Mission / Purpose

The mission of the Bachelors of Business Administration, Accountancy Major is to provide the technical and analytical accounting knowledge to become a professional in accounting and to pursue a fifth (graduate) year of professional study.

Goals

G 1: Technical Accounting Knowledge

Technical Accounting Knowledge

G 2: Analytical Accounting Knowledge and Skills

Students demonstrate analytical accounting knowledge and skills in financial accounting, auditing, accounting information systems, taxation, and managerial accounting

Student Learning Outcomes/Objectives

SLO 1: Principles of Accounting (ACCT 2101 and 2102) (G: 1) (M: 1, 2, 3)

Students display knowledge of Principles of Accounting

SLO 2: Financial Accounting (ACCT 4111, 4112, 4113) (G: 2) (M: 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16)

Students display financial accounting knowledge

SLO 3: Managerial Accounting (ACCT 4210) (G: 2) (M: 17, 18, 19)

Students display knowledge about Managerial Accounting

SLO 4: Accounting Information Systems (ACCT 4310) (G: 2) (M: 20, 21, 22, 23)

Students display knowledge about accounting information systems

SLO 5: Taxation (ACCT 4510) (G: 2) (M: 24, 25, 26)

Students display knowledge about Taxation

SLO 6: Audit and Assurance (ACCT 4610) (G: 2) (M: 27, 28, 29, 30, 31)

Students display Audit and Assurance knowledge

Measures, Targets, and Findings

M 1: Translate business activities into accounting information (ACCT 2101 and 2102) (O: 1)

Translate activities related to essential business processes into accounting information reflected in the accounting information system

Source of Evidence: Writing exam to assure certain proficiency level

Target for O1: Principles of Accounting (ACCT 2101 and 2102)

Mean of 70% or higher on exam questions

Findings 2010-2011 - Target: Partially Met

Mean scores ranged from 59% to 94%. For 2010/2011, we had two primary objectives: (1) improve attendance and (2) increase the number of students who attend teaching assistant office hours. We did not have the success in these areas that we had hoped for. Attendance averaged around 75% as in most past semesters and the teaching assistants only had 221
M 2: Solve operating problems using accounting information (ACCT 2101 and 2102) (O: 1)

Solve operating problems by identifying relevant information from the accounting system and using appropriate tools

Source of Evidence: Writing exam to assure certain proficiency level

Target for O1: Principles of Accounting (ACCT 2101 and 2102)

Mean of 70% or higher on exam questions

Findings 2010-2011 - Target: Partially Met

Mean scores ranged from 53% to 84%. For 2010/2011, we had two primary objectives: (1) improve attendance and (2) increase the number of students who attend teaching assistant office hours. We did not have the success in these areas that we had expected. Attendance averaged around 75% as in most past semesters and the teaching assistants only had 221 student visits to their office hours. Given the 1,400 or so students taking ACCT 2101 in the MWF format during the 2010/2011 academic year, this number is much too low. The average number of students per week is just 15 which is exactly the same as in 2009/2010. Of the 221 student visits, 35% of them were from 5 students. We are just not reaching enough of our students. Spring 2011 was also impacted by missing two classes due to a snowstorm. We had to remove a few topics and juggle some of the remaining topics for that semester. Finally, one new item surfaced this year. The solutions manual has been listed for sale on Craig's List. This means that many students could be simply copying homework rather than putting effort into completing their assignments. All of these factors lead us to consider revising several key components of the course for 2011/2012.

M 3: Comprehend the usefulness of accounting information (ACCT 2101 and 2102) (O: 1)

Comprehend the usefulness of accounting information to stakeholders making business decisions

Source of Evidence: Writing exam to assure certain proficiency level

Target for O1: Principles of Accounting (ACCT 2101 and 2102)

Mean of 70% or higher on exam questions

Findings 2010-2011 - Target: Partially Met

Mean scores ranged from 54% to 82%. For 2010/2011, we had two primary objectives: (1) improve attendance and (2) increase the number of students who attend teaching assistant office hours. We did not have the success in these areas that we had expected. Attendance averaged around 75% as in most past semesters and the teaching assistants only had 221 student visits to their office hours. Given the 1,400 or so students taking ACCT 2101 in the MWF format during the 2010/2011 academic year, this number is much too low. The average number of students per week is just 15 which is exactly the same as in 2009/2010. Of the 221 student visits, 35% of them were from 5 students. We are just not reaching enough of our students. Spring 2011 was also impacted by missing two classes due to a snowstorm. This means that many students could be simply copying homework rather than putting effort into completing their assignments. All of these factors lead us to consider revising several key components of the course for 2011/2012.

M 4: Identify, analyze and record journal entries (ACCT 4111) (O: 2)

Identify, analyze and record journal entries for business transactions, including adjusting and closing entries

Source of Evidence: Writing exam to assure certain proficiency level

Target for O2: Financial Accounting (ACCT 4111, 4112, 4113)

Mean of 60% or more on exam questions

Findings 2010-2011 - Target: Partially Met

Mean scores ranged from 54% to 99%.

M 5: Prepare financial statements (ACCT 4111) (O: 2)

Prepare the financial statements of a business with no complex transactions

Source of Evidence: Writing exam to assure certain proficiency level

Target for O2: Financial Accounting (ACCT 4111, 4112, 4113)

Mean of 60% or more on Exam questions

Findings 2010-2011 - Target: Partially Met

Mean scores ranged from 55% to 84%

M 6: Recognize Revenue (ACCT 4111) (O: 2)

Recognize revenue for a variety of business models

Source of Evidence: Writing exam to assure certain proficiency level

**M 19: Structure and model business problems (ACCT 4210) (O: 3)**
Structure and model business problems to evaluate alternatives, conduct sensitivity analysis on assumptions, and analyze outcomes to determine causes and variances.
Source of Evidence: Writing exam to assure certain proficiency level

**Target for O3: Managerial Accounting (ACCT 4210)**
Mean score of 65% or higher on exam questions

Findings 2010-2011 - Target: Not Met
Mean was 63%

M 20: Query Databases (ACCT 4310) (O: 4)
That students query databases to provide insights about business operations and performance
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O4: Accounting Information Systems (ACCT 4310)
Existing norm for set 1 (Warranty Call Center case): 65.3. Better than prior year’s performance for set 2: 62.2 (BloomScape case).

Findings 2010-2011 - Target: Met
For set 1, academic year 2011 least-squares means adjusted for student GPAs (73.6) were not significantly different than the mean for the prior year (73.5), which is significantly above the target of 65.3 established fall 2005. For set 2, an integrative exam encompassing all the learning outcomes (querying databases, designing business processes, designing databases, and evaluating internal control), 2011 least-squares means adjusted for student GPAs (62.9) were statistically similar to the average for the prior year (61.3) and at the target level (62.2). Although students are meeting the learning objective, the Warranty Call Center case is showing its age. Therefore, I plan to replace it fall 2011 with a new case for implementing the learning objective. In the last year, employers and recruiters of accounting majors said their new hires, from GSU and elsewhere, need to be better skilled in preparing and using spreadsheets. To address this need, the new case will have two parts. Part one will be designed to impart improved spreadsheet skills including sound construction techniques. Part two will help students learn to select between spreadsheets and databases for specific analytical applications as it develops students querying skills. New targets will have to be set for the new case in FY2012.

M 21: Design Business Processes (ACCT 4310) (O: 4)
That students design business processes and represent them with documentation tools
Source of Evidence: Writing exam to assure certain proficiency level

Target for O4: Accounting Information Systems (ACCT 4310)
Performance on 24-Seven part 1 case questions: 72.2

Findings 2010-2011 - Target: Met
Academic year 2011 least-squares means adjusted for GPA (68.3) were not significantly different from the prior year mean (70.5), both of which are slightly below the target level (72.2). A new case, SuperSushi, was used to help students learn to prepare graphical documentation (flowchart and business process diagram). While it was not associated with improved performance for the learning objective, scores on its sub-parts were significant predictors of performance for the learning objective. This outcome indicates that constructing process diagrams, identifying errors in diagrams, and making inferences from diagrams are distinct tasks, each of which supports the learning objective for business processes. Even though they struggle to represent and use business process diagrams, they need experience obtaining information about business processes so they can document them. They need to be able to get such information from conversations because that is how they will obtain much information in practice.

M 22: Design and Implement Databases (ACCT 4310) (O: 4)
That students design and implement well-structured databases to enable business processes
Source of Evidence: Writing exam to assure certain proficiency level

Target for O4: Accounting Information Systems (ACCT 4310)
Better than 2006-07 performance on BloomScape case questions (62.2)

Findings 2010-2011 - Target: Met
For the integrative exam including the learning outcome of designing and implementing databases, academic year 2010 least-squares means adjusted for student GPA (62.0) were not statistically different from prior year means (61.4). The means are not statistically different from the target (62.2). More guidance at first for tasks requiring critical thinking helps students perform better. Although students will need to learn to design databases for new situations, many of them would prefer to memorize information from a textbook rather than make sense of ambiguous situations.

M 23: Evaluate Internal Control (ACCT 4310) (O: 4)
That students evaluate internal control in information systems and design controls to mitigate risks associated with information systems
Source of Evidence: Writing exam to assure certain proficiency level

Target for O4: Accounting Information Systems (ACCT 4310)
2006-07 norm for the 24-Seven Part 2 case: 62.3

Findings 2010-2011 - Target: Partially Met
Although not statistically different (p = 0.05) from the 2006-07 norm (62.3), academic year 2010 least-squares means adjusted for GPA (59.3) were 3.0 percentage points lower than the norm, which is 0.4 points better than in academic year 2009. Students struggle with evaluating internal control due to several aspects: its unstructured nature, the cumulative nature of the required expertise, and its positioning at the end of the course. The cumulative aspect of the required expertise surprises many students. Some students tend to confuse processes and controls, which becomes apparent when they create graphical representations of business processes. They need practice distinguishing between them. Students also have difficulty identifying control weaknesses.

Mean of 72.5% or higher on exam questions

### Findings 2010-2011 - Target: Met
Mean was 85.48%

**M 31: Evaluate, integrate and apply different types of audit information (ACCT 4610) (O: 6)**
Evaluate, integrate, and apply different types of audit information and knowledge to form independent judgments. Present, discuss, and defend their views through written and spoken language. Conclusions and critical points of view must be complete and demonstrate an understanding of the audit problem.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O6: Audit and Assurance (ACCT 4610)**
Mean score of 72.5% or higher on team project

### Findings 2010-2011 - Target: Met
Mean was 95%

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**ACCT 4310**
Develop better thinking models to help students evaluate internal control.

- Established in Cycle: 2008-2009
- Implementation Status: Finished
- Priority: High
- Projected Completion Date: 07/2009
- Responsible Person/Group: A. Faye Borthick

**ACCT 4210**

We improved the assessment process by providing a standard set of questions to be included on exams in all sections effective Fall 08. The result of the new, standardized approach is that the question sets used for assessing learning objectives are not directly comparable to 07-08. Thus, changes in means may reflect more rigor in the questions (prior questions included subjective evaluations and partial credit). Going forward the standardization will allow us to better assess how changes to the program affect student performance. We adopted a new text beginning in Fall 2008 to return to a more traditional approach. We had tried a text that...
emphasized ambiguity; however, this hindered the students' learning of technical concepts. We will focus in 09-10 on improving students' abilities to model business problems and analyze causes of variances as student performance in these areas lags expectations. Instructors will devote more class time and develop additional assignments in these two areas in order to help students master these concepts.

### ACCT4210
See Action Plan for Measure 8

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 07/2009
Responsible Person/Group: Tim Mitchell

### ACCT4510
Refine "ChrisNotes" pertaining to this measure. Spend more class on these measures.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 07/2009
Responsible Person/Group: Chris Fenn

### ACCT4510

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 07/2009
Responsible Person/Group: Chris Fenn

### Delete Course and Revise Curriculum
In ACCT4410, students performed below target in a significant number of sub-learning outcomes pertaining to Measures #26 and #27. ACCT4410 relies a lot on the material learnt in ACCT4110. You cannot analyze certain parts of the financial statements if you don't know how to prepare or understand those parts of the financial statements. Since ACCT4110 omitted many important topics, students were ill-prepared for ACCT4410 on these topics and performed poorly on them. The above two issues indicate an urgent need to revise the curriculum to include more financial accounting. Given that there is a course similar to ACCT4410 at the graduate level (ACCT8700) we plan to eliminate ACCT4410 and replace it with an additional 3 credit class in financial accounting.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 07/2009
Responsible Person/Group: Siva Nathan

### Revise Curriculum
Revise the undergraduate curriculum to add three more credits of Intermediate Accounting, so that the relevant material can be covered in class.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 07/2009
Responsible Person/Group: Siva Nathan

### Revise Curriculum
See Action Plan for Measure 18

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 07/2009
Responsible Person/Group: Siva Nathan
**Emphasis on selected topics**
Revenue theory, analysis of discontinued operations, cash flow statement, cash versus accrual basis, revenue recognized using installment method, and using PV/FV will be emphasized during 2010 since those were the lowest percent correct on the cumulative final exam. Instruction will include providing more homework in these areas and spending more class time on these topics. A "Digital Tutor" (short instructional video) will be added on Installment Method Accounting to improve the learning outcomes for this harder topic. Further, students will be given more guidance on how to get started on Jag & Elk to help them get a quick start on the project.

**Excel Assignments**
Students do not practice problem solving sufficiently. We have added some homework MS Excel assignments to address this issue and concerns regarding students MS Excel skills.

**Excel Assignments**
Students do not practice problem solving sufficiently. We have added some homework MS Excel assignments to address this issue and concerns regarding students MS Excel skills.

**Excel Assignments**
Students do not practice problem solving sufficiently. We have added some homework MS Excel assignments to address this issue and concerns regarding students MS Excel skills.

**Explain case facts in class**
Continue to explain the facts of the case in class and guide students on where to find accounting and finance information about a company.

**Hand grade large problem**
One of the four areas targeted last year was still below the 60% correct target and will be reviewed for extra attention in the upcoming year (see highlighted rows). The full accounting cycle problem was a set of five MC questions in Spring 2001 so one error could throw off multiple questions. Prior semesters the large problem was hand graded with partial credit. The scores are not comparable. It is suggested that the large problem be handed graded due to the all-or-nothing nature of MC questions for large dependent computations. This course will be expanded to three credits, from two credits, and so the assessments going forward will add two new chapters with no history.

Responsible Person/Group: Taewoo Park

Move topic to weeks 9-11
In academic year 2011, the study of internal control will be moved from the last three weeks of the term to weeks 9-11, and the internal control case used for performance assessment will be condensed to make it tractable for a term that is one week shorter beginning fall 2010.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Evaluate Internal Control (ACCT 4310) | Outcome/Objective: Accounting Information Systems (ACCT 4310)

Projected Completion Date: 08/2011
Responsible Person/Group: Borthick

Practice problem on loss carrybacks and carryforwards
Do a practice problem in class with loss carrybacks and loss carryforwards

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Record deferred tax assets and liabilities (ACCT 4113) | Outcome/Objective: Financial Accounting (ACCT 4111, 4112, 4113)

Projected Completion Date: 08/2011
Responsible Person/Group: Siva Nathan

Proposed FASB standard
Develop detailed Powerpoint slides on the FASB's proposed standard on leases

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Recording Lease Contracts (ACCT 4113) | Outcome/Objective: Financial Accounting (ACCT 4111, 4112, 4113)

Projected Completion Date: 08/2011
Responsible Person/Group: Siva Nathan

Refine Chris Notes
For learning objectives with exam scores below 70%, 1. the lecture notes, i.e., “ChrisNotes,” pertaining to them will continue to be refined and 2. in-class time will continue to be spent: a) explaining the related learning objectives and b) applying tax law to real-life factual situations pertaining to those learning objectives.

Established in Cycle: 2010-2011
Implementation Status: Finished
For academic year 2011/2012, we are making some radical changes to the course. Our goals will be the same as in 2010/2011, but our method of achieving those goals will be drastically different. First, we will teach the large section classes in a two day a week format rather than a three day a week format. This allows all students to see only one instructor for acct 2101 rather than an instructor and a teaching assistant. It also cuts down on the number of times students need to come to class. We will encourage students to come to class and participate with response pads by increasing their worth in the course to 15% of total course points by eliminating the homework grading component. Second, we will create an accounting lab that will be open approximately 35 hours per week. In the past, the teaching assistants have had Friday teaching commitments so were only able to hold 15 hours of office hours each week. We hope that this change from "TA office hours" to "accounting lab hours" will sound more inviting to our students and allow them to get help regardless of their schedule.

Two day a week format and accounting lab

For academic year 2011/2012, we are making some radical changes to the course. Our goals will be the same as in 2010/2011, but our method of achieving those goals will be drastically different. ---

**Georgia State University**

**Assessment Data by Section**

**2010-2011 Accountancy PhD**

_(As of: 12/12/2016 04:10 PM EST)_

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

---

**Mission / Purpose**

Develop in graduates a high level of confidence in conducting research and in teaching business disciplines by requiring (1) training in theory, (2) training in general research techniques as well as research techniques specific to a discipline, (3) research experience with faculty members on contemporary research problems and issues, and (4) training on teaching methodology reinforced with active classroom teaching experience.

---

**Goals**

**G 1: Discipline knowledge - evaluate research**

Students should be able to critically evaluate and discuss theoretical developments and the results of original research.

**G 2: Discipline knowledge - conduct research**

Students should be able to conduct and present original research in collaboration with faculty.

**G 3: Research competence**

Students should be able to conduct original research individually.

**G 4: Placement**

Most graduates will accept positions at institutions where the research skills learned in the program will be used and developed further.

**G 5: Teaching competency**

Develop a high level of competence in conducting university level teaching.

---

**Student Learning Outcomes/Objectives**

**SLO 1: Comprehensive exams (G: 1) (M: 1)**

Successful completion of comprehensive examinations as judged by a committee of appropriate faculty members.

**SLO 2: Critical evaluation of research (G: 1) (M: 2)**

Demonstrate the ability to critically evaluate research by providing comments to presenters at internal workshops.

**SLO 3: Collaborative research activity (G: 2) (M: 3)**

Students will conduct research with faculty in order to develop their research skills and experience with the publication process.

**SLO 4: Research presentations (G: 2) (M: 4)**

Students will present their research at internal workshops and professional meetings.

**SLO 5: Dissertation defense (G: 3) (M: 5)**

Successful defense of the dissertation conducted before a faculty committee.

**SLO 6: Initial placements - research (G: 4) (M: 6)**

Students will accept positions at research institutions, preferably at schools offering doctoral degrees in accounting.

**SLO 7: Teaching - training (G: 5) (M: 7)**

Successful completion of 9200, Seminar in University Teaching.

**SLO 8: Teaching - competency (G: 5) (M: 8)**
Students will develop their teaching competency by teaching and obtaining feedback via SEIPs.

**SLO 9: Placement - teaching (G: 5) (M: 9)**

Students will place in institutions where the teaching skills learned in the program will be used and developed further.

### Measures, Targets, and Findings

**M 1: Comprehensive exams (O: 1)**

Successful completion of comprehensive examinations as judged by a committee of appropriate faculty members.

Source of Evidence: Comprehensive/end-of-program subject matter exam

**Target for O1: Comprehensive exams**

80% of students will pass comprehensive exams.

**Findings 2010-2011 - Target: Met**

Of students taking the comprehensive exam in the past five years, 89% have passed.

**M 2: Critical Analysis Seminar and workshops (O: 2)**

All students in their first three years of the program will attend Critical Thinking Seminar to critically evaluate workshop papers. All students beyond the first year will provide comments to presenters during workshops.

Source of Evidence: Academic direct measure of learning - other

**Target for O2: Critical evaluation of research**

All students in their first three years of the program will take the Critical Analysis seminar to gain skill in critically evaluating working papers. All students beyond the first year will provide comments to presenters during research workshops.

**Findings 2010-2011 - Target: Met**

All current students have taken Critical Analysis seminar in each year of the first three years of their programs. Workshops are monitored and students beyond the first year are prodded for comments when necessary.

**M 3: Research with faculty (O: 3)**

Source of Evidence: Portfolio, showing skill development or best work

**Target for O3: Collaborative research activity**

Seventy-five percent of students will have a project with faculty member(s) by their third year in the program. Fifty percent will have a paper published or in the publication process by the end of their program.

**Findings 2010-2011 - Target: Met**

Of the four students in their third year or beyond in 2010-2011, three have research projects with faculty members, which meets our target rate of 75%. Of the seven graduates in the past six years, four had co-authored papers published or in the publication process, for a rate of 57%. This meets our target of 50%.

**M 4: Research presentations (O: 4)**

Students will present their research at internal workshops and professional meetings.

Source of Evidence: Presentation, either individual or group

**Target for O4: Research presentations**

All students beyond the second year will have presented their research at internal workshops. 50% of graduating students will have presented a research paper at a research conference.

**Findings 2010-2011 - Target: Met**

All students beyond the second year have presented a least one research project internally. Of the students who have graduated in the past six years, five (71%) had presented a research paper externally at a research conference.

**M 5: Dissertation Defense (O: 5)**

Successful defense of the dissertation conducted before a faculty committee.

Source of Evidence: Senior thesis or culminating major project

**Target for O5: Dissertation defense**

100% of students who attain ABD status will successfully defend their dissertations before a faculty committee; 75% on their first attempt.

**Findings 2010-2011 - Target: Met**

100% of graduates in the past six years defended their dissertations on the first attempt. All ABD students are currently on track to propose and defend their dissertations.

**M 6: Initial placements - research (O: 6)**

Students will accept positions at research institutions, preferably at schools offering doctoral degrees in accounting.
**Target for O6: Initial placements - research**

At least 50% of graduating students will place at research institutions.

**Findings 2010-2011 - Target: Met**

Of the seven students who graduated in the past six years, four (57%) have placed at research-focused universities, which meets our target of at least 50%.

---

**M 7: Teaching - training (O: 7)**

Successful completion of 9200, Seminar in University Teaching.

**Source of Evidence: Academic direct measure of learning - other**

**Target for O7: Teaching - training**

100% of students will complete the seminar on teaching (9200) in their first year of the program.

**Findings 2010-2011 - Target: Met**

All students who entered the program in the past five years have completed the seminar in their first semester.

---

**M 8: Teaching - competency (O: 8)**

Students will develop their teaching competency by teaching and obtaining feedback via SEIPs.

**Source of Evidence: Student course evaluations on learning gains made**

**Target for O8: Teaching - competency**

All students will teach during their programs. 50% will teach an upper division course before graduating. All students will achieve a minimin average overall effectiveness rating of 4.0 in semesters beyond the first one that they teach. 60% of students will achieve overall effectiveness ratings of at least 4.2 before graduating.

**Findings 2010-2011 - Target: Partially Met**

All students currently in the program have taught, which meets our target. All graduating students taught an upper-level course, which meets our target. Of the seven students who taught (beyond their first experience) during 2010-2011, two students did not attain an overall average effectiveness rating of 4.0, which does not meet our target. All students teaching beyond the second year have attained an average of 4.2 or above in at least one section, but only 33% are consistently at or above 4.2. These two outcomes together, indicate that we are only partially achieving this target.

---

**M 9: Placement - teaching (O: 9)**

Students will place in institutions where the teaching skills learned in the program will be used and developed further.

**Source of Evidence: Job placement data, esp. for career/tech areas**

**Target for O9: Placement - teaching**

80% of graduates will place at institutions with AACSB accreditation.

**Findings 2010-2011 - Target: Met**

All graduates in the past six years have placed in AACSB accredited business schools, which meets our target.

---

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Improve Teaching Effectiveness

International students tend to have the most challenge with SEIPs. All students, especially international students, are encouraged to observe the teaching of our most effective faculty and PhD students before they teach their first course. SEIPs are reviewed for each student. Any student who continually achieves ratings below 4.0 is required (rather than encouraged) to observe other faculty in the classroom as well as receive feedback from a faculty mentor. Students with average SEIPs below 4.2 are encouraged to observe other faculty and receive feedback from a faculty mentor.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** In-Progress
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Teaching - competency | Outcome/Objective: Teaching - competency

- **Implementation Description:** Beginning of the Fall 2010 semester
- **Projected Completion Date:** 07/2012
- **Responsible Person/Group:** SOA Doctoral Program Committee

---

#### Pass rate on comprehensive exams

Students will be provided with formal feedback throughout their doctoral coursework regarding their strengths and weaknesses, with guidance for improving weaknesses.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Comprehensive exams | Outcome/Objective: Comprehensive exams
**Implementation Description:** Comprehensive exam date for students admitted after formal feedback program was initiated.

**Projected Completion Date:** 09/2011

**Responsible Person/Group:** SOA PhD Program Committee

---

**Improve research collaborations**

We are meeting both our target of 50% published/submitted papers by graduation and 75% collaborative research projects for current third year and more senior students. We implemented the second year paper requirement for students admitted in 2006 in part to stimulate collaborative research. Students who have elected to pursue more of a teaching rather than research focus have tended to turn these projects into their dissertations rather than a separate, collaborative paper with faculty. Other students have been successful at using this requirement to build their research portfolios. We will continue to encourage and monitor collaborative research activity. Although we are meeting our targets, comparisons with peer and aspiration schools show that our students teach much more than students at these schools. Discussions with students indicate that teaching interferes with their ability to develop a competitive research portfolio. To address this, we are restructuring the stipends effective with students admitted in 2010 to shift the stipends toward RA and from TA.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** In-Progress
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Research with faculty
  - Outcome/Objective: Collaborative research activity

---

**pass rate on comprehensive exams**

We are meeting our target pass rate on comprehensive exams. No action is required at this time.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Finished
- **Priority:** Medium
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Comprehensive exams
  - Outcome/Objective: Comprehensive exams

---

**Georgia State University**

**Assessment Data by Section**

**2010-2011 Actuarial Science BBA**

*(As of: 12/12/2016 04:10 PM EST)*

*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)*

---

**Mission / Purpose**

**BBA-AS PROGRAM MISSION:** The BBA in Actuarial Science is designed to prepare students to: (1) Have a broader foundation of business courses and quantitative analytical training; (2) Have introductory-level knowledge on actuarial valuation of insurance liabilities and financial valuation of assets, integrating the actuarial contingencies and the time value of money; and (3) Pass the first two professional exams offered by the Society of Actuaries/Casualty Actuarial Society.

**RMI DEPARTMENT MISSION:** To enhance social well being by developing knowledge and providing education in risk and its management.

**RMI DEPARTMENT VISION:** To be the world's leader in risk management scholarship and education. Through the collaboration of experts in multiple disciplines, we will be recognized internationally as leaders in: a) the development of integrated applications of economics, law, mathematics, and probability theory to the quantitative and qualitative measurement of risks; b) the selection and design of individual, organizational, and societal strategies for the efficient management of risk; and c) the dissemination of this knowledge.

---

**Goals**

**G 1: Broader foundation and quant. analysis skills**

Upon completion of the BBA-AS program, students will have a broader foundation of business courses and quantitative analytical training.

**G 2: Introductory-level actuarial science knowledge**

Upon completion of the BBA-AS program, students will have introductory-level knowledge on actuarial valuation of insurance liabilities and financial valuation of assets, integrating the actuarial contingencies and the time value of money.

**G 3: Pass the first two SOA/CAS professional exams**

Upon completion of the BBA-AS program, students will pass the first two professional exams offered by the Society of Actuaries/Casualty Actuarial Society.

---

**Student Learning Outcomes/Objectives**

**SLO 1: Structure and solve problems (G: 1, 2, 3) (M: 1, 2)**

BBA-AS graduates will be able to structure and solve actuarial and related business problems with sound analytical techniques.

**SLO 2: Comprehension of theoretical & technical materials (G: 1, 2, 3) (M: 1, 2)**

BBA-AS graduates will be able to comprehend the theoretical and technical material in appropriate actuarial journals.
### SLO 3: Mastery of life contingencies (G: 1, 2, 3) (M: 1, 2, 3)
BBA-AS graduates will demonstrate the technical mastery of life contingencies and risk theory. The student will also demonstrate a mastery of actuarial modeling techniques.

### SLO 4: Completion of first two actuarial exams (G: 1, 2, 3) (M: 4)
To be recognized as a professional actuary, a person must become a member of the Society of Actuaries or the Casualty Actuarial Society by passing a series of examinations. By graduation, our BBA-AS students will have passed the first two professional exams: Exam P – Probability and Exam FM – Financial Economics.

### Measures, Targets, and Findings

#### M 1: Selected and Identified Quiz Questions in AS 4340 (O: 1, 2, 3)
Each student will demonstrate through performance on selected and identified quiz questions in AS 4340 Life Contingencies an understanding of the concepts of insurance liabilities, including "interest discounting" and "survival discounting" of actuarial valuation.

Source of Evidence: Academic direct measure of learning - other

**Target for O1: Structure and solve problems**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE ONE RUBRIC to a random selection of students during each 4-year evaluation period.

**Target for O2: Comprehension of theoretical & technical materials**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE ONE RUBRIC to a random selection of students during each 4-year evaluation period.

**Target for O3: Mastery of life contingencies**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE ONE RUBRIC to a random selection of students during each 4-year evaluation period.

#### M 2: Selected Projects in RMI 3750 (O: 1, 2, 3)
Each student will demonstrate through performance on selected projects in RMI 3750 Probability Theory and Simulation Analysis in Risk Management an understanding of the sources of uncertainty in a business application.

Source of Evidence: Project, either individual or group

**Target for O1: Structure and solve problems**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE TWO RUBRIC to a random selection of students during each 4-year evaluation period.

**Target for O2: Comprehension of theoretical & technical materials**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE TWO RUBRIC to a random selection of students during each 4-year evaluation period.

**Target for O3: Mastery of life contingencies**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE TWO RUBRIC to a random selection of students during each 4-year evaluation period.

#### M 3: Identified Exam Questions in AS 4230 (O: 3)
Each student will demonstrate through performance on identified exam questions in AS 4230 Theory of Interest and understanding of the basic concept of compound theory of interest and the term structure of interest rates.

Source of Evidence: Performance (recital, exhibit, science project)

**Target for O3: Mastery of life contingencies**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE THREE RUBRIC to a random selection of students during each 4-year evaluation period.

#### M 4: Completion of first 2 professional actuarial exams (O: 4)
BBA-AS graduates will have passed the first two professional exams offered by the Society of Actuaries and the Casualty Actuarial Society: Exam P – Probability and Exam FM – Financial Economics.

Source of Evidence: Certification or licensure exam, national or state

**Target for O4: Completion of first two actuarial exams**
70% of our BBA-AS graduates will have taken and passed both Exam P – Probability and Exam FM – Financial Economics by the time they finish the program.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Course revision to improve instruction across relevant items**
The course will be revised to improve instruction on random variable distributions, recursion formulas and interest conversion.
Georgia State University

Assessment Data by Section

2010-2011 Actuarial Science MAS

As of: 12/12/2016 04:10 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose

MAS PROGRAM MISSION: The MS in Actuarial Science is designed to prepare students to: (1) Undertake actuarial valuation of liabilities and financial risk modeling of assets for insurance companies, financial institutions and consulting firms; (2) Develop integrated thinking and communication skills; and (3) Pass the early professional actuarial exams offered by the Society of Actuaries and the Casualty Actuarial Society.

RMI DEPARTMENT MISSION: To enhance social well being by developing knowledge and providing education in risk and its management.

RMI DEPARTMENT VISION: To be the world’s leader in risk management scholarship and education. Through the collaboration of experts in multiple disciplines, we will be recognized internationally as leaders in: a) the development of integrated applications of economics, law, mathematics, and probability theory to the quantitative and qualitative measurement of risks; b) the selection and design of individual, organizational, and societal strategies for the efficient management of risk; and c) the dissemination of this knowledge.

Goals

G 1: Actuarial valuation and risk modeling
Upon completion of the MAS program, students will be prepared to undertake actuarial valuation of liabilities and financial risk modeling of assets for insurance companies, financial institutions and consulting firms.

G 2: Integrated thinking and communication skills
Upon completion of the MAS program, students will be prepared to develop integrated thinking and communication skills.

G 3: Pass the first two SOA/CAS professional exams
Upon completion of the MAS program, students will be prepared to pass the early professional actuarial exams offered by the Society of Actuaries and the Casualty Actuarial Society.

Student Learning Outcomes/Objectives

SLO 1: Explanation of technical concepts (G: 1, 2, 3) (M: 3)
The MAS graduate will be able to explain technical concepts to non-actuarial associates or clients.

Other Outcomes/Objectives

O/O 2: Concepts of Investment Risk Evaluation (G: 1, 2, 3) (M: 1, 2)
The MAS graduate will have the basic conceptual knowledge and technical skill in evaluating major types of risks for a typical insurance company’s investment portfolio.

O/O 3: Concepts of Liability Risk Evaluation (G: 1, 2, 3) (M: 1, 2, 3)
The MAS graduate will have the basic conceptual knowledge and technical skills in evaluating major types of risks for a typical insurance company’s liability portfolio.

O/O 4: Enterprise Risk and Integration (G: 1, 2, 3) (M: 3)
The MAS graduate will have an appreciation of broader enterprise-wide risks and their integrations in insurance companies.

Measures, Targets, and Findings

M 1: Case studies from current events (AS 8810) (O: 2, 3)
Each student will demonstrate through performance on case studies from current events in the AS 8810 Graduate Seminar an understanding of the following: (1) Concepts and tools in calculating market risks (stocks, real estate); (2) Concepts and tools in calculating credit risks (bond yield spreads, Credit Default Swaps, rating transition matrix); (3) Basic shapes of the yield curve and...
interest rate risk measures (duration and convexity); and (4) Standard products offered by life insurance companies and property-casualty companies.

Source of Evidence: Performance (recital, exhibit, science project)

**Target for O2: Concepts of Investment Risk Evaluation**

A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE ONE RUBRIC to a random selection of student performances on case studies from current events in AS 8810 Graduate Seminar during each 4-year evaluation period.

**Target for O3: Concepts of Liability Risk Evaluation**

A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE ONE RUBRIC to a random selection of student performances on case studies from current events in AS 8810 Graduate Seminar during each 4-year evaluation period.

**M 2: Case examples using real company balance sheets (O: 2, 3)**

Each student will demonstrate through performance on a project and case studies in the AS 8810 Graduate Seminar an understanding of the following: (1) Concepts and tools in calculating market risks (stocks, real estate); (2) Concepts and tools in calculating credit risks (bond yield spreads, Credit Default Swaps, rating transition matrix); (3) Basic shapes of the yield curve and interest rate risk measures (duration and convexity); (4) Standard products offered by life insurance companies and property-casualty companies; and (5) Concepts and tools in calculating property-casualty loss reserves.

Source of Evidence: Project, either individual or group

**Target for O2: Concepts of Investment Risk Evaluation**

A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE TWO RUBRIC to a random selection of student performances on case examples using real company balance sheets in AS 8810 Graduate Seminar during each 4-year evaluation period.

**Target for O3: Concepts of Liability Risk Evaluation**

A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE TWO RUBRIC to a random selection of student performances on case examples using real company balance sheets in AS 8810 Graduate Seminar during each 4-year evaluation period.

**M 3: Performance on project (AS 8810 Graduate Seminar) (O: 1, 3, 4)**

Each student will demonstrate through performance on a project in the AS 8810 Graduate Seminar an understanding of the following: (1) Standard products offered by life insurance companies and property-casualty companies; (2) The regulatory environment, the role of rating agencies and investors; and (3) Different accounting (financial reporting) requirements (statutory, GAAP and fair value). Further, graduates will have the ability to explain technical concepts to non-actuarial associates or clients.

Source of Evidence: Project, either individual or group

**Target for O1: Explanation of technical concepts**

A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE THREE RUBRIC to a random selection of student performances on a project in AS 8810 Graduate Seminar during each 4-year evaluation period.

**Target for O3: Concepts of Liability Risk Evaluation**

A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE THREE RUBRIC to a random selection of student performances on a project in AS 8810 Graduate Seminar during each 4-year evaluation period.

**Target for O4: Enterprise Risk and Integration**

A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE THREE RUBRIC to a random selection of student performances on a project in AS 8810 Graduate Seminar during each 4-year evaluation period.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Continue retention of exams/projects**
Continue retention analysis of applicable selected student work until targeted 4-year database is achieved. Maintain rolling 4-year database thereafter.

- **Established in Cycle**: 2008-2009
- **Implementation Status**: Planned
- **Priority**: High

**Relationships (Measure | Outcome/Objective):**
- **Measure**: Case examples using real company balance sheets | **Outcome/Objective**: Concepts of Investment Risk Evaluation
- **Measure**: Case studies from current events (AS 8810) | **Outcome/Objective**: Concepts of Investment Risk Evaluation
- **Measure**: Performance on project (AS 8810 Graduate Seminar) | **Outcome/Objective**: Concepts of Liability Risk Evaluation
- **Measure**: Enterprise Risk and Integration | **Outcome/Objective**: Explanation of technical concepts

**Projected Completion Date**: 08/2012

**Responsible Person/Group**: Shaun Wang and MAS Assessment Group

**Additional Resources**: None
Develop new coursework on in-depth analysis of accounting practices, conventions, and their implications

Develop a student team project to discuss, in which the various teams will have to perform an in-depth analysis of various accounting practices, conventions, and their implications.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: Medium
Projected Completion Date: 08/2011
Responsible Person/Group: Shaun Wang

Improve instruction using integrated insurance company data

Improve instruction using integrated insurance company data with an asset portfolio and liability portfolio.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: Medium
Projected Completion Date: 08/2011
Responsible Person/Group: Shaun Wang

Improve instruction with more effective written materials

Improve instruction using more effective written materials on standard insurance policies.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: Medium
Projected Completion Date: 08/2011
Responsible Person/Group: Shaun Wang

Georgia State University
Assessment Data by Section
2010-2011 African American Studies Assessment of Core
As of: 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose

The mission of the Department of African American Studies (DAAS) at Georgia State University is the advancement of knowledge of people of African descent and their empowerment within the local, national, and international arena. As an interdisciplinary field of concentration, the department offers an interdisciplinary approach to the study of African people nationally and globally. The department's guiding philosophy is African-centered in that we believe that an understanding of the specific cultural and historical experiences of a people must guide and inform any productive analysis and interpretation of that people's past and present, and must guide any viable directives that are offered for their future.

Goals

G 1: To develop Critical Thinking

At the bachelors-level, African American Studies contributes to the university’s broader mission of encouraging critical thinking by understanding and communicating how the experience and trajectory of African-descended people is influenced by historical, cultural, geographical, and political factors. In so doing, we prepare our students to identify forms and mechanisms of oppression and apply strategies of advocacy and social change that advance social and economic justice.

Student Learning Outcomes/Objectives

SLO 2: Communication (G: 1) (M: 1)

Students will be able to communicate effectively in writing.

Other Outcomes/Objectives

O/O 1: Analytic (G: 1) (M: 1)

Students will be able to make connections between the African American experience and larger events in the community and world.

Measures, Targets, and Findings

M 1: Service Learning Papers (O: 1, 2)

Students engaged in community service activity and wrote reflection papers based on their experience. The reflection paper assesses student learning based on their ability to analyze and communicate core course concepts. The analytic rubric is a five-item scale where a rating of 5 indicates that the paper reflects a careful reading and understanding of the material. Additionally, the paper
focuses on a careful critique of the material, as opposed to a restatement of what the author has stated; 4= Same as 5 above, but paper lacks a careful critique of the material; 3= Same as 4 above, but paper over generalizes and / or does not use material from the reading to support conclusions.; 2= Paper simply restates what the author has said, but ignores careful critique of the material; and 1= Paper relies primarily on rhetoric (personal expression) and generalized arguments. The communication rubric is also a five-item scale where a score of 5 reflects a paper that is clearly written with appropriate punctuation, grammar and syntax. Paper is typed, no greater than 12 point font, double-spaced, no more than one-inch margins, and minimum three full pages of text. Reference cited page is included if sources other than those assigned are used; 4) Same as 5 above with some minor (2 – 4) punctuation, grammatical or syntax mistakes; 3) Same as 4 above with no more than 6 punctuation, grammatical or syntax mistakes; 2) Paper has some lack of clarity as well as several punctuation, grammatical or syntax mistakes; and 1) Paper is confusing or unclear in structure and includes several punctuation, grammar and syntax mistakes. Reference cited page is not included when sources other than those assigned were used.

Source of Evidence: Academic indirect indicator of learning - other

Target for O1: Analytic
Target: 80% of the students will receive a rating of 3 or above.

Findings 2010-2011 - Target: Met
Outcome: Three reviewers received a random sample of nine papers (one quarter) from the course. Of the nine papers reviewed 88% of the students scored a rating of 3 or above indicating that the paper reflected a careful reading and understanding of the material; focused on a careful critique of the material, as opposed to a restatement of what the author had stated.

Target for O2: Communication
Target: 80% of the students will receive a score of 3 or higher.

Findings 2010-2011 - Target: Met
A panel of three reviewers assessed a random sample of nine student papers for appropriate punctuation, grammar, syntax, and formatting. Over 92% of the students papers received a rating of 3 or above indicating that a majority of the papers were clearly written with appropriate punctuation, grammar and syntax; were typed, containing no greater than 12 point font, double-spaced, no more than one-inch margins, and minimum three full pages of text; and included a reference page if sources other than those assigned were used.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

2010 Action Plan
No action planned required as benchmarks were exceeded or nearly met.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

No action
No action will be taken since the target was nearly met and the findings could be a sampling error.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Service Learning Papers | Outcome/Objective: Communication
Implementation Description: N/A
Responsible Person/Group: N/A

Monitor current outcomes for trends
The instructor will monitor the current outcomes to assess if there are trends based on student demographics (e.g. major, minor, gender, age, etc).

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Low
Implementation Description: Enrollment data will be exported from class into SPSS for descriptive analysis.
Projected Completion Date: 12/2012
Responsible Person/Group: Instructor
Additional Resources: None
Budget Amount Requested: $0.00 (no request)
The Department of African-American Studies at Georgia State University (GSU) is committed to both the advancement of knowledge of people of African descent and to their empowerment within the local, national and international arena. As an interdisciplinary field of concentration, the GSU African-American Studies Department offers an interdisciplinary approach to the study of African people nationally and globally. The GSU African-American Studies Department provides critiques of knowledge presented within traditional disciplines and professions; scholarly and artistic accounts of the realities of lives of African people; and perspective on social change to empower black people.

Goals

G 1: Demonstrate logical reasoning
To be able to develop a thesis argument based on a logical set of interrelated concepts.

Student Learning Outcomes/Objectives

SLO 1: Demonstrate logical reasoning (M: 1)
To be able to develop an argument based on a logical set of interrelated concepts

SLO 2: Demonstrate communication skills through writing (G: 1) (M: 1)
To be able to communicate ideas effectively through clearly written, well organized, and appropriately formatted scholarship

SLO 3: Demonstrate knowledge of field (G: 1) (M: 1)
Demonstrate the ability acquire new knowledge and add to the body of knowledge in the field of African American Studies

Measures, Targets, and Findings

M 1: Written Assignment (O: 1, 2, 3)
The final papers in two courses are used to assess these outcomes: AAS 3975 and 4980. Each course assignment requires students to integrate, synthesize, and interpret concepts relevant to theory and research. The assessment for each of the three areas is as follows: Analytical Skill: 5) Paper reflects skillful collection of data required for research. The paper reflects a careful reading and understanding of social science and humanities research. Paper includes a strong critique of ideas and theories and their application to social, cultural, political and economic lives of African American people. Paper reflects an understanding and application of interdisciplinary scholarship; 4) As 5 above but paper lacks a critique of ideas and theories and application to social, cultural, political, and economic lives of African American people; 3) As 4 above but paper over generalizes and / or fails to organize data to support conclusions; 2) Paper reflects collection of data, but ignores critique and application of interdisciplinary scholarship; and 1) Paper relies primarily on rhetoric and generalized arguments. Communications Skills: 5. Paper is clearly written with appropriate punctuation, grammar and syntax. Paper is free of and uses appropriate (APA) writing style required for course. Citations are appropriately included to leave no room for charges of plagiarism. Citations are included appropriately according to required style; 4) As 5 above with some minor (2 – 4 punctuation, grammatical or syntax mistakes) 3) As 4 above with no more than 6 punctuation, grammatical or syntax mistakes; 2) Paper has some lack of clarity as well as several punctuation, grammatical or syntax mistakes and does not properly make citations or references; 1) Paper is confusing or unclear in structure and includes several punctuation, grammatical or syntax mistakes. Paper does not use appropriate writing style and / or does not include citations or references. Acquisition of Knowledge. 5. Paper articulates key concepts and theoretical stance that informs the research. Paper includes a clearly stated hypothesis. Paper reflects use of multiple levels of data acquisition (primary, secondary, etc.). Paper demonstrates an understanding of relationship between the lived experiences of African Americans and the Global African community. Paper applies an application of data to understanding the impact of societal, economic and political factors on the life chances of people of African descent; 4) As 5 above, but the paper does not include a clearly stated hypothesis; 3). As 4 above but the paper does not reflect use of multiple levels of data acquisition; 2) Paper is overly focused on personal opinion and generalizations. No data is included to support thesis and / or no application is made to the lived experiences of people of African descent; 1) Paper has no clear hypothesis and no clear articulation of conceptual / theoretical stance informing research. Data is not applied appropriately to the lived experience of people of African descent.

Source of Evidence: Written assignment(s), usually scored by a rubric

Findings 2010-2011 - Target: Met

AAS 3975: Three reviewers assessed eleven randomly selected papers on the following criteria: Skillful collection of data required for research; exhibition of a careful reading and understanding of social science and humanities research; strong critique of ideas and theories and application to social, cultural, political and economic lives of African American people; and a reflection an understanding and application of interdisciplinary scholarship. Ninety-nine percent (99%) of the students received ratings of 4 or higher on Analytic skills. AAS 4980: Three reviewers assessed four papers on the following criteria: Skillful collection of data required for research; exhibition of a careful reading and understanding of social science and humanities research; strong critique of ideas and theories and application to social, cultural, political and economic lives of African American people; and a reflection an understanding and application of interdisciplinary scholarship. Ninety-nine percent (99%) of the students received ratings of 4 or higher on Analytic skills.

Findings 2010-2011 - Target: Met

AAS 3975: Three reviewers assessed eleven randomly selected papers for clear writing, appropriate punctuation, grammar, syntax, use of APA writing, appropriate citations and plagiarism. Over 96% of the papers received a 4 or higher from each reviewer. AAS 4980: Three reviewers assessed four papers for clear writing, appropriate punctuation, grammar, syntax, use of APA writing, appropriate citations and plagiarism. One hundred percent (100%) of the papers received a 4 or higher from each reviewer.

Findings 2010-2011 - Target: Met
### Target for O3: Demonstrate knowledge of field

80% of the students will receive a score of 3 or higher on acquisition of knowledge.

### Findings 2010-2011 - Target: Met

AAS 3975: Three reviewers assessed eleven randomly selected papers on the following criteria: A clearly stated hypothesis; Reflected multiple levels of data acquisition (primary, secondary, etc); Demonstrated an understanding of a relationship between the lived experiences of African Americans and the Global African community; an applied application of data to understand the impact of societal, economic and political factors on the life chances of people of African descent. Ninety-eight percent (98%) of the papers received a rating of four or higher by all reviewers. AAS 4980: Three reviewers assessed four papers on the following criteria: A clearly stated hypothesis; Reflected multiple levels of data acquisition (primary, secondary, etc); Demonstrated an understanding of a relationship between the lived experiences of African Americans and the Global African community; an applied application of data to understand the impact of societal, economic and political factors on the life chances of people of African descent. Ninety-nine percent (99%) of the papers received a rating of four or higher by all reviewers.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Acquisition of knowledge

This outcome is being met with graduating seniors (AAS 4980) but not students still matriculating at the junior level and below. Consider compartmentalizing the process of synthesizing information to create more manageable and sequential steps for students to follow.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** Medium

  **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Written Assignment
  - **Outcome/Objective:** Demonstrate knowledge of field

  **Implementation Description:** May 2010
  **Projected Completion Date:** 04/2010
  **Responsible Person/Group:** Curriculum committee

  **Additional Resources:** Unsure

#### Analytic

Overall, in analytic reasoning students are performing well with 88% and 75% meeting the achievement goal. Consider additional exercises to improve student performance in AAS 3975.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** Low

  **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Written Assignment
  - **Outcome/Objective:** Demonstrate logical reasoning

  **Implementation Description:** May 2010
  **Projected Completion Date:** 07/2010
  **Responsible Person/Group:** Curriculum committee

#### Communication skills

This outcome is not being met well with lowest performance rate at 66% and 37% for both courses. Consider consulting with the English department to obtain recommendations on how best to improve student writing and grammar.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Written Assignment
  - **Outcome/Objective:** Demonstrate communication skills through writing

  **Implementation Description:** May 2010
  **Projected Completion Date:** 05/2010
  **Responsible Person/Group:** Curriculum committee

  **Additional Resources:** Unsure

#### Action

The assignment will incorporate a purpose or relevance statement which is designed to help students apply the findings of their research to a larger body of work in the field.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Written Assignment
  - **Outcome/Objective:** Demonstrate knowledge of field

  **Implementation Description:** The statement will be incorporated in the course syllabus
  **Responsible Person/Group:** The instructor assigned to the course.

  **Additional Resources:** None
  **Budget Amount Requested:** $0.00 (no request)

#### Monitor trends
The instructor will monitor the current outcomes to assess if there are trends based on student demographics (e.g. major, minor, gender, age, etc).

**Established in Cycle:** 2010-2011  
**Implementation Status:** Planned  
**Priority:** Low  
**Implementation Description:** Download class enrollment data into SPSS for descriptive analysis.  
**Projected Completion Date:** 12/2012  
**Responsible Person/Group:** Instructor  
**Additional Resources:** None  
**Budget Amount Requested:** $0.00 (no request)

---

**Goals**

**G 1: Theory and Application**
At the master's level, African American Studies contributes to the university's broader mission of encouraging theoretical and applied inquiry by engaging in original research that examines ways in which ethnicity and racial identity affects historical, social, and cultural experiences of African-descended people. In so doing we prepare our students to engage in culturally relevant scholarship that improves the life circumstances of African-descended people.

---

**Student Learning Outcomes/Objectives**

**SLO 2: Communication (G: 1) (M: 1)**
Students will be able to articulate verbally and writing emergent areas of research in the field of African American studies.

---

**Other Outcomes/Objectives**

**O/O 1: Analytic (G: 1) (M: 1)**
Students will be able to systematically analyze and critique empirical research.

---

**Measures, Targets, and Findings**

**M 1: Research Proposal (O: 1, 2)**
AAS 6010 teaches first year graduate students how to critically analyze, synthesize, and deconstruct empirical literature to communicate orally and in writing the central tenets of a research problem/opportunity as it pertains to a social issue affecting the African American community. The primary assignment by which this outcome is assess is a research proposal. A panel of three external reviewers will observe and rate student's oral presentation of their research proposal on a rubric of 0-100.

Source of Evidence: Presentation, either individual or group

**Target for O1: Analytic**
AAS 6010: 25% of the students will score at the 25th and 100th percentiles with the remaining 50% between the two.

**Findings 2010-2011 - Target: Met**
AAS 6010: Based upon the aggregate ratings of the three reviewers, one hundred percent of the students scored between the 75th and 100th percentile on the analytic portion of the oral presentation.

**Target for O2: Communication**
AAS 6010: 100% of the students will score above the 80th percentile on the communication portion of the research proposal.

**Findings 2010-2011 - Target: Met**
Based on the aggregate scores of the three reviewers, 100% of the students scored between the 80th and 100th percentile on the communication portion of the research proposal.

---

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Mock Review**
The instructor will establish an external Mock Review process to determine student final research proposals scores increase

**Established in Cycle:** 2010-2011  
**Implementation Status:** Planned
Georgia State University
Assessment Data by Section
2010-2011 Anthropology Assessment of Core

Mission / Purpose
The Anthropology Department participates in the general education core curriculum by offering its signature course, Anth 1102: Introduction to Anthropology. The course elucidates the comparative study of humanity across time and space by offering (1) a holistic understanding of human diversity that requires the study of biological, archaeological, social/cultural, and linguistic anthropology; (2) a cross-cultural and comparative study of humanity; and (3) a consideration of human problems within historical, environmental, political-economic, and sociocultural contexts. Students are given an overview of anthropological research strategies, theories, and practices. Topical foci include human evolution, primate behavior, human variation, prehistory and complex societies, global-local articulations, ideology and power, migrants, immigrants, and refugees in the world system, urban processes and populations, identity politics in multicultural societies, and social reform. The course is an option to satisfy Area E of the core curriculum because contemporary and past cultures and societies, and their precursors, are covered in global and local contexts.

Goals
G 2: Application of anthropological perspectives on contemporary social phenomena
Students should understand the applicability and application of the holistic, biocultural anthropological approach to complex phenomena and contemporary issues among human societies, with particular attention to human diversity.

G 1: Biocultural evolution of humans
Students are expected to understand the linkages between human biology and culture in an evolutionary framework. This is a core element of the anthropological perspective on humanity and a main orientation of the Department of Anthropology at GSU

Student Learning Outcomes/Objectives
SLO 1: Culture and its significance for humanity (G: 1, 2) (M: 1)
Students should understand the concept of culture in shaping human experience and the human condition. Culture is a universal characteristic of human groups, is inextricably linked to human biology and human adaptation, shapes environments and is dynamic and historical. Building on the conceptual foundations of anthropology and exploring examples of cultural manifestations in human groups across space and through time students should become able to distinguish and focus on the cultural bases of human behavior and experience. This objective is particularly significant for cross-cultural communication and competence, and is relevant to institutional goals regarding the global competency of students.

General Education/Core Curriculum Associations
6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

Institutional Priority Associations
2 Student promotion and progression

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Strategic Plan Associations
5.4 Enhance the global competency of students, faculty and staff.

SLO 2: Critique of the race concept (G: 1, 2) (M: 2)
Normal 0 false false false EN-US X-NONE X-NONE MicrosoftInternetExplorer4 Students should understand the multifaceted anthropological critique of the concept of race as used to explain human variation. Race is a major factor in a multitude of contemporary social problems. Through the application of the scientific method and both the natural and social history of humans and human variation, students should become competent in critiquing the race concept from a biological, historical and sociocultural perspective. This outcome is aligned with a number of institutional priorities including learning about the global and cultural reality of human variation, and positioning the self with respect to human cultural and biological diversity.

General Education/Core Curriculum Associations
6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**

1.1 Increase the level of scholarship support for undergraduate students.
5.4 Enhance the global competency of students, faculty and staff.

---

**Measures, Targets, and Findings**

**M 1: Significance of Culture for Humanity (O: 1)**

Students respond to standardized in-class examination questions designed to assess this objective. Examples can be found in the attached document.

Source of Evidence: Standardized test of subject matter knowledge

**Target for O1: Culture and its significance for humanity**

Pooling data from multiple 1102 sections, 80% of students are expected to correctly identify the characteristics and role of culture for humanity.

**Findings 2010-2011 - Target: Met**

Out of the 8 questions considered in this assessment, the lowest score was 89% and the highest was 100%, with an average of over 90% of students correctly identifying the characteristics, roles and manifestations of culture for humanity.

**M 2: Critique of the race concept (O: 2)**

The faculty of the Department of Anthropology has been collaborating to standardize assessment of its learning outcomes/objectives. A shared repository of examination questions is being created for this purpose. Students in all sections are required to respond to several of these questions at in-class examinations. Questions used for this year's assessment can be found in the attached document.

Source of Evidence: Standardized test of subject matter knowledge

**Target for O2: Critique of the race concept**

Pooling data from multiple 1102 sections, 80% of the students are expected to correctly answer examination questions designed to address critical anthropological understandings surrounding the race concept.

**Findings 2010-2011 - Target: Met**

Out of the 4 questions considered for this assessment, the lowest score was 81%, the highest was 96% and the remaining two were 85% correct.

---

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Monitor and encourage students**

Faculty will monitor and encourage students who fail to turn-in their assignments.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** Medium
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Critique of the race concept | Outcome/Objective: Critique of the race concept
- **Implementation Description:** The departmental learning outcomes committee will recommend for the faculty teaching ANTH 1102 to monitor and encourage students who do not complete assignments.
- **Projected Completion Date:** 07/2009
- **Responsible Person/Group:** The departmental learning outcomes committee will target the faculty who teach ANTH 1102.

**Streamlining Instruction, Evaluation and Mentorship**

- The faculty will move forward in developing and implementing streamlined rubrics for assessing student success in critiquing the race concept from a biological and cultural perspective.
- The faculty will continue discussing the possibility of a similar approach in the instruction of the biocultural evolution of humans.
- The faculty will monitor student performance.
- The faculty will mentor and encourage students to complete related assignments.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** Medium
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Critique of the race concept | Outcome/Objective: Critique of the race concept
- **Projected Completion Date:** 11/2010

---

**Streamlining Instruction, Evaluation and Mentorship**

- The faculty will move forward in developing and implementing streamlined rubrics on the critique of the race concept from a biological and cultural standpoint.
- The faculty will continue discussion on whether to implement a similar strategy for the teaching of biocultural evolution in humans.
- The faculty will monitor student performance.
- The faculty will mentor and encourage students to complete related assignments.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** Medium
Integrating Instructional and Testing Tools
- The faculty will continue to develop an integrated approach to the teaching of the anthropological critique to race. This will include:
  1. Further collaborating on instructional techniques and tools and assessments

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: Medium

Stramlining assessment
The faculty will continue to collaborate on developing instruction modules and assessment questions to track student learning on the concept of culture.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Low

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

In this cycle, the department modified its goals as well as measures and targets. Maintaining the focus on biocultural evolution in humans, we added outcomes with respect to the phenomenon of culture and its significance for humanity. For both outcomes, we measured success in relevant multiple-choice examination questions. These changes reflect the department's satisfaction with performance in previously established goals and subsequent shift of attention to additional topical areas. In the coming year we will revisit this cycle’s goals and outcomes, as well as measures and results, and proceed accordingly to amend existing ones or assess different parts of the program. The faculty teaching core courses will consider integrating assessment tools more broadly so as to generate additional data for the next cycle.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

This assessment cycle has solidified our assessment practices. The data indicate a satisfactory degree of student learning associated with the areas under assessment. In the present cycle, this information is used to integrate and further inform teaching and evaluation in all core classes. It is hoped that this will generate more and more detailed data for the next cycle.
Students will demonstrate command of key anthropological concepts, issues and perspectives, and apply critical anthropological theory as well as key research methods pertinent to the field.

**G 3: Communication skills**
Students will communicate effectively and as appropriate to the field in speech and writing.

### Student Learning Outcomes/Objectives

**SLO 1: Holistic and comparative curriculum (G: 1, 2, 3) (M: 3)**
To achieve the goals of a holistic and comparative curriculum, students apply key concepts, issues and methods relevant to each anthropological subfield by completing specialized projects in each of the three mandatory specialized survey courses for biological, cultural and archaeological anthropology. By graduation, students demonstrate their synthetic and cumulative understanding and analysis through their research and writing in the mandatory senior seminar course.

#### Institutional Priority Associations
- 1 Student retention
- 2 Student promotion and progression
- 3 Timely graduation

#### Standard Associations
- 1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

#### Strategic Plan Associations
- 1.5 Other efforts in support of Goal 1 (Undergraduate Education).

**SLO 2: Content knowledge and application (G: 1, 2, 3) (M: 1, 2, 3)**
Under the premise that learning is best achieved through application, students identify, utilize and/or critique fundamental anthropological concepts, theory and methodology in cultural, biological, and archaeological anthropology, through conducting original research and evaluating current, peer-reviewed research in the field. Selected projects serve as gauges of student learning.

#### Standard Associations
- 1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 3: Competence in oral and written communication (G: 2, 3) (M: 1, 2, 3)**
Students will interpret and produce communication in speech and writing appropriate to the discipline

#### Standard Associations
- 1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

### Measures, Targets, and Findings

#### M 1: Archaeology - Garbology project (O: 2, 3)
Students apply fundamental archaeological concepts and methods by conducting a mini archaeological investigation of garbage. Students describe, classify and analyze material evidence, through which to reconstruct a profile of daily practice and its agents. Data collection and analysis culminates in a report in which students critically interpret the data to support or disprove their hypotheses. Evaluation is based on the quality of the content of the report (collection and analysis methods), the quality of the interpretation of findings (testing hypotheses through data), and the quality of writing in terms of organization and competent, academic English prose. See attached document for details.

**Target for O2: Content knowledge and application**
- 0 students will receive a score under 16, demonstrating satisfactory ability to apply fundamental archaeological concepts and methods - Average student scores will be 17 or above, demonstrating students’ superior use of methods, critical analysis and interpretation of material remains, to reconstruct lived experience

**Findings 2010-2011 - Target: Met**
Student average score was 17.5, while the score range was 17-19. One person received a score of 8 but this reflects a penalty for late submission and not the quality of the student's work.

**Target for O3: Competence in oral and written communication**
Students communicate in clear, organized, grammatically correct prose

**Findings 2010-2011 - Target: Met**
Students communicated their findings and analysis using a discipline appropriate combination of data presentation in tables, analysis and interpretive narrative. Writing was satisfactory to very satisfactory in all cases.

#### M 2: Cultural Anthropology - Mini Ethnography (O: 2, 3)
Students in ANTH 2020 - Introduction to Cultural Anthropology formulate and conduct a short, original ethnographic project in which they a. Demonstrate understanding of a. the concept of culture, b. cultural relativism and c. anthropological ethics by applying them to a short examination of an aspect of urban life b. Identify, design and conduct ethnographic data collection c. Produce an ethnographic narrative Student's work is evaluated using the following axes. The overall quality of the work is holistically evaluated in
terms of the following criteria. These axes are unequally weighted and presented here in an order of decreasing significance. A. Topic: The student identifies an appropriate topic and formulates a research question, contextualizing it in the culture concept B. Methodology: The student directs evidence and ethnographic details in the narrative, effectively addressing the initial topic or question D. Writing: The student writes in correct English prose. The narrative is clear, organized and grammatically correct. See attached document for details

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Content knowledge and application**
The maximum score for the assignment is 37.5 points, unequally weighted across the 4 axes. Criteria 1, 2 and 3 are most relevant for this objective. The achievement target for this exercise is that - 0 students will receive unsatisfactory scores (below 25) - The average scores will be between 30 and 37.5 reflecting Satisfactory or Superior performance.

**Findings 2010-2011 - Target: Partially Met**
The breakdown in the 10-11 cycle was as follows: - 1 student did not return the assignment resulting in a score of 0 - 1 student turned in the assignment very late resulting in a significant penalty for a score of 15 - Beyond these two cases, all students scored 25 and above. 2 students scored between 25 and 30, while the other 47 students scored 33 and above. 36 of these scored 36+ points, demonstrating superior performance on all axes.

**Target for O3: Competence in oral and written communication**
Satisfactory or superior writing is required for scores over 35. The achievement target for this exercise is that - 0 students will receive unsatisfactory scores (below 25) - The average scores will be between 30 and 37.5 - Most students will score over 35 points, reflecting superior ability to construct an ethnographic narrative in proper English prose.

**Findings 2010-2011 - Target: Partially Met**
- 2 students received a score under 25 though in both cases this had to do with problems completing the assignment on time. 1 student received a score of 25 though written communication was not the only problem. The student misunderstood the assignment - 41 students (81%) received a score over 35 demonstrating superior writing skills.

**M 3: CTW Senor Seminar (O: 1, 2, 3)**
Normal O The Senior Seminar is the capstone course for the department of anthropology. Through a series of projects, students synthesize knowledge and demonstrate their topical, theoretical and methodological training in the discipline through original work and presentations. The Senior Seminar is taught as a Critical Thinking through Writing (CTW) course. The projects required the following: 1 - Identify theory and method in others’ work 2 - Produce a title and abstract for own research to be presented in the course 3 - Produce a CV and personal statement 4 - Produce a self-reflexive article 5 - Compose a mini-grant proposal 6 - Compile a teaching portfolio 7 - Deliver a conference-style presentation Evaluation was based on a CTW rubric developed by the department, and a WAC rubric. Please see attached documents for details.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Holistic and comparative curriculum**
Students critically and reflexively analyze anthropological work.

**Findings 2010-2011 - Target: Met**
Graduating students critically and analyzed peer-reviewed work of their choice.

**Target for O2: Content knowledge and application**
Students were expected to score on average below 2 on the CTW Anthropology rubric, and above 4 on the WAC rubric, for all assignments. Normal O

**Findings 2010-2011 - Target: Partially Met**
For each assignment, the average scores for students were between 1 and 2 on the Anthropology CTW rubric. For the WAC rubric, average scores were between 4 and 5 with no individual scores below 3

**Target for O3: Competence in oral and written communication**
Students were expected to score between 1 and 2 on their written projects and oral presentations, as outlined by the departmental CTW rubric and the WAC rubric.

**Findings 2010-2011 - Target: Partially Met**
Students displayed competence in academic English prose, with their best work emerging in reflective and original research assignments, in both writing and oral presentation. Some issues with punctuation and proper citation format were present. A few students had problems tailoring their writing to the intended audience.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**
**Faculty collaboration and student mentoring**
The faculty will collaborate to mentor students in identifying theoretical and methodological constructs, and tailor written and oral communication to intended audiences.

**Established in Cycle:** 2009-2010
**Implementation Status:** Planned
**Priority:** Medium

**Relationships (Measure | Outcome/Objective):**
Restructuring assignments and their sequencing

- Restructure writing assignments as incremental steps feeding into a final project for the course - Further integrate and coordinate curricular development with the rest of the faculty - Further utilize the capabilities of the Online Writing Environment

  Established in Cycle: 2009-2010
  Implementation Status: Planned
  Priority: Medium

Clarity objectives through discussion and examples

Most students' performance indicated that they successfully assimilated and applied the targeted concepts and methods. The two biggest challenges that require improvement however were a. to properly contextualize and formulate a research question out of the cultural topic students identified and b. to properly present data to support their conclusions. This will be addressed by a. explicitly discussing these issues in class and b. offering examples of proper use of evidence to support argumentation in an ethnographic context.

  Established in Cycle: 2010-2011
  Implementation Status: Planned
  Priority: Medium

Identifying intended audience

The instructor will focus on clarifying to the students the intended audience for each writing assignment.

  Established in Cycle: 2010-2011
  Implementation Status: Planned
  Priority: Medium

Relating theory to empirical evidence

The instructor has identified and will adopt a new text for the purpose of helping students identify and relate anthropological concepts and theory to both contemporary academic work and their own daily life and experience.

  Established in Cycle: 2010-2011
  Implementation Status: Planned
  Priority: Medium

Writing assistance

Students will be given access to the pamphlet-format grammar and style guide presenting the most common grammatical errors GSU students make. They will be encouraged to utilize the writing studio as well as to share drafts of their work with the instructor and/or the teaching assistant for review.

  Established in Cycle: 2010-2011
  Implementation Status: Planned
  Priority: Low

ACADEMIC PROGRAM QUESTION 1:

What changes in the assessment process has your degree program made since last year's assessment report?
Since the previous assessment cycle, the department has reconsidered its assessment tools and adopted measures that reflect our concern with theoretical and methodological application of knowledge through research projects in all subdisciplines. These changes were made to capture learning demonstrated by students through direct implementation of classroom knowledge. In the coming year we will revisit these projects and consider expanding their use and scope.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The assessment data from this cycle show strong learning outcomes and indicate a satisfactory structure and implementation for the program. The data indicate the usefulness of assessment based on projects that require the application of knowledge gained in the classroom. They will serve to inform a wider adoption of project-format assessments in the core academic nodes of the program.

---

**Mission / Purpose**

The Department of Anthropology offers a Master of Arts in Anthropology. Graduate education in anthropology emphasizes research and teaching on urban contexts, processes, and populations. Students receive rigorous training in local, regional, and global transformations, quantitative and qualitative research methods, and theories of nature, society, and culture. In addition to intellectual maturity, students gain practical skills, including proposal writing, project development, field research, ethnography and ethnographic needs-assessments, community development, and program evaluation. Graduate students are trained in theories, methods, topics, and skills within the discipline and each of its sub-fields. They are encouraged to write a thesis based on independent empirical research, or in collaboration with faculty. Alternatively, students may complete a practicum, in a variety of contexts and human service organizations. Students who obtain a MA in anthropology pursue doctoral studies, or seek employment as professional anthropologists with museums, CRM firms, the CDC, and various NGOs.

**Goals**

**G 1: Content and Method Competency**

Students will firmly ground their research in a broad and relevant body of anthropological knowledge in their field of study. They will demonstrate capacity in a) theory, b) field/area of study and c) appropriate methodologies.

**G 2: Contributing to Anthropological Knowledge and Practice**

Students will demonstrate competence in the practice of anthropology by producing original research in their specific subfield.

**Student Learning Outcomes/Objectives**

**SLO 1: Synthesizing knowledge (G: 1) (M: 1)**

Students will collect, synthesize, analyze and effectively communicate a broad body of anthropological knowledge, theory and methodology framing their particular research interests.

- **Standard Associations**
  - 1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 2: Producing Original Research (G: 1, 2) (M: 2)**

Students will design, conduct, analyze and present original research in writing and orally. The work of design, data collection in the field, analysis and write-up will be conducted in close interaction with the student's adviser and evaluated by the adviser, and members of the student's thesis committee, selected for their expertise in the relevant field of interest.

- **Standard Associations**
  - 1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

- **Strategic Plan Associations**
  - 2.2 Leverage our national reputation in professional degree programs for the development of societal leaders.

**Measures, Targets, and Findings**

**M 1: MA comprehensive exam (O: 1)**

The graduate students are assessed individually by their committees, which consist of three regular university faculty members, two of whom must be Department faculty members. The comprehensive exam is tailored to each graduate student's interest and is written by the student's major advisor. The three questions include (1) the field of inquiry, (2) theory pertaining to the research, and (3) method to be employed in the research. The graduate students are asked to write 7-10 pages for each question, and to return the completed exam to each committee member within two weeks. The exam is then evaluated; the advisor, in consultation with the committee, rates the exam as a pass, contingent pass or fail. The Anthropology Graduate Program Director was consulted to obtain
data on the number students who took the comprehensive exam. Data recorded included (1) the number of students who took the comprehensive exam, (2) the number of students who successfully passed the exam on the first attempt, (3) the number of students who encountered problems with passing the exam, and (4) the number of students who ultimately passed the comprehensive exam.

Source of Evidence: Writing exam to assure certain proficiency level

</thead>
<tbody>
<tr>
<td><strong>ACADEMIC PROGRAM QUESTION 1:</strong> What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?</td>
</tr>
</tbody>
</table>

The program has moved to more clearly define its goals and targets with respect to students demonstrating competence in the key areas of theoretical framing, research methodology and implementation/analysis of research. The Faculty has several conversations with respect to the assessment of student performance and resolved to more closely monitor students' progress throughout the degree program in order to address issues early and encourage continuously rising standards. |

| **ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain. |

The department is overall pleased with the results of this cycle’s assessment and has used these data to discuss strategies to coordinate student evaluation practices over the course of the program in order to encourage continuous improvement in student performance. This year’s assessment will contribute to this conversation, particularly with respect to instituting early alerts. |
**Mission / Purpose**

Normal 0 false false false EN-US X-NONE X-NONE The B.A. in Applied Linguistics provides a thorough grounding in the study of language structure, use, and acquisition to prepare students for a variety of options for employment or further study in fields in which the scientific study of language is significant, e.g: language teaching (including English as a second/foreign language), anthropology, speech and hearing science, psychology, cognitive science, lexicography, and text and discourse analysis.

**Student Learning Outcomes/Objectives**

**SLO 1: Core areas of linguistics (M: 1)**
Students demonstrate understanding of the core areas within linguistic study: phonetics, phonology, morphology, and syntax.

**SLO 2: Foundations of language acquisition (M: 2)**
Students demonstrate understanding of what is involved in the acquisition and development of language including its biological and social foundations.

**SLO 3: Key concepts in sociolinguistics (M: 3)**
Students will demonstrate their understanding of sociolinguistics, i.e., the study of variation in language form and use associated with social, situational, temporal, and geographic influences.

**SLO 4: Analysis of linguistic structure (M: 4)**
Students acquire the skills to analyze language structure (e.g., sound structure, word & sentence structures, discourse structure).

**SLO 5: Written Communication and Editing Skills (M: 5)**
Students develop effective written communication and editing skills.

**Measures, Targets, and Findings**

**M 1: Final examinations in core courses (O: 1)**
At least 80% of students will score at least 70% on the final examinations in AL 3021 (Introduction to Linguistics), AL 4011 (Phonetics and Phonology), and AL 4012 (Morphology and Syntax)
Source of Evidence: Faculty pre-test / post-test of knowledge mastery

**Target for O1: Core areas of linguistics**
80% of students will score at least 70% on the final exams in AL 3021, AL 4011 and AL 4012

**Findings 2010-2011 - Target: Partially Met**
73% of students achieved at least 70% in AL 3021 and 86.5 and 88% achieved at least 70% in AL 4011 and AL 4012, respectively.

**M 2: Exam results in SLA (O: 2)**
Performance on final examination in AL 3041: Second Language Acquisition will be documented.
Source of Evidence: Academic direct measure of learning - other

**Target for O2: Foundations of language acquisition**
At least 80% of students will score at least 70% on the final project in AL 3041

**Findings 2010-2011 - Target: Met**
93% of students scored at least 70% on the final project in AL 3041.

**M 3: Language in Society paper (O: 3)**
The final paper in AL 3031 is graded on a rubric that includes the following categories: (A) identifies values and assumptions that underlie different perspectives; (B) shows awareness of prejudicial aspects of the problem; (C) presents convincing arguments based on linguistic principles; (D) draws reasonable conclusions. The percentage of students scoring at least "competent" on these four areas will be tabulated.
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Key concepts in sociolinguistics**
At least 80% of students will be judged "competent" or "sophisticated" on all four relevant criteria on the rubric
Findings 2010-2011 - Target: Met

88% of students were judged "competent" or "sophisticated" on all four relevant criteria on the rubric

M 4: Performance on language analysis problems (O: 4)
The final examinations in AL 4011 (Phonetics & Phonology) and AL 4012 (Morphology & Syntax) consist primarily of language analysis problems. The number of students scoring at least 70% on these examinations will be tabulated.

Source of Evidence: Academic direct measure of learning - other

Target for O4: Analysis of linguistic structure
80% of students will score at least 70% on the final examinations in AL 4011 and AL 4012

Findings 2010-2011 - Target: Met
86.5% of students in AL 4011 and 88% of students in AL 4012 scored at least 70% on the final examinations.

M 5: Writing assignments in required courses (O: 5)
The final paper in AL 3031 (Language in Society) is rated on a 4 point rubric in five areas. One of these areas is "presents ideas clearly and in a well-organized fashion." The number of students who score "competent" or "sophisticated" in this area will be tabulated.

Source of Evidence: Writing exam to assure certain proficiency level

Target for O5: Written Communication and Editing Skills
80% of students will be judged as competent or sophisticated in the area of "presents ideas clearly and in a well-organized fashion"

Findings 2010-2011 - Target: Partially Met
88% of students in AL 3021 and 76% of students in AL 4161 were judged as competent or sophisticated in the area of "presents ideas clearly and in a well-organized fashion"

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Increasing research-related activities in courses
It is not clear from our assessment that students are gaining sufficient experience in reading published applied linguistics research and carrying out their own research. The undergraduate committee will investigate options for increasing such opportunities within courses and/or within the department in general.

Established in Cycle: 2007-2008
Implementation Status: In-Progress
Priority: High
Implementation Description: With primary research now required in all AL CTW courses, the second aspect of this action plan has been implemented. With regard to exposure to published research, syllabi for all required AL major courses will be solicited and examined for incorporation of foundational and current publications in course readings. Findings will be reported in the next cycle.
Responsible Person/Group: Kris Acheson-Clair

Reweave current measures
In completing our assessment for the first year of our BA program, we realize that our measures are too gross to give us helpful information about improving our curriculum. Thus a committee will reassess the current measures and propose additional measures that can target specific outcomes more effectively.

Established in Cycle: 2007-2008
Implementation Status: Finished
Priority: High
Implementation Description: New measures were developed and implemented for the new set of objectives revised in the 2011-2012 cycle. As an example, assessments specifically measuring linguistic analysis are used across 3 courses for the program objective on demonstrating linguistic analysis skills.
Responsible Person/Group: Lucy Pickering/Undergraduate Committee

Changes to student learning outcomes and associated measures
We are reconsidering our learning outcomes and associated measures as we are making program changes to the BA in Applied Linguistics. These program changes are currently under review and have not yet been implemented. We are working on the following: Outcome 2 & its related measure will need to be changed to reflect the fact that AL 3041 will no longer be a required course
Outcomes 1 & 4 need to be more explicitly differentiated
Outcomes will need to reflect two new required CTW courses: Language in Society and Communication across Cultures.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High

Analysis of linguistic structure – revise measure
In the next cycle we will be adding a measure from data analysis problems for AL 3041.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Performance on language analysis problems | Outcome/Objective: Analysis of linguistic structure

Responsible Person/Group: Kris Acheson-Clair
For the next cycle we will add a new outcome related to inculcative competence and cultural discovery skills along with associated measures.

- Established in Cycle: 2010-2011
- Implementation Status: Planned
- Priority: High
- Projected Completion Date: 12/2011
- Responsible Person/Group: Kris Acheson-Clair

This is no longer a core outcome for our program and we will be eliminating this outcome in the next cycle.

- Established in Cycle: 2010-2011
- Implementation Status: In-Progress
- Priority: High

In AL 4161, where the achievement target was not met, we have revised preliminary writing assignments to better build towards the final paper. We will continue to monitor this outcome.

- Established in Cycle: 2010-2011
- Implementation Status: Finished
- Priority: High

Currently we are using the final examinations for 3 courses to measure this outcome but in the future we will only use the final exam from AL 3021. We are exploring other ways of measuring this outcome and/or changing the achievement target.

- Established in Cycle: 2010-2011
- Implementation Status: In-Progress
- Priority: High

The Master's degree in Applied Linguistics integrates the study of linguistic theory with practical applications and focuses on the language acquisition needs of the adult or near-adult learner of an additional language. Students receive the theoretical and practical foundational knowledge needed to teach language at the postsecondary level and to progress to doctoral work in applied linguistics or other language-study or language-teaching related areas.

**Mission / Purpose**

**Student Learning Outcomes/Objectives**

**SLO 1: Knowledge of linguistic systems of English (M: 4, 5)**
Demonstrates knowledge of the linguistic systems of English phonology, grammar, and discourse

**SLO 2: Teaching methodology (M: 3, 4, 5, 7)**
Applies the basic principles of ESL/EFL learning and teaching methodology

**SLO 3: Professional development (M: 1, 4, 8)**
Conducts and participates in professional development activities

**SLO 4: Technology (M: 2, 4, 5)**
Uses technology effectively in research and teaching

**SLO 5: Communication (M: 2, 3, 4, 5, 6)**
Communicates effectively in both written and oral language in English
### SLO 6: Connecting theory and practice (M: 4, 5, 6, 7)
Analyzes and critiques theory and practice of L2 teaching and learning

### SLO 7: Cultural knowledge (M: 4, 5)
Uses cultural knowledge in second language learning and teaching

### Measures, Targets, and Findings

#### M 1: Number of presentations/publications (O: 3)
Advisors count the number of conference presentations and/or publications for each student.
Source of Evidence: Academic indirect indicator of learning - other

**Target for O3: Professional development**
50% of graduating students will have made at least one conference presentation or written at least one published article.

**Findings 2010-2011 - Target: Met**
67% of graduating students made at least one conference presentation or wrote at least one published article.

#### M 2: Oral presentation of Master’s paper (O: 4, 5)
During their final semester, students make a formal oral presentation of their Master’s paper. Two faculty members rate the paper for clarity, organization, effective use of visual aids, and overall presentation.
Source of Evidence: Presentation, either individual or group

**Target for O4: Technology**
90% of students will score "good" or "excellent" on their use of technology in presentations.

**Findings 2010-2011 - Target: Met**
96% of the students scored "good" or "excellent" on their use of technology in presentations.

**Target for O5: Communication**
90% of students will score "good" or "excellent" on the overall scores for their presentations.

**Findings 2010-2011 - Target: Met**
96% of the students scored "good" or "excellent" on the overall scores for their presentations.

#### M 3: Teaching performance and videotapes (O: 2, 5)
Students are videotaped teaching a lesson to their peers in AL 8900: Practicum, a required course in the program. The instructor rates the students on a rubric evaluating teaching effectiveness (outcome 1) and oral communication (outcome 5).
Source of Evidence: Performance (recital, exhibit, science project)

**Target for O2: Teaching methodology**
90% of students will meet or exceed expectations for their videotaped teaching performance.

**Findings 2010-2011 - Target: Met**
100% of the students scored "good" or "excellent" on the overall scores for their presentations.

**Target for O5: Communication**
90% of students will meet or exceed expectations for their videotaped teaching performance.

**Findings 2010-2011 - Target: Met**
100% of the students met or exceeded expectations for their videotaped teaching performance for the outcome "teaching methodology".

#### M 4: Survey of graduating students (O: 1, 2, 3, 4, 5, 6, 7)
Students who graduated between Summer 2008 and Spring 2009 were asked to complete a web-based survey investigating their perceptions of how confident they feel about the areas covered in the learning outcomes.
Source of Evidence: Alumni survey or tracking of alumni achievements

**Target for O1: Knowledge of linguistic systems of English**
90% of graduating students will report confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "knowledge of linguistic systems of English".

**Findings 2010-2011 - Target: Met**
100% of graduating students will report confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "knowledge of linguistic systems of English".
Target for **O2: Teaching methodology**

90% of graduating students will report confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "teaching methodology".

**Findings 2010-2011 - Target: Met**

100% of graduating students reported confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "teaching methodology".

Target for **O3: Professional development**

90% of graduating students will report confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "professional development".

**Findings 2010-2011 - Target: Met**

100% of graduating students reported confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "professional development".

Target for **O4: Technology**

90% of graduating students will report confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "technology".

**Findings 2010-2011 - Target: Met**

92% of graduating students reported confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "technology".

Target for **O5: Communication**

90% of graduating students will report confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "communication".

**Findings 2010-2011 - Target: Met**

100% of graduating students reported confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "communication".

Target for **O6: Connecting theory and practice**

90% of graduating students will report confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "connecting theory and practice".

**Findings 2010-2011 - Target: Met**

100% of graduating students reported confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "connecting theory and practice".

Target for **O7: Cultural knowledge**

90% of graduating students will report confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "cultural knowledge".

**Findings 2010-2011 - Target: Met**

100% of graduating students reported confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "cultural knowledge".

**M 5: Syllabi (O: 1, 2, 4, 5, 6, 7)**

Syllabi for all required courses were collected by the Chair and examined for the presence or absence of specific learning outcomes. Source of Evidence: Curriculum/syllabus analysis of course to program

Target for **O1: Knowledge of linguistic systems of English**

The syllabus for at least one required course will contain "knowledge of linguistic systems of English" as a learning outcome.

Target for **O2: Teaching methodology**

The syllabus for at least one required course will contain "teaching methodology" as a learning outcome.

Target for **O4: Technology**

The syllabus for at least one required course will contain "technology" as a learning outcome.

Target for **O5: Communication**

The syllabus for at least one required course will contain "communication" as a learning outcome.

Target for **O6: Connecting theory and practice**

The syllabus for at least one required course will contain "connecting theory and practice" as a learning outcome.
Target for **O7: Cultural knowledge**
The syllabus for at least one required course will contain "cultural knowledge" as a learning outcome.

**M 6: Master’s papers (O: 5, 6)**
Two faculty members evaluate each graduating student's master's papers in four areas: (a) connecting theory with practice; (b) scholarship; (c) writing; (d) appropriate formatting/referencing.
Source of Evidence: Senior thesis or culminating major project

Target for **O5: Communication**
90% of students will be rated "excellent" or "good" in writing and formatting/referencing (Outcome 5).

**Findings 2010-2011 - Target: Met**
92% of the students were rated "excellent" or "good" in writing and formatting/referencing.

Target for **O6: Connecting theory and practice**
90% of students will be rated "excellent" or "good" in connecting theory to practice and scholarship (Outcome 4).

**Findings 2010-2011 - Target: Partially Met**
88% of the students were rated "excellent" or "good" in connecting theory to practice and scholarship

**M 7: Classroom-based experience forms and reflections (O: 2, 6)**
Students are required to complete 90 hours of classroom-based experience (CBE) during their program. Advisors certify that their advisees have completed this requirement by submitting two documents each semester: a form signed by the student’s supervisor certifying that the CBE has been completed, and a reflective essay in which the student draws connections between the CBE and what has been learned in coursework.
Source of Evidence: Performance (recital, exhibit, science project)

Target for **O2: Teaching methodology**
100% of students will complete this requirement.

**Findings 2010-2011 - Target: Met**
100% of students completed the requirement.

Target for **O6: Connecting theory and practice**
100% of students will complete this requirement.

**Findings 2010-2011 - Target: Met**
100% of students completed the requirement.

**M 8: Professional development activities (O: 3)**
Students are required to participate in two professional development (PD) activities each semester they are in the program. They document this experience by submitting a reflective essay about each PD activity to their advisor.
Source of Evidence: Academic indirect indicator of learning - other

Target for **O3: Professional development**
100% of students will complete the PD requirement.

**Findings 2010-2011 - Target: Met**
100% of graduating students completed all required PD activities.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Connecting theory and practice: Confidence level**
MA advisors will encourage students to reflect on and explicitly discuss in their MA portfolio reflective overview how they have learned to link theory and practice. The MA Committee will begin looking at three-year trends rather than just the limited survey responses obtained in any single year to determine how well the program is helping students make theory/practice connections.

**Established in Cycle:** 2009-2010
**Implementation Status:** Planned
**Priority:** High
**Relationships (Measure | Outcome/Objective):**
- Measure: Survey of graduating students | Outcome/Objective: Connecting theory and practice

**Implementation Description:** MA advisors and MA Paper readers will oversee and support students’ written discussions of connections between theory and practice. The MA Committee will analyze relevant survey responses over a three-year span.

**Projected Completion Date:** 04/2011
**Responsible Person/Group:** MA advisors

**Professional development: Presentations and publications**
Graduate faculty will encourage and offer more scaffolding, in the form of workshops, for conference participation. *Conference
participation” itself will be re-conceptualized by the graduate faculty to be more inclusive of a number of relevant professional activities, such as training sessions for fellow teachers, that graduate students may engage in as novice professionals.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Implementation Description: Graduate faculty will offer workshops for MA students. The "conference participation" measure will be reconceptualized and rephrased.
Projected Completion Date: 04/2011
Responsible Person/Group: Department graduate faculty

MA paper scholarship and theory/practice connections enhancement

The two faculty readers of each MA paper will be urged to give feedback specifically on scholarship and theory and practice connections on an early draft of the MA paper and work more closely with students who have difficulty in these areas. Additional drafts will be required if the student continues to struggle in these areas.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
Measure: Master’s papers | Outcome/Objective: Connecting theory and practice
Implementation Description: The Director of Graduate Studies will send queries to graduate faculty each semester regarding the status of in-progress MA papers and will meet with faculty who wish to discuss further intervention needed for individual students.
Responsible Person/Group: Director of Graduate Studies

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Changes were not made. In the coming year, the rubric for assessing the microteaching video, i.e., for evaluating teaching methodology, will be revisited and possibly revised. A rubric for assessing classroom-based experience will be proposed.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

This past year’s assessment confirms that our new technology course elective is improving students’ technology use self-confidence, judging by students’ self-reports on the alumni survey and actual use of technology in presentations. For the MA paper, faculty readers will be urged to provide more direction and feedback on explicit linking of theory and practice in the students’ papers.

Georgia State University
Assessment Data by Section
2010-2011 Applied Linguistics PhD
As of: 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The Department of Applied Linguistics and English as a Second Language at Georgia State University, one of the few departments of its kind in the United States, offers a PhD in applied linguistics to prepare students to conduct research on adult language learning and teaching and to function as graduate-level educators in programs training language education professionals. Students in the program have an opportunity to work with graduate faculty who specialize in various areas of applied linguistics. The faculty are committed to teaching and research productivity, and are especially interested in mentoring and collaborating with novice members of the profession.

Student Learning Outcomes/Objectives

SLO 1: Teaching experience (M: 4)
Graduates will be experienced teachers

SLO 2: Research methodology (M: 1, 3)
Graduates will be able to design studies on a range of topics in applied linguistics (e.g. second language acquisition, second language teaching, and English for academic purposes)

SLO 3: Familiarity with Applied Linguistics (M: 1, 2, 3)
Graduates of the program will be familiar with the current state of knowledge in applied linguistics, including the numerous questions that remain to be answered

SLO 4: Professional development (M: 1)
Graduates will have begun contributing to the knowledge-base of applied linguistics through presentation of papers at conferences
and through publication

### Measures, Targets, and Findings

#### M 1: Professional development (O: 2, 3, 4)
Graduate students are expected to begin presenting regularly at conferences and to publish in scholarly journals.
Source of Evidence: Academic indirect indicator of learning - other

**Target for O2: Research methodology**
At least 50% of graduate students in their second year or beyond will present at least one paper at a conference or publish a scholarly paper annually.

**Target for O4: Professional development**
At least 50% of graduate students in their second year or beyond will present at least one paper at a conference or publish a scholarly paper annually.

#### M 2: Qualifying papers (O: 3)
The purpose of the Qualifying Paper (QP) is for the PhD candidate to demonstrate strong writing abilities. When reading the completed QP, faculty should recognize the voice of a scholar-writer who is ready to progress to the next stages of the PhD program.
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Familiarity with Applied Linguistics**
90% of students will pass the qualifying paper requirement.

#### M 3: Comprehensive examinations (O: 2, 3)
The Comprehensive Exam (CE) consists of three examination questions, which the student has two weeks to answer. The questions require the student to address issues in theory, research methodology, research topics of importance in the field, and/or topics related to the student's intended dissertation research. At least one of the topics requires consideration of issues that overlap the boundaries between language, cognition and communication and language teaching and language teacher development.
Source of Evidence: Comprehensive/end-of-program subject matter exam

**Target for O2: Research methodology**
90% of students will pass their comprehensive examinations.

**Target for O3: Familiarity with Applied Linguistics**
90% of students will pass their comprehensive examinations.

#### M 4: Teaching experience (O: 1)
Students will graduate with substantial teaching experience in the Intensive English Program and in undergraduate courses in Applied Linguistics.
Source of Evidence: Academic indirect indicator of learning - other

**Target for O1: Teaching experience**
100% of students will teach at least 4 semesters at GSU. 90% of students will teach at least two undergraduate courses.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

revisiting/revamping PhD assessment
mission outcomes goals

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High

Georgia State University
Assessment Data by Section
2010-2011 Art Studio MFA
As of: 12/12/2010 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

### Mission / Purpose
The mission of the Studio Art MFA Program within the School of Art and Design is to provide a rigorous, comprehensive and accessible graduate education in the visual arts and art history to a diverse urban constituency. This mission extends to the University at large, to the community and beyond, with the recognition that visual literacy is essential to imagination, creativity and the articulation of ideas in all fields. We address this mission in the following ways: +/-Provide students with sophisticated critical thinking
and visual literacy skills • Expand students understanding as practitioners, scholars and advocates of the visual arts • Prepare students to be competitive in an increasingly technological, interdisciplinary and theoretical art world • Engage and collaborate with local state, regional, national and global institutions and communities to provide enhanced visual arts opportunities to students and the community.

### Student Learning Outcomes/Objectives

**SLO 1: Theoretical and critical thinking (M: 1, 3)**
Knowledge of art criticism and theory and facility in applying theory and critical thinking to visual analysis.

**SLO 2: Contemporary contextual knowledge (M: 1, 3)**
Informed of contemporary art and its relationship to the history of the discipline

**SLO 3: Advanced research skills (M: 1, 3)**
Ability to thoroughly investigate and critically analyze research results

**SLO 4: Professional practice (M: 1, 3)**
Professional presentation of studio work, polished representation of self on paper, fluency in discussing own work, demonstration of self-assessment skills.

### Strategic Plan Associations

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

### Measures, Targets, and Findings

**M 1: Thesis Paper (O: 1, 2, 3, 4)**
Written paper detailing multiple aspects of studio practice.

**Target for O1: Theoretical and critical thinking**
With possible scores of 1 = Poor, 2 = Average, 3 = Very Good, and 4 = Excellent, achievement target is 3.5.

**Findings 2010-2011 - Target: Partially Met**
Of 8 students evaluated, the results were: 1 Poor = 0, 2 Average = 2, 3 Very Good = 1, 4 Excellent = 5.

**Target for O2: Contemporary contextual knowledge**
With possible scores of 1 = Poor, 2 = Average, 3 = Very Good, and 4 = Excellent, achievement target is 3.5.

**Findings 2010-2011 - Target: Partially Met**
Of 8 students evaluated, the results were: 1 Poor = 0, 2 Average = 1, 3 Very Good = 4, 4 Excellent = 3.

**Target for O3: Advanced research skills**
With possible scores of 1 = Poor, 2 = Average, 3 = Very Good, and 4 = Excellent, achievement target is 3.5.

**Findings 2010-2011 - Target: Partially Met**
Of 8 students evaluated, the results were: 1 Poor = 0, 2 Average = 0, 3 Very Good = 2, 4 Excellent = 6.

**Target for O4: Professional practice**
With possible scores of 1 = Poor, 2 = Average, 3 = Very Good, and 4 = Excellent, achievement target is 3.5.

**Findings 2010-2011 - Target: Partially Met**
Of 8 students evaluated, the results were: 1 Poor = 0, 2 Average = 0, 3 Very Good = 2, 4 Excellent = 6.

**M 3: MFA Solo Exhibition with Statement and Resume (O: 1, 2, 3, 4)**
A solo exhibition of work done in last two semesters of graduate study accompanied by an artist statement and resume.

**Source of Evidence: Portfolio, showing skill development or best work**

**Target for O1: Theoretical and critical thinking**
With possible scores of 1 = Poor, 2 = Average, 3 = Very Good, and 4 = Excellent, achievement target is 3.5.

**Findings 2010-2011 - Target: Partially Met**
Of 8 students evaluated, the results were: 1 Poor = 0, 2 Average = 2, 3 Very Good = 1, 4 Excellent = 5.

**Target for O2: Contemporary contextual knowledge**
With possible scores of 1 = Poor, 2 = Average, 3 = Very Good, and 4 = Excellent, achievement target is 3.5.

**Findings 2010-2011 - Target: Partially Met**
Of 8 students evaluated, the results were: 1 Poor = 0, 2 Average = 1, 3 Very Good = 4, 4 Excellent = 3.
Of 8 students evaluated, the results were: 1 Poor = 0, 2 Average = 1, 3 Very Good = 4, 4 Excellent = 3.

### Target for O3: Advanced research skills

With possible scores of 1 = Poor, 2 = Average, 3 = Very Good, and 4 = Excellent, achievement target is 3.5.

**Findings 2010-2011 - Target: Partially Met**

Of 8 students evaluated, the results were: 1 Poor = 0, 2 Average = 0, 3 Very Good = 2, 4 Excellent = 6.

### Target for O4: Professional practice

With possible scores of 1 = Poor, 2 = Average, 3 = Very Good, and 4 = Excellent, achievement target is 3.5.

**Findings 2010-2011 - Target: Met**

Of 8 students evaluated, the results were: 1 Poor = 0, 2 Average = 0, 3 Very Good = 2, 4 Excellent = 6.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Formation of 3-D program

The Ceramics area and Sculpture area will join to form a 3-D program. This will allow students from both disciplines to enroll in the same Directed Study and Graduate Seminar course under the direction of one faculty member. By forming a larger critical mass of students, they will experience richer and more diversified feedback in their group critiques as well as more exposure to the possibilities of creative problem solving in their studio practice.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**
- **Measure:** Thesis Paper | **Outcome/Objective:** Theoretical and critical thinking

**Implementation Description:** Ceramics and Sculpture faculty are in the process of refining the details of a 3-D program yet are moving forward by joining the two disciplines in one Directed Study course this semester. By Fall 2010 all details should be resolved and in full operation.

- **Projected Completion Date:** 07/2010
- **Responsible Person/Group:** Mark Burleson, Christina West, Ruth Stanford, George Beasley

#### Graduate Program Review

A Graduate Program review is scheduled for 2009 - 2010. A committee has been formed and will be chaired by Graduate Program Director Joe Peragine. Topics for consideration are: increasing cross disciplinary interaction and instruction among studio disciplines, expanding attendance and participation in graduate studio critiques to include faculty and students from all studio disciplines, reducing the isolation of graduate students in their respective studio areas and increasing their experience of other graduate students’ research activities, and devising program opportunities for graduate students to have greater exposure to practicing contemporary artists excelling in the field.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**
- **Measure:** Thesis Paper | **Outcome/Objective:** Theoretical and critical thinking

**Implementation Description:** The review of the Graduate Program will take place throughout this academic year with the intent of implementing any changes in Fall 2010.

- **Projected Completion Date:** 07/2010
- **Responsible Person/Group:** Graduate Program Director Joe Peragine

### Analysis Questions and Analysis Answers

**CTW Reflection 1:** Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

CTW is not required of MFA degree programs.

**CTW Reflection 2:** Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

CTW is not required of MFA degree programs.

**CTW Reflection 3:** Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

CTW is not required of MFA degree programs.

**CTW Reflection 4:** Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

CTW is not required of MFA degree programs.

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
In spring 2011 the learning outcomes were revised by consolidating like outcomes. This sharpened the focus to four critical outcomes, making assessment results more pointed. It also assisted in streamlining the reporting.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The weaker scores were in theoretical and critical thinking. Studio graduates are required to take Contemporary Art and Theory and Criticism, though the semester that they take these courses is not specified. More often than not, graduates are taking these courses toward the end of their degree program rather than at the beginning. Earlier involvement in these classes has the potential to improve the theoretical and critical thinking results.

**ADMINISTRATIVE DEPT QUESTION 1:**
Explain how your department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?

Scheduling the graduate studio classes in all disciplines on the same days and times has allowed for greater interdisciplinary opportunities, such joint critiques with students and faculty from different disciplines, shared visiting and guest artists and scholars, and discussions based on assigned readings and critical writings.

**ADMINISTRATIVE DEPT QUESTION 2:**
What have you learned from your assessment this year (2010-2011)?

Theoretical and critical thinking needs improvement across the MFA studio program.

**ADMINISTRATIVE DEPARTMENT QUESTION 3:**
What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

Graduate faculty student advisement needs to stress the importance of taking Contemporary Art and Theory and Criticism courses within the first year of study. This may involve working the the art historians and their ability to add more sections of these classes in order to accommodate graduate student demand. By having this exposure earlier in the program, we anticipate students demonstrating a higher level of critical thinking and theoretical knowledge by the end of the degree program.

---

**Georgia State University**

**Assessment Data by Section**

**2010-2011 Art and Design Assessment of Core**

As of: 12/12/2016 04:10 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

**Mission / Purpose**

As part of the core curriculum in Area C, AH survey courses seek to impart knowledge, values and skills to undergraduates through the study of global art and visual cultures. Through analytical, historical, critical and appreciative methods of learning, students develop skills applicable to any major, but particularly those in fine arts, social sciences and humanities. It is the mission of the department that AH courses increase intellectual curiosity and initiate a continuing interest in the arts.

**Goals**

G 1: Critical thinking
Students will gain broad knowledge of World art history and demonstrate critical-thinking relative to the study of the visual arts.

**Student Learning Outcomes/Objectives**

SLO 1: Critical thinking in core (G: 1) (M: 1, 2)

“Critical Thinking” outcomes in Art History Core Courses: students develop critical thinking skills through the evaluation and analysis of visual and textual material. The following discipline-specific critical thinking outcomes relate to the General Education “Critical Thinking” outcomes: 1. Students formulate pertinent questions relevant to the evaluation of a work of art or an art historical problem (Gen Ed “Critical Thinking” Outcome #1). 2. Students discern differences and similarities between works of art through the application of aesthetic, contextual and historical knowledge (Gen Ed “Critical Thinking” Outcomes #1 and #2). 3. Students formulate informed opinions about the value of an art historical interpretation (Gen Ed “Critical Thinking” Outcome #3). 4. Students apply knowledge read in their course book and learned in class to solve art-historical problems associated with material not explicitly covered in lectures (Gen Ed “Critical Thinking” Outcome #4).

**Measures, Targets, and Findings**

M 1: Critical thinking in multiple choice exam (O: 1)

One exam from AH 1700 was assessed. The exam had 75 multiple choice questions, of which 19 were identified by AH faculty as CT questions. The average correct responses to the CT questions were measured, and compared to the overall test average.

Source of Evidence: Standardized test of subject matter knowledge

**Target for O1: Critical thinking in core**

Target is 75%. 88 students took the exam. The test mean was 77%. The mean for the CT questions was 77%.
A standardized exam for AH 1700 was used to measure CT in the core. The mean of the CT scores surpassed the target of 75% and reflected the overall test mean.

Source of Evidence: Standardized test of subject matter knowledge

**Target for O1: Critical thinking in core**

A mean of 75% or better on CT questions on multiple choice exams.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Critical thinking in Core Action Plan**

Continue to: 1) include 15-20 CT questions on every exam and 2) include class discussion of critical thinking in test format.

*Established in Cycle:* 2008-2009  
*Implementation Status:* In-Progress  
*Priority:* Low  
*Relationships (Measure | Outcome/Objective):*  
  - Measure: Critical thinking in multiple choice exam  
  - Outcome/Objective: Critical thinking in core  
*Responsible Person/Group:* AH faculty

---

**Mission / Purpose**

The mission of the Art Education BFA Program within the School of Art and Design is to provide a rigorous, comprehensive and accessible undergraduate education in the visual arts, art education and art history to a diverse urban constituency. This mission extends to the University at large, to the community and beyond, with the recognition that visual literacy is essential to imagination, creativity and the articulation of ideas in all fields.

**Goals**

**G 1: Visual Arts Literacy**

Provide students with sophisticated critical thinking and visual literacy skills so that they may effectively relay ideas and responses in visual, oral and/or written communication as it relates to the visual arts.

**G 2: Visual Arts Advocacy**

Expand students' understanding as practitioners, scholars and advocates of the visual arts who engage and collaborate with local state, regional, national and global institutions and communities to provide enhanced visual arts opportunities to students and the community.

**G 3: Technology and Media**

Prepare students to be competitive in an increasingly technological, interdisciplinary and theoretical art world through awareness of and facility with a wide range of media and state of the art technologies.

**Student Learning Outcomes/Objectives**

**SLO 1: Learning Environment (M: 1)**

Student is able to clearly describe expectations for student behavior and design and carry out a plan for rewards and consequences. Student is highly organized and manages materials, equipment, and the labeling and storage of student work effectively. Student demonstrates the ability to communicate effectively both verbally and in writing, with colleagues, students, and other stakeholders regarding expectations.

**SLO 2: Instruction (M: 1)**

Student is able to plan and assess developmental appropriate lessons for Pre-K through 12 students, including those in need of accommodation. Student demonstrates competency in a variety of art mediums, and has broad knowledge of the history and criticism of art, informed by cultural understandings. Students use appropriate vocabulary and is able to discuss and write about artworks and art processes from an informed perspective and communicate information about art to students through a variety of pedagogical strategies. Student is reflective about their teaching practice and revises strategies based on assessments of student learning.

**SLO 3: Instructional Resources (M: 1)**

Student can create and utilize teaching tools such as slide presentations, demonstrations, displays, critiques, and performance-based assessments to communicate and document expectations, objectives, procedures, outcomes and progress to learners. Student is able to utilize technology effectively in preparing and presenting lessons to students, and in empowering students to utilize technology in their own creative endeavors. Student responds critically to readings and organizes final portfolio to highlight their
SLO 4: Professionalism (M: 1)
Student has demonstrated and understanding of the professional role of the teacher through appropriate, positive dispositions, including ethical conduct and responsiveness to diverse student needs. Student has articulated a thoughtful teaching philosophy and understands the importance of advocacy and participation in professional development opportunities.

Strategic Plan Associations
1.5 Other efforts in support of Goal 1 (Undergraduate Education).

Measures, Targets, and Findings

M 1: Student Teaching Portfolio (O: 1, 2, 3, 4)
The student teaching portfolio is the capstone assessment and consists of measures for content knowledge, lesson planning, classroom management, instructional strategies, classroom and student behavior management, assessment skills, and professional attributes.

Source of Evidence: Portfolio, showing skill development or best work

Target for O1: Learning Environment
Minimum score for successful completion of goal: 3 Aiming for an average score of: 4.5

Findings 2010-2011 - Target: Met
Number of students evaluated: 27 Number of students who achieve the goal: 27 Aim for an average score: 4.5 Average score this academic year: 4.6

Target for O2: Instruction
Minimum score for successful completion of goal: 3 Aiming for an average score of: 4.5

Findings 2010-2011 - Target: Met
Number of students evaluated: 27 Number of students who achieve the goal: 27 Aim for an average score: 4.5 Average score this academic year: 4.6

Target for O3: Instructional Resources
Minimum score for successful completion of goal: 3 Aiming for an average score of: 4.5

Findings 2010-2011 - Target: Met
Number of students evaluated: 27 Number of students who achieve the goal: 27 Aim for an average score: 4.5 Average score this academic year: 4.7

Target for O4: Professionalism
Minimum score for successful completion of goal: 3 Aiming for an average score of: 4.5

Findings 2010-2011 - Target: Met
Number of students evaluated: 27 Number of students who achieve the goal: 27 Aim for an average score: 4.5 Average score this academic year: 4.6

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Use of video technology
Video taping of student teachers and student presentations for critical review by faculty in order to ease the time consuming aspects of student placements in K-12 schools and other non-profit settings.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High
Implementation Description: Considering the grant cycle for Tech Fee awards, we intend to make equipment purchases in the summer for use in Fall 2010.
Projected Completion Date: 07/2010
Responsible Person/Group: Melody Milbrandt, Melanie Davenport, Kevin Hseish

Increase student field experience hours
We have not been collecting data in this particular format long enough to have established a practical baseline but we are hopeful that this streamlined reporting will assist us in determining whether our students are consistently reaching our goals and will inform our efforts to improve the program as needed. Strengths: Implementing new criteria for this report helped the program to consolidate and solidify the relationship between various data sources and their use in program evaluation. Our review this year was more thorough than previous years thanks to this process. Because students in art education are evaluated at the beginning, middle, and endpoint of their certification program, streamlining the data collected should enable us to better track improvement over time. Areas for Improvement: Faculty in art education recognize the need to increase student field-experience hours prior to student teaching, to allow more hands-on experience for students, and allow faculty more insights into student “readiness.” We are currently developing expanded field experience opportunities in courses prior to student teaching. Faculty also recognize the overwhelming burden of reporting and accountability make it essential to streamline data collection to assist in analysis which will then inform program evaluation and revision. Plans are in place to revise the Summative Evaluation form and other rubrics and upload them into Livetext.
to centralize the collection of information needed for accountability purposes.

**Maintain condensed objective achievement**

We have not been collecting data in this particular format long enough to have established a practical baseline but we are hopeful that this streamlined reporting will assist us in determining whether our students are consistently reaching our goals and will inform our efforts to improve the program as needed. Strengths: Implementing new criteria for this report helped the program to consolidate and solidify the relationship between various data sources and their use in program evaluation. Our review this year was more thorough than previous years thanks to this process. Areas for Improvement: Faculty in art education recognize the need to increase student field-experience hours prior to student teaching, to allow more hands-on experience for students, and allow faculty more insights into student “readiness.” We are currently developing expanded field experience opportunities in courses prior to student teaching. Faculty also recognize the overwhelming burden of reporting and accountability make it essential to streamline data collection to assist in analysis which will then inform program evaluation and revision. Plans are in place to revise the Summative Evaluation form and other rubrics and upload them into Livetext to centralize the collection of information needed for accountability purposes.
CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

CTW data analysis is completed by Art Education CTW Ambassador Melanie Davenport.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

CTW data analysis is completed by Art Education CTW Ambassador Melanie Davenport.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

CTW data analysis is completed by Art Education CTW Ambassador Melanie Davenport.

ACADEMIC PROGRAM QUESTION 1:

What changes in the assessment process has your degree program made since last year's assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Learning outcomes were reduced in number and made more generalized to coincide with the primary aims of the program. These outcomes will be assessed in the coming semester and then a determination will be made regarding any needed changes. Otherwise no changes are planned.

ACADEMIC PROGRAM QUESTION 2:

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Students are functioning at a high level and meeting, if not exceeding, learning outcome expectations for the program. Results reinforce the recent course sequence changes to the curriculum, which allows students to go through the program as a cohort.

ADMINISTRATIVE DEPT QUESTION 1:

Explain how your department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?

The previous number of learning outcomes was greater than needed and redundant in nature. By consolidating the outcomes to four, the focus on the mission of the program was sharpened. Students are now operating as a cohort, making the scheduling of classes more streamlined.

ADMINISTRATIVE DEPT QUESTION 2:

What have you learned from your assessment this year (2010-2011)?

If learning outcome assessment results for 2011 - 12 indicate that all students are meeting or exceeding the goals, it seems appropriate to consider raising the standards of performance.

ADMINISTRATIVE DEPARTMENT QUESTION 3:

What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

No current changes for improvement are scheduled for the coming year. If all students score as high as they have this past year, faculty may consider higher standards for their assessments.

Georgia State University
Assessment Data by Section
2010-2011 Art Education MAEd
As of: 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose

The mission of the Art Education MFA Program within the School of Art and Design is to provide a rigorous, comprehensive and accessible graduate education in the visual arts, art education and art history to a diverse urban constituency. This mission extends to the University at large, to the community and beyond, with the recognition that visual literacy is essential to imagination, creativity and the articulation of ideas in all fields. We address this mission in the following ways: •Provide students with sophisticated critical thinking and visual literacy skills •Expand students understanding as visual artists, art educators, scholars and advocates of the visual arts •Prepare students to be competitive in an increasingly technological, interdisciplinary and theoretical art world •Engage and collaborate with local state, regional, national and global institutions and communities to provide enhanced visual arts opportunities to students and the community.

Student Learning Outcomes/Objectives

SLO 1: Research skills in gathering evidence (M: 1)

Thesis evaluation: Ability to gather evidence to support thesis statement

SLO 2: Research skills in critically analyzing evidence (M: 1)

Thesis evaluation: ability to provide a critical analysis of research material as evidence in support of thesis statement
### Strategic Plan Associations

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

### SLO 3: Written Communication Skills (M: 1)

Thesis evaluation: effective and persuasive writing in support of thesis statement

### Measures, Targets, and Findings

**M 1: Thesis (O: 1, 2, 3)**

The written thesis is assessed for providing a scholarly background with theoretical justification, purpose and need for the study. The thesis requires students to collect and analyze data, discuss and synthesize conclusions, and present recommendations for further research.

Source of Evidence: Senior thesis or culminating major project

**Target for O1: Research skills in gathering evidence**

Minimum score for successful completion of goal: 3 Aim for average score: 4.0

**Findings 2010-2011 - Target: Met**

Number of students evaluated: 5 Number of students who achieved the goal: 5 Minimum score for successful completion of goal: 3 Aim for average score: 4.0 Average score for this goal for this academic year: 4.6

**Target for O2: Research skills in critically analyzing evidence**

Minimum score for successful completion of goal: 3 Aim for average score: 4.0

**Findings 2010-2011 - Target: Met**

Number of students evaluated: 5 Number of students who achieved the goal: 5 Minimum score for successful completion of goal: 3 Aim for average score: 4.0 Average score for this goal for this academic year: 4.5

**Target for O3: Written Communication Skills**

Minimum score for successful completion of goal: 3 Aim for average score: 4.0

**Findings 2010-2011 - Target: Partially Met**

**Findings 2010-2011 - Target: Met**

Number of students evaluated: 5 Number of students who achieved the goal: 5 Minimum score for successful completion of goal: 3 Aim for average score: 4.0 Average score for this goal for this academic year: 4.6

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Low Residency with Online Course Offerings

We have restructured the MAEd program to operate as a low-residency program with 40% of the courses now offered online.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Implementation Description:** Beginning in the fall semester 2009.
- **Projected Completion Date:** 07/2009
- **Responsible Person/Group:** Melody Milbrandt, Melanie Davenport, Kevin Hsieh

#### Summer triad of courses

In order to engender greater cross disciplinary activity in our students classrooms, we are focusing on integrating the three required summer courses that address contemporary issues in art education, postmodern art history and a studio mixed media course.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Implementation Description:** Summer session 2010
- **Projected Completion Date:** 07/2010
- **Responsible Person/Group:** Melody Milbrandt, Melanie Davenport, Kevin Hsieh

#### Survey of cohort program

Having initiated a cohort aspect to the MAED program this year, we will survey the students at the end of the academic year to understand the effectiveness of this change and address any deficiencies cited in the survey.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Implementation Description:** The survey will be conducted at the conclusion of the academic year.
- **Projected Completion Date:** 07/2010
- **Responsible Person/Group:** Melody Milbrandt, Melanie Davenport, Kevin Hsieh
Develop extended support network
Although all of those evaluated above met our expectations for completion of the Master’s degree, this evaluation includes students who were admitted into the MAE prior to the development of the new cohort program. We will be interested to see how ratings for the cohort groups compare to those for students who made their way through the program individually, without that extended support network and a more structured curriculum. Based upon comparative data with next year’s completers, we will re-evaluate the cohort program to ensure that it is serving the needs of our students.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Thesis | Outcome/Objective: Research skills in critically analyzing evidence
Implementation Description: Melody Milbrandt, Melanie Davenport, Kevin Hsieh
Projected Completion Date: 06/2012

Greater structure in curriculum
Although all of those evaluated above met our expectations for completion of the Master’s degree, this evaluation includes students who were admitted into the MAE prior to the development of the new cohort program. We will be interested to see how ratings for the cohort groups compare to those for students who made their way through the program individually, without that extended support network and a more structured curriculum. Based upon comparative data with next year’s completers, we will re-evaluate the cohort program to ensure that it is serving the needs of our students.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Thesis | Outcome/Objective: Written Communication Skills
Projected Completion Date: 06/2012
Responsible Person/Group: Melody Milbrandt, Melanie Davenport, Kevin Hsieh

New cohort formation evaluation
Although all of those evaluated above met our expectations for completion of the Master’s degree, this evaluation includes students who were admitted into the MAE prior to the development of the new cohort program. We will be interested to see how ratings for the cohort groups compare to those for students who made their way through the program individually, without that extended support network and a more structured curriculum. Based upon comparative data with next year’s completers, we will re-evaluate the cohort program to ensure that it is serving the needs of our students.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Thesis | Outcome/Objective: Research skills in gathering evidence
Projected Completion Date: 07/2011
Responsible Person/Group: Melody Milbrandt, Melanie Davenport, Kevin Hsieh

Analysis Questions and Analysis Answers
CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
CTW assessment is not required of Art Education MAED degree program.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
CTW assessment is not required of Art Education MAED degree program.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
CTW assessment is not required of Art Education MAED degree program.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?
CTW assessment is not required of Art Education MAED degree program.
accessible undergraduate education in the visual arts and art history to a diverse urban constituency. This mission extends to the
University at large, to the community and beyond, with the recognition that visual literacy is essential to imagination, creativity and the
articulation of ideas in all fields.

**Goals**

**G 1: Visual Arts Literacy**
Provide students with sophisticated critical thinking and visual literacy skills so that they may effectively relay ideas and responses in
visual, oral and/or written communication as it relates to the visual arts.

**G 2: Visual Arts Advocacy**
Expand students' understanding as practitioners, scholars and advocates of the visual arts who engage and collaborate with local
state, regional, national and global institutions and communities to provide enhanced visual arts opportunities to students and the
community.

**G 3: Technology**
Prepare students to be competitive in an increasingly technological, interdisciplinary and theoretical art world through awareness of a
wide range of media and state of the art technologies.

**Student Learning Outcomes/Objectives**

**SLO 1: Knowledge of content (M: 1)**
Student is able to recall pertinent art historical facts (i.e., artist, title, date), can identify artworks as belonging to specific cultures,
periods, and places, and can define art historical vocabulary.

**SLO 2: Critical thinking skills (M: 1)**
Student is able to apply a range of art historical methods (i.e., formal analysis, semiotics, criticism, etc.), to apply appropriate
methods to the analysis of particular works of art, and to make reasoned judgement about the validity of rival claims about art.

**SLO 3: Research skills (M: 1)**
Student is able to design and carry out an independent research project culminating in a substantial written document. Student is
able to acquire, evaluate, and critique the scholarship relevant to an art-historical problem, and to propose solutions or contribute
new insights into that problem.

**SLO 4: Written communication skills (M: 1)**
Student is able to explain art-historical principles, and to use art-historical terms in their proper context to explain and/or describe
works of art or art-historical problems. Student can effectively communicate the results of research and critical thought in a well-
written essay.

**Measures, Targets, and Findings**

**M 1: Graduation portfolio (O: 1, 2, 3, 4)**
Students are evaluated on the basis of a graduation portfolio assembled by graduating seniors in consultation with their principal
advisors in the course of their final semester (or last 15 credit hours of study). The portfolio consists of a CAPP form, a copy of a test
from an upper level Art History course, and an advance writing project involving art historical research.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O1: Knowledge of content**
Evaluation based on analysis of performance in 1000-level art history survey classes, and a review of the content-based sections
of tests submitted with the graduation portfolio. Students evaluated: xx, Students achieving goal: xx, Minimum score for successful
completion of goal: 3, Aim for an average score of: 4.5, Average score for this goal this academic year: xx

**Findings 2010-2011 - Target: Partially Met**
Students evaluated: 17, Students achieving goal: 14, Minimum score for successful completion of goal: 3, Aim for an average score
of: 4.5, Average score for this goal this academic year: 3.76

**Target for O2: Critical thinking skills**
Evaluation based on review of exam essay questions and the writing project submitted with the graduation portfolio. Number of
students evaluated: xx, Number achieving goal: xx, Minimum score for successful completion of goal: 3, Aim for an average score
of: 4.5, Average score for this goal for this academic year: xx

**Findings 2010-2011 - Target: Partially Met**
Number of students evaluated: 17, Number achieving goal: 13, Minimum score for successful completion of goal: 3, Aim for an
average score of: 4.5, Average score for this goal for this academic year: 3.65

**Target for O3: Research skills**
Evaluation based on review of any research-based exam questions and the writing project submitted with the graduation portfolio.
Number of students evaluated: xx, Number of students achieving goal: xx, Minimum score for successful completion of goal: 3, Aim
for average score: 4.5, Average score for this goal for this academic year: xx
Details of Action Plans for This Cycle (by Established cycle, then alpha)

AH 4990 as new capstone course for the major
The outcomes for Objectives 1 and 2 (Knowledge of Content and Critical Thinking Skills) were unchanged from the previous academic year. The students we evaluated are meeting our goals in both those areas, and we see no need for changes in our program with respect to these particular goals. One concern that we do have is that these scores may be somewhat inflated, since they are based only on the graduation portfolios submitted, and -- since submission of the graduation portfolio is still essentially voluntary -- the portfolios submitted may not be a representative sample. This problem should be solved in coming years, as more and more of our graduating majors will be required to pass through the new capstone course (AH 4990), and thus be required to submit a graduation portfolio. As we get a more truly representative sample of work, however, we may find that our average scores go down.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High
Implementation Description: AH 4990 has been adopted as the capstone course for the major, though it will be sometime before we have a critical mass taking completing the course. Therefore, we project that within two years we can effectively use it as a measure.
Projected Completion Date: 07/2010
Responsible Person/Group: Glenn Gunhouse, John Decker, Kimberly Cleveland, Maria Gindhart, Melinda Hartwig, Susan Richmond, Akela Reason

AH 3000 - Intro to Art History Methodology
We have added a new course to our program (AH 3000 - Introduction to Art History Methodology), which we hope will improve the research skills of our majors by giving them training in art-historical methods early in their course of study. As more and more of our graduates are required to take this course as part of their program, we hope to see improvement in the scores for the Research Skills objective. In addition, our students now have the opportunity for instruction in library research skills under the guidance of Neddia Ahmed, the new library instructor in the fine arts area. We plan to take more advantage of this opportunity in the future, with the expectation that it will further improve our students' research skills.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High
Relationships (Measure | Outcome/Objective):
| Measure: Graduation portfolio | Outcome/Objective: Critical thinking skills
| Knowledge of content | Research skills | Written communication skills
Implementation Description: This course addition will have increased enrollment in the fall 2009 as a new requirement for the major.
Projected Completion Date: 07/2009
Responsible Person/Group: Glenn Gunhouse, Maria Gindhart, Melinda Hartwig, Kimberly Cleveland, John Decker, Susan Richmond, Akela Reason

AH 3000 and AH 4990 as CTW courses
The average score for Objective 4 (Written Communication Skills) dropped slightly from the previous academic year (from 4.25 to 4.1). This was a disappointing result, given our focus in recent years on the need to improve the quality of our students' writing. We hope that with increased attention to writing in our designated CTW courses (AH 3000 and AH 4990), we will see improvement in the scores for this objective.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High
Implementation Description: All AH majors are required to take two CTW courses in their major beginning Fall 2009.
Projected Completion Date: 07/2009
Responsible Person/Group: Glenn Gunhouse, Maria Gindhart, Melinda Hartwig, Kimberly Cleveland, John Decker, Susan Richmond, Akela Reason

Content Knowledge and Critical Thinking Skills
The outcomes for Objective 1 (Knowledge of Content and Critical Thinking Skills. 3.85 and 3.58 respectively) are lower from the previous academic year. While the students we evaluated are meeting most of our goals, the faculty and course content is more rigorous, requiring more out of students. Our goal is to turn out art history graduates who could go on to any top graduate program in the US. Our concern last year was the somewhat inflated scores based only on the graduation portfolios submitted, which -- since submission of the graduation portfolio was essentially voluntary -- the portfolios submitted were not a representative sample. This year we solved the problem by offering graduating majors a new capstone course (AH 4990), and required all to submit a graduation portfolio. This resulted in a more representative sample of work that included a CAPP form, a copy of a test from an upper-level Art History course, and an advanced writing project involving art-historical research, a research response paper, a critical analysis paper, an art analysis paper, and an art history experience paper.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Content Knowledge and Critical Thinking Skills
The outcomes for Objective 1 (Knowledge of Content and Critical Thinking Skills. 3.85 and 3.58 respectively) are lower from the previous academic year. While the students we evaluated are meeting most of our goals, the faculty and course content is more rigorous, requiring more out of students. Our goal is to turn out art history graduates who could go on to any top graduate program in the US. Our concern last year was the somewhat inflated scores based only on the graduation portfolios submitted, which -- since submission of the graduation portfolio was essentially voluntary -- the portfolios submitted were not a representative sample. This year we solved the problem by offering graduating majors a new capstone course (AH 4990), and required all to submit a graduation portfolio. This resulted in a more representative sample of work that included a CAPP form, a copy of a test from an upper-level Art History course, and an advanced writing project involving art-historical research, a research response paper, a critical analysis paper, an art analysis paper, and an art history experience paper. We also believe that the relatively low scores for Objectives 1 and 4 were in part the result of the greater breadth of assessment material, which gave us the opportunity to target more precisely areas that need improvement. Furthermore, many of the students who took AH 4990 Art History Capstone, did not take AH 3000 - Introduction to Art History Methodology. By taking AH 3000, students receive greater attention in their content, critical thinking, research and written communication skills early in their career resulting in better papers and tests.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Graduation portfolio | Outcome/Objective: Critical thinking skills

CTW Alignment
The average score for Objective 4 (Written Communication Skills) dropped from the previous academic year (from 4.1 to 3.58). This was a disappointing result, given our focus in recent years on the need to improve the quality of our students' writing. We hope that with increased attention to writing in our designated CTW courses (AH 3000 and AH 4990), we will see improvement in the scores for this objective. We also believe that the relatively low scores for Objectives 1 and 4 were in part the result of the greater breadth of assessment material, which gave us the opportunity to target more precisely areas that need improvement. Furthermore, many of the students who took AH 4990 Art History Capstone, did not take AH 3000 - Introduction to Art History Methodology. By taking AH 3000, students receive greater attention in their content, critical thinking, research and written communication skills early in their career resulting in better papers and tests.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Research Plan
The scores for Objective 3 (Research Skills) were quite a bit lower than we’d like to see. The average of 3.75 was considerably below our goal of 4.5, and lower than the results for the other three objectives. We recognize that this is a continuing area of focus for the faculty. We have already added a new course to our program (AH 3000 - Introduction to Art History Methodology), which we hope will improve the research skills of our majors by giving them training in art-historical methods early in their course of study. As more and more of our graduates are required to take this course as part of their program, we hope to see improvement in the scores for the Research Skills objective. In addition, our students now have the opportunity for instruction in library research skills under the guidance of Nedda Ahmed, the new library instructor in the fine arts area. We plan to take more advantage of this opportunity in the future, with the expectation that it will further improve our students’ research skills.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

AH 3000 and Fine Arts Library Liaison
The outcome score for Objective 3, Research Skills, is marginally higher than the previous year's score (2009/10 was 3.75, 2010/11 is 3.76) but is still lower than we would like to see. The change is the smallest of all the objectives (.01 points, which is less than 1% of the total). Like objective 2, the small upward shift we are reporting this year may or may not be statistically significant. The meagerness of the improvement may be the result of the relative difficulties involved in teaching research skills in the Humanities to undergraduates. Art History, as a research field, is intensely interdisciplinary and requires that students be able to read languages other than English, be able to read, process, and critique high-level scholarly articles and books in multiple fields (e.g. history, religious studies, women studies, anthropology, sociology, etc), and be able to make multiple types of arguments (e.g. rhetorical, visual, contextual) each of which has its own methodological and historiographical complications. As part of our continuing effort to improve our students’ Critical Thinking Skills, we have added a required undergraduate methodology course (AH 3000) and have been working with the Fine Arts Library Liaison, Nedda Ahmed, to provide students with more access to research materials and instruction. It is still too early to know what effect these measures will have. The Art History area’s action plan for this objective is unchanged -- we are working toward 100% student achievement and an average score of 4.5.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Graduation portfolio | Outcome/Objective: Research skills

Implementation Description: By continuing to provide students with more access to research materials and instruction, we anticipate improved scores for 2011-12

Responsible Person/Group: John Decker, Melinda Hartwig, Maria Gindhart, Glenn Gunhouse, Kimberly Cleveland, Susan Richmond
Instituted CTW courses AH 3000 and AH 4990 and increased critical writing submission

The outcome score for Objective 4, Written Communication Skills, climbed slightly from the previous academic year (2009/10 was 3.58, 2010/11 is 3.62). Like each of the preceding objectives, the change was relatively small (.04 points, which is 1.2% of the total). Once again, it is uncertain whether or not this change is significant. While the increase is encouraging, we are still disappointed given our focus in recent years on improving our students' writing. We have instituted CTW courses (AH 3000 and AH 4990) and hope to see greater improvement. These courses have been available only for a short time and it is still too early to measure any effect they may have on student performance. That said, however, the Art History area has taken steps to emphasize the importance of writing. Specifically, the capstone class (AH 4990) requires students to submit a great deal of written documentation for assessment including an advanced writing project involving art-historical research, a research response paper, a critical analysis paper, an art analysis paper, and an art history experience paper. The last of these, the art history experience paper, is an attempt to gather “pseudo-exit interview” information, which we plan to use to help us identify potential areas for improvement. The emphasis on written work is part of our overall strategy to make writing the central feature of how we educate our students. Art History area’s action plan for this objective is unchanged – we are working toward 100% student achievement and an average score of 4.5.

- Established in Cycle: 2010-2011
- Implementation Status: In-Progress
- Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Graduation portfolio
- Outcome/Objective: Written communication skills

Implementation Description: Instituted CTW courses AH 3000 and AH 4990, which have been available only a short time. Addition of art history experience exit paper.

Responsible Person/Group: John Decker, Melinda Hartwig, Maria Gindhart, Glenn Gunhouse, Kimberly Cleveland, Susan Richmond

Maintain baseline with continued insistence on rigorous course work

The outcome score for Objective 1, Knowledge of Content, is marginally lower than the previous year’s score (2009/10 was 3.85 and 2010/11 is 3.76). To some degree, this small drop (.09 points, which is only 3% of the total) may be attributable to the Art History area’s continued insistence on more rigor in its course work. For Art History, Knowledge of Content includes the ability to identify information like artist, title, and date with 100% accuracy as well as knowledge of Art Historical terms. In early classes (such as the surveys) student often struggle with learning how to memorize and report this information. As the Art History area increases its expectations regarding student performance, it places more weight on this foundational information and demands higher performance from students, especially majors. The drop in performance in this objective, however, is slight (3%) and also may be a normal yearly fluctuation. We have not been collecting data long enough to have established a practical baseline and cannot determine whether or not such a small numerical movement is statistically significant. The Art History area’s action plan for this objective is unchanged – we are working toward 100% student achievement and an average score of 4.5.

- Established in Cycle: 2010-2011
- Implementation Status: In-Progress
- Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Graduation portfolio
- Outcome/Objective: Knowledge of content

Implementation Description: Maintain current standards for ability to identify information with 100% accuracy

Projected Completion Date: 06/2012

Responsible Person/Group: John Decker, Melinda Hartwig, Maria Gindhart, Glenn Gunhouse, Kimberly Cleveland, Susan Richmond

Maintain goals to improve critical thinking skills

The outcome score for Objective 2, Critical Thinking Skills, is higher than that of the previous academic year (2009/10 was 3.58 and 2010/11 is 3.65). Like the score for objective 1, above, the change is relatively small (.07 points, which is only 2% of the total). This upward shift may be, to some extent, the result of the area’s emphasis on critical thinking in each of its 3000 and 4000-level courses. The capstone course (AH 4990) may also be contributing to the rise in performance. The capstone requires a graduation portfolio that is a representative sample of each student’s work. The ability to look over a clearer cross section of our students’ works provides us with a more realistic view of their critical thinking skills. While the change is positive, it too may or may not be statistically significant – we lack sufficient longitudinal data to perform in-depth analysis. The Art History area’s action plan for this objective is unchanged – we are working toward 100% student achievement and an average score of 4.5.

- Established in Cycle: 2010-2011
- Implementation Status: In-Progress
- Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Graduation portfolio
- Outcome/Objective: Critical thinking skills

Implementation Description: Unchanged from previous year

Projected Completion Date: 06/2012

Responsible Person/Group: John Decker, Melinda Hartwig, Maria Gindhart, Glenn Gunhouse, Kimberly Cleveland, Susan Richmond

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

CTW is reported by Art History Ambassador Susan Richmond.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

CTW is reported by Art History Ambassador Susan Richmond.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

CTW is reported by Art History Ambassador Susan Richmond.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your
CTW is reported by Art History Ambassador Susan Richmond.

**ACADEMIC PROGRAM QUESTION 1:**
What changes in the assessment process have your degree program made since last year's assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Our review this year was more thorough than previous years thanks to the information derived from the capstone portfolio. In particular, the portfolio requires students to submit a paper from the beginning of their Art History studies and one from the end. This “book-ending” approach provides us with a much better grasp of each student’s improvement, or lack thereof, across time.

**ACADEMIC PROGRAM QUESTION 2:**
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

In the future, we would like to see all undergraduate majors take at least one seminar class. For this, we would need to make 4900-level classes “undergraduate seminars,” with a lower cap on class size to ensure greater one-on-one instruction. Such a seminar would better prepare our students for the rigors of graduate school and would offer them an opportunity to perform more focused research and writing.

**ADMINISTRATIVE DEPT QUESTION 1:**
Explain how your department used the results from last year’s (2009-2010) assessment. What actions did you take? What changes did you make as a result?

Students are in need of an advanced level seminar course that concentrates of critical writing and allow for more one to one instruction.

**ADMINISTRATIVE DEPT QUESTION 2:**
What have you learned from your assessment this year (2010-2011)?

We need to develop more robust 3000-level courses, which will provide students with intermediary critical thinking and writing skills. These courses would be a firm foundation and would better prepare students to perform at higher levels in the 4000-level courses.

**ADMINISTRATIVE DEPARTMENT QUESTION 3:**
What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

Strengths: Our review this year was more thorough than previous years thank to the information derived from the capstone portfolio. In particular, the portfolio requires students to submit a paper from the beginning of their Art History studies and one from the end. This “book-ending” approach provides us with a much better grasp of each student’s improvement, or lack thereof, across time.

Areas for Improvement: In the future, we would like to see all undergraduate majors take at least one seminar class. For this, we would need to make 4900-level classes “undergraduate seminars,” with a lower cap on class size to ensure greater one-on-one instruction. Such a seminar would better prepare our students for the rigors of graduate school and would offer them an opportunity to perform more focused research and writing. We also will need to develop more robust 3000-level courses, which will provide students with intermediary critical thinking and writing skills. These courses would be a firm foundation and would better prepare students to perform at higher levels in the 4000-level courses. These changes may be possible as the Art History area works toward having its BA program recognized as a self-standing major (rather than a concentration).

**Georgia State University**

**Assessment Data by Section**

**2010-2011 Art History MA**

As of: 12/12/2016 04:10 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

**Mission / Purpose**

The mission of the Art History MA Program within the School of Art and Design is to provide a rigorous, comprehensive and accessible graduate education in the visual arts and art history to a diverse urban constituency. This mission extends to the University at large, to the community and beyond, with the recognition that visual literacy is essential to imagination, creativity and the articulation of ideas in all fields. We address this mission in the following ways: •Provide students with sophisticated critical thinking and visual literacy skills •Expand students understanding as scholars and advocates of the visual arts •Prepare students to be competitive in an increasingly technological, interdisciplinary and theoretical art world •Engage and collaborate with local state, regional, national and global institutions and communities to provide enhanced visual arts opportunities to students and the community

**Student Learning Outcomes/Objectives**

**SLO 1: Research Skills (Gathering of Evidence) (M: 1, 2)**

**Standard Associations**

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).
**SLO 2: Research Skills (Critical Analysis of Evidence) (M: 3)**
The ability to gather relevant art historical evidence

- **Student Learning Outcome:** Yes
- **Established in Cycle:** 2005-2006
- **Active Through:** 2007-2008
- **Entry Status:** Final
- **Last Updated By:** Migration Tool on 10/13/2008
- **Established By:** Migration Tool on 10/13/2008
- **Relevant Associations:** National Association of Schools of Art and Design (NASAD)

**Measures, Targets, and Findings**

**M 1: Review of thesis (O: 1)**
Review of thesis

- **Source of Evidence:** Established in Cycle: 2005-2006

Number of students evaluated for this goal: 5
Number of those students who achieved the goal: 5
Minimum score for successful completion of goal: 3
We are aiming for an average score of: 4.5
Average score for this goal this academic year: 4.3

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Instituted Graduate Methodology and Historiography (AH8010)**
The 2010/11 outcomes for Art History graduate students are significantly better than the previous year. The 2009/10 outcomes reflected the work of two graduates, one a high achiever and the other a low achiever. The sample size for this year’s analysis is larger and is more reflective of the quality of graduate students graduating from the Art History program. Scores for objectives 1 and 2 exceeded our stated targets; the score for objective 3 came close to meeting our desired level. One potential reason for the rise in outcomes may be that each of the students assessed benefited from the institution of Graduate Methodology and Historiography (AH 8010). This course introduced students to graduate-level methodology and provided them with the tools needed to carry out high-level research. We plan to continue offering this class (currently we are only able to offer it every other year because of the College’s minimum enrollment requirement). In keeping with our recent NASAD review, we also began offering graduate only seminars. Previously, our graduate students have taken mixed classes and this may have negatively impacted their performances. We are hopeful that the combination of AH 8010 and graduate only seminars will have continued positive effects on our students.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** High
- **Implementation Description:** Continue AH 8010 course
- **Projected Completion Date:** 06/2011
- **Responsible Person/Group:** John Decker, Susan Richmond, Melinda Hartwig, Maria Gindhart, Glen Gunnhouse, Kimberly Cleveland
Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
CTW is not part of the Art History MA program, only undergraduate programs.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
CTW is not part of the Art History MA program, only undergraduate programs.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
CTW is not part of the Art History MA program, only undergraduate programs.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?
CTW is not part of the Art History MA program, only undergraduate programs.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
The learning outcomes were re-assessed in an effort to consolidate like outcomes and streamline reporting. In doing so, this process clarified our priorities for the graduates in Art History. Thus far, this has been effective and no changes are needed for the coming academic year.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.
The rise in outcomes may be that each of the students assessed benefited from the institution of Graduate Methodology and Historiography (AH 8010). This course introduced students to graduate-level methodology and provided them with the tools needed to carry out high-level research. This change will continue next year.

ADMINISTRATIVE DEPT QUESTION 1:
Explain how your department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?
Our NASAD review in 2010 resulted in the requirement for more graduate only seminars. Previously, our graduate students have taken mixed classes and this may have negatively impacted the performances we measured in 2009-10. We are now offering graduate only seminars along with our Graduate Methodology and Historiography (AH 8010) course every other year.

ADMINISTRATIVE DEPT QUESTION 2:
What have you learned from your assessment this year (2010-2011)?
The 2010/11 outcomes for Art History graduate students are significantly better than the previous year. The 2009/10 outcomes reflected the work of two graduates, one a high achiever and the other a low achiever. The sample size for this year’s analysis is larger and is more reflective of the quality of graduate students graduating from the Art History program. Scores for objectives 1 and 2 exceeded our stated targets; the score for objective 3 came close to meeting our desired level. One potential reason for the rise in outcomes may be that each of the students assessed benefited from the institution of Graduate Methodology and Historiography (AH 8010). This course introduced students to graduate-level methodology and provided them with the tools needed to carry out high-level research. We plan to continue offering this class (currently we are only able to offer it every other year because of the College's minimum enrollment requirement). In keeping with our recent NASAD review, we also began offering graduate only seminars. Previously, our graduate students have taken mixed classes and this may have negatively impacted their performances. We are hopeful that the combination of AH 8010 and graduate only seminars will have continued positive effects on our students.

Georgia State University
Assessment Data by Section
2010-2011 Art Studio BFA
As of: 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The mission of the Studio Art BFA Program within the School of Art and Design is to provide a rigorous, comprehensive and accessible undergraduate education in the visual arts and art history to a diverse urban constituency. This mission extends to the University at large, to the community and beyond, with the recognition that visual literacy is essential to imagination, creativity and the articulation of ideas in all fields.

Student Learning Outcomes/Objectives
SLO 1: Technical skills (M: 1, 2)
In their studio work, students demonstrate control of their medium, creative use of formal elements such as shape, line, form, texture, color, and competent use of relevant technologies.

**SLO 2: Conceptual Skills (M: 1, 2)**
Students demonstrate conceptual and critical thinking skills in their approach to their studio work. They have the ability to investigate and research their individual ideas with a focus on content. Conceptual skills are manifested in the level of sophistication in their studio work as well as in the quality of their participation in critical discussions and the critique process.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**

1.5 Other efforts in support of Goal 1 (Undergraduate Education).

**SLO 3: Historical and contemporary knowledge (M: 1, 2)**
Students demonstrate a knowledge of the historical development of their medium and the critical contemporary issues attached to it. This includes familiarity with movements and trends of the past that have shaped the medium and an awareness of contemporary artists and contemporary critical discourse in their field.

**SLO 4: Professional preparation (M: 1, 2)**
Students acquire refined professional skills in the presentation and exhibition of their studio work. They demonstrate the ability to represent themselves on paper, which includes writing cogent and effective artist statements, compiling a polished resume and preparing a professional packet for the submission of their work for exhibition consideration.

**Measures, Targets, and Findings**

**M 1: Gateway (Foundations) Portfolio and Statement (O: 1, 2, 3, 4)**
Gateway Portfolio of Artwork from first year foundation studio courses plus 2 upper level studio courses including written essay that details information about the student’s portfolio of art and why the student has chosen this art discipline.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O1: Technical skills**
Target is 2.5 on a scale of 1 (Poor), 2 (Average), 3 (Very Good), 4 (Excellent).

**Findings 2010-2011 - Target: Partially Met**
Of 45 students evaluated, the results were: Poor 1 = 4, Average 2 = 12, Very Good 3 = 20, Excellent 4 = 9

**Target for O2: Conceptual Skills**
Minimum target is 2.5 on a scale of 1 (Poor), 2 (Average), 3 (Very Good), 4 (Excellent).

**Findings 2010-2011 - Target: Partially Met**
Of 45 students evaluated, the results were: Poor 1 = 1, Average 2 = 14, Very Good 3 = 20, Excellent 4 = 10

**Target for O3: Historical and contemporary knowledge**
Target is 2.5 on a scale of 1 (Poor), 2 (Average), 3 (Very Good), 4 (Excellent).

**Findings 2010-2011 - Target: Partially Met**
Of 45 students evaluated, the results were: Poor 7 = 1, Average 2 = 16, Very Good 3 = 17, Excellent 4 = 8

**Target for O4: Professional preparation**
Target is 2.5 on a scale of 1 (Poor), 2 (Average), 3 (Very Good), 4 (Excellent).

**Findings 2010-2011 - Target: Partially Met**
Of 45 students evaluated, the results were: Poor 1 = 1, Average 2 = 16, Very Good 3 = 17, Excellent 4 = 11

**M 2: Final Portfolio, Artist's Statement, Resume and BFA Senior Exhibition (O: 1, 2, 3, 4)**
Final Portfolio submitted containing 15-20 examples of studio work done in 4500 courses and in capstone classes 4940 and 4950 including artist’s statement evidencing knowledge and understanding of ones own artistic practice. Artist Statement and Resume further evidence students' competence in writing and communication skills.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O1: Technical skills**
Final Portfolio Reviews and Assessments are conducted by Faculty committee within each discipline. Student generated portfolios of studio work are evaluated in four categories: Technical skills, conceptual skills, historical and contemporary knowledge and professional preparation. Possible scores are: Poor 1, Average 2, Very Good 3, Excellent 4. Target for technical skills is 3.5.

**Findings 2010-2011 - Target: Partially Met**
Of 56 students assessed, the results were: 1 Poor = 0, 2 Average = 5, 3 Very Good = 18, 4 Excellent = 32
### Target for O2: Conceptual Skills

Final Portfolio Reviews and Assessments are conducted by Faculty committee within each discipline. Student generated portfolios of studio work are evaluated in four categories: Technical skills, conceptual skills, historical and contemporary knowledge and professional preparation. Possible scores are: Poor 1, Average 2, Very Good 3, Excellent 4. Target score for conceptual skills is 3.5.

**Findings 2010-2011 - Target: Partially Met**

Of 56 students assessed, the results were: 1 Poor = 0, 2 Average = 5, 3 Very Good = 20, 4 Excellent = 31.

### Target for O3: Historical and contemporary knowledge

Final Portfolio Reviews and Assessments are conducted by Faculty committee within each discipline. Student generated portfolios of studio work are evaluated in four categories: Technical skills, conceptual skills, historical and contemporary knowledge and professional preparation. Possible scores are: Poor 1, Average 2, Very Good 3, Excellent 4. Target score for historical and contemporary knowledge is 3.5.

**Findings 2010-2011 - Target: Partially Met**

Of 56 students assessed, the results were: 1 Poor = 1, 2 Average = 3, 3 Very Good = 25, 4 Excellent = 27.

### Target for O4: Professional preparation

Final Portfolio Reviews and Assessments are conducted by Faculty committee within each discipline. Student generated portfolios of studio work are evaluated in four categories: Technical skills, conceptual skills, historical and contemporary knowledge and professional preparation. Possible scores are: Poor 1, Average 2, Very Good 3, Excellent 4. Target score for professional preparation is 3.5.

**Findings 2010-2011 - Target: Partially Met**

Of 56 students assessed, the results were: 1 Poor = 2, 2 Average = 3, 3 Very Good = 17, 4 Excellent = 34.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**CTW ART 3910 and CTW 4950 Portfolio II in all 7 studio disciplines**

In fall 2009 the School, BFA majors will be required to take the new gateway CTW course ART 3910 Critical Issues in Contemporary Art as they begin the foundation level studio courses in Area G. They will also be required to take the newly designated CTW 4950 Portfolio II course as the capstone course for the major.

### Analysis Questions and Analysis Answers

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

CTW for Art Studio BFA is completed by Ambassador Craig Drennan.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

CTW for Art Studio BFA is completed by Ambassador Craig Drennan.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**

CTW for Art Studio BFA is completed by Ambassador Craig Drennan.

**CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?**

CTW for Art Studio BFA is completed by Ambassador Craig Drennan.
**ACADEMIC PROGRAM QUESTION 1:**
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The learning outcomes for the gateway course and capstone course were changed by reducing the high numbers of outcomes that varied from the gateway to the capstone to four identical outcomes for both courses. This allows for a clear understanding of where and to what degree growth and learning occurred from the onset of the degree program to its conclusion.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Since we implemented the new learning outcomes just this past spring, we need to accumulate another semester’s worth of data in order to make an informed judgement.

**ADMINISTRATIVE DEPT QUESTION 1:**
Explain how your department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?

We were finding with different learning outcomes for the gateway and capstone courses that it was difficult to determine where actual growth and development occurred and where we needed to take action. With consistent measures for both, we will obtain very clear indicators of our students strengths and weaknesses and can then address them accordingly.

**ADMINISTRATIVE DEPT QUESTION 2:**
What have you learned from your assessment this year (2010-2011)?

We learned that it was difficult to determine where growth occurred because of the varying measures employed for the introductory level students and the senior level students.

**ADMINISTRATIVE DEPARTMENT QUESTION 3:**
What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

We anticipate receiving much more informative data that will assist in addressing areas for improvement in our BFA program.

Normal 0 false false false EN-US X-NONE X-NONE MicrosoftInternetExplorer4 Students effectively evaluate the implications and applications of research and technology.

**O/O 3: Scientific Critical Thinking (M: 3, 4)**

Students apply the basic scientific process as they perform and report their research. That is, they develop research questions appropriate for research, appropriately collect experimental or theoretical data to address identified research questions, analyze and interpret data to evaluate research questions, and use results of data analysis to formulate new research questions.

**O/O 4: Scientific Communication (M: 2, 3, 4)**

Normal 0 false false false EN-US X-NONE X-NONE MicrosoftInternetExplorer4 Students communicate effectively orally and in writing in a context relevant to scientific research using appropriate formats and styles for scientific journals, meetings, conferences, or colloquia.
Measures, Targets, and Findings

M 1: Qualifying Exam 2 (O: 5)
Normal 0 false false false EN-US X-NONE X-NONE MicrosoftInternetExplorer4 As part of the M.S. program, each astronomy graduate student takes a first qualifying exam, consisting of an extensive written exam on the broad scope of astronomy and astrophysics and the essential skills required to apply the relevant physical and mathematical reasoning. Students are counseled at this point on their preparedness for further study. Each Ph.D. student takes a second qualifying exam, consisting of an extensive written exam on graduate level astronomy and astrophysics, followed by an oral exam with a committee of four faculty members. Students are advised on their degree progress, and for Ph.D. students, on their preparedness for independent research. The learning outcomes related to core principles and math skills are assessed by the exam committee by rating each student on each outcome with a score scaled from 1 to 5. The criteria for these scores are set by the assessment committee in consultation with the faculty and are available in the Qualifying Exam 2 Evaluation Form.

Source of Evidence: Academic direct measure of learning - other

Target for O5: Astronomy Knowledge and Math Skills
Target performance is 4.0 out of 5.0 for each learning outcome.

Findings 2010-2011 - Target: Met
Seven students were rated by the exam committee after completing Qualifying Exam 2. The average rating for Astronomy Knowledge and Math Skills was 4.6 out of 5.0.

M 2: Research Advisor Evaluation (O: 1, 4, 6)
Normal 0 false false false EN-US X-NONE X-NONE MicrosoftInternetExplorer4 The students work in close collaboration with their research advisor throughout the course of their Ph.D. program. The advisor has the opportunity to observe and evaluate the student’s progress in collaboration and technology. The learning outcomes are assessed by the research advisor following the student’s successful dissertation defense. The advisor rates the student on each outcome with a score scaled from 1 to 5. The criteria for these scores are set by the assessment committee in consultation with the faculty and are the first section of the advisor evaluation form.

Source of Evidence: Academic direct measure of learning - other

Target for O1: Collaboration in Scientific Research
Target performance is 4.0 out of 5.0 for each learning outcome.

Findings 2010-2011 - Target: Met
Four students were rated by their research advisor after successfully completing their dissertation and defense. The average rating for Collaboration in Scientific Research was 5.0 out of 5.0.

Target for O4: Scientific Communication
Target performance is 4.0 out of 5.0 for each learning outcome.

Findings 2010-2011 - Target: Met
Four students were rated by their research advisor after successfully completing their dissertation and defense. The average rating for Scientific Communication Research was 4.8 out of 5.0.

Target for O6: Scientific & Research Technology
Target performance is 4.0 out of 5.0 for each learning outcome.

Findings 2010-2011 - Target: Met
Four students were rated by their research advisor after successfully completing their dissertation and defense. The average rating for Scientific & Research Technology was 4.9 out of 5.0.

M 3: Committee Evaluation of Dissertation (O: 2, 3, 4, 5)
Normal 0 false false false EN-US X-NONE X-NONE MicrosoftInternetExplorer4 In the dissertation and oral defense, the student presents the motivation, methods, results, and implications of their research. When the student has finished the dissertation, and successfully defended it, the members of the dissertation committee produce a final assessment. Based on the written dissertation, the committee assesses the learning outcomes related to motivation and implications, the scientific process, written communication skills, and physics, astronomy, and math knowledge and application. The committee rates the student on each outcome with a score scaled from 1 to 5. The criteria for these scores are set by the assessment committee in consultation with the faculty and are sections
of the documents available in the committee member evaluation form and advisor evaluation form.

**Findings 2010-2011 - Target: Met**

Eighteen committee member evaluations were performed of student's dissertations. The average rating for Scientific Communication Research was 4.6 out of 5.0.

**Target for O5: Astronomy Knowledge and Math Skills**

Target performance is 4.0 out of 5.0 for each learning outcome.

**Findings 2010-2011 - Target: Met**

Eighteen committee member evaluations were performed of student's dissertations. The average rating for Astronomy Knowledge and Math Skills was 4.7 out of 5.0.

**M 4: Committee Evaluation of Doctoral Defense (O: 2, 3, 4, 5)**

Normal 0 false false false EN-US X-NONE X-NONE MicrosoftInternetExplorer4 In the dissertation and oral defense, the student presents the motivation, methods, results, and implications of their research. When the student has finished the dissertation, and successfully defended it, the members of the dissertation committee produce a final assessment. Based on the oral presentation and defense, the committee assesses the learning outcomes related to motivation and implications, the scientific process, oral communication skills, and physics, astronomy, and math knowledge and application. The committee rates the student on each outcome with a score scaled from 1 to 5. The criteria for these scores are set by the assessment committee in consultation with the faculty and are sections of the documents available in the committee member evaluation form and advisor evaluation form.

Source of Evidence: Presentation, either individual or group

**Target for O2: Motivations and Implications of Research**

Target performance is 4.0 out of 5.0 for each learning outcome.

**Findings 2010-2011 - Target: Met**

Nineteen committee member evaluations were performed of student's dissertation defenses. The average rating for Motivations and Implications of Research was 4.5 out of 5.0.

**Target for O3: Scientific Critical Thinking**

Target performance is 4.0 out of 5.0 for each learning outcome.

**Findings 2010-2011 - Target: Met**

Nineteen committee member evaluations were performed of student's dissertation defenses. The average rating for Scientific Critical Thinking was 4.7 out of 5.0.

**Target for O4: Scientific Communication**

Target performance is 4.0 out of 5.0 for each learning outcome.

**Findings 2010-2011 - Target: Met**

Nineteen committee member evaluations were performed of student's dissertation defenses. The average rating for Scientific Communication was 4.7 out of 5.0.

**Target for O5: Astronomy Knowledge and Math Skills**

Target performance is 4.0 out of 5.0 for each learning outcome.

**Findings 2010-2011 - Target: Met**

Nineteen committee member evaluations were performed of student's dissertation defenses. The average rating for Astronomy Knowledge and Math Skills was 4.6 out of 5.0.
**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Assessment Committee Review and Report**

The departmental assessment committee will present the results for this past year (along with the previous 3 years) to the faculty to keep them informed on the performance of the Ph.D. students in astronomy. The assessment shows very high achievement of learning goals for students in the PhD in Astronomy program. In past years there have been occasional low scores in some areas but all results were very good this year. Therefore, the departmental assessment committee will not be recommending any changes in either the assessment methods or the curriculum at this time.

**Established in Cycle:** 2008-2009  
**Implementation Status:** In-Progress  
**Priority:** High

**Relationships (Measure | Outcome/Objective):**
- **Measure:** Committee Evaluation of Dissertation | **Outcome/Objective:** Astronomy Knowledge and Math Skills  
- **Measure:** Motivations and Implications of Research | **Outcome/Objective:** Scientific Communication | Scientific Critical Thinking  
- **Measure:** Committee Evaluation of Doctoral Defense | **Outcome/Objective:** Astronomy Knowledge and Math Skills  
- **Measure:** Motivations and Implications of Research | **Outcome/Objective:** Scientific Communication | Scientific Critical Thinking  
- **Measure:** Qualifying Exam 2 | **Outcome/Objective:** Astronomy Knowledge and Math Skills  
- **Measure:** Research Advisor Evaluation | **Outcome/Objective:** Collaboration in Scientific Research  
| **Outcome/Objective:** Scientific & Research Technology | **Outcome/Objective:** Scientific Communication

**Implementation Description:** Assessment Committee will present results at a faculty meeting in the Fall of 2009, at the chairman's discretion.  
**Projected Completion Date:** 05/2012  
**Responsible Person/Group:** Brian Thoms

**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The department has not changed its assessment process since last year's assessment. Although data was collected last year, no report was submitted for the Astronomy PhD. Also, the number of students completing the Astronomy PhD each year is small.

Therefore the report for this cycle contains data collected from July 2009 to June 2011.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The assessment findings indicate a very high level of achievement for the students in the program. No significant changes are planned for the coming year based on this assessment.

**Assessment Data by Section**  
**2010-2011 Behavior and Learning Disabilities Certification**  
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

**Mission / Purpose**

Through a focus on teacher education as an area of excellence and research, the BLD Program in the Department of Educational Psychology and Special Education is committed to preparing special educators who can make decisions that enable them to provide high quality instruction and support services consistent with the diverse needs and abilities of individuals with disabilities and their families. Because there is a critical shortage of teachers for students with mild disabilities in Georgia, the members of the BLD Faculty are committed to attracting and retaining highly qualified students who will become new special education teachers. The members of the BLD Faculty recognize that the personnel we prepare must have the flexibility to adapt to the changing role of the special educator, the changing patterns regarding how special education services are delivered, and the changing social and economic context in which individuals with disabilities will live. The growing availability of technology tools, improvements in field-based learning experiences, implementation of research-supported practices in special education, a focus on effective communication, and working collaboratively with other special educators, general educators, parents, and support personnel all have bearing on the enhancement of student learning. The BLD certification program is a post-baccalaureate program giving students initial teacher certification in Special Education General Curriculum:Consultative. A new program plan was developed and approved during 05-06 for this certification. During 06-07, the BLD certification program had approximately 130 students in the certification program; approximately 40 of them completed the program. During 07-08, the BLD certification program had approximately 111 students in the certification program; approximately 48 of them completed the certification program. During the current 08-09 academic year, the BLD certification program had approximately 90 students in the certification program; 31 of them completed the certification program. During the current 09-10 academic year, the BLD certification program had approximately 123 students in the certification program; 44 of them completed the certification program.

**Goals**

**G 1: Demonstrates content pedagogical knowledge.**

Demonstrates content pedagogical knowledge.
G 2: Understands student development regarding learning
Understands student development regarding learning.

G 3: Can effectively teach diverse groups of learners.
Can effectively teach diverse groups of learners.

G 4: Can Effectively plan and assess instruction.
Can Effectively plan for and assess instruction.

**Student Learning Outcomes/Objectives**

**SLO 1: Demonstrates content pedagogical knowledge. (G: 1) (M: 1)**
The teacher demonstrates an understanding of the central concepts, tools of inquiry, and structures of the discipline he or she teaches and creates learning experiences that make these aspects of subject matter meaningful for students.
Relevant Associations: Council for Exceptional Children Standards.

**SLO 2: Demonstrates understanding of how children learn. (G: 2) (M: 2)**
The teacher demonstrates understanding of how children learn and develop over a period of time, and provides learning opportunities that demonstrate a child's intellectual, social, and/or behavioral development/growth.
Relevant Associations: Council for Exceptional Children Standards

**SLO 3: Effectively teaches diverse groups of children. (G: 3) (M: 3)**
The teacher demonstrates understanding of how students differ in their approaches to learning and uses effective communication and professional behavior while differentiating instruction based on student need.
Relevant Associations: Council for Exceptional Children Standards

**SLO 4: Effectively plan and assess instruction. (G: 4) (M: 4)**
The teacher plans for and uses assessment in instruction based upon knowledge of subject matter, student needs, the community and curriculum goals.
Relevant Associations: Council for Exceptional Children standards.

**Measures, Targets, and Findings**

**M 1: Teaching Sequence (O: 1)**
EXC 7190 Teaching Sequence using a rubric of 1-4 with 4 being the strongest to include: Rationale and design, lesson plans and continuous assessments and post-assessments and discussion of findings.
Source of Evidence: Project, either individual or group

**Target for O1: Demonstrates content pedagogical knowledge.**
90% of students will score at or above a 3 out of 4 on the EXC 7190 Teaching Sequence Rubric.

**Findings 2010-2011 - Target: Partially Met**
With an N of 22, 86% of students scored a 3 or above on the EXC 7190 teaching sequence rubric. The range was 2-4. The mean score was 3.35.

**M 2: Pupil change project. (O: 2)**
P-12 change project using a rubric of 1-4 with 4 being the strongest to include a description of the behavior to be changed, a treatment for change, baseline and treatment data, and analysis and discussion of the results.
Source of Evidence: Project, either individual or group

**Target for O2: Demonstrates understanding of how children learn.**
90% of students will score at or above a 3 out of 4 on the P-12 rubric.

**Findings 2010-2011 - Target: Met**
With an N of 22, 100% scored at or above 3 out of 4 on the P-12 rubric. The range was 3.5-3.95. The mean score was 3.64.

**M 3: Performance Evaluation (O: 3)**
Performance Evaluation Rubric of 1-4 with 4 being the strongest to include indicators based on the Georgia Framework.
Source of Evidence: Performance (recital, exhibit, science project)

**Target for O3: Effectively teaches diverse groups of children.**
90% of students will score at or above a 3 out of 4 on the performance evaluation rubric.

**Findings 2010-2011 - Target: Met**
With an N of 22, 100% scored at or above 3 out of 4 on the performance evaluation rubric. The range was 3.4-3.9. The mean score was 3.66.
**M 4: Lesson Plan (O: 4)**

Lesson Plan Rubric of 1-4 with 4 being the strongest to include lesson title and description, primary learning outcomes, procedures, technology, assessment, modifications, extension, and reflection.

Source of Evidence: Project, either individual or group

**Target for O4: Effectively plan and assess instruction.**

90% of students will score at or above a 3 out of 4 on the lesson plan rubric.

**Findings 2010-2011 - Target: Met**

With an N of 22, 100 scored at or above 3 out of 4 on the lesson plan rubric. The range was 3-4. The mean score was 3.63.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Action Plan for All indicators**

Data for the Initial Certification program in BLD were collected again on the new measures established for the 08-09 academic year as recommended in our APR plan. The data indicate that student performance was met for three measures and was at 86% for the other measure; target for all was 90%. The faculty have indicated that the student’s performance on these measures is adequate since they were within 4% points of the target. We will explore increasing reliability in the future. The faculty members are now using the new rubric for performance (mentioned in the 08-09 report) that aligns with the Georgia Framework for Teaching in order to better establish alignment with state standards.

- **Established in Cycle:** 2009-2010

Mission / Purpose

Through a focus on teacher education as an area of excellence and research, the BLD Program in the Department of Educational Psychology and Special Education is committed to preparing special educators who can make decisions that enable them to provide high quality instruction and support services consistent with the diverse needs and abilities of individuals with disabilities and their families. Because there is a critical shortage of teachers for students with mild disabilities in Georgia, the members of the BLD Faculty are committed to attracting and retaining highly qualified students who will become new special education teachers. The members of the BLD Faculty recognize that the personnel we prepare must have the flexibility to adapt to the changing role of the special educator, the changing patterns regarding how special education services are delivered, and the changing social and economic context in which individuals with disabilities will live. The growing availability of technology tools, improvements in field-based learning experiences, implementation of research-supported practices in special education, a focus on effective communication, and working collaboratively with other special educators, general educators, parents, and support personnel all have bearing on the enhancement of student learning. The BLD Master's program is a graduate program for students with teacher certification in Special Education General Curriculum/Consultative. A new program plan was developed and approved during 05-06 for this degree. During 06-07, the BLD Master's program had approximately 60 students in the program, with 21 students completing the Master's program. During 07-08, the BLD Master's program had approximately 33 students in the program, with 10 students graduating with Master's degrees in BLD from Summer 07 through Spring 2008. During 08-09, the BLD Master's program had approximately 46 students in the program, with 10 students graduating with Master's degrees in BLD from Summer 08 through Spring 2009. During 09-10, the BLD Master's program had approximately 60 students in the program, with 6 students graduating with Master's degrees in BLD from Summer 09 through Spring 2010.

Goals

G 1: Understands student development regarding learning
The student demonstrates understanding of how children learn.

G 2: Can effectively teach diverse learners.
Can effectively teach diverse groups of learners.

G 3: Demonstrates content pedagogical knowledge.
Demonstrates content pedagogical knowledge.

Student Learning Outcomes/Objectives

SLO 1: Student demonstrates understanding of learning. (G: 1) (M: 1)
The student demonstrates understanding of how children learn and develop over a period of time, by providing learning opportunities that demonstrate a child's intellectual, social, and/ or behavioral development/ growth.
Relevant Associations: Council for Exceptional Children Standards.

SLO 2: Effectively teaches diverse groups of learners. (G: 2) (M: 2)
The teacher plans for and uses assessment in instruction based upon knowledge of subject matter, student needs, the community and curriculum goals.
Relevant Associations: Council for Exceptional Children Standards.

SLO 3: Demonstrates content pedagogical knowledge. (G: 3) (M: 3)
The teacher demonstrates understanding of the central concepts, tools of inquiry, and structures of the discipline he or she teaches and creates learning experiences that make these aspects of subject matter meaningful for students.
Relevant Associations: Council for Exceptional Children Standards.

Measures, Targets, and Findings

M 1: P-12 Change Project (O: 1)
P-12 change project using a rubric of 1-4 with 4 being the strongest to include a description of the behavior to be changed, a treatment for change, baseline and treatment data, and analysis and discussion of the results.
Source of Evidence: Project, either individual or group

M 2: Performance Evaluation (O: 2)
Performance Evaluation Rubric of 1-4 with 4 being the strongest to include indicators based on the Georgia Framework.
Source of Evidence: Performance (recital, exhibit, science project)

Target for O2: Effectively teaches diverse groups of learners.
90% of students will score at or above a 3 out of 4 on the performance rubric.

Findings 2010-2011 - Target: Met
With an N of 9, 100% scored at or above 3 out of 4 on the performance rubric. The range was 3.6-4. The mean score was 3.79.
M 3: Comprehensive Exam (O: 3)
Written Comprehensive Exam scored by a Rubric of 1-4 with 4 being the strongest.
Source of Evidence: Comprehensive/end-of-program subject matter exam

Target for O3: Demonstrates content pedagogical knowledge.
90% of students will score at or above a 3 out of 4 on their comprehensive exams.

Findings 2010-2011 - Target: Met
With an N of 9, 100% scored at or above 3 out of 4 on the performance rubric. The range was 3-4. The mean score was 3.22.

Georgia State University
Assessment Data by Section
2010-2011 Biology Assessment of Core
As of: 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
To critically think about and communicate Biology. Students will be able to recall basic concepts in Biology, think critically and...
evaluate Biological claims, and communicate these concepts both in writing and orally.

Goals

G1: To critically think about and communicate Biology
Students will be able to recall basic concepts in Biology, think critically and evaluate Biological claims, and communicate these concepts both in writing and orally.

Student Learning Outcomes/Objectives

SLO 1: Content in Biology (M: 22)
Students will be able to recall basic content in Biology, including but not limited to: history, conventional metabolic pathways, structure/function of cells, structure/function of human physiology, and how these topics pertain to real-world applications.

SLO 5: Basic field/lab techniques (M: 22)
Students will be able to perform basic techniques used in biological research which are applied in a laboratory setting and, in some cases, in outdoor settings such as during data collection.

Other Outcomes/Objectives

O/O 2: Communication (M: 1)
Students will be expected to be able to express ideas about biological content both orally and in writing.

O/O 3: Application of the Scientific Method
Students will be able to apply the scientific method to critically analyze problems in biology. Inherent in these skills are the ability to formulate a hypothesis, perform background research, design appropriate experiments to address biological questions, and analyze the results of the experiment.

O/O 4: Analysis (M: 1, 22)
Students will be able to execute basic problem-solving skills and data analysis in Biology.

Measures, Targets, and Findings

M 1: Mini Lecture followed by 1 page summary (O: 2, 4)
Communicate effectively in oral and written forms Biol 4930/6930 Summer 10 n=24 Each student will present a mini lecture and provide 1-page summary. 84% of students scored 75% or higher Target: 80% to score 75% Save
Source of Evidence: Presentation, either individual or group

M 22: Dilution Scheme problem solving BIO3890 (O: 1, 4, 5)
Course: BIOL 3890 Assessment: Final Exam Question (complex dilutions) Data: Students are taught to calculate dilution schemes for use in enumeration of bacteria. The following question requires the students take the learned principles and formula and apply them in a new situation (Bloom's level 3). Given the following serial dilution, what is the colony count of the original sample if 0.1 ml of the final dilution yields 185 organisms? 1:10 2:10 1:100 1:100 (Final Dilution) Outcome: Greater than 75% of the students were able to completely answer the question and demonstrate the mechanics of how they got there.
Source of Evidence: Academic direct measure of learning - other

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Action Plan Biology Fall 2009
One issue in our curricula that was identified from assessment data collection was the discontinuity of topics covered in the same courses. We realized that in Cell & Molecular Biology, for example, instructors varied more from topic to topic than expected. This is a problem since our courses constitute components of a building, continuous degree program. Our dept. is holding subcommittee meetings with instructors to teach the same courses to form a concrete consensus on what topics must be covered in major courses. This will standardize the degree program so that students receive similar material in the same courses regardless of the instructor.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High
Projected Completion Date: 04/2010
Responsible Person/Group: Frank Cruz, Therese Poole

Curriculum Assessment
At a recent faculty retreat it was realized that the Biology Department has grown large enough to re-examine the content overlap and gaps between required courses. The first step will be to form an Assessment Committee. The committee will decide how to best assess the curricula in consideration of our departmental goals (which are also being clarified).

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Goals

G 1: To provide opportunities to pursue graduate studies in biology for the 21st century

The accumulation of information in biology and related fields is increasing geometrically. In addition, ethical and problematic issues associated with environmental health, public health and individual health confront each of us everyday. Our goal is to train biologists to meet these challenges. We provide our students with a curriculum that emphasizes training in scientific literacy and critical thinking. We also provide them with opportunities to participate in internships and contribute to research efforts that explore a variety of scientific frontiers.

Outcomes/Objectives

O/O 1: Student Learning Outcomes, Associations and Related Measures, Achievement Targets, Findings and Action Plans (G: 1)

O 1: Scientific Content. Students will demonstrate the ability to choose an appropriate topic, comprehend, and organize information from current scientific literature by preparing a non-thesis report or a thesis. Related Measures: M 1: The non-thesis report 1) Students in the non-thesis track enroll in Biol 8888, the capstone course. A rubric, which is made available to students and faculty, is used to provide a uniform evaluation metric. 2) Students submit a 20-page non-thesis paper (either a critical review of a defined topic or a description of a research project) to their faculty mentor, who offers constructive criticism. 3) After addressing comments from the mentor, students submit the corrected copy to a faculty committee composed of the faculty mentor and a faculty reader who evaluate the paper using a 1 to 5 scale for each of three categories. Students are asked to demonstrate their ability to describe and organize conceptually complex scientific material in a way that provides background information and rationale to justify the experimental endeavor that they have chosen. Achievement Target: 70% of students are expected to achieve a score of 4 or higher on a 5-point scale in part 1 of the rubric. Findings (2008-2009) - Achievement Target: not met. A random sample of 12 non-thesis M.S. graduates were evaluated using the rubric and 58% (7/12 scored 4 or 5) achieved the target score. M 2: Thesis Report 1) Students prepare a thesis proposal, that is reviewed by a committee of at least three faculty members. Upon approval of the proposal, students register for Biol 8999 and undertake their thesis research. 2) Students complete the thesis and present an oral defense before the 3-member faculty committee and a general audience consisting of interested faculty and students. Achievement Target: 80% of those who submit a thesis proposal are expected to be approved for continuation on the thesis track. Findings (2008-2009) - Achievement Target: Met. Three students submitted a thesis proposal between Su08 and Sp09. All three proposals were approved. Findings (2007-2008) - Achievement Target: Met. Five students submitted a thesis proposal between Su07 and Sp08. All five proposals were approved. Findings (2006-2007) - Achievement Target: Met. Six students submitted a thesis proposal between Su06 and Sp07. All six proposals were approved. Findings (2005-2006) - Achievement Target: Met. Three students submitted thesis proposals during the 2005-2006 academic year. After revision, 100% of the students were approved to continue on the thesis track. O 2: Scientific Inquiry. Students will demonstrate a knowledge of scientific content as it pertains to their chosen area of concentration in biology. Related Measures: M 1: The non-thesis Report Students in the non-thesis track are asked to demonstrate the ability to analyze relevant data from the literature and/or from the student's laboratory. Students are evaluated on their ability to formulate logical arguments supporting interpretations of the data and describe the limit of our understanding about the chosen topic. Achievement Target: 65% of students achieve a score of 4 or higher on a 5-point scale in part 2 of the rubric. Findings (2008-2009) - Achievement Target: met. A random sample of 12 non-thesis M. S. graduates were evaluated using the rubric. 42% (10 of 12 (83%) scored 4 or 5). M 2: Thesis Report 1) Students prepare a thesis proposal, that is reviewed by a committee of at least three faculty members. Upon approval of the proposal, students undertake their thesis research. 2) Students complete the thesis and present an oral defense before the 3-member faculty committee and a general audience consisting of interested faculty and students. Achievement Target: 80% of those who submit a thesis proposal are expected to be approved for continuation on the thesis track. Findings (2008-2009) - Achievement Target: Met. Three students submitted a thesis proposal between Su08 and Sp09. All three proposals were approved. Findings (2007-2008) - Achievement Target: Met. Five students submitted a thesis proposal between Su07 and Sp08. All five proposals were approved. Findings (2006-2007) - Achievement Target: Met. Six students submitted a thesis proposal between Su06 and Sp07. All six proposals were approved. Findings (2005-2006) - Achievement Target: Met. Three students submitted thesis proposals during the 2005-2006 academic year. After revision, 100% of the students were approved to continue on the thesis track. O 3: Critical Thinking. Students will be able to critically assess the findings they have presented and formulate a reasonable hypothesis for future experiences. Related Measures: M 1: Non-thesis Report Students are asked to critique data sets and generate a speculative but testable hypothesis with alternative outcomes. It is expected that this section of the report be accompanied by an appropriate experimental design for testing the hypothesis. Achievement Target: 60% of students are expected to achieve a score of 4 or higher on a 5-point scale in part 3 of the rubric. Findings (2008-2009) - Achievement Target: not met. A random sample of 12 non-thesis M.S. graduates were evaluated using the rubric. 50% (6 of 12) scored 4 or 5. M 2: Thesis Report 1) Students prepare a thesis proposal, that is reviewed by a committee of at least three faculty members. Upon approval of the proposal, students undertake their thesis research. 2) Students complete the thesis and present an oral defense before the 3-member faculty committee and a general audience consisting of interested faculty and students. Achievement Target: 80% of those who submit a thesis proposal are expected to be approved for continuation on the thesis track. Findings (2008-2009) - Achievement Target: Met. Three students submitted a thesis proposal between Su08 and Sp09.
All three proposals were approved. Findings (2007-2008) - Achievement Target: Met Five students submitted a thesis proposal between Su07 and Sp08. All five proposals were approved. Findings (2006-2007) - Achievement Target: Met Six students submitted a thesis proposal between Su06 and Sp07. All six proposals were approved. Findings (2005-2006) - Achievement Target: Met Three students submitted thesis proposals during the 2005-2006 academic year. After revision, 100% of the students were approved to continue on the thesis track.

O/O: Scientific Inquiry

Findings (2008-2009) - Achievement Target: Met 61 students completed their MS degree between Su2008 and Sp2009. The average time between entrance into the program and receipt of degree was 24 months, the median time was 22 months. Three M.S. degrees were awarded to biology doctoral students as non-terminal degrees. Of the 58 students enrolled only as M.S. students, 53 (91%) completed the program in 3 years or less.

Findings (2007-2008) - Achievement Target: Met 70 students completed their MS degree between Su2007 and Sp2008. The average time between entrance into the program and receipt of degree was 23.9 months, while the median was 22 months. Of the 58 students awarded a degree, 46 (79%) completed the program in 3 years or less. [Note: three M.S. degrees were offered to biology doctoral students as a non-terminal degree.] Findings (2007-2008) - Achievement Target: Met 70 students completed their MS degree between Su2007 and Sp2008. The average time between entrance into the program and receipt of degree was 2.8 years, while the median time was 2.3 years. Of the 70 students awarded a degree, 46 (66%) completed the program in 3 years or less. [Note: this year, M.S. degrees were offered to biology doctoral students as a non-terminal degree. Of the 9 current Ph.D. students who opted to complete the non-thesis M.S. requirements, 8 had already been in their doctoral program for more than 3 years. Thus, of the 61 MS recipients who were enrolled only as M.S. students throughout their entire graduate program, 45 (74%) obtained their degree in 3 years or less.] Findings (2006-2007) - Achievement Target: Met 64 students completed their MS degree between Su2006 and Sp2007. The average time between entrance into the program and receipt of degree was 3.0 years, while the median time was 2.34 years. Of the 64 students awarded a degree, 42 (66%) completed the program in 3 years or less. Findings (2005-2006) - Achievement Target: Met 61 students completed their M.S. degree during the 2005-2006 year. Of these, 69% completed their degree within three years. The average time to completion of degree was 2.74 years, and the median time was 2.33 years. Related Action Plans:

O/O: Scientific Inquiry

Findings (2008-2009) - Achievement Target: Met 61 students completed their MS degree between Su2008 and Sp2009. The average time between entrance into the program and receipt of degree was 24 months, the median time was 22 months. Three M.S. degrees were awarded to biology doctoral students as non-terminal degrees. Of the 58 students enrolled only as M.S. students, 53 (91%) completed the program in 3 years or less.

Findings (2007-2008) - Achievement Target: Met 70 students completed their MS degree between Su2007 and Sp2008. The average time between entrance into the program and receipt of degree was 23.9 months, while the median was 22 months. Of the 58 students awarded a degree, 46 (79%) completed the program in 3 years or less. [Note: three M.S. degrees were offered to biology doctoral students as a non-terminal degree.] Findings (2007-2008) - Achievement Target: Met 70 students completed their MS degree between Su2007 and Sp2008. The average time between entrance into the program and receipt of degree was 2.8 years, while the median time was 2.3 years. Of the 70 students awarded a degree, 46 (66%) completed the program in 3 years or less. [Note: this year, M.S. degrees were offered to biology doctoral students as a non-terminal degree. Of the 9 current Ph.D. students who opted to complete the non-thesis M.S. requirements, 8 had already been in their doctoral program for more than 3 years. Outcomes/Objectives

O/O 1: Scientific Content (M: 1, 2)

Students will demonstrate the ability to 1) form hypotheses, design experiments, collect data, and evaluate results; 2) comprehend the current scientific literature; 3) place reports of new discoveries into the context of previous scientific progress; and 4) develop an understanding of the impact of these discoveries on science and society.

Related Measures: M 1: Ph.D. Qualifying Examination Students must prepare, submit, and orally defend an NIH-style research proposal. The examination process follows a specific timeline. 1) Students must submit a pre-proposal in which they state the nature of the problem, present their hypothesis, and briefly describe their experimental design. The pre-proposal is evaluated by a 3-member faculty committee who either grant their approval or make suggestions. 2) After the pre-proposal or a revised pre-proposal has been approved, students have two months to complete the full proposal. During this time period, they receive mentoring from their Committee in the form of 1-2 meetings in which they present their progress on developing the proposal and receive suggestions from the Committee. 3) Students submit their completed proposals and orally defend them before their Committees. The Committee then makes one of the following assessments of student performance: a) Pass (satisfactory performance on both the written and oral parts of the examination); b) Qualified Pass (satisfactory performance on the written proposal, but deficiencies noted in the oral defense); c) Conditional Pass (certain parts of the written proposal must be revised); or Fail (unsatisfactory performance on both the proposal and the oral defense). Students who fail the examination two times are subject to expulsion from the Ph.D. program. Achievement Target: 75% of students are expected to receive a Pass on their first attempt, and 90% are expected to receive a Pass, Qualified Pass, or Decision Pending. Of those who receive a Qualified Pass or a Conditional Pass, 80% are expected to meet the conditions stipulated by their Committee within six months. Findings (2008-2009) - Achievement Target: Met 19 students took the Ph.D. qualifying examination in the 2008-2009 academic year. Of these 15 (79%) received a Pass on their first attempt, while 3 (16%) received either a Qualified Pass or Decision Pending and one student (5%) failed the exam for the second time. Those students receiving a Qualified Pass or Decision Pending subsequently satisfied the conditions required to pass the examination. Findings (2007-2008) - Achievement Target: Partially Met Seventeen students took the Ph.D. qualifying examination in the 2007-2008 academic year. Of these 10 (59%) received a Pass on their first attempt, while 13 (76%) received either a Pass, Qualified Pass or Decision Pending. Those students receiving a Qualifying Pass or Decision Pending subsequently satisfied the conditions required to pass the examination. Of those students who did not pass, three are retaking the examination during the Fa08 semester, and the fourth has left the program.

Findings (2006-2007) - Achievement Target: Met Sixteen students took the Ph.D. qualifying examination in the 2006-2007 academic year. Of these 15 (94%) received either a Pass, Qualified Pass or Decision Pending. The student who received the Decision Pending has satisfied the conditions required for a Pass. The two students who received a Qualified Pass took their examinations in the Sp07 semester; therefore, six months have not yet elapsed since the date of their evaluation. Findings (2005-2006) - Achievement Target: Met Eighteen students took the Ph.D. qualifying examination in the 2005-2006 academic year. Of these, 15 (83%) received a Pass, and 17/18 (94%) received a Pass, Qualified Pass, or Decision Pending. Two who received a conditional pass conditions of their qualified status within six months. Related Action Plans: Evaluation of Revised Doctoral Examination Format During the 2007-2008 academic year, the format for the Ph.D. examination was modified in a way that decreases the complexity of the proposal-based format and limits faculty input into the process. Compared with the 2006-2007 year, this year a lower percentage of students passed the exam on the first attempt. This may be due to the need for both students and faculty to adjust to the new format. The Department has decided to use the new format for another year and, should the trend toward low pass percentages continue, re-evaluate the exam format at that time. For more information, see the Action Plan Details section of this report. M 2: Time to receipt of degree Students are expected to complete their degrees in a timely fashion. The current median time to receipt of degree in the biological disciplines that form the research focus in our department is approximately 6-6.5 years. Achievement Target: 50% of students who receive their Ph.D.s will have spent 6.5 years or less in the doctoral program. Achievement Target: 50% of students who receive their Ph.D.s will have spent 6.5 years or less in the doctoral program. Findings (2008-2009) - Achievement Target: Met 17 students received their Ph.D.s from the Biology Department during the 2008-2009 academic year. The average time from entry into the program until receipt of degree was 5.6 years, while the median time was 5 years. 15 of the 17 students (88%) completed their degree work in 6.5 years or less. Findings (2007-2008) - Achievement Target: Met Twenty-four students received their Ph.D.s from the Biology Department during the 2007-2008 academic year. The average time from entry into the program until receipt of degree was 6.48 years, while the median time was 6.3 years. Fourteen of the 24 students (58%) completed their degree work in 6.5 years or less. Findings (2006-2007) Achievement Target: Met 15 students received their Ph.D.s from the Biology Department during the 2006-2007 academic year. The average time from entry into the program until receipt of degree was 5.11 years, while the median time was 5.3 years. 13 of the 15 students (87%) completed their degree work in 6.5 years or less. Findings (2005-2006) - Achievement Target: Partially Met 11 students received their Ph.D.s from the department during the 2005-2006 academic year. Of these, 5 (45%) completed their degrees in 6.5 years or less. O 2: Scientific Communication Students will be able to present their findings and the findings of others in written and oral formats. Related Measures: M 2: Ph.D. Qualifying Examination Students must prepare, submit and orally defend an NIH-style research proposal. The examination process follows a specific timeline. 1) Students must submit a pre-proposal in which they state the nature of the problem, present their hypothesis, and briefly describe their experimental design. The pre-proposal is evaluated by a 3-member faculty committee who either grant their approval or make suggestions. 2) After the pre-proposal or a revised pre-proposal has been approved, students have two months to complete the full proposal. During this time period, they receive mentoring from their Committee in the form of 1-2 meetings in which they present their progress on developing the proposal and receive suggestions from the Committee. 3) Students submit their completed proposals and orally defend them before their Committees. The Committee then makes one of the following assessments of student performance: a) Pass (satisfactory performance on both the written and oral parts of the examination); b) Qualified Pass (satisfactory performance on the written proposal, but deficiencies noted in the oral defense); c) Conditional Pass (certain parts of the written proposal must be revised); or Fail (unsatisfactory performance on both the proposal and the oral defense). Students who fail the examination two times are subject to expulsion from the Ph.D. program. Achievement Target: 75% of students are expected to receive a Pass on their first attempt, and 90% are expected to receive a Pass, Qualified Pass, or Decision Pending. Of those who receive a Qualified Pass or a Conditional Pass, 80% are expected to meet the conditions stipulated by their Committee within six months. Findings (2005-2006) - Achievement Target: Partially Met 11 students received their Ph.D.s from the department during the 2005-2006 academic year. Of these, 5 (45%) completed their degrees in 6.5 years or less

Measures, Targets, and Findings

**M 1: Details for Action Plans Established this Cycle (O: 1, 2, 3)**
Details for Action Plans Established This Cycle Evaluation of Revised Doctoral Examination Format. During the 2007-2008 academic year, the format for the Ph.D. examination was modified in a way that decreases the complexity of the proposal-based format and limits faculty input into the process. Compared with the 2006-2007 year, this year a lower percentage of students passed the exam on the first attempt. This may be due to the need for both students and faculty to adjust to the new format. The Department has decided to use the new format for another year and, should the trend toward low pass percentages continue, re-evaluate the exam format at that time. Priority: High Responsible Person/Group: Ph.D. graduate directors(Drs. G. Pierce, C.-D. Liu, and C. Jiang). Analysis Answers What specifically did your assessments show regarding any outcomes/objectives that will require continued attention? The percentage of students who passed the Ph.D. qualifying examination dipped below the goals set by the department during 2007-2008. This may reflect the fact that this year certain changes were made to the format for the Ph.D. examination. Specifically, students were no longer required to prepare a full NIH-style proposal with multiple specific aims. Instead, they were required to propose a single specific aim and defend it orally. Faculty committee input was also decreased: faculty were limited to providing one set of comments for the pre-proposal and one for the rough draft of the final proposal. The relatively low percentage of students who passed this year may be due to 1) a statistical anomaly, 2) the need for students and faculty alike to adjust to the new examination format, or 3) a defect in the examination process that must be addressed. The pass rates will be monitored closely next year and, based on the results, modifications may need to be made in the exam format.

Source of Evidence: Efficiency

**M 2: Details for Action Plans Established this Cycle (O: 1, 2, 3)**
Details for Action Plans Established This Cycle Evaluation of Revised Doctoral Examination Format. During the 2007-2008 academic year, the format for the Ph.D. examination was modified in a way that decreases the complexity of the proposal-based format and limits faculty input into the process. Compared with the 2006-2007 year, this year a lower percentage of students passed the exam on the first attempt. This may be due to the need for both students and faculty to adjust to the new format. The Department has decided to use the new format for another year and, should the trend toward low pass percentages continue, re-evaluate the exam format at that time. Priority: High Responsible Person/Group: Ph.D. graduate directors(Drs. G. Pierce, C.-D. Liu, and C. Jiang). Analysis Answers What specifically did your assessments show regarding any outcomes/objectives that will require continued attention? The percentage of students who passed the Ph.D. qualifying examination dipped below the goals set by the department during 2007-2008. This may reflect the fact that this year certain changes were made to the format for the Ph.D. examination. Specifically, students were no longer required to prepare a full NIH-style proposal with multiple specific aims. Instead, they were required to propose a single specific aim and defend it orally. Faculty committee input was also decreased: faculty were limited to providing one set of comments for the pre-proposal and one for the rough draft of the final proposal. The relatively low percentage of students who passed this year may be due to 1) a statistical anomaly, 2) the need for students and faculty alike to adjust to the new examination format, or 3) a defect in the examination process that must be addressed. The pass rates will be monitored closely next year and, based on the results, modifications may need to be made in the exam format.

Source of Evidence: Efficiency

**M 3: Ph.D. Qualifying Exam**
O 1: Students receive compliance training and take on-line exams as they begin working in research laboratories (See Appendix 1) O 2: Students are required to complete a rigorous core curriculum that emphasizes training in scientific literacy and critical thinking. O 3: This curriculum requires students to be evaluated both on written (e.g. term papers and proposals, essay test questions) and oral communication skills (class presentations in topic and concept courses). O 4: Students perform independent and collaborative research within the Departments of Biology and Chemistry that explore and integrate a variety of scientific frontiers and graduate in a timely manner. Related Measures: M 1: (O 1) Successful completion of Bio 8550 and the CITI exam (See Appendix 1) Achievement Target: Our goal is that 100% of the students complete the two steps for compliance. Federal law mandates that all individuals working in research labs complete these requirements successfully. Findings: not met. A key component for success is attendance # of classes that meet the attendance policy and will be measured (O 2 & 3). The Ph.D. Qualifying Exam 1) During the second year students are required to complete Bio 6801 “Survival Skills in Academia”. At the beginning of the third year students must register Bio 9991 or 9992, these are discipline specific graded courses used to mentor and evaluate students based upon the preparation of a scientific proposal. The qualifying exam consists of: 1) preparation of a pre-proposal and upon approval; 2) preparation of a proposal not to exceed 20 pages that follows either an NIH or an NSF proposal format. A faculty committee evaluates both written documents and an oral defense. Student assessment is on a scale from 1 (high) to 4 (low). An assessment of 1 is reserved for superior performances on both the written and oral components; 2 reflects a satisfactory performance in which deficiencies are recognized that typically require remedial coursework that is specified by the examination committee; 3 reflects a marginal performance in which students are required to prepare and submit additional material and often a second oral defense; 4: unsatisfactory requires that the examination be repeated within 12 months. Achievement Target: Our goal is that 20% of the exams evaluated receive a score of 1. 30% of the exams receive a 2; 35% of the exams receive a score of 3 and less than 15% receive a score of 3 or lower. Findings: Achievement target met: 14 students completed the qualifying exam. Three exams received a 1; 8 exams received a 2 or 3 and three exams received a 4. The average score was 2.14 M3: (O 1 - 4) Participation in regional, national and international meetings and graduate in a timely manner Beginning in their third and continuing through graduation students are expected to attend and present their research results at regional, national and international meetings. This provides the opportunity to establish scientific collaborations as students begin establishing their own scientific networks.

Source of Evidence: Capstone course assignments measuring mastery
Mission / Purpose

The Master of Science degree is designed for students who wish to work as Business Analysis practitioners. A typical student would have an undergraduate business degree, strong functional experience, or exceptional interest in Business Analysis. The program blends the elements of the Business Analysis (problem solving, information technology and analytical methods) so that every graduate will have a foundation in the Business Analysis discipline. The emphasis is on a deeper understanding of the concepts and techniques used. Graduates of the program will ideally enter a career path requiring analysis and decision support in any functional area of business, or across functional areas.

This Mission was formulated in 2005-2006. It was not moved to this cycle when WEAVE was updated.

Goals

G 1: Goal of the MS in Business Analysis

The goal of the MS in Business Analysis program is to provide students seeking a degree with a singular focus on business analyses tools, techniques and frameworks with the theory, method, and rational for understanding, selecting, and utilizing those tools, techniques, and frameworks over a wide range of applications used in for-profit and not-for-profit organizations in the 21st century.

Student Learning Outcomes/Objectives

SLO 1: Qualitative Analysis of Business Situation (M: 1)

Normal 0 false false false EN-US X-NONE X-NONE Students should be able to qualitatively state the key issues clearly and accurately the issues in a business problem.

SLO 2: Model Building Ability (M: 2)

Normal 0 false false false EN-US X-NONE X-NONE Students will be able to clearly identify the dependent variable(s) and the appropriate metrics in a given business problem.

SLO 3: Understanding of Techniques (M: 3)

Normal 0 false false false EN-US X-NONE X-NONE Students will understand when and how to perform problem solving techniques for business problems and how to interpret the results.

SLO 4: Software Skills (M: 4)

Students will acquire expertise in the selection and use of key decision making software packages.

Measures, Targets, and Findings

M 1: Qualitative Analysis of Business Situation (O: 1)

Normal 0 false false false EN-US X-NONE X-NONE Students will be measured on their ability to a) understand the business goals, b) identify the key variables that need to be analyzed, c) analyze the potential relationships among the variables and d) interpret the results of their analysis.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Qualitative Analysis of Business Situation

80% of students will receive a score of 3.0 or higher on the 4.0 scale. Rubric 1 is to be used in scoring on assignments and projects from courses across the curriculum. Because the small number of students in the MS Business Analysis program each student in the program will be evaluated on this rubric in every course where it is applicable during the academic year Learning Outcome 1. Rubric Qualitative Analysis of Business Situation Excellent (4) Competent (3) Less than competent (2) Ineffective (1) i. Understanding of the business goal / issues Is able to state the key issues clearly and accurately Either clarity or accuracy can be improved Both clarity and accuracy are below expectation It is clear that the student does not understand the issues ii. Identifying Key variables that need to be analyzed Knows clearly what variables must be used to represent the key issue(s) Some lack of clarity in expressing the key variables Unsure or incomplete understanding of what needs to be analyzed Does not understand the key variable that relate to the issues. iii. Analysis potential relationships among variables Accurate and thorough qualitative analysis of the situation Some lack of clarity in expressing the relationships Weak understanding of relationships among concepts/variables Very little understanding of how variables/concepts are related. iv. Interpretation of results Can clearly relate the results of model building and quantitative analysis back to the main issue Can make the connection of model results to situation most of the time Some errors in interpretation of results in the context of the situation inability to connect the results of model with the situation at hand.

Findings 2010-2011 - Target: Met

All students scored 3 or higher in their ability to do qualitative analysis.

M 2: Model Building Ability (O: 2)

In developing a model students will be measured on their ability to a) identify the dependent variable(s) and the appropriate metrics, b) identify key independent variables and their metrics, c) manage data collection, cleaning and transformation, and d) develop and
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Model Building Ability**

80% of students will receive a score of 3.0 or higher on the 4.0 scale. Rubric 2 is to be used in scoring on assignments and projects from MGS 8150. Because of the small number of students in the MS Business Analysis program each student in the program will be evaluated on this rubric in MGS 8150 each time the class is offered. Learning Outcome 2 Model Building Ability Excellent (4) Competent (3) Less than competent (2) Ineffective (1) i. Identifying the dependent variables and appropriate metrics Can clearly identify the dependent variable(s) and the appropriate metrics Can identify the variables, but unsure about measurement Unsure about the dependent variable Does not understand the connection between the issue at hand and the dependent variable ii. Identifying Key independent variables and their metrics Can clearly identify the independent variable(s) and the appropriate metrics Can identify the variables, but unsure about measurement Unsure about the independent variables Does not understand the connection between the dependent and the independent variables iii. Dealing with Data – collection, cleaning, transforming the data. Accurate and thorough preliminary analysis of the data. Most parts of preliminary analysis done well. Skipped or misunderstood some aspects of data preparation Poor understanding of the need to examine data carefully before modeling. iv. Model Development and validation Clear demonstration of a viable model and results from a validation. Possibly accurate model, not validated sufficiently Some errors in model building Model inappropriate or has too many errors.

**Findings 2010-2011 - Target: Met**

Quantitative Model building ability is the cornerstone of the Business Analysis program, and all students did well in this regard. Their work on projects shows that they can develop statistical models for forecasting, optimization, and other tasks very well.

**M 3: Understanding of Techniques (O: 3)**

Students will show skills using a) regression analysis, b) time-series forecasting, c) factor and cluster analysis, and d) discriminant analysis and/or logistic regression.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Understanding of Techniques**

80% of students will receive a score of 3.0 or higher on the 4.0 scale. Rubric 3 is to be used in scoring on assignments and projects from across the curriculum. Because of the small number of students in the MS Business Analysis program each student in the program will be evaluated on this rubric in every course where it is applicable during the academic year. Learning Outcome 3 Rubric Understanding of Techniques Excellent (4) Competent (3) Less than competent (2) Ineffective (1) i. Regression Analysis Clear understanding of when and how to perform the technique and interpret the results. Occasional uncertainty about the application of the technique or interpretation of results. Makes some errors in applying the technique, or in the way the results are interpreted. Poor understanding of why, when and how the technique is applied. ii. Time Series Forecasting Clear understanding of when and how to perform the technique and interpret the results. Occasional uncertainty about the application of the technique or interpretation of results. Makes some errors in applying the technique, or in the way the results are interpreted. Poor understanding of why, when and how the technique is applied. iii. Factor/Cluster Analysis Clear understanding of when and how to perform the technique and interpret the results. Occasional uncertainty about the application of the technique or interpretation of results. Makes some errors in applying the technique, or in the way the results are interpreted. Poor understanding of why, when and how the technique is applied. iv. Discriminant Analysis or Logistic Regression Clear understanding of when and how to perform the technique and interpret the results. Occasional uncertainty about the application of the technique or interpretation of results. Makes some errors in applying the technique, or in the way the results are interpreted. Poor understanding of why, when and how the technique is applied.

**Findings 2010-2011 - Target: Met**

At least 80% of the students scored 3 or above on this measure. A couple of students showed some weakness in the mathematical concepts behind the techniques used. Additional resources can be made available in the future to assist such students, such as video instruction online.

**M 4: Software Skills (O: 4)**

This measure evaluates the students’ expertise in using key software in business decision analysis and problem solving situations. It will be assessed during the completion of projects and assignments across the curriculum.

Source of Evidence: Project, either individual or group

**Target for O4: Software Skills**

**Findings 2010-2011 - Target: Met**

Software skills tend to have the most variation among students. Still, most students were competent enough in their software abilities to score 3 or higher on the scale. Some recurring software issues tend to be problems with installation of SAS on various operating systems.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Continual Improvement Actions**

The assessment data show that both the programs are currently meeting or exceeding expectations, and have shown improvement over the data in 2008. With this in mind, the key elements of the action plan are as follows: 1. To continue the efforts made over the past few years in keeping the course material current, updating cases and examples to reflect industry practices today. 2. To...
add more resources online to aid in software competency. 3. To encourage students to engage in collaborative learning. Students post projects on the web and learn from each others’ work. This strategy has over the years yielded very positive results.

**To Hire New Faculty**

Two trends have been noted in this area: 1. Analytics skills are increasingly used in business, and new techniques are being developed to analyze data. 2. Enrollment in our courses is going up. We need new faculty to meet the demand for existing courses as well as to offer new ones.

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The assessment process remains unchanged. The current version is appropriate for our objectives.

**ACADEMIC PROGRAM QUESTION 2:**

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The data show that students from various disciplines in the college of business as well as computer science, mathematics, and economics are taking our electives due to the practical, applied nature of the courses. Currently, the program is effective. However, due to the loss of several faculty members to retirement in the past couple of years, our ability to offer courses frequently enough as well as to offer new courses is constrained. Additional faculty resources are needed for growth in this area.

**Mission / Purpose**

The chemistry department has long supported the University mission. We work to create an environment that provides for the education of students from all walks of life, traditional, non-traditional and people of all races, creeds and genders without bias. We adhere to the principle of liberal arts education with our faculty interacting with our students both inside and outside the classroom on a routine basis. Our goals are to deliver a high quality instructional program both at the undergraduate and graduate levels to prepare our students for productive careers in post-graduate studies and the job market. We endeavor to have both our faculty and our students participate actively in scholarly pursuits, including oral presentations, submission of grant proposals, internships, graduate and undergraduate stipends, and fellowships. A unique characteristic of the chemistry department is our affiliation with the American Chemical Society (ACS). The ACS affiliation provides national standards of learning outcomes and assessment for the professional training of chemists for real life work in the chemical sciences. This includes industrial settings, government work, and academic areas. The intent is to determine what knowledge and skills are needed by practitioners in the field, what is currently taught to undergraduates, and how successful our teaching is. The ACS endeavors to encourage national improvements in curriculum and instruction through the various activities of its Division of Chemical Education and through its certification program. Faculty members are encouraged to attend seminars given by this division at the two national society meetings and at regional meetings each year. The chemistry department is certified by the ACS. This involves a full program review by the ACS every 5 years with a short annual review of senior research reports (our capstone courses) and student certifications. Course syllabi, including content and the number and types of courses taught, undergraduate research reports, and the professional quality of the instrumentation used in our laboratories are of prime consideration in the certification process. Additional benefits of our association with the ACS are the access to standardized tests that allow us to assess our students learning outcomes compared to national standards. In order to graduate with a B.S. in chemistry and be successful in careers after college, the students should show proficiency on these exams as a measure of their obtaining fundamental knowledge of the prescribed chemistry curriculum compared to national standards. Because these tests measure fundamental knowledge, we also employ an extensive laboratory curriculum that encourages analytical thought processes and concludes with devolvement of extensive writing skills leading to final reports and oral presentations in our capstone courses. In conjunction with our use of ACS exams, we also employ an internal review and revision process. We have committees in place for evaluation of each major area of the undergraduate curriculum. This includes freshmen chemistry (all first and second semester core courses), organic chemistry (second year chemistry), biochemistry (third and fourth year chemistry), physical chemistry (third and fourth year chemistry), analytical chemistry (third and fourth year chemistry), and review of senior research theses. A review of student outcomes and their assessment is conducted by each committee with appropriate feedback given to individual instructors to enhance our courses and continue to let them evolve to a better level. Since critical thinking is so important to the discipline this is the measure that we will be addressing in the core.
## Goals

**G 1: Critical Thinking Assessment in the Core**

Area D Critical Thinking Assessment for Chemistry Critical thinking skills center on applying, analyzing, synthesizing, and evaluating information and methods. Students need thorough practical training in research techniques. These must include not only mastery of instrumentation and the calibration of same, but the design of the relevant control experiments. Overall, they need to gain mastery with the techniques that chemists use to measure data, and the conventions that chemists use to express data. Students must learn to evaluate their data, looking in detail for statistical significance. Students not only have to know facts, they should also be able to design experiments to ascertain if these facts are true. It is vital that the skills learned in one situation be transferable to related situations. One of the key aspects of teaching critical thinking is developing the higher order cognitive skills of decision making and problem solving. It is vital to create an atmosphere where students grow in their ability to reason. 1) The American Chemical Society provides national-level exit exams for all the area D courses within the chemistry program. A representative faculty committee for area D was formed in 2004 and 8 questions from each test were chosen as questions that would require critical thinking. The faculty voted that a 2/8 would demonstrate appropriate critical thinking skills. The expected outcomes were based on the Department of Chemistry Learning Outcome rubric submitted to the Provost's office prior to Fall 2004. 2) A rubric was developed to assess critical thinking skills demonstrated in the laboratory reports required for these courses.

## Student Learning Outcomes/Objectives

**SLO 2: Using critical thinking skills to interpret data (G: 1) (M: 5)**

Laboratory reports are used in order to assess students' ability to interpret data. A rubric was developed based on American Chemical Society Guidelines to assess the laboratory reports. The department goal is for 85% of students to receive an adequate or better. The rubric is in the document repository.

## Other Outcomes/Objectives

**O/O 1: Solving Problems related to chemistry (G: 1) (M: 1, 2, 3, 4)**

Specific questions from the ACS exit examination for each course were chosen by the faculty. The national mean and median for these questions is known and the department uses this as an indicator of students' critical thinking skills. The national mean for all exams is between 2.5 and 3.1 questions correct. (Nationally for this subset of questions the average student answers 2.5 - 3.1 of the 8 questions correct) The departmental goal is 4 out of the 8 questions correct.

## Measures, Targets, and Findings

**M 1: ACS exam questions for 1151 (O: 1)**

These questions are copyrighted and cannot be placed in report.

Source of Evidence: Standardized test of subject matter knowledge

**Target for O1: Solving Problems related to chemistry**

Target goal was 4 out of 8. Students averaged 6.5 out of 8.

**M 2: ACS exam in 1152 (O: 1)**

ACS results of 8 critical thinking questions off of Chem 1152 exam

Source of Evidence: Standardized test of subject matter knowledge

**Target for O1: Solving Problems related to chemistry**

Goal was 4/8

**Findings 2010-2011 - Target: Met**

Students averaged 6.7/8

**M 3: ACS Exit exam in 1211 (O: 1)**

Students got 4/8 on 1211 ACS exit exam on critical thinking problems

Source of Evidence: Standardized test of subject matter knowledge

**Target for O1: Solving Problems related to chemistry**

Goal was 4/8 students averaged 3.8 out of 8.

**Findings 2010-2011 - Target: Met**

The Goal was 4/8 students scored 4.1/8

**M 4: ACS result in 1212 (O: 1)**

Students should receive at least a 4/8 on critical thinking questions on the ACS exam

Source of Evidence: Standardized test of subject matter knowledge

**Target for O1: Solving Problems related to chemistry**

Goal was 4 out of 8.
**M 5: Laboratory Reports in 1211 and 1212 (O: 2)**

Assessment of Critical thinking in laboratory report for 1211 and 1212 students.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Using critical thinking skills to interpret data**

85% of students should receive an adequate or better.

**Findings 2010-2011 - Target: Not Met**

83 % of students received adequate or better.

In conjunction with our use of ACS exams, we also employ an internal review and revision process. We have committees in place for evaluation of each major area of the undergraduate curriculum. This includes freshmen chemistry, general chemistry (all first and second semester core courses), organic chemistry (second year chemistry), biochemistry (third and fourth year chemistry), physical chemistry (third and fourth year chemistry), analytical chemistry (third and fourth year chemistry), and review of senior research theses. A review of student outcomes and their assessment is conducted by each committee with appropriate feedback given to individual instructors to enhance our courses and continue to let them evolve to a better level.

---

**Goals**

**G 1: Critical Thinking**

Critical thinking skills center on applying, analyzing, synthesizing, and evaluating information and methods. Students need thorough practical training in research techniques. These must include not only mastery of instrumentation and the calibration of same, but the design of the relevant control experiments. Overall, they need to gain mastery with the techniques that chemists use to measure data, and the conventions that chemists use to express data. Students must learn to evaluate their data, looking in detail for statistical significance. Students not only have to know facts, they should also be able to design experiments to ascertain if these facts are true. It is vital that the skills learned in one situation be transferable to related situations. One of the key aspects of teaching critical thinking is developing the higher order cognitive skills of decision making and problem solving. It is vital to create an atmosphere where students grow in their ability to reason. Upon graduation students will be able to take and analyze real world data to develop a knowledge base and the ability to draw conclusions from this knowledge base. Thought processes should be rational, logical and consequential. Conclusions should grow directly from the data and accepted fundamental chemical principles. In addition, students should not only arrive at conclusions, but be aware that they are expected to defend these conclusions. It is also important to realize that data may be interpreted in more than one way, and that science moves forward as these difference data interpretations clash with one another, and are then resolved. Students must therefore learn to deal with open ended questions, deciding which data and variables are important, and which can safely be ignored in creating a picture of the system under study. The ability to think critically about scientific content and processes is key to these students’ futures. Critical thinking over time should become an internal skill, transferable to the rest of the student’s life and career.

**G 2: Analytical Skills**

Analytical Skills center on mathematically analyzing information that relates to the chemical sciences. Students need a thorough mathematical background in calculus, statistics and algebra and be able to apply these skills to chemical problems.
G 3: Instrumental Skills
Students who graduate need to be familiar with many different instruments and proficient in understanding not only how to use basic techniques (GC, HPLC, IR, UV-Vis and NMR) but also what information these techniques would allow the user access to.

### Student Learning Outcomes/Objectives

#### SLO 1: Oral and Written Communication Skills (M: 2)

**Full Description:** Each graduate shall develop oral and written communication skills. The written communication skills will be evidenced by 1a and/or 1b. The oral communication skills will be evidenced by 1c and/or 1d. 1a) At least six reports based on laboratory experiments which will comply with current American Chemical Society guidelines. 1b) A term paper, grant proposal, literature review or research paper on a current topic in chemistry. 1c) An oral examination or an oral presentation in class. 1d) Presentation of a poster or oral talk at a Georgia State, local, regional or national meeting.

Relevant Associations: American Chemical Society

#### SLO 2: Critical Thinking in Chemistry (M: 1, 2)

Each graduate will develop critical thinking skills as relates to Chemistry. 2a Each student will develop high order problem solving skills. 2b. Each graduate will be able to ask pertinent questions and develop logical experimental procedures to answer these questions. 2c Each graduate will learn to interperate original data.

Relevant Associations: American Chemical Society

#### SLO 3: Technology (M: 2)

Students will demonstrate the ability to 1. Use computer graphics. 2. Access chemical databases 3. Access chemical literature 4. Conduct molecular modeling of chemical structures 5. Use normal word processing skills 6. Use state of the art instrumentation in order to solve novel problems in chemistry

Relevant Associations: American Chemical Society

### Other Outcomes/Objectives

#### O/O 4: Quantitative skills (M: 1, 2)

Students will demonstrate the ability to 1. Use mathematical skills from algebra, trigonometry and calculus to solve problems and understand theory in chemistry. 2. Understand error analysis to validate experimental results. 3. Translate problem situations into symbolic representations for the purpose of solving problems.

Relevant Associations: American Chemical Society

### Measures, Targets, and Findings

#### M 1: ACS exit exams (O: 2, 4)

Many chemistry courses have national exit exams. Specific questions from these exams will be used to target different outcomes.

Source of Evidence: Standardized test of subject matter knowledge

**Target for O2: Critical Thinking in Chemistry**

Out of 8 questions related to critical thinking students should answer 4 correct. (National average is 3.9 correct)

**Findings 2010-2011 - Target: Not Met**

The average student scored 3.9/8.0 on Critical Thinking standardized questions.

**Target for O4: Quantitative skills**

Out of 8 questions that relate to quantitative skills students should receive 4/8 (national average 3.8)

**Findings 2010-2011 - Target: Met**

The average student scored 4.2/8.0 on Quantitative Questions.

#### M 2: laboratory reports (O: 1, 2, 3, 4)

The senior level analytical courses (4000, 4010 and 4190) use laboratory reports to assess different outcomes.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Oral and Written Communication Skills**

Average of "Adequate" on Rubric

**Findings 2010-2011 - Target: Met**

76% of students scored adequate or better on the lab report rubric.

**Target for O2: Critical Thinking in Chemistry**

Adequate or better under critical thinking on the rubric.
The Department of Chemistry serves not only students who have declared chemistry as their major but also students in biology, for which general chemistry is a prerequisite for the first course in the biology major (Principles of Biology), physics, for which chemistry is a required minor and pre-medical students. In addition any major can use chemistry 1151/1152 or 1211/1212 as the laboratory sequence required by the University for graduation. This report addresses the efforts to increase retention in the courses which are used by both major and non-major students in the core curriculum (1151/1152, 1211/1212) and courses used by persons wishing to minor in chemistry (2400/3410). The second part of the report addresses the efforts to improve the retention, progression and graduation of persons who major in chemistry. Introductory Courses “Many introductory science courses are responsible for driving off many students either from a science major or from taking science courses.” (Reform in Undergraduate Science Teaching in the 21st Century.) Because of the “turn off” factor of these 1000 and 2000 level courses one of the key factors that will affect retention is the number of students who receive a D, F or withdraw from the course. These students either are turned off by science or are forces to retake the course causing the department to offer more sections both of which are unfavorable outcomes. Over the past four years the department has placed a priority in improving the retention of students in the 1211/1212 sequence believing those courses will affect the most people. These efforts have been supported by the University System of Georgia’s RGP initiative and STEM initiative. A three year grant based on the RGP initiative allowed the department to attack the retention problem in three ways; the implementation of peer tutorials, weekly meetings between faculty members who teach the courses in order to discuss ideas, methods and problems in the various units and a redesign in the courses. Peer Led Tutorials Peer led tutorials are an effective way to allow students to receive help and ask questions in a small group setting (25 as opposed to 100 – 200). Students enrolled in 1211, 1212, 2400 or 3410 can register for a tutorial which is led by either an undergraduate student who has recently excelled in one of the courses or a graduate student. The grade for the course is based on class attendance and participation by the student. We have found that the tutorials have been moderately effective in the 1211 and 1212 sequence but less effective in the 2400 and 3410 sequence. The department is currently modifying the tutorials so that they are more interactive and students are required to work out problems on the board as the peer leader circulates throughout giving help where needed. We believe that this activity will more actively engage the student allowing him/her to work the problem on their own with hints from the leader. In addition the department is developing a book of “worked out” problems which students can download. Weekly Communication Weekly meetings between the faculty members who teach introductory courses were started initially with a senior faculty member who facilitated discussion on what materials in the text were more important and what topics should be less emphasized. Since most persons teaching the general chemistry sequence come in as visiting faculty and very little experience teaching except as a TA we found that there is a preconceived notion that everything in the text must be taught. Through these meetings the general chemistry faculty has been able to increase the depth of student knowledge rather than go for complete ‘coverage’ of the text. In addition the faculty have exchanged ideas on how to teach different topics, discussed student misconceptions and developed slides which we can use as needed. It is often difficult to schedule these meetings around teaching schedules so this part of the action plan has been waning over the past semester, but we hope that we can continue this as part of the upcoming year’s action plan. Course Redesign In the eight sections of CHEM1211 and CHEM1212, General Chemistry I and II in Spring 2009, 151 out of 255 students enrolled were biology majors (59%) and 28 are chemistry majors (18%). After the General Chemistry series, the biology majors go on to take BIOL3800 – Molecular Cell Biology, which requires students to have a strong background in key chemistry concepts. Both chemistry and biology majors are then required to complete a course in Biochemistry. In addition, much of the research performed in the chemistry department at Georgia State University is biologically oriented with most of the faculty specializing in some subfield of biochemistry (biophysical, biochemical, bioanalytical, bioorganic or medicinal chemistry). Since all of the biology majors and a large number of chemistry majors will be involved in learning and researching biologically related topics, we believe that linking the common concepts in biology and chemistry together will facilitate the understanding and relevance of the topics in General Chemistry and help students better integrate the two disciplines. To facilitate this process, we are analyzing the topics covered in General Chemistry I and II in order to determine which topics have biologically relevant examples that can be easily added to the curriculum without taking away from the chemistry department’s mission as an American Chemical Society (ACS) certified program. The addition of biological examples and illustrations will help students make connections between the chemistry and biology. We hypothesize that adding biologically-related material will require the “weeding out” of some traditional topics which are no longer relevant, thus allowing a greater emphasis on the more relevant topics. This is the most recent addition to our action plan and is still in the infancy stages. Analysis of the Effect of Action Plan A ten year analysis of the 1151 course shows an increase from 239 students in 1998 to 361 students in 2008 (51% increase). During that time the class sizes have grown while DFW rates have decreased from 25.5 % to 18.6 %. The ACS scores are slightly higher. A ten year analysis of the 1152 course shows an increase from 208 students in 1998 to 333 students in 2008 (60% increase). During that time the class sizes have grown while DFW rates have decreased from 23.5 % to 20.1 % in 2007. In 2008 the department saw a spike in the DFW rate for 1152 up to 35.7 %. In 2007 the class sizes have grown while DFW rates have decreased from 23.5 % to 20.1 % in 2007. In 2008 the department saw a spike in the DFW rate for 1152 up to 35.7 %. In 2007 the class sizes have grown while DFW rates have decreased from 23.5 % to 20.1 % in 2007. In 2008 the department saw a spike in the DFW rate for 1152 up to 35.7 %. In 2007 the class sizes have grown while DFW rates have decreased from 23.5 % to 20.1 % in 2007. In 2008 the department saw a spike in the DFW rate for 1152 up to 35.7 %. In 2007 the class sizes have grown while DFW rates have decreased from 23.5 % to 20.1 % in 2007. In 2008 the department saw a spike in the DFW rate for 1152 up to 35.7 %. In 2007 the class sizes have grown while DFW rates have decreased from 23.5 % to 20.1 % in 2007. In 2008 the department saw a spike in the DFW rate for 1152 up to 35.7 %. In 2007 the class sizes have grown while DFW rates have decreased from 23.5 % to 20.1 % in 2007. In 2008 the department saw a spike in the DFW rate for 1152 up to 35.7 %. In 2007 the class sizes have grown while DFW rates have decreased from 23.5 % to 20.1 % in 2007. In 2008 the department saw a spike in the DFW rate for 1152 up to 35.7 %. In 2007 the class sizes have grown while DFW rates have decreased from 23.5 % to 20.1 % in 2007. In 2008 the department saw a spike in the DFW rate for 1152 up to 35.7 %. In 2007 the class sizes have grown while DFW rates have decreased from 23.5 % to 20.1 % in 2007. In 2008 the department saw a spike in the DFW rate for 1152 up to 35.7 %. In 2007 the class sizes have grown while DFW rates have decreased from 23.5 % to 20.1 % in 2007. In 2008 the department saw a spike in the DFW rate for 1152 up to 35.7 %.
The chemistry department has long supported the University mission. We work to create an environment that provides for the education of qualified students from all walks of life, traditional, non-traditional and people of all races, creeds and genders without bias. We adhere to the principle of liberal arts education with our faculty interacting with our students both inside and outside the classroom on a routine basis. Our goals are to deliver a high quality instruction program both at the undergraduate and graduate levels to prepare our students for a productive career in post-graduate studies and for the job market. We endeavor to have both our faculty and our students to participate actively in scholarly pursuits, including oral presentations, submission of grant proposals/internships/graduate and undergraduate stipends and fellowships. A unique characteristic of the chemistry department is our affiliation with the American Chemical Society (ACS). The ACS affiliation provides national standards of learning outcomes and assessment for the professional training of chemists for real life work in the chemical sciences. This includes industrial settings, government work, and academic areas. The intent is to determine what knowledge and skills are needed by practitioners in the field, what is currently taught to undergraduates, and how successful is our teaching. The ACS endeavors to encourage national improvements in curriculum and instruction through the various activities of its Division of Chemical Education and through its certification program. Faculty members are encouraged to attend seminars given by this division at the two national society meetings and the regional meetings each year.

Mission / Purpose

The chemistry department is certified by the ACS. This involves a full program review by the ACS every 5 years with a short annual review of senior research reports (our capstone courses) and student certifications. Course syllabi, including content and the number and types of courses taught, undergraduate research reports, and the professional quality of the instrumentation used in our laboratories are of prime consideration in the certification process. Additional benefits of association with the ACS is the access to standardized tests that allow us to assess our students learning outcomes compared to national standards. In order to graduate with a B.S. in chemistry and be successful in careers after college, the students should show proficiency on these exams as a measure of their obtaining fundamental knowledge of the prescribed chemistry curriculum compared to national standards. Because these tests measure fundamental knowledge we also employ an extensive laboratory curriculum that encourages analytical thought processes and concludes with development of extensive writing skills leading to final reports and oral presentations in our capstone courses. In conjunction with our use of ACS exams we also employ an internal review and revision process. We have committees in place for evaluation of each major area of the undergraduate curriculum. This includes freshmen chemistry (all first and second semester core courses), organic chemistry (second year chemistry), biochemistry (third and fourth year chemistry), physical chemistry (third and fourth year chemistry), analytical chemistry (third and fourth year chemistry), and review of senior research theses. A review of student outcomes and their assessment is conducted by each committee with appropriate feedback given to individual instructors to enhance our courses and continue to let them evolve to a better level.

Goals

G 1: MS Program Goals

The M.S. program's goal is to produce well trained professionals who possess a high level of proficiency in modern chemical techniques and knowledge of modern chemical problems.

Outcomes/Objectives
**Mission / Purpose**

The chemistry department has long supported the University mission. We work to create an environment that provides for the education of qualified students from all walks of life, traditional, non-traditional and people of all races, creeds and genders without bias. We adhere to the principle of liberal arts education with our faculty interacting with our students both inside and outside the classroom on a routine basis. Our goals are to deliver a high quality instruction program both at the undergraduate and graduate levels to prepare our students for a productive career in post-graduate studies and for the job market. We endeavor to have both our faculty and our students to participate actively in scholarly pursuits, including oral presentations, submission of grant proposals/internships/graduate and undergraduate stipends and fellowships.

## Goals

**G 1: Knowledge of chemistry**  
The Ph.D. program's goal is to produce chemists who possess a high level of proficiency in modern chemical techniques and knowledge of modern chemical problems.

## Outcomes/Objectives

**O/O 1: Communication Skill (M: 1, 2)**  
Students will demonstrate the ability to 1. Communicate effectively in written and oral forms. 2. Read and demonstrate an understanding of scientific literature for content 3. Critically analyze claims made in the scientific literature. 4. Demonstrate an understanding of scientific terminology 5. Work effectively in group situations. 6. Students must perform and analyze and be able to relate experiments which address a current problem in the chemical sciences.

**O/O 2: Critical Thinking (M: 1, 2)**  
Students will demonstrate the ability to 1. Construct reasonable hypotheses while asking scientific questions. 2. Design and conduct investigations about a variety of chemical problems. 3. Understand and analyze experimental results Formulate and defend explanations of theory in chemistry 4. Solve unique problems based on learned factual matter. 5.Effectively perform laboratory operations to collect appropriate experimental evidence in conjunction with 2.1 - 2.5.

**O/O 3: Technology (M: 2)**  
Students will demonstrate the ability to 1. Use computer graphics 2. Access chemical databases 3. Access chemical literature. 4. Conduct molecular modeling of chemical structures 5. Use normal word processing skills. 6. Use state of the art instrumentation in order to solve novel problems in chemistry.

**O/O 4: Quantitative Skills (M: 1, 2)**  
Students will demonstrate the ability to 1. Use mathematical skills from algebra, trigonometry and calculus to solve problems and understand theory in chemistry. 2. Understand error analysis to validate experimental results. 3. Translate problem situations into symbolic representations for the purpose of solving problems.

**O/O 5: Contemporary Issues (M: 1, 2)**  
Students will demonstrate the ability to 1. Know how chemistry can help solve problems in society. 2.Understand safety and waste control - impact on society. 3. Students must perform and analyze experiments which address a current problem in the chemical sciences.

## Measures, Targets, and Findings

**M 1: Qualifying Exam (O: 1, 2, 4, 5)**  
All Ph.D. students must take a written and an oral qualifying exam at least 1 year before graduation. The written exam is produced by the faculty in the student’s major ie. Organic chemistry, biochemistry, physical chemistry. The exam is graded by the faculty on a pass fail basis. Once the written exam is complete a committee is formed consisting of two faculty members from the student’s major and 1 from outside the major. The student gives a brief presentation of research and the committee asks questions which may be general in nature or related to the student’s research.  
Source of Evidence: Writing exam to assure certain proficiency level

**M 2: Dissertation Defense (O: 1, 2, 3, 4, 5)**  
All Ph.D. students are required to write and defend a dissertation of original cutting edge research which they have performed under the direction of a faculty member.  
Source of Evidence: Senior thesis or culminating major project

## Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Continued Quality**  
Our goal is to continue excellence with our program’s growth.  
- Established in Cycle: 2005-2006  
- Implementation Status: Planned  
- Priority: High  
- Implementation Description: Fall 2012  
- Responsible Person/Group: Giovanni Gadda, Ph.D.

**continued quality and growth**  
The department has met all its goals and will continue to grow while keeping the quality of the program.  
- Established in Cycle: 2006-2007  
- Implementation Status: Planned  
- Priority: High  
- Responsible Person/Group: Giovanni Gadda, Ph.D.

**Action Plan**  
The PhD program meets all our objectives. Our plan is to continue this excellence with continued growth.
### Georgia State University

**Assessment Data by Section**

#### 2010-2011 Communication Assessment of Core

*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)*

<table>
<thead>
<tr>
<th>Mission / Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Department of Communication is firmly committed to the goals of academic excellence, strong research programs and international relevance set forth in the Georgia State University’s Strategic Plan. The Department encompasses multiple professional, creative and research traditions, all of which are organized around the idea that central to the human experience is the use of symbols for the purpose of making and understanding meaning. As an academic unit, the Department is committed to cultivating a deeper appreciation of the creative and intellectual traditions of communication by providing students with critical thinking and media literacy skills, enhancing students’ oral, written and visual communication processes through participation in cutting edge scholarly and artistic programs and collaborating with and enhancing the local, state, regional, national and global communities related to communication. Note: The Department has about 1,400 undergraduate majors; 108 major in Speech Communication.</td>

<thead>
<tr>
<th>Student Learning Outcomes/Objectives</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SLO 1: Course Objectives for Speech 1000 (M: 1, 2, 3)</strong></td>
</tr>
</tbody>
</table>

Students will demonstrate the ability to: 1. Choose and narrows a topic appropriately for the audience and occasion. 2. Communicate the thesis/specific purpose in a manner appropriate for audience and occasion. 3. Provide appropriate supporting material based on the audience and occasion. 4. Use an organizational pattern appropriate to the topic, audience, occasion and purpose. 5. Use language that is appropriate to the audience, occasion and purpose. 6. Use vocal variety in rate, pitch, and intensity to heighten and maintain interest. 7. Use pronunciation, grammar, and articulation appropriate to the designated audience. 8. Use physical behaviors that support the verbal message.

<table>
<thead>
<tr>
<th>Measures, Targets, and Findings</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>M 1: Competent Speaker Measure (O: 1)</strong></td>
</tr>
</tbody>
</table>

Competent Speaker evaluations were completed across all Speech 1000 sections, yielding data for 949 students in fall 2010 and 728 students in spring 2011. The eight performance competencies measured correspond to a universal grading form used in all Speech 1000 sections. Each performance competency was measured on a three-point scale, with 1 = unsatisfactory, 2 = satisfactory, and 3 = outstanding. The Competent Speaker scores range higher than one might intuitively expect due to the way in which the speech assignment operates within the Speech 1000 curriculum. Students are only provided a single opportunity to hone their public speaking skills; and instructors’ evaluations often reflect an acknowledgement of the assignment’s limited ability to improve the performance competencies targeted. Generally speaking, however, we might conclude that the assignment does improve oral competency among GSU undergraduates and reduce speech apprehension to some degree.

Source of Evidence: Faculty pre-test / post-test of knowledge mastery

<table>
<thead>
<tr>
<th>Target for O1: Course Objectives for Speech 1000</th>
</tr>
</thead>
</table>

For the PRCA measure, collected data over the past six years has fallen consistently between the following scores: Group = 12-
Findings 2010-2011 - Target: Met

In fall 2010 and spring 2011, all sections of Speech 1000 were selected for data interpretation using the PRCA-24 measure, producing 949 scores in fall 2010 and 728 scores in spring 2011. As shown in the above tables, the fall 2010 mean score indicated an overall increase in students' willingness to communicate in the various situations, from 181.4056 pre-test to 196.3284 post-test. In fall 2010, the public communication score and communication with a stranger score both increased (from 21.66178 to 23.36701 and from 51.25136 to 57.24465 respectively) and logic suggests that the public speaking assignment in Speech 1000 is partly (but not wholly) responsible for these results. In fall 2010, all other situations showed an increase in students' willingness to communicate. As the data above indicates, the spring 2011 results showed an increase in the willingness to communicate measure, from 181.2584 in the pre-test to 197.2571 in the post-test, as well as slight increases in all other measures.

Source of Evidence: Faculty pre-test / post-test of knowledge mastery

Target for O1: Course Objectives for Speech 1000

For the WTC measure, collected data over the past five years has fallen consistently between the following scores: Public = 20-25; Meeting = 52-64; Group = 70-78; Dyad = 49-57; Stranger = 52-64; Acquaintance = 68-75; Friend = 63-71; Overall (total) = 188-205. Using these ranges as the target for this year’s assessment is reasonable because the data has consistently replicated and provided the necessary information to draw conclusions regarding the effectiveness of Speech 1000 in meeting the university, department, and course curriculum learning outcomes.

Findings 2010-2011 - Target: Met

In fall 2010 and spring 2011, all sections of Speech 1000 were selected for data interpretation using the WTC measure, producing 949 scores in fall 2010 and 728 scores in spring 2011. As shown in the above tables, the fall 2010 mean score indicated an overall increase in students' willingness to communicate in the various situations, from 181.4056 pre-test to 196.3284 post-test. In fall 2010, the public communication score and communication with a stranger score both increased (from 21.66178 to 23.36701 and from 51.25136 to 57.24465 respectively) and logic suggests that the public speaking assignment in Speech 1000 is partly (but not wholly) responsible for these results. In fall 2010, all other situations showed an increase in students' willingness to communicate. As the data above indicates, the spring 2011 results showed an increase in the willingness to communicate measure, from 181.2584 in the pre-test to 197.2571 in the post-test, as well as slight increases in all other measures.

Georgia State University
Assessment Data by Section

2010-2011 Communication Disorders MEd

As of 12/12/2016 04:10 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose

The Communication Disorders (CD) Program is a unit of the Educational Psychology & Special Education Department. The mission of the CD Program is to offer a high quality master's degree program which educates students to implement evidence-based services across the scope of practice in speech-language pathology. The program will achieve this goal through the continual pursuit of excellence in academic and clinical education and by infusion of research and scholarly experiences appropriate to a master’s degree program. We will utilize the unique strengths of our community's diverse population and our numerous affiliated sites to prepare fully-certified speech-language pathologists who are exceptionally well-qualified to work in schools, hospitals, private clinics, and rehabilitation programs throughout the state. During the 2009-10 academic year there were 56 students enrolled in the program and 19 students graduated.

Goals

G 1: Meet Certification Requirements
CD Program graduates will meet national certification and state licensure requirements to be fully-certified.

G 2: Evidence Based Practice
CD Program graduates will be able to implement evidence-based services across the scope of practice in speech-language pathology.

G 3: Employment
CD Program graduates will be sought and hired by employers throughout the state and the southeast.
Student Learning Outcomes/Objectives

SLO 1: Apply Prerequisite Knowledge (G: 1, 2, 3) (M: 1, 9)
The student can apply the basic principles of biological science, physical science, and the behavioral/social sciences to communication sciences and disorders.

SLO 2: Describe Communication & Swallowing Processes (G: 1, 2, 3) (M: 2, 10)
The student can describe normal communication and swallowing processes and behaviors including their biological, neurological, acoustic, psychological, developmental, and linguistic and cultural bases.

SLO 3: Discuss Communication & Swallowing Disorders (G: 1, 2, 3) (M: 3, 4, 5, 6, 11)
The student can discuss the etiologies and characteristics of speech, language, hearing, and communication disorders and differences and swallowing disorders including anatomical/physiological, acoustic, psychological, developmental, and linguistic and cultural correlates.

SLO 4: Discuss Principles of Assessment and Intervention (G: 1, 2, 3) (M: 3, 4, 5, 6, 7, 12)
The student can discuss the principles and methods of prevention, assessment, and intervention for people with communication and swallowing disorders including consideration of anatomic/physiological, acoustic, psychological, developmental, and linguistic and cultural correlates.

SLO 5: Apply Standards of Ethical Conduct (G: 1, 2, 3) (M: 8, 13)
The student can discuss and apply the standards of ethical conduct.

SLO 6: Evaluate Research Relevance (G: 1, 2) (M: 8, 14)
The student can critically evaluate published theory and research to determine its relevance and application to clinical practice in communication disorders.

SLO 7: Discuss Contemporary Professional Issues (G: 1, 3) (M: 8, 15)
The student can describe and discuss contemporary professional issues related to clinical standards and practice guidelines, federal and state regulations, site-specific rules, service delivery models, and practice management.

SLO 8: Outline Professional Credentials (G: 1) (M: 16)
The student can outline the requirements for state and national certification, specialty recognition, and licensure.

SLO 9: Demonstrate Appropriate Communication Skills (G: 1, 3) (M: 17)
The student demonstrates oral and written communication skills appropriate to professional practice in communication disorders.

SLO 10: Demonstrate Clinical Skills - Assessment (G: 1, 2, 3) (M: 18)
The student accurately assesses clients with communication disorders and differences and swallowing disorders using formal and informal assessment procedures (including screening, prevention, and evaluation).

SLO 11: Demonstrate Clinical Skills - Intervention (G: 1, 2, 3) (M: 19)
The student develops and implements intervention programs that are functional, logical in sequence, and effective in changing client behavior.

SLO 12: Demonstrate Appropriate Interpersonal Qualities (G: 1, 3) (M: 20)
The student demonstrates appropriate collaborative and interpersonal skills and ethical behavior with clients, family members, and other professionals and is able to self-evaluate clinical performance.

SLO 13: Apply Technology (G: 1, 2, 3) (M: 6, 7, 21)
The student uses appropriate technology for clinical assessment and intervention and for professional productivity.

SLO 14: Understand Linguistic & Cultural Diversity (G: 1, 2, 3) (M: 2, 22)
The student demonstrates knowledge of linguistic and cultural issues related to communication and swallowing disorders and adapts assessment, treatment, and prevention plans and procedures to meet the individual needs as well as the linguistic and cultural differences of each client.

Measures, Targets, and Findings

M 1: Praxis II Exam (Total Score) (O: 1)
All students take the Praxis II Exam in speech-language pathology for national certification and state licensure prior to graduation.

Source of Evidence: Certification or licensure exam, national or state
Target for **O1: Apply Prerequisite Knowledge**

90% of students will pass the Praxis II exam (score of 600 or higher) on their first attempt.

**Findings 2010-2011 - Target: Met**

In 2010-2011, 100% of the students taking the Praxis II exam (16) passed it on their first attempt. Scores ranged from 620 to 770 with an average score of 705.

**M 2: Praxis II Exam Category I Score (Comm Process) (O: 2, 14)**

Score for Category I Basic Human Communication Processes.

Source of Evidence: Certification or licensure exam, national or state

**Target for **O2: Describe Communication & Swallowing Processes**

90% of students will score within the national average range or above.

**Findings 2010-2011 - Target: Met**

100% of the students scored within the national average range or above on this section of the Praxis II exam. Eleven students scored within the average range; and 5 above average.

**Target for **O14: Understand Linguistic & Cultural Diversity**

90% of students will score within the national average range or above.

**Findings 2010-2011 - Target: Met**

100% of the students scored within the national average range or above on this section of the Praxis II exam. Eleven students scored within the average range; and 5 above average.

**M 3: Praxis II Exam Category II Score (Phon/Lang Dis) (O: 3, 4)**

Score for Category II Phonological and Language Disorders.

Source of Evidence: Certification or licensure exam, national or state

**Target for **O3: Discuss Communication & Swallowing Disorders**

90% of students will score within the national average range or above.

**Findings 2010-2011 - Target: Met**

94% of the students (15 out of 16) scored within the national average range or above on this section of the Praxis II exam. One student scored below average; 10 students scored within the average range; and 5 above average.

**Target for **O4: Discuss Principles of Assessment and Intervention**

90% of students will score within the national average range or above.

**Findings 2010-2011 - Target: Met**

94% of the students (15 out of 16) scored within the national average range or above on this section of the Praxis II exam. One student scored below average; 10 students scored within the average range; and 5 above average.

**M 4: Praxis II Exam Category III Score (Spch Disord) (O: 3, 4)**

Score for Category III Speech Disorders.

Source of Evidence: Certification or licensure exam, national or state

**Target for **O3: Discuss Communication & Swallowing Disorders**

90% of students will score within the national average range or above.

**Findings 2010-2011 - Target: Met**

94% of the students (15 out of 16) scored within the national average range or above on this section of the Praxis II exam. One student scored below average; 12 students scored within the average range; and 3 above average.

**Target for **O4: Discuss Principles of Assessment and Intervention**

90% of students will score within the national average range or above.

**Findings 2010-2011 - Target: Met**

94% of the students (15 out of 16) scored within the national average range or above on this section of the Praxis II exam. One student scored below average; 10 students scored within the average range; and 5 above average.

**M 5: Praxis II Exam Category IV Score (Neuro Disord) (O: 3, 4)**

Score for Category IV Neurogenic Disorders.

Source of Evidence: Certification or licensure exam, national or state

**Target for **O3: Discuss Communication & Swallowing Disorders**

90% of students will score within the national average range or above.
Findings 2010-2011 - Target: Met

100% of the students scored within the national average range or above on this section of the Praxis II exam. Twelve students scored within the average range; and 4 above average.

Target for O4: Discuss Principles of Assessment and Intervention
90% of students will score within the national average range or above.

Findings 2010-2011 - Target: Met

100% of the students scored within the national average range or above on this section of the Praxis II exam. Twelve students scored within the average range and 4 above average.

M 6: Praxis II Exam Category V Score (Aud/Hrg) (O: 3, 4, 13)
Score for Category V Audiology, Hearing.
Source of Evidence: Certification or licensure exam, national or state

Target for O3: Discuss Communication & Swallowing Disorders
Due to the small number of exam questions in this area (4-6), ETS does not calculate the national average performance range. The program has targeted an overall program performance score of 70% or higher.

Findings 2010-2011 - Target: Met

The overall average program performance for this section of the Praxis II exam was 73%.

Target for O4: Discuss Principles of Assessment and Intervention
Due to the small number of exam questions in this area (4-6), ETS does not calculate the national average performance range. The program has targeted an overall program performance score of 70% or higher.

Findings 2010-2011 - Target: Met

The overall average program performance for this section of the Praxis II exam was 73%.

Target for O13: Apply Technology
Due to the small number of exam questions in this area (4-6), ETS does not calculate the national average performance range. The program has targeted an overall program performance score of 70% or higher.

Findings 2010-2011 - Target: Met

The overall average program performance for this section of the Praxis II exam was 73%.

M 7: Praxis II Exam Category VI Score (Clin Managemt) (O: 4, 13)
Score for Category VI Clinical Management.
Source of Evidence: Certification or licensure exam, national or state

Target for O4: Discuss Principles of Assessment and Intervention
90% of students will score within the national average range or above.

Findings 2010-2011 - Target: Not Met

87.5% of the students (14 out of 16) scored within the national average range or above on this section of the Praxis II exam. Two students scored below average; 8 students scored within the average range; and 6 above average.

Target for O13: Apply Technology
90% of students will score within the national average range or above.

Findings 2010-2011 - Target: Not Met

87.5% of the students (14 out of 16) scored within the national average range or above on this section of the Praxis II exam. Two students scored below average; 8 students scored within the average range; and 6 above average.

M 8: Praxis II Exam Category VII Score (Prof Issues) (O: 5, 6, 7)
Score for Category VII Professional Issues, Psychometrics, Research.
Source of Evidence: Certification or licensure exam, national or state

Target for O5: Apply Standards of Ethical Conduct
90% of students will score within the national average range or above.

Findings 2010-2011 - Target: Met

94% of the students (15 out of 16) scored within the national average range or above on this section of the Praxis II exam. One student scored below average; 14 students scored within the average range; and 1 above average.

Target for O6: Evaluate Research Relevance
90% of students will score within the national average range or above.
Findings 2010-2011 - Target: Met
94% of the students (15 out of 16) scored within the national average range or above on this section of the Praxis II exam. One student scored below average; 14 students scored within the average range; and 1 above average.

Target for O7: Discuss Contemporary Professional Issues
90% of students will score within the national average range or above.

Findings 2010-2011 - Target: Met
94% of the students (15 out of 16) scored within the national average range or above on this section of the Praxis II exam. One student scored below average; 14 students scored within the average range; and 1 above average.

M 9: Portfolio Section 1 (Prereq Knowledge) (O: 1)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they have met the prerequisite requirements of the program.
Source of Evidence: Portfolio, showing skill development or best work

Target for O1: Apply Prerequisite Knowledge
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

Findings 2010-2011 - Target: Met
Students achieved an average rating of 3.83 on this section of the portfolio.

M 10: Portfolio Section 2 (Comm & Swallow Process) (O: 2)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they can describe the normal communication and swallowing processes.
Source of Evidence: Portfolio, showing skill development or best work

Target for O2: Describe Communication & Swallowing Processes
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

Findings 2010-2011 - Target: Met
Students achieved an average rating of 3.75 on this section of the portfolio.

M 11: Portfolio Section 3 (Comm & Swallow Disord) (O: 3)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they can discuss the etiologies and characteristics of communication and swallowing disorders.
Source of Evidence: Portfolio, showing skill development or best work

Target for O3: Discuss Communication & Swallowing Disorders
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

Findings 2010-2011 - Target: Met
Students achieved an average rating of 3.83 on this section of the portfolio.

M 12: Portfolio Section 4 (Prin Assess & Interv) (O: 4)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they can discuss the principles and methods of prevention, assessment, and intervention.
Source of Evidence: Portfolio, showing skill development or best work

Target for O4: Discuss Principles of Assessment and Intervention
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

Findings 2010-2011 - Target: Met
Students achieved an average rating of 3.92 on this section of the portfolio.

M 13: Portfolio Section 5 (Std Ethical Conduct) (O: 5)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they can discuss and apply the standards of ethical conduct.
Source of Evidence: Portfolio, showing skill development or best work

Target for O5: Apply Standards of Ethical Conduct
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

Findings 2010-2011 - Target: Met
M 14: Portfolio Section 6 (Eval Research) (O: 6)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they can critically evaluate published theory and research.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O6: Evaluate Research Relevance**
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2010-2011 - Target: Met**
Students achieved an average rating of 3.75 on this section of the portfolio.

M 15: Portfolio Section 7 (Prof Issues) (O: 7)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they can describe and discuss contemporary professional issues related to clinical standards, practice guidelines, and practice management.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O7: Discuss Contemporary Professional Issues**
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2010-2011 - Target: Met**
Students achieved an average rating of 3.25 on this section of the portfolio.

M 16: Portfolio Section 8 (Prof Credentials) (O: 8)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must outline the requirements for national and state certification and licensure.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O8: Outline Professional Credentials**
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2010-2011 - Target: Met**
Students achieved an average rating of 4.0 on this section of the portfolio.

M 17: Portfolio Section 9 (Comm Skills) (O: 9)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must document that they have appropriate oral and written communication skills.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O9: Demonstrate Appropriate Communication Skills**
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2010-2011 - Target: Met**
Students achieved an average rating of 3.42 on this section of the portfolio.

M 18: Portfolio Section 10 (Clin Skills Assess) (O: 10)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must document that they can accurately assess clients with communication disorders and differences and swallowing disorders.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O10: Demonstrate Clinical Skills - Assessment**
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2010-2011 - Target: Met**
Students achieved an average rating of 3.84 on this section of the portfolio.

M 19: Portfolio Section 11 (Clin Skills - Interven) (O: 11)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they can develop and implement functional and effective intervention programs.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O11: Demonstrate Clinical Skills - Intervention**
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2010-2011 - Target: Met**

Students achieved an average rating of 3.75 on this section of the portfolio.

**M 20: Portfolio Section 12 (Interpersonal Qual) (O: 12)**

All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must document that they have appropriate collaborative and interpersonal skills and are able to self-evaluate clinical performance.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O12: Demonstrate Appropriate Interpersonal Qualities**

Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2010-2011 - Target: Met**

Students achieved an average rating of 3.75 on this section of the portfolio.

**M 21: Portfolio Section 13 (Apply Technology) (O: 13)**

All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must document that they can use appropriate technology for assessment, intervention, and professional productivity.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O13: Apply Technology**

Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2010-2011 - Target: Met**

Students achieved an average rating of 3.92 on this section of the portfolio.

**M 22: Portfolio Section 14 (Ling & Cult Diversity) (O: 14)**

All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate their knowledge of linguistic and cultural issues related to communication and swallowing disorders.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O14: Understand Linguistic & Cultural Diversity**

Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2010-2011 - Target: Met**

Students achieved an average rating of 3.67 on this section of the portfolio.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Monitor student performance**

Two students scored below the national average on the Clinical Management subtest of the Praxis II exam. This was surprising for two reasons; both students performed well in their clinical experiences, and the program graduates have met or exceeded the national average on this subtest every year since 2006-2007. The program faculty do not believe any action is needed at this time; however, the scores for this subtest will be monitored during the next two years for potential trends in student performance.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Low

Relationships (Measure | Outcome/Objective):
- Measure: Praxis II Exam Category VI Score (Clin Management) | Outcome/Objective: Apply Technology
- Measure: Praxis II Exam Category VII Score (Prof Issues) | Outcome/Objective: Apply Standards of Ethical Conduct

Implementation Description: Students' scores for this subtest will be monitored during the next two years for potential trends in student performance.
Projected Completion Date: 05/2013
Responsible Person/Group: Program coordinator.
Additional Resources: None

**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
The Communication Disorders Program did not make any changes in our assessment process this past year. We completed a comprehensive curriculum review in 2010-2011. We will be reviewing student and program assessment tools during the 2011-2012 academic year and may decide to modify the assessment tools that are currently used to measure learning outcomes.

**Annual Report Section Responses**

**Most Important Accomplishments for Year**

The Communication Disorders Program completed a comprehensive curriculum review in 2010-2011. Two new courses are being proposed in addition to changes in several existing courses in the curriculum. We believe these changes will have a positive impact on our students' knowledge and skills needed to enter the workforce.

**Challenges for Next Year**

The Communication Disorders Program will be reviewing student and program assessment tools and may decide to modify the assessment tools that are currently used to measure learning outcomes.

---

**Georgia State University**

**Assessment Data by Section**

**2010-2011 Communication MA**

(As of: 12/12/2016 04:10 PM EST)

**Goals**

G 1: Scholarly or creative excellence

Our highly diverse cohort of MA students can nonetheless be divided into two broad categories: those whose work is centered on scholarship and research, and those whose work is centered on the creative production of media work (films, videos, images, etc.). Students in the creative tracks are expected to develop a strong personal aesthetic vision as evidenced in their work, as well as a solid mastery of the technical demands of media production. Students in the research tracks are expected to produce a methodologically sound and theoretically rigorous scholarly exploration of a question central to the sub-field of communication which they are working in.

G 2: Broad understanding of communications fields

The MA in Communication trains students in a number of different sub-fields in our discipline, ranging from rhetorical studies to quantitative studies of media messages, from humanistic approaches to film and media to digital moving image production. Nevertheless, all students receiving the MA in Communication are expected to have a broad understanding of the various disciplines and interdisciplinary traditions that comprise the field of communication.

**Student Learning Outcomes/Objectives**

SLO 1: Understanding of scholarly and creative traditions (G: 2) (M: 1)

Students should demonstrate a command of the key texts in their area of specialization. These include theoretical and scholarly literature in the area; additionally, for the Film/Video specialization, it includes a breadth of knowledge of the important artistic works, styles, and movements that comprise the film canon.

SLO 2: Written, oral, and media-making competencies (G: 1, 2) (M: 3, 4, 5, 6)

The student’s research proposal should pose a significant research problem, should evidence awareness of historical and theoretical contexts surrounding the question, and should deploy appropriate methodologies for addressing the question. In the oral defense, the student should be able to articulate the questions of the committee members. Proposals for creative projects in film/video should go beyond the technical-logistical, and should present in detail the aesthetic sources and traditions out of which the student’s work is operating. Completed creative projects should evidence technical mastery of the means of media-making as well as aesthetic sophistication and artistic vision.

SLO 3: Understanding of research methods (G: 1, 2) (M: 2)

Students should be conversant in the wide range of research methodologies of the interdisciplinary field of communication. They should demonstrate competence in specific research methods appropriate to their area of specialization.

SLO 4: Engagement with New Media (G: 2) (M: 7)

Given that our department’s mission is centrally connected to the scholarly study of media in all its forms, and is also engaged in the production of works of media art [film and video], we believe that all MA students should actively engage themselves at some point in their tenure as graduate students with new media. For creative MA students, this would entail engagement with new media as an exhibition/distribution venue, or with development of moving-image productions which mobilize new media in creative new ways. For scholarly MA students, this would entail some exposure to new, online modes of critical engagement with media and image-making cultures.

**Measures, Targets, and Findings**
M 1: End-of-course evaluation: knowledge of communication theory and literature (O: 1)

We have developed an online system that is tracking graduate student performance in seminars by having faculty complete an evaluation of the overall performance of each student, at the end of every seminar, in specific areas connected to learning outcomes. This data is anonymized and aggregated, so that we can get a picture of overall programmatic strengths and weaknesses. The rubric that directly measures the overall knowledge of the communication field is as follows: Course content: overall literature. 1 – student has read and mastered a good deal of the literature in the field over and above the material on the course reading list. In presenting the material, the student is fully at the level of a very good doctoral student 2 – student demonstrates a clear mastery of the literature in the form of the course readings but with significant areas of reading outside the required material. The student likely received an ‘A’ in the course. 3 – student has a good mastery of the literature of the area, with few if any major gaps. Much of the student's knowledge of the area comes from the readings required in the course. 4 – there are some significant gaps in the student’s knowledge of the literature of the area. 5 – there are wide gaps in the student's knowledge of the literature of the area. And for Comm Theory: Course content: theory: 1 - sophisticated knowledge of theoretical issues pertaining to the course, going well beyond the required readings, with an understanding of the historical and intellectual contexts of all major theoretical positions, and most importantly, evidence that the student can make theoretical interventions of some degree of originality. 2 excellent knowledge of theoretical issues pertaining to the course, going somewhat beyond the required readings, and evidencing some degree of historical and intellectual contexts of debates. The student feels comfortable making theoretical interventions, though there might be some awkwardness of execution. 3 - student evidences a good command of theoretical groundings of the course, and can accurately summarize them, but is inacurate in making theoretical interventions, and needs to understand the intellectual contexts of theoretical developments more clearly. 4 – the student has shown some difficulty in accurately summarizing theoretical arguments, in commanding theoretical vocabulary, and in making theoretical interventions. 5 – the student’s knowledge of theory is inadequate to the demands of an MA thesis Additionally, for students in the creative tracks, we have the following rubric: Cinematic language: 1 - Student has a breadth of knowledge of cinematic traditions worldwide, and can mobilize that knowledge both when analyzing others' creative work but also when thinking about his/her own work. 2 – Student has a good understanding of cinematic traditions, with perhaps a few gaps here and there. The student is able to use this knowledge in the screenings of student work. 3 – Student knows the key reference points (eg, montage schools, neorealism, etc.) but would benefit from a wider vocabulary from which to draw upon. 4 – Student has difficulty translating knowledge of cinematic traditions to new works being viewed. 5 – Student has little or no knowledge of cinematic traditions.

Source of Evidence: Academic direct measure of learning - other

Target for O1: Understanding of scholarly and creative traditions

The scale on these rubrics has been set deliberately very high, so that we can have a better spread across the numbers so as to be able to identify problem areas. By the second year in the program, all students should be averaging a 2.5 or higher. Students in the first year should score 3.0 or higher. An average in any given semester of 3.5 or below represents a significant problem, which could hinder the student's performance in the program.

Findings 2010-2011 - Target: Not Met

54 students were evaluated in the Fall; 44 in the Spring. In the area of knowledge of the literature, in both semesters 13 students (24% and 30%) were assessed below 3.0; in Fall, 11 students were assessed at 3.0, while 8 were assessed at 3.0 in Spring. None of these figures was correlated with year in program; relatively equal percentages of students scored below expectation no matter their year in program. In the area of competence in theory, in Fall 12 students fell below 3.0 and 14 scored at 3.0; in Spring, 8 students fell below 3.0 and 11 were at 3.0. Again, these did not correlate to semester in program. In the MA program, while we would like the student to score at a level of 2.5 by the end of program, an MA student averaging a 3.0 in these areas would likely not be at risk in the program, since the rubrics have been set to doctoral expectations. However, those students scoring below 3.0 in these areas should be considered to be performing at a level which might put them at risk in the program.

M 2: End-of-course evaluation: knowledge of methods in communication study (O: 3)

We have developed an online system that is tracking graduate student performance in seminars by having faculty complete an evaluation of the overall performance of each student, at the end of every seminar, in specific areas connected to learning outcomes. This data is anonymized and aggregated, so that we can get a picture of overall programmatic strengths and weaknesses. The rubric which measures student command of the literature in the field. (See Measure #1)

Source of Evidence: Academic direct measure of learning - other

Target for O3: Understanding of research methods

The scale on these rubrics has been set deliberately very high, so that we can have a better spread across the numbers so as to be able to identify problem areas. By the second year in the program, all students should be averaging a 2.5 or higher. Students in the first year should score 3.0 or higher. An average in any given semester of 3.5 or below represents a significant problem, which could hinder the student's performance in the program.

Findings 2010-2011 - Target: Not Met

54 students were evaluated in the Fall; 44 in the Spring. Because of the interdisciplinarity of the department, methodology is measured by the rubric which measures competence and knowledge of the literature of the field. (ie, because methodology in rhetorical studies will be different than methodology in cultural studies or content analysis.) In the area of knowledge of the literature, in both semesters 13 students (24% and 30%) were assessed below 3.0; in Fall, 11 students were assessed at 3.0, while 8 were assessed at 3.0 in Spring. None of these figures was correlated with year in program; relatively equal percentages of students scored below expectation no matter their year in program.

M 3: End-of-course evaluation: writing skills (O: 2)

We have developed an online system that is tracking graduate student performance in seminars by having faculty complete an evaluation of the overall performance of each student, at the end of every seminar, in specific areas connected to learning outcomes. This data is anonymized and aggregated, so that we can get a picture of overall programmatic strengths and weaknesses. We have two rubrics which measure student writing skills based on the final papers, proposals, and other writing assignments in the MA seminars. Overall writing effectiveness: 1 - the final paper is of a level you would expect of a very good doctoral student 2 - the final paper is quite effective, but is not quite what one would expect at the doctoral level (ie, the student is still working through other people's arguments rather than fully articulating a critical problem of his/her own) 3 - the paper is good, but requires a significant reconceptualization of the thesis, or a major reorganization of the argument, and/or a reconceptualization of the theoretical groundwork 4 - the paper is weak in more than one of the areas in (3) above 5 - the paper is not of graduate-seminar quality Writing Style: 1 - the writing is not only lucid and effective, but also elegant. Not only are there no technical errors in the writing, but the writer...
has full mastery of his/her voice, full command of rhetorical strategies and rhythmic cadences of prose style. 2 – a strong, effective paper (it probably received a grade of A). There are only very few, if any, technical errors, and an overall solid command of the language. 3 – a competently written paper which is marred by a few recurrent technical errors, unfortunate word choices, or other stylistic lapses that mark the essay as that of a “student.” 4 – Writing with technical errors sufficient enough to lose the reader, and/or with repeated passages which are difficult or impossible to comprehend, or which illustrate that the writer is not in control of his/her language 5 – Writing which technically is not expected at the graduate level

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Written, oral, and media-making competencies**

The scale on these rubrics has been set deliberately very high, so that we can have a better spread across the numbers so as to be able to identify problem areas. By the second year in the program, all students should be averaging a 2.5 or higher. Students in the first year should score 3.0 or higher. An average in any given semester of 3.5 or below represents a significant problem, which could hinder the student's performance in the program.

**Findings 2010-2011 - Target: Not Met**

Two rubrics are used for writing competence, one measuring overall effectiveness of the writing (argumentation, organization) and another measuring the readability, style, and voice of the writing. In Fall, 11 students (or 20%) fell below 3.0 in writing effectiveness, while 8 fell below 3.0 in style (15%). In Spring, 8 students fell below 3.0 in writing effectiveness (18%), while 7 (16%) fell below 3.0 in style.

**M 4: End-of-course evaluation: oral presentation proficiency (O: 2)**

We have developed an online system that is tracking graduate student performance in seminars by having faculty complete an evaluation of the overall performance of each student, at the end of every seminar, in specific areas connected to learning outcomes. This data is anonymized and aggregated, so that we can get a picture of overall programmatic strengths and weaknesses. For proficiency in oral presentation and advocacy, we have two rubrics to measure both the student's ability to present material formally, and the ability to make astute and targeted interventions in class discussion and in the discussion of the work of colleagues. Oral communication skills: presentations 1 – in presenting an article to the seminar, the student has done the work of finding out the intellectual context of the argument, and clearly articulates the central problem the article is engaged in answering. The presentation is driven by the student's own intellectual engagement with the material, and the student's voice is not hijacked by that of the article's author. The student understands the article on its own terms, while still being able to actively interrogate it throughout the presentation. 2 – the student's presentation of an article is overall excellent: the student clearly understands the stakes of the argument, can present it without significant error or distortion, and can actively interrogate it. The student, however, still might compartmentalize these areas of the presentation, leading to a less dynamic presentation than that at level '5' above. 3 – student can present a competent summary of his/her aesthetic project to the workshop. 4 – the student's interventions in seminar discussions are not only clear, sharp, and to-the-point, but also evidence a keen and subtle understanding of the nuances of the discussion; the student answers difficult questions directly and with clarity. 5 – the student cannot coherently present his/her work in the workshop

**Source of Evidence: Presentation, either individual or group**

**Target for O2: Written, oral, and media-making competencies**

The scale on these rubrics has been set deliberately very high, so that we can have a better spread across the numbers so as to be able to identify problem areas. By the second year in the program, all students should be averaging a 2.5 or higher. Students in the first year should score 3.0 or higher. An average in any given semester of 3.5 or below represents a significant problem, which could hinder the student's performance in the program.

**Findings 2010-2011 - Target: Not Met**

54 students evaluated in Fall; 44 in Spring. Two rubrics are used to measure oral proficiency: one which measures quality of presentation, the other which measures the quality of oral interventions, whether via discussion, question/answer, etc. In the area of presentations, in Fall 12 students fell below 3.0; in Spring, 8 students did. This represents 22% and 18%. In the area of discussion, the students falling below 3.0 were, Fall: 14; spring: 9. (20%; 20%)

**M 5: Quality of thesis prospectus and defense (O: 2)**

After the defense of the thesis prospectus, the examining committee evaluates the project on a scale of 1 to 4, with 2 being a low pass and 4 representing excellence. The evaluation should be delivered to the relevant area director.

**Source of Evidence: Written assignment(s), usually scored by a rubric**

**Target for O2: Written, oral, and media-making competencies**

Ideally, all students should score a 3 (good) or higher score on this measure. However, given that the prospectus is by definition a roadmap toward a finished project rather than the project itself, it is to be expected that a certain percentage of students will score
2 (fair to barely passing) on some measures of the prospectus evaluation, with the idea that it is only through the process of the defense that some difficult issues can be sorted out to the point where the thesis can proceed. Thus, an acceptable target here would probably be more like 75% scoring good or higher.

Findings 2010-2011 - Target: Not Met
Of the 14 MA students defending prospectuses this year, one (or 7%) was ranked fair in articulation of the research problem; two (14%) were ranked fair in theoretical underpinnings of the work; and three (21%) were ranked fair in methodological soundness. This represents an improvement over the numbers in the last cycle. It also suggests that methodology remains the single area most in need of improvement in MA thesis prospectuses. An action item should be formulated.

M 6: Quality of creative or research thesis (O: 2)
After the thesis defense, the committee members evaluate the thesis on a 1 to 4 scale, with 2 representing mediocre but passable work, and 4 representing excellence.

Source of Evidence: Senior thesis or culminating major project

Target for O2: Written, oral, and media-making competencies
Here, the target should be 100% of theses at level 3 or level 4.

Findings 2010-2011 - Target: Partially Met
Of the five creative theses completed this year, two evaluations were completed. All categories were ranked good or excellent for these two theses. Of the 14 research theses completed this year, six evaluations were completed. One out of the six was ranked at the level of fair in all categories. The low turnout here needs to be examined. Since there was 100% compliance with completion of evaluations for prospectus defenses, perhaps faculty were not aware that theses needed to be evaluated after the defense.

M 7: Student engagement with new media (O: 4)
Starting in the academic year 2010-11, we will begin to track the extent of student engagement with new media. For students in the scholarly tracks of the MA, we will ask them to summarize such engagement annually. (The fact that our department has just taken over the editorship of the online journal In Media Res, which is devoted to making innovative interventions in the mediascape via combinations of moving images and text, might provide both MA and PhD students with opportunities to do scholarly new media work.) For creative students, we will look at the extent to which they use new media in innovative ways, whether in specifically interactive projects or in a more "trans-media" way.

Source of Evidence: Academic indirect indicator of learning - other

Target for O4: Engagement with New Media
Since engagement with new media is not mandated by course requirements (except in certain production and new media courses), the target should not be set an 100% (even though, ideally, at some future point, we would want to get all students to engage with new media). It would seem reasonable to begin with a target of 50% for this measure.

Findings 2010-2011 - Target: Not Reported This Cycle
We did not put in place a mechanism for measuring this. No findings will be reported this cycle.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Develop Assessment Form for Creative Thesis
- Established in Cycle: 2008-2009
- Implementation Status: Finished
- Priority: High

Develop Assessment Form for Research Thesis
- Established in Cycle: 2008-2009
- Implementation Status: Finished
- Priority: High

Develop Assessment Form for Thesis Prospectus
Initially, our plan was to develop a simple form which will measure the student's level of competence in the various criteria outlined in the "Objectives" section of this report. At the end of a prospectus defense, the members of the committee would fill out these forms, and they would be filed and would exist solely for assessment purposes. We are still working on this form, as Thesis Prospectuses present unique challenges in terms of measurement. The Prospectus is necessarily an "imperfect" document: we expect there to be theoretical and/or methodological issues which it is the purpose of the Prospectus defense to help the student to resolve. Thus, the prospectus assessment form will need to take this into consideration. One way to do this would be to ask the examiners to assess how adept the student was, during oral defense, at thinking through the issues raised by committee members during the defense.
- Established in Cycle: 2008-2009
- Implementation Status: Finished
- Priority: High
- Projected Completion Date: 10/2009
- Responsible Person/Group: Angelo Restivo. Graduate Committee

Incorporate more opportunities for revisions in core courses
In the core theory-oriented courses (6010 and 6020) we should incorporate more opportunities for revisions of written work. These can be connected to shorter written assignment which focus on specific analytic or research skills.
- Established in Cycle: 2008-2009
- Implementation Status: In-Progress
### Measure student engagement with new media

On hold. Once we implement the end-of-year reporting system for all MA students, then we can set measures and targets for this.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** On-Hold
- **Priority:** High

#### Implementation Details:

**Relationships (Measure | Outcome/Objective):**
- **Measure:** Student engagement with new media
- **Outcome/Objective:** Engagement with New Media

**Implementation Description:** This would be done by required submission of end-of-year cv (or other list) detailing activities in this area, delivered to the graduate directors.

**Responsible Person/Group:** Restivo

### Annual reports submitted by all grad students

While our MA students are highly active in their participation in film festivals, engagement with new media, and in other creative and scholarly activities, we do not consistently gather information here. Typically, we only see the cv’s of MA students if they have a teaching assignment. Thus, beginning this year, we will require all MA students to complete a questionnaire in which they describe in detail the various outside activities, recognitions, and so forth that they have been involved in. These can include film festival participation, new media work; conferences or publications; etc. After this is in place, we can develop a measure and a target for these activities.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High

#### Implementation Details:

**Relationships (Measure | Outcome/Objective):**
- **Measure:** End-of-course evaluation: knowledge of communication theory and literature
- **Outcome/Objective:** Understanding of scholarly and creative traditions

**Measurement:**
- **Measure:** End-of-course evaluation: knowledge of methods in communication study
- **Outcome/Objective:** Understanding of research methods

**Responsible Person/Group:** Graduate Faculty

### Begin new assessment system based on data collected 2010-11

#### Background:

Last year, the department implemented an online evaluation system with six rubrics, for all MA and doctoral students in the program, for every course that they took. The results were aggregated by year-in-program, program of study, and were averaged for each student across all the seminars the student took. The results have been reported throughout this WEAVE report as findings;

- **Priority:** High

#### Implementation Details:

**Relationships (Measure | Outcome/Objective):**
- **Measure:** End-of-course evaluation: knowledge of communication theory and literature
- **Outcome/Objective:** Understanding of scholarly and creative traditions

**Measurement:**
- **Measure:** End-of-course evaluation: knowledge of methods in communication study
- **Outcome/Objective:** Understanding of research methods

**Responsible Person/Group:** Graduate Committee, Graduate Faculty

---

**Projected Completion Date:** 03/2010

**Established in Cycle:** 2009-2010

**Implementation Status:** In-Progress

**Priority:** High
Mission / Purpose

The Graduate Program in Communication offers its students a multi-disciplinary curriculum leading to the Ph.D. degree. The program is designed to prepare students for research and teaching in one of three primary areas of emphasis: Rhetoric and Politics, Media and Society, and Moving Image Studies. The curriculum is designed to provide students with in depth training in communication pedagogy and the professional expectations of the discipline, as well as mentored experiences in both teaching and research.

Goals

G 1: To produce PhDs highly skilled in research
The areas of Rhetoric/Politics, Media and Society, and Moving Image Studies are all highly interdisciplinary, drawing on a broad range of theoretical and intellectual traditions. We would like our PhDs to frame research questions with full understanding of their positioning within this broad discursive matrix, while at the same time having highly developed research skills specific to their research questions.

G 2: To produce excellent undergraduate teachers
We seek to produce PhDs with demonstrated teaching excellence in the undergraduate classroom, both at the level of the introductory or survey course and in higher-level courses related to their research projects.

G 3: To foster academic professionalism
We strive to produce PhDs with significant professional experience, including presentation at conferences in their area (Rhetoric and Politics, Media and Society, or Moving Image Studies), professional interaction with leading scholars in their areas of research, publication in journals, and service activities in the graduate student caucuses of the professional organizations in their area.

Student Learning Outcomes/Objectives

SLO 1: Research proficiency (G: 1) (M: 1, 2)
Proven ability to engage in high quality independent research, evidencing competence in a broad range of methodologies (textual analysis, historical research, ethnographic data, etc., as appropriate to the context).

Strategic Plan Associations

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).
Measures, Targets, and Findings

O/O 6: Professional development (G: 3) (M: 6, 7)
Students are expected to regularly present their work at the professional conferences in the field, and to regularly submit written work for publication. Students are also encouraged to take an active role in the graduate student caucuses of the professional organization in their area.

O/O 7: Increase student engagement with new media (M: 9)
Now that the Communication Department has taken over editorship of the online journal In Media Res (under the editorship of Alisa Perren), the opportunities for doctoral student involvement in new media work has increased. In Media Res is not simply an online journal which follows the template of conventional journals; rather, it is a site for curated interventions in the mediascape, incorporating moving images and text. As such, it exemplifies a different type of scholarship that is emerging, one more fully connected to the idea of "trans-media" that is currently gaining conceptual currency.

O/O 8: Enhance recruitment of graduate students
We find that we are losing some of our best applicants to programs at other universities, and we need to find ways to increase the yield of our top-tier applicants.

O/O 9: Enhance ongoing intellectual life outside the seminars
Having a vibrant intellectual life outside the regular seminars is a vital part of a doctoral program, making it more attractive to potential students as well as providing enormous if intangible benefits to current students. The department has just inaugurated what we hope to be an annual workshop, in which an internationally renowned senior scholar brings in a book manuscript s/he is completing to be workshopped by faculty and advanced graduate students. Dudley Andrew from Yale inaugurated our first departmental workshop in Spring 2010; while internationally renowned Ernesto Laclau will come in Spring 2011. These workshops should continue. In addition, the department should work to increase the number of distinguished scholars we bring in for lectures and/or workshops. Finally, a group of faculty in Moving Image Studies (Restivo, Raengo, Barker) is currently organized what promises to be a major Moving Image Studies conference in Feb 2011, on the theme "Rendering the Visible." Many highly visible film-media scholars will be here. Hopefully the MIS conference can continue with that name and a different theme each time; perhaps not every year but biannually.

Measures, Targets, and Findings

M 1: End-of-course assessment: competence in theory (O: 1, 2)
We have developed an online system that is tracking graduate student performance in seminars by having faculty complete an evaluation of the overall performance of each student, at the end of every seminar, in specific areas connected to learning outcomes. This data is anonymized and aggregated, so that we can get a picture of overall programmatic strengths and weaknesses.

Competence in theory will now be directly assessed with the following rubric: 1 - sophisticated knowledge of theoretical issues pertaining to the course, going well beyond the required readings, with an understanding of the historical and intellectual contexts of all major theoretical positions, and most importantly, evidence that the student can make theoretical interventions of some degree of originality. 2 excellent knowledge of theoretical issues pertaining to the course, going somewhat beyond the required readings, and evidencing some degree of historical and intellectual contexts of debates. The student feels comfortable making theoretical interventions, though there might be some awkwardness of execution. 3 - student evidences a good command of theoretical groundings of the course, and can accurately summarize them; but is insecure in making theoretical interventions, and needs to understand the intellectual contexts of theoretical developments more clearly. 4 – the student has shown some difficulty in accurately...
summarizing theoretical arguments, in commanding theoretical vocabulary, and in making theoretical interventions. 5 – the student's knowledge of theory is inadequate to do doctoral-level research.

Source of Evidence: Academic direct measure of learning - other

**Target for O1: Research proficiency**

These rubrics were set deliberately high, and the "1"s are designed to represent the standards of the profession. Since the assessments will be done at the end of every seminar, every semester, we will be able to track how aggregate performance moves during the years of coursework. By the end of coursework, we expect all students to be performing at the level of 2 or better; students in the first year of coursework might be expected to fall between 2 and 3, with a small percentage falling below 3. A score of 3.5 or below indicates a serious problem that could affect performance in the program.

FINDINGS 2010-2011 - Target: Not Met

In the rubric that measures the student's mastery of the overall literature and methodologies in the various sub-specializations, the mean/median in the fall were 2.5/2.6, and in the spring were 2.3/4.25. In the category of students falling below the performance benchmark of 3.5, three were in that group in the Fall (evenly distributed by year in the program), and 3 fell into that group in the Spring (though in the spring all three were in the first year of the program). Since we have only just begun to use these rubrics this year, it is too early to be able to explain variances in performance over time; hopefully explanations will emerge as we gather more data over a longer time frame. Significantly, though, this rubric was the one which registered the highest frequency of "3" rankings: 10 students in Fall and 9 in Spring. A full 40-50% of students in the third year of coursework were assessed at 3 or lower; while among students in the second year of coursework, 35-50% were assessed at 3 or lower; and the percentage among students in the first year of the program scoring 3 or lower was invariant for the two semesters, at 36%. The 3 in this rubric indicates that the student's knowledge of the area comes almost entirely from course readings and little from independent study. This finding may have some explanatory power in relation to the poor performance on the comprehensive exams this year, insofar as those depend on reading lists of material much of which is not covered in coursework.

**Target for O2: Proficiency in communication theory**

These rubrics were set deliberately high, and the "1"s are designed to represent the standards of the profession. Since the assessments will be done at the end of every seminar, every semester, we will be able to track how aggregate performance moves during the years of coursework. By the end of coursework, we expect all students to be performing at the level of 2 or better; students in the first year of coursework might be expected to fall between 2 and 3, with a small percentage falling below 3.

**FINDINGS 2010-2011 - Target: Partially Met**

In Fall the mean/median for competence in theory were 2.37/2.5. In Spring the mean/median were 2.33/2.0. These rubrics, we consider 3.5 (and to a significant degree 3.0) to be a significant point to register doctoral expectations and might need extra help: in Fall 4 students fell below 3.5, and in Spring 3 students fell below that number. Interestingly, the lower performing students in Fall were distributed evenly across 3 years of the program, while in Spring, all of the lower performing students were first-year students. More significant, perhaps, was that there was an even split between students measured at level 2 (the goal at end of coursework) and level 3 (8 and 8 students); these did not correlate to semester in program. Given that the "3" assessment in theory suggests that, while the student can demonstrate knowledge of the theory, the student is uncomfortable in making theoretical interventions or interconections among the positions, the fact that there were 3's among the 2nd year students might explain some of the issues that have come up in Comprehensive Exams. Nevertheless, since this is the first year we have assessed with these rubrics, it is too early to be able to discern long-term trends in student progress through the program.

**M 2: End-of-course assessment: Research competence (O: 1)**

We have developed an online system that is tracking graduate student performance in seminars by having faculty complete an evaluation of the overall performance of each student, at the end of every seminar, in specific areas connected to learning outcomes. This data is anonymized and aggregated, so that we can get a picture of overall programmatic strengths and weaknesses. Two rubrics will measure the student's ability to conduct high-level research in the field: the rubric assessing competence in theory (see Measure and the rubric measuring the student's understanding of the literature in the field which is the province of the seminar. This latter rubric is: Course content: overall literature: 1 – student has read and mastered a good deal of the literature in the field over and above the material on the course reading list. Student fully understands the intellectual contexts within or against which the various developments within the field have positioned themselves. You could comfortably recommend that the student would be able to teach this material in a graduate seminar. 2 – student demonstrates a clear mastery of the literature in the field, largely covered in coursework readings, but with significant areas of reading outside the required material. The student likely received an 'A' in the course. The student is not yet an expert in the area covered in the seminar; or the student—given her/his research interests—may not need to become an expert in the area. 3 – student has a good mastery of the literature of the area, with few if any major gaps. Much of the student's knowledge of the area comes from the readings required in the course. 4 – there are some significant gaps in the student's knowledge of the literature of the area. 5 – there are wide gaps in the student's knowledge of the literature of the area.

Source of Evidence: Academic direct measure of learning - other

**Target for O1: Research proficiency**

These rubrics were set deliberately high, and the "1"s are designed to represent the standards of the profession. Since the assessments will be done at the end of every seminar, every semester, we will be able to track how aggregate performance moves during the years of coursework. By the end of coursework, we expect all students to be performing at the level of 2 or better; students in the first year of coursework might be expected to fall between 2 and 3, with a small percentage falling below 3.

**FINDINGS 2010-2011 - Target: Not Met**

for the two semesters, at 36%. The 3 in this rubric indicates that the student's knowledge of the area comes almost entirely from course readings and little from independent study. This finding may have some explanatory power in relation to the poor performance on the comprehensive exams this year, insofar as those depend on reading lists of material much of which is not covered in coursework.

M 3: End-of-course assessment: Writing competence (O: 3)

We have developed an online system that is tracking graduate student performance in seminars by having faculty complete an evaluation of the overall performance of each student, at the end of every seminar, in specific areas connected to learning outcomes. This data is anonymized and aggregated, so that we can get a picture of overall programmatic strengths and weaknesses. Two rubrics are devoted to assessment of the student's writing in the seminar. (The writing assessed is generally an article length final paper, as well as other smaller writing assignment produced in the seminar.) Overall writing effectiveness: 1 - the final paper can with very minor revisions be submitted to a journal 2 - the final paper is quite effective, but would require some substantial revision(s) before submission to a journal 3 - the paper is good, but requires a significant reconceptualization of the thesis, or a major reorganization of the argument, and/or a reconceptualization of the theoretical groundwork 4 - the paper is weak in more than one of the areas in (3) above 5 - the paper is not of graduate-seminar quality Writing Style: 1 - the writing is not only lucid and effective, but also elegant. Not only are there no technical errors in the writing, but the writer has full mastery of his/her voice, full command of rhetorical strategies and rhythmic cadences of prose style. 2 - a strong, effective paper (it probably received a grade of A). There are only very few, if any, technical errors, and an overall solid command of the language. 3 - a competently written paper which is marred by a few recurrent technical errors, unfortunate word choices, or other stylistic lapses that mark the essay as that of a "student." 4 - Writing with technical errors sufficient enough to lose the reader, and/or with repeated passages which are difficult or impossible to comprehend, or which illustrate that the writer is not in control of his/her language 5 - Writing which technically is not expected at the graduate level

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: Proficiency in writing

These rubrics were set deliberately high, and the "1"s are designed to represent the standards of the profession. Since the assessments will be done at the end of every seminar, every semester, we will be able to track how aggregate performance moves during the years of coursework. By the end of coursework, we expect all students to be performing at the level of 2 or better; students in the first year of coursework might expect to fall between 2 and 3, with a small percentage falling below 3.

Findings 2010-2011 - Target: Not Met

Two rubrics are used for writing competence, one measuring overall effectiveness of the writing (argumentation, organization) and another measuring the readability, style, and voice of the writing. In general, writing style was assessed at a higher level than writing effectiveness: In fall, median for effectiveness was 3.0, style 2.0; in spring, effectiveness 2.42 and style 2.0. In the Fall the number of students whose writing effectiveness ranked at 3.5 or lower was 7; in spring it was 3. For writing style, assessment followed the same pattern, with 4 receiving below 3.5 in Fall and 2 in spring. There was no correlation here between low ranking and year in program. (Note that 3.5 in writing suggests problems that would likely seriously affect performance through the program; thus, an action item seems recommended for identifying students here.) If, on the other hand, we take 3.0 as a dividing line, we find that in both semesters, and across students in all 3 years-in-program, there is close to a 50%/50% split. Since our ultimate goal is to move students up from the 3.0 level to the 2.0 level, action should be taken in the area of writing proficiency.

M 4: End-of-course assessment: Proficiency in oral expression/advocacy (O: 4)

We have developed an online system that is tracking graduate student performance in seminars by having faculty complete an evaluation of the overall performance of each student, at the end of every seminar, in specific areas connected to learning outcomes. This data is anonymized and aggregated, so that we can get a picture of overall programmatic strengths and weaknesses. For proficiency in oral presentation and advocacy, there are two rubrics: one which measures the student's formal presentation of material to the seminar, and the second which measures the quality of the student's interventions in discussion during the seminar. Oral communication skills: interventions in the seminar, the student has done the work of finding out the intellectual context of the argument, and clearly articulates the central problem the article is engaged in answering. The presentation is driven by the student's own intellectual engagement with the material, and the student's voice is never hijacked by that of the author's article. The student understands the article on its own terms, while still being able to actively interrogate it throughout the presentation. 2 – the student's presentation of an article is overall excellent: the student clearly understands the stakes of the argument, can present it without significant error or distortion, and can actively interrogate it. The student, however, still might compartmentalize these areas of the presentation, leading to a less dynamic presentation than that at level '5' above. 3 – student can present a competent and accurate summary of an article to the seminar. However, the student cedes her/his voice to that of the source, with little active intervention until the end of the presentation, when the student might give a "strengths and weaknesses" speech. 4 – the presentation has significant problems: either the student does not clearly articulate the logic of the argument, or the student gets portions of the argument wrong. 5 – the student presentation clearly does not evidence an understanding of the article; it is likely a rote, blow-by-blow description, with little sense of the logical connections, and mistakes in understanding the concepts. Oral communication skills: interventions 1 – the student's interventions in seminar discussions are not only clear, sharp, and to-the-point, but also evidence a keen and subtle understanding of the nuances of the discussion; the student answers difficult questions directly and with clarity. 2 – the student's interventions in seminar discussions are clear, sharp, and to-the-point; the student is generally able to articulate answers to difficult questions posed to him/her. 3 – the student's interventions in discussion are for the most part on-point, though sometimes not as clear or precise as would be expected in the context; the student does a fairly good job handling difficult questions, though may at times seem evasive, unsure or hesitant in the response. 4 – the student's interventions in discussions are sometimes off-point, unclear, or vague; the student has trouble handling questions. 5 – the student's interventions in discussions are often off-point, unclear, or vague; the student cannot respond clearly to questions posed in seminar.

Source of Evidence: Presentation, either individual or group

Target for O4: Strong oral presentation and advocacy skills

These rubrics were set deliberately high, and the "1"s are designed to represent the standards of the profession. Since the assessments will be done at the end of every seminar, every semester, we will be able to track how aggregate performance moves during the years of coursework. By the end of coursework, we expect all students to be performing at the level of 2 or better; students in the first year of coursework might expect to fall between 2 and 3, with a small percentage falling below 3.

Findings 2010-2011 - Target: Met

In the assessment of oral proficiency, two rubrics were used: one which assesses student proficiency in formal presentation, and the other which assesses informal oral proficiency (seminar discussion, interventions, responses to questions). Overall, our students were assessed highly in both of these areas. For the 30-33 students assessed, the mean and median in both
Fall and Spring was 2.0. In the Fall only 3 students were assessed at 3.5 or lower (and 2 of those were in the first semester); while in Spring only 2 students were assessed at 3.5 or lower (both first-year students). Thus it would seem that this rubric is showing that oral skills among our students develop more consistently through their coursework.

**M 5: Comprehensive doctoral examinations (O: 2)**

After approval by the advisory committee of the reading lists in four areas related to the student’s research project (including one theoretical area), the members of the advisory committee draft questions which the student answers in writing, in four-hour sessions per area. Committee members grade each area of the exam as High pass, Pass, Low pass, or Fail; and make a detailed list of questions based on the student’s written responses. Assuming the student has not failed more than one area, an oral defense is arranged, in which the student is expected not only to clarify and expand upon the responses written, but also to range across the entire reading lists in answering questions posed. Upon successful completion of the oral defense, one grade is assigned to the entire exam.

Source of Evidence: Comprehensive/end-of-program subject matter exam

**Target for O2: Proficiency in communication theory**

All students taking doctoral comprehensive exams should pass, ideally on the first attempt.

**Findings 2010-2011 - Target: Not Met**

Of the 17 students scheduled for comprehensive examinations this year, there were a significant number (4) of failures in one or all areas, as well as a significant number of postponements (4) of the exam. Thus, close to 50% of the students scheduled for comps either failed or postponed. Of the nine students who passed, three were accorded the grade of High Pass on the exams.

**M 6: Presentation of work at conferences (O: 6)**

Students are expected regularly to present conference papers at both the international professional organizational conferences in their area, and at smaller, boutique conference related to their specific line of research. In our annual review meetings we now do an annual credential check, requiring CV submission, and those are carefully discussed so that ongoing plans of study are matching actual accomplishment. (Note: we are splitting a current measure, “Conferences and Publications,” into two separate measures, as achievements are significantly different in the two areas.)

Source of Evidence: Presentation, either individual or group

**Target for O6: Professional development**

All doctoral students are expected to present, minimally, one conference paper per year (after the first year in the program), and to publish at least one article before defending the dissertation.

**Findings 2010-2011 - Target: Met**

In the past year, our doctoral students have presented 45 papers at international, national, and regional conference (with 5 additional presentations locally). A significant number presented at the conference of the professional organization of their areas, SCMS, NCA, or other. One student organized a panel for SCMS. Four of the presentations won top paper awards (NCA).

**M 7: Publication in peer reviewed journals (O: 6)**

Students are expected to have submitted work to journals by the time they reach the comprehensive exam stage. After that, they are expected to try to place one publication per year in a peer reviewed journal. In our annual review meetings we now do an annual credential check, requiring CV submission, and those are carefully discussed so that ongoing plans of study are matching actual accomplishment. (Note: we are splitting a current measure, “Conferences and Publications,” into two separate measures, as achievements are significantly different in the two areas.)

Source of Evidence: Academic direct measure of learning - other

**Target for O6: Professional development**

We will not adopt a rigid target percentage on this, except that all students should have at least one article accepted in a peer-reviewed journal or collection by the final year of dissertation writing (as they prepare to go on the job market). The reasons for this flexibility are that, first, there is legitimate disagreement among graduate educators whether doctoral students should take time away from dissertation writing to produce journal articles; and second, the time-frames of academic journal publishing (ie, from the time of submission, to ‘revise-resubmit,’ to final acceptance) vary so widely that one cannot set expectations that are tied to academic years.

**Findings 2010-2011 - Target: Partially Met**

It appears that our students this year are publishing at a significantly higher rate than in past years, which is in keeping with our action plan items designed to produce more publishable writing among the students. Two book chapters were published, with 10 more book chapters forthcoming. Three journal articles were published, with three forthcoming. Three book reviews were published. And students curated three theme weeks of the online journal In Media Res, while three published interventions in that journal.

**M 8: Student teaching evaluations (O: 5)**

Students are expected to receive student evaluations of at least 4 out of 5, to create syllabi which reflect the most up-to-date scholarship in the area the course covers, and to have grade distributions appropriate for their course.

Source of Evidence: Student course evaluations on learning gains made

**Target for O5: Teaching excellence**

All students are expected to receive average student evaluations of their teaching that fall between 4 and 5.

**M 9: Number of students engaged in new media (O: 7)**

As part of the year-end evaluations of graduate student performance, we will begin to track the number of students who are actively
involved in producing content for the online site In Media Res, or who are actively integrating new media with scholarly work and research, whether by creation of web content, innovative use of social media, or other.

Source of Evidence: Academic indirect indicator of learning - other

**Target for O7: Increase student engagement with new media**

We will not set an achievement target until we gather data at the end of the first year of tracking.

**Findings 2010-2011 - Target: Not Reported This Cycle**

If we are to keep this outcome, then we need to devise a system to measure. This year, we did not have one in place.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Increased opportunity to revise written work**

Currently, slightly over 50% of our doctoral seminars incorporate paper revision into the seminar. We would like to encourage faculty to adopt this practice more widely. One of the systems we would advocate is to have the students present short versions of the final paper orally to the seminar as a conference presentation, and then use the resulting feedback to revise the paper for final submission. This is already done in some seminars; we would like to see it more widely adopted in doctoral syllabi.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High

**Institute prospectus writing workshop**

In Fall 2009, we began to offer a prospectus writing workshop for all students who had completed coursework (whether or not they had taken comps yet). We believe that this workshop will not only help doctoral students avoid the post-comprehensive-exams "doldrums," which often drags out the period during which the prospectus is written; but that it will also help the student in the publication process, as the completed prospectus can serve as a kind of template for planning which areas of the dissertation would be best suitable for sending out for publication during the writing process.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High

**Integrate Center for Teaching/Learning feedback into grad teaching**

Beginning this semester, our two undergraduate Film core courses (which are the entry-level courses for new graduate GTAs to teach) have incorporated Center for Teaching and Learning feedback sessions early in the semester. We should adopt this in all of our large undergraduate core courses (those which have course directors), so as to provide new GTAs with feedback early. We should also encourage more of our experienced GTAs teaching stand-alone courses to utilize this resource.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** On-Hold
- **Priority:** High

**Revised doctoral proseminar curriculum**

At the initiative of the Graduate Committee, and with the approval of the entire faculty, we have initiated a new prosem format which is focused on faculty and student presentation of research in progress. Students will now be required to present work in prosem at least twice during their doctoral residence, once before comprehensive exams, and once in the dissertation-writing period. We believe that this shift in focus in the proseminar will help bring the students more quickly up to speed in the theoretical foundations of the field, and in their oral and written proficiency.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**

- Measure: Comprehensive doctoral examinations | Outcome/Objective: Proficiency in communication theory
- Measure: End-of-course assessment: competence in theory | Outcome/Objective: Proficiency in communication theory
- Measure: End-of-course assessment: Writing competence | Outcome/Objective: Proficiency in writing
- Measure: Publication in peer reviewed journals | Outcome/Objective: Professional development

- Measure: End-of-course assessment: Writing competence | Outcome/Objective: Proficiency in writing
- Measure: Presentation of work at conferences | Outcome/Objective: Professional development

- Measure: Student teaching evaluations | Outcome/Objective: Teaching excellence

- Measure: Student teaching evaluations | Outcome/Objective: Teaching excellence

- Measure: Student teaching evaluations | Outcome/Objective: Teaching excellence

- Measure: Student teaching evaluations | Outcome/Objective: Teaching excellence

---

**Projected Completion Date:** 04/2010
Add writing requirement to Prosem

Beginning Fall 2011, the department is requiring that all students who present papers at proseminar (and they are required to present at minimum two papers during their doctoral studies) distribute beforehand the written version of the paper to the faculty and doctoral students. This is designed not only to produce better discussion in the proseminar after the paper is delivered, but also to serve as another opportunity for doctoral students to revise and polish written work for an audience.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High
Responsible Person/Group: Graduate Committee; Fujioka and Wilkin for statistical design; Restivo, Stuckey, and committee members for assessment questions.

Revamp end-of-semester online assessment of doctoral students

Given the described problems in the current set of data generated by the pilot assessment year, the following recommendations have been presented to the Graduate Committee: 1. Aggregate data by student for each semester; 2. Assign semester-in-program numbers to each student and generate data spreads under that variable. 3. Revise the evaluation questionnaire both to a./ eliminate redundancies; and b/ eliminate categories that will not lead to identification of actionable issues; and most important, c/ revise assessment rubrics to produce a wider spread in the results, to be accomplished by adopting standards of the profession and not expectations of a graduate student. 4. Establish coherent methods of reporting and presenting data, as well as a deadline for each semester's data.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Responsible Person/Group: Graduate Committee; Fujioka and Wilkin for statistical design; Restivo, Stuckey, and committee members for assessment questions.

Institute earlier application deadlines for graduate application

Because the Grad Committee discovered that we were losing our best applicants to other programs in part because our application deadlines were so late in the cycle, we moved the doctoral application deadlines to Dec 1 (Feb 1 for no GTA consideration); and the MA deadlines to Feb 1/ Mar 15. This is in keeping with other, competitive departments’ deadlines.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Responsible Person/Group: Graduate Committee, in consultation with Graduate Admissions (Amber Amari, Chad Van Gorden)

Investigate option for non-thesis MA

The Graduate Committee has charged a subcommittee with investigating the possibility of a non-thesis MA, for those students coming out of a BA program who want to move quickly into the PhD track. We may be losing some of the best applicants to doctoral programs in our areas because of we cannot provide a faster track toward the doctorate. This policy (which is currently only under consideration, and would need to be approved by the Executive Committee and eventually the entire faculty) is in keeping with the practices of many graduate departments in our field (especially in the moving image studies area).

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Responsible Person/Group: Graduate Committee

Continue the Moving Image Studies conference

Currently, the Moving Image Studies conference set for Feb 2011 promises to bring a highly visible group of scholars together under the theme of "Rendering the Visible." The area should consider continuing this conference, perhaps biennially given the vast time commitments a conference like this requires, rotating themes and principal faculty.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Responsible Person/Group: Cheshier; departmental faculty

Continue annual manuscript workshops with senior scholars

The first workshop with Dudley Andrew from Yale was a great success, and the upcoming workshop with Ernesto Laclau promises to be the same. By continuing the bring the highest-level scholars to our department, we expect to increase departmental visibility both nationally and internationally, and thus increase the quality of our doctoral applicant pool.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Responsible Person/Group: Cheshier; Graduate Committee, all area faculty

Bring top doctoral applicants to department in mid February

Now that we have moved the application deadlines up to December 1, we are planning to bring to the department our top doctoral applicants in mid February; we believe that we can significantly improve our yield in doctoral student recruitment by exposing them to the faculty and grad students in the department.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Responsible Person/Group: Cheshier, Graduate Committee, all area faculty

Revamp end-of-semester online assessment of doctoral students

Given the described problems in the current set of data generated by the pilot assessment year, the following recommendations have been presented to the Graduate Committee: 1. Aggregate data by student for each semester; 2. Assign semester-in-program numbers to each student and generate data spreads under that variable. 3. Revise the evaluation questionnaire both to a./ eliminate redundancies; and b/ eliminate categories that will not lead to identification of actionable issues; and most important, c/ revise assessment rubrics to produce a wider spread in the results, to be accomplished by adopting standards of the profession and not expectations of a graduate student. 4. Analysis Questions and Analysis Answers

**ACADEMIC PROGRAM QUESTION 1:** What changes in the assessment process has your degree program made since last year's assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Last year, the department implemented an online evaluation system with six rubrics, for all MA and doctoral students in the program, for every course that they took. The results were aggregated by year-in-program, program of study, and were averaged for each student across all the seminars the student took. The results have been reported throughout this WEAVE report as finding; in addition, the raw data and the interpretation of that data has been deposited in the document repository. The amount of data collected has given us valuable information with which to move forward in assessment (see below); while at the same time, it would be overkill to collect all this data every semester. (For one thing, it required that two tenure-track faculty spend over 50 hours of work during summer research time crunching data; this is clearly not something we can do on a regular basis.) Thus, we plan to redo this assessment in 7 years; in the meantime we plan to use the results to focus on targeted areas for assessment, in order to come up with more concrete revisions of curriculum, assignments, and so on. To this end, a subcommittee of the Graduate Committee will devise a system of rubrics that begins at the dissertation and moves backward through the prospectus and comprehensive exams. Then we will target two courses during coursework which will serve as assessment courses, so that we can measure student progress at every stage of the program. Because there are three very different tracks in the Communications doctoral program, we have not decided yet whether we will develop separate rubrics for each track, or whether we can have common rubrics. The data gathered from last year should help us determine this. Once the grad committee has drafted the new integrated set of rubrics, then they will be given to the faculty in each area, where further revisions will be done. We expect the entire set of rubrics to be ready by the end of Spring semester 2012.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

We have already added a prospectus writing workshop to our course offerings, so as to allow students to complete prospectuses in a collaborative workshop environment. We have also instituted a writing component to the doctoral Proseminar, which requires students to submit the written version of their paper to the faculty and doctoral students whenever they deliver a paper there.
Georgia State University
Assessment Data by Section
2010-2011 Computer Information Systems MBA
(As of: 12/12/2016 04:10 PM EST)

**Mission / Purpose**
In today's highly competitive global environment, the effective deployment of information technology has become the key to organizational success. There is a continuing shortage of individuals with the combination of business and technology skills needed to develop and manage information systems that provide competitive advantage in the global marketplace. New applications of information technology strike at the heart of what management does and how organizations are structured and compete. In many respects these applications are redefining the nature of work and its organization. The mission of the M.B.A. concentration and major in information systems is to produce graduates able to fill this need. Students will learn how to combine their general business knowledge with contemporary and emerging information systems concepts to enable organizations to compete strongly in the global marketplace. The courses to constitute a concentration (12 semester hours) in information systems are chosen from the 8000-level offerings of the Department of Computer Information Systems or IB 8680. This flexibility enables students to select courses that provide the best foundation for their career advancement. The M.B.A. IS enrollment over the 2008-2009 academic year was used to identify the specific courses for this assessment. Based on highest registration, the selected courses were CIS 8000 IT Project Management, CIS 8010 Business Process Innovation & Organizational Change Management, CIS 8020 Systems Integration, and CIS 8080 Security and Privacy. Indeed, these are logical extensions of the overall MBA program. Businesses need to continually innovate. This typically requires employing IT enabled business process reengineering and careful management of organizational change and of the overall innovation project. Finally, security and privacy are evermore important to maintain integrity and trust in this highly connected business environment.

**Outcomes/Objectives**

**O/O 1: Build and renew business via technology and process (M: 1)**
Students will be able to identify and diagnose problems in business process, to design improved configurations enabled by information technology, and to manage the organizational changes required to implement the new processes.

**Strategic Plan Associations**
2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

**O/O 2: Manage projects and balance resources (M: 2)**
Students will be able to translate a set of project requirements and resources into a workable plan. Students will be able to work with intellectual tools for selecting among competing projects and to choose appropriate solutions to meet project objectives.

**O/O 3: Identify security and privacy circumstances and required controls (M: 3)**
Students will be able to articulate security and privacy circumstances and to propose appropriate controls.

**O/O 4: Employ strategies and methods to blend interdependent systems into a unified whole to accomplish business goals (M: 4)**
The student will be able to employ strategies and methods to blend interdependent systems into a unified whole to accomplish business goals. This includes: Define the objectives of and issues associated integration of information systems applications. Explain alternative strategies for systems integration. Identify commonly used tools for integrating information systems, describing the benefits of using each. Explain how Web services can aid in systems integration, identifying the underlying tools and technologies that facilitate the creation of such services. Discuss the characteristics of systems integration projects, emphasizing the management issues and practices associated with them. Identify information systems application and organization characteristics that are most likely to cause an organization to employ a systems integration company to carry out the project work.

**Measures, Targets, and Findings**

**M 1: Identify and diagnose problems in business process, design improved configurations enabled by IT, and manage the required change (O: 1)**
Students will be able to accurately identify and diagnose problems in business process, design improved configurations enabled by information technology, and manage the required organizational changes.

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O1: Build and renew business via technology and process**
75% of students will be rated at or above 2.0. Measurement will be done by applying the following Rubric to the midterm and final exams in CIS 8010. Learning Objective: Identify and diagnose problems in business process, design improved configurations enabled by information technology, and manage the organizational changes required to implement the new processes. Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure: Accurately identify and diagnose problems in business process, design improved configurations enabled by information technology, and manage the organizational changes required to implement the new processes. Students were not able to accurately identify and diagnose problems in business process, design improved configurations enabled by information technology, and manage the organizational changes required to implement the new processes. Students were able to accurately identify and diagnose problems in business process, design improved configurations...
enabled by information technology, and manage the organizational changes required to implement the new processes.

**Findings 2010-2011 - Target: Not Reported This Cycle**

Only two MBA IS/CIS students took CIS 8020 IT Enabled Innovation during 2010-2011. This is not sufficient to measure success. Will review during 2011-2012.

**M 2: Manage projects and balance resources (O: 2)**

Manage projects and balance resources

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Manage projects and balance resources**

75% of students will be rated at or above 2.0. Measurement will be done by applying the following Rubric to the written assignments in CIS 8000. Learning Objective: translate a set of project requirements and resources into a workable plan; work with intellectual tools for selecting among competing projects and to choose appropriate solutions to meet project objectives. Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure: Translate a set of project requirements and resources into a workable plan; work with intellectual tools for selecting among competing projects and to choose appropriate solutions to meet project objectives. Students were not able to accurately translate a set of project requirements and resources into a workable plan; work with intellectual tools for selecting among competing projects and to choose appropriate solutions to meet project objectives. Students were able to accurately translate a set of project requirements and resources into a workable plan; work with intellectual tools for selecting among competing projects and to choose appropriate solutions to meet project objectives.

**Findings 2010-2011 - Target: Not Reported This Cycle**

Only 2 MBA IS/CIS students took CIS 8010 IT Project management where this objective is assessed. This number is not sufficient for reasonable assessment measure. Will revisit during 2011-2012.

**Findings 2010-2011 - Target: Not Reported This Cycle**

Only 3 MBA IS/CIS students took CIS 8000 IT Project management where this objective is assessed. This number is not sufficient for reasonable assessment measure. Will revisit during 2011-2012.

**M 3: Understand and analyze security and privacy circumstances and propose appropriate control decisions. (O: 3)**

Students will understand and analyze security and privacy circumstances and will propose appropriate control decisions.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Identify security and privacy circumstances and required controls**

75% of students will be rated at or above 2.0. Measurement will be done by applying the Rubric below to the midterm or final paper in CIS 8080. Learning Objective: Identify security and privacy circumstances and required controls Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure: Accurately analyze security and privacy circumstances and propose appropriate control decisions. Students were not able to accurately articulate security and privacy circumstances and to propose appropriate control decisions. Students were able to accurately articulate security and privacy circumstances and to propose appropriate control decisions.

**Findings 2010-2011 - Target: Not Reported This Cycle**

Only 3 MBA IS/CIS students took CIS 8080 Security & Privacy during 2010-2011. This is not sufficient for assessment measurement. Will revisit during 2011-2012.

**Findings 2010-2011 - Target: Not Reported This Cycle**

Only 2 MBA IS/CIS students took CIS 8080 Security & Privacy during 2010-2011. This is not sufficient for assessment measurement. Will revisit during 2011-2012.

**M 4: Employ strategies and methods to blend interdependent systems into a unified whole to accomplish business goals (O: 4)**

Employ strategies and methods to blend interdependent systems into a unified whole to accomplish business goals

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O4: Employ strategies and methods to blend interdependent systems into a unified whole to accomplish business goals**

75% of students will be rated at or above 2.0. Measurement will be done by applying the Rubric below to the midterm or final paper in CIS 8020. Learning Objective: Identify strategies and methods to blend interdependent systems into a unified whole to accomplish business goals Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure: Accurately identify strategies and methods to blend interdependent systems into a unified whole to accomplish business goals. Students were not able to accurately identify strategies and methods to blend interdependent systems into a unified whole to accomplish business goals. Students were able to accurately identify strategies and methods to blend interdependent systems into a unified whole to accomplish business goals. Students were able to accurately identify strategies and methods to blend interdependent systems into a unified whole to accomplish business goals.

**Findings 2010-2011 - Target: Not Reported This Cycle**

Only one MBA IS/CIS student took CIS 8020 during 2010-2011. This is not sufficient for assessment measurement. Will review during 2011-2012.
Mission / Purpose
The application of information technology to organizational functions has shifted from supplanting basic operational tasks to the evolution of an intelligent information infrastructure which supports knowledge-workers within the organization as well as customers of the organization. Underlying these changes is an ever more rapidly developing technology with dramatically changing economics, pushing the envelope of what is possible and desirable. In this environment of dynamic and pervasive technology development and diffusion, the mission of the BBA-CIS program is to produce graduates who are able to combine their general business and technical knowledge with the latest software development tools and techniques to create information systems that will meet the needs of tomorrow's organizations.

Number of graduates from this BBA CIS degree program this academic year: Summer 2009 9 Fall 2009 41 Spring 2010 38 The number of students in this program major: Summer 2009 241 Fall 2009 462 Spring 2010 488 Previous academic year graduates: Summer 2008 11 Fall 2008 24 Spring 2009 21 The number of students in this program major during previous academic year: Summer 2008 211 Fall 2008 399 Spring 2009 423

Goals
G 1: CIS BBA Program Goals
Students will become better problem-solvers; students will demonstrate clearer critical-thinking; students will gain broad knowledge of the discipline; students will be well prepared for positions in the discipline.

Student Learning Outcomes/Objectives
SLO 1: Students will be proficient in systems analysis (G: 1) (M: 1, 2, 3, 4, 12)
Students will be able to investigate, define, document and analyze an existing information system including the capability to solve complex organizational problems. Within the context of a capstone course, the ability of students to analyze real-world organizational needs will be evaluated by the client organizations. The ability of students to analyze real-world organizational needs will be evaluated by a faculty panel. Students will be able to specify the requirements for a replacement system. Within the context of a capstone course, the quality of specifications developed by students will be evaluated by the client organizations. The quality of specifications developed by students will be evaluated by a faculty panel.

SLO 2: Students will be proficient in systems design (M: 5, 6, 10)
Students will be able to read a system specification and analyze user data requirements within the context of a three-tier architecture. Within the context of a capstone course, the ability of students to analyze user requirements for real-world applications will be evaluated by the client organizations. The ability of students to design current system architectures will be evaluated by the client organizations. The ability of students to design current systems architectures will be evaluated by a faculty panel. Students will be able to develop program specifications, procedures, test plans and implementation plans. Within the context of a capstone course, the ability of students to design current systems architectures will be evaluated by the client organizations. The ability of students to design and develop effective, graphically pleasing web sites will be evaluated by a faculty panel.

SLO 3: Object Oriented Programming Proficiency (M: 7, 8, 11)
Students will be able to read a program specification using unified modeling language. Within the context of a capstone course, the ability of students to develop object-oriented software that conforms to specifications will be evaluated by the client organizations. The ability of students to develop object-oriented software that conforms to specifications will be evaluated by a faculty panel. Students will be able to design, code, test and document an object-oriented program using object-oriented programming language. Within the context of a capstone course, the ability of students to write object-oriented programs will be evaluated by the client organizations. The ability of students to write object-oriented programs will be evaluated by a faculty panel.

Student Learning Outcomes/Objectives

SLO 1: Identify business needs and challenges that may be facilitated through information technology (M: 1)

Students will be able to specify the requirements for an information system that meets user needs. At the conclusion of the Fall and Spring term instructional faculty were asked to provide a sampling representing 15% of the student’s work, with the provision that there should be a minimal subset of work representing all the stated learning objectives. Those objectives and the mapping of those objectives to specific courses in our core are based on the learning objectives as stated in the course syllabus and according to the departments overall learning objectives. At the conclusion of the Fall and Spring term instructional faculty were asked to provide a sampling representing 15% of the student’s work, with the provision that there should be a minimal subset of work representing all the stated learning objectives. Those objectives and the mapping of those objectives to specific courses in our core are based on the learning objectives as stated in the course syllabus and according to the departments overall learning objectives. The course level assessment provided herein was arrived at by indirect means; that is, via the evaluation of static artifacts. Those assessments were based on the learning objectives as stated in the course syllabus and according to the departments overall learning objectives. For each of the core courses the departmental evaluation committee developed a survey instrument (C1). The draft instrument was created from published course documents and then reviewed by instructional staff to access the efficacy of the instrument and the completeness of the courses learning objectives. At the conclusion of the Fall and Spring term instructional faculty were asked to provide a sampling representing 15% of the student’s work, with the provision that there should be a minimal sub-set of work representing all the stated learning objectives. These materials were made available to the assessment team of faculty, and PhD students. Those evaluating review all documents and the course syllabi and relevant assignment materials then completed the assessment questionnaire. The summary results are reported herein and the overall summary of the graduate assessment may be found at: (To Be Completed for 2006-2007). A fuller description of the assessment process is represented by the diagram above (except figure 1 here) and may be found in Napier, Johnson, Stucke, 2006 from which we excerpted this diagram.
The student should be able to analyze an organization's performance by assessing its resources, capabilities, and competitive environment.

**SLO 2: Create environments for programs and systems (M: 2)**
Students will be proficient in design and implementation of information infrastructure.

**SLO 3: Manage an information technology project (M: 3, 4)**
Students will be able to translate a set of project requirements and resources into a workable plan. Students will be able to work with intellectual tools for selecting among competing projects and to choose appropriate solutions to meet project objectives.

**SLO 4: Build and renew business via technology & process (M: 5, 6, 7)**
Students will be able to identify business opportunities associated with an emerging technology. Students will be able to identify and diagnose problems in business process, to design improved configurations enabled by information technology, and to manage the organizational changes required to implement the new processes.

### Measures, Targets, and Findings

**M 1: I.1: Specify the requirements for an information system (O: 1)**
Students will be able to specify the requirements for an information system that meets user needs.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Identify business needs and challenges that may be facilitated through information technology**

Three facets of assessing achievement:
1) the average score for all students assessed will be 2.0 or above on a 3-point scale
2) 80% of students will achieve "level 2" ("meets the standard"), according to the evaluation rubric.
3) 25% of students will achieve "level 3" ("exceeds the standard"), according to the evaluation rubric.

**M 2: II: Design and implementation of information infrastructure (O: 2)**
Students will be proficient in design and implementation of information infrastructure.

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O2: Create environments for programs and systems**

Three facets of assessing achievement:
1) the average score for all students assessed will be 2.0 or above on a 3-point scale
2) 80% of students will achieve "level 2" ("meets the standard"), according to the evaluation rubric.
3) 25% of students will achieve "level 3" ("exceeds the standard"), according to the evaluation rubric.

**M 3: III.1: Translate project requirements and resources into a workable plan (O: 3)**
Students will be able to translate a set of project requirements and resources into a workable plan.

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O3: Manage an information technology project**

Three facets of assessing achievement:
1) the average score for all students assessed will be 2.0 or above on a 3-point scale
2) 80% of students will achieve "level 2" ("meets the standard"), according to the evaluation rubric.
3) 25% of students will achieve "level 3" ("exceeds the standard"), according to the evaluation rubric.

**M 4: III.2: Manage an ongoing project using project control tools and techniques (O: 3)**

Students will be able to manage an ongoing project using project control tools and techniques.

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O3: Manage an information technology project**

Three facets of assessing achievement:
1) the average score for all students assessed will be 2.0 or above on a 3-point scale
2) 80% of students will achieve "level 2" ("meets the standard"), according to the evaluation rubric.
3) 25% of students will achieve "level 3" ("exceeds the standard"), according to the evaluation rubric.

**M 5: IV.1: Identify business opportunities associated with available information technologies (O: 4)**

Students will be able to identify business opportunities associated with available information technologies.

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O4: Build and renew business via technology & process**

Three facets of assessing achievement:
1) the average score for all students assessed will be 2.0 or above on a 3-point scale
2) 80% of students will achieve "level 2" ("meets the standard"), according to the evaluation rubric.
3) 25% of students will achieve "level 3" ("exceeds the standard"), according to the evaluation rubric.

**M 6: IV.2: Diagnose problems in business processes to design improved configurations (O: 4)**

Students will be able to identify and diagnose problems in business processes to design improved configurations enabled by information technology.

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O4: Build and renew business via technology & process**
Three facets of assessing achievement: 1) the average score for all students assessed will be 2.0 or above on a 3-point scale. 2) 80% of students will achieve "level 2" ("meets the target"), according to the evaluation rubric. 3) 25% of students will achieve "level 3" ("exceeds the target"), according to the evaluation rubric.

**M 7: IV.3: Formulate an implementation plan to manage organizational changes associated with introduction of new technology (O: 4)**

Students should be able to formulate an implementation plan to manage organizational changes associated with introduction of new technology.

*Source of Evidence: Writing exam to assure certain proficiency level*

**Target for O4: Build and renew business via technology & process**

Three facets of assessing achievement: 1) the average score for all students assessed will be 2.0 or above on a 3-point scale. 2) 80% of students will achieve "level 2" ("meets the standard"), according to the evaluation rubric. 3) 25% of students will achieve "level 3" ("exceeds the standard"), according to the evaluation rubric.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Course instructor should follow assessment procedures**

Course instructor responsible for teaching CIS 8030 must assign individual-level projects that reflect the course objectives. In addition, the course instructor must save copies of all M.S. individual student deliverables and make them available to the assessment coordinator.

*Established in Cycle*: 2008-2009  
*Implementation Status*: Planned  
*Priority*: High

*Relationships (Measure | Outcome/Objective):*  
Measure: I.1: Specify the requirements for an information system  
Outcome/Objective: Identify business needs and challenges that may be facilitated through information technology

*Projected Completion Date*: 03/2010  
*Responsible Person/Group*: Course instructor for CIS 8030

**Offer all core courses yearly; require course instructors to assign student projects that reflect course objectives.**

There are 3 components of the action plan related to this learning objective. 1) Offer all required core courses on a yearly basis (to remedy the problem that CIS 8050 has not been offered for more than two years, and that faculty assisting in the assessment process have had to assess materials from a different course that students were permitted to substitute for CIS 8050). 2) All instructors who teach courses related to this learning objective must assign individual-level student assignments that reflect the course objectives. 3) All instructors who teach courses related to this learning objective must save all M.S. student deliverables from their courses.

*Established in Cycle*: 2008-2009  
*Implementation Status*: Planned  
*Priority*: High

*Relationships (Measure | Outcome/Objective):*  
Measure: II: Design and implementation of information infrastructure  
Outcome/Objective: Create environments for programs and systems

*Projected Completion Date*: 03/2010  
*Responsible Person/Group*: Course instructors who teach CIS 8040, 8050, and 8070.

**Train assessors to allow for greater variability in student scores**

The only portion of the target goal that was not achieved for objective III.1 was the last part, which specifies a goal of having 25% or more of assessed students scoring at the level of "3" ("exceeds the standard"). In this case, all of the assessed students (n=8) were scored as "2" (which means that 0% of students were assessed as scoring a "3"). One contributing factor may be that course assessors have not been trained to discriminate between higher or lower scores. The Assessment coordinator will provide additional detailed criteria for participating assessors to use when performing the assessment. With the exception of this detail, all other target objectives were met.

*Established in Cycle*: 2008-2009  
*Implementation Status*: Planned  
*Priority*: High

*Relationships (Measure | Outcome/Objective):*  
Measure: III.1: Translate project requirements and resources into a workable plan  
Outcome/Objective: Manage an information technology project

*Projected Completion Date*: 06/2010  
*Responsible Person/Group*: Assessment coordinator

---

**Georgia State University**  
**Assessment Data by Section**  
**2010-2011 Computer Science Assessment of Core**  
As of: 12/12/2016 04:10 PM EST  
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)
**Mission / Purpose**

It is critical for all students to master a basic understanding of computing due to its pervasiveness. Also, due to its rapidly changing nature it is imperative students learn the concepts that underlie this discipline. One of the missions of the Department of Computer Science is to provide high quality instruction in the CSC 1010 course that incorporates computing fundamentals and the latest technologies.

**Goals**

**G 1: Student productivity**
- Students will be comfortable and competent in a setting which requires the use of computers.
- Students will be productive using various computer applications, for example, they will be able to produce reports, graphs, spreadsheets, charts, and slide shows.

**Student Learning Outcomes/Objectives**

**SLO 1: Computer Components – Hardware and Software (M: 4)**

Students will learn about the various components that make up a computer.

**Strategic Plan Associations**

1.5 Other efforts in support of Goal 1 (Undergraduate Education).

**SLO 2: Word Processing Application Software (M: 3)**

Students will learn the necessary components of word processing that will enable them to write term papers, reports, and research papers.

**SLO 3: Spreadsheet Application Software (M: 1, 3)**

Students will learn the necessary components of spreadsheet applications that will enable them to enter, calculate, manipulate, and analyze data.

**SLO 5: Web Development (M: 5)**

Students will learn how to use the language of the Internet (HTML) in order to create web pages. This includes creating links so that users can navigate from one page to another.

**Other Outcomes/Objectives**

**O/O 4: Presentation Application Software (M: 2)**

Students will learn the necessary components of presentation applications and presentation techniques that will enable them to effectively deliver information, findings, and projects to others.

**Measures, Targets, and Findings**

**M 1: Chart drawing (O: 3)**

Students are to extract data from a spreadsheet and use this to draw charts for various functions. This includes formatting the charts as well.

Source of Evidence: Academic direct measure of learning - other

**Target for O3: Spreadsheet Application Software**

Proper curves should be generated for charts with appropriate labels.

**Findings 2010-2011 - Target: Met**

About 88.1% of the students were able to do this correctly.

**M 2: Formatting slides (O: 4)**

Students should create slides to demonstrate some functions. This includes labeling the slides appropriately.

Source of Evidence: Presentation, either individual or group

**Target for O4: Presentation Application Software**

The presentation should include multiple number of slides with appropriate titles. Each slide importing figures or text accordingly.

**Findings 2010-2011 - Target: Met**

A majority of students could generate the slides accordingly but imported figures were not always formatted as well as expected.

**M 3: Generate documents (O: 2, 3)**

Students should generate a document that imports charts from a spreadsheet. The document should include comparisons as well as a variation in formats for headers and the text body.

Source of Evidence: Academic direct measure of learning - other
**Target for O2: Word Processing Application Software**

The documents would not only include text, but also charts from a spreadsheet. The charts should be easy to read and the description/comparisons should be detailed and formatted nicely.

**Findings 2010-2011 - Target: Met**

Most often the charts were imported properly. However, the comparisons were not detailed enough. About 85% performed well with this.

**Target for O3: Spreadsheet Application Software**

The documents would not only include text, but also charts from a spreadsheet. The charts should be easy to read and the description/comparisons should be detailed and formatted nicely.

**Findings 2010-2011 - Target: Met**

Usually the charts were imported properly. However, the comparisons were not detailed enough. About 85.1% performed well with this.

**M 4: Comparison shopping for computer systems (O: 1)**

Students are asked to shop for computer systems for four different purposes. Each task has different requirements for the hardware and software components. Students should be able to justify why each system they chose meets the demand of the corresponding tasks.

Source of Evidence: Academic direct measure of learning - other

**Target for O1: Computer Components -- Hardware and Software**

For each environment described, the students should be able to select the appropriate components that follow:
1) motherboard/cpu; 2) memory/hard disk space/ram; 3) adapter cards; 4) video/sound; 5) application software

**Findings 2010-2011 - Target: Met**

90.1% of the students did well with this objective. Occasionally, they were not able to justify their choices clearly. This could be tied back to critical thinking or writing objectives.

**M 5: Website design (O: 5)**

Students are to design a website using HTML as the programming language. Their design has certain specifications required, such as linking pages, format, and headers.

Source of Evidence: Academic direct measure of learning - other

**Target for O5: Web Development**

Students should be able to follow a flowchart for a website design. There should be multiple pages linked together including tags. The formats should adhere to specifications and include headers.

**Findings 2010-2011 - Target: Met**

Less than 8% of the students have difficulty with the syntax of HTML. Tags were not always included properly. Linking pages tended to cause problems for some students so that the intended flow was not achieved.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Additional examples and quizzes**

With additional examples being provided during the lectures, students will see how to create charts and then import them into other software for presentations and documents. Additional quizzes will require students to work more closely with the material to gain better understanding. For more information, see the Action Plan Details section of this report.

**Established in Cycle: 2008-2009**
**Implementation Status: In-Progress**
**Priority: High**

**Relationships (Measure | Outcome/Objective):**
- **Measure:** Generate documents
- **Outcome/Objective:** Spreadsheet Application Software

**Additional examples and quizzes**

With additional examples being provided during the lectures, students will see how to create charts and then import them into other software for presentations and documents. Additional quizzes will require students to work more closely with the material to gain better understanding. For more information, see the Action Plan Details section of this report.

**Established in Cycle: 2008-2009**

Coordinate 1010 sections
Establish a coordinator for the CSC 1010 course. They will be responsible for meeting with all instructors teaching sections of the CSC 1010 course in order to ensure that there is consistency among each of the sections offered.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High
Projected Completion Date: 07/2010
Responsible Person/Group: Undergraduate Curriculum Committee

Mission / Purpose
MISSION Within the Georgia State mission of research, education, and public service, the mission of the Department of Computer Science encompasses the following areas: - Research: To make leading contributions to basic and applied science by conducting broadly based research in both theoretical and applied areas of computer science and collaborating on interdisciplinary efforts with other departments in the institution. - Educational Programs: To provide the next generation of leaders and capable lifelong learners in computer science. - Service: To support other programs at Georgia State by offering rigorous training in basic computer science to non-majors and to support collaboration with colleagues in other disciplines. The Department of Computer Science B.S. Program provides students with the underpinnings of computation and the basic computer science for today's applications in industry, science, government, and business and prepares the foundation for tomorrow's applications in ubiquitous computing, medical cures for diseases, and instant access to information by every one.

Goals
G 1: Computer Science BS goals
students will become better problem-solvers; students will demonstrate clearer critical thinking, students will gain knowledge of the discipline; students will gain skills necessary to be successful in the discipline

Outcomes/Objectives
O/O 1: Computer Systems Development (G: 1) (M: 3, 5)
Students should be able: 1) to describe the principles, processes, and life cycles of computer systems development 2) to apply modeling techniques and tools for specification of systems under development and of computer systems project team management.

O/O 2: Programming Skills (G: 1) (M: 4, 5)
Students should be able: 1) to describe the current, best-practices programming paradigms 2) to apply high-level programming languages to implement the programming paradigms.

O/O 3: Algorithm Design and Analysis (G: 1) (M: 4, 5)
Students should be able: 1) to describe the principles and methods of analyzing algorithms 2) to analyze complexity of problems and algorithms 3) to formulate optimization problems 4) to apply algorithmic techniques to optimization problems

O/O 4: Discrete Mathematics (G: 1) (M: 4, 5)
Students should be able: 1) to describe the principles of discrete math 2) to formulate problems and theorems 3) to construct and
evaluate the validity of proofs 4) to apply discrete structures for solving problems in computer science

</table>

**Target for O1: Computer Systems Development**

The average samples should demonstrate mastery of the subject domains as well as competent presentation skills sufficient for them to be successful in the work force. The best samples should demonstrate excellent mastery and a thorough understanding of subject domain as well as excellent presentation skills. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results.

**Findings 2010-2011 - Target: Met**

The best samples demonstrated excellent mastery and a thorough understanding and overall the samples showed that the students demonstrated mastery of the subject domain basics. Compared to last year, on average, the writing skills of our seniors were slightly improved.

**Target for O5: Hardware Systems**

The average samples should demonstrate mastery of the subject domains as well as competent presentation skills sufficient for them to be successful in the work force. The best samples should demonstrate excellent mastery and a thorough understanding of subject domain as well as excellent presentation skills. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results.

**Findings 2010-2011 - Target: Met**

The best samples demonstrated excellent mastery and a thorough understanding and overall the samples showed that the students demonstrated mastery of the subject domain basics. Compared to last year, on average, the programming skills of our seniors were slightly improved.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Coordinate lower level classes

Establish a coordinator for each of the lower level classes. They will be responsible for meeting with all instructors of the course they are assigned to in order to ensure that there is consistency among each of the sections offered.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High
### Relationship (Measure | Outcome/Objective):
- **Measure:** Examinations
- **Outcome/Objective:** Programming Skills

**Projected Completion Date:** 08/2010  
**Responsible Person/Group:** Chair of Undergraduate Curriculum Committee  
**Additional Resources:** none

---

**Mission / Purpose**

**MISSION** Within the Georgia State mission of research, education, and public service, the mission of the Department of Computer Science encompasses the following areas:

- **Research:** To make leading contributions to basic and applied science by conducting broadly based research in both theoretical and applied areas of computer science and collaborating on interdisciplinary efforts with other departments in the institution.
- **Educational Programs:** To provide the next generation of leaders and capable lifelong learners in computer science.
- **Service:** To support other programs at Georgia State by offering rigorous training in basic computer science to non-majors and to support collaboration with colleagues in other disciplines. The Department of Computer Science M.S. Program provides students with the underpinnings of computation and the basic computer science for today's applications in industry, science, government, and business and prepares the foundation for tomorrow's applications in ubiquitous computing, medical cures for diseases, and instant access to information by every one.

**Goals**

**G 1: Computer Science MS Goals**

Students will become better solvers of advanced computational problems; Students will improve abilities to develop advanced computational models of real world problems; Students will gain advanced knowledge of computer science; Students will gain skills necessary for a successful career applying advanced computer science methods.

**Outcomes/Objectives**

**O/O 1: Computer Science Foundations (G: 1) (M: 2, 3, 4, 5, 6)**

Students should be able to: 1. Describe the principles and methods of (a) discrete mathematics, (b) best-practices programming paradigms, (c) algorithm analysis, (d) computer & hardware systems development, and (e) advanced network-oriented software engineering. 2. Develop models and corresponding optimization problem formulations. 3. Apply (a) discrete structures for solving problems in computer science, (b) algorithmic techniques to optimization problems, (c) high-level programming languages to implement the programming paradigms, and (d) advanced software engineering and modeling techniques for specification of computer systems and implementing the phases of hardware development.

**Strategic Plan Associations**

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

**O/O 2: Research and Critical Thinking (G: 1) (M: 1, 3, 4, 6)**

Students should be able to: 1) study related work and approaches; 2) formulate relevant questions for research; 3) justify and evaluate claims, arguments, evidence and hypotheses; and 4) provide a theoretical and/or practical (hardware or software) solution to their research problem.

**O/O 3: Collaboration (G: 1) (M: 4)**

Students participate effectively in collaborative activities.

**O/O 4: Communication (G: 1) (M: 1, 4, 6)**

Students communicate effectively using appropriate writing and oral conventions and formats.

**O/O 5: Bioinformatics (for students with concentration) (G: 1) (M: 2, 3, 4, 5, 6)**

Students should be able to: (a) analyze, correlate and extract information from biological and chemical databases with emphasis on...
the sequence and structure of proteins and nucleic acids, and (b) apply computational tools, techniques and models to analysis of protein and nucleic acid sequences.

### Measures, Targets, and Findings

**M 1: Research Publications (O: 2, 4)**

Research publications in journals and conference proceedings produced by M.S. graduate students will be catalogued and made available to the Assessment Committee (ongoing).

- **Source of Evidence:** External report

**Target for O2: Research and Critical Thinking**

**Findings 2010-2011 - Target: Met**

M.S. students have co-authored many publications that have appeared in peer reviewed conferences and journals during the reporting period. A number of these were published in conferences with acceptance rates below 33%.

**Target for O4: Communication**

Research publications should appear in highly selective journals and/or conferences, preferably supported by renowned professional societies (ACM, IEEE).

**Findings 2010-2011 - Target: Met**

M.S. students have co-authored many publications that have appeared in peer reviewed conferences and journals during the reporting period. A number of these were published in conferences with acceptance rates below 33%.

**M 2: Written Assignments and Reports (O: 1, 5)**

Copies of selected written class assignments, lab reports, and research reports will be collected from individual faculty members for future inspection by the Assessment Committee. (each semester)

- **Source of Evidence:** Written assignment(s), usually scored by a rubric

**Target for O1: Computer Science Foundations**

Students should demonstrate the ability to work independently on relevant problems, assignments and projects. The average samples should demonstrate mastery of advanced skills and the best samples should demonstrate excellent mastery of the advanced skills as well as presentation. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results.

**Findings 2010-2011 - Target: Met**

Students worked independently of project, assignments and relevant problems. They demonstrated appropriate mastery of the subject domains. The presentations were of sufficient skill level.

**Target for O5: Bioinformatics (for students with concentration)**

Students should demonstrate the ability to work independently on relevant problems, assignments and projects. The average samples should demonstrate mastery of advanced skills and the best samples should demonstrate excellent mastery of the advanced skills as well as presentation. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results.

**Findings 2010-2011 - Target: Met**

Students worked independently of project, assignments and relevant problems. They demonstrated appropriate mastery of the subject domains. The presentations were of sufficient skill level.

**M 3: Alumni Surveys (O: 1, 2, 5)**

An alumni survey will be mailed to alumni via the departmental newsletter on an annual basis. Survey will solicit input from alumni on job promotions, success in graduate schools, job satisfaction, etc. Results will be provided to the Assessment Committee for review.

- **Source of Evidence:** Alumni survey or tracking of alumni achievements

**Target for O1: Computer Science Foundations**

The surveys will reveal that the majority of the students found the coursework, projects, and thesis research useful and relevant to their careers.

**Findings 2010-2011 - Target: Met**

At this current time we do not have enough data to provide reliable findings.

**M 4: Graduate Oral and Written Presentations (O: 1, 2, 3, 4, 5)**

Copies of selected presentations and oral reviews will be collected from individual faculty for future inspection by Assessment Committee (each semester). Students are encouraged to participate in design/research paper competitions where they are judged relative to their peers from other institutions (ongoing).

- **Source of Evidence:** Presentation, either individual or group

**Target for O1: Computer Science Foundations**

The average samples should demonstrate mastery and a thorough understanding of the advanced subject domains as well as competent presentation skills sufficient for professional meetings. The best samples should demonstrate excellent mastery of
subject domain, excellent presentation skills suitable for Ph.D. student candidates, and sufficient quality for acceptance at leading conferences. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results

**Findings 2010-2011 - Target: Met**

Students demonstrated mastery of presentation skills as well as subject domains. Students presented posters and talks at international refereed conferences

**Target for O2: Research and Critical Thinking**

The average samples should demonstrate mastery and a thorough understanding of the advanced subject domains as well as competent presentation skills sufficient for professional meetings. The best samples should demonstrate excellent mastery of subject domain, excellent presentation skills suitable for Ph.D. student candidates, and sufficient quality for acceptance at leading conferences. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results

**Findings 2010-2011 - Target: Met**

Students demonstrated mastery of presentation skills as well as subject domains. Students presented posters and talks at international refereed conferences

**Target for O3: Collaboration**

The average samples should demonstrate mastery and a thorough understanding of the advanced subject domains as well as competent presentation skills sufficient for professional meetings. The best samples should demonstrate excellent mastery of subject domain, excellent presentation skills suitable for Ph.D. student candidates, and sufficient quality for acceptance at leading conferences. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results

**Findings 2010-2011 - Target: Met**

Students demonstrated mastery of presentation skills as well as subject domains. Students presented posters and talks at international refereed conferences

**Target for O4: Communication**

The average samples should demonstrate mastery and a thorough understanding of the advanced subject domains as well as competent presentation skills sufficient for professional meetings. The best samples should demonstrate excellent mastery of subject domain, excellent presentation skills suitable for Ph.D. student candidates, and sufficient quality for acceptance at leading conferences. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results

**Findings 2010-2011 - Target: Met**

Students demonstrated mastery of presentation skills as well as subject domains. Students presented posters and talks at international refereed conferences

**Target for O5: Bioinformatics (for students with concentration)**

The average samples should demonstrate mastery and a thorough understanding of the advanced subject domains as well as competent presentation skills sufficient for professional meetings. The best samples should demonstrate excellent mastery of subject domain, excellent presentation skills suitable for Ph.D. student candidates, and sufficient quality for acceptance at leading conferences. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results

**Findings 2010-2011 - Target: Met**

Students demonstrated mastery of presentation skills as well as subject domains. Students presented posters and talks at international refereed conferences

**M 5: Examinations (O: 1, 5)**

Student ability will be assessed via examinations. Copies of selected examinations will be collected from individual faculty members for future inspection by the Assessment Committee. (each semester)

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O1: Computer Science Foundations**

The average samples should demonstrate mastery of advanced topics of the subject domain and the best samples should demonstrate excellent mastery and a thorough understanding of advanced topics within the subject domain. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results.

**Findings 2010-2011 - Target: Met**

Students demonstrated mastery of presentation skills as well as subject domains. Students presented posters and talks at international refereed conferences

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Consider Course Only Master's Degree Option**

Consider offering a third option for obtaining the Master's Degree. Specifically, a course only option instead of a thesis or project option.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Projected Completion Date:** 07/2010
- **Responsible Person/Group:** Director of Graduate Studies and Graduate Faculty
Consider foundation courses for graduate program

We plan to present the results to the computer science curriculum committee and show the areas (discrete mathematics and computer organization) that may need improvement. For more information, see the Action Plan Details section of this report.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
  Measure: Written Assignments and Reports | Outcome/Objective: Computer Science Foundations

Dispatch alumni surveys

Prepare a survey questionnaire to send out to alumni from the Master's program.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: Low

Relationships (Measure | Outcome/Objective):
  Measure: Alumni Surveys | Outcome/Objective: Computer Science Foundations

Projected Completion Date: 07/2010
Responsible Person/Group: Ms. Tammie Dudley
Budget Amount Requested: $1,000.00 (recurring)
O/O 4: Research and Critical Thinking (G: 1) (M: 3, 4, 5)
Students should be able to: 1) Achieve understanding of the frontier research literature, emerging technologies, and current research approaches and methods in computer science; 2) Formulate questions for research that are recognized by the broad community computer scientists as advancing knowledge; 3) Justify and evaluate claims, arguments, evidence and hypotheses to the standards of computer science scholarship; 4) Construct new arguments and formulate new relevant questions based on the results of analysis; and 5) Provide novel theoretical and practical (hardware or software) solutions to formulated problems.

O/O 5: Collaboration (G: 1) (M: 4)
Students participate effectively in collaborative activities appropriate to the research area in computer science.

O/O 6: Bioinformatics (for students with concentration) (G: 1) (M: 2, 3, 4, 5)
Students should be able to: (a) analyze, correlate and extract information from biological and chemical databases with emphasis on the sequence and structure of proteins and nucleic acids, (b) apply computational tools, techniques and models to analysis of protein and nucleic acid sequences, and (c) develop new bioinformatics tools, techniques and models.

Measures, Targets, and Findings

M 1: Student evaluations (O: 2)
Student evaluations will be assessed to monitor the quality of teaching by our Ph.D. students.
Source of Evidence: Student course evaluations on learning gains made

Target for O2: Teaching
Ph.D. students should receive positive written comments for a majority of the responses. Additionally, we expect that the average of the answers for Question #17 on the evaluation to be above a 4.0

Findings 2010-2011 - Target: Met
This year for Honors Day, when selecting the recipient(s) for the Outstanding Teaching by a Graduate Student Award, the Honors Committee has found that most students receive high marks and comments on their evaluations.

M 2: Qualifying exam (O: 1, 6)
The Ph.D. qualifying exam covers a breadth of the foundation material for the Computer Science curriculum. All Ph.D. students are required to pass this exam within the first three semesters of entry into the program.
Source of Evidence: Comprehensive/end-of-program subject matter exam

Target for O1: Computer Science Foundations
The average samples should demonstrate mastery of advanced topics of the subject domain and the best samples should demonstrate excellent mastery and a thorough understanding of advanced topics within the subject domain. The assessment of mastery will be completed by Qualifying Examination Committee.

Findings 2010-2011 - Target: Met
The students demonstrated appropriate mastery of the subject domains. The best students showed excellent mastery

Target for O6: Bioinformatics (for students with concentration)
The average samples should demonstrate mastery of advanced topics of the subject domain and the best samples should demonstrate excellent mastery and a thorough understanding of advanced topics within the subject domain. The assessment of mastery will be completed by Qualifying Examination Committee.

Findings 2010-2011 - Target: Met
The students demonstrated appropriate mastery of the subject domains. The best students showed excellent mastery

M 3: Dissertation Manuscripts and Defenses (O: 1, 3, 4, 6)
Copies of Ph.D. manuscripts and defense presentation slides will be available for inspection by the Defense Committee and the Assessment Committee (on going).
Source of Evidence: Senior thesis or culminating major project

Target for O1: Computer Science Foundations
The average samples should demonstrate basic research skills, mastery and a thorough understanding of the advanced subject domains, and competent presentation skills sufficient for professional meetings. The best samples should demonstrate advanced research skills, excellent mastery of subject domain, excellent presentation skills suitable for faculty candidates, and sufficient quality for acceptance at leading conferences. The assessment of mastery will be completed by Defense Committees and the Department’s Learning Outcomes and Assessment Committee will evaluate the results.

Findings 2010-2011 - Target: Met
A total of 8 Ph.D. students defended their dissertations during the reporting period. Each student has a high publication record in international refereed conferences and journals.

Target for O3: Communication
The average samples should demonstrate basic research skills, mastery and a thorough understanding of the advanced subject domains, and competent presentation skills sufficient for professional meetings. The best samples should demonstrate advanced research skills, excellent mastery of subject domain, excellent presentation skills suitable for faculty candidates, and sufficient...

- **Priority:** High
- Relationships (Measure | Outcome/Objective):
  - Measure: Qualifying exam | Outcome/Objective: Bioinformatics (for students with concentration)
  - Measure: | Outcome/Objective: Computer Science Foundations

**Dispatch Alumni Survey**

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- Relationships (Measure | Outcome/Objective):
  - Measure: Alumni Surveys | Outcome/Objective: Computer Science Foundations

**Review qualifying exam format**

Review the format of the PhD qualifying examination to consider an option of replacing one mandatory foundation subject exam with a subject exam chosen by the student based upon their focus of research.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Projected Completion Date:** 07/2010
- **Responsible Person/Group:** Graduate Director and Graduate Faculty

---

Georgia State University
Goals

G 1: Goal of the MBA Concentration in Business Analysis
The goal of the Concentration in Business Analysis for students in the MBA program is to provide students seeking a degree a broader MBA education with a meaningful exposure to an array of tools, techniques and frameworks used in business analysis and with techniques for using those tools, techniques and frameworks effectively with other functional information to improve decision making in both profit and not-for-profit organizations.

Student Learning Outcomes/Objectives

SLO 1: Qualitative Analysis of Business Situation (M: 1)
Students should be able to qualitatively state the key issues clearly and accurately the issues in a business problem.

SLO 2: Model Building Ability (M: 2)
Students will be able to clearly identify the dependent variable(s) and the appropriate metrics in a given business problem.

SLO 3: Understanding of Techniques (M: 3)
Students will understand when and how to perform problem solving techniques for business problems and how to interpret the results.

SLO 4: Software Skills (M: 4)
Students will acquire expertise in the selection and use of key decision making software packages.

Measures, Targets, and Findings

M 1: Qualitative Analysis of Business Situation (O: 1)
Students will be measured on their ability to a) understand the business goals, b) identify the key variables that need to be analyzed, c) analyze the potential relationships among the variables and d) interpret the results of their analysis.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Qualitative Analysis of Business Situation
Achievement Target: 80% of students will receive a score of 3.0 or higher on the 4.0 scale. Rubric 1 is to be used in scoring on assignments and projects from courses across the curriculum. Because of the small number of students in the MS Business Analysis program each student in the program will be evaluated on this rubric in every course where it is applicable during the academic year. Learning Outcome 1. Rubric Qualitative Analysis of Business Situation Excellent (4) Competent (3) Less than competent (2) Ineffective (1) i. Understanding of the business goal / issues is able to state the key issues clearly and accurately Either clarity or accuracy can be improved Both clarity and accuracy are below expectation It is clear that the student does not understand the issues ii Identifying Key variables that need to be analyzed Knows clearly what variables must be used to represent the key issue(s) Some lack of clarity in expressing the key variables Unsure or incomplete understanding of what needs to be analyzed Does not understand the key variable that relate to the issues. iii. Analysis potential relationships among variables Accurate and thorough qualitative analysis of the situation Some lack of clarity in expressing the relationships Weak understanding of relationships among concepts/variables Very little understanding of how variables/concepts are related. iv. Interpretation of results Can clearly relate the results of model building and quantitative analysis back to the main issue Can make the connection of model results to situation most of the time Some errors in interpretation of results in the context of the situation Inability to connect the results of model with the situation at hand.

Findings 2010-2011 - Target: Met
This is an area of strength traditionally for MBA students, and they performed very well overall.

M 2: Model Building Ability (O: 2)
In developing a model students will be measured on their ability to a) identify the dependent variable(s) and the appropriate metrics, b) identify key independent variables and their metrics, c) manage data collection, cleaning and transformation, and d) develop and validate a model.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O2: Model Building Ability
80% of students will receive a score of 3.0 or higher on the 4.0 scale. Rubric 2 is to be used in scoring model building and quantitative analysis efforts. Each rubric in MGS 8150 each time the class is offered. Learning Outcome 2 Model Building Ability Excellent (4) Competent (3) Less than competent (2) Ineffective (1) i. Identifying the dependent variables and appropriate metrics Can clearly identify the dependent variable(s) and the appropriate metrics Can identify the variables, but unsure about measurement Unsure about the dependent variable Does not understand the connection between the issue at hand and the dependent variable ii Identifying Key independent variables and their metrics Can clearly identify the independent variable(s) and...
Details of Action Plans for This Cycle (by Established cycle, then alpha)

On-Going Improvement

The assessment data show that both the programs are currently meeting or exceeding expectations, and have shown improvement over the data in 2008. With this in mind, the key elements of the action plan are as follows: 1. To continue the efforts made over the past few years in keeping the course material current, updating cases and examples to reflect industry practices today. 2. To add more resources online to aid in software competency. 3. To encourage students to engage in collaborative learning. Students post projects on the web and learn from each other's work. This strategy has over the years yielded very positive results.

Established in Cycle: 2008-2009
Implementation Status: In Progress
Priority: High
Projected Completion Date: 05/2011
Responsible Person/Group: BA Faculty Members
Additional Resources: None
Budget Amount Requested: $0.00 (no request)
To Hire New Faculty

The business analysis area is showing increasing enrollment, and there is unfilled demand for our courses in the PMBA programs as well. The analytics field is growing quickly in industry, and additional courses in this area can be offered to keep up with the demand. However, with the loss of faculty to retirements, new hiring is necessary to grow the area to its potential.

**Established in Cycle:** 2010-2011
**Implementation Status:** In-Progress
**Priority:** High
**Implementation Description:** Non-tenure track positions in Business Analysis were announced, and the recruitment process is currently in progress.
**Responsible Person/Group:** Recruitment committee chaired by Dr. Subhashish Samaddar

---

**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1:** What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The assessment process remains the same as last year. The goals and assessment rubric have been clearly set to match the objectives of the program.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The courses in this area are updated with current cases as frequently as possible. Student feedback indicates that these are practical courses that help students apply the skills to real life business situations.

**ADMINISTRATIVE DEPARTMENT QUESTION 3:** What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

Enrollment is increasing in our program due to the need for analytics skills in businesses today. This means that class sizes will go up, and that will require improvement in the delivery of the courses to ensure that greater numbers of students are served just as well. Using online resources better is one of the goals for each of the classes. As more and more businesses adopt analytics as part of their strategy, bringing in more current cases and guest speakers from industry is important to our continued success.

**Georgia State University**

**Assessment Data by Section**

**2010-2011 Concentration in Entrepreneurship MBA**

**Mission / Purpose**

Students will be able to integrate the functional knowledge and skills gained in the core subjects that include finance, accounting, marketing, etc. along with entrepreneurship to understand and work effectively within the dynamics and challenges of the new venture arena and the management of entrepreneurial ventures. Upon successfully completing the concentration, students will 1) create business ideas, 2) evaluate whether an idea is a good business opportunity, 3) understand how to gather resources to move a business opportunity to the marketplace, 4) be made aware of various options to exit the business 5) prepare verbal presentations and 6) be prepared to participate with a team in an entrepreneurial context.

**Outcomes/Objectives**

**O/O 1: Create Business Ideas**

Students will be able to use sound knowledge of business and economics in order to develop new business ideas that could be viable new ventures.

**O/O 2: Evaluation Skills**

Students will be able to evaluate business opportunities and accurately judge the situations likelihood of being developed into a viable business. Students will be able to support their conclusions as to the opportunities viability by applying material from the Entrepreneurship courses and other functional core classes of the MBA program.

**O/O 3: Resource Acquisition Skills**

Students understand how to gather resources to move a business opportunity to the marketplace.

**O/O 4: Business Exit Plans**

Students have to show the ability to develop both the content and implementation aspects of a business exit strategy for a business. Students need to understand when a business is failing, when failing business can or cannot be saved and why, and what actions should be taken to maximize the investors recovery of capital in each context.

**O/O 5: Verbal Business Plan Presentation Skills**
Students will be able to prepare and present an oral business plan in a logical and precise fashion consistent with what is common practice in practice.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Development of Measures
The Entrepreneurship faculty will develop measures for the Learning Outcomes that were developed in the last Academic Year.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Projected Completion Date:** 11/2009
- **Responsible Person/Group:** Entrepreneurship Faculty
- **Additional Resources:** None
- **Budget Amount Requested:** $0.00 (no request)

#### Implementation of Assessment Process
The Entrepreneurship assessment team will implement the assessment of the measures developed and assess the initial results of an MBA Concentration assessment in Entrepreneurship.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Responsible Person/Group:** Entrepreneurship Faculty
- **Additional Resources:** None
- **Budget Amount Requested:** $0.00 (no request)

**Georgia State University**

**Assessment Data by Section**

**2010-2011 Concentration in Human Resource Management MBA**

(As of 12/12/2016 04:10 PM EST)

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

---

### Mission / Purpose
The Master of Business Administration in Human Resource Management program prepares students for general business management careers with an emphasis on using Human Resources practices and procedures to increase workforce efficiency and effectiveness. Students receive detailed knowledge of selected functional areas of Human Resources to aid them in formulating legal, motivational, and cost-effective Human Resources policies or to prepare them for Human Resources generalist practices.

This Mission was established in 2006-07. It was not moved forward when the WEAVE version was updated.

### Goals

**G 1: Basic functions of HRM**
To graduate students from the MBA program in HRM with an understanding of the role of the basic functions of Human Resources Management in a variety of organizations.

**G 2: Ability to solve HR problems**
To graduate students from the MBA in HRM program with the ability to solve Human Resources Management problems.

**G 3: Linkage of HR actions and corporate strategy**
To graduate students from the MBA in HRM program with an understanding of the importance of the role and interface of the HR functions with organizational strategies.

**G 4: Understanding of employment legal issues**
To graduate students from the MBA in HRM program with an understanding of the basic employee-related legal issues in organizations.

### Student Learning Outcomes/Objectives

**SLO 1: The Role of HR in Organizations (G: 1) (M: 1, 2)**
The MBA-HRM graduate will be able to understand and effectively apply the appropriate job analysis, job description, job evaluation, performance appraisal, dispute resolution, and HR policy formulation techniques in a variety of settings.

**SLO 2: Problem Solving (G: 2) (M: 3, 4)**
The MBA-HRM graduate will be able to identify, evaluate, and effectively react to issues in the areas of employee relations and performance management.

**SLO 3: Links with Business Strategy (G: 3) (M: 5)**
The MBA-HRM student will be able to define, select, and defend specific business strategies and the appropriate HR policies for each of those strategies.
The MBA-HRM graduate will be able to identify and address potential legal issues, relevant laws, and appropriate policies to address.

**Measures, Targets, and Findings**

**M 1: General Understanding of HR in Organizations (O: 1)**

Students will understand the role and usage of job analysis, job description, job evaluation, and performance appraisal techniques and can apply the appropriate method in a variety of settings.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: The Role of HR in Organizations**

80% of HR students will meet or exceed a 2.0 average on all criteria. Measurement will be done by applying the MBA Concentration in HR Measure 1 Rubric to randomly selected project reports.

**Findings 2010-2011 - Target: Not Met**

Faculty rating of 1.75/3.0. 66% of HR students met or exceeded 2.0 on all criteria.

**M 2: HR Formulation Techniques (O: 1)**

The MBA-HRM graduate will be able to identify, evaluate, and effectively react to issues in the areas of employee relations and performance management.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: The Role of HR in Organizations**

80% of students will be rated at or above 2.0. Measurement will be done by applying Measure 2 Rubric to randomly selected exam questions in MGS 8300, 8360, and 8390. Learning Outcome 1: Understand and apply job analysis, description, evaluation, and performance appraisal. Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure 2: Accurate description and usage guides for dispute resolution and HR policy formulation techniques. Student cannot accurately describe and explain usage of dispute resolution and HR policy formulation techniques. Student can accurately describe and explain usage of dispute resolution and HR policy formulation techniques. Student can accurately and in detail describe and explain usage of dispute resolution and HR policy formulation techniques.

**Findings 2010-2011 - Target: Not Met**

Faculty rating of 1.82/3.0. 68% of MBA/HR students above 2.0 on all criteria.

**M 3: Identify and evaluate critical HR problem issues. (O: 2)**

Students can identify and evaluate critical HR problem issues.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Problem Solving**

80% of HR students will meet or exceed a 2.0 average on all criteria. Measurement will be done by applying Measure 3 Rubric to randomly selected project reports.

**Findings 2010-2011 - Target: Not Met**

54% of HR students met or exceeded 2.0 on all criteria. Faculty rating of 1.7.

**M 4: Resource Identification in HR (O: 2)**

Students can find and apply appropriate resources to address critical HR issues and solve HR problems.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Problem Solving**

80% of HR students will meet or exceed a 2.0 average on all criteria. Measurement will be done by applying Measure 4 Rubric to randomly selected project reports.

**Findings 2010-2011 - Target: Not Met**

71% of MBA/HR students met or exceeded 2.0 on all criteria.

**M 5: Links with Business Strategy (O: 3)**

Students will show the ability to select appropriate business strategies and accompanying HR strategies and policies in case analyses in MGS 8300, MGS 8390, and MGS 8395.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Links with Business Strategy**

80% of HR students will meet or exceed a 2.0 average on all criteria. Measurement will be done by applying Measure 5 Rubric to randomly selected case analyses.

**Findings 2010-2011 - Target: Not Met**

64% of MBA/HR students met or exceeded 2.0 on all criteria.
M 6: Law and Issue Identification (O: 4)
This measure will capture the students' ability to identify and address legal issues and relevant laws and policies to address legal issues in compensation, selection, and other HR areas.
Source of Evidence: Written assignment(s), usually scored by a rubric

M 7: Understanding and Interpreting case Law (O: 4)
This measure will capture the students' ability to understand and translate into appropriate HR policies case law concerning HR issues.
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O4: HR Law
80% of students will be rated at or above 2.0. Measurement will be done by applying Measure 7 Rubric to randomly selected case analyses. Learning Outcome 4: Understand the role of legal constraints on HR activities and policies. Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure 7: Understand and translate into appropriate HR policies case law concerning HR issues. Can discuss some implications of HR case law and can apply to some HR legal issues. Can discuss most implications of HR case law and can apply to most HR legal issues. Can discuss all implications of HR case law and can apply to all HR legal issues.

Findings 2010-2011 - Target: Not Met
53% of students met or exceeded 2.0 on all criteria.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Added Lecture in MGS 8300
Add an additional 30 minute lecture in MGS 8300 on business strategies and appropriate HR strategies for each. Reevaluate after next offering.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Links with Business Strategy | Outcome/Objective: Links with Business Strategy

Projected Completion Date: 12/2010
Responsible Person/Group: Lucy McClurg
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Graduation Requirement Change and Multi-Course Law Additions
Require MBA students to take MGS 8390. Add an additional 30-minute lecture in each class (MGS 8320, MGS 8360, MGS 8390). Reevaluate after next offering.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Law and Issue Identification | Outcome/Objective: HR Law

Implementation Description: Action needed through Graduate Program Council
Projected Completion Date: 12/2010
Responsible Person/Group: Lucy McClurg
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

HR Strategy and Communication
With respect to the third learning outcome, the student's ability to understand and effectively communicate how HR strategies support employer business strategies, two actions will be taken: Add a short reading about problem statement to the MGS 8300 class. Reevaluate after next offering. Spend an additional 30 minutes in MGS 8390 on business strategies and appropriate HR strategies for each. Reevaluate after next offering.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High

Projected Completion Date: 11/2009
Responsible Person/Group: HR Faculty
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Lecture Changes Integrating Law and Policy
Review in more detail written assignments in MGS 8320 and MGS 8300 concerning the linkages between HR law and policies. Discuss in class and compare student products, giving feedback and analysis. Reevaluate after next offering.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Understanding and Interpreting case Law | Outcome/Objective: HR Law

Projected Completion Date: 12/2010
Lecture Modifications on Concepts
Add a 30 minutes to the lecture on differences among, importance of, and usage of job descriptions, analysis, and performance measures. Reevaluate after next offering.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: General Understanding of HR in Organizations | Outcome/Objective: The Role of HR in Organizations

Projected Completion Date: 12/2010
Responsible Person/Group: Lucy McClurg
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Reading Changes in MGS 8360
Assign readings to MGS 8360 and require students to explain conclusions and implications in their own words. Discuss in class. Reevaluate after next offering.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Resource Identification in HR | Outcome/Objective: Problem Solving

Projected Completion Date: 12/2010
Responsible Person/Group: Lucy McClurg
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Add additional hands-on work in linking HR law and HR policies
Add homework assignments and in-class activities to MGS 8300 and MGS 8320 requiring students to link HR laws and HR policies. Spend additional time reviewing and critiquing in class. Compare student work in class, giving feedback and analysis.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Law and Issue Identification | Outcome/Objective: HR Law

Implementation Description: Instructors of MGS 8300 and MGS 8320 will write hands-on cases and activities to lead students through the process of drawing lessons from court decisions and laws to formulating HR policies as a result of those legal constraints.

Projected Completion Date: 01/2012
Responsible Person/Group: Instructors of MGS 8300 and MGS 8320.
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Add additional in-class activity on job analysis
Continue to use 30 additional minutes of class time on job analysis, job descriptions, and performance measures. Add an in-class activity in MGS 8390.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: General Understanding of HR in Organizations | Outcome/Objective: The Role of HR in Organizations

Implementation Description: Instructor will write and administer in-class activity and give feedback in class.

Projected Completion Date: 12/2012
Responsible Person/Group: Lucy McClurg
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Add additional time for strategy in MGS 8300
Add 30 minutes to the presentation in MGS 8300 devoted to linkage between corporate strategy and HR strategy.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Links with Business Strategy | Outcome/Objective: Links with Business Strategy

Implementation Description: Develop a concise lecture and handouts on corporate strategies and appropriate HR strategies for each.

Projected Completion Date: 12/2012
Responsible Person/Group: Instructor of MGS 8300
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Add homework assignment in MGS 8390 about strategy
Require a homework assignment in MGS 8390 concerning linkages between business strategies and components of compensation decision making. Spend additional class time reviewing results of assignment and critiquing student products.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
  Measure: Links with Business Strategy | Outcome/Objective: Links with Business Strategy

Projected Completion Date: 01/2012
Responsible Person/Group: Instructor of MGS 8390
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Add in-class activities on performance measures and job analysis
Add to both MGS 8360 and MGS 8390 classes in-class activities on job analysis, job descriptions, and performance measurement, and the linkages among them. Spend additional class time reviewing and critiquing.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High
Implementation Description: Instructors will write short hands-on cases to illustrate appropriate usage of job methods and performance measures.
Projected Completion Date: 05/2012
Responsible Person/Group: Instructors of MGS 8360 and MGS 8390.
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Add in-class activity and lecture
Continue to use 30 minutes of class time on differences among, importance of, and usage of job descriptions, analysis, and performance measures. Add an in-class activity in MGS 8390 with student practice on topics. Reevaluate after next offering.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: Medium
Implementation Description: Add in-class activities to supplement additional lectures on topics.
Projected Completion Date: 12/2011
Responsible Person/Group: Lucy McClurg
Additional Resources: None

Add in-class activity to MGS 8300
A short in-class activity in MGS 8300 will be designed to illustrate the linkage between case law and HR policy. Feedback for improvement will be given in class.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
  Measure: Understanding and Interpreting case Law | Outcome/Objective: HR Law

Implementation Description: A short in-class activity using a case that will then be used to have students practice writing rules and regulations.
Projected Completion Date: 12/2012
Responsible Person/Group: Instructor of MGS 8300
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Add module on HR problem solving to MGS 8300
An additional module on HR problem solving will be added to MGS 8300. Module to cover problem identification, process, and selecting viable outcomes.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
  Measure: Identify and evaluate critical HR problem issues. | Outcome/Objective: Problem Solving

Implementation Description: Combination lecture and experiential activity on HR problem solving will be designed and assigned.
Responsible Person/Group: Instructor of MGS 8300
Additional Resources: None

Additional feedback on homework re policy formulation
15 additional minutes of class time will be spent helping students edit and rewrite HR policy statements, and more detailed feedback on homework will be given.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
  Measure: HR Formulation Techniques | Outcome/Objective: The Role of HR in Organizations

Implementation Description: Students will be coached to rewrite policy statements.
Projected Completion Date: 12/2012
Responsible Person/Group: Dr. Kay Bunch
Assign readings to MGS 8360
Assign one additional set of readings to MGS 3860 concerning resource allocation in HR.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Resource Identification in HR | Outcome/Objective: Problem Solving

Implementation Description: Add readings to MGS 8360
Projected Completion Date: 12/2012
Responsible Person/Group: Instructor of MGS 8360
Additional Resources: None

Assign rewrites of 2 legal papers in MGS 8320
Students in MGS 8320 will write legal interpretations (including implications for policy). For two of those assignments, students will be required to use instructor feedback to rewrite the papers and make improvements.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Law and Issue Identification | Outcome/Objective: HR Law

Implementation Description: Assign rewrites of 2 papers in MGS 8320
Responsible Person/Group: Dr. Kay Bunch
Additional Resources: None

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We specifically tracked the effects of changing the degree requirements to force students in the MBA/HR program to take both Compensation and Selection. Specifically, we compared student progress on the rubrics pertaining to those topics from the past year to see if students were reaching more of our targets. We also met more often to make decisions about changing the amount of class time spent on various topics and activities and to review the assignments we were using in various courses. We looked at where overlap and repetition were beneficial and where they may be wasteful and made adjustments accordingly.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

We adjusted class sessions to include additional work relating to application of material and higher-level understanding of the material. We incorporated additional writing in the Law course especially to help students learn to express their ideas effectively and to give accurate information and to write persuasively. We began to think about new opportunities to include more original cases to move students toward our objectives. We began to look at assignments that would give students opportunities to learn new material in depth but also to give them some skills and ideas to use in the workplace.

Georgia State University
Assessment Data by Section
2010-2011 Concentration in Operations Management MBA
As of: 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The mission of the MBA Concentration in Operations Management is to provide students pursuing a broader MBA degree (vs. the MS in Operations Management) with a moderate level of breadth and depth of understanding with respect to the major operations management issues confronting organizations of all types today.

Goals
G 1: Most Up-to-date Courses and Materials
One goal of the MBA Concentration in Operations Management program is to offer students the most contemporary offering of any Concentration in the MBA program through continual revision and improvement of the curriculum.

G 2: Attract Higher Performing Students
One goal of the MBA Concentration in Operations Management program is to attract a disproportionate percentage of students from the upper half of the MBA program in order to facilitate better learning through increased quality of classroom discussions.
**Student Learning Outcomes/Objectives**

**SLO 1: A Strategic view of OM (G: 1, 2) (M: 1, 2, 3)**
The courses in this concentration will develop in the student a strategic view of Operations Management. That means that students will not only know the particulars of a topic in Operations Management, but will also be able to understand how that topic integrates with other perspectives in larger organizational problems. Analysis conducted and recommendations made by a student completing this concentration with respect to larger organizational problems will include Operations Management insights, frameworks, and tools, along with those from other functional disciplines, in order to formulate and implement effective strategic actions.

**Strategic Plan Associations**
2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

**SLO 2: Develop Decision Making Abilities (M: 4)**
The Student should be able to identify critical success factors of the operations management activities of an organization. This includes the ability to correctly identify, analyze and select the appropriate decision in terms of the operations management function and incorporate the operations management function into the decision process of the organization.

**SLO 3: Develop an Environmental Sustainability Viewpoint (M: 5)**
The student should become aware of the impact that OM and Supply Chain decisions have on the environment and industrial sustainability. They should be able to select the appropriate solutions to OM problems in the environmental/sustainability framework.

**Other Outcomes/Objectives**

**O/O 4: Become a Strong Team Member (M: 6)**
The students should develop and enhance their team skills in the completion of completing project work in the Operations Management area. This includes positive participation in group activities and the completion of work that is needed for the group’s progress.

**Measures, Targets, and Findings**

**M 1: Reasoned Analysis (O: 1)**
Evaluation of individual MS student's case and/or homework analyses will be completed. The individual work will be integrative in nature and will occur in the MGS 8710 course.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: A Strategic view of OM**
80% of students should pass each outcome/objective with a faculty evaluation of 2.5 on the Rubric for Measure One Learning Objective 1: Strategic View of OM. Fail Fails to meet standards=1 Meet Meets standards=2 Exceed Exceeds standards=3 Measure 1: Reasoned Analysis The student is able to complete a reasoned analysis by identifying and studying a firm's OM application both within the firm or industry. The student cannot determine the effect that firm specific dimensions have on a selected topic. The student is able to complete a reasoned analysis by identifying and studying a firm's OM application both within the firm or industry. The student can determine the effect that firm specific dimensions have on a selected topic. The student excels at determining the effect that a firm's specific dimensions have on a selected topic.

**M 2: Integration of Recommendations (O: 1)**
Students should be able to determine the effect that the OM dimensions have on a selected topic and integrate recommendations on a firm's OM applications both within the firm or industry.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: A Strategic view of OM**
80% of students should pass each outcome/objective with a faculty evaluation of 2 on the Rubric. Rubric for Measurements of Learning Outcome 1 Leaning Objective 1: Strategic View of OM Fail Fails to meet standards=1 Meet Meets standards=2 Exceed Exceeds standards=3 Measure 2 Integration of recommendations The student is not able to integrate recommendations on a firm's OM applications both within the firm or industry. The student cannot determine the effect that the OM dimensions have on a selected topic. The student is able to integrate recommendations on a firm's OM applications both within the firm or industry. The student determines the effect that the OM dimensions have on a selected topic. The student excels at integrating recommendations on a firm's OM applications both within the firm or industry. The student easily determines the effects that the OM dimensions have on a selected topic.

**M 3: Performance (O: 1)**
This item measures the students' ability to analyze or understand how the firm's operations process performance is affected by the competitive environment through their ability to identify the critical success factors of an OM application and the assessment of available resources and capabilities.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: A Strategic view of OM**
80% of students should pass each outcome/objective with a faculty evaluation of 2 on the Rubric. Rubric for Measurements of Learning Outcome 1 Leaning Objective 1: Strategic View of OM Fail Fails to meet standards=1 Meet Meets standards=2 Exceed Exceeds standards=3 Measure 3 Performance The student is not able identify critical success factors of an OM application. The students are not able to assess performance through an assessment of available resources and capabilities.
Students are not able to analyze or understand how the firm's operations process performance is affected by the competitive environment. The student is not able identify critical success factors of an OM application. The students are not able to assess performance through an assessment of available resources and capabilities. Students are not able to analyze or understand how the firm's operations process performance is affected by the competitive environment. The student excels at identifying critical success factors of an OM application. The students are able to easily assess performance through an assessment of available resources and capabilities. Students excel at analyzing or understanding how the firm's operations process performance is affected by the competitive environment.

**M 4: Critical Thinking (O: 2)**

Evaluation of individual MS student's work as completed in the required OM course. The accumulation of this type of knowledge will be received through the application of exam questions that will be measured overtime.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Develop Decision Making Abilities**

Not yet set - this is a new measure being added in this cycle.

**M 5: Environmental Impact Evaluation Skills (O: 3)**

Will develop a focus and will highlight the effects that OM decisions have on the environmental and aspects of industry.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Develop an Environmental Sustainability Viewpoint**

80% of students should pass each outcome/objective with a faculty evaluation of 2 on the Rubric. Learning Objective 3: Develop a Environmental/Sustainability Viewpoint. Fail Fails to meet standards=1 Meet Meets standards=2 Exceed Exceeds standards=3 Measure 5 Environmental Impact Evaluation The student is not able to complete and deliver a project that shows an understanding of the environment impact of OM decisions or are able to contribute their functional expertise to the solution. The student is able to complete and deliver a project that shows an understanding of the environment impact of OM decisions or are able to contribute their functional expertise to the solution. The student can be developed and deliver a project that shows an excellent understanding of the environment impact of OM or are easily able to contribute their functional expertise to the solution.

**M 6: Team Skills (O: 4)**

The students should develop and enhance their team skills in the completion of completing project work in the Operations Management area. This includes positive participation in group activities and the completion of work that is needed for the group's progress.

Source of Evidence: Student course evaluations on learning gains made

**Target for O4: Become a Strong Team Member**

80% of students should pass each outcome/objective with a faculty evaluation of 2 on the Rubric. Objective 4: Become a Strong Team Member Fail Fails to meet standards=1 Meet Meets standards=2 Exceed Exceeds standards=3 Measure 6 Team Skills The student did not develop team skills by indicated by poor returns on peer evaluations. The student develops team skills by indicated by average returns on peer evaluations. The student develops strong team skills by indicated by very positive returns on peer evaluations.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**A strategic view of OM**

With respect to the first learning outcome, to develop a strategic view of OM, two actions will be taken: · Add several readings from Business Week, New York Times or Wall Street Journal about aspects in which companies use operations management knowledge from a strategic perspective. Evaluate after next offering. · Add an in-class exercise based on a case about operations making significant difference for a company' long term shareholder value. The case can be either a Harvard case or one that is created by the OM faculty members in the department. Evaluate after next offering.

- Established in Cycle: 2008-2009
- Implementation Status: Planned
- Priority: High
- Implementation Description: The implementation will be continued to have enough results for further analysis
- Projected Completion Date: 12/2011
- Responsible Person/Group: Operations Management Faculty Members
- Additional Resources: None
- Budget Amount Requested: $0.00 (no request)

**An Environment Sustainability Viewpoint**

With respect to the third learning outcome, develop an environment/sustainability viewpoint, two actions will be taken: · Add a class project that connects OM theory and applications. Evaluate after next offering. · Add an in-class exercise to let students discuss the impact of OM and supply chain decisions on the environment and industrial sustainability. Evaluate after next offering.

- Established in Cycle: 2008-2009
- Implementation Status: Planned
- Priority: High
- Implementation Description: OM faculty will continue to implement these actions. We have seen more and more companies aware of the initiative.
- Projected Completion Date: 12/2011
- Responsible Person/Group: Operations Management Faculty Members
- Additional Resources: None
- Budget Amount Requested: $0.00 (no request)

**Decision Making Abilities**
With respect to the second learning outcome, to develop decision-making abilities, three actions will be taken:  · Require students to add more analysis in students' group project and include numbers in their report. Evaluate after next offering.  · Add an in-class exercise to let students discuss various measures in supply chain and revenue management analysis in accordance with the current globalizing business environment. Evaluate after next offering.  · Add a couple of quiz to make students to make better preparations and improve learning outcomes. Evaluate after next offering.

**Team Membership**

With respect to the fourth learning outcome, to become a strong team member, three actions will be taken:  · Incorporate lessons on effective teams into teaching material.  · Require team members in the group project to create a team charter indicating an emphasis on the importance of cooperation and fairly distributed individual contributions. Evaluate after next offering.  · Ask each team to evaluate other teams' performance to emphasize the importance of team work. Evaluate after next offering.

**Critical Thinking**

The Operations Management faculty members will develop a measurement mechanism, including targeted assignments and exams, as well as a measuring rubric, for the assessment of the use of critical thinking skills in the solving of problems in operations management.

**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

Ability to organize, developed and advanced a operations management business plan and vision using critical thinking through writing at a business level, as opposed to an academic level. With the use of a well developed rubric for the CTW course, we are able to establish viable outcomes and objectives based on the learning outcomes for the course.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

There is no class in CTW requiring the measurement of attributes involving the development of a thesis and the advancement of the thesis.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**

Our assessment regarding need for a CTW course for the concentration in Operations Management MBA program is that there is no immediate need.

**CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?**

There has been no changes to date, as there is no CTW course at present.

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The has been minor changes in the evaluation/ assessment process of Operations Management MBA regarding the project content requirements, such as, sustainability. The balance of the required and elective course requirements, i.e., two exams and multiple cases have remained unchanged. The basic outline for these courses regarding the assessment process has been deemed successful with the students.

**ACADEMIC PROGRAM QUESTION 2:**

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made
Based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

There has been no changes to the curriculum, courses or the sequencing of the courses during the past year's term.

**ADMINISTRATIVE DEPT QUESTION 1:**
Explain how your department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?

No changes of significance have been made, despite the addition of new course materials in the MGS 8710 Operations Planning and the selection of a new text.

**ADMINISTRATIVE DEPT QUESTION 2:**
What have you learned from your assessment this year (2010-2011)?

The evaluations and anecdotal comments made by students assure the Operations Management faculty that the courses are being well received and the objectives/ outcomes of the courses are practical and create value for the students.

**ADMINISTRATIVE DEPARTMENT QUESTION 3:**
What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

The OM faculty continues to review updated text that are felt to improve the learning experience for the students. This is an ongoing process. Our current syllabus consisting of two major exams covering 5 to 6 chapters each, weekly case analysis of relevant articles and cases, and a major team based operations project has been quite successful with our objectives and outcomes developed for these courses.

**Assessment Data by Section**

2010-2011 Concentration in Organization Management MBA

(As of: 12/12/2016 04:10 PM EST)

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

**Mission / Purpose**

The manager in today's business environment deals with a variety of complex concerns including structural and organizational design, people issues and managing people, power and politics, and cultural dimensions. The Master of Business Administration in Organization Management prepares managers to analyze issues, events, problems, resource constraints, and change from the vantage point of each of these concerns and to consider each as they make decisions to chart the organization's future. Organizations are composed of people, and people bring unique challenges to the workplace. These challenges include working with people as individuals, people in work groups, and people collectively in organizations.

**Goals**

**G 1: Diagnose Organizational Events and Problems**
Goal 1: To graduate students from the MBA in Organizational Management with the ability to diagnose the basic causes of organizational events, issues, and problems.

**G 2: Recommendations for Org. Events & Problems**
Goal 2: To graduate students from the MBA in Organizational Management with the ability to recommend appropriate responses to organizational events, issues, and problems.

**G 3: Understand Impact of Power & Politics**
Goal 3: To graduate students of the MBA program in Organization Management with an understanding of the impact that power, influence, and political behavior have on general organizational success and upon the success of specific initiatives in organizations.

**Student Learning Outcomes/Objectives**

**SLO 1: Analyze Organizational Situations (G: 1) (M: 1)**
Outcome/Objective 1: Analyze a variety of organizational situations and identify the causes of effective and ineffective movement toward meeting the organization's agenda. Full Description: Organizational issues, events, and problems have causes that simultaneously emanate from structural, human, political, and cultural roots. Therefore, most significant issues, events, and problems must be viewed from multiple perspectives to obtain a reasonably complete understanding. Graduate should be able to simultaneously see issues, events, and problems from multiple perspectives. Related Measures Case assignments and exam questions in MBA 8165, MGS 8435, and MGS 8440.

**Strategic Plan Associations**

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

**SLO 2: Specify Courses of Action (G: 2) (M: 2)**
Outcome/Objective 2: Review a variety of organizational events, issues, and problems and specify appropriate courses of action the organization should take as a response. Full Description: Organizational issues, events, and problems have causes that simultaneously emanate from structural, human, political, and cultural roots. Graduate should be able to simultaneously see issues, events, and problems from multiple perspectives and to formulate responses that reflect an understanding of these multiple roots. Related Measures Case assignments and exam questions in MBA 8165, MGS 8435, and MGS 8440.
### SLO 3: Analyze Political Realities (G: 3) (M: 3)

Outcome/Objective 3: Effectively analyze political realities in organizational situations. Full Description: The MBA graduate will be able to identify the effect of power and politics on resource allocations, personnel decisions, and other decisions that organizations make. Related Measures Exam questions, cases, and projects in MGS 8435.

### Measures, Targets, and Findings

#### M 1: Find Four-Perspective Causes of Events /Problems (O: 1)

M1: Students can examine organizational events, issues, and problems and identify structural, human, political, and cultural elements in the cause of situation.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Analyze Organizational Situations**

A 2.0 average on all criteria. Measurement will be done by applying the Measure 1 Rubric to randomly selected case assignment and exam questions.

#### M 2: Recommend Responses Incorporating Four-Perspective Analysis (O: 2)

M2: Students can recommend organizational responses to problems that are cognizant of structural, human, political, and cultural dimensions to the situation.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Specify Courses of Action**

A 2.0 average on all criteria. Measurement will be done by applying the Measure 2 Rubric to randomly selected case assignments and exam questions.

#### M 3: Identify Political Dimensions of Decisions (O: 3)

M3: Students can identify political dimensions of organizational decisions.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Analyze Political Realities**

A 2.0 average on all criteria. Measurement will be done by applying Measure 3 Rubric to randomly selected exams, cases, and projects.

**Findings 2010-2011 - Target: Not Met**

These findings come from MGS 8435. This course is currently taught once per year in May Session. From May Session 2011: There were 5 students in the course from this MBA concentration. Findings are as follows:

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Ability to Demonstrate Critical Thinking

With regard to learning outcome three, the ability to demonstrate critical thinking skills related to managing organizations, the following actions will be taken:

- Students will be asked about specific courses where critical thinking was required.
- Faculty will be asked about specific courses where they require critical thinking.
- These data will be analyzed and mapped with recommendations for future action.

Established in Cycle: 2008-2009  
Implementation Status: Finished  
Priority: High  
Projected Completion Date: 11/2009  
Responsible Person/Group: OB Faculty members  
Additional Resources: None  
Budget Amount Requested: $0.00 (no request)

#### Oral Communications

With regard to learning outcome four, the ability to orally present material related to managing organizations, the following actions will be taken:

- Students will be asked about specific courses where oral presentations were required.
- Faculty will be asked about specific courses where they require oral presentations.
- These data will be analyzed and mapped with recommendations for future action.

Established in Cycle: 2008-2009  
Implementation Status: Finished  
Priority: High  
Projected Completion Date: 11/2009  
Responsible Person/Group: OB Faculty members  
Additional Resources: None  
Budget Amount Requested: $0.00 (no request)

#### Work in Teams

With respect to learning outcome two, students will be offered a wide variety of classes that enhance their managerial skills by asking them to work in teams, complete case analyses, and make oral presentations, the following action items will be taken: A survey will be conducted of the current MBA OM students that will address the prevalence of team assignments, case analyses, and oral presentations. Data from this survey will be analyzed and shared with relevant administrators with an eye towards increasing these types of activities in OM classes.
Georgia State University
Assessment Data by Section
2010-2011 Concentration in Real Estate MBA
As of 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Student Learning Outcomes/Objectives

SLO 1: Apply theoretical principles and skills to the analysis and solution of a range of real estate problems (M: 1)
Apply theoretical principles and skills to the analysis and solution of a range of real estate problems

Strategic Plan Associations
2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

SLO 2: Understand how real estate can contribute to achieving the overall goals of the firm (M: 2, 3, 4)
Understand how real estate can contribute to achieving the overall goals of the firm

Measures, Targets, and Findings

M 1: Evaluate corporate real estate organizational and operational structures using material from both real estate & MBA core classes (O: 1)
Evaluate corporate real estate organizational and operational structures using material from both real estate and MBA core classes. Criterion: Identify key criteria and evaluate alternative structures. (RE8100)
Source of Evidence: Writing exam to assure certain proficiency level

Target for O1: Apply theoretical principles and skills to the analysis and solution of a range of real estate problems
2.0

Findings 2010-2011 - Target: Met
Average on Criteria: 2.20 100% students met standard.

M 2: Understand real estate as a contributor to achieving human resources goals (O: 2)
Understand real estate as a contributor to achieving human resources goals Criterion 1: Understand the process for estimating workplace demand. (RE8100) Criterion 2: Understand the changing intersection of workers, space, and technology in designing workplaces.(RE8100)
Source of Evidence: Writing exam to assure certain proficiency level

Target for O2: Understand how real estate can contribute to achieving the overall goals of the firm
2.0

Findings 2010-2011 - Target: Partially Met
Average on Criteria 1: 1.80. 40% students met standard. Average on Criteria 2: 2.80. 100% students met standard.

M 3: Evaluate corporate real estate strategies in relation to core business strategies (O: 2)
Evaluate corporate real estate strategies in relation to core business strategies using material from both real estate and MBA core classes. Criterion: Identify key criteria and evaluate alternative real estate strategies to support common business strategies (RE 8100)
Source of Evidence: Writing exam to assure certain proficiency level

Target for O2: Understand how real estate can contribute to achieving the overall goals of the firm
2.0

Findings 2010-2011 - Target: Met
Average on Criteria: 2.00. 80% students met standard.
**M 4: Evaluate alternative locations and sites (O: 2)**

Evaluate alternative locations and sites Criterion: Identify key criteria and evaluate alternative locations and sites to support core business strategies.

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O2: Understand how real estate can contribute to achieving the overall goals of the firm**

2.0

**Findings 2010-2011 - Target: Met**

Average on Criteria: 2.20. 100% students met standard.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**New Action Plan**

Review achievement targets. At present target is expressed as an average. The Department will review whether this should be modified to encompass a minimum percentage of students attaining target. Although the average target is met on all measures, a not insignificant percentage of students fail to meet the target on some measures. This is considered due to student weakness in readings to support their understanding of organizational structure and general strategic management. Attempts will therefore be made to identify which courses (outside of Real Estate) best prepare students in these areas and to refer students to the materials in those courses.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High
- **Projected Completion Date:** 05/2011

**Review assessment task for O2.M2.C1**

Review assessment task for O2.M2.C1

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** Medium

**Relationships (Measure | Outcome/Objective):**

- **Measure:** Understand real estate as a contributor to achieving human resources goals
- **Outcome/Objective:** Understand how real estate can contribute to achieving the overall goals of the firm

- **Projected Completion Date:** 05/2012
- **Responsible Person/Group:** Course Instructor

**Georgia State University**

**Assessment Data by Section**

**2010-2011 Counseling Psychology PhD**

As of: 12/12/2016 04:10 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

**Mission / Purpose**

The Counseling Psychology PhD Program, a unit of the Department of Counseling and Psychological Services, subscribes to a scientist-practitioner model designed to integrate science with practice and advocacy. Students are prepared to generate and apply psychological knowledge to human development, adaptation, and adjustment issues.

**Goals**

**G 1: Clinical Competence**

Develop Competence in understanding and applying theoretical knowledge in ethical practice, sensitive to multicultural issues.

**G 2: Research Competence**

Develop competence in understanding and applying research methods.

**Student Learning Outcomes/Objectives**

**SLO 1: Effectiveness with diverse groups of clients (M: 1, 2)**

Prepared to work with clients who are culturally and individually different.

- **Relevant Associations:** American Psychological Association Accreditation Domain D.

**SLO 2: Knowledgeable about the tenets of ethical practice (M: 3, 4, 5)**

Knowledgeable about the tenets of ethical practice

**Strategic Plan Associations**

- **2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).**
Knowledgeable about the tenets of ethical practice

Relevant Associations: American Psychological Association Accreditation Domain B

**SLO 3: Is proficient in key areas of the profession (M: 6, 7)**

Proficiency in psycho-educational interventions, diagnosis, prevention, remedial interventions, psychotherapy, consultation, and supervision.

Relevant Associations: American Psychological Association Accreditation Domain B

**SLO 4: Understands relevant theories (M: 8, 9)**

Understand theories of human development, psychopathology, counseling process, and behavior change.

Relevant Associations: American Psychological Association Accreditation Domain B

**SLO 5: Use and conduct research (M: 10)**

Use and conduct research

Relevant Associations: American Psychological Association Accreditation Domain B

---

**Measures, Targets, and Findings**

**M 1: Evaluation by practicum supervisor (O: 1)**

Evaluation by practicum supervisor. Supervisors complete formal written evaluations of students using quantitative and qualitative items. On a 5-point scale, students must score a 3 or above on all items to be satisfactory.

Source of Evidence: Field work, internship, or teaching evaluation

**Target for O1: Effectiveness with diverse groups of clients**

90% of students meet evaluation target

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Comprehensive Examination Orientation**

Present an orientation the the comprehensive examination to enhance students' preparation for the theories portion of the comprehensive examination.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Comprehensive examination question on theory
  - **Outcome/Objective:** Understands relevant theories
- **Projected Completion Date:** 05/2011
- **Responsible Person/Group:** Program Director
Comprehensive Examination Orientation
To offer an orientation to the comprehensive examination process so that students can focus their preparation for the examination more effectively.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
  Measure: Comprehensive examination question on ethics | Outcome/Objective: Knowledgeable about the tenets of ethical practice

Projected Completion Date: 07/2009
Responsible Person/Group: Director of the program

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
Met target goals. Students successfully secured Accredited internship sites.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
Practicum supervisor evaluations of students in later practica reflect increased critical thinking over the evaluations given earlier in students’ programs.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
Continued evaluation of course content and assignments to ensure greatest impact.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?
Increased faculty discussion and consideration of program emphases in this area.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
No changes made this year. Program faculty have plans to reconsider comprehensive examination structure.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.
Data suggest that objectives are being met. We did adjust the curriculum by eliminating one course that, based on student feedback and a change in the course content, appeared to no longer be contributing to the mission of the program.

ADMINISTRATIVE DEPT QUESTION 1:
Explain how your department used the results from last year’s (2009-2010) assessment. What actions did you take? What changes did you make as a result?
Results from last year’s assessment indicated that all objectives were met. We added a more regular review of students’ progress through the program.

ADMINISTRATIVE DEPT QUESTION 2:
What have you learned from your assessment this year (2010-2011)?
Students successfully met objectives.

ADMINISTRATIVE DEPARTMENT QUESTION 3:
What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?
Review of research coursework and sequences of qualitative and quantitative research methods.

Georgia State University
Assessment Data by Section
2010-2011 Counselor Education PhD
As of 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The Counselor Education and Practice Ph. D. program is designed to prepare students to work as counselor educators, supervisors, and advanced practitioners in academic, public schools, and clinical settings. The program accepts as a primary obligation extending
the knowledge base of the counseling profession in a climate of scholarly inquiry. The doctoral program subscribes to a scientist-practitioner model and as such is designed to prepare students to be both consumer and producer of research.

**Goals**

**G 1: Teaching**
Students will gain knowledge and skills in teaching at the university level.

**G 2: Research**
Students will become proficient in critiquing and conducting research related to the counseling profession.

**G 3: Clinical Skills**
Students will enhance their clinical skills.

**G 4: Supervision**
Students will gain knowledge and develop skills in the area of counseling supervision.

**Student Learning Outcomes/Objectives**

**SLO 1: Teaching (M: 1, 2, 3)**
1. Students will demonstrate the ability to develop course syllabi. 2. Students will demonstrate the ability to prepare for class. 3. Students will demonstrate the ability to effectively teach a course.

**SLO 2: Research (M: 4, 5)**
1. Students will demonstrate the ability to critique a research manuscript. 2. Students will demonstrate the ability to design and implement a research project.

**SLO 3: Clinical Skills (M: 6)**
1. Students will demonstrate knowledge of counseling theory and concepts. 2. Students will demonstrate professional and ethical behavior in clinical practice. 3. Students will demonstrate knowledge, skills, and attitudes appropriate for working in diverse settings with clients from various cultural backgrounds. 4. Students will understand the role of social advocacy in the treatment of clients.

**SLO 4: Supervision (M: 7)**
1. Students will demonstrate knowledge of supervision and counseling theories and concepts. 2. Students will demonstrate professional and ethical behavior in the practice of clinical supervision. 3. Students will demonstrate knowledge, skills, and attitudes appropriate for working in diverse settings with supervisees from various cultural backgrounds.

**Measures, Targets, and Findings**

**M 1: Teaching (O: 1)**
Students will receive a passing on the teaching section of their professional portfolio which is one of the assignments in their CPS 9963 course. In order to pass the teaching section of the portfolio, the students must submit a copy of a sample course syllabi that they developed for a course they have taught or are currently teaching. The syllabi will be assessed based on the following criteria: 1) does the syllabi clearly state the purpose of the course; 2) does the syllabi contact the mission of the CPS program; 3) does the syllabi contact criteria for evaluation; and 4) does the syllabi contact a tentative outline of the course.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O1: Teaching**
Target is passing the teaching section of the portfolio. Students must receive 2 out of 3 points.

**Findings 2010-2011 - Target: Met**
There were nine students enrolled in CPS 9963. Three were not assessed for this section because they were not engaged in the teaching internship or working as a teaching assistant. Of the six (6) that were assessed, all six received a 2 out of 3 points.

**M 2: Teaching (O: 1)**
On question 5 (the instructor was well prepared) of the teaching evaluation form, students will receive at least a 3 (5 point scale; 1 is low and 5 is the highest) with 80% receiving a 4 or 5.

Source of Evidence: Student course evaluations on learning gains made

**Target for O1: Teaching**
On question 5 of the Teaching Evaluation Form, students will receive at least a 3 (5 point scale; 1 is the lowest and 5 is the highest) with 80% receiving a 4 or 5.

**Findings 2010-2011 - Target: Met**
100% of the students received at least a 3 point on question 5 of the teaching evaluation form. The average for this question was 4.8 points.
### M 3: Teaching (O: 1)
On the teaching effectiveness question of the teaching evaluation form (please note depending on the version this question is either 13 or 17), students will receive at least a 3 (5 point scale; 1 is low and 5 is the highest) with 80% receiving a 4 or 5.

Source of Evidence: Student course evaluations on learning gains made

</tbody>
</table>

**Findings 2010-2011 - Target: Met**
1. Supervision theory: All students received at least a 3 out of 5 points with an average of 4.0 2. Diversity: All students received at least a 3 out of 5 points with an average of 4.0 3. Ethics: All students received at least a 3 out of 5 points with an average of 4.0

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Teaching-Portfolios
Continue to monitor the portfolios in CPS 9963.
Established in Cycle: 2008-2009  
Implementation Status: Terminated  
Priority: High  
Relationships (Measure | Outcome/Objective):  
Measure: Teaching | Outcome/Objective: Teaching

**Clinical practice**  
to reevaluate the supervision evaluation form.  

Established in Cycle: 2010-2011  
Implementation Status: Planned  
Priority: High  
Relationships (Measure | Outcome/Objective):  
Measure: Clinical Skills | Outcome/Objective: Clinical Skills  
Implementation Description: The supervision evaluation form used in practicum and internship will be reevaluated.  
Projected Completion Date: 12/2012  
Responsible Person/Group: CEP program coordinator  
Additional Resources: none  
Budget Amount Requested: $0.00 (no request)

**Supervision**  
Continue to monitor the SIT evaluation forms.  

Established in Cycle: 2010-2011  
Implementation Status: Planned  
Priority: High  
Relationships (Measure | Outcome/Objective):  
Measure: Supervision | Outcome/Objective: Supervision  
Implementation Description: The SIT evaluation form will be reassessed.  
Projected Completion Date: 12/2012  
Responsible Person/Group: CEP program coordinator  
Additional Resources: none  
Budget Amount Requested: $0.00 (no request)

**Teaching-goals/objectives**  
Reevaluate the items in the teaching portfolio.  

Established in Cycle: 2010-2011  
Implementation Status: Planned  
Priority: High  
Relationships (Measure | Outcome/Objective):  
Measure: Teaching | Outcome/Objective: Teaching  
Implementation Description: The teaching portfolios will be reassessed to determine if the required elements are appropriate.  
Projected Completion Date: 12/2012  
Responsible Person/Group: CEP program coordinator  
Additional Resources: none  
Budget Amount Requested: $0.00 (no request)

**Teaching-preparedness**  
Reevaluate the teaching evaluation rubric.  

Established in Cycle: 2010-2011  
Implementation Status: Planned  
Priority: High  
Relationships (Measure | Outcome/Objective):  
Measure: Teaching | Outcome/Objective: Teaching  
Implementation Description: The teaching evaluation rubric will be reassessed.  
Projected Completion Date: 12/2012  
Responsible Person/Group: CEP program coordinator  
Additional Resources: none  
Budget Amount Requested: $0.00 (no request)

**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements** - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

This year the program revamped our evaluation system to be consistent with our accreditation body (CACREP). This is relates to our action plans because the new system allows us to monitor student progress more closely.

**CTW Reflection 2: Assessment** - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

We are better able to evaluate and assess student critical thinking since we are now collecting artifacts from their courses.

**CTW Reflection 3: Needs** - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

none at this time.
CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

Since the last report, our faculty have updated the way we collect assessment information.

**ACADEMIC PROGRAM QUESTION 1:**
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We have changed the way we gather assessment information. Most of the assessment information have been incorporated into the doctoral competency portfolio. Our learning outcomes have remained the same since they are a part of our accreditation requirement.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will you make in the coming academic year? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

We have made changes to curriculum this year (to be effective next year) as a result of program requirements by the College of Education. The core of our program of study however remains the same and is a part of our required accreditation standards.

**ADMINISTRATIVE DEPT QUESTION 1:**
Explain how your department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?

Our department consolidates the data and publishes the results on our website and to our alumni and community advisory committee. Changes to the curriculum and assessment procedures were made so that we were consistent with our accreditation standards.

**ADMINISTRATIVE DEPT QUESTION 2:**
What have you learned from your assessment this year (2010-2011)?

The new assessment procedure established this year appears to be a good way to collect student outcome information.

**ADMINISTRATIVE DEPARTMENT QUESTION 3:**
What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

I will be more intentional about collecting data and re-evaluate at the end of each semester instead of the academic year. I anticipate this will assist with the final report writing.

---

**Assessment Data by Section**

2010-2011 Criminal Justice Assessment of Core

(As of: 12/12/2016 04:10 PM EST)

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

**Mission / Purpose**

The Department of Criminal Justice emphasizes issues of crime and justice occuring in urban environments from a multicultural, interdisciplinary perspective to inform science, policy, and practice. The mission of the Department is to produce students who are critical and ethical thinkers, knowledgeable about the issues of crime and justice, and prepared for criminal justice leadership positions in public and private agencies. This report provides an assessment of student learning for the 2010-2011 academic year.

**Goals**

G 1: Students will demonstrate critical thinking (BORIII)

Students will develop, enhance, and demonstrate critical thinking skills in the context of contemporary issues in crime and criminal justice.

**Student Learning Outcomes/Objectives**

SLO 1: Analyze Contemporary Crime/Criminal Justice Issues (G: 1) (M: 1)

Students will effectively analyze a wide range of contemporary crime and justice issues to which they are exposed using a social science perspective

**General Education/Core Curriculum Associations**

6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

**Standard Associations**

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**

1.5 Other efforts in support of Goal 1 (Undergraduate Education).
General Education/Core Curriculum Associations

6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 3: Analyze Contemporary Global & International Issues (G: 1) (M: 1)

Students will effectively analyze contemporary global and international crime and criminal justice issues, including comparing crime rates in a number of countries (such as Europe, the Middle East, Asia, Japan, and America).

General Education/Core Curriculum Associations

6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

8.0 Students demonstrate understanding of political, social, economic, and/or institutional developments across the globe.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Measures, Targets, and Findings

M 1: Embedded examination questions (O: 1, 2, 3)

Multiple sections (n=5) of CRJU 2200 were offered during both the Fall, 2010 (n=3) and Spring (n=2011) semesters. Four of the five sections used objective examinations throughout the term; the fifth section was an honors section and utilized essay exams. The examinations in the non-honors course sections each covered approximately one-third (1/3) of the course, for a total of three exams in each of these sections. Two objective questions per objective were embedded on each of the three exams in each of the non-honors sections taught. All students in these sections were required to answer each assessment question. Instructors had the discretion of what questions to include; some of the questions included were similar across sections, other questions differed. This year's assessment focuses on the core course offerings in the non-honors sections of CRJU 2200.

Source of Evidence: Standardized test of subject matter knowledge

Target for O1: Analyze Contemporary Crime/Criminal Justice Issues

Each instructor included two questions assessing students' knowledge of contemporary crime/criminal justice issues on one exam in each section taught. The target achievement goal was an 80% pass rate for each question. The questions by instructor are provided in the attached document entitled Assessment Measures by Instructor by Semester_2010_2011.

Findings 2010-2011 - Target: Partially Met

A total of 308 students (N=119 for Instructor A; and N=189 for Instructor B) were enrolled in the four CrJu 2200 sections assessed during the evaluation period. The percentages of students correctly answering the embedded examination questions for across by instructor and section are reported below. Instructor A (same questions across semesters): Q1 Pass Rate – Fall: 82%; Q1 Pass Rate – Spring: 91%. (Overall: Met target) Q2 Pass Rate – Fall: 93%; Q2 Pass Rate – Spring: 50%. (Overall: Partially met target) Overall Target: Partially met. Instructor B (some questions differed across semesters; these are noted by different labels): Q1 Pass Rate – Fall: 75%; Q1 Pass Rate – Spring: 82%. (Overall: Partially met target) Q2a Pass Rate – Fall: 67%; Q2b Pass Rate – Spring: 86%. (Overall: Partially met target) Overall Target: Partially met.

Target for O2: Analyze Contemporary Multicultural Issues

Each instructor included two questions assessing students' knowledge of contemporary multicultural issues on an exam in each section taught. The target achievement goal was an 80% pass rate for each question. The questions by instructor are provided in the attached document entitled Assessment Measures by Instructor by Semester_2010_2011.

Findings 2010-2011 - Target: Met

A total of 308 students (N=119 for Instructor A; and N=189 for Instructor B) were enrolled in the four CrJu 2200 sections assessed during the evaluation period. The percentages of students correctly answering the embedded examination questions for across by instructor and section are reported below. Instructor A (same questions across semesters): Q1 Pass Rate – Fall: 95%; Q1 Pass Rate – Spring: 70%. (Overall: Met target) Q2 Pass Rate – Fall: 97%; Q2 Pass Rate – Spring: 100%. (Overall: Met target) Overall Target: Partially met. Instructor B (some questions differed across semesters): Q1 Pass Rate – Fall: 98%; Q1 Pass Rate – Spring: 97%. (Overall: Met target) Q2a Pass Rate – Fall: 91%; Q2b Pass Rate – Spring: 97%. (Overall: Met target) Overall Target: Met.

Target for O3: Analyze Contemporary Global & International Issues

Each instructor included two questions assessing students' knowledge of contemporary global and international issues on an exam in each section taught. The target achievement goal was an 80% pass rate for each question. The questions by instructor are provided in the attached document entitled Assessment Measures by Instructor by Semester_2010_2011.

Findings 2010-2011 - Target: Met

A total of 308 students (N=119 for Instructor A; and N=189 for Instructor B) were enrolled in the four CrJu 2200 sections assessed during the evaluation period. The percentages of students correctly answering the embedded examination questions for across by instructor and section are reported below. Instructor A (same questions across semesters): Q1 Pass Rate – Fall: 97%; Q1 Pass Rate – Spring: 89%. (Overall: Met target) Q2 Pass Rate – Fall: 100%; Q2 Pass Rate – Spring: 94%. (Overall: Met target) Overall Target: Met. Instructor B (some questions differed across semesters): Q1 Pass Rate – Fall:
Details of Action Plans for This Cycle (by Established cycle, then alpha)

Review of course content and assessment measures
See plan for contemporary criminal justice issues.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: Low
Relationships (Measure | Outcome/Objective):

| Measure: Embedded examination questions | Outcome/Objective: Analyze Contemporary Multicultural Issues |

Projected Completion Date: 08/2009
Responsible Person/Group: Undergraduate Committee and Cr.Ju 2200 teaching faculty

Budget Amount Requested: $0.00 (no request)

Review new core and course requirements
Review course learning outcomes and measure to ensure that new core outcome is appropriately reflected and assessed and to streamline reporting in the coming year.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Relationships (Measure | Outcome/Objective):

| Measure: Embedded examination questions | Outcome/Objective: Analyze Contemporary Global & International Issues |

Projected Completion Date: 11/2010
Responsible Person/Group: instructors and undergraduate committee

Review new core and course requirements
Review course learning outcomes and measure to ensure that new core outcome is appropriately reflected and assessed and to streamline reporting in the coming year.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):

| Measure: Embedded examination questions | Outcome/Objective: Analyze Contemporary Multicultural Issues |

Projected Completion Date: 11/2010
Responsible Person/Group: instructors and undergraduate committee

Training on assessment for PhD Instructors
With implementation of Ph.D. Program the department has added a number of Teaching Assistants and as a part of this implementation, the department has developed a teaching seminar. As part of this seminar, students will be subjected to assessment issues and questions as a part of this conference. With this implementation, a section of the seminar will be consistently oriented to
ensure that curriculum of the department and assessment issues are considered in course development. As well, required data collection elements will be discussed and collected as a part of this course.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High
Implementation Description: On-going
Responsible Person/Group: Brenda Blackwell

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Because the department recently initiated a Ph.D. program with the inclusion of a number of T.A. positions, a number of which will be involved in teaching CRJU 2200, the department will focus in the coming year on ensuring that all instructors, particularly new instructors, have a clear understanding about the importance of considering learning outcomes and assessment in the building and delivery of their courses. As part of this process, review of the items used for assessment and discussion of delivery to enhance learning outcomes will be discussed.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Currently no degree program changes, with a specific focus on CRJU 2200 are planned in the coming year as a result of assessment.

Georgia State University
Assessment Data by Section
2010-2011 Criminal Justice BS
As of: 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The Department of Criminal Justice emphasizes the development of understanding about issues of crime and justice, particularly within urban environments using multicultural, interdisciplinary perspectives that inform science, policy, and practice. The educational mission of the Department of Criminal Justice is to disseminate knowledge and encourage critical analysis of information that is theoretically driven and policy relevant within the fields of criminal justice and criminology. We aim to produce students who are critical and ethical thinkers, knowledgeable about the issues of crime and justice, and prepared for criminal justice positions in public and private agencies through education, training and research experiences.

Goals
G 1: Demonstrate understanding of the justice system
Students will develop knowledge about the functions and structures of the criminal justice system and issues related to crime and justice responses.

G 2: Develop/enhance critical thinking skills
Students will develop and enhance critical thinking skills, specifically concerning crime and justice issues.

G 4: Develop/Enhance Written Communication Skills
Students will develop and/or enhance their written communication skills, with a specific focus on communication about issues of crime and justice, necessary to excel in public and private sector criminal justice positions.

G 3: Apply ethical frameworks
Students will develop knowledge about and learn to utilize ethical frameworks when considering issues in criminal justice decision-making.

G 5: Develop/enhance oral communication skills
Students will develop and enhance their oral communication skills, with a specific focus on their ability to orally communicate about issues in crime and justice, in order to excel in in professional positions.

Student Learning Outcomes/Objectives
SLO 1: Identify and state topical issues or hypotheses (G: 2, 4) (M: 1, 3)
Students will demonstrate their ability to generate a thesis/hypothesis/statement of the problem in the generation of a critical analysis paper on a salient issue in the field of criminal justice.

Strategic Plan Associations
1.5 Other efforts in support of Goal 1 (Undergraduate Education).
SLO 2: Demonstrate knowledge and ability to synthesize information (G: 1, 2, 4) (M: 1)
Students will demonstrate their retention of knowledge about the criminal justice system and salient topical issues in the field in written form. Students will effectively communicate facts about an issue and apply theoretical frameworks to demonstrate the depth of both their knowledge and their ability to critically synthesize relevant information about that specific topic in this paper.

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 3: Application and analysis (G: 1, 2, 4) (M: 1, 2, 3)
Students will develop and/or enhance skills in applying theoretical frameworks to contemporary issues in criminal justice. Students will be able to not only synthesize and interpret extant information, but also identify patterns within extant information, be able to compare and contrast different sides of a problem, and/or generate new predictions through their presentation in a written form.

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 4: Generation of conclusions (G: 1, 2, 4) (M: 1, 3)
Students will be able to develop meaningful conclusions from literature reviews and/or data analyses and/or be able to identify policy implication given the evidence available.

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 5: Written communication skills (G: 4, 5) (M: 1, 3)
Students will be able to effectively communicate their knowledge and analytical skills in written form (paper). Students will demonstrate the ability to effectively identify issues, develop and organize subtopics, and generate streamlined presentations of information. In addition, students will utilize appropriate grammar and syntax, as well as the ability to adhere to APA style guidelines.

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 6: Oral communication skills (G: 4, 5) (M: 2)
Students will demonstrate the ability to communicate effectively through oral presentations about criminal justice issues and processes using the spoken word. Students should be able to orally develop and present material that is organized, flows smoothly, and is engaging in a manner that is smooth and uses good grammar.

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 7: Identification of ethical frameworks (G: 1, 2, 3, 4) (M: 3)
Students should be able to identify and evaluate ethical issues that arise within the criminal justice system.

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Measures, Targets, and Findings

M 1: Capstone Seminar: Analysis of Criminological/Criminal Justice (CJ) Issue Essay (O: 1, 2, 3, 4, 5)
CRJU 4930: Seminar in Criminal Justice is a key assessment course for the department. It is a capstone and the second of a two bookend courses designated as CTW. The CTW assignment, referenced as the Analysis of Criminological/Criminal Justice (CJ) Issue Essay, is designed to test student's ability to critically evaluate an issue in criminology or criminal justice. The assignment, included as an attached document, requires students to identify a single issue from the internship experience, identify a relevant theory (criminological, sociological, psychological, organizational, or legal) that can be utilized to enhance understanding of the issue, and prepare a position paper that addresses policy implications and recommendations. The assessment rubric is attached, and includes the different sections for the separate learning outcomes.

Source of Evidence: Capstone course assignments measuring mastery

Target for O1: Identify and state topical issues or hypotheses
Our goal is that 80% of student papers will be rated as a 4, 3, or 2 in their ability to identify and state topic issues/hypotheses at the end of the senior seminar. In addition, we aim for 50% of students to be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4.

Findings 2010-2011 - Target: Met
A total of four sections of CRJU 4930: Capstone Seminar were offered during the Fall 2010 and Spring 2011 semesters. Assessment data reported here include three of these four sections; the fourth section was taught in the Fall 2010 semester by an adjunct from whom assessment data were unavailable. Findings reported here thus are based on one section of the capstone offered in the fall, Section A (n=28) and two sections, Section B (n=32) and Section C (n=30) offered in the spring, for a total N of 90 students. Rubric scores on the final draft of the essay yielded an overall average score of 3 on the 1-4 scale. Specific sections yielded the following outcomes: Section A average = 2.5; Section B average = 3.8; and Section C average = 2.6. Overall, 44% of students’ paper were rated as a 4, 26% were rated as a 3, 11% as a 2, and 19% as a 1. Students submitted multiple drafts of the paper, and rubric scores over time indicated that 54% of the students improved in...
their performance on this outcome or remained at the highest score. Meanwhile, 12% decreased and 34% demonstrated no improvement where it was possible.

Target for O2: Demonstrate knowledge and ability to synthesize information

Our goal is that 80% of student papers will be rated as a 4, 3, or 2 in their ability to identify and state topic issues/hypotheses at the end of the senior seminar. In addition, we aim for 50% of students to be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4.

Findings 2010-2011 - Target: Met

A total of four sections of CRJU 4930: Capstone Seminar were offered during the Fall 2010 and Spring 2011 semesters. Assessment data reported here include three of these four sections; the fourth section was taught in the Fall 2010 semester by an adjunct from whom assessment data were unavailable. Findings reported here thus are based on one section of the capstone offered in the fall, Section A (n=28) and two sections, Section B (n=32) and Section C (n=30) offered in the spring, for a total N of 90 students.Rubric scores on the final draft of the essay yielded an overall average score of 2.7 on the 1-4 scale. Specific sections yielded the following outcomes: Section A average = 2.4; Section B average = 3.3 and Section C average = 2.3). Overall, 27% were rated as a 4, 29 % were rated as a 3, 30% as a 2, and 14% as a 1. Students submitted multiple drafts of the paper, and rubric scores over time indicated that 48% of the students improved in their performance on this outcome or remained at the highest score. Meanwhile, 40% demonstrated no improvement where improvement was possible and 12% decreased. Collectively these enrollees met our goals; 86% scored 2-4, 66% scored 3-4, and 27% scored a 4).

Target for O3: Application and analysis

Our goal is that 80% of student papers will be rated as a 4, 3, or 2 in their ability to identify and state topic issues/hypotheses at the end of the senior seminar. In addition, we aim for 50% of students to be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4.

Findings 2010-2011 - Target: Met

A total of four sections of CRJU 4930: Capstone Seminar were offered during the Fall 2010 and Spring 2011 semesters. Assessment data reported here include three of these four sections; the fourth section was taught in the Fall 2010 semester by an adjunct from whom assessment data were unavailable. Findings reported here thus are based on one section of the capstone offered in the fall, Section A (n=28) and two sections, Section B (n=32) and Section C (n=30) offered in the spring, for a total N of 90 students. Rubric scores on the final draft of the essay yielded an overall average score of 2.7 on the 1-4 scale. Specific sections yielded the following outcomes: Section A average = 2.4; Section B average = 3.3 and Section C average = 2.3). Overall, 31% were rated as a 4, 27 % were rated as a 3, 27% as a 2, and 15% as a 1. Students submitted multiple drafts of the paper, and rubric scores over time indicated that 47% of the students improved in their performance on this outcome or remained at the highest score. Meanwhile, 42% demonstrated no improvement where improvement was possible and 11% decreased. Collectively these enrollees met our goals; 85% scored 2-4, 58% scored 3-4, and 31% scored a 4).

Target for O4: Generation of conclusions

Our goal is that 80% of student papers will be rated as a 4, 3, or 2 in their ability to identify and state topic issues/hypotheses at the end of the senior seminar. In addition, we aim for 50% of students to be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4.

Findings 2010-2011 - Target: Met

A total of four sections of CRJU 4930: Capstone Seminar were offered during the Fall 2010 and Spring 2011 semesters. Assessment data reported here include three of these four sections; the fourth section was taught in the Fall 2010 semester by an adjunct from whom assessment data were unavailable. Findings reported here thus are based on one section of the capstone offered in the fall, Section A (n=28) and two sections, Section B (n=32) and Section C (n=30) offered in the spring, for a total N of 90 students. Rubric scores on the final draft of the essay yielded an overall average score of 2.7 on the 1-4 scale. Specific sections yielded the following outcomes: Section A average = 2.4; Section B average = 3.3 and Section C average = 2.4). Overall, 30% were rated as a 4, 28 % were rated as a 3, 26% as a 2, and 16% as a 1. Students submitted multiple drafts of the paper, and rubric scores over time indicated that 57% of the students improved in their performance on this outcome or remained at the highest score. Meanwhile, 34% demonstrated no improvement where improvement was possible and 9% decreased. Collectively these enrollees met our goals; 86% scored 2-4, 58% scored 3-4, and 30% scored a 4).

Target for O5: Written communication skills

80% of student papers will be rated as a 2, 3, of 4 on an assessment rubric at the end of the senior seminar. Please see attached rubric for achievement meanings associated with each category.

Findings 2010-2011 - Target: Met

A total of four sections of CRJU 4930: Capstone Seminar were offered during the Fall 2010 and Spring 2011 semesters. Assessment data reported here include three of these four sections; the fourth section was taught in the Fall 2010 semester by an adjunct from whom assessment data were unavailable. Findings reported here thus are based on one section of the capstone offered in the fall, Section A (n=28) and two sections, Section B (n=32) and Section C (n=30) offered in the spring, for a total N of 90 students. Rubric scores on the final draft of the essay yielded an overall average score of 3.2 on the 1-4 scale. Specific sections yielded the following outcomes: Section A average = 3.1; Section B average = 3.9, and Section C average = 2.6). Overall, 50% were rated as a 4, 21 % were rated as a 3, 24% as a 2, and 5% as a 1. Students submitted multiple drafts of the paper, and rubric scores over time indicated that 62% of the students improved in their performance on this outcome or remained at the highest score. Meanwhile, 32% demonstrated no improvement where improvement was possible and 6% decreased. Collectively these enrollees met our goals; 95% scored 2-4, 71% scored 3-4, and 50% scored a 4).
provide an oral presentation, utilizing PowerPoint based on their Analysis of Criminological/Criminal Justice (CJ) Issue Essay, which evaluates an issue in criminology or criminal justice. The assignment, included in the syllabus, requires students to identify a single issue from the internship experience, identify a relevant theory (criminological, sociological, psychological, organizational, or legal) that can be utilized to enhance understanding of the issue, and prepare a presentation based on their position paper that addresses policy implications and recommendations.

Source of Evidence: Presentation, either individual or group

**Target for O3: Application and analysis**

80% of student presentations will be rated as a 4 or 5 on a five point assessment scale utilized on a rubric (with 1 representing a poorly identified topic, lack of linkage between course/program content and internship experiences and 5 representing an achievement of excellence, with a timely and important topic relevant to internship agency functioning identified and analyzed using appropriate course and program materials and information.

**Findings 2010-2011 - Target: Not Report This Cycle**

We did not assess outcomes using this measure this year.

**Target for O6: Oral communication skills**

80% of student presentations will be rated as a between a 10 and 15 on a fifteen point assessment scale (with 1 representing a poorly developed and organized presentation, without a logical flow, that is not engaging and uses poor grammar and a 15 representing excellence – well organized, logical flow, engaging with excellent grammatical skills).

**M 3: Ethics in Criminal Justice: Ethical Issues on Television Assignment (O: 1, 3, 4, 5, 7)**

CRJU 4060: Ethics in Criminal Justice was moved into the position of an early bookend CTW course for the department. In this course, students are presented with a variety of ethical frameworks and strategies and in a series of assignments are expected to select and apply these frameworks. The writing assignments in this course assess students’ ability to critically evaluate material and apply course concepts to ethical issues in the criminal justice system. In this particular assignment, the third of three assignments, students consider how plea bargaining practices impact aspects of procedural and substantive justice. Students examine the advantages and disadvantages of plea bargaining in the US. The assignment is based on class lectures and a documentary on the topic (see attached file named Ethical Issue Assignment). This assignment also assesses students' ability to express ideas in writing.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Identify and state topical issues or hypotheses**

80% of a random sample of student papers will be rated as a 3 (Acceptable) or 4 (Outstanding) on this, the third, assignment.

**Target for O3: Application and analysis**

Our goal is that 80% of student papers will be rated as a 4, 3, or 2 in their ability to identify and state topic issues/hypotheses at the end of the senior seminar. In addition, we aim for 50% of students to be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4.

**Findings 2010-2011 - Target: Not Met**

A total of two sections of CRJU 3060: Ethical Issues in Criminal Justice were offered during the Fall 2010 and Spring 2011 semesters (Section A in the fall, n=35; and Section B in the Spring, n=37). The assessment data reported here comes from Section B. Rubric scores on the final draft of the essay yielded an overall average score of 28 on the 1-4 scale on Application and Analysis. Overall, 22% were rated as a 4, 57% were rated as a 3, 22% as a 2, and 0% as a 1. Students submitted multiple drafts of the paper, and rubric scores over time indicated that 62% of the students improved in their performance on this outcome or remained at the highest score. Meanwhile, 32% demonstrated no improvement where improvement was possible and 6% decreased. Collectively these scores fell just short of our goals; 79% scored 3-4, 22% scored a 4.

**Target for O4: Generation of conclusions**

80% of student papers will be rated as a 3 (Acceptable) or 4 (Outstanding) on the third assignment.

**Target for O5: Written communication skills**

Our goal is that 80% of student papers will be rated as a 4, 3, or 2 in their ability to identify and state topic issues/hypotheses at the end of the senior seminar. In addition, we aim for 50% of students to be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4.

**Findings 2010-2011 - Target: Not Met**

A total of two sections of CRJU 3060: Ethical Issues in Criminal Justice were offered during the Fall 2010 and Spring 2011 semesters (Section A in the fall, n=35; and Section B in the Spring, n=37). The assessment data reported here comes from Section B. Rubric scores on the final draft of the essay yielded an overall average score of 3.0 on the 1-4 scale on written communication skills. Overall, 43% were rated as a 4, 41% were rated as a 3, 5% as a 2, and 10% as a 1. Collectively these scores fell just short met our goals; 84% scored 3-4, 43% scored a 4.

**Target for O7: Identification of ethical frameworks**

Our goal is that 80% of student papers will be rated as a 4, 3, or 2 in their ability to identify and state topic issues/hypotheses at the end of the senior seminar. In addition, we aim for 50% of students to be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4.

**Findings 2010-2011 - Target: Met**

A total of two sections of CRJU 3060: Ethical Issues in Criminal Justice were offered during the Fall 2010 and Spring 2011 semesters (Section A in the fall, n=35; and Section B in the Spring, n=37). The assessment data reported here comes from Section B. Rubric scores on the final draft of the essay yielded an overall average score of 3.0 on the 1-4 scale on written communication skills. Overall, 32% were rated as a 4, 51% were rated as a 3, 16% as a 2, and 0% as a 1. Collectively these scores fell just short met our goals; 83% scored 3-4, 32% scored a 4.
Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Review all learning outcomes**
Review syllabi and curriculums to ensure that all basic learning outcomes are relevant, measurable and achievable.

- **Established in Cycle:** 2005-2006
- **Implementation Status:** Planned
- **Priority:** Medium
- **Implementation Description:** Fall 2006
- **Responsible Person/Group:** Undergraduate Committee

**Improve data collection efforts**
The Department will make a concerted effort to collect and analyze appropriate data for academic assessment purposes.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** In-Progress
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Capstone Seminar: Analysis of Criminological/Criminal Justice (CJ) Issue Essay | Outcome/Objective: Written communication skills
  - Measure: Capstone Seminar: Oral Presentation Assignment | Outcome/Objective: Application and analysis
- **Projected Completion Date:** 07/2009
- **Responsible Person/Group:** Undergraduate Committee and CTW teaching faculty

**Objective assessment measures**
The CTW Ambassador will meet with faculty to discuss the need to use objective assessment measures that are independent of grades.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Projected Completion Date:** 08/2009
- **Responsible Person/Group:** CTW Ambassador

**Continued data collection**
As a discipline, we believe that cross sectional data may yield findings that are not accurate, particularly given that contextual factors may enter into any particular course during any particular semester. Because we value examining a greater breadth of data, we will continue to monitor results over the next two years to determine whether our goals are being consistently met before we move on to address another question.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Capstone Seminar: Analysis of Criminological/Criminal Justice (CJ) Issue Essay | Outcome/Objective: Identify and state topical issues or hypotheses
- **Projected Completion Date:** 06/2012
- **Responsible Person/Group:** UG committee and program faculty

**Expanded gathering of data**
We will work to expand collection of data across sections of the capstone seminar next semester to collect a wider range of data relevant to assessment of oral presentation requirements and outcomes in the coming two years.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Capstone Seminar: Oral Presentation Assignment | Outcome/Objective: Application and analysis
- **Implementation Description:** This year the committee reviewed departmental syllabi to determine the degree to which oral presentations are required in the curriculum. The coming year the committee will assess the viability of inclusion of this as a learning outcome seen as important by the faculty. If the outcome is continued, then the committee will work to ensure that curriculum structure leads in a linear manner to ensure that students develop requisite skills for success.
- **Responsible Person/Group:** Undergraduate coordinator/committee

**Continued Monitoring**
The department will continue monitoring outcomes annually to ensure that new cohorts continue to demonstrate success in achieving this learning outcome.

**Established in Cycle:** 2010-2011  
**Implementation Status:** In-Progress  
**Priority:** Medium

**Relationships (Measure | Outcome/Objective):**  
- Measure: Capstone Seminar: Analysis of Criminological/Criminal Justice (CJ) Issue Essay  
- Outcome/Objective: Application and analysis

**Responsible Person/Group:** Brenda Blackwell and undergraduate committee

**Continued Monitoring**

The department will continue monitoring to ensure that future cohorts continue to demonstrate success.

**Established in Cycle:** 2010-2011  
**Implementation Status:** In-Progress  
**Priority:** Medium

**Relationships (Measure | Outcome/Objective):**  
- Measure: Capstone Seminar: Analysis of Criminological/Criminal Justice (CJ) Issue Essay  
- Outcome/Objective: Identify and state topical issues or hypotheses

**Responsible Person/Group:** Brenda Blackwell and undergraduate committee

**Data Collection**

The department will cycle in data collection for determining achievement of this target in the upcoming year.

**Established in Cycle:** 2010-2011  
**Implementation Status:** In-Progress  
**Priority:** Medium

**Relationships (Measure | Outcome/Objective):**  
- Measure: Capstone Seminar: Oral Presentation Assignment  
- Outcome/Objective: Application and analysis

**Responsible Person/Group:** Brenda Blackwell and undergraduate committee

**Improve data collection efforts**

The Department is reviewing the evaluation rubric to further enhance evaluation and data collection.

**Established in Cycle:** 2010-2011  
**Implementation Status:** In-Progress  
**Priority:** High

**Relationships (Measure | Outcome/Objective):**  
- Measure: Capstone Seminar: Analysis of Criminological/Criminal Justice (CJ) Issue Essay  
- Outcome/Objective: Identify and state topical issues or hypotheses

**Projected Completion Date:** 07/2012  
**Responsible Person/Group:** CTW Ambassador

**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1:**  
What changes in the assessment process has your degree program made since last year's assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We continue to annually review and discuss our learning outcomes and the course curriculum to address student learning objectives. This year’s data and reporting from faculty has led us to reassess the structure of assignments in the capstone course for the coming year. Currently, the undergraduate committee, which includes the CTW ambassador, coordinating with the internship coordinator, is discussing the measurement of learning outcomes, specifically in reference to the assignments included in the bookend CTW courses: CRJU 3060 (Ethical Issues in Criminal Justice) and CRJU 4930 (Capstone Seminar). This year, shifts were made, with a new CTW Ambassador put into place. With new leadership in this position, new ideas are being generated about how to restructure and examine learning outcomes, targeted outcomes, and strategies to continue to improve programmatic and teaching strategies. To answer the questions posed here specifically, decisions were made last year to not change or revise learning outcomes in any major way. Instead, revisions occurred based on feedback on last year's report. Specifically, Learning Outcomes/Objectives 5 and 6 were modified to provide greater clarity and specificity, separating written and oral communication skills to a greater degree. With this change came the need to discuss how we would measure Learning Objective 6. The committee will work with instructors for CRJU 4930 in the fall to determine the viability of applying a rubric to score oral reports required in this course. In addition, during the fall semester, faculty will be surveyed to identify what courses require oral communication. Faculty will also be engaged in a discussion about the importance of this objective and how best to ensure that students are obtaining these skills in our curriculum. In addition, with the revision of the course sequencing that occurred in the fall 2010 catalog and the placement of a new CTW Ambassador, plans will progress to link assignment requirements across the two CTW courses to develop a within student – across year measurement of change over time in a number of learning objectives. This is currently in progress as a result of this year's reporting efforts. In addition, with the advent of the new Ph.D. program in integration of beginning T.A. Instructors teaching in the undergraduate curriculum, a training course was implemented (Ph.D. level Teaching Seminar) that will ensure sound development of beginning instructors to ensure appropriate consideration of curriculum level learning outcomes, the translation of appropriate outcomes into individual level courses, appropriate delivery strategies for higher order learning outcomes, consideration of assessment strategies, and data collection of assessment information to inform curricular goals and improvements.

**ACADEMIC PROGRAM QUESTION 2:**  
What is the impact of the data obtained from assessment findings on
As a result of the 2008-2009 report, the department moved to make curriculum changes in course sequencing to put into place a course that students would take in their junior year to allow comparisons across time, keeping the Capstone course as a required course for students' last semester. As a result of such planning, four courses (Methods of Criminal Justice, Criminological Theory, Statistical Analysis in Criminal Justice, and Ethics in Criminal Justice), viewed as involving key concepts necessary for students to master prior to entry into upper division classes so that the latter can be increasing rigorous and challenging, were structured as co-requisites in the this reporting year (2010-2011). With the move to a new college, we will work to ensure that advisement strategies and curricular requirements in banner appropriate reflect and address these changes to ensure that assessment of curriculum outcomes, as well as retention strategies are appropriately applied to enhance student success and higher order student learning outcomes. We continue to examine assessment strategies for these courses (see comments on above question). In the coming year, we will survey faculty to determine the importance of learning objective 6 and will examine syllabi for these four courses to determine if early attempts integrate this objective into course materials exists. Information obtained will influence how the committee proceeds. Because shifts were made in curriculum structure this year, we are not significantly altering our learning objectives or assessment tools, as we want to determine if these structural changes have the desired improved outcomes. We also are planning to continue assessment of current strategies in light of college level service provisions as well as new resources and recommendations in the coming year.

Georgia State University
Assessment Data by Section
2010-2011 Criminal Justice MS
As of: 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The mission of the Department of Criminal Justice is to generate and disseminate knowledge and information that is theoretically driven and policy relevant for the fields of criminal justice and criminology. This is accomplished by (1) engaging in research and scholarly activities to address issues of crime and justice affecting diverse populations in urban settings; (2) producing students who are critical and ethical thinkers, knowledgeable about the issues of crime and justice, and prepared for leadership positions in public and private sector agencies that address crime and justice problems; and (3) collaborating with public and private agencies through education, training, and research ventures that enhance our understanding of, and response to, issues associated with crime and the administration of justice. Through these activities, the Department strives to promote basic principles of justice that enhance the criminal justice profession and benefit the community at large.

Goals
G 1: Develop knowledge
Students will develop knowledge about crime and criminal justice systems and processes

G 0: Critical thinking
Students will be able to think critically about issues related to crime and criminal justice policies

G 2: Preparation for leadership positions
Students will be prepared for leadership positions in public and private sector agencies that address crime and justice issues.

Student Learning Outcomes/Objectives
SLO 1: Critically analyze crime & justice issues/data (G: 0) (M: 1, 2)
Students will be able to critically analyze crime and justice issues and/or information, utilizing theoretical, methodological, and statistical skill bases.

SLO 2: Apply research and statistical skills (G: 0) (M: 2)
Students will be able to apply acquired research and statistical skill bases to evaluate the quality of scholarly products and their contribution to the field of criminology and criminal justice.

SLO 3: Understand criminological theory (G: 1) (M: 1, 2)
Students will demonstrate an understanding of the theoretical knowledge base in criminology

SLO 4: Understand theory of criminal justice responses (G: 1) (M: 1, 2)
Students will demonstrate an understanding of the theoretical knowledge base of criminal justice responses to crime and criminality

SLO 5: Understand how systems & processes interact (G: 1) (M: 1, 2)
Students will be able to provide an integrated view of crime and criminal justice systems and processes and how the components interact and intersect to provide coordinated justice administration.

Strategic Plan Associations
2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

SLO 2: Apply research and statistical skills (G: 0) (M: 2)
Students will be able to apply acquired research and statistical skill bases to evaluate the quality of scholarly products and their contribution to the field of criminology and criminal justice.
### Measures, Targets, and Findings

#### M 1: Assessment Survey of Non-thesis students (O: 1, 3, 4, 5, 6, 7)

This is a 16 item faculty-rated assessment instrument used to evaluate non-thesis students. It replaces the previous 18 item assessment survey. The items are rated on a 4 point scale, ranging from poor to excellent. The instrument is to be completed by members of the graduate committee shortly after the end of the course.

**Source of Evidence:** Capstone course assignments measuring mastery

**Target for O1: Critically analyze crime & justice issues/data**

The desired performance is to have at least 70% of students with an average rating score of 3.0 or higher (on a 4 point scale) across the six items that measure this objective on the Assessment Survey of Non-thesis Students.

**Findings 2010-2011 - Target: Not Met**

Seven non-thesis students completed the Capstone Seminar during the Spring semester 2011. All 7 students were evaluated on all 6 of the items that measure this objective. The average score on these six items was a 2.98, with scores ranging from 2.87 to 3.58. Only 2 students out of 7 (approximately 29%) met the target rating score of 3.0 or better.

**Target for O3: Understand criminological theory**

The desired performance is to have at least 70% of students with an average rating score of 3.0 or higher (on a 4 point scale) on the one item that measures this objective on the Assessment Survey of Non-thesis Students.

**Findings 2010-2011 - Target: Met**

Seven non-thesis students completed the Capstone Seminar during the Spring semester 2011. All 7 students were evaluated on the one item that measures this objective. The average score on this item was a 3.0, with scores ranging from 2.0 to 4.0. Five of the seven students (approximately 71%) met the target rating score of 3.0 or better.

**Target for O4: Understand theory of criminal justice responses**

The desired performance is to have at least 70% of students with an average rating score of 3.0 or higher (on a 4 point scale) on the one item that measures this objective on the Assessment Survey of Non-thesis Students.

**Findings 2010-2011 - Target: Met**

Seven non-thesis students completed the Capstone Seminar during the Spring semester 2011. All 7 students were evaluated on the one item that measures this objective. The average score on this item was a 3.07, with scores ranging from 2.00 to 4.0. Five of the seven students (approximately 71%) met the target rating score of 3.0 or better.

**Target for O5: Understand how systems & processes interact**

The desired performance is to have at least 70% of students with an average rating score of 3.0 or higher (on a 4 point scale) across the two items that measure this objective on the Assessment Survey of Non-thesis Students.

**Findings 2010-2011 - Target: Met**

Seven non-thesis students completed the Capstone Seminar during the Spring semester 2011. Only 4 out of 7 students were evaluated on at least one of the two items that measure this objective. The average score on these two items for the students that were evaluated was a 2.88, with scores ranging from 2.5 to 3.0. Three of the four students (75%) met the target rating score of 3.0 or better.

**Target for O6: Apply theory and terminology**

The desired performance is to have at least 70% of students with an average rating score of 3.0 or higher (on a 4 point scale) across the two items that measure this objective on the Assessment Survey of Non-thesis Students.

**Findings 2010-2011 - Target: Not Met**

Seven non-thesis students completed the capstone seminar during the Spring semester 2011. All seven students were evaluated on the two items that measures this objective. The average score across all seven students on this measure was 2.68, with scores ranging from 2.0 to 3.5. Only two of the seven students achieved the target rating of 3.0 (approximately 29%).

**Target for O7: Communicate effectively**

The desired performance is to have at least 70% of students with an average rating score of 3.0 or higher (on a 4 point scale) across the four items that measure this objective on the Assessment Survey of Non-thesis Students.

**Findings 2010-2011 - Target: Met**

Seven non-thesis students completed the Capstone Seminar during the Spring semester 2011. All 7 students were evaluated on the 4 items that measures this objective. The average score on these items was a 3.27, with scores ranging from 2.5 to
Six of the seven students (approximately 86%) met the target rating score of 3.0 or better.

**M 2: Knowledge assessment survey of thesis students (O: 1, 2, 3, 4, 5, 6, 7)**

The Capstone knowledge assessment survey is a 21-item faculty rated questionnaire that measures the degree to which students who defended their thesis successfully have met the student learning outcomes. The questionnaire is completed by the student's thesis supervisor. Items are based on a 5 point scale.

Source of Evidence: Senior thesis or culminating major project

**Target for O1: Critically analyze crime & justice issues/data**

The desired performance is to have at least 80% of students with an average rating score of 4.5 or higher (on a 5 point scale) across the items measuring this outcome.

**Findings 2010-2011 - Target: Not Met**

Two students completed a Master's thesis during the 2010-2011 academic year in time for the July 1 assessment data. (One student will be defending next week.) Both students were assessed on only 3 of the 5 items measuring this outcome. The average scores across these 3 items for the two students were 4.33 and 5, giving an overall average of 4.66. With only two thesis students in this evaluation, and one falling just below a 4.5, only 50% met the desired target performance level of 4.5.

**Target for O2: Apply research and statistical skills**

The desired performance is to have at least 80% of students with an average rating score of 4.5 or higher (on a 5 point scale) across the three items measuring this learning outcome.

**Findings 2010-2011 - Target: Not Met**

Two students complete a Master's thesis during the 2010-2011 academic year in time for the July assessment deadline. Both students were assessed on one each of the 3 items measuring this outcome. The average scores across these 3 items was a 4.33 and a 5.0, giving an overall average of 4.66. With only two students writing theses, only 50% of the students reached the desired target performance level of 4.5, thus the target was not met.

**Target for O3: Understand criminological theory**

The desired performance is to have at least 80% of students with an average rating score of 4.5 or higher (on a 5 point scale) across the items measuring this outcome.

**Findings 2010-2011 - Target: Met**

Two students complete a Master's thesis during the 2010-2011 academic year in time for the July assessment. Both students were assessed on one item measuring this outcome. Both students received a 5 on this item, thus the performance target was met with 100% of the students scoring 4.5 or higher.

**Target for O4: Understand theory of criminal justice responses**

The desired performance is to have at least 80% of students with an average rating score of 4.5 or higher (on a 5 point scale) across the items measuring this outcome.

**Findings 2010-2011 - Target: Met**

Two students complete a Master's thesis during the 2010-2011 academic year in time for the July assessment. One student was assessed on 4 of the 5 items measuring this outcome, while the other student was assessed on only 1. The average scores for both of the two students on these items were 5; therefore 100% of the students had an average rating score above 4.5.

**Target for O5: Understand how systems & processes interact**

The desired performance is to have at least 80% of students with an average rating score of 4.5 or higher (on a 5 point scale) across the items measuring this learning outcome.

**Findings 2010-2011 - Target: Met**

Two students complete a Master's thesis during the 2010-2011 academic year in time for the July assessment. Both of the students were assessed on the 2 items measuring this outcome. The average score across these items for both students was a 5. Therefore, the targeted performance level of 80% of the students achieving a score of at least a 4.5 was met.

**Target for O6: Apply theory and terminology**

The desired performance is to have at least 80% of students with an average rating score of 4.5 or higher (on a 5 point scale) across the items measuring this outcome.

**Findings 2010-2011 - Target: Met**

Two students complete a Master's thesis during the 2010-2011 academic year in time for the July assessment. Both students were assessed on at least 1 of the two items measuring this outcome. The average score on these items for both students was a 5. With 100% of the students scoring a 5, the desired target performance level of 80% having a rating score of 4.5 was met.

**Target for O7: Communicate effectively**

The desired performance is to have at least 80% of students with an average rating score of 4.5 or higher (on a 5 point scale) across the items that measure this objective on the Knowledge assessment survey of thesis students.

**Findings 2010-2011 - Target: Met**
Two students complete a Master's thesis during the 2010-2011 academic year in time for the July assessment. Both students were assessed on all three of the items measuring this outcome. Both students (100%) had an average rating on these 3 items of 5.0, thus the desired performance target of 80% being rated at a 4.5 or higher was met.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Develop Embedded Measures in Core Courses
The current assessment of non-thesis students in the Masters program is based solely on indicators derived from the capstone course. Later this year, we will begin to work with faculty who teach core courses to develop measures that can be embedded in at least three of these courses and ways in which these measures can be retrieved, stored and analyzed by the graduate coordinator. Data on thesis students will be collected as well.

- Established in Cycle: 2008-2009
- Implementation Status: Planned
- Priority: Medium
- Implementation Description: end of Fall semester 2010
- Projected Completion Date: 11/2010
- Responsible Person/Group: Graduate committee and faculty who teach statistics, methods and theory

Develop Rubric for assessing non-thesis students
While our students continue to meet or exceed our target levels for learning outcomes, assessment of outcomes based on the revised capstone course suggested the need for a more reliable assessment tool than what is currently being used. The rubric will focus on the same learning outcomes as have already been established, but will provide more detail for assigning numerical scores. Once the rubric has been developed multiple members of the graduate committee can assess final papers in the capstone course in order to provide increased reliability.

- Established in Cycle: 2008-2009
- Implementation Status: In-Progress
- Priority: High
- Implementation Description: end of Spring semester 2010
- Projected Completion Date: 04/2010
- Responsible Person/Group: Graduate committee

Re-design the instrument used for assessing thesis students
Faculty have noted that the current instrument used to evaluate the thesis students does not seem to work well, leading to several items that cannot be rated, and consequently low reliabilities for outcome measures. Further, with the low numbers of students that we have completing thesis, and the low number of items that are being answered by faculty, also make it difficult to reach our very high performance targets (80% attaining score of 4.5 on scale of 5). We will have to discuss whether these performance targets are still appropriate.

- Established in Cycle: 2009-2010
- Implementation Status: Planned
- Priority: Medium
- Implementation Description: We will begin having the discussion of how better to evaluate thesis students this year along with the appropriate performance targets. Next year we will develop measures consistent with the outcomes of this year's discussion.
- Projected Completion Date: 05/2012
- Responsible Person/Group: Graduate committee

Students are now writing a literature review in their first year in the program
This is the first time in several years that we have not met our achievement target for this outcome. The analysis shows that the students were weakest on the item "The student is comfortable with his or her ability to write about crime and justice issues." Last year our required course "Crime and the Criminal Justice System" was re-vamped to require students to work extensively on writing a literature review on a criminal justice topic and I believe that this will strengthen their writing skills in this area. The two students that did not perform well on this outcome took the course before the changes were made.

- Established in Cycle: 2009-2010
- Implementation Status: Finished
- Priority: High
- Implementation Description: Changes were made to the course and implemented in Fall 2010 for last year's cohort.
- Projected Completion Date: 09/2010
- Responsible Person/Group: Faculty teaching CRJU 7010

Georgia State University
Assessment Data by Section
2010-2011 CTW Accounting
As of 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
All accounting students take a core business course (BUS3000) that serves as the first CTW course an introduction to critical
thinking through writing. Students take BUSA3000 in their sophomore or junior year. The second CTW course for accounting majors is Auditing (AC4610). Students enroll in the Auditing class during their senior year. Usually, students are enrolled in the course during the last semester of their undergraduate studies. CTW is applied in two quizzes and two written assignments: a written case analysis that includes an oral presentation and a report based on a review of operations and internal controls at a simulated audit client.

**Goals**

**G 1: Auditing issues**
The goal of the CTW component of the course is to familiarize students with the types of higher order level thinking and analytical skills that will be expected of them in a professional career in accounting. The School of Accountancy would like graduates in accounting to demonstrate mastery in critical thinking through writing. Students demonstrating critical thinking skills must be able to locate, obtain, organize, and analyze information and to exercise judgment based on comprehension of a set of facts and available evidence. They must be able to present, discuss and defend their views through written and spoken language. Their conclusions and recommendations must be complete, plausible, and compelling, and demonstrate an understanding the accounting problem. The ability to demonstrate critical thinking skills in a time-pressure environment is an important attribute to achieve a successful career in accounting. Therefore, we would like students to be able to solve problems and communicate the results of their analysis under restricted time constraints. Analysis: Students will demonstrate an ability to analyze cases of audit failure to identify strong vs. weak audit approaches, develop alternative audit procedures, and make recommendations to improve governance and control conditions at audit clients. Communication: students will demonstrate the ability to communicate their knowledge of auditing directly to their peers. They prepare oral presentations and written reports that demonstrate their analysis. They will provide theoretical support and corroborating data to support their conclusions. Research Skills: Students will learn to research the appropriate audit standards and regulatory requirements to support their analysis.

**Student Learning Outcomes/Objectives**

**SLO 1: Internal Control and Fraud Risk Assignment (G: 1) (M: 1)**
Auditing Alchemy Inc. is the long CTW assignment. It is worth approximately 15% of the semester grade. The objective of the assignment is have students adopt the role of an independent auditor who is responsible for reviewing the client’s production and revenue recognition process. Students must identify fraud risks and internal control weaknesses based on a simulated “walkthrough.” The will analyze the type of fraud that can occur, identify internal control weaknesses and then prepare a memo to the files that describes the issues at the client and recommendations to correct the problems that they detected. This task is similar to tasks that junior public accountants will perform at real audit clients. We use a simulated production system and video interviews between auditors and representatives of the simulated client. Students must review background materials and client prepared documents before they begin the simulation.

**General Education/Core Curriculum Associations**

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.
3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.
9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

**Institutional Priority Associations**

1. Student retention
2. Student promotion and progression

**SLO 2: Audit Objectives**
Objectives of the course are as follows: Differentiate among the various types of auditing and the procedures applied on financial statements audits and audits of Internal Controls over Financial Reporting Evaluate the components of audit risk and the appropriate audit approach to address the risks identified. Apply the opinion formulation process to specific attestation engagements and clearly communicate the results of procedures performed as part of the opinion formulation process. Understand and evaluate the auditors' responsibility on the audit engagement and determine whether that responsibility was adequately fulfilled. Evaluate, integrate, and apply different types of audit information and knowledge to form independent judgments. Present, discuss and defend their views through written and spoken language. Conclusions and critical points of view must be complete and demonstrate an understanding the audit problem.

**Measures, Targets, and Findings**

**M 1: CTW Evaluations (O: 1)**
The CTW program conducted a survey of the students enrolled in AC 4610 during the 2010-11 AY. There was a very low response rate (less than 5% of the students enrolled). The low response rate requires that any responses be interpreted with caution. Nonetheless, the following observations were made. The accounting respondents had lower ratings (.4 points or lower) than the summary CTW responses (for all CTW courses) in four areas: CT is important in my discipline, CT is important in the field I plan to pursue, helps me ask relevant questions, formulate a testable hypothesis. Accounting respondents indicated more favorable responses than the summary CTW responses in four key areas: helps make accurate inferences, evaluate the validity of evidence, CTW rubric helped me understand the expectations for the CTW assignment, CTW assignments helped me learn the material for this course. It is not surprising that the respondents had low ratings on the formulation of testable hypotheses metric because the audit course is not designed to emphasize this attribute. However, it was surprising that students did not recognize how important CT is to a career in accounting. It was pleasing to note that the students found the rubric to be helpful. During 2010-11 AY, we had revised the rubric and had students peer review each other using the rubric. It seems that this contributed to their satisfaction with the metric.

Source of Evidence: Student course evaluations on learning gains made
Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

We revised our rubric significantly. Changes to the rubric were based on feedback from former AC 4610 students, knowledge gained from CTW workshops and the CTW faculty. The CTW survey results indicated that the students' satisfaction with the rubric had increased several points. In the past the satisfaction with the rubric was less than 3 and below the CTW overall summary. This year the satisfaction score was significantly above the CTW overall summary. We held a 2 hour training session for all faculty and CTW consultants to develop a plan of action and agreed upon procedures to be instituted in all AC4610 CTW classes. This led to a clearer understanding of responsibilities, improvements in the willingness of actors to adhere to the CTW plan and greater consistency in the delivery of the course across semesters and instructors. During the year we also added an outline requirement for the long CTW assignment. Sample outlines and "how to write an outline" tip sheet were posted on the course’s website. CTW consultants provided timely feedback on the outlines that were submitted. The outline helped the students to organize their reports and we saw a significant improvement in the quality of the reports that were submitted.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

We saw a significant decline in the "top 20 GSU writing errors.” It was clear that distributing copies of the leaflets to the students had an impact on their propensity to make such errors. Students’ case analysis were improved in the dimensions of organization and clarity as well as internal consistency of the arguments presented. We believe that these improvements were the result of following an agreed upon action plan with the CTW consultants that emphasized feedback on these areas. The CTW consultant gave feedback to each group, forcing the group of students to think about their writing and to re-phrase ill-constructed sentences and rectify illogical errors. Group members became more active in their self-assessment and correction. They became more critical with the information presented to them. They asked relevant questions regarding the assessment and tried harder to remain objective, as auditors. Additionally, each group members were asked to rate the performance of each of their peers. The peer evaluations allowed the student to genuinely observe and give an objective grade to each of his/her team members. Accordingly, peer evaluations motivate students to participate in group efforts and serve as a control mechanism empowering students to penalize group members who shirk group responsibilities.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

We need to work on developing better short assignments that emphasize CT under time pressure constraints. We currently use two 15 min. quizzes that require students to select an objective response and then to articulate the analysis that supported their selection. We have noticed wide variance in the performance on quizzes. Some students excel (scoring 95%+) and others struggle (scoring less than 50%). It has been difficult to develop questions that test the learning objective and that require students to demonstrate the knowledge that they have acquired. We have posted a sample quiz to familiarize students with the types of analysis that we expect on the assignment. We will increase the time dedicated to modeling CT under pressure so that the students can learn by example.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

We have seen a marked improvement in the ability of students to engage in critical analysis to solve auditing problems. During this academic year performance on the comprehensive final examination was 8-10 points higher than the norm. We held the rigor and breadth of the exam consistent with prior years. We believe that the quizzes and written analyses forced the students to evaluate and support their responses on those assignments and that this approach helped them to analyze their exam questions in greater detail to arrive at more accurate responses. Several students reported that when they were forced to provide support for their objective responses, they discovered that they had made logical errors or selected the incorrect response. They were happy that developing the written responses allowed them to correct their errors. They were then able to apply this method of thinking to other assignments. The major changes we made were to increase the number of opportunities for feedback and revision of the students’ drafts for the written assignments. In our view this was the single most important factor in improving the quality of the final submissions. During the prior years many teams received low grades on their final product but in the current year that was not the case.
AAS CTW courses will require students to engage, through writing, a “wide range of cognitive skills and intellectual dispositions needed to effectively identify, analyze, and evaluate arguments and truth claims; to discover and overcome personal prejudices; to formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about what to believe and what to do.” (Bassham, Irwin, Nardone & Wallace, Critical Thinking: A Student's Introduction (McGraw-Hill, 2005, page 1.) While critical thinking will be valued throughout the course of the semester, specific assignments will most directly fulfill the CTW designation. CTW-designated assignments will be assessed using the rubric included in the appendix (50%) and the grading rubric included in the syllabus (50%).

**Goals**

**G 1: AAS CTW Goal 1 (Annotations)**
In comparing initial submissions to subsequent submissions, students in AAS will demonstrate improved CTW (as determined by the assignment rubric). Further, CTW strengths in the following domains will be apparent: Analyzing information: data, ideas, or concepts (Interprets information (data, ideas, or concepts) accurately, appropriately and in-depth in new contexts); Assessing strengths and weaknesses of novel material; and Assessing relevance of novel material to research interests.

**G 2: AAS CTW Goal 2 (Research Paper)**
At minimum, the final research paper will exhibit, on average, CTW in the high “developing” range (as determined by the assignment rubric). Further, students in AAS will demonstrate CTW strengths in the following domains: Analyzing information: data, ideas, or concepts (Interprets information (data, ideas, or concepts) accurately, appropriately and in-depth in new contexts); Drawing well-supported conclusions (Creates a detailed conclusion or complex solution that is well-supported, logically consistent, complete and often unique); Synthesizing ideas into a coherent whole (Integrates ideas or develops solutions that are exceptionally clear, coherent, and cohesive).

**Student Learning Outcomes/Objectives**

**SLO 2: CTW Objective 1 (G: 1) (M: 1)**

Assignment Two Article Annotation and Critique (20%, CTW Component) Each student will submit an annotation and critique of six peer-reviewed journal articles. Each article will be identified by the instructor as important to the discipline and/or identified by the student as particularly pertinent to their research project. These submissions will provide entry into the more extensive literature review of your research paper. The grading criteria for your annotation and critique are as follows: Annotation (20%) 1. Is the bibliographic information provided in APA format (5%) 2. Is the purpose of the work identified (thesis/research question, (4%)? 3. Is the methodology clearly described? (3%) 4. Are the results adequately described? (3%) 5. Was a hardcopy of article submitted? (5%) Critique (80%) 1. Does the author assess the strength and weakness of the degree to which the article’s literature review, b. analysis; and c. discussion support the conclusions offered by each author (30%). 2. Does the author provide specific support from the article for a decision to include or exclude each article from the literature review (30%); 3. Is there evidence of critical thinking (see rubric) (10%) 4. Is the article free of written errors? (10%) Initial critiques will not be assigned a grade although I will provide you with feedback. You will have the option of submitting one revision of each critique. It is my expectation that each revised submission will more completely meet the criteria.

**Standard Associations**

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 3: CTW Objective 2 (G: 2) (M: 2)**

AAS 4980 Seminar and Practicum in African American Studies Completion of the research paper (50%) The primary products of this class are (1) completion of a coherent research project and (2) a well-written research paper that describes this project fully. During the course of the semester, the students will submit a series of revisions in response to instructor comments toward the completion of their research papers. As with the assignments for 3980, this assignment will require students to “evaluate arguments and truth claims; to discover and overcome personal prejudices; to formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about what to believe and what to do” as it relates to the specific requirements of each assignment(Bassham, Irwin, Nardone & Wallace, Critical Thinking: A Student's Introduction (McGraw-Hill, 2005, page 1). More specifically, this activity will center the students’ own truth claims in critical thinking. While the assignments for 3980 encourage students to critically engage (1) the general biases they bring to the class and (2) pre-existing research that is relevant to their chosen area of interest, 4980 will require them to critically reflect on THEIR OWN truth claims about THEIR research as they pursue a final paper that is accurate, coherent, thoughtful and critical. Further, resubmissions provide students with additional opportunities to more fully reflect on and engage their research.

**Measures, Targets, and Findings**

**M 1: Article Annotation (O: 2)**
To assess and demonstrate CTW performance on the article annotations, initial submissions were compared to the final submission. In comparing the performance of twelve students across 34 submissions, the average increase on the CTW portions of the assignment (1. the author assess the strength and weakness of the degree to which the article’s conclusions are supported ; 2. Does
the author assess the strength and weakness of the degree to which the article’s conclusions are supported) was 18.99/60 (see rubric). Without exception, each student demonstrated improved CTW on this assignment.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: CTW Objective 1**

Moving forward, we expect that a minimum of 75% of the students will earn a grade of 75% or above on the CTW portion of this assignment.

**Findings 2010-2011 - Target: Met**

Objective: Moving forward, we expect that a minimum of 75% of the students will earn a grade of 75% or above on the CTW portion of this assignment. Finding: AAS accomplished this objective. The average CTW grade was 55.2/60 (90%).

**M 2: Research Paper CTW Assessment (O: 3)**

In reviewing the research papers of nine students, it is apparent that students demonstrate strengths in CTW. Specifically, the overall average rating on AAS' CTW rubric is 4.87 (across all five criteria) with no criterion falling below 4.3 (criterion 5). In comparing the ratings (2010-2011/2009-2010), CTW has increased in each criterion with the exception of criterion 5. Identifies, summarizes (and appropriately reformulates) the problem, question, or issue (5/4.5) Identifies and considers the influence of the researcher (4.3/4.09) Develops, presents, and communicates OWN perspective, hypothesis or position. (4.8/4.68) Presents, assesses, and analyzes appropriate supporting data/evidence. (4.8/4.64) Identifies and assesses conclusions, implications, and consequences. (4.3/4.45)

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: CTW Objective 2**

Moving forward, we expect that the minimum average score on each criterion of the rubric will be 4 (high developing), with a minimum overall average CTW rating of 4 (high developing) as well.

**Findings 2010-2011 - Target: Met**

AAS accomplished this objective as indicated in the summary.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Revise Research Paper Rubric**

I will revise the CTW research paper rubric for the 2010-2011 academic year. This rubric will be inclusive of both general and CTW-specific assignment requirements.

- Established in Cycle: 2009-2010
- Implementation Status: Finished
- Priority: High
- Relationships (Measure | Outcome/Objective): Measure: Research Paper CTW Assessment | Outcome/Objective: CTW Objective 2
- Projected Completion Date: 07/2010
- Responsible Person/Group: Jonathan Gayles

**CTW Sessions**

To maintain the CTW progress evidenced during the past year, AAS will devote one class session to CTW in each of our CTW courses. The purpose this action is to provide students with specific examples of CTW in AAS using previously-submitted CTW assignments that best demonstrate CTW. If possible, these sessions will be conducted with the assistance of CTW staff.

- Established in Cycle: 2010-2011
- Implementation Status: Planned
- Priority: High
- Implementation Description: 1. Identify and make anonymous outstanding/poor CTW assignments (sum’ 2011); 2. Discuss collaboration w/CTW staff (sum’ 2011); 3. Develop instructional activities for students that will elucidate evidence of CTW in the selected assignments as well as provide them with opportunities to identify and discuss the CTW strengths/weaknesses of each assignment (late sum’ 2011); and 4. Identify specific date and location for fall/spring term CTW sessions (late sum’/fall 2011).
- Projected Completion Date: 04/2012
- Responsible Person/Group: Jonathan Gayles
- Additional Resources: Possible collaboration with CTW staff
- Budget Amount Requested: $0.00 (no request)

**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

This semester’s research papers were particularly strong. In fact, four students presented their papers at the National Council for Black Studies Conference in Cincinnati, Ohio. In terms of CTW, students appear to be more comfortable with that which CTW represents. Of course, much of this improvement should be attributed to the fact that AAS CTW courses are taught as a two-course sequence by the same instructor. As a result, the intersection of CTW expectations across two semesters culminated in especially strong research paper submissions this semester.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

General CTW performance has increased but the most significant increase is found in student performance on the annotated bibliography. Students initially struggle on the CTW portion of the assignment but as they submit revisions, their performance and grasp of CTW improved. I believe that this improvement influences their research papers.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the
CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

What areas of CTW in your program still need development?
None.

What aspects of the implementation of CTW have been problematic?
None, presently.

What assistance might you need to address those areas?
N/A.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

Students’ grasp of CTW and ability to produce scholarly work is enhanced by AAS CTW efforts. AAS is considering producing an undergraduate research journal that will provide student work with a broader audience. The only change to our CTW efforts is a slight change to the Annotation Rubric.

ACADEMIC PROGRAM QUESTION 1:

What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

No changes have been made.

ACADEMIC PROGRAM QUESTION 2:

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Our departmental CTW efforts are limited to the two courses. At present, there is no broader departmental impact.

ADMINISTRATIVE DEPT QUESTION 1:

Explain how your department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?

Our departmental CTW efforts are limited to the two courses. At present, there is no broader departmental impact.

ADMINISTRATIVE DEPT QUESTION 2:

What have you learned from your assessment this year (2010-2011)?

It appears that our efforts to increase CTW are successful and that this success culminates in strong research papers.

ADMINISTRATIVE DEPARTMENT QUESTION 3:

What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

I will continue to consider student performance in CTW with particular attention to AAS CTW rubrics. At present, I anticipate AAS involvement to be limited to our two CTW courses and the CTW efforts of the instructor of these courses.

---

**Georgia State University**

**Assessment Data by Section**

**2010-2011 CTW Anthro**

As of: 12/12/2016 04:10 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

**Mission / Purpose**

In anthropology, critical thinking entails examining and contextualizing the multiple perspectives that inform complex social, cultural, and biological realities pertaining to the human condition in its past and present dimensions.

**Goals**

**G 1: Goals for Anthropology majors CTW**

Students will demonstrate an ability to analyze complex social, cultural, and biological realities; they will demonstrate an ability to draw conclusions that engage current perspectives in the discipline; they will demonstrate an ability to contextualize relevant anthropological theories on the issues at hand, and to critique relevant anthropological theories on the issues at hand.

**Student Learning Outcomes/Objectives**

**SLO 1: Critical thinking in Anthropology (M: 1)**

In Anth 3033, students were asked to submit 3 versions each of 4 papers--one for each course module. The third version of the fourth paper was selected for CTW score measuring. Papers were evaluated on a rubric which measured the outcome on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding. Our target was for all students to receive at least a 3, and for 75% to receive at least a 4. In ANTH 4970, students were assigned 6 papers, 3 of which required multiple revisions. Papers were evaluated on a rubric which measured the outcome on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding. Our target was for all students to receive at least a 3, and for 75% to receive at least a 4. In both courses, all of the assignment reflected all of the following goals: a. Analysis: students will demonstrate an ability to analyze complex social, cultural, and biological realities. b. Draw Conclusions: students will demonstrate an ability to draw conclusions that engage current perspectives in the discipline. c. Contextualize: students will demonstrate an ability to contextualize relevant anthropological theories on the issues at hand. d. Critique: students will demonstrate an ability to critique relevant anthropological theories on the issues at hand.
CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

Action Plans for last year were effective. Eliminating peer-reviewing in 3033 fostered a more reflexive approach to topic choices. Grading drafts was also effective in ensure full student participation in online sessions. In 4970 the number of papers requiring multiple revisions was reduced, and this allowed students to put more effort into the writing assignments that still required revisions.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Overall quality seems to have improved, and students in 4970 frequently comment on how writing intensive courses have improved
the quality of their critical thinking through writing.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

With a growing major and a shrinking faculty body, it is very difficult to cap our CTW courses at 25. At the time of writing, ANTH 3033 is already full, and I keep receiving overflow requests. We are in the process of hiring a new TT faculty member, but one of our senior faculty is retiring. We need at least one more permanent lecturer to be able to handle CTW requirements without shortchanging our graduate program.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

Critical thinking has always been a central component of our discipline; however, the overall quality of student work has improved. The faculty are more concerned with students’ writing skills, and several of us have expressed an interest in teaching a writing-intensive course.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

no changes were made

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Since the data are satisfactory, no structural changes were deemed necessary. The number of writing-intensive course offerings will probably increase, even though this will create important challenges due to the competition for resources between CTW classes and our graduate program.

ADMINISTRATIVE DEPT QUESTION 1:
Explain how your department used the results from last year’s (2009-2010) assessment. What actions did you take? What changes did you make as a result?

Data were used for program evaluation and strategic plan. Several faculty have expressed an interest in teaching writing intensive courses.

ADMINISTRATIVE DEPT QUESTION 2:
What have you learned from your assessment this year (2010-2011)?

Undergraduate students may not be ready for peer-reviewing; however, oral presentations are more conducive to thinking critically about fellow students’ work as well as one’s own.

ADMINISTRATIVE DEPARTMENT QUESTION 3:
What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

Since the current course structures worked well in the past year, we are not going to make changes at this time.

Annual Report Section Responses

Most Important Accomplishments for Year
Course format changes implemented in 2010 were effective.

Challenges for Next Year
We do not have enough faculty members as to be able to teach the CTW courses we need even as we support a thriving graduate program. One faculty member will be on leave, and one is retiring. We are hiring one TT faculty member, but we still need more resources in order to be able to support both a growing major and a successful MA program.

Assessment Data by Section
2010-2011 CTW Applied Linguistics
(2016-06-12 04:10 PM EST)
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

**Mission / Purpose**
Critical thinking in Applied Linguistics always involves evaluating arguments and presenting the rationale behind the conclusions drawn. The CTW-specific courses additionally address personal prejudices, for example as relating to language-trait-focused discrimination, and making reasonable, intelligent decisions about how to address real-world language-oriented controversies.

**Goals**

**G 1: evaluate arguments**
Students will learn to evaluate arguments and present the rationale behind the conclusions drawn.

**G 2: address personal prejudices**
Students will learn to address personal prejudices, for example as relating to language-trait-focused discrimination.

**G 3: write clearly**
Students will learn to present an argument clearly in writing.

**Student Learning Outcomes/Objectives**

**SLO 1: language in society final paper (G: 1, 2, 3) (M: 1, 3, 4, 5, 6)**
Students will write a final paper on a sociolinguistic topic of their choice, drawing on both popular sources and academic sources, or on academic sources presenting more than one viewpoint. They will demonstrate their critical thinking through writing skills in this assignment, including their ability to identify values and assumptions that underlie different perspectives, show awareness of prejudicial aspects of the problem, present convincing arguments based on linguistic principles, draw reasonable conclusions, and present ideas clearly and in a well-organized fashion.

**SLO 2: communication across cultures final paper (G: 1, 2, 3) (M: 2, 3, 4, 5, 6)**
Students will write a 17-22 page final paper on a microculture (e.g., dog breeders, massage therapists, yoga instructors, faculty members, graduate students, 1st graders). They will identify a microculture that interests them, observe members of the microculture interacting, identify an informant, take field notes, develop ethnographic interviewing skills, and collect and analyze ethnographic interview data. Finally, they will complete the written presentation of your project. All writing assignments in this course relate to and build toward this final paper. They will demonstrate their critical thinking through writing skills in this assignment, including their ability to demonstrate an honest awareness of their feelings/thoughts about cultural difference, show awareness that they are cultural beings, present convincing arguments based on data, draw reasonable conclusions, and present ideas clearly and in a well-organized fashion.

**Measures, Targets, and Findings**

**M 1: identify values and assumptions that underlie different perspectives (O: 1)**
Students will write a final paper on a sociolinguistic topic of their choice, drawing on both popular sources and academic sources, or on academic sources presenting more than one viewpoint. They will demonstrate their critical thinking through writing skills in this assignment, including their ability to identify values and assumptions that underlie different perspectives, show awareness of prejudicial aspects of the problem, present convincing arguments based on linguistic principles, draw reasonable conclusions, and present ideas clearly and in a well-organized fashion.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: language in society final paper**
The papers were evaluated on a rubric which measured this outcome on a scale from 1-4, where 1 is "fails to identify underlying values and assumptions of different perspectives", 2 is "Does not identify many underlying values and assumptions of different perspectives or addresses only one perspective", 3 is "Identifies many underlying values and assumptions of more than one perspective" and 4 is "Clearly identifies most underlying values and assumptions of more than one perspective". Our target is for 85% of students to receive at least a 3 and for at least 40% to receive a 4.

**Findings 2010-2011** - Target: Met
In terms of this outcome, 96% of students received at least a 3 and 48% received a 4.

**M 2: demonstrates self-awareness about cultural difference (O: 2)**
Students will demonstrate their critical thinking through writing skills on their final papers for Communication across Cultures, including their ability to demonstrate an honest awareness of their feelings/thoughts about cultural difference.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: communication across cultures final paper**
The papers were evaluated on a rubric which measured this outcome on a scale from 1-4, where 1 is "Fails to demonstrate
The papers were evaluated on a rubric which measured this outcome on a scale from 1-4, where 1 is "Fails to demonstrate awareness of one's feelings /thoughts about cultural difference", 2 is "Does not demonstrate much awareness of one's feelings /thoughts about cultural difference", 3 is "Demonstrates much awareness of one's feelings /thoughts about cultural difference" and 4 is "Clearly demonstrates a lot of self awareness about one's feelings and thoughts about cultural difference". Our target is for 85% of students to receive at least a 3 and for at least 40% to receive a 4.

### Target for O2: communication across cultures final paper

The papers were evaluated on a rubric which measured this outcome on a scale from 1-4, where 1 is "Conclusions are based on misconceptions of data, personal opinion, or are unrelated to arguments presented or on bias", 2 is "Conclusions are somewhat or vaguely based on data presented", 3 is "Conclusions are largely supported by data presented" and 4 is "Conclusions are clearly supported by data presented". Our target is for 85% of students to receive at least a 3 and for at least 40% to receive a 4.
or vaguely based on misconceptions of data, personal opinion, or are unrelated to arguments presented or bias. Our target is for 85% of students to receive at least a 3 and for at least 40% to receive a 4.

**Findings 2010-2011 - Target: Partially Met**

In terms of this outcome, 80% of students received at least a 3 and 44% received a 4.

**M 6: presents ideas clearly and in a well-organized fashion (O: 1, 2)**

Students will demonstrate their critical thinking through writing skills in their final papers, including their ability to present ideas clearly and in a well-organized fashion.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: language in society final paper**

The papers were evaluated on a rubric which measured this outcome on a scale from 1-4, where 1 is "Writing is incoherent and ideas are illogically arranged", 2 is "Few ideas are logically arranged. Writing is often unclear", 3 is "Most ideas are logically arranged. Writing is generally clear" and 4 is "Ideas are logically arranged. Writing is clear and precise". Our target is for 85% of students to receive at least a 3 and for at least 40% to receive a 4.

**Findings 2010-2011 - Target: Met**

In terms of this outcome, 96% of students received at least a 3 and 65% received a 4.

**Target for O2: communication across cultures final paper**

The papers were evaluated on a rubric which measured this outcome on a scale from 1-4, where 1 is "Writing is incoherent and ideas are illogically arranged", 2 is "Few ideas are logically arranged. Writing is often unclear", 3 is "Most ideas are logically arranged. Writing is generally clear" and 4 is "Ideas are logically arranged. Writing is clear and precise". Our target is for 85% of students to receive at least a 3 and for at least 40% to receive a 4.

**Findings 2010-2011 - Target: Partially Met**

In terms of this outcome, 80% of students received at least a 3 and 48% received a 4.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

### change to course requirements for Communication across Cultures

Students had difficulty identifying cultural difference (and thus, becoming aware of their feelings and thoughts regarding such differences) and recognizing themselves as cultural beings if they were investigating a micro-culture with which they were already too familiar (e.g. Starbucks, gaming). In future offerings of Communication Across Cultures, students will be required to do their final paper on a micro-culture with which they are not at all familiar, which should help them to become more aware of cultural differences.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Relationships (Measure | Outcome/Objective):**
  - Measure: demonstrates self-awareness about cultural difference | Outcome/Objective: communication across cultures final paper
  - Measure: shows awareness of bias | Outcome/Objective: communication across cultures final paper
- **Responsible Person/Group:** Instructors for communication across cultures
- **Additional Resources:** none
- **Budget Amount Requested:** $0.00 (no request)

### discuss advising students/set possible prerequisites with faculty

Many students who signed up for the "senior-level" CTW course were not seniors and had not taken the junior-level course. The AL faculty will need to consider whether it is feasible to have the junior-level course (or senior status) as a prerequisite to the senior-level course. (Since the courses were only offered once per year in the past, such a requirement has made graduating in a timely fashion difficult for students.) Another possibility is just to work with advising so that students know to sign up for the junior-level course before the senior-level one if at all possible.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Relationships (Measure | Outcome/Objective):**
  - Measure: demonstrates self-awareness about cultural difference | Outcome/Objective: communication across cultures final paper
  - Measure: draws reasonable conclusions | Outcome/Objective: communication across cultures final paper
  - Measure: presents convincing arguments based on appropriate evidence | Outcome/Objective: communication across cultures final paper
  - Measure: presents ideas clearly and in a well-organized fashion | Outcome/Objective: communication across cultures final paper
  - Measure: shows awareness of bias | Outcome/Objective: communication across cultures final paper

### timely data collection

The Ambassador did not try to collect data from instructors until after the semester was over. The instructors had already returned some papers, and had not always kept rubric data separately. This likely resulted in overall lower scores on the Communication across Cultures rubrics, as students who make the effort to pick up their final papers (those whose data are missing from the current report) are often those who are likely to have done a good job to begin with. The process of doing this report has already helped clarify what is needed, but in the future the Ambassador will make sure the instructors are keeping this data; at that point we will be able to better assess whether other changes are needed.
CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

We are no longer using the EFL practicum course as the senior-level CTW course; instead we have added Communication Across Cultures, which appears to be a much better fit and more closely parallels the junior-level course. This course was taught for the first time, with close collaboration between the two instructors. We have changed our overall measures so that they can be used for both courses, showing the parallels between the tasks we are assigning at different levels, and added achievement targets for the new course. We have also addressed our difficulties in offering enough CTW courses in part by hiring an outstanding lecturer who will teach CTW courses. Both of these accomplishments address issues raised in the 2008-2009 report (before WEAV/Enline was used).

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

From this year's data, we cannot see improvement from the junior-level class to the senior-level class; in fact, the scores in the senior-level class were lower overall. However, because of scheduling difficulties (our courses are nearly always full very quickly and few sections are offered) students are not always able to take the junior-level class before the senior-level class. This year there were at least some students in the senior-level class who had not taken the junior-level class. We will encourage students not to take the senior-level class unless they have completed the junior-level one, but we expect that this will nevertheless sometimes occur. We will also need more data over more time to see meaningful patterns since it is not the same students who are in both courses in a year, so we'd need to look at the pattern over a couple of years to be a little more confident that differences between the two courses are not just due to different groups of students. Finally, now that we have sample papers from both classes, it may be possible for faculty to meet and do some norming of the rubric grading so that we can check for our own consistency in assigning rubric scores.

The main problems thus far have been with setting in on a program (with the current, more appropriate, senior-level course being offered for the first time this past spring) and with the workload of CTW-associated faculty. The first problem seems to have been solved, but the second is still of some concern. Because we are a relatively small department in terms of faculty, service loads are high (for example, the CTW ambassador is also in charge of the PhD program and has been chair or a member of a search committee each of the last three years). An unfortunate result is that it is more of a burden for CTW instructors and ambassadors to meet to do more in-depth working together, discussion of ratings, expectations, etc. that would make the program really exciting and beneficial for both faculty and students. As our department has hired another tenure-track faculty member and a lecturer who can teach CTW courses this year, we may be in a better position to engage more fully with the challenges of the CTW program. We may also be able to CTW courses more often. However, since teaching a CTW course well typically involves more work than most other classes it would be helpful to have that taken into consideration when workloads are assigned. I am not sure what assistance is available since we are not eligible for consultants in CAS, for example, but I thought it was important to acknowledge the situation.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the program have been problematic? What assistance might you need to address those areas?

The main problems thus far have been with setting in on a program (with the current, more appropriate, senior-level course being offered for the first time this past spring) and with the workload of CTW-associated faculty. The first problem seems to have been solved, but the second is still of some concern. Because we are a relatively small department in terms of faculty, service loads are high (for example, the CTW ambassador is also in charge of the PhD program and has been chair or a member of a search committee each of the last three years). An unfortunate result is that it is more of a burden for CTW instructors and ambassadors to meet to do more in-depth working together, discussion of ratings, expectations, etc. that would make the program really exciting and beneficial for both faculty and students. As our department has hired another tenure-track faculty member and a lecturer who can teach CTW courses this year, we may be in a better position to engage more fully with the challenges of the CTW program. We may also be able to CTW courses more often. However, since teaching a CTW course well typically involves more work than most other classes it would be helpful to have that taken into consideration when workloads are assigned. I am not sure what assistance is available since we are not eligible for consultants in CAS, for example, but I thought it was important to acknowledge the situation.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

We've developed a couple of very exciting courses that really challenge students to do their own research, question their assumptions, weigh options, and defend their arguments. Students are also getting substantial writing assignments in these courses, which is not always possible in non-CTW courses which are often much larger. In the next couple of years we should be able to see more specific results as we settle in with one program and are able to collect data regularly. Our major changes have centered around the change in the senior-level CTW course offered, as mentioned above.

Georgia State University
Assessment Data by Section
Mission / Purpose
In conversations among the art education faculty since the initiation of CTW, we arrived at two operational definitions for critical thinking that are particularly relevant to students in our area. One centers upon the ability to critically analyze and interpret artworks, which is fundamental to teaching about art. The other promotes students’ capacities to think critically about pedagogy, relate educational theory to classroom practice, and become reflective practitioners. Students have opportunities to develop both aspects of critical thinking in our program. In AE 4200, the first course in the major, students conduct classroom observations and examine aspects of teaching such as: adapting curricula for students with special needs, managing space and materials, integrating technology and other subjects, utilizing diverse visual communication strategies, planning lesson content, and creating a productive learning environment. In their modules and final field experience reflection, students analyze, compare, and evaluate what they have observed and relate it both to course readings and to their own emerging teaching philosophies. They also critically analyze various popular resources available to art teachers in journal and digital formats in a second CTW assignment.

In AE 4900, students engage in learning activities related to art history, art criticism, and aesthetics, and acquire familiarity with several different critical frameworks for deriving meaning from artworks. They also explore strategies for actively engaging young learners in these disciplines. CTW assignments in this course focus upon analysis of artworks and visual culture toward the objective of developing relevant instructional plans.

As a national collaborator on the Arts Map for the Partnership for 21st Century Skills, and as a signatory to the Partnership for 21st Century Skills’ National Action Agenda, NAEA recognizes the importance of having all students leave school prepared with the skills and knowledge to address the challenges that await them. To that end, we support the following PRINCIPLES:

• That the arts, including the visual arts, dance, music, and theatre, are recognized as core subjects in the framework of the Partnership for 21st Century Skills’ Framework for 21st Century Learning.

• That the visual arts provide opportunities for all students to build their skills and capacity in what the Partnership for 21st Century Skills calls “Learning and Innovation Skills,” specifically Creativity and Innovation; Critical Thinking and Problem Solving; and Communication and Collaboration.

• That the visual arts provide opportunities for all students to build their skills and capacity in what the Partnership for 21st Century Skills calls “Information, Media and Technology Skills,” specifically Information Literacy, Media Literacy, and ICT (Information, Communications, and Technology) Literacy.

Goals
G 1: Analysis of Artworks
Art Education majors should be able to 1) formulate pertinent questions and compose valid interpretations of works of art or art historical problems; 2) assess and synthesize interpretations of art and art historical claims made by others; 3) understand and evaluate the creative and cultural significance of art on both micro and macro levels.

G 2: Synthesize skills and understandings
Art Education majors are expected to relate course readings to real-life situations and demonstrate the ability to develop and defend their own ideas about appropriate strategies and content for teaching art.

G 3: Interpretation of Artworks
Art Education majors are expected to develop and defend interpretations of art works informed by analytical processes such as the Feldman method.

G 4: Compare/Contrast Pedagogical Strategies
Art Education majors should demonstrate critical awareness of classroom management strategies, including effective communication as well as management of materials, behavior, and time.

G 5: Critical Reflection
Art Education majors are expected to become reflexive practitioners, demonstrated through personal, critical responses to course readings and activities.

G 6: Evidence-based Evaluation
Art Education majors are expected to develop and defend evaluative responses to course readings and activities.

G 7: Contextualize Information from Course Materials
Art Education majors should be able to demonstrate deep understanding of course materials and assignments and relate them to real teaching contexts through reflections, planning, and field work.

Student Learning Outcomes/Objectives
SLO 1: Critical Analysis of Artwork (G: 1, 3, 6) (M: 2)
In AE 4900 this year, students analyzed advertisements using the Feldman method and other applicable strategies covered in class, as part of their preparation for planning a learning unit about Visual Culture.

SLO 2: Final Field Experience Reflection (G: 2, 4, 5, 6, 7) (M: 1)
After students completed their field experiences for AE 4200, they reflected upon the significance of these experiences and what they observed, relating their insights to course readings and lectures.

### Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

### SLO 3: Resource Review (G: 2, 5, 6, 7) (M: 3)

After learning the fundamentals of lesson planning, students investigated popular resources in journal or digital form and wrote a critical analysis of the resource identifying strengths and weaknesses of the resource and its usefulness for art teachers.

### Measures, Targets, and Findings

#### M 1: Rubric for Field Experience Reflection (O: 2)

The associated Rubric provides descriptors of competent performance in addressing the CTW objectives of this assignment. I have streamlined the criteria and expanded upon the descriptors for different levels of performance based upon last year’s results.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Final Field Experience Reflection**

Of the students in class 75% will score competency on all or almost all of the criteria in the rubric

**Findings 2010-2011 - Target: Met**

90% of students met target.

#### M 2: Art Criticism assignment (O: 1)

90% were competent.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Critical Analysis of Artwork**

75% of students will demonstrate competency based upon the rubric for art criticism.

#### M 3: Resource Review (O: 3)

Students were asked to select an art educational resource from print or online source and answer questions through critical analysis. Graduate students in this course were given a more challenging version of this assignment.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Resource Review**

This was a pilot of an assignment I plan to revise and implement next year. Achievement targets were for 75% of students to demonstrate competency.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Implement Rubrics and define definitions

Next fall we will be fully implementing rubrics for the CTW content in both courses, as well as refining our operational definitions of critical thinking in art education.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High

### Analysis Questions and Analysis Answers

#### CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

Action plan from last year included reflecting upon the piloted resource review CTW assignment in 4200, which I did revise and assign as a CTW assignment during Fall 2010. I think it helped orient students to the level of discourse expected in these assignments, so they did a better job on the second assignment as a result. I incorporated more sophisticated questions into the undergraduate assignment during Fall 2010, based upon the results of the pilot last spring, and I was pleased with the results. In AE 4900, Spring 2011, the instructor noted a marked improvement in student performance on writing assignments. Incorporating CTW into 4900 was one of our goals for this year and I believe it has been successfully implemented and will continue to improve.

#### CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Faculty discussed our perception that, in fact, the students who have had two CTW courses did demonstrate more sophisticated skills in critical writing and analysis. Some questioned whether this was a direct result of greater emphasis on Critical Writing in the entry course, or whether this particular group just coincidentally responded to the assignments at a higher level. All agree, however, that having undergraduate students interacting in class with graduate students seems to raise the bar on achievement overall.

#### CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

In AE 4200, the two existing CTW assignments seem to be working well, but will continue to be refined each semester. In AE 4900, the instructor intends to put greater emphasis on descriptive writing during the next cycle, to accompany the gains made in critical
CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

I believe that incorporating CTW assignments into the entry level course has improved the critical thinking and writing abilities of our students and added an extra dimension to the assignments we expect them to complete. I am trying to work more closely with the instructor of the senior level course to document changes made to assignments and outcomes that result. It will be helpful to the department as a whole to see the progression of students thru these courses and reflect upon the evidence of their critical thinking skills. As we continue to refine our program, moving toward a cohort model for the undergraduate students, the CTW component will not only enhance student learning but also contribute to our efforts in program evaluation.

<td>ART 3910 ARTIST INTERVIEW (100pts) Choose an artist who you would like to interview. You should choose an artist with significant career accomplishment--regionally, nationally, internationally, or all three. Initiate contact with your chosen artist via email, phone, or through their gallery. Your interviews may be conducted in person, through email, or over the phone. Consider in advance what questions you would like to ask your artist, but be ready to adjust as your interaction with the artist develops. (Feel free to use the questions you compiled for the earlier writing assignment as part of this assignment.) Turn in a typed version of your final interview on the last day of class, during finals week. For interview formatting suggestions, please refer to the following: Interview magazine <a href="http://www.interviewmagazine.com/art/">http://www.interviewmagazine.com/art/</a> The Brooklyn Rail <a href="http://www.brooklynrail.org/">http://www.brooklynrail.org/</a> BOMB magazine <a href="http://www.bombsite.com/issues/current">http://www.bombsite.com/issues/current</a> Your interview will be graded on 1) ambition of artist choice, 2) rigor of questions, 3) appropriate formatting, and 4) accurate grammar &amp; spelling. There is no minimum or maximum length requirement. DUE DATE: last day of class</td>

</thead>
<tbody>
<tr>
<td>Studio Project Proposal Your proposal must: * outline the concept for your project by discussing the ideas behind it. Where did your idea originate? What motivates you to explore this idea through this project? Is this idea connected to your past work and, if so, how are you pushing the idea further in this project? What kind of thoughts do you want to provoke with this project? What kind of questions do you want to pose? What kind of discussion do you hope to elicit? Why is it important for you to do this work? And why do it now? * provide an art historical context for your project. What kind of work has been done in the past on the subject of your project and how does your project relate to this historical work? If you don't know, then do some research so you can address this intelligently. How does your project relate to contemporary art practice and the issues being addressed in contemporary art today? If you don't know, again, do some research so you can be informed and can address this thoughtfully. Include some discussion of current artists or projects that will influence the development of your project. Whose work are you looking at? Whose work do you want to learn more about? What is it about their work that inspires you? * briefly detail any equipment, materials and technical processes you intend to utilize to produce the work. * provide a projected timeline over the course of a semester for the production of the project. * state a goal for the completion of the project in terms of final presentation, such as the number pieces, the potential scale of the work, installation considerations, presentation needs, etc.</td>

<table>
<thead>
<tr>
<th>SLO 7: GRD 3910 History of Graphic Design</th>
</tr>
</thead>
</table>
| Assignment description exactly as the students received it: Read Chapter 6 “Modernism” from Graphic Design as Communication by Malcolm Barnard and answer study questions in the worksheet as directed. Post three possible thesis statements for your paper by Tuesday, September 21. Your topic will be whether a piece of graphic design is, or isn't, a modernist work. Write about design created 1900 or later which is not discussed by Barnard. It should be an example of graphic design (as opposed to fine art, architecture, etc.) If it is mass produced and communicates with text, it is probably graphic design. Examples of good thesis statements go beyond simple, obvious arguments: ~ Jan Tschichold's flyer for Die Neue Typographie is an excellent example of modernism, even though it has justified paragraphs and capital letters. ~ Bruce Rogers’ page from The Centaur of 1915 shows that book design continued classical forms well into the twentieth century, despite the popularity of modernism in other areas of graphic design. ~ Bradbury Thompson's Westvaco Inspirations used victorian-era engravings, but in a style consistent with modernism. Imagine another student asked you whether a design were modern or not, and you had the opportunity to share what you had just.
learned from Barnard: write a 1000-word essay describing why your piece is, or isn't, a modernist work. Turn in a hard copy of your paper Tuesday October 21. Your example will probably conform to Barnard's descriptions in some ways but not all ways – and this will form your most of your discussion. Remember that even Barnard does not have a simple, single formula that applies to all modernist work. You may need to research the designer or the client for your piece, in order to infer the creator's intent. You don't have to defend the piece you write about. Visual description (the lettering is blue, the figure is wearing a brown suit, etc.) is only necessary if it explains how the piece is, or isn't, a modernist work. Guidelines Be sure that all quoted text and all images are attributed. Quotes must be in quotation marks and sources must be cited as footnotes or endnotes. Otherwise you may be committing plagiarism, a serious offense. Plagiarism will be reported to the university and can result in remarks on your permanent record and expulsion from GSU. Attribute all ideas and information not your own, including information from the internet. Provide full information about where the image came from. Format Turn in a color reproduction of the piece you write about with your paper. Papers should be typed, double-spaced, with footnotes or endnotes. Sheets should be numbered and stapled together. Grading Criteria – Paper follows directions regarding length, format, and timeframe, cited sources, etc. – The thesis is clearly stated and selected design is appropriate for the paper, allowing you to make observations about when and why it was made and how it communicates. – Complexity: your ideas are defended in a way that takes into account the complexity of cultural and aesthetic issues. Modernism is not a simple checklist of criteria but evolved authentically in response to very complex forces. – Research goes beyond merely stating general knowledge. Research may involve consulting other design critics besides Barnard or reading historical accounts of design. – Writing craft: Graphic design gives form to the written word, and you will be expected to honor the conventions of writing. Get a trusted friend to proofread your paper before you turn it in. Run spellcheck. Edit. – Synthesis: conclusions leave the reader feeling that you have said something interesting and important. Spend time working out your conclusions and make sure they are clear and well supported. Grading rubric used to assess the assignment, as it appeared on syllabus: Projects are scored using a rubric, with 17 - 20 points = A; 13 - 16 points = B; 8 - 12 points = C; 5 - 7 points = D; 0 - 4 points = F. Criteria for evaluation are thesis, complexity, research, writing craft, and synthesis.

SLO 8: ART 4950 / Portfolio II (3D) (M: 7)

Assignment Description: Write an artist statement that summarizes the work, ideas, and interests you have discovered so far in your art-making process this year. Usually an artist's most recent work is most important to the artist, but your statement should reflect upon the many experiences you've had in general, so you may refer to your strongest works from previous semesters as well. Your artist statement is a working document because it will not have one final form. Instead, the artist statement will take many forms as you update and adapt it for various purposes over the coming year(s): graduate school applications, scholarships, future exhibitions, and grant applications. DUE DATE: last day of class

SLO 9: PHOT 4950 Portfolio II (M: 9)

ASSIGNMENT DESCRIPTION Portfolio II is the capstone course for students completing the BFA in Studio Arts with a Concentration in Photography. As the capstone course for the major, Portfolio II is designated as a Critical Thinking Through Writing (CTW) course. This means that a component of the course requires students to engage, through writing, in critical thinking in relation to their studio work. The University defines critical thinking through writing as: “wide range of cognitive skills and intellectual dispositions needed to effectively identify, analyze, and evaluate arguments and truth claims; to discover and overcome personal prejudices; to formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about what to believe and what to do.” (Bascham, Irwin, Nardone & Wallace, Critical Thinking: A Student's Introduction (McGraw-Hill, 2005, p. 1.) The CTW component of this course is addressed in a written artist statement that supports the final portfolio work. The CTW writings and the final artist statement count for 20% of the final grade. Your artist statement must use clear language with proper grammar, spelling and punctuation. It should convey the essential ideas of your work and how those ideas are embodied in the work. A good artist statement will provide insight into the work and further the viewers’ understanding of the artist's connection to the work. You will have an opportunity to write two drafts in order to arrive at a strong statement at the end of the course… No further opportunities for improvement will be available after the third submission.

Other Outcomes/Objectives

O/O 1: Assignment (M: 1, 5)

Assignment Description

Measures, Targets, and Findings

**Georgia State University**

**Assessment Data by Section**

**2010-2011 CTW Biology**
Mission / Purpose

Critical thinking is the human mental process of developing conclusions that proceed logically from the study of evidence. Specifically in the biological sciences, critical thinkers analyze the quality and relevance of experimental results to determine whether they meet the goals of scientific studies on life processes. Critical thinkers in biology also use conclusions drawn from empirical evidence to formulate new scientific questions and ultimately, they design and implement new experiments to answer such questions. Thus, biologists with critical thinking skills apply various forms of the scientific method appropriately.

Goals

G 1: Improve writing skills
Students will become better writers by organizing complex biological concepts into written form

G 2: Improve reading skills
Students will become better critical readers as a result of improving their writing skills

Student Learning Outcomes/Objectives

SLO 1: Lab Report (M: 1, 2)
Students will organize a written report communicating their experimental findings. The reports parallel the structure that is conventionally used in professional journals.

Measures, Targets, and Findings

M 1: Written lab report rubric (O: 1)
The following rubric will be used to grade reports. For every concept that is not included in the report, 0.1-0.5 points will be deducted (for a 10 point report). I. Introduction (2 points) a. _____Includes background b. _____Citations were appropriate c. _____Is not a summary of methods d. _____Does not read like a summary of methods e. _____Relevance of study f. _____Does not read like protocol intro g. _____Moves from a broad to specific h. _____Includes a hypothesis II. Methods (2 points) a. _____Passive past tone b. _____Appropriate detail c. _____Only mentions own experiments d. _____Does not read like a protocol or recipe e. _____No numbered lists f. _____Organized into sections III. Results (2 points) a. _____Should include text which highlight important trends/observations and are NOT a part of the captions or legends!! b. _____Figures/Tables are cited (i.e. Table 1) c. _____Considers all data sets d. _____No interpretations or conclusion IV. Discussion (2 points) a. _____Uses data to draw conclusions b. _____Each analysis states expected results c. _____Includes work cited at the end with appropriate literature d. _____All interpretations are merged into a set of overall conclusions e. _____Scientific premise to all conclusions V. Figures/Tables (2 points) a. _____Appropriate labeling (axes, descriptive titles, column headings, gel lanes) b. _____Should include original captions (communicates methodology used to generate data. Concise, not as detailed as methods) c. _____Size should be big enough to read, but not awkwardly large d. _____Should function to simplify interpretation of data e. _____Appropriate numbering scheme (i.e. Table 1, Figure 1, etc.) f. _____Contains number, title and caption g. _____Shows only relevant data that is discussed in discussion VI. General a. _____Grammatical issues GRADING (points deducted/section deducted from) Intro: Methods: Results: Discussion: Source of Evidence: Written assignment(s), usually scored by a rubric

M 2: Scientific Report (O: 1)
Students were asked to organize a report communicating their experiments. The structure paralleled that of professional manuscripts.

Target for O1: Lab Report
85% of the class improved by 15% points over the course of the semester

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Standardize Rubric for all CTW faculty according to feedback
All of the CTW instructors for Cell & Mol biology are due to meet in August to discuss restructuring the rubric for the reports so that the students are more closely aligned to the course objectives (with less emphasis on grammatical corrections).

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Projected Completion Date: 09/2011
Responsible Person/Group: Frank Cruz

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
This year we offered our second CTW course, BIOL4980 - Senior Seminar. It was taught in both Fall and Spring Semester by Dr. Therese Poole and Dr. Teryl Frey. Students reported feeling more comfortable with analyzing primary literature and presentations by
CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Students are able to analyze data from experiments more proficiently. They are also better able to construct appropriate graphs and figures. In addition, they are also able to better recognize good writing/presenting from poor writing/presenting. Students are better able to write coherent paragraphs that are logical as well as knowing when to begin a new paragraph instead of just putting all of the ideas into one big paragraph.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

We have nearly 2000 majors so we have many sections of CTW courses. One of the major concerns is whether all of the different sections and courses are "equivalent" in their rigor as it regards the CTW paradigm. We want to make sure that all of the instructors are appropriately trained and that they are willing to dedicate that time it takes to properly implement their CTW course.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

The biggest impact on students is that some of the more mediocre students are really able to increase their skill levels, which will serve them well in the "real world". The biggest impact on the faculty is that those instructors that were already using a lot of writing and critical analysis in their courses feel appreciated for their efforts and rewarded by the fact that they only have 25 students in their CTW course. (most of our 3000 level classes have 50-75 students and most of our 4000 level have 48 students)

---

**Georgia State University**

**Assessment Data by Section**

**2010-2011 CTW Birth through Five**

As of: 12/12/2016 04:10 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

---

**Mission / Purpose**

The Birth to Five program in the Department of Early Childhood Education considers critical thinking to be an important aspect of teacher education. We consider critical thinking to be a disposition toward thoughtful consideration of detail, evaluation of evidence, analysis of broad perspectives, and synthesis determined by a careful mix of cited and subjective conclusions. In teaching (birth to kindergarten), critical thinking is essential for understanding children's development and learning, evaluating teaching methods, advocating for "best practices," considering student assessment data, and expanding theory and practice to account for a variety of socio-cultural influences on children's development and learning.

**Goals**

**G 1: Analysis**

Students will analyze academic articles by examining the arguments and evidence put forth by the author(s).

**G 2: Application of Academic Knowledge**

Application Students will critical thinking and apply the readings and in-class experiences to new situations that require thoughtful analysis, evaluation and application.

**G 3: Develop a Personal Philosophy**

This assignment is designed to assist preservice teachers in developing their personal philosophies about children's early literacy and language development. Students are to base their philosophies off of academic course content (i.e., readings and lecture). Students' emergent literacy and language philosophies focus on both how children develop these skills as well as the best ways to promote such learning. Specifically, students are encouraged to detail pedagogical approaches to assist children in achieving strong language and literacy achievement.

**Student Learning Outcomes/Objectives**

**SLO 2: Language and Literacy Philosophy (G: 3) (M: 3)**

Students will critically reflect on their beliefs and experiences surrounding literacy and language development and pedagogy. They will utilize course material (i.e., readings, lectures, practicum experiences and in class experiences) to develop an insightful language and literacy philosophy. Full Description In order to teach literacy, teachers must be readers and writers. We need to have opportunities as professionals to examine our own lives, our own literacy practices, and to do so in a context that helps connect these experiences to our roles as teachers and learners. To help you begin making these connections, you will be observing structured learning environments in the community, reading scholarly books and articles, and adding to your understand through course lectures and discussions. Your emergent literacy and language philosophy is a 2-5 page essay describing your philosophy about literacy and language instruction for children from birth to age five. As you write your philosophy, think about your own educational experiences, beliefs, and understanding related to the way literacy and language should be taught and the way literacy and language are best learned. Think about your beliefs related to how children become literate and support your thinking with examples and research.

**General Education/Core Curriculum Associations**

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.
Measures, Targets, and Findings

**M 3: Emergent Literacy and Language Philosophy (O: 2)**

To teach literacy, teachers must be readers and writers. We need to have opportunities as professionals to examine our own lives, our own literacy practices, and to do so in a context that helps connect these experiences to our roles as teachers and learners. To help preservice teachers begin making these connections, they will participate in observing structured learning environments in the community, reading scholarly books and articles, and adding knowledge through course lectures and discussions. The emergent literacy and language philosophy is a 2-5 page essay describing preservice teachers’ philosophy about literacy and language instruction for children from birth to age five. As students write their philosophy, they are encouraged to think about their own educational experiences, beliefs, and understanding related to the way literacy and language should be taught and the way literacy and language are best learned. Specifically, teachers are encouraged to think about their beliefs related to how children become

### Other Outcomes/Objectives

**O/O 1: Critical Thinking and Application of Material (G: 2) (M: 2)**

Students will critically reflect on course material (i.e., readings, lectures, and in class experiences) and apply this knowledge to new situations that require thoughtful analysis, evaluation and application. Professional Reflection/Quick Writes provide the opportunity to use critical thinking and apply the readings and in-class experiences to new situations that require thoughtful analysis, evaluation and application. Each Quick Write will ask you to take informed and supported stance on a current issue, professional dilemma or new situation that you will encounter as an early care and education professional. You will receive a “writing prompt or scenario” for each Quick Write. For example, a prompt may ask you to write a letter to your legislator supporting a childcare funding bill. The first draft of each Quick Write will be completed in class over 20-30 minutes. You may use a laptop computer to create a word processed document in class or you may submit a neatly handwritten draft. The draft will be turned in to the instructor who will use the rubric below to provide feedback and suggestions for improvement directly on the draft with the aim of deepening your thinking about the topic. Feedback may include suggestions about how/where to add examples, use citations, more directly address the prompt, evaluate and acknowledge your biases and subjectivities, as well as edits for spelling, grammar, etc. You will resubmit the second draft to the instructor by an assigned due date (see syllabus). A final grade will be awarded to the second, resubmitted draft. Each Final resubmitted draft of the original Quick Write should be a minimum of 1 double-spaced page (12 font) and will be worth 10 points.

- **General Education/Core Curriculum Associations**
  - 1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.
  - 3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

- **Institutional Priority Associations**
  - 2 Student promotion and progression

- **Standard Associations**
  - 1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

- **Strategic Plan Associations**
  - 1.3 Implement an Undergraduate Signature Experience.

---

**M 2: Professional/Ethical Quick Write Rubric (O: 1)**

Criteria

- **Excellent** (2 points) Satisfactory (1 points) Unsatisfactory (0–5 points) Purpose: Fully reflects on the issue/critically discusses the dilemma posed. Reasonably reflects on the issue/generally discusses the dilemma posed. Surface treatment of the issue at hand and/or failure to address dilemma/problems posed. Support & Citations: Strong use of course-related texts to support stance; uses citations appropriately. Statements drawn from readings are over generalized or under analyzed; uses citations haphazardly. Unjustified assumptions and/or opinions; little evidence that class topics/texts are understood; lack of citations or incorrect citations. Evidence: Uses specific examples and/or strategies to support stance. An example or strategy was used to support stance. No examples or strategies used to support stance. Communication: Easy to read; avoids meaningless jargon; writer clearly wants to engage reader. Some errors make it harder to read; writer sometimes shows awareness of reader. Errors make reading difficult; writer shows no awareness of reader and makes no attempt to engage reader’s interest. Inquiry & Flexibility: Considers complex alternatives; creativity applies ideas to new situations. Differing views are considered; some evidence ideas are applied to new situations. Other views are not understood or considered; does not apply ideas to new situations. Total Score: /10

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Critical Thinking and Application of Material**

Students will apply their in class knowledge in generating a convincing argument. By the end of the semester, students will consistently perform in the excellent range on assignments, achieving a score of 8/10 (80%) or higher.
Analysis Questions and Analysis Answers

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Constrained/Unconstrained Action Plan

Student performance on this objective was high. The utilization of class time and the opportunity to receive feedback on drafts assisted students in demonstrating strong analysis skills. For future assignments, the opportunities to receive feedback on their drafts will be continued. However, as currently implemented, the provision of faculty feedback on multiple drafts presents a significant time and resource challenge to the course instructor. To help alleviate some of these challenges, opportunities for peer feedback and discussion will be offered to allow students opportunities to interact with and learn from peers through the writing process.

Emergent Language and Literacy Philosophy Evaluation

Student performance on this objective was high for the first semester of implementation. The utilization of class time and the opportunity to receive feedback on drafts assisted students in thinking and writing about their emergent literacy and language development philosophies. In addition, students’ practicum experiences and work placements allowed them to make clear connections between theory and practice. Although students did rather well on this assignment, we will be studying students’ writing as part of the emergent literacy and language philosophy assignment. We will look at first, second and third drafts to determine the amount of support, feedback and length of time required to meet our performance objectives. In addition, we wonder if more time to reflect might improve the quality of student work.

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

We made considerable progress toward improving the efficiency and clarity of our CTW goals during 2009-2010. This progress was made in re-envisioning assignments and rubrics for our Language, Literacy, and Cognition course (BTFV 4370) as well as making small, stream-lined, changes to our Professional Development and Ethics (BRFV 3250) assignments. We worked in collaboration with our counterparts in the Early Childhood Education, Bachelors in Education program in re-developing our B-5 assignments. Specifically, based upon student performance and feedback from the previous year, we deleted the constrained/unconstrained assignment from the B-5, Language, Literacy and Cognition course and we added an assignment focusing on teachers' Emergent Literacy and Language Philosophies. Making this change has allowed our students to critically think about the important skills associated with children’s early literacy and language learning and reflect on the type of pedagogy that best promotes such development.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

We retooled our one assignment for BRFV 4370 (Language, Literacy, and Cognition) in order to improve students comprehension of the course material and to allow for additional critical thinking and writing opportunities. Student learning on this assignment is evident in students’ performance from first to last draft on their Emergent Literacy and Language Philosophies. Students significantly improved the quality of their drafts as evidenced by an overall improvement in scores during the redrafting process. In fact, students, on average progressed approximately 40% points during this process. Learning was evident in students’ responses to the Professional and Ethical Practice Quick Write assignments. Students made significant progress from first drafts to final drafts. This was evidenced by 100% of students achieving assessment targets (a 9 out of 10) on the quick write assignments on their final drafts. In addition to change over time in students’ performance on CTW assignments, course instructors have noted that students have
demonstrated marked improvements in their general writing abilities and thoughtfulness in other, non CTW, assignments. Although anecdotal in nature, this information is encouraging and appears to suggest that students may be applying knowledge and skills gained in CTW assignments to other instructional contexts and tasks.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**

Although significant retooling of the CTW BRFV 4370 assignments took place for 2010, it was still evident from student work that students would have benefited from additional time writing and thinking about their language and literacy philosophies. Because of this perceived need, considerable discussions have taken place regarding how we can allow students more time to think and write around these issues. One constraining factor associated with this course is the fact that it is offered during a condensed summer semester. Summer semester may not be the best time to implement this CTW course as students do not appear to have ample amounts of time to reflect, write, and revise drafts of their papers. As a BRFV faculty, we are currently having discussions around ways that we can address this important issue.

**CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?**

The BRFV CTW courses have played a critical role in helping us determine the activities that contribute to the skills and dispositions that we expect a teacher of young children to possess. CTW has impacted the way that we think about student development and achievement. It has also positively impacted our assessment practices. For example, most of the assignments in our BRFV courses utilized rubrics similar to those that are used in CTW courses. This has allowed us to more effectively conceptualize and document student learning. We also believe that it has assisted students’ learning. As noted earlier in this report, the changes that we have made during the previous academic year primarily relate to our BRFV 4370, Language, Literacy and Cognition course. We have revamped key assignmnet associated with BRFV 4370, Emergent Literacy and Language Conceptualization, in consultation with the CTW faculty. We are currently having discussions around these issues. One constraining factor associated with this course is the fact that it is offered during a condensed summer semester. Summer semester may not be the best time to implement this CTW course as students do not appear to have ample amounts of time to reflect, write, and revise drafts of their papers. As a BRFV faculty, we are currently having discussions around ways that we can address this important issue.

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We have revised a key assignment associated with BRFV 4370. This assignment, entitled Emergent Literacy and Language Conceptualization, encourages students to critically reflect on and write about their beliefs and experiences with young children’s language and literacy development. We changed this key assignment because the previous assignment was too long and constrained students' thinking, required them to read a cutting edge research article about children's language and literacy development, and many students significantly struggled with the complexity of the reading as well as the complexity of the constructs discussed. This new assignment is better aligned with our professional standards and we believe it will be of greater impact to students’ classroom practices. Although we are currently discussing ways to allow students additional time and support to complete this assignment, our impressions of the results from this new assignment in BRFV 4370 is that it is promoting critical thinking through writing outcomes.

---

**Mission / Purpose**

The Bachelor of Interdisciplinary Studies (BIS) degree provides educational opportunities not available through the existing, traditional degree programs. The purpose of the program is to offer students an avenue by which they may focus on a central academic issue, topic, or area of inquiry and study it from the perspective of two or more academic disciplines (i.e., it by taking courses on it from several departments in the College of Arts & Sciences or other colleges in the university). Thus, BIS students do not graduate with "major" in one academic department; instead they graduate with an "area of concentration" (issue or topic of interest) comprised of courses offered by several GSU departments. Students may apply for admission to one of the 10 BIS programs that have already been created by College of Arts & Sciences faculty: Arts Administration-Speech/Theatre, Asian Studies, Classical Studies, Community Studies, Environmental Science, International Studies, Italian Studies, Law and Society, Middle East Studies, and Theatre. Alternatively, an individual student, in consultation with a faculty adviser, may tailor an interdisciplinary program of study that meets his or her particular educational needs, desires, and interests. With respect to CTW assessment and review, it is not feasible to evaluate every BIS student's effort and progress, mainly because they are enrolled in many different CTW courses and often comprise a tiny fraction of those classes' students. In other words, other than in the Theatre program and BIS 4995 courses, there are few CTW classes that enroll only BIS students, instead BIS students usually are mingled in various departments' CTW courses along with the regular BA and BS degree students. Therefore, the descriptions and evaluations in this CTW report are based on a sample of BIS students enrolled in several different BIS programs, who have taken several different CTW courses, offered by several different academic departments. In other words, it's truly a mixed batch of students -- with diverse interests, talents, and classroom experiences. Our purpose, in this CTW report, is to see how well they are accomplishing the "interdisciplinary" component of their critical thinking development, and not in judging it on the basis of the disciplinary criteria used in the particular CTW courses they have taken (the latter is more the responsibility of their CTW course instructor). The one exception to this is the Theatre program, which maintains its own CTW courses filled primarily with BIS Theatre majors. Those students' interdisciplinary competencies are included in the overall report, but the program also has attached an individual report on how its students meet specific CTW needs within the discipline. The Bachelors of Interdisciplinary Studies program acknowledges and respects the definitions of critical thinking affirmed by the University and its individual departments. A common thread in these definitions presents critical thinking as an ability to effectively identify, formulate, analyze, and evaluate arguments, hypotheses, evidence, and truth claims or to use these skills to solve problems. Beyond that, the BIS program seeks to imbue its students with two other elements of critical thinking. These are: (a) to understand the logic, perspectives, terminology, and analytic methods of more than one academic discipline, (b) to see how they can be mixed, or overlap with, another discipline, and (b) to be able to apply the "tools" of more than one discipline (i.e., their logic, perspectives, terminologies, and methods) to draw reasonable conclusions and make sound judgments based on available information and/or empirical evidence. As the largest BIS program, Theatre has its own definition of Critical Thinking: As a multidisciplinary art form, theatre engages students in a variety of critical thinking activities, including the synthesis of
Goals

**G 1: Critical Thinking in Theatre**
Students completing the CTW courses in theatre will be able to: Analyze play scripts in terms of the meanings created by their authors, exercising a sophisticated ability to distinguish between what is in the script and their own unfounded assumptions. Evaluate critical and historical source materials in order to determine their relevance to scripts and productions. Synthesize materials from a variety of disciplines to determine their relevance to theatrical theory, history, and practice. Formulate research questions related to the study of scripts for production. Apply script analysis and the evaluation of critical and historical source materials to solving specific research and production problems related to play scripts. Evaluate productions and production plans based on clear critical and historical criteria. Apply critical thinking skills in reporting their research findings in oral and written form. Apply critical thinking skills in writing their research and analysis on stage as actors, directors, and designers.

**G 3: Analysis**
Students in BIS courses will analyze theories, concepts, facts or other information from the perspective of multiple disciplines.

**G 4: Application and Evaluation**
Students in BIS courses will apply the ideas presented in their courses to new contexts in two ways: (a) by experiencing and judging how applicable and/or relevant the concepts, theories, and data from one discipline are in or for another discipline (i.e., seeing the compatibility, or lack thereof, of concepts across such fields as history, cultural anthropology, sociology, cultural geography, environmental studies, political science and law); (b) by observing or testing the "fit" between the explanations, accounts, theories, and information gained in their classes and reading assignments and what they experience in their lives or in the research projects they engage in as part of their class.

---

**Student Learning Outcomes/Objectives**

**SLO 1: THEA 4070 Research Paper (G: 1) (M: 1, 2)**
Students will demonstrate effective communication through a paper based on their research into a specific literary or historical topic. The paper will be organized around a clear thesis statement or question, support this statement or address this question in a logical manner and with an appropriate level of detail and draw logical conclusions based on an analysis of materials from a variety of sources and disciplines. Students will demonstrate organizational skills of presentation without distracting grammatical errors or lapses in academic language or citation mechanics.

**SLO 7: THEA 3100 Research Paper (M: 7, 8)**
Students will demonstrate their abilities to analyze and evaluate critical source materials by creating a concise summary of the interpretations underlying two different academic articles analyzing a specific play and then synthesize their research to create a comparison of those two interpretations. Students will demonstrate organizational skills of presentation without distracting grammatical errors or lapses in academic language or citation mechanics. Students first submit a list of the two journal articles to be used in the paper, then submit a draft for instructor review before turning in the final paper.

---

**Other Outcomes/Objectives**

**O/O 2: In Class Writing Exercise (M: 6)**
In History 3000, BIS students demonstrated analysis through an in class writing assignment: In class writing exercise on The Return of Martin Guerre Consider the differences between the film and book versions of this story. What are the strengths and weaknesses of each? What can you learn from one that you could not learn from the other? [Preview Formatting]

**O/O 3: Museum Exhibit Critique (M: 5)**
In Geog 4768-Hist 4320-Soci 4279 (Metropolitan Atlanta) students demonstrate ability to analyze, apply, and evaluate in museum exhibit critique assignment: Go to Atlanta History Center and view the "Metropolitan Frontiers" exhibit. Then write a 4-5 page paper in which you discuss and critique the content, design, and effectiveness of this exhibit, being sure to view it in light of class discussions and the book "Atlanta: An Illustrated History."

**O/O 4: Demographic Assignment**
Students in Metropolitan Atlanta class demonstrate ability to analyze data by completing a demographic assignment. The assignment requires them to obtain population, social, and economic data on Atlanta and several other metropolitan areas, and/or several counties in metropolitan Atlanta to compare/contrast them, to see how they compare to data from 20 or 30 years ago, and to draw conclusions about these changes and contrasts.

**O/O 5: Analytical Reaction Essay (M: 4)**
In Speech 3250, BIS students demonstrate analysis by completing an analytical reaction essay. Analytical Essay assignment description: Write an essay in which you demonstrate what you have learned from the textbook and apply those things elsewhere. You must make reference to the outside text (video or article) and explain its point. You must incorporate an issue or concept from the course (i.e., show how it is related to Persuasion). You must show how it connects to other things (examples from your world, something you've seen, studied, etc.). Questions to ask yourself: a. What is the author trying to say? b. What is the main idea? c. Why do you think that the article or video was assigned? d. What is the connection to the course? e. What other connections can I make? f. Do I agree or disagree with the argument? g. Is this generalizable? A strong paper will include solid analysis, go beyond simple summary to demonstrate learning, and express a real ownership of the ideas.
### Measures, Targets, and Findings

#### M 1: THEA 4070 Research Paper (O: 1)

Students complete a research paper of 10-12 pages, prove a thesis focused down from broad research topic in theatre. The assignment requires four different submissions: 1) A one-page report (20 points) that including focused topic and proposed thesis statement, stating what the student will look for (evidence) to support his or her claim. 2) An annotated bibliography, in MLA style, with 15 sources. No more than 5 of these sources may be available exclusively as electronic media. 3) A complete first draft with a worked cited page. 4) The final draft of the paper.

Source of Evidence: Writing exam to assure certain proficiency level

#### M 2: Findings for THEA 4070 (O: 1)

We would consider four of the eight rubrics the most relevant to critical thinking through writing: Argumentation/Critical Thinking, Evaluation/Development, Knowledge and Structure. Of those Knowledge was consistently the strong point in the research papers, with an average of 4.9. Development came in second, with an average score of 4.1. Third was Structure, with an average of 3.6. Argumentation/Critical Thinking came in the lowest, with a 3.5 average. The overall CTW average for the 27 papers turned in was 4.025. These are not good numbers and reflect a definite need to rethink the CTW component of this class. Unlike THEA 3100, which I had the opportunity to teach for the first time this past spring and build around the needs of a CTW course, THEA 4070 has been in my schedule for several years, and I feel I am still struggling to incorporate CTW materials without losing course content. This is particularly distressing when one compares scores for the first microtheme, application of concepts from Sue-Ellen Case's "Classical Drag" to The Oresteia, to the final draft of the research paper. That comparison suggests that students actually declined in CTW skills during the semester, with an overall drop of .3083 in the CTW average and drops of .73 in Structure and .34 in Development. The only area in which students improved was Knowledge, with an overall improvement of .01. Although the decline in structuring skills can be at least partially excused as a product of the difference in the two assignments, the overall drop in the CTW average needs to be addressed. More encouraging is the improvement between the first and final drafts of the research paper. Students improved .225 overall, with particularly significant gains in Argumentation/Critical Thinking (.722) and Development (.456). Nonetheless, these numbers need to be improved. Last year, I suggested targets of 4.1 in the four key rubrics, 4 in Argumentation/Critical Thinking., 4.2 in Development, 4.75 in Knowledge and 3.5 in Structure. The only one of these achieved was Knowledge, which actually reached 4.9 overall. I will be keeping the same targets for 2011-2012 and exploring additional CTW work to do in class that, I hope, will help improve these skills.

#### M 3: Rubric

History Rubric

Source of Evidence: Written assignment(s), usually scored by a rubric

#### M 4: CTW for BIS students: Speech 3250 (O: 5)

BIS students' progress in this CTW class was assessed through their written analytical essays and application of the evaluation rubric shown here: Speech's Definition of Critical Thinking In Speech, "critical thinking" is the art of actively producing and analyzing arguments for particular audiences in specific cultural and historical contexts. Critical thinkers are able to construct and assess arguments in their cultural situatedness; evaluate stated or unstated claims and their supporting forms; recognize the creation of knowledge through symbol systems; and converse and pose questions about the production of knowledge through the communicative process. Rubric to Use for CTW Assessment: Not at All Extremely Recognizes the cultural context 1 2 3 4 5 Arguments clearly constructed 1 2 3 4 5 Arguments adapted to that cultural context 1 2 3 4 5 Evaluates data/supporting materials effectively 1 2 3 4 5 Evaluates claim/conclusions effectively 1 2 3 4 5

Source of Evidence: Written assignment(s), usually scored by a rubric

#### M 5: CTW for BIS Students: Geog4768/His4320/Soci4279 (O: 3)

Students in this course were evaluated in CTW via several written assignments (e.g., museum exhibit critique, essay exams, demographic project, and term paper). A rubric used in CTW evaluation is shown below. **HOW MANY STUDENTS IN THIS COURSE FIT INTO EACH CATEGORY?** Poor Good Very Good Excellent The demonstration of their understanding of course research reports/articles/books/theories was: Their analyses, interpretations, or syntheses of these research reports/articles/books/theories was: Their ability to articulate coherent and logical arguments on course material was: Their ability to use results of their analyses to formulate new research questions and/or to extend analyses in new directions was:

Source of Evidence: Written assignment(s), usually scored by a rubric

#### Target for O5: Analytical Reaction Essay

The expected achievement target for BIS students is that at least 80% of the students in a CTW class will obtain a grade in the two highest evaluation levels used in the course’s last CTW written (and/or oral, in some cases) project. Given the way many CTW rubrics are designed, this means, quite often, scoring a 4 or 5 on the evaluation rubric used for a particular project or assignment. The rubric used in Speech 3250’s analytical reaction essay is shown here:

#### Target for O3: Museum Exhibit Critique

The expected achievement target for BIS students is that at least 80% of the students in a CTW class will obtain a grade in the two highest evaluation levels used in the course’s last CTW written (and/or oral, in some cases) project. Given the way many CTW
rubrics are designed, this means, quite often, scoring a 4 or 5 (or a "very good" or "excellent") on the evaluation rubric used for a particular project or assignment.

**M 6: CTW for BIS students in Hist 3000 & PoS 3800 (O: 2)**

BIS students in these courses were few in number and were evaluated for CTW along with all non-BIS students (the vast majority) via written assignments. For a description of these assignments and the rubrics or other measures used to assess student progress please refer to the CTW reports prepared by the CTW Ambassadors from the departments that offer these courses.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: In Class Writing Exercise**

The expected achievement target for BIS students is that at least 80% of the students in a CTW class will obtain a grade in the two highest evaluation levels used in the course's last CTW written (and/or oral, in some cases) project. Given the way many CTW rubrics are designed, this means, quite often, scoring a 4 or 5 (or a "very good" or "excellent") on the evaluation rubric used for a particular project or assignment.

**M 7: THEA 3100 Research Paper (O: 7)**

Students will choose a play from the list supplied and write a five page research paper comparing two interpretations of the play found in academic articles located in journals in the GSU Library or through an on-line journal search using Galileo. These are not to be reviews, but rather critical analyses of the works as theatrical art. The list of plays on which you may write is: David Henry Hwang--Golden Child, Tony Kushner--Angels in America: Part One--Millennium Approaches, Eduardo Machado--Broken Eggs, Paula Vogel--How I Learned to Drive, Oscar Wilde--The Importance of Being Earnest, Tennessee Williams--The Glass Menagerie, August Wilson--Fences

Source of Evidence: Written assignment(s), usually scored by a rubric

**M 8: Findings for THEA 3100 (O: 7)**

We would consider four of the eight rubrics the most relevant to critical thinking through writing: Argumentation/Critical Thinking, Development, Knowledge and Structure. Of those Knowledge was consistently the strong point in the research papers, with an average of 5. Development came second, with an average score of 4.928. Third was Structure, with an average of 4.519. Argumentation/Critical Thinking came in the lowest, with a 4.333 average. In part this reflects a pitfall of the assignment—the temptation to summarize everything in each article, which in a five page paper makes it impossible to offer evidence in support of each element of the article’s interpretation. The overall CTW average for the 27 papers turned in was 4.694. In terms of improvement from first to final draft of the paper and overall from first microtheme to final research paper, the greatest growth was in Argumentation/Critical Thinking, which improved 1.368 over the course of the semester and .458 between first and final draft. Structure would seem to have deteriorated overall, with a drop in .14 in average score, but that would be more a reflection of the difference between a microtheme simply requiring the student to state and support an opinion (is Freud right in suggesting that the timeless appeal of Oedipus Rex is a result of its reflection of a basic psychological conflict shared by all people) and a research paper requiring the careful synthesis of two complex interpretations. Between first draft and final paper, Structure improved .644, more than any other rubric. Our target should be an average of 4.75 in the four key rubrics, 4.5 in Argumentation/Critical Thinking, 5 in Development, 5 in Knowledge and 4.75 in Structure. One possible avenue for this might be the assignment of a scholarly article on one of the six plays read by the class as a whole so that students are required to discuss that specific interpretation.

Source of Evidence: Written assignment(s), usually scored by a rubric

---

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Action Plan for Theatre 2010-11**

DEPARTMENTAL 1-Revise the definition of critical thinking in theatre to include an interdisciplinary element in keeping with our position as one of the B.I.S. programs. 2-Provide basic CTW training for all non-visiting faculty so that they will have sufficient awareness of the program and CTW procedures to step into CTW classes when necessary. 3-Set up a twice-yearly review of student written work using CTW rubrics to evaluate the overall progress of theatre majors as they go through the program. THEA 3100--A specific action plan for this course is difficult at present as we are changing the faculty assignment, which will lead to a general overhaul of the class. The goal will be to do this within the parameters of a CTW course, which means using rubrics for the evaluation of student work and the use of at least once written assignment submitted in both draft and final form. I will also attempt to use this class to instill in the students a definition of critical thinking in theatre that both includes its interdisciplinary nature and allows for a consideration of the different ways in which writing informs our work as both scholars and artists. THEA 4070--The main action plan for this class is to make the microtheme assignment more effective in improving students’ CTW skills. This will include: 1-Incorporating microtheme prompts within classes on the plays covered so that we can discuss issues related specifically to the CTW rubrics. 2-Designating specific microtheme topics as revisable, with students required to use the teacher's comments and rubric rankings to re-write their microthemes. 3-Revising or completely changing microtheme prompts for which students consistently score poorly on Argumentation/Critical Thinking and Appropriateness. To accommodate this, the peer review assignment may have to be cut back or dropped.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

**Add Metropolitan Atlanta course**

We will work to add the Metropolitan Atlanta course to the list of BIS available courses. This class has been piloted as BIS for the last year, and we will add it officially starting in the fall.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High

**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this
Goals

Mission / Purpose

The purpose of the CTW component of Business Analysis is to help students develop the "wide range of cognitive skills and intellectual dispositions needed to effectively identify, analyze, and evaluate arguments and truth claims; to discover and overcome ill-founded presuppositions" ["personal prejudices" in the original]; to formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about what to believe and what to do." (Bassham, Irwin, Nardone & Wallace, Critical Thinking: A Student's Introduction (McGraw-Hill, 2005) page 1.) "Personal prejudices" in the original document has been changed to "ill-founded presuppositions" since I doubt many of the students have "personal prejudices" in the usual sense of the phrase about the subject matter of this course, but there will be times that initial guesses about things may need to be discarded as students delve deeper.

G 1: Critical Thinking Skills and Processes

Students graduating with a major in Managerial Sciences in the Business Analysis concentration will be able to apply critical thinking skills and processes with addressing problems in the field.

G 2: Effective Writing Skills

Students graduation with a major in Managerial Sciences and a concentration in Business Analysis will be able to effectively communicate their decision processes and conclusions on Business Analysis problems in the written format used in contemporary organizations.
**Student Learning Outcomes/Objectives**

**SLO 1: Problem Identification (G: 1) (M: 1)**
Students will be able to identify correctly the nature of a problem that an organization is facing that is amenable to a business analysis recommendation.

Relevant Associations:

**SLO 2: Choice of Analytical "Tools" (G: 1) (M: 1)**
Students will be able to identify the proper, established business analysis tools and skills for addressing the identified problem.

Relevant Associations:

**SLO 3: Application for Analysis (G: 1) (M: 1)**
Students will be able to apply the proper, established business analysis tools and skills to the identified problem.

Relevant Associations:

**SLO 4: Drawing Conclusions from Analysis (G: 1) (M: 1)**
Students will be able to draw a conclusion from among the identified viable alternatives that best addresses the identified problem.

Relevant Associations:

**SLO 5: Written Process Communication (G: 2) (M: 1)**
Students will be able to communicate, in writing, the process of critical thinking that they used in arriving at the recommendation made for the identified problem.

Relevant Associations:

**SLO 6: Written Communication of Conclusions (G: 2) (M: 1)**
Students will be able to communicate, in writing, the basis for their conclusion relative to the other alternatives reasonable presented for the identified problem.

Relevant Associations:

**Measures, Targets, and Findings**

**M 1: Problem Solving Memos (O: 1, 2, 3, 4, 5, 6)**
In this course students will be asked to write effective business memoranda addressing a problem that requires the systematic application of the tools of analysis developed in this course. Students will do an initial analysis early in the semester. Following a review on both the merits and the effective communication of the student's critical thinking and writing skills in the memorandum, the student will be asked to re-write the memorandum addressing the issues raised. The second memorandum will then be resubmitted and again, in addition to being graded on the merit of the assignment, the student will be required to attend a feedback session with a CTW ambassador or writing consultant on how to further improve the paper. The syllabus in which these assignments are set out, the actual assignments used, and the rubric used in assessing the assignments are set out in the Document Repository.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Problem Identification**
Students will achieve a class average that exceeds a 3.0/4.0 on the second criterion in the rubric for problem. With respect to the distribution of scores, there will be no more than 5% of student that will be below 2.0 and no more than 30% of students will be below 3.0 on this measure.

**Findings 2010-2011 - Target: Partially Met**
The average score on this dimension was 3.0 on the second iteration of the assignment. No students were below 2.0 and 25% (3/12) were at 3.0.

**Target for O2: Choice of Analytical "Tools"**
Students will achieve a class average that exceeds a 3.0/4.0 on the third criterion in the rubric for problem. With respect to the distribution of scores, there will be no more than 5% of student that will be below 2.0 and no more than 30% of students will be below 3.0 on this measure.

**Findings 2010-2011 - Target: Met**
This element came out strong after the second iteration, but was weak on the first version. Students seemed to make large assumptions about what the reader understood about the tools in Excel for analysis and about how this overcomes cognitive bias. The average score on this dimension was 3.3 on the second iteration of the assignment. No students were below 2.0 and 8.3% (1/12) were at 3.0.

**Target for O3: Application for Analysis**
Students will achieve a class average that exceeds a 3.0/4.0 on the fourth criterion in the rubric for problem. With respect to the distribution of scores, there will be no more than 5% of student that will be below 2.0 and no more than 30% of students will be below 3.0 on this measure.
Findings 2010-2011 - Target: Met
The average score on this dimension was 3.0 on the second iteration of the assignment. No students were below 2.0 and 17% (2/12) were at 2.0.

Target for O4: Drawing Conclusions from Analysis
Students will achieve a class average that exceeds a 3.0/4.0 on the fifth criterion in the rubric for problem. With respect to the distribution of scores, there will be no more than 5% of student that will be below 2.0 and no more than 30% of students will be below 3.0 on this measure.

Findings 2010-2011 - Target: Partially Met
Students could report the conclusions of the software, but they had difficulty expressing the results in the larger context of the decision. Even with the data outputs students had a hard time mixing the data and the prose in making the recommendations. The average score on this dimension was 3.0 on the second iteration of the assignment. No students were below 2.0 but 33% (4/12) were at 2.0.

Target for O5: Written Process Communication
Students will achieve a class average that exceeds a 3.0/4.0 on the first criterion in the rubric for problem. With respect to the distribution of scores, there will be no more than 5% of student that will be below 2.0 and no more than 30% of students will be below 3.0 on this measure.

Findings 2010-2011 - Target: Not Reported This Cycle
The rubric item here is mis-specified and does not focus on the items that need to be assessed for this objective.

Target for O6: Writen Communication of Conclusions
Students will achieve a class average that exceeds a 3.0/4.0 on the fifth criterion in the rubric for problem. With respect to the distribution of scores, there will be no more than 5% of student that will be below 2.0 and no more than 30% of students will be below 3.0 on this measure.

Findings 2010-2011 - Target: Met
Students were very clear on their writing of the conclusions. In part, however, this may be because the Excel spreadsheet was relied on heavily. Without that pre-existing support the writing will be more of a challenge. The assessment is for this assignment. The average score on this dimension was 3.5 on the second iteration of the assignment. No students were below 2.0 and no students were below 3.0.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Ensure staffing for the course
Since I am retiring, someone else should be the ambassador, whether I teach the course next year on a part time basis.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Implementation Description: Ensure staffing for the course
Projected Completion Date: 04/2011
Responsible Person/Group: Bill Bogner
Additional Resources: Full time faculty time or adjunct faculty funding.
Budget Amount Requested: $10,000.00 (recurring)

Assignment Revision
The assignments in the CTW exercises rely heavily on the student's use of software programs that run on the Excel spreadsheet. While Excel is an important tool in business analysis, there is very little in terms of choices that the students have to make, explain and defend in the problem solving process. This hurts both the assessment of the depth of the student's critical thinking skill and the degree to which their writing is challenged. Revisiting this assignment so that these skills are more student-dependent and less software-dependent will help enrich the assessment of both CT and W skill sets.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
Measure: Problem Solving Memos | Outcome/Objective: Choice of Analytical "Tools" | Written Communication of Conclusions
Implementation Description: Re-wording of hte CTW assignements
Projected Completion Date: 12/2011
Responsible Person/Group: Jim Shi and Bill Bogner
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Review and Improvement of New CTW Processes in BA
In the 2010-1011 cycle new assignments, and a revised rubric were put in place for this course. At the end of the year these will be reviewed for how effectively they are linking the skills of a successful Business Analysis student with the skills of Critical Thinking and Writing. This review is in addition to the analysis of findings on individual learning outcomes. It is a meta-level analysis of the CTW approach in the BA concentration more oriented toward th Goals set out for BA student.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Rubric Update and Alignment
In the process of recasting the Goals and Objectives the Rubric needed to align findings with the new objectives did not translate well. Other items fit but are poorly stated. This revision will be put in place for the 2011-2012 cycle.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Problem Solving Memos | Outcome/Objective: Written Process Communication

Implementation Description: Revise rubric.
Responsible Person/Group: Jim Shi and Bill Bogner
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
The goal of the action plan last year was to make the transition to a new instructor and to make changes in the assignments and the assessment process. We accomplished both to a large extent. We were able to find ad transition to a new instructor. Dr. Bogner has filled in as the ambassador for this class and oversaw this transition. Dr. Shi taught the class and did a very good job. Thus the action plan from last year was considered finished and two new action plan items were created in their wake.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
At this time we do not have the ability to compare students in this way. This will be a major challenge for the College as it is the real measure of skill development.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
There does not appear to be any resource needs at this time. The Department expects a wave of students entering into the CTW courses beginning in the 2011-2012 cycle and this could push up the grading responsibilities. That, in turn, will impact the feedback given. In the current class size we can have two required one-on-one coaching sessions with the ambassador that last fifteen minutes each. If enrollments double (and they might), then this will become a resource challenge.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
Since the last assessment report the Department held assessment session in each of the discipline areas to help in the revision of all assessment processes. The idea here was that the discipline areas could get more out of the assessment process with better input and focus. It is hoped that this will increase the impact of the assessment results on continual improvement not only of CTW, but of all assessment programs.
association with the ACS are the access to standardized tests that allow us to assess our students learning outcomes compared to national standards. In order to graduate with a B.S. in chemistry and be successful in careers after college, the students should show proficiency on these exams as a measure of their obtaining fundamental knowledge of the prescribed chemistry curriculum compared to national standards. Because these tests measure fundamental knowledge, we also employ an extensive laboratory curriculum that encourages analytical thought processes and concludes with devolvement of extensive writing skills leading to final reports and oral presentations in our capstone courses. In conjunction with our use of ACS exams, we also employ an internal review and revision process. We have committees in place for evaluation of each major area of the undergraduate curriculum. This includes freshmen chemistry (all first and second semester core courses), organic chemistry (second year chemistry), biochemistry (third and fourth year chemistry), physical chemistry (third and fourth year chemistry), analytical chemistry (third and fourth year chemistry), and review of senior research theses. A review of student outcomes and their assessment is conducted by each committee with appropriate feedback given to individual instructors to enhance our courses and continue to let them evolve to a better level.

Critical thinking skills center on applying, analyzing, synthesizing, and evaluating information and methods. Students need thorough practical training in research techniques. These must include not only mastery of instrumentation and the calibration of same, but the design of the relevant control experiments. Overall, they need to gain mastery with the techniques that chemists use to measure data, and the conventions that chemists use to express data. Students must learn to evaluate their data, looking in detail for statistical significance. Students not only have to know facts, they should also be able to design experiments to ascertain if these facts are true. It is vital that the skills learned in one situation be transferable to related situations. One of the key aspects of teaching critical thinking is developing the higher order cognitive skills of decision making and problem solving. It is vital to create an atmosphere where students grow in their ability to reason.

Upon Graduation students will be able to take and analyze real world data to develop a knowledge base and the ability to draw conclusions from this knowledge base. Thought processes should be rational, logical and consequential. Conclusions should grow directly from the data and accepted fundamental chemical principles. In addition, students should not only arrive at conclusions, but be aware that they are expected to defend these conclusions. It is also important to realize that data may be interpreted in more than one way, and that science moves forward as these difference data interpretations clash with one another, and are then resolved. Students must therefore learn to deal with open ended questions, deciding which data and variables are important, and which can safely be ignored in creating a picture of the system under study. The ability to think critically about scientific content and processes is key to these students’ futures. Critical thinking over time should become an internal skill, transferable to the rest of the student’s life and career.

Goals

G 1: Students who pass the introductory course (C or better) should score adequate on critical thinking skills by semester end

Using the established rubric for critical thinking. Students who progress to the next course in the analytical sequence should receive a score of adequate on all sections of report 3 by the final rewrite. On papers one and two students should demonstrate an emergence of critical thinking skills as they rewrite and resubmit papers.

G 2: Capstone Course

Using the established rubric for critical thinking. Students who finish the capstone course a score of adequate on all sections of report 3 by the final rewrite.

Student Learning Outcomes/Objectives

SLO 5: Appropriate Discussion/Conclusion (M: 1, 2)

The paper contains a Discussion/Conclusion section which demonstrates the connection between the laboratory experiment and the theory. Based on Rubric Below. Discussion/Conclusions. Excellent: In depth analysis of data including any error analysis which cumulates in the answer to the question or problem stated in the introduction. Adequate: Error analysis not complete, minor questions about interpretation of data, improper, but minor problems applying theory. Not yet adequate: No error analysis or many errors in interpretation of data or theory. Poor: No understanding of theory, major errors in data interpretation.

Other Outcomes/Objectives

O/O 1: Appropriate Title that represents actual work done in lab (G: 1) (M: 1, 2)

Students must demonstrate the ability to think critically by choosing a title which reflects the actual experiment performed in lab based on the following from the rubric. Title. Excellent. The title should accurately, clearly, and concisely reflect the emphasis and content of the paper. The title must be brief and grammatically correct Adequate: Missing one key component. Not yet adequate: Title misses more than one of the key components. Poor: Not descriptive of the experiment. NA is not an option all papers must have titles.

O/O 2: Appropriate Introduction (M: 1, 2)

The introduction should be judged adequate based on the rubric section below. Introduction: Excellent: Includes a full statement of the problem, any background theory that will be used to answer the problem and the basic experimental design that will be used to answer the problem. Adequate: Minor errors in either experimental design, theory or unclear statement of the problem. Not yet adequate: A major error in one of the above categories or several minor errors. Poor: Major errors the experimental design, or a lack of understanding of the theory or misstatement of the problem. NA is not an option.

O/O 3: Appropriate Materials and methods (M: 1, 2)

The paper contains a materials and methods section which would allow a competent chemist to repeat the experiment. Based on the rubric section below. Experimental: Excellent: Includes the details of the experimental procedure (section titled Materials and Methods). A competent chemist should be able to reproduce the experiment using this section of the paper. Adequate: Minor details omitted that would hamper reproduction of the experiment. Not yet adequate: A competent chemist would have difficulty reproducing the experiment. Major components of experiment not described or omitted. Poor: Lack of experimental detail.
O/O 6: Figures and Tables (M: 1, 2)

Figures and tables are added at logical places that enhance the readability of the paper and summarize data in a logical manner. Excellent: Use tables and figures when the data cannot be presented clearly as narrative, when many precise numbers must be presented, or when more meaningful interrelationships can be conveyed by the tabular format. Tables should supplement, not duplicate, text and figures. Tables should be simple and concise. It is preferable to use the Table Tool in your word-processing package, placing one entry per cell, to generate tables. Adequate: Most tables or figures have descriptive narrative (captions or titles) with minor errors which either have a lack of clarity or are not needed. Not yet adequate: Tables and figures do not add to the clarity of the paper. Poor: Tables and figures take away from the readability or clarity of the paper.

Measures, Targets, and Findings

M 1: Reports 1 through 3 in Chemistry 4000 (O: 1, 2, 3, 4, 5, 6)

There were a total of 45 students which were enrolled in chemistry 4000 in the academic year 2010-2011. 43 of these students went on to the next analytical course. Title: Many students had difficulty on paper one determining an appropriate title on the first submission of paper 1. (Aver 3.17/4.0). All 43 completers and 2 of the non-completers were at (adequate) of higher by the final submission of the final paper. (3.9/4.0) Description: Most students had difficulty with the introduction on the first submission of paper 1 (1.94/4.0). 41 out of the 50 completers were judged as adequate or better on the last submission of the final paper. (3.2/4.0) Experimental: Most students had difficulty with the experimental section of the first paper. (1.3/4.0). All completers were judged as adequate or higher along with 1 non-completers by the final submission of paper 3. (3.6/4.0) Results: Many students had difficulty with the results section of the first paper. (2.1/4.0). All completers were judged as adequate or higher along with 1 non-completer by the final submission of paper 3. (3.4/4.0) Figures and Tables were not required for paper 1. Many students had difficulty with tables and Figures (usually trying to place too much information or illogical information in tables) on the first submission of paper 2. (2.3/5.0). All 43 completers were judged as adequate or better on the last submission of the final paper. (3.7/4.0) Discussion and Conclusion: Most students had trouble on the Discussion/Conclusion portion of paper 1 (1.1/4.0). 41 of the 43 completers were judged as adequate or better on the last submission of paper 3. (3.4/5.0)

Source of Evidence: Written assignment(s), usually scored by a rubric

M 2: Final Paper of Capstone Course (O: 1, 2, 3, 4, 5, 6)

38 students took Chem 4160 in 2010-2011. Of these 38 students 34 have received passing grades (the others are in progress). The 34 completers received adequate or better in every category by the final submission. The average number of submissions was 4. Source of Evidence: Capstone course assignments measuring mastery

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Decrease average submission numbers in Chem 4000

We will attempt to decrease submission numbers in Chem 4000 by adding reviews of papers as part of the course. Students will have to critically evaluate a series of papers in order to determine if the paper shows the critical thinking skills set forward by the rubric.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium
Implementation Description: Instructors will write papers that illustrate various degrees of critical thoughts in the areas of the rubric.
Responsible Person/Group: Barrow

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
We were very happy with the percentage of students who were deemed adequate on the final submission.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
Critical thinking skills are very bad in the beginning of the 400 course. While they improve during the first course they are still not adequate for the capstone course. Many instructors use portions of the capstone papers for writing larger papers for peer-reviewed journals so for many of these students "adequate" is not considered adequate by the Professors who teach the capstone course. Many students must resubmit papers deemed adequate until they are excellent.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
More examples are needed in the lecture portion of the course. This will be tricky as the curriculum for the course will be altered in order to make room for writing exercises.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
None
Georgia State University
Assessment Data by Section
2010-2011 CTW Computer Information Systems
(As of: 12/12/2016 04:10 PM EST)
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
Critical thinking through writing is defined in Computer Information Systems by behavioral (typically written), or other evidence, of certain skills and/or traits. These skills and/or traits include the abilities to: Identify problems (and in some cases, opportunities) before they become critically important or demanding of immediate attention to ameliorate and address; typically these problems relate to organizational work processes and workflows that could best be addressed through computer-based solutions; Identify multiple, innovative, and creative solutions to these problems; typically these solutions are formulated as multiple alternative designs for computer-based solutions to the problem(s); Evaluate the possible solutions to these problems in such a way to rank order them, from best to worst, in terms of their relative efficacies and inherent costs in brokering the "best" solution; Exhibit a concern for, and appreciation of, pursuing solutions that are characterized by ethical and social responsibility; Propose an effective approach to implement the "best" solution. This definition applies the University's CTW policy in the context of our discipline in the following ways:
The CIS definition of CTW in consistent with the University's definition for the following reasons: (1) a wide range of cognitive skills are required to perform the CIS behaviors. This includes identifying, analyzing, and evaluating arguments and truth claims (points 1-3); (2) the need to recognize ethical and social responsibilities is addressed in point 4; (3) identifying problems, solutions, and evaluating solutions requires the formulation and expression of convincing reasons in support of conclusions; and (4) the exhibition of reasonable, intelligent decisions is also embedded in points 1-2 and point 5 of the CIS definition.

Goals
G 1: Improve Critical Thinking with a focus on Information Systems
Improve Critical Thinking with a focus on Information Systems

Student Learning Outcomes/Objectives
SLO 3: Consider Ethical and Social Issues (M: 1)
Consider Ethical and Social Issues within potential solutions

SLO 4: Select Best Solution with Justification (M: 1)
Select Best Solution with Justification

Other Outcomes/Objectives
O/O 1: Articulate Requirements and Constraints (M: 1)
Articulate Requirements and Constraints

O/O 2: Identify and Evaluate Potential Solutions (M: 1)
Identify and Evaluate Potential Solutions

Measures, Targets, and Findings
M 1: CIS 4980 System Development Project Capstone (O: 1, 2, 3, 4)
The CTW assignment captures either as a Wiki or, if non-disclosure is required, a Word document the student's analysis of the project's goal, potential solutions, ethical and social issue issues, and the selection of the best solution. Students also analyze and give suggested improvements to at least one team member on their draft of this assignment. Here are the directions: Spring 2011 Instructions Please create a wikispaces at Wikispaces and invite CTW ambassador to your account. Make this a formal informational webpage rather than an informal blog. Complete your lessons early and the CTW ambassador will provide recommendations. Due Dates: February 17: Phase 1 (Lesson 1, 2, and 3) March 17: Phase 2 (Lesson 4, 5) March 31: Phase 3 (Lesson 6) May 31: Phase 4 (Draft Paper Consultation / Paper Exchange) April 21: Phase 5 (Lesson 7 and Final Paper) For the homepage, you can write anything and add anything you like to show a little bit of your style and flavor. Keep in mind that this needs to be school appropriate. If you want, you may summarize any major points from the Outline attachment, but do not just copy and paste. B. Please create seven pages with the following master titles: o Lesson 1 An Introduction o Lesson 2 The Problem o Lesson 3 The Solutions Identified o Lesson 4 The Solutions Evaluated o Lesson 5 The Ethical and Social Issues o Lesson 6 The Best Solution o Lesson 7 A Conclusion C. Subtitle each page with a news article title hotlinked to the original website. Cite this title at the bottom of your page. Add wikispaces ProjectHelp to your account list. Use this site for all wikispaces help. If you have any other questions or concerns, let me know by creating a Discussion on your wikispaces page. After creating the discussion send me an email on wikispaces to check your discussion. D. Make sure that each page flows from one to the next. The information provided here is basically going to form your proposal paper. I have created the sample wikispaces that you can use as a guide for formatting. Refer to Expert Writing Tips for writing tips. Fall 2009 Student Samples were provided.

Target for O1: Articulate Requirements and Constraints
The CIS CTW Rubric Version 2 provides a 0 to 4 score for student work. The targets set for 2010-2011 are an overall average of.
3.4 with fewer than 20% making less than 3.2. This a combined score across the outcomes which we will work to separate in 2011-2012 scoring.

**Findings 2010-2011 - Target: Met**

Based on Spring 2011 results, the average was 3.5 with 14% making less than 3.2. This a combined score across the outcomes which we will work to separate in 2011-2012 scoring.

**Target for O2: Identify and Evaluate Potential Solutions**

The CIS CTW Rubric Version 2 provides a 0 to 4 score for student work. The targets set for 2010-2011 are an overall average of 3.4 with fewer than 20% making less than 3.2. This a combined score across the outcomes which we will work to separate in 2011-2012 scoring.

**Findings 2010-2011 - Target: Met**

Based on Spring 2011 results, the average was 3.5 with 14% making less than 3.2.

**Target for O3: Consider Ethical and Social Issues**

The CIS CTW Rubric Version 2 provides a 0 to 4 score for student work. The targets set for 2010-2011 are an overall average of 3.4 with fewer than 20% making less than 3.2.

**Findings 2010-2011 - Target: Met**

Based on Spring 2011 results, the average was 3.5 with 14% making less than 3.2.

**Target for O4: Select Best Solution with Justification**

The CIS CTW Rubric Version 2 provides a 0 to 4 score for student work. The targets set for 2010-2011 are an overall average of 3.4 with fewer than 20% making less than 3.2.

**Findings 2010-2011 - Target: Met**

Based on Spring 2011 results, the average was 3.5 with 14% making less than 3.2.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Integrate CTW into CIS 4970**

CIS 4970 is our CIS internship course. CIS majors must either complete CIS 4980 (our current CTW course) or CIS 4970. To cover all students, CTW should be integrated into CIS 4970.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** Medium
- **Implementation Description:** The CTW assignments are now part of the CIS 4970 Field Study in Information Systems course...
- **Projected Completion Date:** 01/2011

**Integrate CTW into CIS 4980 System Development Project Capstone course**

The CTW component needs to be fully integrated into our CIS 4980 System Development Project Capstone course.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** High
- **Projected Completion Date:** 12/2009

**Split CTW assignment assessment into objective components**

The assessment of the CTW assignment submissions needs to be broken into objective components rather than a single overall assessment value.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** Medium
- **Implementation Description:** Preserve the objective component scores when assessing student submissions.
- **Projected Completion Date:** 12/2011
- **Responsible Person/Group:** CTW Instructor

**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

CIS 4970 has now been designated a CTW course. This is the CIS field study course which is an alternate choice to the CIS 4980 Capstone course. Students in CIS 4970 are just this summer for 2011 being required to complete the same CTW activities as required for CIS 4980 students.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

2010-2011 is the first time CTW performance has been quantified. The scores will be tracked and trends evaluated going forward.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**
With the implementation of CTW in CIS 4970 Field Study in CIS, additional time will be required to manage and grade student CTW work. Currently, the instructor of record does not receive load credit for CIS 4970. Since both CIS 4980 and CIS 4970 are offered each semester (one section each at this point), the CTW consultant for CIS 4980 will be expected to assist both sections. Any additional changes will depend on success of this initial solution.

**CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?**

To date, the only changes have been to bring CIS 4970 Field Study in CIS into CTW status and to quantify scoring of student CTW work.

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year's assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Quantified measures were added so we may track progress and improvement. In the coming year, the quantification will be separated to reflect individual objective performance. CIS 4970 will also incorporate the CTW activities.

**ACADEMIC PROGRAM QUESTION 2:**

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

None at this point other than the addition of CIS 4970 Field Study to CTW.

**ADMINISTRATIVE DEPT QUESTION 1:**

Explain how your department used the results from last year’s (2009-2010) assessment. What actions did you take? What changes did you make as a result?

The qualitative assessment of CTW performance indicated continuing on the current path for CTW activities. Quantification was added to scoring this year to enable future tracking of performance.

**ADMINISTRATIVE DEPT QUESTION 2:**

What have you learned from your assessment this year (2010-2011)?

A very few students took a zero on the CTW part of their grade rather than spending the time on CTW. We will increase encouragement to students to take full advantage of CTW. We will also begin to track these opt-out numbers. If the encouragement is not successful and the number of students opting out is significant, the portion of the final grade that depends on CTW will be increased.

**ADMINISTRATIVE DEPARTMENT QUESTION 3:**

What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

Detailed feedback on CTW assignments will be increased to encourage improvement and to encourage participation. Having added quantification to CTW scoring, relative improvement will be observed and communicated. Although our measures for this year were all met, we set our improvement goal at 20%.

**Georgia State University**

**Assessment Data by Section**

2010-2011 CTW Computer Science

As of: 12/12/2016 04:10 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

---

**Mission / Purpose**

The mission of the computer science department is to educate students in fundamental topics like programming languages, data structures, algorithms, data base systems, computer architecture, communications, and software engineering. For Computer Science, critical thinking is defined as documentation, clearly stating assumptions, explaining logic with regard to the chosen solution (through in-code comments), and testing solutions for correctness.

The computer science CTW plans are to have students evaluate and choose between alternate solution strategies. In this major, there are multiple ways to solve a given assignment. Often, there are several equally correct methods, however, there will also be methods that are not as good due to inefficiencies (in time, space, cost, or other resource), over-complexity, fragility (non-robustness), scalability, etc.

Thus, for our majors, we interpret the statement “identify, analyze, and evaluate arguments and truth claims” to mean our students should clearly state their assumptions, explain (through in-code comments) their logic for the chosen solution, and test their solutions for correctness. Testing (debugging) will allow them to “formulate and present convincing reasons in support of conclusions”, i.e., they present a series of test cases and demonstrate that their solution (most likely computer code) functions as expected. Grading can include different test cases, defined by the instructor, that reveal faults in the students’ assumptions. In other words, the test cases will allow the students to “discover and overcome personal prejudices” in the sense of their preconceived assumptions.

---

**Goals**

**G 1: critical thinking for Computer Science**

For Computer Science, critical thinking is defined as documentation, clearly stating assumptions, explaining logic with regards to the chosen solution (through in-code comments), and testing solutions for correctness.
Outcomes/Objectives

O/O 1: Assignments to introduce CTW to our students (M: 1, 2, 3)

We use assignments to educate our students about writing and critical thinking. Included are a couple of example student project reports. From these reports we see the level of documentation expected for students in a capstone class. Two of the attachments are project directions, and the other two are examples of students' work. The computer science CTW plans are to have students evaluate and choose between alternate solution strategies. In this major, there are multiple ways to solve a given assignment. Often, there are several equally correct methods, however, there will also be methods that are not as good due to inefficiencies (in time, space, cost, or other resource), over-complexity, fragility (non-robustness), scalability, etc.

Thus, for our majors, we interpret the statement "identify, analyze, and evaluate arguments and truth claims" to mean our students should clearly state their assumptions, explain (through in-code comments) their logic, and test their solutions for correctness. Testing (debugging) will allow them to "formulate and present convincing reasons in support of conclusions", i.e., they present a series of test cases and demonstrate that their solution (most likely computer code) functions as expected. Grading can include different test cases, defined by the instructor, that reveal faults in the students' assumptions. In other words, the test cases will allow the students to "discover and overcome personal prejudices" in the sense of their preconceived assumptions.

Measures, Targets, and Findings

M 1: example projects (O: 1)

This is the grading criteria used in the CSc 4350 class. The achievement target is as follows. We expect a large number (around 50%) to perform excellently, then another 40% to meet these criteria better than average, though below excellent. Some (about 15%) will do an adequate job, while the remaining 5% will not participate fully in the project and not do well in exams (because this is a class whereby the students do a group project that is worth 50% of the total grade and questions in the exams have a direct bearing to work completed in the project as well as overall knowledge acquired over the semester). Student deficiencies included the not participating fully in projects and hence not being able to do as well in exams early. Our findings were somewhat consistent with this prediction, and are reflected in the grades for this class. 16 out of 25 (64%) completed the course with an excellent grade, 7 out of 25 (28%) received a very good grade, and only 1 student (i.e., 4%) received an average grade and only 1 student (i.e. 4%) received a failing grade (this student stopped attending classes after 3 weeks and never withdrew). The projects attempted are at par with real-world situations - in fact these projects can be used in the real world with just a few adjustments to their database implementation and maintenance and upgrading during its lifetime. An actual software engineering project is not going to have everything spelled out initially, it is likely to change to have feature-creep (management requiring more features), bloat (features added to features), under-estimation of the time-line and budget, poor testing, and finally staff are required to cut corners to complete the project within a marketing-imposed deadline. For example, Microsoft's Windows Vista had many of these problems. Allowing the students a greater degree of freedom to determine their own project specifications would be a good way to teach them about what they can expect on the job. Grading Criteria Each team member will be required to submit a confidential evaluation on all other members of the project team on the day the final report is due. (Failure to turn in an evaluation can result in a loss of up to 10 points from your own individual project grade.) This evaluation will be accomplished only by the submitter and will assign the level of effort that every other team member contributed to each deliverable. These evaluations will be used to determine the number of points (out of 50) each team member receives. The following will contribute to project grading: 1. Timeliness (and quality) of six documents. Failure to submit a deliverable on time will result in heavy point penalty. This is done to help you keep a pace that will result in a successful project. 10 points will be deducted for each calendar day a deliverable is late. For example, if a deliverable is due on 9/5, 1:30p and if the Team Coordinator turns it in 9/6 at 8:30a, the deliverable loses 10 points, if it is turned in 9/7 at 1:35p, the deliverable loses 22 points, etc. 2. Accuracy, completeness, and organization of the Final Report 3. Agreement of project with System Description 4. Project scope – is it complex enough to provide good experience but simple enough to be completed within time and provide the 4-5K of code? 5. Quality and completeness of the Software System Design Project Contract, p.3 of 3 pages 6 Thoroughness, completeness, and organization of testing 7. Software System operation (Lack of errors, system crashes, ease of use, readability of user manual, correctness and completeness of user manual, etc.) 8. Quality of presentation (Organization, pertinence, clarity and understandability of oral presentation, preparation and use of visual aids, effectiveness of demonstration, etc.) 9. Implementation faithfulness to design; programming style This is the grading criteria used in the CSc 3410 class. In this class, students are given a number of programming assignments (an example given above i.e. under GOALS). The grading for these assignments are broken into two parts - 44% allocated for Documentation (as explained in the assignment) and 56% for the program (which includes following of instructions for name, etc.) As the example assignments (below) shows, the students did fairly well in these assignments which I think lead them to do well in the exams. Overall, the grade more or less reflects their combined performance for assignments and exams. There were 25 students in the class with 2 withdrawals and 1 F and there were 9 A's, 5 B's and 8 C's. Overall therefore, we had 88% of the students getting a passing grade ranging from C to A and only a 12% withdrawal/failure. Furthermore, from the pre and post surveys, the students have been able to grasp the idea of CTW and were able to utilize the procedures (as laid out in the syllabus/assignments) to do well.

Source of Evidence: Capstone course assignments measuring mastery

M 2: Students make projects for the CTW class. (O: 1)

In the first computer science CTW class, students work on assignments throughout the semester. In the second class, they must prepare a project over the course of the semester. Example homeworks and final projects are attached. We surveyed the students both at the beginning and ending of the semester to get their opinions on CTW. We looked for progression in their comments showing increased understanding about CTW. In general, the students in the first class initially gave us responses indicating that they did not understand CTW. But the second survey indicated that they understood it better at the end of the semester. The second class was similar in that their end-of-semester understanding of CTW was better than in the beginning, however, their understanding in the beginning was much better than the first CTW class. It's unlikely that most students in the capstone class took the first CTW class last year, though it is possible since students have considerable freedom to schedule their non-prerequisite classes when they want. We also looked at students' success in class.

Source of Evidence: Project, either individual or group
Details of Action Plans for This Cycle (by Established cycle, then alpha)

Continue having students doing documentation for programs

Explaining algorithms used to solve the problem, then implement that algorithm. Have all preconditions and postconditions listed for all of the functions used in a program. Also, attach a user guide for executing the program. Overall, continue on the same path we have been doing over the past year.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Surveys and student specifications

Next year, we plan to achieve the same level of excellence that we have accomplished this year. The classes are working very well, so we plan to continue as is. I think that from reading the documentation submitted by the students, they are able to explain in detail what they are doing and how they are achieving their solutions to the problems.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):

Measure: Software Engineering measures | Outcome/Objective: Assignments to introduce CTW to our students

Implementation Description: Adjust the software engineering instructions to allow students more room to make the type of decisions that project managers make.

Responsible PersonGroup: The CSc 4350 instructor(s).

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

I think that our department has been doing well in implementing the CTW. It is more a situation of documentation and maintenance and upgrading during its lifetime. An actual software engineering project is not going to have everything spelled out initially, it is likely to change to have feature-creep (management requiring more features), bloat (features added to features), under-estimation of the time-line and budget, poor testing, and finally staff are required to cut corners to complete the project within a marketing-imposed deadline. For example, Microsoft's Windows Vista had many of these problems. Allowing the students a greater degree of freedom to determine their own project specifications would be a good way to teach them about what they can expect on the job. Grading Criteria Each team member will be required to submit a confidential evaluation on all other members of the project team on the day the final report is due. (Failure to turn in an evaluation can result in a loss of up to 10 points from your own individual project grade.) This evaluation will be accomplished only by the submitter and will assign the level of effort that every other team member contributed to each deliverable. These evaluations will be used to determine the number of points (out of 50) each team member receives. The following will contribute to project grading: 1. Timeliness (and quality) of first six documents. Failure to submit a deliverable on time will result in heavy point penalty. This is done to help you keep a pace that will result in a successful project. 10 points will be deducted for each calendar day a deliverable is late. For example, if a deliverable is due on 9/5, 1:30p and if the Team Coordinator turns it in 9/6 at 8:30a, the deliverable loses 10 points, if it is turned in 9/7 at 1:35p, the deliverable losses 22 points, etc. 2. Quality, completeness, and organization of the Final Report 3. Agreement of project with System Description 4. Project scope - is it complex enough to provide good experience but simple enough to be completed within time and provide the 4-5K of code? 5. Quality and completeness of the Software System Design Project Contract, p.3 of 3 pages 6. Thoroughness, completeness, and organization of testing 7. Software System operation (Lack of errors, system crashes, ease of use, readability of user manual, correctness and completeness of user manual, etc.) 8. Quality of presentation (Organization, pertinence, clarity and understandability of oral presentation, preparation and use of visual aids, effectiveness of demonstration*, etc.) 9. Implementation faithfulness to design; programming style This is the grading criteria used in the CSc 3410 class. In this class, students are given a number of programming assignments (an example given above i.e. under GOALS). The grading for these assignments are broken into two parts - 44% allocated for Documentation (as explained in the assignment) and 56% for the program (which includes following of instructions for name, etc.) As the example assignments (below) shows, the students did fairly well in these assignments which I think lead them to do well in the exams. Overall, the grade more or less reflects their combined performance for assignments and exams. There were 25 students in the class with 2 withdrawals and 1 F and there were 9 A's, 5 B's and 8 C's. Overall therefore, we had 88% of the students getting a passing grade ranging from C to A and only a 12% withdrawal/failure. Furthermore, from the pre and post surveys, the students have been able to grasp the idea of CTW and were able to utilize the procedures (as laid out in the syllabus/assignments) to do well.

Source of Evidence: Project, either individual or group

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Once they start incorporating the documentation, then it follows through more or less naturally. So, after the first assignment where I...
would comment where they need improvements, then the students are generally able to explain their solutions thoroughly.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
None. So far, no assistance needed.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
I don't think that there have been much changes or impact. Yes, it is true that the students have been encouraged to do documentation more, especially in the lower level CTW class. But, they have always been doing well in the upper level CTW class with lots of documentation for their projects. Based upon this, I don't think there are any changes that will be considered. And if any are considered, it would likely be very very minor. No changes were made from last year's report.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
None. None.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.
None. There were only about 4 persons that respond to the survey. No changes in educational program are projected nor any changes in curriculum.

ADMINISTRATIVE DEPT QUESTION 1:
Explain how your department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?
Just continue to impress upon the students the importance of critically analyzing a problem to be able to come up with the best solution. And to record such analysis via documentation.

ADMINISTRATIVE DEPT QUESTION 2:
What have you learned from your assessment this year (2010-2011)?
The students have continued to apply critical thinking to problem solving i.e. critically thinking through the solution to a computer programming problem and thus get the best solution possible.

ADMINISTRATIVE DEPARTMENT QUESTION 3:
What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?
There is not a whole lot of room for improvements - because they have to generate a program for a problem and implement that program so that it can execute on a computer. Maybe some students can come up with even more clever ways for solving the problem and implementing it on the computer.

---

Georgia State University
Assessment Data by Section
2010-2011 CTW Criminal Justice
As of: 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The Department of Criminal Justice undergraduate curriculum highlights the need for students to not only develop and improve their abilities to gather and synthesize information and research to gain knowledge relevant to activities and issues related to crime and criminal justice system responses, but also their abilities to utilize relevant information in developing frameworks that they will use in solving problems, critically assessing issues information, and situations, and in critical decision making. Students also should be able to communicate about their knowledge and the processes that they utilize in problem solving and decision making effectively in the written form.

The department utilizes as its foundation the university's definition of critical thinking, which reflects the position of Bassham, Irwin, Nardone & Wallace (2005, Critical Thinking: A Student's Introduction, McGraw-Hill, page 1) that critical thinking involves a "wide range of cognitive skills and intellectual dispositions needed to effectively identify, analyze, and evaluate arguments and truth claims; to discover and overcome personal prejudices; to formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about what to believe and what to do."

Goals

G 2: Generate coherent descriptions of extant knowledge
Students will explore, synthesize, and evaluate extant knowledge and scientific literatures on topics of interest to the field of criminal justice.

G 4: Identify ethical dilemmas in criminal justice decision making and processing
Students will become better at identifying moral dilemmas faced by criminal justice personnel and offenders.
G 3: Critically evaluate current issues in criminal justice
Students will become familiar with research processes, and will improve their evaluation skills.

G 6: Communicate effectively
Students will enhance their abilities to communicate their knowledge, analyses, evaluations, and decisions through writing.

Student Learning Outcomes/Objectives

SLO 1: Identify and state topical issues or hypotheses (G: 3, 6) (M: 1)
Students will demonstrate their ability to generate a thesis/hypothesis/statement of the problem in the generation of a critical analysis paper on a salient issue in the field of criminal justice.

SLO 2: Demonstrate knowledge and ability to synthesize information (G: 2, 3, 6) (M: 1)
Students will demonstrate their retention of knowledge about the criminal justice system and salient topical issues in the field in written form. Students will effectively communicate facts about an issue and apply theoretical frameworks to demonstrate the depth of both their knowledge and their ability to critically synthesize relevant information about that specific topic in this paper.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 3: Application and analysis (G: 3, 6) (M: 1, 2)
Students will develop and/or enhance skills in applying theoretical frameworks to contemporary issues in criminal justice. Students will be able to not only synthesize and interpret extant information, but also identify patterns within extant information, be able to compare and contrast different sides of a problem, and/or generate new predictions through their presentation in a written form.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 4: Generation of conclusions (G: 3, 4, 6) (M: 1, 2)
Students will be able to develop meaningful conclusions from literature reviews and/or data analyses and/or be able to identify policy implication given the evidence available.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 5: Written communication (G: 6) (M: 1, 2)
Students will be able to effectively communicate their knowledge and analytical skills in written form (paper). Students will demonstrate the ability to effectively identify issues, develop and organize subtopics, and generate streamlined presentations of information. In addition, students will utilize appropriate grammar and syntax, as well as the ability to adhere to APA style guidelines.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 6: Identification of ethical issues (G: 3, 4) (M: 2)
Students should be able to identify and evaluate the criminal justice system and issues that arise within it.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Measures, Targets, and Findings

M 1: Analysis of Criminological/Criminal Justice (CJ) Issue Essay (O: 1, 2, 3, 4, 5)
This essay is designed to test students' ability to critically evaluate an issue in criminology and/or criminal justice. Students will identify a single issue from the internship experience that involves crime or the criminal justice system and discuss why it is of interest. Students must define and clarify the issue and provide background information describing its significance. Students also must apply a relevant theoretical framework to demonstrate their ability to more formally analyze the issue. Finally, students must assess the impact/potential impacts of the issues on the criminal justice system and/or personnel working within it and/or offenders and/or victims of crime and present potential responses/solutions.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Identify and state topical issues or hypotheses
The goal is that by the end of their senior year (e.g., for the capstone seminar), 80% of students should be rated as an 4, 3, or 2 in their ability identify and state topic issues or hypotheses. Additionally, 50% of students should be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4. Please reference the assessment rubric to identify the specific skill level denoted by these numeric levels.

Findings 2010-2011 - Target: Met
There were 4 sections of capstone class (CRJU 4930) during fall 2010 and spring 2011. An adjunct instructor taught a section of 12 students in the fall for which we were unable to obtain assessment data due to miscommunication of reporting expectations. The other section in the fall had 28 students. The sections in the spring had 32 and 30 students respectively.
The attached file named Capstone Rubric Data contains data for these 90 students. At the end of the semester, the average score on the 1-4 rubric scale was 3.0 (2.5 in fall section and 3.8 and 2.6 in the spring sections). The following percentages for the Identification of an Issue and Hypothesis rubric dimension were reported on the final draft of the CJ Issue Essay: 4 - 44%; 3 – 26%; 2 – 11%; 1 – 19%. Collectively these enrollees met our goals (81% scored 2-4, 70% scored 3-4, and 44% scored a 4). These scores correspond to the final draft of the paper and consistently show significant improvement over the first draft numbers in that 54% exhibited an increase in the Identification of an Issue and Hypothesis rubric score or remained at the highest possible point between the first and final submission, 12% exhibited a decrease, and 34% showed no improvement in the rubric score where improvement was possible. (see attached rubric for skill levels associated with each rubric point).

**Target for O2: Demonstrate knowledge and ability to synthesize information**

The goal is that by the end of their senior year (e.g., for the capstone seminar), 80% of students should be rated as an 4, 3, or 2 in their ability to comprehend and synthesize information. Additionally, 50% of students should be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4. Please reference the assessment rubric to identify the specific skill level denoted by these numeric levels.

**Findings 2010-2011 - Target: Met**

There were 4 sections of capstone class (CRJU 4930) during fall 2010 and spring 2011. An adjunct instructor taught a section of 12 students in the fall for which we were unable to obtain assessment data due to miscommunication of reporting expectations. The other section in the fall had 28 students. The sections in the spring had 32 and 30 students respectively. The attached file named Capstone Rubric Data contains data for these 90 students. The average score on the 1-4 rubric scale was 2.7 (2.5 in fall section and 3.2 and 2.3 in the spring sections). The following percentages for the Comprehend and Synthesize Information rubric dimension were reported on the final draft of the CJ Issue Essay: 4 - 27%; 3 – 29%; 2 – 30%; 1 – 14%. Collectively these enrollees met our goals (86% scored 2-4, 66% scored 3-4, and 27% scored a 4). These scores correspond to the final draft of the paper and consistently show significant improvement over the first draft numbers in that 48% exhibited an increase in the Comprehend and Synthesize Information rubric score or remained at the highest possible point between the first and final submission, 12% exhibited a decrease, and 40% showed no improvement in the rubric score where improvement was possible. (see attached rubric for skill levels associated with each rubric point).

**Target for O3: Application and analysis**

The goal is that by the end of their senior year (e.g., for the capstone seminar), 80% of students should be rated as an 4, 3, or 2 in their ability conduct application and analysis of criminal justice subject matter. Additionally, 50% of students should be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4. Please reference the assessment rubric to identify the specific skill level denoted by these numeric levels.

**Findings 2010-2011 - Target: Met**

There were 4 sections of capstone class (CRJU 4930) during fall 2010 and spring 2011. An adjunct instructor taught a section of 12 students in the fall for which we were unable to obtain assessment data due to miscommunication of reporting expectations. The other section in the fall had 28 students. The sections in the spring had 32 and 30 students respectively. The attached file named Capstone Rubric Data contains data for these 90 students. At the end of the semester, the average score on the 1-4 rubric scale was 2.7 (2.4 in fall section and 3.3 and 2.4 in the spring sections). The following percentages for the Application and Analysis rubric dimension were reported on the final draft of the CJ Issue Essay: 4 - 31%; 3 – 27%; 2 – 27%; 1 – 15%. Collectively these enrollees met our goals (85% scored 2-4, 58% scored 3-4, and 31% scored a 4). These scores correspond to the final draft of the paper and consistently show significant improvement over the first draft numbers in that 47% exhibited an increase in the rubric score or remained at the highest possible point between the first and final submission, 11% exhibited a decrease, and 42% showed no improvement in the rubric score where improvement was possible. (see attached rubric for skill levels associated with each rubric point).

**Target for O4: Generation of conclusions**

The goal is that by the end of their senior year (e.g., for the capstone seminar), 80% of students should be rated as an 4, 3, or 2 in their ability to generate conclusions and implications pertaining to criminal justice subject matter. Additionally, 50% of students should be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4. Please reference the assessment rubric to identify the specific skill level denoted by these numeric levels.

**Findings 2010-2011 - Target: Met**

There were 4 sections of capstone class (CRJU 4930) during fall 2010 and spring 2011. An adjunct instructor taught a section of 12 students in the fall for which we were unable to obtain assessment data due to miscommunication of reporting expectations. The other section in the fall had 28 students. The sections in the spring had 32 and 30 students respectively. The attached file named Capstone Rubric Data contains data for these 90 students. At the end of the semester, the average score on the 1-4 rubric scale was 2.7 (2.3 in fall section and 3.2 and 2.4 in the spring sections). The following percentages for the Application and Analysis rubric dimension were reported on the final draft of the CJ Issue Essay: 4 - 31%; 3 – 27%; 2 – 27%; 1 – 15%. Collectively these enrollees met our goals (86% scored 2-4, 66% scored 3-4, and 27% scored a 4). These scores correspond to the final draft of the paper and consistently show significant improvement over the first draft numbers in that 47% exhibited an increase in the rubric score or remained at the highest possible point between the first and final submission, 11% exhibited a decrease, and 42% showed no improvement in the rubric score where improvement was possible. (see attached rubric for skill levels associated with each rubric point).

**Target for O5: Written communication**

The goal is that by the end of their senior year (e.g., for the capstone seminar), 80% of students should be rated as an 4, 3, or 2 in their ability to use high quality written communication to convey ideas about criminal justice subject matter. Additionally, 50% of students should be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4. Please reference the assessment rubric to identify the specific skill level denoted by these numeric levels.

**Findings 2010-2011 - Target: Met**

At the end of the semester, the average score on the 1-4 rubric scale was 3.2 (3.1 in fall section and 3.9 and 2.6 in the spring sections). The following percentages for the Writing Quality and Style rubric dimension were reported on the final draft of the CJ Issue Essay: 4 - 50%; 3 – 21%; 2 – 24%; 1 – 5%. Collectively these enrollees met our goals (95% scored 2-4, 71% scored 3-4, and 50% scored a 4). These scores correspond to the final draft of the paper and consistently show significant improvement over the first draft numbers in that 62% exhibited an increase in the Writing Quality & Style rubric score or remained at the highest possible point between the first and final submission, 6% exhibited a decrease, and 32% showed no improvement in the rubric score where improvement was possible. (see attached rubric forskill levels associated with each rubric point).

**M 2: Critically Assess Ethical Issues in Criminal Justice (O: 3, 4, 5, 6)**

This writing assignment is designed to assess students' ability to critically assess material and apply course concepts to ethical issues in the criminal justice system. In this particular case, the assignment asked students to consider the ways in which plea bargaining practices impact aspects of procedural and substantive justice. They were also required to weigh in on the advantages and disadvantages of plea bargaining in the US. The assignment was based on class lectures and a documentary on the topic. (see attached file named Ethical Issue Assignment). This assignment was also intended as an assessment of students' ability to express ideas in writing.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Application and analysis**

This is the third assignment of 3 in a junior level class, although it was only this year that the department was able to enact a policy that assures all 3000 level courses will be completed before they can proceed to register for 24 hours of 4000 level required or elective course work. The target is that 80% of student papers will be rated as a 3 (Acceptable) or 4 (Outstanding) on Application and Analysis rubric dimension for the third assignment. Additionally, at least 25% should rate as a 4. Please reference the assessment rubric to identify the specific skill level denoted by these numeric levels.

**Findings 2010-2011 - Target: Not Met**

There were 2 sections of the Ethics class (CRJU 3060) offered for the period of fall 2010 and spring 2011 (1 course each semester). Due to miscommunication of reporting expectations, the full-time faculty member who taught the a section of 35 students in the fall did not amassed usable assessment data. As such, the spring section of 37 students is the only source of our assessment data for this reporting cycle. The attached file named Ethics Rubric Data contains data for these 37 students. For the third assignment considered here (see Ethical Issue Assignment attachment), the average score for the Application & Analysis rubric was 2.8 on a 1-4 scale. Rounding decimal points upward at the .5 level, the following percentages for the Application & Analysis rubric dimension were reported: 4 - 22%; 3 – 57%; 2 – 22%; 1 – 0%. Collectively these enrollees just missed our goals (79% scored 3-4 and 22% scored a 4). (see attached rubric forskill levels associated with each rubric point).

**Target for O4: Generation of conclusions**

80% of student papers will be rated as a 3 (Acceptable) or 4 (Outstanding) on the third assignment.

**Target for O5: Written communication**

This is the third assignment of 3 in a junior level class, although it was only this year that the department was able to enact a policy that assures all 3000 level courses will be completed before they can proceed to register for 24 hours of 4000 level required or elective course work. The target is that 80% of student papers will be rated as a 3 (Acceptable) or 4 (Outstanding) on the Mechanics rubric dimension for the third assignment. Additionally, at least 25% should rate as a 4. Please reference the assessment rubric to identify the specific skill level denoted by these numeric levels.

**Findings 2010-2011 - Target: Met**

There were 2 sections of the Ethics class (CRJU 3060) offered for the period of fall 2010 and spring 2011 (1 course each semester). Due to miscommunication of reporting expectations, the full-time faculty member who taught the a section of 35 students in the fall did not amassed usable assessment data. As such, the spring section of 37 students is the only source of our assessment data for this reporting cycle. The attached file named Ethics Rubric Data contains data for these 37 students. For the third assignment considered here (see Ethical Issue Assignment attachment), the average score for the Mechanics rubric was 3.0 on a 1-4 scale. Rounding decimal points upward at the .5 level, the following percentages for the Mechanics rubric dimension were reported: 4 - 43%; 3 – 41%; 2 – 5%; 1 – 10%. Collectively these enrollees met our goals (84% scored 3-4 and 43% scored a 4). (see attached rubric forskill levels associated with each rubric point).

**Target for O6: Identification of ethical issues**

This is the third assignment of 3 in a junior level class, although it was only this year that the department was able to enact a policy that assures all 3000 level courses will be completed before they can proceed to register for 24 hours of 4000 level required or elective course work. The target is that 80% of student papers will be rated as a 3 (Acceptable) or 4 (Outstanding) on the Key Issue Addressed rubric dimension for the third assignment. Additionally, at least 25% should rate as a 4. Please reference the assessment rubric to identify the specific skill level denoted by these numeric levels.

**Findings 2010-2011 - Target: Met**

There were 2 sections of the Ethics class (CRJU 3060) offered for the period of fall 2010 and spring 2011 (1 course each semester). Due to miscommunication of reporting expectations, the full-time faculty member who taught the a section of 35 students in the fall did not amassed usable assessment data. As such, the spring section of 37 students is the only source of our assessment data for this reporting cycle. The attached file named Ethics Rubric Data contains data for these 37 students. For the third assignment considered here (see Ethical Issue Assignment attachment), the average score for the Key Issue Addressed rubric was 3.0 on a 1-4 scale. Rounding decimal points upward at the .5 level, the following percentages for the Key Issue Addressed rubric dimension were reported: 4 - 32%; 3 – 51%; 2 – 16%; 1 – 0%. Collectively these enrollees met our goals (83% scored 3-4 and 32% scored a 4). (see attached rubric forskill levels associated with each rubric point).
Continued data collection
We will continue to collect data on this component of critical thinking through the capstone seminar across instructors. We will increase our collection of data in different semesters to see if we have variance in assessment techniques across instructors. We want to determine if our overall rates are meeting our overall goals and to identify where discrepancies occur.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Analysis of Criminological/Criminal Justice (CJ) Issue Essay | Outcome/Objective: Identify and state topical issues or hypotheses

Projected Completion Date: 05/2011
Responsible Person/Group: Faculty involved with Capstone seminar in conjunction with CTW Ambassador.

Continued monitoring and data collection
Continued monitoring and data collection efforts should be pursued with a focus on determining the degree to which outcomes may vary across instructors and students and to determine what students need to ensure their success. It is recognized that there are cohort effects and that in a different class or a different year, we may find that we reach our goal. Continued monitoring and collection/analysis of data can help us determine the source/s of achievement levels.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
- Measure: Analysis of Criminological/Criminal Justice (CJ) Issue Essay | Outcome/Objective: Identify and state topical issues or hypotheses

Implementation Description: On-going.
Responsible Person/Group: CTW ambassador and section instructors

Improved collection of data, monitoring
In the next year priority should be given to improving assessment approaches for this course to further enhance the use of CTW in the Ethics course. Given the short implementation phase that occurred this year, not enough "bones" were in place to ensure a wider breadth of data collection. It is recommended that the next phase of assessment consider collection of information for all student essays/assignments in this course, along with data on all students. This would allow for a determination if there are improved outcomes throughout the course as well as a measure of success at the end of the course. Rubric scoring should be utilized in the assessment approach.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Critically Assess Ethical Issues in Criminal Justice | Outcome/Objective: Application and analysis | Generation of conclusions | Identification of ethical issues

Consistent use of rubrics and reporting of corresponding data
CTW ambassador will conduct consultation with CRJU 3060 instructors in advance of the term to encourage more consistent and complete use of rubrics for more than 1 of the ethical issue assignments.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Critically Assess Ethical Issues in Criminal Justice | Outcome/Objective: Identification of ethical issues

Responsible Person/Group: CTW ambassador

EmpHASIZE student improvement over time
We have increased our expectations this year with the introduction of graduated targeted outcomes that apply to minimal expectations and higher expectations. These targets only apply to the work provided by students in the final draft of a paper submitted in the last weeks of their undergraduate experience. We plan to focus more on within student improvement. Targets for next year will stress improvements in scores across the first and final drafts of the CJ Issue Essay that is assigned in the capstone class (CRJU 4930). A recent policy change mandates that CJ majors must complete the other CTW class, Ethical Issues in CJ (CRJU 3060), before they are eligible to enroll in 4000 level electives. The department’s undergraduate committee will consider ways to introduce into CRJU 3060 an assignment that taps the Comprehend and Synthesize Information measure in order to allow for within and across student comparisons over a broader time frame.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Analysis of Criminological/Criminal Justice (CJ) Issue Essay | Outcome/Objective: Demonstrate knowledge and ability to synthesize information

Implementation Description: Assessment efforts next year will analyze the within student improvements for CRJU 4930 students. The CJ Undergraduate Committee will fashion a proposal to allow for assessment and measure linkages across CRJU 3060 and 4930 and seek faculty approval.
Responsible Person/Group: CTW ambassador and CJ faculty

Emphasis on student improvement over time
Gradation was added to achievement outcomes to enhance standards. Second, a recent policy change mandating that CJ majors complete the Ethical Issues in CJ (CRJU 3060) before they are eligible to enroll in 4000 level electives raises the opportunity for linked assignments across CRJU 3060 and 4930. The department's undergraduate committee will consider ways to introduce into CRJU 3060 an assignment that taps the Application and Analysis measure in order to allow for within and across student comparisons over a broader time frame.

**Enhance data collection, reporting and connect CRJU 3060 to 4930 assessment**

Last year, the previous CTW ambassador made the following recommendation: "The next phase of assessment consider collection of information for all student essays/assignments in this course, along with data on all students. This would allow for a determination if there are improved outcomes throughout the course as well as a measure of success at the end of the course. Rubric scoring should be utilized in the assessment approach." While we achieved enhancements in the use of rubrics for the spring term, the introduction of a new CTW ambassador led to failure in this regard for the fall and a change in direction with regard to action plans. First, gradation was added to achievement outcomes to enhance standards. Second, a recent policy change mandating that CJ majors complete the Ethical Issues in CJ (CRJU 3060) before they are eligible to enroll in 4000 level electives raises the opportunity for linked assignments across CRJU 3060 and 4930. The department's undergraduate committee will consider ways to introduce into CRJU 3060 an assignment that taps the Application and Analysis measure in order to allow for within and across student comparisons over a broader time frame.

**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

We experienced a change in our CTW ambassador. This led to a steep learning curve and a breakdown in communication that produced missing data for the fall term. That said, we managed to add gradations to our achievement targets and trained and deployed 3 new CTW writing consultants and 2 new instructors. These training opportunities further allowed the new CTW ambassador to gain confidence in the expectations and structures of the effort. Improvements were made in the data collection for CRJU 3060 in the spring and will continue moving forward.
CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

With only 1 exception, we met achievement targets for all measures. All sections of CRJU 4930 showed significant within student improvements across the first and final draft paper submissions.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

We need to achieve more consistency in the rubric usage of our instructors. Noticable differences were observed in the average scores (1-4 scale) across the 3 CRJU 4930 instructors. the CTW ambassador needs to provide better training and oversight of adjunct instructors to assure quality control. It is expected that we will draw more heavily on CTW central office to assist in these training efforts. There also exists inconsistent use of writing consultants across sections. In part this is the byproduct of instructor styles and preferences but also seems to be linked to poor communication about expectations and potential benefits to writing consultant usage. Here again, added emphasis will be provided by CTW ambassador.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

Faculty are begging to fully internalize and implement the ideals of revision based writing and the use of rubrics. We currently use a one-size-fits-all rubric for CRJU 4930 that is mandated for use by all instructors. This rubric makes the separation of feedback and grading difficult for some. We will explore the possibility of a menu of rubrics and ways to link assessment measures and assignments across CRJU 3060 and 4930 to allow for more precise and meaningful assessment. The biggest change in our CTW program has been the introduction of a new CTW ambassador. The learning curve stunted our collective growth and it is hoped that substantive improvement can become the focus once again now that compliance has been achieved.

---

Georgia State University
Assessment Data by Section
2010-2011 CTW Early Childhood Education

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose

Mission: To build upon future teachers' understanding of how to apply critical thinking skills to their teaching practices and their own professional development to improve students' critical thinking skills through composition. Purpose: The purpose of the CTW initiative within the Early Childhood Development BSE program is to engage early childhood educators in critical thinking and communication. The department of Early Childhood Education considers critical thinking to be an important aspect of teacher education. In Prekindergarten through Grade 5 teaching, critical thinking is essential for evaluating teaching methods, advocating for "best practices," considering student assessment data, and expanding theory and practice to account for a variety of socio-cultural influences on children's development and learning. We consider critical thinking to include the following practices: the thoughtful consideration of detail and evaluation of evidence; the willingness to recognize, challenge, and analyze broad perspectives, question assumptions, and explore and evaluate personal subjectivities; the ability to defend a position or argue for a course of action based on the synthesis of cited sources and personal experiences; the ability to craft a comprehensible message for a particular audience using appropriately selected modes and genres of communication.

Goals

G 1: Think critically in online environments
Students will develop and present ideas in online fora. Their ideas will indicate that they are: 1) making reasonable, intelligent decisions about what to believe and what to do based on experiences, readings, conversations, etc., and 2) demonstrating the willingness to recognize and challenge personal biases and assumptions. Through asynchronous online interactions, including conversations, brief postings, and content organizations, they will demonstrate developing awareness and use of critical thinking.

G 2: Expand Understanding of Educational Issues through Written Inquiry
Students will explore their literacy pedagogy, practice, and current trends and issues impacting education by researching existing literature on the topic, participating in whole and small group discussions, interviewing public school personnel and policy makers, and engaging in study groups. Through multiple drafts of an expressive product, students will 1) make reasonable, intelligent decisions about what to believe and what to do based on experiences, readings, conversations, etc., and 2) demonstrate the willingness to recognize and challenge personal biases and assumptions.

G 3: Communicate Ideas Effectively
Students should be able to craft a comprehensible message for a particular audience using appropriately selected media, format, and genres of communication. Part of critical thinking is the ability to understand the influence of audience and the medium of expression upon how an author decides to craft her ideas. Students need to have working knowledge of a variety of expressive media, format, and genres and understand how audience impacts how she uses these three writing constructs to express ideas.

G 4: Explore and Evaluate Personal Subjectivities through Composition
Students will explore and evaluate their personal literacy philosophies by revising multiple drafts of an expressive product to examine their beliefs associated with teaching literacy and fostering literacy-rich learning environments for students. Multiple drafts will include reflections of research, readings, experiences, and conversations leading to a culminating composition evidencing the exploration and evaluation of personal subjectivities and how they have contributed to a final personal philosophy of literacy.

Student Learning Outcomes/Objectives
**SLO 1: Demonstrate developing awareness and use of evaluation methods to think critically in hybrid learning environments**

Our graduates will be able to demonstrate developing awareness and use of evaluation methods to think critically in hybrid learning environments.

**SLO 1: Exploring Children’s Literature to Expand Literacy Beliefs and Practices (G: 1, 3, 4) (M: 1)**

Objective: Students will use an online environment to review examples of quality children's literature, reflect upon what makes quality children's literature, and engage in online discussions designed to further their understanding of literature and its function in literacy development. Outcomes: Students will read and "log" at least 100 children's books in this online environment. "Logging" a book includes reading it, designing a virtual bookshelf within which it fits, and adding a review. Reviewers should let the reader know how students connected with the text, as opposed to a plot summary. Online discussions are begun by students, occur longitudinally throughout the semester, and are facilitated by the instructor. Online discussions may relate to how to continue using this site in future classrooms or sharing other online resources that could benefit future teachers teaching of literacy. A final written reflection and visual representation of the experience is the culminating product.

**SLO 2: Inquiry into Educational Issues (G: 2, 3) (M: 1)**

Objectives: Students will become advocates for educational policies at district, state, and national levels. Taking on the persona of a "press secretary," students will become familiar with Governor candidates' beliefs and future plans for education to the extent they can write a mock speech for the candidate to give at a speaking event to voting constituents with an interest in education. Students will attempt to contact the candidate, become familiar with the candidate's websites, Facebook page, tweets, etc., watch candidates debates, and infer their thinking about educational policy and plans with strong justifications for those thoughts. This writing will require a structured and mandatory cycle of feedback and revision with the help of the Critical Thinking through Writing consultant and small group meetings with "peer consultants". Outcome: Based on their research, readings, experiences, and conversations, students will write candidates campaign speeches related to literacy teaching and learning.

**SLO 3: Demonstrate an attitude of persistence, open-mindedness, tolerance for ambiguity and intellectual engagement**

Our graduates will be able to demonstrate an attitude of persistence, open-mindedness, tolerance for ambiguity and intellectual engagement through writing, revision, and collaborative experiences that support the exploration of their literacy pedagogy, practice, and current trends and issues impacting education.

**SLO 3: Literacy Outreach (G: 2, 3, 4) (M: 1)**

Objective: Students will communicate their understanding of literacy-related best practices and pedagogy in the elementary school classroom, locate and read professional literature to inform and support their thinking, and produce a written product aimed at communicating their learning. Details follow: Outcome: Students will submit a written mock interview with a public school principal highlighting (1) possible interview questions related to literacy practices and pedagogy and, (2) responses that reflect an understanding of best practices supported by research, readings, conversations and experiences. To support the design of the mock interview, students will conduct research related to public school interviews, current policies, and best practices in literacy. Student will meet with administrators and teachers to discuss possible interview questions. Students will meet in small groups to discuss possible responses and locate research that substantiates their answers. Their writing will go through a structured and mandatory cycle of feedback and revision with Critical Thinking through Writing Consultant and with a peer consultant to expand thinking about the topic. Feedback will include suggestions about how/where to add examples, use citations, add voice, more directly address the prompt, evaluate and acknowledge biases and subjectivities, etc.

**Standard Associations**

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 4: Literacy Compass Rose (G: 3, 4) (M: 1)**

Objective: Provide opportunities for students to examine their own lives, literacy practices, and to do so in a context that helps them connect these experiences to their roles as teachers and learners. Mini-lessons throughout the semester help students examine their own beliefs associated with teaching literacy and fostering literacy-rich learning environments for students. Students will create and revise their own Literacy Compass Rose. Creating this rose should help determine major and minor themes in understanding and teaching literacy to young children. In the rose, the major “directions” (N, E, S, W) are the major ideas involved in literacy and the subsets of the main ideas become the minor directions (NE, NW, SE, SW). Outcome: Through the compilation of cycles of inquiry capturing critical thinking, students present a final Literacy Compass Rose composition that connects students’ experiences and beliefs to their roles as teachers and learners. A portfolio of thinking linked to a final written “artist statement” highlights exploration, growth, and examination of beliefs and practices related to their literacy learning. Ultimately, the literacy compass rose will offer “direction” in future teachers’ own teaching of literacy.

**Measures, Targets, and Findings**

**M 1: Measure for Early Childhood Education BSE CTW Assignments**

Aligning our measure with our goals and objectives, critical thinking indicators are presented in rubric format. The rubric is broken down by objective to allow for greater instructor understanding of evidence of critical thinking. Each CTW assignment was assessed for evidence of critical thinking using this measurement scale. Please see Measurement Scale for Early Childhood Education BSE Program attached.

Source of Evidence: Written assignment(s), usually scored by a rubric

**M 1: Rubric for CTW Component of All Assignments (G: 1, 2, 3, 4)**

Based on our Action Plan designed in 2009-2010, we separated the Critical Thinking components on the Scoring Scale for Early Childhood Education BSE CTW Assignments. Instead of one indicator on a rubric, it is broken into two to allow for greater instructor understanding of evidence of kinds of critical thinking. The rubric is as follows: Evidence of Critical Thinking Component #1: 5: Makes reasonable decisions about what to believe and what to do based on experiences, readings, conversations, etc. 4. Attempts to link decisions about what to believe and what to do based on experiences, readings, conversations, etc., but the link is tenuous or
cursory 3. Makes statements about what to believe and what to do based only on experiences without consulting additional resources 2. Makes statements about what to believe or do, but they are not convincingly linked to experiences, readings, conversations, etc. 1: Makes superficial statements about what to believe or do without supporting reasons for positions

Evidence of Critical Thinking Component #2: 5: Demonstrates the willingness to recognize and challenge personal biases and assumptions 4: Indicates awareness of personal biases and assumptions but doesn't demonstrate a willingness to challenge them 3: Needs to challenge personal biases and assumptions 2: Needs to show more awareness of personal biases and assumptions 1: Seems unaware of personal biases and assumptions

Source of Evidence: Performance (recital, exhibit, science project)

**Target for O1: Exploring Children’s Literature to Expand Literacy Beliefs and Practices**

We did not establish a target for the 2009-2010 academic year. Going forward our target is for 50% of our students to score a 5 out of a 5pt. scale on this assignment.

**Findings 2010-2011 - Target: Met**

Our target is for 50% of our students to score a 5 out of a 5 pt. scale on this assignment. The breakdown is as follows: END OF SEMESTER Evidence of Critical Thinking on Indicator #1 (n=141): 113 scored a 5; 22 scored a 4; 6 scored a 3; 0 scored a 2; 0 scored a 1; 80% of students scored a 5. END OF SEMESTER Evidence of Critical Thinking on Indicator #2 (n=108): 110 scored a 5; 25 scored a 4; 4 scored a 3; 0 scored a 2; 0 scored a 1. 78% of students scored a 5. BEGINNING of semester scores were: 25 scoring a 5; 40 scoring a 4; 33 scoring a 3; 7 scoring a 2; 3 scoring a 1; 23% of students scored a 5.

**Target for O2: Inquiry into Educational Issues**

We did not have a target for the 2009-2010 academic year. Going forward, our target is for 50% of our students to score a 5 on a 5 pt. scale on this assignment.

**Findings 2010-2011 - Target: Met**

Our target is for 50% of our students to score a 5 out of a 5 pt. scale on this assignment. The breakdown is as follows: At the end of the semester, our scores were as follows: END OF SEMESTER: Evidence of Critical Thinking Indicator #1 (n=54): 40 scored a 5; 11 scored a 4; 3 scored a 3; 0 scored a 2; 0 scored a 1. 74% scored a 5. END OF SEMESTER: Evidence of Critical Thinking Indicator #2 (n=54): 44 scored a 5; 7 scored a 4; 3 scored a 3; 0 scored a 2; 0 scored a 1. 81% scored a 5. BEGINNING of Semester Scores: 9 scoring a 5; 12 scoring a 4; 22 scoring a 3; 8 scoring a 2; 3 scoring a 1. 16% had scores of 5 at the beginning of the semester.

**Target for O3: Literacy Outreach**

We did not choose an achievement target for the 2009-2010 academic year. Going forward, our target will be that 50% of our students will score 5 in a 5 pt scale for this assignment.

**Findings 2010-2011 - Target: Met**

Our target is for 50% of our students to score a 5 out of a 5 pt. scale on this assignment. The breakdown is as follows: END OF THE SEMESTER Evidence of Critical Thinking on Indicator #1 (n=87): 51 scored a 5; 16 scored a 4; 20 scored a 3; 0 scored a 2; 0 scored a 1. 59% of students scored a 5. END OF THE SEMESTER Evidence of Critical Thinking on Indicator #2 (n=87): 61 scored a 5; 15 scored a 4; 11 scored a 3; 0 scored a 2; 0 scored a 1. 70% of students scored a 5. At the beginning of the semester, students scored as following: BEGINNING of Semester Scores: 6 scoring a 5; 9 scoring a 4; 18 scoring a 3; 42 scoring a 2; 12 scoring a 1. 1% of students scored a 5.

**Target for O4: Literacy Compass Rose**

Our target is

**Findings 2010-2011 - Target: Met**

Our target is for 50% of our students to score a 5 out of a 5 pt. scale on this assignment. The breakdown is as follows: END OF SEMESTER Evidence of Critical Thinking on Indicator #1 (n=141): 118 scored a 5; 13 scored a 4; 8 scored a 3; 1 scored a 2; 0 scored a 1. 84% of students scored a 5. END OF SEMESTER Evidence of Critical Thinking on Indicator #2 (n=141): 120 scored a 5; 17 scored a 4; 3 scored a 3; 1 scored a 2; 0 scored a 1. 85% scored a 5. BEGINNING OF THE SEMESTER Evidence of Critical Thinking (n=141). 1 scored a 5; 6 scored a 4; 12 scored a 3; 98 scored a 2; 24 scored a 1.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Change rubric to reflect two critical thinking categories.**

In looking at the scores, we realize that they may skew high because two critical thinking criteria were collapsed into one rubric category. By dividing the criteria into two categories, we feel that next year's scores will be a more accurate depiction of student critical thinking development.

- Established in Cycle: 2010-2011
- Implementation Status: Finished
- Priority: High
- Implementation Description: Beginning in Fall 2010, we will create 2 categories of rubric descriptors to better capture critical thinking in our students.
- Projected Completion Date: 05/2011
- Responsible Person/Group: CTW ambassadors in consult with faculty
- Additional Resources: none
- Budget Amount Requested: $0.00 (no request)

**Encourage instructors to design CTW assignments that best fit their curriculum, including multimodal and digital products.**

In 2010, the BSE adopted the NET Standards to improve teacher and student use of technology as meaning-making tools. To meet these standards, preservice teachers will need more experience working with a variety of technology and software to develop and
express critical thinking. In 2010-2011, we used online sites for students to explore and evaluate children's literature and to engage in ongoing discussions about teaching practices and education policy. To help students understand multimodal composition, we created the Compass Rose assignment, which asked them to work in image and words to express their critical thinking about literacy and literacy instruction. This multimodal composition work will translate directly into digital multimodal compositions that they will create later in their teacher preparation program.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

Within the ECE B.S.E. program, CTW is well respected; however, further development is continually sought. We need a formal structure to assure the continued quality of our CTW component.

Critical Thinking Indicator #1: 80% scored a 5.
Critical Thinking Indicator #2: 81% scored a 5.
Expand Literacy Beliefs and Practices (n=141):
Critical Thinking Indicator #1: 74% scored a 5.
Critical Thinking Indicator #2: 70% scored a 5.
16% scored a 5.

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

There were three major accomplishments in the ECE B.S.E. CTW Initiative:
1. The students enrolled in our Early Childhood Education courses in the B.S.E. CTW courses met every objective. In reflecting upon our Action Plan from 2009-2010, the decision to separate the critical thinking indicators on the Scoring Rubric for CTW assignments allowed instructors to more clearly explore various ways students were exemplifying critical thinking in CTW assignments. An Instructor teaching courses without the "CTW" designation adopted the Critical Thinking Indicators on the Scoring Rubric to help explore various ways her students were exemplifying critical thinking through composition.

2. Inquiry in Educational Issues (n=54)
Critical Thinking Indicator #1: 59% scored a 5.
Critical Thinking Indicator #2: 57% scored a 5.
>1% scored a 5.

3. An Instructor teaching courses without the "CTW" designation adopted the Critical Thinking Indicators on the Scoring Rubric to help explore various ways her students were exemplifying critical thinking through composition.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Based on the Critical Thinking indicators used in the scoring rubrics for CTW assignments, students critical thinking improved dramatically. Each assignment captured significant improvement in critical thinking from the beginning to the end of the semester. Increases in the use of critical thinking found in CTW assignments were evidences as follows: 1. Exploring Children's Literature to Expand Literacy Beliefs and Practices (n=141): Beginning of the Semester Score: 23% scored a 5. End of the Semester Scores: Critical Thinking Indicator #1: 80% scored a 5. Critical Thinking Indicator #2: 78% scored a 5. 2. Inquiry in Educational Issues (n=54) Beginning of the Semester Score: 16% scored a 5. End of the Semester Scores: Critical Thinking Indicator #1: 74% scored a 5. Critical Thinking Indicator #2: 81% scored a 5. 3. Literacy Outreach (n=87) Beginning of the Semester Score: 1% scored a 5. End of the Semester Scores: Critical Thinking Indicator #1: 59% scored a 5. Critical Thinking Indicator #2: 70% scored a 5. 4. Literacy Compass Rose: Beginning of the Semester Score: >1% scored a 5. End of the Semester Scores: Critical Thinking Indicator #1: 84% scored a 5. Critical Thinking Indicator #2: 85% scored a 5.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

We need to fully implement this action plan during the 2012-2013 year. Consultants had been working with us for two years. However, since they either graduated in 2011 or will graduate in 2012, we will need to fully implement this action plan during the 2012-2013 year.

Implement formal workshops at the start of each semester for new CTW faculty and consultants.
As our BSE program expands, faculty and ambassadors recognize we cannot rely on prior knowledge of our faculty and consultants. We need a formal structure to assure the continued quality of our CTW component.

Structure CTW consultant training by requiring prior experiences.
We continue to see the consultant role as paramount to the success of the CTW initiative in ECE. The intense, one-on-one feedback students receive from the consultant, coupled with the writing relationship established between student and consultant, is not only crucial for critical thinking development but also models for pre-service teachers effective pedagogical practice. We have seen a marked difference in the quality of the CTW experience for students who had a working relationship with a CTW consultant well versed in course content versus students who did not have a working relationship with the consultant fostered through in-class mentoring. Because of the difference in the quality of experience for students, we are introducing pre-requisites for our CTW consultants. CTW consultants will need to demonstrate experience in either teacher development or writing pedagogy. Qualifying experience may be WAC and/or National Writing Project participation or their equivalent, or enrollment in or completion of ECE 8400-Teacher Development or ECE 9400-Academic Writing or their equivalent. By requiring these pre-requisites, we hope to mentor CTW consultants to provide on-going and effective support to our undergraduate students while also improving their own teacher development skills. We implemented this plan during the 2010-2011 year but did not need to attend to it because our CTW consultants had been working with us for two years. However, since they either graduated in 2011 or will graduate in 2012, we will need to fully implement this action plan during the 2012-2013 year.

CTW ambassadors review CTW consultant qualifications prior to submitting names.
Starting Fall 2010, we will implement a more formal workshop that will allow faculty and consultants to practice and review writing pedagogy-informed techniques as well as conceptualizations of critical thinking. This action plan was initiated during the 2010-2011 year; however, since we had returning CTW instructors and consultants, there was no need for formal workshops. Instead, we held informal meetings to gauge the progress of the initiative.

Implemented the Compass Rose assignment, which asked them to work in image and words to express their critical thinking about literacy and literacy instruction. This multimodal composition work will translate directly into digital multimodal compositions that they will create later in their teacher preparation program.
ways to support our CTW consultants through professional development experiences. We have been fortunate to have consistent CTW consultants, but as these consultants graduate, we will need greater support for introducing new consultants to the CTW experience. In terms of assistance, it would be ideal if instructors with fewer than 25 students could still have a CTW consultant in order to fully support our B.S.E. students through the intricate feedback and revision cycles of CTW assignments. One solution would be for a CTW consultant to work with two courses with less than 25 students. In addition, as we expand across three campuses (main, Alpharetta, and Newton County) we will be faced with the difficulties of finding consultants for all three locations. As we have stressed in the past, we feel our CTW components are successful in large measure because of the strength of our consultants. As our program grows, the issue of developing and keeping effective consultants will be a significant issue.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

The primary impact of CTW on the ECE B.S.E. Program, Faculty, and Students is three fold: (1) The CTW initiative was a catalyst in developing a B.S.E. Literacy Concept Map to structure unique components of each literacy course students take; (2) Faculty teaching courses without a CTW designation have adopted the CTW scoring rubric indicators to guide their own assignments; (3) Students report an increased self-awareness as a writer and increased confidence in their ability to, and enjoyment associated with, critically thinking through writing. Since last year’s CTW assessment report, we have implemented the Action Plan designed for the 2009-2010 report. We revised the CTW scoring rubric to inform instructors of students' critical thinking in more specific ways. We continue to seek ways to support our CTW consultants and support new instructors teaching CTW courses.

---

**Georgia State University**

**Assessment Data by Section**

**2010-2011 CTW Econ**

As of: 12/12/2016 04:10 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

---

**Mission / Purpose**

Economics is the study of how best to allocate scarce resources. Economics is an academic discipline that is central to the offerings of all major universities. As at most universities, economics plays an essential role in the general education required of all undergraduates, extending well beyond our undergraduate majors to essential courses in the core curriculum required of all GSU students, especially those majoring in business. At the Andrew Young School of Policy Studies at Georgia State University, it is the fundamental mission of the Department of Economics to contribute to the advancement of knowledge in our discipline, to share that knowledge with our students, and help them develop their critical thinking skills. The CTW components, embedded in problem sets for ECON 3900 and a book review and quizzes in ECON 4999, require the students to assess and evaluate concepts in economics as they relate to the real world and to be able to recognize (1) how economic theory relates to policy and (2) how many classical assumptions in economics do not apply in reality yet can still be a useful point of departure.

---

**Goals**

**G 1: relate economic theory to policy**

Students will recognize how economic theory relates to policy.

**G 2: relevance of classical assumptions in economics**

Students will recognize the relevance of classical assumptions in economics, and how they may not apply in reality yet can still be a useful point of departure.

---

**Student Learning Outcomes/Objectives**

**SLO 1: ECON 4999: Book Review (G: 1, 2) (M: 1)**

Students will demonstrate the ability to recognize and apply economic concepts by reviewing a book that is not primarily an economics book. Examples of such books include 1984, Confessions of an Economic Hitman, and The Firm. The individual book review will require the student to explore topics in economics that he or she is interested in and choose a book to read (with instructor approval) and thoroughly review. The review should be done in 5-6 pages, incorporating 2-3 economic concepts and provide a detailed, thoughtful analysis of the book, not simply a summary. There will be multiple drafts where the instructors will provide feedback. Students will be required to address any concerns the instructor has in subsequent draft. In particular, the student will be graded on the following components of the book review: the introduction, explanation of the book, application of at least two economic concepts to the book, structure of the review, valid opinion and conclusion, and references (graded also through citing sources accurately and not plagiarizing).

**SLO 2: ECON 3900: Short Assignment 1 (G: 1, 2) (M: 2)**

Respond to prompts about applications of macroeconomic theory. See attachments for more details.

**SLO 3: ECON 3900: Short Assignments 2 & 3 (G: 1, 2) (M: 3)**

Respond to prompts after completing readings. See attachments for more details.

**SLO 4: ECON 3900: Short Assignments 4, 5, & 6 (G: 1, 2) (M: 4)**

Respond to prompts about data interpretation and policy choices related to macroeconomics. See attachments for more details.

---

**Measures, Targets, and Findings**
M 1: ECON 4999 Book Review Rubric (O: 1)
See attached document for the rubric for the ECON 4999 book review. Each of the first 2 book review drafts is rated based on the criteria outlined in the rubric (i.e., Introduction, Book explanation, Economic Concepts, Structure of the book review, and valid opinion/Conclusion). The Critical Thinking components of the assignment are mainly embedded in the "economic concepts" and "valid opinion" parts of the assignment. So we pay closer attention to these components. Our measures are based on the ratings on each of these components. A "1" is assigned for "missing information", a "2" for "incomplete or lack of clarity", a "3" for "complete but needs minor revision" and a "4" for "complete, appropriate, no changes needed". We measure progress in critical thinking (between drafts) by the changes in ratings on the Critical thinking components of the assignment (economic concepts and valid opinion) as well as overall book review grade.

Source of Evidence: Capstone course assignments measuring mastery

Target for O1: ECON 4999: Book Review

We measure progress in critical thinking (between drafts) by the changes in ratings on the Critical thinking components of the assignment (economic concepts and valid opinion) as well as overall book review grade. We set the following specific targets: 1. On the first draft of the book review, at least 75 percent of students should make an average rating of 2.5 (on a scale of 1-4) or higher. 2. On the second draft of the book review, at least 75 percent of students should make an average rating of 2.5 (on a scale of 1-4) or higher. 3. On the final book review, at least 75 percent of students should make a grade of 85 percent or higher. 4. On the first draft, at least 60 percent of students should make a rating of 2 (on a scale of 1-4) or higher on the 2 critical thinking components of the book review assignment (economic concepts and valid opinion) 5. On the second draft, at least 60 percent of students should make a rating of 3 (on a scale of 1-4) or higher on the 2 critical thinking components of the book review assignment (economic concepts and valid opinion)

Findings 2010-2011 - Target: Partially Met

We did not meet Target 1 (70 percent meet the threshold rating of 2.5). We met Target 2 (about 93 percent of students meet the threshold rating of 2.5). We met Target 3 (about 89 percent of students made a grade of 85 percent or higher on the final book review). We met Target 4 (87.5 percent and 62.5 percent made the 2 rating threshold on "economic concepts" and "valid opinion" parts of the book review in the first draft). We narrowly met Target 5 (about 61 percent and 90 percent made the 2 rating threshold on "economic concepts" and "valid opinion" parts of the book review in the first draft). We saw gains from the first to the second draft in terms of average ratings (average rating of 2.5 increased from 70% to about 93% of students). We also saw improvement on the critical thinking components, in terms of the percentage of students earning at least a 2 (from about 88% on draft one to 98% on draft two for the "economic concepts" component, and from about 63% on draft one to 100% on draft two for the "valid opinion" component), and in terms of many students now earning the higher threshold of a 3 rating (as previously reported above).

M 2: ECON 3900 Short Assignment 1 Rubric (O: 2)
See attached rubric.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O2: ECON 3900: Short Assignment 1

No specific target was set this year; we are still working on this ECON 3900 course, and instructor turnover is great.

Findings 2010-2011 - Target: Met

Students showed some improvement from the first draft to the second draft.

M 3: ECON 3900 Short Assignments 2 & 3 Rubric (O: 3)
See attached rubric.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: ECON 3900: Short Assignments 2 & 3

No specific target was set this year; we are still working on this ECON 3900 course, and instructor turnover is great.

Findings 2010-2011 - Target: Met

Average Grades: CTW 1: 1st draft 8.3/10; final draft 18/20 CTW 2: 1st draft 8.35/10; final draft 19/20

M 4: ECON 3900 Short Assignments 4, 5, & 6 Rubric (O: 4)
See attached rubrics.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O4: ECON 3900: Short Assignments 4, 5, & 6

No specific target was set this year; we are still working on this ECON 3900 course, and instructor turnover is great.

Findings 2010-2011 - Target: Partially Met

The instructor for this course gave the following qualitative analysis: I tried to communicate my expectations to the students and to explain my grading system by using a grading rubric. For the first CTW assignment, I asked them to use Excel to make a figure using data from the national income accounts and to write a paragraph explaining the figure. I viewed this assignment, as like asking an art student to paint a still life. However, most students could not construct a satisfactory paragraph describing a simple figure. In my opinion, most students did not do very well on these assignments. In many cases, the essays were poorly organized and poorly written. The essays often appeared to be hastily written rather than well crafted essays. I reluctantly concluded that the level of writing proficiency among my students is at such a low level that they need far more guidance in how to write than I could reasonably provide in a single economics course. I tried my best, but I concluded that my efforts were unsuccessful.

Details of Action Plans for This Cycle (by Established cycle, then alpha)
incorporate Critical Thinking Through Writing (CTW) elements into two required major courses

The economics department plans to incorporate Critical Thinking Through Writing (CTW) elements into the following two required major courses: ECON 3900 (Macroeconomics) and ECON 4999 (Senior Capstone in Economic Policy). The CTW components, embedded in problem sets for ECON 3900 and a book review and quizzes in ECON 4999, require the students to assess and evaluate concepts in economics as they relate to the real world and to be able to recognize (1) how economic theory relates to policy and (2) how many classical assumptions in economics do not apply in reality yet can still be a useful point of departure. All CTW assignments will be redone after students incorporate the feedback they have been given by the instructor.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High

Set more specific targets and establish more formal assessment reporting procedures

Formal targets were not set this year. There were many different instructors for ECON 3900, and each of them had slightly different approaches to working CTW into their course, although all of them were appropriately working it into their course in some way. The ECON 4999 has more consistency across sections in terms of which specific assignments are done and how they are reported. More discussion needs to take place to set specific targets and more formal assessment reporting procedures for the ECON 3900 course across all sections.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

working with CTW consultants

Several CTW instructors have expressed concern about the ability of CTW consultants to provide good and clear feedback to students on CTW assignments. Often times their comments on assignments are not clear or are written in a way that does not encourage students’ critical thinking. But even more concerning for Economics CTW instructors is that they don't get to keep the same CTW consultant for more than a few semesters (at best). Most of our CTW consultants are Masters students (often in their second year). So going forward, we need to think about the most effective ways to train consultants so that instructors do not have to train a new consultant every semester.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

We met with all instructors to discuss the goals of the CTW Initiative. We still have large turnover with the ECON 3900 course and need to have more widespread discussion about specific targets for the objectives in that course - that was part of last year’s action plan and could still use work. The ECON 4999 course has more consistency across sections.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

We see progress in critical thinking skills as students move through the ECON 4999 course. They perform better on the final draft than on the earlier ones.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

High turnover of the ECON 3900 instructors and CTW consultants in general remain problematic for us. We will continue to work with the new instructors and consultants. The good news is more and more faculty are becoming aware of the CTW initiative as more of them get exposed to teaching the CTW courses, but it is difficult to keep starting over with new instructors.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

In general, it is nice to see our faculty discussing topics related to teaching and student learning. More of them are warming up to the ideas behind the CTW initiative. More students are aware of it as well. Feedback from students has been quite good - they seem to recognize that we are trying to teach them important skills.
**Mission / Purpose**

The Department of English teaches students to read and write critically and creatively. Our Department also prepares students to pursue professional training in areas of English language studies, global and multi-ethnic literary and cultural studies, pedagogy, critical theory, creative writing, rhetoric and composition, professional and technical writing, and secondary education. Our practice of critical thinking fosters development in all of these areas. For English majors, critical thinking means reading texts from many perspectives and working towards the expression of an informed, valid, and persuasive understanding of the text. Critical thinking activities in our discipline include analyzing elements of form; rigorous testing of ideas against evidence; articulating the relation between a text's production and its reception; summarizing a text's argument and purpose; and developing a point of view within relevant literary, historical, and theoretical frameworks.

**Goals**

**G 1: Students will comprehend texts.**

Students will learn to understand the ideas, arguments, and conventions in a text. In the process, they will examine how their own assumptions and biases might affect their critical reading of texts. They will also learn to select evidence effectively, evaluate competing ideas, and defend their interpretations.

**G 2: Students will understand and use literary and rhetorical conventions.**

Students will learn to recognize how writers use literary and rhetorical conventions and incorporate these conventions into their own writing.

**G 3: Students will learn to write clearly and effectively.**

Students will learn to make linguistic and rhetorical choices to produce writing that is effective in terms of tone, audience, and/or genre. They will develop an awareness of their specific audience and work towards developing an individual voice or style.

**Student Learning Outcomes/Objectives**

**SLO 1: Identifies ideas (G: 1) (M: 1, 2, 3, 4, 5, 6, 7, 8, 9)**

Students successfully summarize main ideas and arguments in a text. In the introductory CTW courses, English 3040 and 3050, students practice identifying the foundation of critical theory and rhetorical elements in a text and then complete a 1-2 page summary of these essential ideas. This process of thinking through how writers use language and ideas in their discipline prepares students for more complex assignments, such as applying theory to literary texts or using rhetorical techniques in their own writing. In the Senior Seminars, students refine their thinking about specific literary and rhetorical forms, such as a sonnet, a short story, a blog, a podcast, by completing assignments which ask them to summarize the key elements of these forms, thus continuing to extend the process of working with the language and ideas central to their area of study within the major.

**SLO 2: Demonstrates literary knowledge (G: 1, 2) (M: 1, 2, 3, 4, 5, 6, 8)**

Students demonstrate working knowledge of literary or rhetorical language and theory. Once students have practiced taking apart a text and identifying its central ideas or arguments, they work through assignments that ask them to evaluate or apply these ideas. The introductory classes ask students to evaluate a theory's strengths or weaknesses; in the Senior Seminars, students apply a theory and use it to develop their own interpretation of a text, to inform a research project, or to produce their own creative work. CTW instructors evaluate this outcome through the rubric categories of conventions, process, and judgment.

**SLO 3: Writes effectively (G: 2, 3) (M: 1, 2, 3, 5, 6, 7, 9)**

Students write clearly and effectively, using language appropriate to the form or discipline. While all of the CTW assignments emphasize the process of thinking through how texts create meaning, they also require students to develop mastery in their own writing. The short assignments assessed through CTW, such as the 1-2 page reading summaries or 2-3 page analyses of a pedagogical theory or poem, are especially designed for students to practice their writing. Because we see competent writing as evidence of clear thinking, three out of nine categories of our rubric evaluate writing in terms of expression, voice and style, and contribution to the development of a writer's craft.

**Measures, Targets, and Findings**

**M 1: Rubric (O: 1, 2, 3)**

Rubric to determine strength of student critical thinking skills in English. See Repository. The rubric contains three broad skills (engagement, reflection, and communication) that English faculty agreed were fundamental for assessing critical thinking in all four English concentrations (Rhetoric & Composition, Literary Studies, Creative Writing, Secondary Education). Each skill breaks down into specific aspects of that skill. These specific skills are assessed using a four-point scale (4 being the strongest score and 1 being the weakest), and they graduate in terms of degree of difficulty. For instance, under the broad skill "Engagement," students are assessed on how well they understand concepts ("Ideas"). A solid understanding of concepts should lead to students' ability to appropriately use the conventions in their concentration ("Conventions"). Once "Ideas" and "Conventions" are mastered, students should be able to effectively evaluate textual evidence and adapt or reevaluate their ideas based on that evidence ("Testing").

Source of Evidence: Written assignment(s), usually scored by a rubric.

**Target for O1: Identifies ideas**

3.5 out of 4

**Findings 2010-2011 - Target: Not Met**

For this cycle of assessment, we have chosen to focus on four categories in our rubric which nearly all CTW instructors used in their courses. Our data from each CTW course shows that on average students scored 3.2 out of 4 in the category of
engagement with ideas, an activity essential to reading and thinking about texts. While this finding shows competence in this area, we would like to see some students exceed this measure and achieve mastery; our target of 3.5 would indicate solid competence in this area and show progress towards such mastery.

**Target for O2: Demonstrates literary knowledge**
3.2 out of 4

**Findings 2010-2011 - Target: Not Met**
For this cycle of assessment, we have chosen to focus on four categories in our rubric which nearly all CTW instructors used in their courses. Our data from each CTW course shows that on average students scored 2.94 out of 4 in the category of engaging with literary or rhetorical conventions. We would like to see all students show competence and occasional mastery in this area because they will need to build on this knowledge as proceed through their CTW and other courses in the major.

**Target for O3: Writes effectively**
3.5 out of 4

**Findings 2010-2011 - Target: Not Met**
Our data for this cycle shows that students showed solid competence and some mastery in their writing for CTW assignments; they scored on average 3.24 out of 4 for the rubric category for expression. In our workshops for the next cycle, we will encourage CTW instructors to develop compatible assignments that use four key categories in the rubric as they design their courses. By focusing on particular CTW activities such as expressing ideas in language appropriate to the discipline, instructors can direct students to engage effectively with ideas and convey their understanding in writing. Our target of 3.5 would show significant progress towards mastery in this area.

M 2: Rubric Data (O: 1, 2, 3)
This spreadsheet represents an average of the students' scores on the Assessment Rubric associated with the assignments below.
Source of Evidence: Document Analysis

M 3: Theory Summary (O: 1, 2, 3)
Students summarize a textbook chapter on a critical theory and evaluate that theory's strengths and weaknesses.
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Identifies ideas**
3.5 out of 4

M 4: Reading Response (O: 1, 2)
Students respond to a reading by identifying and evaluating the rhetorical elements that students find compelling.
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Identifies ideas**
3.5 out of 4

M 5: Sonnet Analysis (O: 1, 2, 3)
Students analyze a sonnet by identifying the poetic techniques used and explain how they work to create meaning.
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Identifies ideas**
Findings 2010-2011 - Target: Not Met

Target for O2: Demonstrates literary knowledge

Findings 2010-2011 - Target: Not Met

Target for O3: Writes effectively

Findings 2010-2011 - Target: Not Met

M 6: Theory Application (O: 1, 2, 3)
Students apply a critical theory to a text (film, literary work, tv show, etc.)
Source of Evidence: Presentation, either individual or group

Target for O1: Identifies ideas

Findings 2010-2011 - Target: Not Met

Target for O2: Demonstrates literary knowledge

Target for O3: Writes effectively

Findings 2010-2011 - Target: Not Met

M 7: Analysis of Fiction (O: 1, 3)
Students analyze a piece of published fiction by identifying elements of craft and explaining how they function to create particular effects. Students then reflect on how they might make use of the same elements.
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Identifies ideas

Findings 2010-2011 - Target: Not Met

Target for O3: Writes effectively

Findings 2010-2011 - Target: Not Met

M 8: Blog or Podcast Response (O: 1, 2)
Students respond to a blog or podcast by analyzing and evaluating its use of rhetoric.
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Identifies ideas

Findings 2010-2011 - Target: Not Met

Target for O2: Demonstrates literary knowledge

Findings 2010-2011 - Target: Not Met
Findings 2010-2011 - Target: Not Met
3.0 out of 4 (Engagement: Convention)

M 9: Article Summary (O: 1, 3)
Students research, select, and summarize an article on the use of technology in the English classroom.
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Identifies ideas
3.5 out of 4

Findings 2010-2011 - Target: Met
3.5 out of 4 (Engagement: Ideas)

Target for O3: Writes effectively
3.5 out of 4

Findings 2010-2011 - Target: Met
3.6 out of 4 (Communication: Expression)

Details of Action Plans for This Cycle (by Established cycle, then alpha)

CTW English Website
We created and maintain a departmental CTW website. The site is for students majoring in English and for English instructors. For students, the site provides links to important information on the CTW initiative and identifies English CTW courses. For instructors, the site provides training documents such as the departmental rubric, tips on assignment design, information on assignment submission, etc. The site also contains sample syllabi and assignments. The site has been in use and maintained all year.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Responsible Person/Group: Melissa McLeod

Rubric Revision
Many faculty who taught CTW courses during our pilot year did not find the rubric we had developed to be entirely satisfactory. Some of the categories in our rubric focused more on the outcome than the process of critical thinking, while others did not serve students in all four concentrations. Last year the CTW faculty proposed several alternative rubrics, and we revised our rubric to clarify the essential activities all students in the major should practice: thoughtful engagement with the ideas in a text; thorough reflection on their own position in relation to those of other readers and writers; and clear communication. While we plan a few minor revisions to the rubric for the next cycle, our focus will be on coordinating the use of the rubric across all of courses. We hope to establish three or four common measures for all the CTW courses.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Implementation Description: All CTW assignments will be assessed using the revised rubric, which will be posted on the online writing environment course pages.
Projected Completion Date: 05/2011
Responsible Person/Group: Audrey Goodman

Workshop Revision
In previous years, we held workshops for all CTW faculty twice each semester, once to introduce the program and answer questions for new faculty and then to discuss problems and share ideas about how to improve the program. This year we focused on the faculty actively teaching each semester and worked to break down their training by concentration. For 2011-12 we plan to hold small, more personalized orientation meetings before the start of each semester to address the varying levels of familiarity with CTW requirements among our faculty.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Implementation Description: Workshops will be scheduled at the beginning of each semester for new faculty, with follow-up meetings of all faculty at the end of each semester.
Projected Completion Date: 05/2012
Responsible Person/Group: Audrey Goodman
Additional Resources: An assistant familiar with OWE would be extremely helpful for leading these sessions and being available for consultation during the semester.

Focus on clarity of writing
Clear expression in writing demonstrates critical thinking in English. We will continue to focus on writing as a key element of thinking in our discipline through encouraging CTW instructors to develop assignments with several cycles of revision; we will then coordinate our assessment of these activities by applying consistently the rubric category of expression.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Analysis of Fiction | Outcome/Objective: Writes effectively
Measure: Rubric | Outcome/Objective: Writes effectively
Focus on engagement with ideas in a text
In our workshops for the next cycle, we will encourage CTW instructors to develop compatible assignments that use four key categories in the rubric as they design their courses. By focusing on particular CTW activities such as analyzing the essential concepts in a literary or rhetorical text, the instructors can direct students to engage effectively with ideas and convey their understanding in writing.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Focus on engagement with literary and rhetorical conventions
In our workshops for the next cycle, we will encourage CTW instructors to develop compatible assignments that use four key categories in the rubric as they design their courses. By focusing on particular CTW activities such as engaging with literary or rhetorical conventions, the instructors can direct students to identify and use the tools essential to their work in the discipline.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Focus on process of reflection
In our workshops for the next cycle, we will encourage CTW instructors to develop compatible assignments that use four key categories in the rubric as they design their courses. By focusing on particular CTW activities such as cultivating awareness of the thinking process or individual biases, instructors can guide students to reflect more fully on their own positions and help them to articulate and defend their own point of view.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
Our main accomplishment this year was to build consensus among CTW instructors regarding the key assessment categories for CTW assignments. While our new rubric provides the opportunity for instructors to measure a range of critical thinking skills, we agreed that focusing on a few key categories will help us to work together towards our goals of improving critical reading and writing. From there, we can develop signature CTW assignments in each CTW course to have standards to measure student progress.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
Instructors report that students now do not leap to embrace their first reading of a text. They appreciate the need to re-read and to consider the lens through which they read. They also understand better that words and texts of multiple meanings, none of which is absolute. An additional benefit instructors observed was that after completing CTW assignments student engaged more productively in class discussions, and they also wrote more analytical and generative final papers. The short, focused exercises that develop critical thinking function like scaffolding for larger projects. By practicing critical thinking during the semester, students approach their final papers with a greater understanding of issues and complexities in their own final arguments. They are able to contextualize their responses or arguments more accurately in larger discussions of a topic, leading them towards more useful and engaging introductions and conclusions.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the
implementation of CTW have been problematic? What assistance might you need to address those areas?

While our CTW program has worked fairly well this year, we still face the challenge of coordinating our four concentrations. In the next year, we plan to address the assignments and assessment process for each concentration separately in order to refine the ways that we pursue our common goals. Some faculty continue to resist using the Online Writing Environment, the method we have chosen to gather data and coordinate assessment. Others use OWE but apply default rubrics. In order to address this process, we will need to hold more one-on-one training sessions.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

This year students seem to have a clearer understanding of how critical thinking works in our discipline. The faculty involved in this initiative are becoming more committed to it, as it requires additional training and modification of assignments. While we may find fewer faculty willing to teach CTW courses, those who do are likely to become increasingly able to help students develop critical thinking skills. Our major change this year was to apply a new rubric, and we expect that as we continue to use it we will be able to measure student progress more effectively.

---

Georgia State University
Assessment Data by Section
2010-2011 CTW Entrepreneurship
As of: 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
Successful entrepreneurship requires an individual to possess a high degree of self-sufficiency with respect to a wide range of business skills. Communication is critical among those skills. In particular, entrepreneurs must be measured in their thinking and persuasive in their writing. Writing about business situations requires a mix of skills. The writer must be succinct, tools of business analysis must be employed, and arguments have to honestly consider alternatives. The argument made in business writing in general and entrepreneurship writing in particular is often requesting, however indirectly, that the reader make some sort of commitment to the writer that puts the reader at risk. That risk is assumed in the hope of some return. This is true when a business plan is submitted to a banker or investor as much as when trying to persuade a desirable prospect to become a key member of the management team. The reader is going to be highly circumspect and look carefully at the reasoning and support that is woven into request. The mission of the Entrepreneurship faculty members is to emphasize this point to students through the placement of critical thinking and effective writing components in the undergraduate Business Planning class.

This will need to be revised in the 2011-2012 cycle to be more crisp and focused.

Goals
G 1: Writing Skills
Students graduating with a major in managerial sciences and a concentration in Entrepreneurship will be effective writers in their field.

G 2: Critical Thinking Skills
Students graduating with a major in managerial sciences and a concentration in Entrepreneurship will be effective critical thinkers with respect to the problems they will confront in their field.

Student Learning Outcomes/Objectives

Relevant Associations:
Source of Evidence: Written assignment(s), usually scored by a rubric. Student will re-write the CTW case following feedback and work with the writing consultant. This subsequent case write-up will be analyzed with the same MGS 4560 CTW rubric as the initial case write-up. Based on this, further feedback will be given to the student and comparative measures will be drawn on the CTW outcomes set out in the rubric.

Target for O1: Effective Writing
The targets for the first item in the rubric are to have 80% of the students scoring at "Competent" or "Excellent" with no more than 5% at the "Ineffective" level. Critical Thinking through Writing Rubric for MGS 4560 Students Can: Excellent (4) Competent (3) Less than competent (2) Ineffective (1)

Findings 2010-2011 - Target: Met
In the 2010-2011 Spring Semester offering of MGS 4560 33 students were enrolled. 31 students completed the final version of the CW case analysis and were assessed on the rubric. There were in the class three students on an exchange program from the Republic of Georgia who were not in the RCBA BA degree program. Of the three was among the two who did not complete the case analysis. On the first item on the rubric the Students averaged 2.548 with a standard deviation of 0.9. Of the 31 students 25 were at the level "Competent" or higher (80.6%) and 0 were rated at the level "Ineffective."

Target for O2: Gathering and Generating Data
The targets for the second item in the rubric are to have 80% of the students scoring at "Competent" or "Excellent" with no more than 5% at the "Ineffective" level. Critical Thinking through Writing Rubric for MGS 4560 Students Can: Excellent (4) Competent (3) Less than competent (2) Ineffective (1)

Findings 2010-2011 - Target: Not Met
In the 2010-2011 Spring Semester offering of MGS 4560 33 students were enrolled. 31 students completed the final version of the CW case analysis and were assessed on the rubric. There were in the class three students on an exchange program from the Republic of Georgia who were not in the RCBA BA degree program. One of the three was among the two who did not complete the case analysis. On the first item on the rubric the Students averaged 2.548 with a standard deviation of 0.9. Of the 31 students 13 were at the level "Competent" or higher (41.9%) and 3 were rated at the level "Ineffective."

Target for O3: Analysis and Interpretation
The targets for the third item in the rubric are to have 80% of the students scoring at "Competent" or "Excellent" with no more than 5% at the "Ineffective" level. Critical Thinking through Writing Rubric for MGS 4560 Students Can: Excellent (4) Competent (3) Less than competent (2) Ineffective (1)

Findings 2010-2011 - Target: Not Met
In the 2010-2011 Spring Semester offering of MGS 4560 33 students were enrolled. 31 students completed the final version of the CW case analysis and were assessed on the rubric. There were in the class three students on an exchange program from the Republic of Georgia who were not in the RCBA BA degree program. One of the three was among the two who did not complete the case analysis. On the first item on the rubric the Students averaged 2.483 with a standard deviation of 0.6325. Of the 31 students 25 were at the level "Competent" or higher (80.6%) and 0 were rated at the level "Ineffective."

Target for O4: Recommendations for Action
The targets for the fourth item in the rubric are to have 80% of the students scoring at "Competent" or "Excellent" with no more than 5% at the "Ineffective" level. Critical Thinking through Writing Rubric for MGS 4560 Students Can: Excellent (4) Competent (3) Less than competent (2) Ineffective (1)

Findings 2010-2011 - Target: Not Met
In the 2010-2011 Spring Semester offering of MGS 4560 33 students were enrolled. 31 students completed the final version of the CW case analysis and were assessed on the rubric. There were in the class three students on an exchange program from the Republic of Georgia who were not in the RCBA BA degree program. One of the three was among the two who did not complete the case analysis. On the first item on the rubric the Students averaged 2.483 with a standard deviation of 0.962 Of
the 31 students 15 were at the level "Competent" or higher (48.4%) and 5 were rated at the level “Ineffective.”

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Development of Critical Thinking Skills

In reviewing the initial and subsequent case write-ups, and in talking with the students individually when reviewing the initial write-ups it was clear that students had little idea as to what critical thinking exercises entailed. Although this course is situated as the senior-level CTW class, these students did not have the junior–level CTW class not did they have the core CTW exercises that have been added recently (many did not complete their freshman and sophomore course work at GSU). Thus, unlike students who we hope will matriculate through the entire undergraduate CTW sequence, these students were encountering an explicit CTW approach for the first time in their semester of graduation. Action Plan: Following the 2010-2011 assessment using a more rigorous measure of Critical Thinking skills it is clear that we need to work harder at developing these skills in the course and in the assignment feedback on the case draft.

- **Established in Cycle**: 2009-2010
- **Implementation Status**: In-Progress
- **Priority**: High
- **Projected Completion Date**: 04/2012
- **Responsible Person/Group**: William Bogner, Stan Little
- **Additional Resources**: None
- **Budget Amount Requested**: $0.00 (no request)

#### Increased Preparation for Initial Assignment

Student composition skills were disappointing in the initial draft. Students do have a course that emphasizes business writing in their junior year so the writing style needed for effective business communication should not be difficult. In talking with students when reviewing their performance on the initial case write-ups most indicated that they had not done structured writing assignments since their business communication course. Many had reverted to writing in bullet lists and simplistic outline formats. Action Plan: A major Action Plan item for the Entrepreneurship CTW course was to increase the Critical thinking coaching in the course.

- **Established in Cycle**: 2009-2010
- **Implementation Status**: In-Progress
- **Priority**: High
- **Projected Completion Date**: 04/2011
- **Responsible Person/Group**: William Bogner, Stan Little
- **Additional Resources**: None
- **Budget Amount Requested**: $0.00 (no request)

#### Increased Revision Performance

Students were generally found not to be highly engaged in the revision process in spite of the relationship between the revision performance and their final grade. Action Plan: For the 2010-2011 academic year two modules will be added prior to the initial paper being written. If the logic of both effective writing and critical thinking for effective entrepreneurship can be effectively increased by those modules, then the opportunity to have a better follow-up, one-on-one meeting with the students should emerge. At those meetings the opportunity to further develop critical skills will be stressed. The ability to achieve the 0.5 level improvement will be reassessed.

- **Established in Cycle**: 2009-2010
- **Implementation Status**: Terminated
- **Priority**: High
- **Relationships (Measure | Outcome/Objective):**
  - **Measure**: The Case Analysis
  - **Outcome/Objective**: Effective Writing
- **Responsible Person/Group**: William Bogner
- **Additional Resources**: None
- **Budget Amount Requested**: $0.00 (no request)

### Analysis Questions and Analysis Answers

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

A major Action Plan item for the Entrepreneurship CTW course was to increase the Critical thinking coaching in the course. To do this a new module was added early in the semester. This was accompanied by the hiring of a writing instructor who had extensive experience in assessment in education from her prior job. Working with the ambassador, William Bogner, and the instructor, Stan Little, she was able to set out some very clear guidelines and standards that were applied going forward. We also changed the way in which we evaluated student performance, and these changes are reflected in the way that the findings are reported in the 2010-2011 cycle. This also resulted in the termination of one action plan which focused on the draft stage of the CTW exercise and shifted a stronger emphasis to the CT development Action Plan just discussed.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

Used a more rigorous standard for Critical thinking this year we were able to produce some rather sobering but motivating results about student critical thinking skills. While students at the top of the class were very good, there was a very broad fall off in the skill level once the middle of the class distribution was approached. The number of students that were rather “Ineffective” was lase to the desired target on all but one measure, the the number of students falling int he “Less than Competent” category was too high, particularly for the exit class.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**

The more rigorous application of the CT items n the rubric clearly show that we need to increase those three skills in students. We will need to modify the module we added to review those skills in its class, but there seems to be a need for more CT emphasis on all
classes. This is the final semester for most of these students and the number that has "Less than Competent" skills on multiple dimensions is too high. Actually we think that these results are appearing in part because we are doing a better job of requiring and being able to evaluate CT skills. This in turn is due, in part, to the ability to work with a writing consultant that has assessment experience in education. With that person working one on one with the students we can see clearly the levels that students are at on the various skills and where we need to focus efforts.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

The major change in the CTW implementation on the department level is to do a better job of channeling students into CTW classes. Because of the odd configuration of the Managerial sciences Department it was possible for a student to take all of their required courses without taking a second CTW class. This creates graduation issues. In addressing this we anticipate a significant increase in CTW enrollments in 4000-level classes in MGS.

Assessment Data by Section
2010-2011 CTW Film
As of: 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
Students who graduate with an undergraduate degree in film should be able to participate fully in our media-intensive society as both critical consumers and informed creators of film and television. Critical thinking is crucial for this purpose. In film, “critical thinking” is defined as identifying, analyzing, and evaluating arguments and truth claims; and formulating and presenting convincing reasons in support of conclusions.

Goals
G 1: Thinking about Media
Students should be able to identify, analyze, and evaluate theoretical arguments about media and to formulate and present convincing reasons in support of their own theoretical arguments.

G 2: Writing about Media
Students should be able to write clear, well-organized, and grammatically correct English prose to make a persuasive argument.

G 3: Theoretical understanding of media
The film major should develop students' abilities to apply media theory insightfully to contemporary and historical media.

G 4: Writing effectively about media
The film major should develop students' abilities to write clear, persuasive English prose about media.

Student Learning Outcomes/Objectives
SLO 3: Evaluating theoretical arguments about media (G: 3) (M: 2)
At the end of this program, students should be able to identify, analyze, and evaluate theoretical arguments about media.

SLO 4: Supporting theoretical arguments about media (G: 3) (M: 1, 2)
At the end of this program, students should be able to formulate and present convincing reasons in support of their own theoretical arguments about media.

SLO 5: Writing about media (G: 4) (M: 1, 2)
At the end of this program, students should be able to write clear, well-organized, and grammatically correct English prose to make a persuasive argument about media.

Other Outcomes/Objectives
O/O 1: Development of Film Criticism Assignment Structure (G: 1, 2) (M: 1)
The CTW faculty in Film will develop an assignment structure whose core elements can be implemented across all sections of Film 4750 (Film Theory and Criticism) while providing faculty with the potential to adjust aspects of the assignment to the theoretical content they privilege in their own individual sections. In this assignment, students will research an appropriate area in film theory and investigate how a specific theoretical construct functions in a particular film. The skills involved in this assignment will include: generating a clear, appropriate research question in film theory; finding and interpreting the relevant critical literature; applying theoretical material to a specific film text to produce critical insight into the film; supporting the student's argument with well-chosen examples; organizing the criticism into a persuasive whole; and writing the paper in clear, concise, grammatically correct prose.

O/O 2: Development of Senior Seminar Assignment (G: 1, 2) (M: 1)
The CTW faculty in Film will develop an assignment that can be implemented across all sections of the capstone course Film 4910
In this assignment, students will detail a structure for their final project (either a research paper, a video production, or a website) and justify why this structure will accomplish their rhetorical goals. The skills involved in this assignment will include: generating a clear, appropriate research question/argument dealing with some aspect of authorship/reception; situating the project's approach within the critical debate about authorship and/or audiences; organizing the materials into a persuasive whole; and either writing the paper in clear, concise, grammatically correct prose or creating video that is proficient and clear. The CTW faculty will also develop a rubric for the assignment that lays out clear grading parameters and that allows the faculty to set measurable targets for student performance.

O/O 6: Development of Film Criticism Assignment Rubric (G: 3, 4) (M: 1)

The primary CTW assignment in Film Theory and Criticism asks students to research an appropriate area in film theory and to investigate how a specific theoretical construct functions in a particular film. The skills involved in this assignment include: generating a clear, appropriate research question in film theory; finding and interpreting the relevant critical literature; applying theoretical material to a specific film text to produce critical insight into the film; supporting the student's argument with well-chosen examples; organizing the criticism into a persuasive whole; and writing the paper in clear, concise, grammatically correct prose. The CTW faculty will develop a rubric for the assignment that lays out clear grading parameters and that allows the faculty to set measurable targets for student performance.

Measures, Targets, and Findings

M 1: CTW Faculty Discussion (O: 1, 2, 4, 5, 6)

At the end of each semester, the CTW faculty in Film meet to evaluate the CTW procedures both in Film Theory and Criticism and in Senior Seminar in Film. Instructors read A, B, and C papers from each class section to determine if grading procedures are comparable across instructors. Faculty discuss their experiences that semester in implementing CTW assignments, evaluating what the best practices are. Faculty will arrive at a consensus about which will be the core CTW practices for each class in the future, and they will also set student performance goals for future semesters (by consensus). The CTW Ambassador will update the assignments, rubrics, and syllabi in the Weave system.

Source of Evidence: Discussions / Coffee Talk

Target for O1: Development of Film Criticism Assignment Structure

100% of CTW Film faculty participating in the end-of-semester meetings should approve of the CTW core assignment structure for the next semester.

Findings 2010-2011 - Target: Met

100% of the CTW Film faculty participating in the 2010-2011 discussion approved of the core assignment structure for the coming year.

Target for O2: Development of Senior Seminar Assignment

100% of CTW Film faculty participating in the end-of-semester meetings should approve of the CTW assignment writeup and grading rubric for the next semester.

Findings 2010-2011 - Target: Met

100% of the CTW Film faculty participating in the 2010-2011 discussion approved of the core assignment structure for the coming year.

Target for O4: Supporting theoretical arguments about media

The supporting evidence in the project proposal assignment in Senior Seminar in Film should be at the "competent" or "sophisticated" level for at least 50% of the students.

Target for O5: Writing about media

The written expression in the project proposal assignment in Senior Seminar in Film should be at the "competent" or "sophisticated" level for at least 50% of the students.

Target for O6: Development of Film Criticism Assignment Rubric

100% of the CTW faculty will agree on a standard grading rubric for Film Theory and Criticism and on achievement targets for that rubric.

M 2: Project proposal: Senior Seminar in Film (O: 3, 4, 5)

In this assignment, students will detail a structure for their final project (either a research paper, a video production, or a website) and justify why this structure will accomplish their rhetorical goals. The skills involved in this assignment will include: generating a clear, appropriate research question/argument dealing with some aspect of authorship/reception; situating the project's approach within the critical debate about authorship and/or audiences; organizing the materials into a persuasive whole; and either writing the paper in clear, concise, grammatically correct prose or creating video that is proficient and clear.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: Evaluating theoretical arguments about media

The integration of theoretical perspectives in the project proposal assignment in Senior Seminar in Film should be at the "competent" or "sophisticated" level for at least 50% of the students.

Target for O4: Supporting theoretical arguments about media

The supporting evidence in the project proposal assignment in Senior Seminar in Film should be at the "competent" or "sophisticated" level for at least 50% of the students.
Target for O5: Writing about media

The written expression in the project proposal assignment in Senior Seminar in Film should be at the “competent” or “sophisticated” level for at least 50% of the students.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Grading Rubric Standard
In the 2010-11 year, the CTW Film faculty will create quantitative targets for the new grading rubric in the Senior Seminar in Film.

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

The primary accomplishments of the CTW program in film were in the development of rubrics for our two CTW classes. The Film faculty have been fairly hesitant about rubrics. However, a couple of CTW faculty have taken the lead in testing rubrics. This development process has been a “bottom-up” effort rather than a “top-down” intervention. Although the rubric development process remains slow and careful, the choice to work from best practices has helped in gaining wider faculty acceptance for rubric use. The rubric in Senior Seminar in Film was tested in both spring and fall semesters, and the CTW faculty have approved it (although it will be re-evaluated each semester). The faculty have agreed to achievement targets for this class for the coming year. The faculty have agreed to test a rubric in Film Theory and Criticism in 2011-2012 with the goal of creating measurable targets for that rubric by the end of the year.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit level?

At the end of both fall and spring semesters, the CTW faculty who taught courses in those semesters (Jennifer Barker, Alessandra Raengo, Jim Roberts, and Greg Smith) met with CTW Ambassador Greg Smith to read sample papers to establish grading norms; to discuss best practices; and to determine which CTW practices should be adopted for future semesters. All faculty have found these meetings to be a very helpful exchange of pedagogical strategies, and the faculty grading norms remain consistent. Since both CTW classes in Film are at the 4000 level, there is no formal “entry/exit” class sequence, and so the discussion dealt with individual instructors’ variations on the basic teaching structures for each course. Jim Roberts organizes his Film Theory and Criticism class around 5 key words: author, spectator, realism, cinematic, and ideology. In the fall he introduced each word in the first 5 weeks, and then assigned students to be responsible for one of these concepts as they move through the readings for the rest of the class. The student was responsible for discussing how the assigned concept functions within the readings for that week. They did so on the class wiki (http://film4750.wikispaces.com), and Roberts felt that the wiki has been valuable in getting them to write more, better, and critically. In the spring Roberts further integrated his class wiki into class activities so that the wiki did not serve simply as a “hoop” that the students needed to jump through. The wiki promoted discussion outside of class. Robert intends to have students use the wiki next year to address the film screening of the week from the perspective of their assigned key word, thus further interrelating the various class components. Roberts does not assign grades to the initial paper proposal, which means that students don’t have an expectation that their final paper proposal will get a better grade. To encourage students to hand in the initial ungraded paper proposal on time, he gives a grade penalty on the final proposal if the initial proposal is late. Roberts then has them turn in the “final paper” (he doesn’t call it a “draft” because that encourages sloppier work), and he provides feedback on that without providing a grade. Students then turn in a revised paper for a grade. He uses the same grade penalty system with the final paper, which encourages them to turn in the paper on time, even though it doesn’t receive an initial grade. The rest of us marveled at Roberts’s efforts at putting both the proposal AND the paper through a revision process. Roberts said that the best thing he did in his spring Film Theory and Criticism section was spend an entire class on how writing a proposal was different from writing a paper. Most students simply begin writing papers without having to articulate their argument and structure first, and so a proposal where they have to foreground and justify their rhetorical choices is a new experience for most. Roberts particularly emphasized how a proposal differs from a paper introduction, and he discussed the importance of doing the research before writing the paper (instead of coming to a conclusion first and then looking for research to support it). This explicit focus helped improve the quality of the proposals. Other smaller pedagogical decisions made an impact for Roberts’s spring 4750 class. He taught the class in a room that made conference style seating possible, and he felt that promoted better discussion than the standard classroom seating. He also attended several workshops for CTW ambassadors/instructors, and he found the shared experiences/wisdom in those sessions to be invaluable.

Jennifer Barker felt that the student tends to be overwhelmed when she provides full comments on papers, and so in the fall she decided to make her comments for most students fit within the cells of her rubric. She offers full line comments to her students and provides them if they want, but if they don’t she provides comments within the rubric. Barker felt that the rubric helps provide clarity to the student and a justification for the paper grade if students ask. Barker’s rubric formed the basis for the rubric that the faculty will
CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

The CTW Film faculty remain pleased with the implementation of critical thinking and writing strategies in these classes. This is particularly true for Film Theory and Criticism, an established part of our curriculum. The challenge is to integrate a unified rubric into an established class, allowing us to document our impressions of CTW effectiveness. During the 2010-2011 year, the CTW faculty will more broadly test the implementation of a Film Theory and Criticism rubric and determine measurable targets. Spring 2011 was the first time that the Senior Seminar in Film was taught at full enrollment, having 25 instead of 12 students as in previous semesters. Greg Smith was the only faculty member teaching Senior Seminar during the spring, and he discussed the importance of the schedule of assignments in that class. Because there are so many sub-assignments leading to the final project, the calendar is quite sensitive to relatively small variations. The primary difficulty was that GSU classes for the first week were canceled because of weather, and so this particular class did not meet until Wednesday of the second week (because of the Martin Luther King holiday). This shortchanged the initial sessions of the class, which oriented students toward the project, the project proposal, and the CTW process. Smith moved quickly through the project description and headed for the intellectual content of the course (concerning authors, audience, and meaning-making), figuring that the seniors were relatively practiced in creating papers and videos. Also, the students needed as much time as possible to work on their projects, given the shortened semester. In retrospect, Smith thinks this was a mistake. Students were asked too quickly to begin discussing and writing about their large projects, and so the project conceptions suffered. Poor conceptions led to relatively poor projects. In a project driven class such as Senior Seminar in Film, the early project description and development must be paramount. Smith said that special attention to the schedule of assignments (particularly given the feedback circuit of the CTW portion of the course) will be needed when the class is next taught (in the 7 week summer session).

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

The primary changes to CTW within the Film major in 2010-2011 involve the development and testing of rubrics. Smith said that special attention to the schedule of assignments (particularly given the feedback circuit of the CTW portion of the course) will be needed when the class is next taught (in the 7 week summer session).

### Student Learning Outcomes/Objectives

#### SLO 1: CTW Assignment 1 - Define CTW in Finance (G: 2, 3, 4, 5) (M: 1)

The first writing assignment in this class is a two part assignment. The first part of the assignment is completed in-class on the first day of class. In this assignment, students are asked to write a one sentence definition of “critical thinking through writing in finance.” The assignment is given after the instructor explains the difference between business writing and general writing and after the instructor briefly discusses the importance of writing in finance. The purpose of this assignment is to encourage students to consider the meaning of critical thinking in finance. By asking them to write a definition of critical thinking in finance, we begin the process of setting a goal for them to follow for the entire semester. This second part of this writing assignment is an expansion to the first part. Here we ask students to rewrite their definition of critical thinking through writing in finance at home between the first and second class periods. We encourage students to research the topic and discuss the topic with other students and/or friends. In addition, we ask them to expand the definition to three (3) sentences, where the second and third sentences expand/explain/illustrate their definition (sentence one) to provide more direction, detail or clarity. On the day the assignment is turned in, the instructor will display some reports via the overhead projector. Open discussion will produce a “class” definition of critical thinking through writing in finance, which will be displayed on the course uLearn page and used as a guide for all writing assignments in the course.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

#### SLO 2: CTW Assignment 2 - Writing for Business (G: 2, 3, 4, 5, 6) (M: 2, 3)

The purpose of this assignment is to encourage students to contemplate the similarities and differences between business writing and academic writing. Students read a collection of articles concerning business writing techniques and then they must draft a memo summarizing what they learned. The memo must be addressed to the instructor who taught their basic English composition course at GSU (or at the school where they took a similar class).

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

#### SLO 3: CTW Assignment 3 - Argumentative Essay (G: 1, 2, 3, 4, 5, 6) (M: 2, 3)

In this assignment, students read two articles and then write an engaging introductory paragraph to an argumentative essay on what, in their opinion, is the best way to prevent firms from committing inventory fraud. We ask students to evaluate the articles, analyze the data and draw a definitive conclusion. The writing assignment is only the opening paragraph to what would be their entire argument. We want students to be able to state their opinion and introduce their support in a powerful and concise manner.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)
### Measures, Targets, and Findings

</table>

<table>
<thead>
<tr>
<th>Target for O1: CTW Assignment 1 - Define CTW in Finance</th>
</tr>
</thead>
<tbody>
<tr>
<td>For the first part of this assignment, which is an in-class assignment on the first day of class, we do not expect student single sentence definitions to be very well thought out or deep. However, since all students have taken other CTW courses in other areas as well as previous finance courses and writing courses, we expect the definitions to be well written and moderately insightful. The second part of this assignment, which is a takehome assignment, is scored using the same simple rubric that was used for Assignment 1a. The scores on the two assignments are compared with the expectation that more time, thought and research will produce a more comprehensive definition as well as a fewer spelling and grammar errors. The rubric scores for this assignment are 0, 1, 2, 3 or 4. Our target score is 2.5.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Findings 2010-2011 - Target: Met</th>
</tr>
</thead>
<tbody>
<tr>
<td>This assignment was refined from 2009-10 - actually this assignment is a combination of both assignments 1 and 2 from the prior year. The goal of this assignment is to show students the importance of &quot;critical&quot; thinking in this class by making them define critical thinking in their own words. The average score on the first part of the assignment (what was done in class) was 2.3, which was lower than we expected. The average score on the takehome part of the assignment was 3.3. Students exceeded our expectations on the takehome part. Many provided definitions of critical thinking through writing in finance that demonstrated advanced thought and research. Some students even cited their sources, which was not required, but was enlightening to us. We plan to require this in the future. Overall, we consider this to be a very successful assignment.</td>
</tr>
</tbody>

<table>
<thead>
<tr>
<th>M 2: CTW Assignment 2 - Writing for Business (O: 2, 3)</th>
</tr>
</thead>
<tbody>
<tr>
<td>In this writing assignment, students are asked to summarize several articles that discuss similarities and (mainly) differences between academic writing and business writing. We ask students to write a memo, addressed to their English Composition teacher, discussing what they learned from their reading of the articles. On the day that students brought their papers to class, they were placed in groups of 3-4 where they read each others first drafts. Using the feedback they received from their peers, and learning from the first drafts of others they read, students were then asked to edit/rewrite their memos to be turned in the next class period. In general, the final papers that we received were well written and most highlighted the most salient aspects of the articles. Students followed instructions well and many incorporated the principles of good business writing, as discussed in the articles, into their memo. This assignment did not ask for any analysis, so the evaluation was based mainly on the quality of writing. Overall, the quality of these written assignments exceeded expectations.</td>
</tr>

</table>

<table>
<thead>
<tr>
<th>Target for O3: CTW Assignment 3 - Argumentative Essay</th>
</tr>
</thead>
<tbody>
<tr>
<td>The goal of this assignment was for the memos to be well written, properly addressed and formatted, and reflective of knowledge gained from the articles. Students seemed to enjoy reading each others memos, and from the volume of the ensuing discussion as reported by faculty who used this assignment, they appeared to offer each other useful suggestions for improvements.</td>
</tr>
</tbody>
</table>
M 3: CTW Assignment 3 - Argumentative Essay (O: 2, 3)

This assignment was scored using the General Rubric for FI 4020 Assignments. The assignment was evaluated for Items 1, 4, 6 and 7. The maximum score possible was 15 and the minimum possible score was 0. We divided the total score by 4 to derive an average score. The average score ranged from 0 to 4.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: CTW Assignment 3 - Argumentative Essay

The target grade for this assignment was 3.0.

Findings 2010-2011 - Target: Met

Our expectation was an average grade of 3.

M 4: CTW Assignment 4 - "Case Name" Business Analysis (O: 4)

Only one faculty member (Pete Eisemann) used this assignment and submitted results. Others were encouraged to use the assignment, but it is not clear if they did so or not. The assignment was graded with the Grading Rubric for Business Analysis that Pete created. Pete used this assignment and rubric for three different cases in the class. The case for this specific writing assignment was covered during the 10th week of the term.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O4: CTW Assignment 4 - "Case Name" Business Analysis

Based on the rubric used to evaluate the papers submitted for this assignment, the maximum possible score was 20. The expected average score for this assignment was 13.5, which related to an evaluation of "fair." We expected a low score for two reasons. First, this was the first assignment in the course that used this specific set of guidelines. An assignment learning curve was expected. Second, because this assignment occurred early in the semester, we did not expect students to have yet mastered the art of business and financial analysis. Learning how to properly analyze a case is part of the instruction that takes place in the course. It is difficult for students to demonstrate critical thinking skills related to financial analysis before they learn how to properly do financial analysis.

Findings 2010-2011 - Target: Partially Met

Similar to last year, the average score on this assignment was lower than we expected. Whereas student writing was judged as being above average, students did not demonstrate sufficient critical thinking. In general, the analysis part of the papers we received was weak and few students offered suggestions for solutions to the problem of inventory fraud.

M 5: CTW Assignment 5 - "Case Name" Business Analysis (O: 5)

Only one faculty member (Pete Eisemann) used this assignment and submitted results. Others were encouraged to use the assignment, but it is not clear if they did so or not. The assignment was graded with the Grading Rubric for Business Analysis that Pete created. Pete used this assignment and rubric for three different cases in the class. The case for this specific writing assignment was covered during the 6th week of the term.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O5: CTW Assignment 5 - "Case Name" Business Analysis

Based on the rubric used to evaluate the papers submitted for this assignment, the maximum possible score was 20. The expected average score for this assignment was 15, which related to an evaluation of "good."

Findings 2010-2011 - Target: Met

The actual average score on this assignment was 14.5, the standard deviation was 2.6, the minimum score was 9.0 and the maximum score was 19.5. We note significant improvement in the average score from the first assignment as well as a narrower deviation of scores. Overall, the writing and critical thinking components of these papers met expectations and the improvement over the prior assignment was significant.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Future Action Plan for All Writing Assignments

Since all of the writing assignments that we used this past year were new, we consider this past year as a learning experience for both our students as well as us. We recognize that it is possible that our target grades were overly optimistic and possibly unrealistic. In the future we will use the average grades from this year as the base standard for future years. We also recognize that perhaps our assignments need improvement. We will work together this summer to clarify the goals in our assignments and make changes as needed. As noted in CTW Reflection 2, we believe that the results from this year show that our students tend to: Struggle when faced with complex issues and "messy" data Experience difficulty when asked to critically assess their arguments or policy decisions Tend to approach every problem believing that it can be solved with a formula Answer case questions using data in the case only - that is, they do not seem to make the connection between academic cases and real world events or effects Often make biased decisions and seldom develop robust conclusions Our major action plan for the future is to determine the best way to help our students improve these critical thinking skills. One issue that we must address is how to best incorporate critical thinking exercises into this already very full and challenging class. Most of us who teach this required class for all finance majors, do not believe there is enough time in the semester to teach the skills, tools, processes and techniques needed to do good financial analysis while at the same time teaching and evaluating critical thinking through writing. Although most students write well (we do have a significant number of students in our class who write poorly) it is our goal to help them improve their writing skills so that they can more effectively communicate their ideas.
classes for whom English is a second language - these students need help outside of what we can do to assist them with basic writing skills, specifically spelling and grammar), since business writing is different from writing literature in an English class, we are forced to spend a significant amount of time teaching business writing skills. To also teach critical thinking through writing skills is challenging for all who teach this course. In addition, adding CTW to this course makes it very difficult to find faculty willing and able to teach the course. Nonetheless, we will continue to work as best we can to make FI 4020 an effective CTW course. We believe that we have made a good start in finding articles in our field that address some of the issues related to critical thinking in finance. Indeed, the student critical thinking struggles that we identified above are similar to those reported in these articles. We now better understand the challenge that we face and that allows us to focus on effective solutions. Finally, to increase the effectiveness of course delivery, class sizes have been reduced to 30 students.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Projected Completion Date: 05/2011

Responsible Person/Group: Richard Fendler and the finance faculty assigned to teach FI 4020 during the 2011-12 academic year (not yet decided).

Challenges and Plan for 2011-12

The finance department has supported the CTW initiative from the beginning. We are committed to make the CTW aspect of our designated course, FI 4020, which all finance students are required to take for the major, as effective as possible. As a case based course that focuses on the analysis of financial statements and financial based decisions within a firm and/or with regards to a firm, FI 4020 is a natural choice in our department for CTW. Even before CTW, one of the most significant learning objectives of the course was that students would develop the ability to critically analyze a firm's financial position and be able to develop solutions to address identified weaknesses. Although applying CTW to FI 4020 seems natural, in fact, implementing the program presents significant challenges. Prior to CTW, most instructors evaluated student progress in critical thinking through evaluation of student preparation, in-class case discussion (we cover nearly one new case per week), financial analysis problem sets and frequent exams. None who teach the class believe that CTW assignments are a substitute for our traditional manner of evaluating student critical thinking. Thus, CTW added an additional burden to instructors, specifically grading and providing significant feedback on nearly 200 student papers per semester. FI 4020 is a very full and challenging course to teach without this extra burden. The cases used in the class and case assignments are constantly being changed to remain current to shifting economic and market conditions. Thus, getting faculty to implement CTW in their courses is difficult. It also complicates recruitment of faculty to teach the course. Nonetheless, we will continue to work as best we can to make FI 4020 an effective CTW course. Our chairman is supportive of the program and he continues to work with me to address the issues noted above. We are confident that the writing assignments now developed for the course are sufficiently detailed and effective. Our major challenge moving forward is to rally new faculty to support the approach that we have developed, to develop consistent scoring guidelines and to collect and efficiently evaluate assessment data. Hopefully the data and evaluation we do next year will continue to strengthen the CTW aspect of FI 4020 as well as the overall program within our department.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Projected Completion Date: 05/2012

Responsible Person/Group: Richard Fendler and the finance faculty assigned to teach FI 4020 during the 2011-12 academic year (not yet decided).

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

This was a difficult year for me relative to CTW because I did not teach any sections of FI 4020 (the finance department’s designated CTW course) this academic year. One section of the course each semester was taught by Pete Eisemann, who taught the course and been involved with both the WAC and CTW programs for many years. All other sections of the course, however, were taught by faculty new to the course and/or new to CTW. Nonetheless, I believe the finance department made significant progress in the application of our CTW goals and plans for this year. The most significant progress for this year was improved communication and coordination among faculty teaching the course. We met before, and continued to communicate throughout, each semester. We developed a common rubric for FI 4020 writing assignments, most faculty submitted scoring reports and, mainly due to the efforts of Pete Eisemann, we developed a generic template for writing the business analysis of a credit memo for cases we use in the course. Pete used this template for three of the CTW tasks that he assigned in his courses. Other faculty used some parts of the template for their assignments this year. In the future, we will make Pete’s generic business analysis writing template a central part of the CTW program for the finance department. The beauty of the template is that we can apply it to any three cases that we use in the course.

FI 4020 is a case based course and most of us use between 6 to 10 cases each semester, though not all faculty use the same cases. By developing a generic writing assignment, each instructor can choose the cases to apply the assignment to, providing individual faculty academic freedom, and each faculty member can alter the cases that we assign the project to each semester, thereby reducing the incidence of cheating. The instructions that Pete created provide students with a complete explanation of the use of credit memos by financial institutions, specific guidelines how to write the business analysis section of a credit memo, and scoring guidelines for their case write-ups. These guidelines and improved coordination among faculty concerning the implementation of CTW in FI 4020 directly relate to the Action Plan that we specified last year.

Finally, to increase the effectiveness of course delivery, class sizes have been reduced to 30 students.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Projected Completion Date: 05/2011

Responsible Person/Group: Richard Fendler and the finance faculty assigned to teach FI 4020 during the 2011-12 academic year (not yet decided).

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

It is difficult to assess the improvement in critical thinking among the students in our classes that is due to CTW for two reasons. First, FI 4020 is a course in financial statement analysis. We teach students the tools of financial analysis and then we instruct them, via cases, to put the tools of analysis into practice. Analysis involves critical thinking. In fact, improvement in critical thinking skills and appropriate application of those skills have always been key learning objectives of the course. Thus, ever prior to our incorporating CTW assignments into the course, we noted improvement in critical thinking skills of our students in the class from the beginning of the course to the end. Prior to CTW, we measured this improvement through in-class case discussion, case based problems and exams. Now we also use CTW assignments as another way to assess improvement in critical thinking. Whether or not our CTW assignments have actually made critical thinking among our students any better than what it was before is difficult, if not impossible, to directly measure. Second, although we have noticed improvements in the writing skills of our students, both prior to the course and throughout the course, we are not sure of the cause of this improvement. We are concerned that the main source of this progress is that the instructions that we use for our assignments are now better written and more complete. Also, by providing students with rubrics before they write, students write to the rubric. That is, we tell students what we want them to do and we pre-provide them with specific scoring guidelines better now than we did in the past. Because our instructions are more precise, student writing and what we
identify as critical thinking through writing appears to be improved, relative to prior years. Also, within the semester, that is, from the first assignment to the last assignment, the feedback we provide to students on early papers guides them to write better. The rubric based scores they receive on follow-up papers in the course improve, but I am not completely convinced that the improved scores are due to improvements in critical thinking. They may merely be due to improvement in following instructions.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

Because the instructors who teach this class change nearly every year, we need improved faculty training concerning both the course and CTW. I most likely will not teach FI 4020 again next year (most of my teaching duties will be at the graduate level) and because Pete Eisemann is taking early retirement this summer, he will not be teaching the course next year either. This means that probably two new faculty members will be teaching FI 4020 next year and of the repeat instructors, both are still relatively new to the course. FI 4020 is a very difficult course to teach, both due to the subject matter and the fact that the course is mainly case based. Case teaching is challenging to most instructors. Teaching this course is best learned by doing, as is CTW. It can take many semesters to learn how to teach the many different cases that are used in this course and then many more semesters to learn how to effectively employ CTW assignments. With the turnover that we have in faculty who teach the course and with the challenges inherent in teaching the course without CTW, making sure that writing projects are being assigned and properly evaluated is extremely difficult. Faculty new to teaching the course resist assigning and grading numerous papers. The course is already very full and we do not have significant faculty positions open. I am still very leery of assigning numerous CTW assignments at this time without the burden of numerous CTW assignments. I am not sure what assistance could be provided to address these areas short of several new faculty members for the finance department. Writing assistants do not really help, because they change nearly every semester and most faculty find that it takes more time to train a writing assistant than the assistant saves. Our chairman has been very supportive of my efforts and of the CTW aspect of the course. He placed an enrollment cap of 30 students on all sections of the course last year, which makes grading of writing assignments at least more manageable than when the average class size was 40. However, due to growing enrollments and unfilled faculty positions in our department, seasoned faculty, such as me, are being assigned to different courses. Pete Eisemann’s retirement only exacerbates the situation for next year.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

The primary impact of CTW on our department is improved communication and support among the faculty who teach this class. Most who have taught the class over the past 3 years believe that CTW is a good idea. Also, over the years, we seem to have converged in our understanding of the program and in our ideas of how to best implement CTW in the course. Our chairman supports the program and is committed to try to keep enrollment numbers in the class as low as possible, acknowledging the extra burden created by the grading of writing assignments. As for the impact of the CTW program on our students, there is consensus among those who teach the class that student writing has improved. Because we teach students the principles of correct business writing, which differs from good writing composition, we believe that the students exiting the course writing better business text. Not only do the students writing better business text, but they also have a better understanding of the nature and principles of a credit memo and knowing the difference between good business writing and good academic writing are valuable lessons. Our department continues to assess the value of CTW and to find ways to improve the implementation of the program. I will meet with all faculty who will be teaching FI 4020 at least twice during the summer and I plan to talk with each FI 4020 instructor on a monthly basis during the fall semester. I believe frequent communication, where I stress the importance and the goals of CTW, is necessary to ensure compliance with the goals of the program within our department.

ACADEMIC PROGRAM QUESTION 1: What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We made some changes to the assignments that we used this year. We combined the first 2 assignments into one assignment and we (thanks to Pete Eisemann) developed a generic template of instructions for writing the business analysis part of a credit memo. We used that generic template for three of the writing assignments for the course. We plan to continue using this template in future years - the only changes will be in the cases that the template is assigned to. We do not plan any other significant changes to the assessment process next year. Our main challenge will be to make sure that the current assessment process (assignments, targets, etc.) is carried out by all faculty teaching the class next year, especially the faculty who are new to teaching the course and new to CTW.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The data that we collected this year is both interesting and informative, however, we do not plan any changes in our degree program due to our findings. As was the case last year, we are still in the discovery stage of CTW. We are not yet convinced that we have figured out the best way to implement CTW into this course and we are still struggling to get all faculty who teach the course to completely buy into CTW. In our meetings, faculty support the CTW initiative. Getting them to use common assignments, scoring the assignment with rubrics and submitting individual assignment rubric based scores to me each year is still a challenge. Thus, at this point, the data that we are collecting is mainly being used to support that notion that the CTW initiative is working and that we need to continue to refine the implementation of CTW into our degree program.

ADMINISTRATIVE DEPT QUESTION 1: Explain how your department used the results from last year’s (2009-2010) assessment. What actions did you take? What changes did you make as a result?

Last year’s CTW report was used by those who taught the department’s CTW course this year as a guide to better understanding CTW and for improving the implementation of CTW in the course. Outside of this group, last year’s results were not used to make any specific changes within the department.

ADMINISTRATIVE DEPT QUESTION 2: What have you learned from your assessment this year (2010-2011)?

The main lesson we learned from our assessment of CTW in FI 4020 for this year is that overall students seem to display improvement in their ability to express critical thinking through writing as the semester progresses. However, we cannot say for certain that this progression is due to CTW. Because an objective of the course has always been to develop the ability to critically think, we may merely be observing additional evidence of what we were already evaluating through different means (i.e., in-class case discussion, problem sets and frequent exams). In addition, we are not completely certain that our assessment of improved critical thinking through writing is correct. Specifically, we are not sure if we are observing improvement in critical thinking or if we are merely observing improvements in following our writing instructions. As we continue to develop more precise instructions for writing
administrations and more precise rubrics for evaluation of these assignments, we are concerned that students are merely writing the way that we are telling them to write and we are accessing this as improvement in critical thinking. I would like to see this issue more adequately addressed and explored in our next CTW workshop in August.

**ADMINISTRATIVE DEPARTMENT QUESTION 3:**

What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

I have spoken with our department chair about the need to have all members of the faculty support CTW. We plan to get more faculty involved with the CTW course and through this means to achieve greater support for the CTW program overall. One concern we have with this idea concerns that extra amount of work that CTW imposes on those of us who teach the course. Our CTW course, FI 4020, is a very difficult course to teach. It is a case based course that requires constant research to make sure that the cases used in the class are up to date and pertinent to market and economic conditions. Our department chair lowered the enrollment cap on the class to 30 this year, which is lower than the average of 40 for the past several years, but still presents a very large number of papers to grade in a writing intensive course. Also, we have experienced difficulty maintaining consistency in the faculty who teach this course each year. For example, due to needs in other teaching areas, I did not teach any sections of FI 4020 last year and will probably not teach any next year either. Likewise, another key faculty member and department supporter of CTW (Pete Eisemann) will not be teaching any sections of FI 4020 next year because he is taking early retirement. Due to budget and personnel restrictions coupled with growing enrollments, there is not a lot that we can do this coming year to improve the implementation of CTW in our department. I will work as hard as possible to teach the new instructors about CTW and to encourage all to use the common CTW assignments that we have developed. I believe that our assignments and grading rubrics are very good and I perceive that students are becoming increasingly supportive of CTW in general. As faculty who teach the course, we will continue to meet, continue to encourage others in the department to join us and do the best we can to make the finance department's CTW course the best that it can be. *I am teaching a summer section of FI 4020 and from discussions with my class as well as the results of the first 2 assignments in the class, I notice significant changes in student attitudes towards CTW. Students are more aware of the program and its goals, they better understand the difference between business writing and academic writing and they complain less about being asked to write than they did several years ago.*

**Georgia State University**

**Assessment Data by Section**

**2010-2011 CTW French**

As of: 12/15/2016 04:10 PM EST

(Include those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

**Mission / Purpose**

In accordance with the University's regulations regarding the Critical Thinking through Writing component of courses, the French faculty has defined critical thinking in French as follows: students who demonstrate their commitment to critical thinking through writing analyses, and who improve the quality of their work through the rewriting of successive drafts, gain a better understanding of the intellectual production that has taken place among French-language writers over the past several hundred years. They learn more about French thinking processes and are better equipped to find and express their own voices in the target language.

**Goals**

G 1: Goal for French

French majors in CTW courses are able to apply their critical judgment by writing commentaries on literary texts and answering critical questions on literary and civilization topics. More specifically, students who think critically about French culture and literature can: 1. Interpret (categorize, decide significance, clarify meaning), 2. Analyze (examine ideas, identify arguments, analyze arguments), 3. Evaluate (assess claims, assess arguments), 4. Infer (query evidence, conjecture alternatives, draw conclusions), 5. Explain (state results, justify procedures, present arguments), 6. Self-reflect (self-examine, self-correct according to the advice and comments that were given for the first phase of the assignment and then for the second phase).

**Student Learning Outcomes/Objectives**

SLO 1: Objective (G: 1) (M: 1)

The objective in French courses is to have an amount of 80% enrolled students reaching a CTW rating of 4 on a scale going from 1 to 6.

**Measures, Targets, and Findings**

M 1: Assignments descriptions (O: 1)

In each CTW French course, two written assignments are rated. In the FREN3033 course (Introduction to the Analysis of Literary Texts), one assignment is a literary essay (usually on a text in prose), the second is a text analysis (usually a poem). In the civilization courses (FREN4103 and FREN4123), the two assignments are essays related to civilization topics; in the FREN4103 course the topics are more historical than in the FREN4123 course, where they are more related to contemporary civilization issues.

Source of Evidence: Written assignment(s), usually scored by a rubric.

**Target for O1: Objective**

The target is a rating of 4 (on a scale going from 1 to 6) for 80% of the students enrolled in the course.

**Findings 2010-2011 - Target: Partially Met**

In 2010-2011, the target was reached for two courses (FREN3033 and FREN4103) but was not reached for one course.
Details of Action Plans for This Cycle (by Established cycle, then alpha)

Action plan
This past year was the second year for teaching CTW courses in French. There were three faculty members involved but among those three, one was new for CTW and was trained. We need to have one workshop in August to discuss the "data analysis" (attached), as one course did not meet the goal of 4 for 80% defined for the French major so the goal was only partially met. We need to understand why this is so and also answer the following questions: 1) Is this goal realistic? 2) Are there discrepancies among the faculty rating students' work (the exercise done last year to have the same piece of work rated by three different faculty members did not show big discrepancies but maybe this is only because the work rated was too obvious)? 3) Should we lower the number of students to 75% instead?

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Implementation Description: Workshop in August
Projected Completion Date: 08/2011
Responsible Person/Group: Dr. Eric Le Calvez
Budget Amount Requested: $0.00 (no request)

Increase the courses meeting the target
Need to determine if the high figures for the two courses reaching the target are because of too generous ratings; on the other hand, the ratings for FREN4123 need to be improved. Will have to analyze if the average result is due to the student body or to the way the assignments are being rated. That should not be the case as they are being rated according to the rubric.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
Measure: Assignments descriptions | Outcome/Objective: Objective
Implementation Description: Will reflect on the issue in Fall 2011 when the course is given again.
Responsible Person/Group: Dr. Eric Le Calvez
Additional Resources: n/a
Budget Amount Requested: $0.00 (no request)

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
- We were not able to determine any discrepancies among faculty members rating students' work, this will be another challenge this year. Maybe this is too early to be certain of what is going on (why the Contemporary France course did not meet the goal) as this can be completely related to the quality of the students involved in the course (in particular, this year the faculty member who taught Contemporary France found out that a big number of students were poor in the target language, which certainly was a disadvantage as the linguistic component in the target language is an important one for the CTW). - We were able to refine and simplify the rubric.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
What is very interesting when looking at the Data Analysis 2010-2011 is to see the differences between FREN4123, FREN3033 and FREN4103. FREN4123 is the only course that did not reach the target of 4 for 80% students; and yet, this is the course where students get better results throughout the semester (78% versus 26% and 45% respectively). In the same way, FREN3033 and FREN4103 see students obtaining lower ratings throughout the semester (24% and 28%) whereas in FREN4123, only 1% obtain lower levels. In the FREN4123 course, students were able to better structure their second assignment from their self-reflection after the first assignment (the first phase of the CTW in each course is a detailed outline of 2 pages) and to have (in general) more logical thoughts in their argumentation.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
- The most problematic (all faculty members agree about this) is the amount of quite required to do the exercise well. The students agree too; even if they feel in general that they improve and that the exercise helps them, they think it is too time-consuming (one student had, in fall 2010, four CTW courses at once!). - Development needed (see action plan): we need to reflect on the target for the French major and on the way students are rated by faculty members.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?
Changes: FREN4103 has been taught as a CTW course for the first time and was quite successful; one faculty member has been trained to teach a CTW course for the first time. As all spring 2011, the three courses that have been designed as CTW courses have now been taught. Although they complain in general, students seem to realize that they actually benefit from the CTW exercise.
Mission / Purpose

Critical thinking is defined as "a wide range of cognitive skills and intellectual dispositions needed to effectively identify, analyze, and evaluate arguments and truth claims; to discover and overcome personal prejudices; to formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about what to believe and what to do." (Bassham, G., Irwin, W. Nordone, H., & Wallace, J., 2005. Critical Thinking: A Student's Introduction. New York: McGraw-Hill, page 1.). For both geography and geology, critical thinking involves the ability to recognize and evaluate truth claims, synthesize different approaches to knowledge/scientific findings, and articulate coherent and logical arguments.

Goals

G 1: Analysis
Students should be able to engage with scholarly literature in their respective fields and analyze arguments, validity, and findings.

G 2: Communication
Students should develop communication skills to appropriately convey their analysis of texts and data.

Student Learning Outcomes/Objectives

SLO 1: Reflection paper (G: 1, 2) (M: 1)
In Urban Geography, students will complete weekly reflection papers. In at least one paragraph and not more than one page, students reflect on the readings by exploring the connections of the authors’ arguments. Students’ reflection papers may be guided by the questions posed each week in the syllabus. The purpose of reflection papers is to encourage students to read carefully, and consider critically, the literature being explored and to articulate critical thinking in a brief, organized essay. Students will complete ten response papers over the course of the semester. Two papers, one from the beginning of the semester and one from the end, will be evaluated with a rubric.

SLO 2: Synthesizing Paragraphs (G: 1, 2) (M: 1)
In Climatic Change, students are expected to summarize the topic of a day’s lecture and to include outside research to support the claims and observations made in the paragraphs. Students will turn in three paragraphs during the semester and will receive detailed feedback on each submission. Rubric assessment scores will be recorded for the first and third paragraph submissions.

SLO 3: Research Project (G: 1, 2) (M: 2, 3)
The term paper will be an opportunity for students to develop an original research paper. The student will identify a topic and submit a research proposal. The instructor will give feedback to the students, and the students will develop a research project, complete with explicitly identified methods and data. The student will submit a rough draft of the paper, and the instructor will provide detailed feedback. The student will incorporate the feedback and develop a final paper, which will also be orally presented to his or her peers.

SLO 4: Group Research Project (G: 1, 2) (M: 2)
Geology of Georgia project. The purpose of this project is to analyze, synthesize, interpret, and communicate the state of knowledge regarding the sedimentary environments and stratigraphy represented by the rocks and sediment of Georgia. Each student will go through a semester-long process of building an individual paper, and then synthesizing his or her paper with those of his or her classmates.

Measures, Targets, and Findings

M 1: Paper Rubric (O: 1, 2)
Please see Rubric in attached documents.
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Reflection paper
80% of our students should average 4 or better on each element of the rubric, with a total of 24 or greater on the seven elements combined. Importantly, we are looking for improvement from our students through the course of a semester. As such, we would like to see 80% of our students improve from the first response paper to the final one that is collected.

Findings 2010-2011 - Target: Not Met
Of the 18 undergraduates in the course, 16 completed both assignments. Of these, 11, or 73% improved from the first paper to the last. This is slightly below achievement targets. Of those who turned in the final paper, 8 of the 16, or 50% achieved an average score of 24 or better. This is well below the achievement target.

Target for O2: Synthesizing Paragraphs
80% of students should achieve a 26 or better in the seven combined elements. 80% of students should demonstrate improvement from draft 1 to draft 2.

Findings 2010-2011 - Target: Partially Met
Of the 17 students who completed the two paragraph assignments, 65% improved from the first assignment to the third, 11% stayed the same, and 23% did not improve. This achievement target was not met. Of the 17 students who completed the two paragraphs, 100% achieved a 26 or better on the second paragraph submission.
M 2: Term Paper Rubric (O: 3, 4)

Please see the attached Term Paper Rubric for Geology of Georgia

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: Research Project

80% of students would achieve at least a total rubric score of 20 (an average of 4 or better for each of the five elements) for draft 1 and draft 2. Ideally 80% of students would improve from draft 1 to draft 2.

Target for O4: Group Research Project

80% of students’ assessment scores should equal or exceed 20, which represents working understanding of the rubric elements. 80% of students should improve from the first draft of the assignment to the final draft.

Findings 2010-2011 - Target: Met

100% of the 33 students enrolled in the course achieved at least a score of 20 on the assessment score for both the first and second drafts. All students improved between the first draft and the final draft.

M 3: Final Paper Rubric (O: 3)

Geog/Geol 4830: Senior Seminar rubric attached.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: Research Project

All students should improve from draft 1 to the final draft. 80% of students should achieve a score of 20 or better on the final assessment score.

Findings 2010-2011 - Target: Met

All students improved from draft 1 to the final draft of the final project. All students achieved at least a 20 on the final paper, with the lowest score a 22 and the highest a 33.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Refine rubric

For the literature review assignment, the instructor will refine the rubric to capture integral elements of the assignment and will include more explicit discussion of critical thinking and writing skills in the course of the class.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Paper Rubric | Outcome/Objective: Synthesizing Paragraphs

Strengthen curriculum for Urban Geography

In order to facilitate meeting the CTW goals for the urban geography course, the instructor will strengthen her curriculum to include more explicit teaching on various components of writing, providing more examples to students. She will make a more demonstrated effort to articulate clearly the strengths and weaknesses of the reflection papers that the students turn in so that they may learn from their own writing experiences. Throughout the semester, she will schedule one-on-one conferences with students to discuss their writing strengths and weaknesses.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Paper Rubric | Outcome/Objective: Reflection paper

Strengthen focus on structure of research paper

The instructor will focus her efforts on improving students’ understanding of the component parts of a research paper, which include identifying a problem, articulating an argument, identifying (and justifying) methods and data, and analyzing data and drawing conclusions.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Final Paper Rubric | Outcome/Objective: Research Project

Writing skills course

The instructor plans to devote several class periods to focus on critical thinking skills with less emphasis on technical writing skills.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Term Paper Rubric | Outcome/Objective: Research Project
**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

The Department of Geosciences successfully offered four unique CTW courses and had a productive year. From the 2009-2010 academic year to the 2010-2011 academic year, several improvements were implemented, which seemed to improve the process. First, the rubric was streamlined in the Urban Geography course, which was a necessary change. The assignment for the Climatic Change course was also revised, and students seemed to do well, in general. What has been useful across the course offerings is the explicit attention to CTW assignments and the assessment process. While still not yet perfect, the conscious attention to this process has, on the whole, yielded positive results for the CTW faculty and students. For two of the courses (Sed-Strat and Senior Seminar), the instructors reported very successful assignments and student achievement.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

As a faculty group teaching CTW courses, we have not had conversations about this question. Given the uniqueness of the department offering two separate majors and yet a single Senior Seminar, we are still working on what critical thinking might look like from earlier courses to the capstone across two distinct disciplines.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

The unwillingness of some faculty members to participate in the reporting process has been problematic for the effective implementation of the CTW initiative in Geosciences. Some clear incentive for CTW instructors may assist in this problem.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

The impact has been modest, but nonetheless, merely having conversations about critical thinking, developing assignments and corresponding rubrics has required a rethinking of our department's curriculum and how it serves both critical thinking and our respective disciplines (geography and geology). To that end, it has initiated helpful conversations which should be ongoing.

**Academic Program Question 1:**

What changes in the assessment process has your degree program made since last year's assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

For Urban Geography: revised rubric. For Climatic Change: revised assignment. For Senior Seminar: revised assignment, revised rubric. The targets have remained the same; however, there is unevenness across the reported outcomes (with two courses reporting achievement well below the 80% target and two courses reporting 100% achievement). This should be addressed with more careful conversations and training with CTW instructors.

**Academic Program Question 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The Department of Geosciences is in the process of developing new B.S./B.A. degrees, and the CTW initiative has shaped how that process is unfolding in terms of requiring an articulation of specific learning objectives, measurable outcomes, and the inclusion of critical thinking (and other skills) in the curriculum.

**Administrative Dept Question 1:**

Explain how your department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?

Changes took place among the practices of CTW instructors, their assignments, and rubrics.

**Administrative Dept Question 2:**
What have you learned from your assessment this year (2010-2011)?

That there is unevenness across our CTW courses, and that the capstone course (Senior Seminar), where we include a portfolio in the overall assessment of our majors, has yielded a rethinking of the learning objectives and outcomes for our students.

**Administrative Department Question 3:**

What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

A modest improvement in the CTW assignments and assessment is anticipated, although as the department works through a restructuring of its BA/BS program, the lessons learned from the CTW process will be invaluable.

---

**Georgia State University**

**Assessment Data by Section**

**2010-2011 CTW German**

(As of: 12/13/2016 04:10 PM EST)

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

**Mission / Purpose**

The mission of the Department is to give students majoring in German the opportunity to develop appropriate proficiencies in the German language, to acquaint them with the literature and culture of German speakers, to promote their interest and involvement in international exchanges through study abroad programs, and to provide them the opportunity to acquire critical skills through linguistic, literary and cultural analysis as they prepare for careers in teaching, business, translation and interpretation and other areas. Critical thinking goes hand in hand with analytical thinking. For Cottrell (1999:188) analytical thinking involves the following additional processes: • Standing back from the information given • Examining it in detail from many angles • Checking closely whether it is completely accurate • Checking whether a statement follows logically from what went before • Looking for possible flaws in the reasoning, the evidence, or the way that conclusions are drawn • Comparing the same issue from the point of view of other theorists or writers • Being able to see and explain why different people arrived at different conclusions • Being able to argue why one set of opinions, results or conclusions is preferable to another • Being on guard for literary or statistical devices that encourage the reader to take questionable statements at face value • Checking for hidden assumptions.” German for critical thinking = Auseinandersetzungsvermögen (Discussion/Debate/Looking into a subject + capacity/ability/assets/means). In terms more specific to the German major, the assignments in our CTW courses will enable students to gain a better understanding of literary and -- more broadly -- cultural and historical trends in the German-speaking world, and equip students with the tools necessary to query their intellectual and personal positions with respect to the long and complex tradition of Germanic cultural production, which at times intersects with other traditions with which students may be familiar, and at times diverges from them. Ultimately, students in our CTW courses will be able to comprehend German texts within their cultural, intellectual, and historical contexts, and engage these texts in ways that are both intellectually rigorous and personally meaningful. The challenge unique to CTW in a foreign language is the rigorous task of interpretation and evaluation in a non-native context of imperfectly mastered grammar and syntax and a lexicon with sub textual subtleties.

**Goals**

**G 2: Reflections on the Morality of Neutrality - The Case of Switzerland**

Students were assigned the same topic in the entry level (German 3301) and capstone courses (German 4402) to experiment with tracking improvement in critical thinking. The test group was possible due to the size of the program. The students were asked to write in German and in English so that the Weave report would have a record of the students work. The theme developed out of the discussion of Switzerland’s neutrality and its implications during the second world war and the subsequent scandals with Nazi gold reserves. From the Rubric the CTW goals were limited to "fair-mindedly following where evidence and reasons lead" and "makes judgments based on the evaluation of the evidence." The hope was that the students would have developed a higher skill set and cultural knowledge over the year to identify the salient arguments and communicate them with refinement.

**Student Learning Outcomes/Objectives**

**SLO 5: Critique/Analysis of a Cultural Ideology (G: 2) (M: 3)**

Essay of 350-400 words on the morality of neutrality, the case of Switzerland. The objective was to track development of CTW skills from the entry level course to the capstone course in a year where there was an overlap of students taking both in the same reporting year. This was the only assignment that was not lost in the improper handling of student samples documented elsewhere. From the current rubric, where a goal of 4 is preferred, the skills set focus was whether the student could fair-mindedly follow where evidence and reason lead and make judgments based on an evaluation of all the evidence. The assignment only required secondary sources where the student wanted to integrate more historical data on Switzerland’s perceived culpability (through inaction or furtiveness) in World War II and after. The moral implications of neutrality could also be presented independent of research as long as the student’s views were justified drawing support from experience (personal and from the lectures), yet also integrating contrary interpretations.

**General Education/Core Curriculum Associations**

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

8.0 Students demonstrate understanding of political, social, economic, and/or institutional developments across the globe.
M 3: Critique/Analysis of a Cultural Ideology (O: 5)

Outcome: Student should demonstrate critical thinking through writing skills by supporting the main idea of the assignment and showing proficiency in fair-mindedly following where evidence and reasons lead. Measure: Student shall write a 350-400 word essay in German and in English which focuses on a moral concept based on a German speaking country's political and cultural philosophy of neutrality (Switzerland). Assessment of the assignment (how it is measured) is based on the ability of the student to distinguish between fact and opinion, explore relevant historical and cultural contexts and achieve a clear organization of ideas with concrete conclusions in the limited framework of a shorter essay. Of the four student essays reviewed by the assigning faculty, 100% showed an improvement in critical thinking skills of at least one point on the 1-6 scale (see graph in repository). Student 1: a growth from a superficial and terse statement on war and taking sides to a more focused essay on the assigned topic of Switzerland, albeit with flaws in structure in integration of ideas. Student 2: a growth from a single somewhat ego-centric perspective to a more thorough examination of historical evidence and global implications. Student 3: a growth from a limited exposed that failed to recognize context and ethical implications to an essay that at least succinctly addresses the ethical dimensions of the issue. Student 4: a growth from a rather unfocused essay on the advantages of neutrality with no clear definition of the morale issue to one with historical perspective and a respectful analysis of other positions. The goal was a 4 on all assignments and the students achieved that score in the capstone course. Our goal is to work on the assignment structure at the entry level course to effect better results at an earlier level of study. This will be facilitated with an e-platform that allows for self-reflection and enables the student to see their growth during the semester.

Source of Evidence: Written assignment(s), usually scored by a rubric

M 3: Critique/Analysis of a Cultural Ideology

Target for OS: Critique/Analysis of a Cultural Ideology

Based on data from last and this year’s assessment, we feel that common assignments between CTW classes should be explored further in order to track statistically improvement in critical thinking with individual students in the program, at least as far as the skill sets we measure in the rubric. We plan to continue our action plan from 2010-2011 as regards our commitment to develop a body of written assignments i.e. thematic exercises as a whole section which are available before the class begins and are stored in our MCL German folder on a drive accessible to all faculty. This will eliminate the problem of papers being lost and incomplete data. With new faculty coming in the fall we can revise the type of assignments we know from experience most fairly assess student learning and achievement and brainstorm other, newer assignments that should lead to more reasonable and thus measurable outcomes from the rubric. The other changes in the rubric and curriculum have been documented elsewhere. The goal was a 4 on all assignments and the students achieved that score in the capstone course. Our goal is to work on the assignment structure at the entry level course to effect better results at an earlier level of study. This will be facilitated with an e-platform that allows for self-reflection and enables the student to see their growth during the semester.

Source of Evidence: Written assignment(s), usually scored by a rubric

Findings 2010-2011 - Target: Partially Met

Of the four student essays reviewed by the assigning faculty, 100% showed an improvement in critical thinking skills of at least one point on the 1-6 scale (see graph in repository). These findings are from an assignment given to students who were enrolled in both our entry level course (German 3301) in fall of 2010 and our capstone course (German 4402) in spring of 2011. The assignment was standardized in order to begin tracking CTW development over a 2 semester/1 year period. Student 1: a growth from a superficial and terse statement on war and taking sides to a more focused essay on the assigned topic of Switzerland, albeit with flaws in structure in integration of ideas. Growth of CTW skills based on rubric from 2 - 3 (goal is 4) Student 2: a growth from a single somewhat ego-centric perspective to a more thorough examination of historical evidence and global implications. Growth of CTW skills from 2 - 4 which meets goal of department. Student 3: a growth from a limited exposed that failed to recognize context and ethical implications to an essay that at least succinctly addresses the ethical dimensions of the issue. Growth of CTW skills from 4 - 5 which exceeds departmental goal of 4. Student 4: a growth from a rather unfocused essay on the advantages of neutrality with no clear definition of the morale issue to one with historical perspective and a respectful analysis of other positions. Growth of CTW skills from 2 - 5 which is the most conspicuous improvement and exceeds departmental goal of 4. The above finding can be found in graph form in the repository. These findings summarize our report for both German 3302 and 4402 based on the goal and achievement target. The sample was small due to the definition of the goal, to measure the same student over time. The other CTW assignments as reported earlier were lost which resulted in our action plan of a portfolio based repository for 2011-2012.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Action Plan for CTW 2010-2011

The German Section has plans to meet more regularly to discuss and develop a body of thematic exercises that can be used for critical thinking writing assignments in upcoming classes. Although generic in character, these assignments can be adapted to fit the goals of any CTW class in German, whether it be a writing assignment, a 5 minute speed paragraph, or a final exam topic. This should help us codify not only the type of assignment we feel can most fairly assess student learning and achievement, but also guide us in a more reasonable expectation on each assignment by limiting which CTW aspects from the rubric are actually being assessed. The faculty will come together as a whole to discuss and compare evaluations and brainstorm broad discrepancies or variables in assessment. It is expected that these discussions will lead to further fine tuning of the rubric itself. From previous CTW classes and pilots, we have discovered as well that the type of assignments we currently use to evaluate critical thinking are very limited (traditional essays with "controversial topics"). We plan to implement more "spiced" paragraphs in which comprehension of and/or reaction to a class discussion point is "tested" immediately and then used to further enlighten the topic being examined. It is hoped that from these spontaneous reactions the students can develop a greater sense of what a longer critical thinking assignment and/or reaction to a class discussion point is "tested" immediately and then used to further enlighten the topic being examined.

Established in Cycle: 2009-2010

Implementation Status: Planned

Implementation Description: Action Plan implemented through German section meetings

Responsible Person/Group: Dr. Robin Y. Huff

Additional Resources: None

Action Plan for 2011-2012

Our major goals are revision of the rubric, a central repository for CTW assignments and CTW graded assignments used for measures and the switching of the CTW required course to a more appropriate one based on content. The revision of the rubric is intended to effect improved student response to the CTW component of the course by making the rating scale more user friendly and the rating criteria more explicit as to what is needed for improvement. The central repository will make it easier for faculty (continuing and new) to standardize assignments deemed to be most conducive to the goals of CTW and not be continually forced to
draft new ideas for each semester/syllabus. The other faculty will also be aware of what is happening in that course and because many students are shared among courses, support can be given in non CTW courses in a subtle interdisciplinary way if core topics are mirrored in multiple courses. This will also prevent loss of data and student samples as occurred this past year. - The grammar capstone course has proven to be a stumbling block to CTW assignments which are perceived as onerous and contrary to the goals of mastering German grammar and syntax. The goal is to change the grammar course to a 3000 level course to ensure mastery at an earlier level, change the capstone course to a culture based interdisciplinary context course such as Literature and Film and add an advanced conversation and composition course to the entry level curriculum to facilitate the integration of CTW assignments into that more thematically based course. We anticipate a better student response to the CTW component, a clearer understanding of the goals of the initiative and subsequently better student performance. We plan to document the progress of the student for their and our edification in a portfolio format perhaps with "digication."

Rubric Revision and Thematic Assignment Bank/Portfolios

Our major goals are revision of the rubric, a central repository for CTW assignments and CTW graded assignments used for measures and the switching of the CTW required course to a more appropriate one based on content. - The revision of the rubric is intended to effect improved student response to the CTW component of the course by making the rating scale more user friendly and the rating criteria more explicit as to what is needed for improvement. - The central repository will make it easier for faculty (controlling and new) to standardize assignments deemed to be most conducive to the goals of CTW and not be continually forced to draft new ideas for each semester/syllabus. The other faculty will also be aware of what is happening in that course and because many students are shared among courses, support can be given in non CTW courses in a subtle interdisciplinary way if core topics are mirrored in multiple courses. This will also prevent loss of data and student samples as occurred this past year. - The grammar capstone course has proven to be a stumbling block to CTW assignments which are perceived as onerous and contrary to the goals of mastering German grammar and syntax. The goal is to change the grammar course to a 3000 level course to ensure mastery at an earlier level, change the capstone course to a culture based interdisciplinary context course such as Literature and Film and add an advanced conversation and composition course to the entry level curriculum to facilitate the integration of CTW assignments into that more thematically based course. We anticipate a better student response to the CTW component, a clearer understanding of the goals of the initiative and subsequently better student performance. We plan to document the progress of the student for their and our edification in a portfolio format perhaps with "digication."

Analysis Questions and Analysis Answers

CTW Reflection Questions 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

One of the goals we specified last year has been initiated with some success. Course and catalog change takes some time, but we have begun the transition of traditional survey courses like Introduction to Literature to more vital culture based courses under the rubric of German Studies whose content is more relevant to our goals of cultural analysis and reflection on values. What has worked especially well from our Action Plan last year are the speed assignments with limited learning outcome goals. That would include in class, non-revised, mini commentaries on topics covered in class and still fresh in the students' mind. We have expanded this exercise to peer review with commentary and assessment. That has seemed to make the more comprehensive and systematic CTW assessments we do for larger assignments less inscrutable to the students because they see it in action and have some degree of ownership of its process and intent. One goal that was not met for which I must take full responsibility was my intent for the German Section to meet more regularly to discuss and develop a body of thematic exercises that could be used for critical thinking writing assignments in upcoming classes. The faculty was not able to come together as a whole to discuss and compare evaluations and brainstorm broad discrepancies or variables in assessment as much as I had hoped. As we are losing and gaining a faculty in German, I will remedy this lack of planning with August training sessions. From previous CTW classes and pilots, we had discovered as well that the type of assignments we previously used to evaluate critical thinking were very limited (traditional essays with "controversial topics"). I am proud to say we were able to experiment with a single essay topic given to the same students taking the entry level (German 3301) and the capstone course (German 4402) in the same academic/reporting year. Those essays and rubric scores enabled us to track the development of critical thinking in a very rudimentary fashion, although the time frame of two semesters is not ideal. The size of our department made the comparison possible with the overlap of some cultural themes in the two courses. The findings and measures of that study are displayed in that section of this report. In addition, a curriculum change throughout the entire major has been drafted and will focus on German Studies rather than on traditional language and literature. We plan to add a course on Advanced Conversation and Composition that is much more adaptable to the writing component than Advanced Grammar, which is currently the capstone course. Writing assignments became onerous to the students who have sufficient difficulty with grammar and syntax.

CTW Reflection Questions 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Despite last year's reflections/action plan we were not able to initiate the outline/subject header assignments originally intended for both entry level and capstone courses. Nor did we meet as scheduled to develop more standard assignments so that the CTW instructor would not have to start from scratch when developing a syllabus. Part of this problem was due to my lack of supervision of the courses I did not teach. We did, however, see improvement in the skills we did measure for a majority of students, even over one semester. For this reason we plan to do standardized assignments, some with outlines and a final product without major revisions, others with revisions based on peer review before the instructor has read the assignment. We also plan to continue with "speed" assignments where a fresh topic is addressed within minutes of its introduction in class. An example from this past year would be the demonstrations at the Vienna Opera Ball (protesting vulgar materialism, etc.). The students had to take a pro/con stance and address their reaction to the non-violent disruption of this long standing cultural highlight of Viennese society. The maximum time allowed was 5 minutes. The results were informative in addressing the ability of the students to take ownership quickly of their
position and draw support from experience and information not copied or reworked from assigned sources. Unfortunately as I did not teach any CTW courses this past year, there was little development in assignments, although we did initiate a new experimental cross-course assignment where we could try and track critical thinking development (at least based on score) for the same student over a one year (i.e., 2 semester) sequence. We limited the assignment to 350 words and had it written in English and in German to make sure there were no flaws based on language inadequacy. As a result of this experiment, or perhaps because of the nature of the assignment, our section is beginning to see the development of analytical skills in students over the course of the major, a finding we did not see last year. The teaching of language has long been perceived as a linguistic exercise but we have known all along that there is no language teaching apart from culture. By focusing on many cultural differences in our CTW assignments, this truth has had more credibility and the integrity of our program has been strengthened in the way that it fits into the university's strategic plan of globalization. By reviewing the egocentric and socio-centric approaches to issues of global significance displayed by some students, we have been able to adapt our teaching strategies and learning outcome goals to focus on the scope and context of issues. Our fervent hope is that the evaluation skills of our students will be sharpened and we can document more tangible evidence of the actual acquisition of critical thinking in our courses. The positive results we have already seen are documented in the measures and findings section.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

In looking back over the last year, I again feel that the basic definition and core goals of critical thinking have not changed, although we have been putting less focus on accuracy in the target language and more on analysis, structure and integrated conclusions. Through our original definition we had hoped to equip students with the tools necessary to query their intellectual and personal positions with respect to the long and complex tradition of Germanic cultural production, which at times intersects with other traditions with which students may be familiar, and at times diverges from them. This has proven to be somewhat daunting and we are continually rethinking the nature of the assignments as they relate to our definition of critical thinking. The challenge unique to CTW in a foreign language is the rigorous task of interpretation and evaluation within a non-native writing context of imperfectly mastered grammar and syntax, further complicated by the use of lexis with textual subtleties. The rubric has been somewhat of a hindrance in guiding students, especially in the type of revision needed. That is why we are considering revising the rubric and simplifying the language but at the same time giving more detailed feedback (see repository). The scale itself will be more descriptive and motivational by rating a student with more than numbers, yet retaining the six point scale needed to integrate with our learning outcomes. By focusing on merging and developing skills with concrete critiques of the strengths and weaknesses in issue identification, contextual analysis, successful ownership of the writer’s position and supporting data, we hope to track more positive development of the desired skill set. The assessment process had major flaws in 2010-2011 that need to be addressed by the faculty, i.e., German Section in the coming semester. The rubric is being redesigned as discussed above and I will also have new faculty to train in CTW. The assessment process will be redesigned to be more student friendly in the descriptors and the type and quantity of CTW assignments will be standardized. The most significant change that must be made is the process of collecting and storing data. In the past two years the instructor of the CTW class had simply collected the assignments and returned them to the students with the scores, often for revision, depending on the nature of the task. At the end of the semester I would ask for samples of student work with the attached score to make my analysis. When I had the foresight, I would ask the instructor to make sure the students submitted their work on line so I could have a word copy rather than having to scan them. As it turned out this past year, both CTW courses were taught by one faculty and I did not supervise the course, its assignments or how they were collected. Having waited until the end of the semester proved disastrous when a cleaning person at the instructor’s home discarded most of the unfiled assignments which were stacked near a table of items to be taken to the recycling. Luckily a key assignment common to both courses was salvaged. It was a sobering moment that will lead to a central method to store all student work in portfolio format in upcoming semesters for both CTW courses. The assistance we need may include the use of the WAC portfolio.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

I think the primary impact on the German degree is the need to overhaul the curriculum. This has been a challenge because we have only one entry level course (and one section of that) offered every year and only one 4000 level (capstone) course offered every year. We have initiated the paperwork to rename some courses, add others, and extend the CTW initiative to other courses in order to maximize efficiency and reduce the burden on one instructor who has often had back to back CTW courses. We are also taking student comments into consideration, clarifying our goals for each assignment and integrating the assignments into the expectations of the course in a more unified manner so that they are not perceived as an added "burden" or course work. I must admit that there is little communication between the languages as to what changes they are initiating and this should be a goal in our action plan for the coming year.

Georgia State University
Assessment Data by Section
2010-2011 CTW History
As of 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The history department subscribes to the definition of Critical Thinking as it was proposed to the Faculty Senate: our courses will help “students develop the ‘wide range of cognitive skills and intellectual dispositions needed to effectively identify, analyze, and evaluate arguments and truth claims; to discover and overcome personal prejudices; to formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about what to believe and what to do.’” When students graduate we expect that they will be able to demonstrate historical mindedness, multidimensional analysis, knowledge of historical context, ability to analyze texts, and how to present their findings. They will also demonstrate a range of professional skills, a knowledge of historiography, an awareness of interdisciplinary methods and larger (trans-national, -regional, or global) perspectives, as well as a set of professional values. Please see the “history standards” in the document repository for further details.

Goals
G 1: Historical Mindedness
Students will understand the connections and disconnections between past and present.
**G 2: Historical Interpretation**
Students will be able to ask relevant questions of primary and secondary texts.

**G 3: Historical Communication**
Students will be able to communicate their findings in clear ways.

### Measures, Targets, and Findings

**M 1: Martin Guerre (History 3000; Davidson) (O: 2, 3)**
In class writing exercise on The Return of Martin Guerre Consider the differences between the film and book versions of this story. What are the strengths and weaknesses of each? What can you learn from one that you could not learn from the other? 
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Historical Interpretation**
Students should achieve scores of 1 or better on the Assessment Instrument (see document repository).

**Target for O3: Historical Communication**
Students should achieve scores of 1 or better on the Assessment Instrument (see document repository).

**M 2: My Lai (History 3000; Davidson) (O: 1, 2, 3)**
Source Analysis I Read My Lai: A Brief History with Documents. After reading and considering all the documents collected here, select three sources of different varieties and write a short paper (3 – 4 pages) describing what could be learned from them. Analyze them as sources of historical knowledge. Consider who wrote the source and why? In what context did it originally appear? Was it public or secret? Was it private or widely known? How did people at the time respond to the particular source? What is the nature of the source—is it an economic report, a legal proceeding, a photograph, a memoir—and how does that determine how an historian could use the document in question? You will present your analysis to the rest of the class.
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Historical Mindedness**
We expect students to achieve scores in the 2-3 range on the assessment instrument.

**Target for O2: Historical Interpretation**
We expect students to achieve in the 2-3 range on the assessment instrument.

**Target for O3: Historical Communication**
We expect students to achieve in the 2-3 range on the assessment instrument.

**M 3: Paper (History 3000; Davidson) (O: 1, 2, 3)**
The longer writing assignment for the class, due at the end of the semester, is a short research paper. For this assignment, you will need to do preliminary research in order to explain and define the topic, construct a bibliography, and present a plan for your research. Then you will write an 8 to 12 page paper where you develop an argument based on your research. You will be receiving more details on this assignment soon, and will be submitting various parts of the paper (short explanation, annotated bibliography, draft, and revision) over the course of the semester.
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Historical Mindedness**
We expect students to achieve scores in the 2-3 range on the assessment instrument.

**Target for O2: Historical Interpretation**

<td>M 4</td>
<td>Response Paper (History 3000; Reid) (O: 1, 2, 3) Students will write two short response papers; three are listed in the syllabus. Response Papers must be typed and are limited to 500 words. They are due on the scheduled class day (typically every other week) by 11:30am on uLearn. Response Papers must address the following issues: 1. Identify a major issue from the readings. 2. Discuss how the issue connects to the topic for the week. Be sure to include an example(s) from the readings to support your point. 3. Explain how the reading(s) helped you think more critically about this week’s topic. Source of Evidence: Written assignment(s), usually scored by a rubric</td>

</table>
significance of your paper (the "so what"). Historiographical Review: A short overview of the main historical works on this topic. You should show awareness both of recent historiography and of older, established works in the field, along with the larger historiographical areas that this topic intersects with. Theory and Methodology: Describe your research methods and, if possible, the larger theoretical or disciplinary framework that you are using (e.g. social/cultural history, analysis of discourse, gender, etc.). Sources: Description (in words) of the collections and archives you will use, with as much detail as possible of their contents and geographical location. Bibliography: This should be divided between primary sources and secondary sources. It should be in perfect Chicago bibliographic format. Include everything you have mentioned in the text of your prospectus (for which you should also have a footnote in perfect Chicago/documentary-note style), along with any other relevant sources you have encountered but did not mention.

**Target for O1: Historical Mindedness**
We expect students to achieve scores in the 2-3 range on the assessment instrument.

**Target for O2: Historical Interpretation**
We expect students to achieve scores in the 2-3 range on the assessment instrument.

**Target for O3: Historical Communication**
We expect students to achieve scores in the 2-3 range on the assessment instrument.

**M 9: My Lai (History 3000; Poley) (O: 1, 2, 3)**
Source Analysis I. Read My Lai: A Brief History With Documents by James A. Olsen and Randy Roberts. After reading and carefully considering all the documents collected in My Lai: A Brief History with Documents, select three sources of different varieties and write a short paper (3 – 4 pages) to be handed in during class describing what could be learned from them. Analyze them as sources of historical knowledge. Consider, for instance, who wrote the source and why? In what context did it originally appear? Was it public or secret? Was it private or widely known? How did people at the time respond to the particular source? What is the nature of the source—is it an economic report, a legal proceeding, a photograph, a memoir—and how does that determine how an historian could use the document in question? You will present your analysis to the rest of the class.

**Target for O1: Historical Mindedness**
We expect students to achieve scores in the 2-3 range on the assessment instrument.

**Target for O2: Historical Interpretation**
We expect students to achieve scores in the 2-3 range on the assessment instrument.

**Target for O3: Historical Communication**
We expect students to achieve scores in the 2-3 range on the assessment instrument.

**M 10: Paper (History 3000; Poley) (O: 1, 2, 3)**
You must write a final paper (roughly 10 pages) in which you investigate in greater detail the history and historiography of a particular theme appropriate to the class. Part of this grade consists of your ability to do certain things on schedule: on September 22 you need to hand in a 1-paragraph topic proposal, on October 6 you need to provide copies of a 1-page discussion of your thesis to the entire class, and on November 3 you must submit an annotated bibliography. As part of the peer review you must have a completed draft on December 1 and critical comments for your assigned colleague on December 3. Final Portfolios are due between 2:45 and 4:45 on December 8 in my office.

**Target for O1: Historical Mindedness**
We expect students to achieve scores in the 2-3 range on the assessment instrument.

**Target for O2: Historical Interpretation**
We expect students to achieve scores in the 2-3 range on the assessment instrument.

**Target for O3: Historical Communication**
We expect students to achieve scores in the 2-3 range on the assessment instrument.

**M 11: Exit Statement (History 3000; Poley) (O: 3)**
Write a short statement (no more than two pages) describing how your thinking about the project changed over the course of writing. How did the “process” affect the outcome?

**Target for O3: Historical Communication**
We expect students to achieve scores in the 2-3 range on the assessment instrument.

**M 12: Annotated Bibliography (History 4990; Grubbs) (O: 1, 2, 3)**
See "Grubbs annotated bibliography assignment.pdf" in the document repository.

**Target for O3: Historical Communication**
We expect students to achieve scores in the 2-3 range on the assessment instrument.

**M 18: Paper (History 4990; Poley) (O: 1, 2, 3)**

You must write a final paper (roughly 20 – 25 pages) based on the research themes of the class: the history of the avant garde. Part of this grade consists of your ability to do certain things on schedule: on February 16 you need to hand in a 1-paragraph topic proposal, on March 2 you need to provide copies of a 1-page discussion of your thesis to the entire class, and on March 4 you need to provide a report to the class on the primary source material you will be employing in your final paper. On March 16 you must submit an annotated bibliography, and on March 30 you must hand in a progress report on your research and writing. As part of the peer review you must have a completed draft on your assigned due date and critical comments for your colleagues. Final Portfolios are due between 2:45 and 4:45 on May 4 in my office.

#### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**assignment workshop**

Hold assignment workshops for instructors of history 3000 and 4990.

**Established in Cycle:** 2009-2010  
**Implementation Status:** Planned  
**Priority:** High

**Relationships (Measure | Outcome/Objective):**

- **Measure:** Annotated Bibliography (History 4990; Grubbs)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** Assignment 2 (History 3000; Selwood)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** Assignment 3 (History 3000; Selwood)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** My Lai (History 3000; Davidson)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** My Lai (History 3000; Poley)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** Peer Review (History 4990; Grubbs)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** Project Proposal (History 4990; Skwiot)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** Prospectus (History 3000; Reid)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** Reading Response (History 4990; Poley)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** Response Paper (History 3000; Reid)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness

**Implementation Description:** Launch a series of brown bags to discuss critical thinking and its relationship to various critical thinking outcomes.

**Projected Completion Date:** 12/2010  
**Responsible Person/Group:** Jared Poley

---

#### Refine document collection strategies

Refine document collection strategies. I asked instructors to submit examples of student work that they felt demonstrated poor, adequate, and advanced critical thinking skills. In the future I plan to modify this strategy, asking instead for "representative" or "random" samples of work from instructors.

**Established in Cycle:** 2009-2010  
**Implementation Status:** Planned  
**Priority:** High

**Relationships (Measure | Outcome/Objective):**

- **Measure:** Annotated Bibliography (History 4990; Grubbs)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** Assignment 2 (History 3000; Selwood)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** Assignment 3 (History 3000; Selwood)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** My Lai (History 3000; Davidson)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** My Lai (History 3000; Poley)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** Peer Review (History 4990; Grubbs)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** Project Proposal (History 4990; Skwiot)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** Prospectus (History 3000; Reid)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** Reading Response (History 4990; Poley)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness  
- **Measure:** Response Paper (History 3000; Reid)  
  **Outcome/Objective:** Historical Communication  
  - History Interpretation  
  - Historical Mindedness
rubric evaluation
Self-evaluation of the rubric to see if it continues to hold meaning as an assessment instrument.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Annotated Bibliography (History 4990; Grubbs) | Outcome/Objective: Historical Communication
- Historical Interpretation | Historical Mindedness
- Measure: Assignment 2 (History 3000; Selwood) | Outcome/Objective: Historical Communication
- Historical Interpretation | Historical Mindedness
- Measure: Assignment 3 (History 3000; Selwood) | Outcome/Objective: Historical Communication
- Historical Interpretation | Historical Mindedness
- Measure: My Lai (History 3000; Davidson) | Outcome/Objective: Historical Communication

- Historical Interpretation | Historical Mindedness
- Measure: Self-evaluation of the rubric to see if it continues to hold meaning as an assessment instrument.

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
We continued to train and certify new colleagues through a set of workshops. We also refined our collection of data – using fewer samples and having the instructors produce assessments of student work using the CTW assessment instrument. While we have kept the rubric unchanged, we have changed the way we report data, using averages rather than ranges.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit level? If you look at the file titled “Rubric Data Chart” in the Document Repository, you’ll see the raw data from all of the rubrics we collected during the 2010-2011 AY. While this is hugely unscientific (the same students aren’t being assessed, and the assessors are different too) it is interesting to notice that there is a perceived change in terms of critical thinking skills in our students when History 3000 students are compared to History 4990 ones. In other words, the capstone students seemingly are able to do critical thinking within the discipline of history more effectively than the gateway students are. In each category, history students seemed to improve, and they improved by a range of .4 to .7 (on a 5-point scale). We’ll continue to monitor this, but if these numbers hold up over time, it indicates that the CT skills taught in History 3000 are retained and then retrained over the course of the upper division coursework and the capstone course.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
I hate weave online. It is the worst and most tedious aspect of CTW.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
I think the initiative has forced a deeper reflection on the part of faculty teaching history 3000 and 4990 in the sense that we continue to see history as a discipline inherently in tune with CTW – and the reflection has allowed us to recognize those harmonies more clearly. Our major changes center mainly on how we use the larger mechanisms of assessment and reporting, and focus specifically on determining ways to generate data that will be useful to us in the long term.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
Since the 2009-2010 assessment, faculty teaching resulted in improvements in achieving targeted goals in four of the five Learning Outcomes evaluated. While in 2009-2010 the Learning Outcomes for "Professional Skills" was only "partially met," by 2010-2011, the goal was "met." In 2009-2010 the Learning Outcome for all three, "Historiography," "Interdisciplinary Awareness," and "Professional Values" were "not met," but in 2010-2011 these goals were all "met." It was in the fourth Learning Outcome, "Comparative/Global/Transnational Perspective" that the assessment suggested slippage between 2009-2010 and 2010-2011 when the evaluation fell from "partially met" to "not met." It appears the department's teaching just fell short a few percentage points in 2009-2010 from having "partially met" or "met" the department goals while in 2010-2011, the evaluations suggest just scoring over the required percentages. Consequently the suggestion of failure or improvement could be skewed depending on the sample papers. While it would be nice to find an improvement in instruction which very well might be the case, the evaluation also suggests variables in the assessment process that need to be considered. Indeed in the coming year the Undergraduate Studies Committee will evaluate
its process of evaluation to determine if this is the best way to assess student achievement. It is possible the department will want to revise its Learning Outcomes or alter its method of measuring success.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

When in 2011-2012 the Undergraduate Studies Committee takes up the question of annual assessment in order to evaluate the method of measuring success in the major, it will also relate its assessment tool, that of using Hist 4990, to the other courses offered in the curriculum in order to determine the best form of analysis. It might be that another course such as Hist 3000 would provide clearer answers to some of the questions being asked in the Learning Outcomes. Then again it might be that the department needs to restructure Hist 4990 to engage these potential shortcomings in student achievement. Currently the changes to the curriculum in the Fall 2011 cycle are routine adjustments and not related to the goals of overall instruction. During the 2010-2011 academic year, the Undergraduate Studies Committee considered its current mission statement with an eye towards revising the explanation of what the department hopes students will gain as history majors in order to more clearly express the department's desired Learning Outcomes.

| **SLO 2: Prioritization of operational practices (M: 1)** |
| The industry project on trends and issues and the case studies required an understanding of how operational practices are prioritized. |
### Measures, Targets, and Findings

#### M 1: Unknown (O: 1)

Students were assigned two case studies. The first assignment consisted of writing a one-page letter to an unspecified legislator taking a stand on a governmental or legislative issue impacting the industry segment. The requirements included the letter being no more than one page, professional written (no grammatical or spelling errors as well as proper and respectful in tone) and supported by facts. The second case, to be written by the student, was to be a description of a managerial problem that would be realistic for an entry-level manager to experience. The scoring criteria included the relevancy of the problem, identification of involved stakeholders, a delineation of options for resolving the issue and the description of the optimal solution along with justification for this choice.

Source of Evidence: Project, either individual or group

#### Target for O1: Effective identification and prioritization of business factors

The target was for 100% of the class to understand at least 80% of the relevant business factors that could impact, in this case, the upstart of a business operation and the successful maintenance of it.

#### Findings 2010-2011 - Target: Met

Both cases had possible point values of 50 each. With the first case, 72% received perfect scores of 50. The average score on the assignment was 49. The second case, in comparison, had a lower range of scores and a lower average score. The scores ranged from 35 to 50 with the average score being 44.4. The predominate problems were lack of clarity in describing the problem, not providing a comprehensive list of stakeholders, providing an insufficient list of options which, therefore, impacted the quality of the selected solution. While the target was met in terms of a combined effort on the two cases, the second case definitely reflected the propensity of students to rush into problem-solving without considering all of their options.

### M 2: Career Strategic Plan (O: 1)

This written assignment involved applying strategic planning principles to one's career plan. As with a business strategic plan, students had to delineate a mission statement, core values, an environmental analysis, SWOT analysis, goals and action plans.

Source of Evidence: Project, either individual or group

#### Target for O1: Effective identification and prioritization of business factors

The goal was for 100% of the class to understand at least 80% of the relevant business factors that could impact, in this case, the successful maintenance of a business operation and the successful maintenance of it.

#### Findings 2010-2011 - Target: Met

Ninety-two percent of the students were able to clearly describe current, relevant issues and trends for the segment of the industry they identified as the focus of this written project.

### M 3: Information Interview (O: 1)

Each student had to select an industry manager/executive who held a position to which he/she aspired to interview. Students had to research this individual and his/her company in advance. Interview questions were developed by the students and the one-on-one interview was held. The resulting report was to reflect the major turning points in this person's career, how the person prepared for their career progress and advice for someone entering the industry.

Source of Evidence: Project, either individual or group

#### Target for O1: Effective identification and prioritization of business factors
The goal was to have 85% of the students develop an understanding of the business environment in which the person interviewed worked. Another goal was to develop an understanding of the decision-making process this person engaged in to make their career choices.

**Findings 2010-2011 - Target: Met**

Grades for the informational interviews ranged from 85 to 100. The students selected appropriate individuals to interview and the questions, for the most part, were relevant and probing. The average score on this assignment was 93.9. Points, where lost, were due to interview questions being superficial and not career-specific.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Interview Outline

An outline with suggested topics to cover will be provided. I do not want to require these topics because the students need to be empowered to ask the questions most important to them. I do expect, however, that students cover current business challenges and the realities of today’s business environment.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** Medium
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Information Interview
  - Outcome/Objective: Effective identification and prioritization of business factors
- **Implementation Description:** This outline will be tested summer semester 2010.
- **Projected Completion Date:** 06/2010

#### Written communication tools

Students in HADM 4800 will be provided, on the syllabus, a list of writing resources. Some of these will be on-line and others will be on-campus. These resources will be developed prior to the start of fall semester 2010.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** Medium
- **Implementation Description:** A list of resources will be provided for summer semester to see which ones will be most useful to the students. Based on this feedback, a revised list will be used for fall 2010.
- **Projected Completion Date:** 08/2010
- **Responsible Person/Group:** Debby Cannon

#### Provide list of industry resources by specialization

In analyzing student performance, research related to environmental scanning (Career Strategic Plan) and identification of industry business factors (Written Industry Trends and Issues Project) were most problematic. Research focused on generic sources that are easily available on the Internet. Starting fall 2011, a comprehensive resource list will be compiled and provided to the students as expanding sources to references through professional associations (American Hotel & Lodging Association, National Restaurant Association, for example) or other trade/professional research journals.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Finished
- **Priority:** High
- **Implementation Description:** Develop and provide list of specialized, in-depth industry resources for students to use in two or more assignments.
- **Projected Completion Date:** 08/2011
- **Responsible Person/Group:** Debby Cannon

### Analysis Questions and Analysis Answers

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

Overall, the students performed at a higher level regarding achieving objectives. All of the target achievements were met. Assignments continue to be refined and, in my opinion, reflect critical thinking at higher levels. The written project requires a significant amount of information evaluation and synthesis. The cases have been improved by requiring the students to research a legislative issue and by requiring the students to develop and write one of the two cases.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

Improvements in critical thinking were evident when there were guest lecturers in class. The questions asked showed a higher level of analytical thinking and many of the guest speakers commented on the depth of the questions asked by students. I always ask guest speakers to present one or two of their most demanding business challenges to get student input and this structure has provided a good forum for students to demonstrate critical thinking abilities.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**

Although the written project was effective, I am going to change the structure of the assignment for fall semester 2011. Instead of a final paper, it will be segmented including submission of an outline, annotated bibliography and an editorial section in which students will have to insert their own opinions. The biggest problem with the writing assignments has to do with writing basics. The international students struggle particularly but the problems are not limited to international students. The biggest complaint that I hear from faculty, overall, is that students are sometimes resistant to think on their own - particularly the younger college students. They want outlines, study guides and clear parameters of what the resulting project/paper should contain. To a certain degree, because the business world is not this defined, students have to be able to use their own creativity and judgement. Our faculty, as a whole, are trying to encourage students to not just meet the standards but exceed them.
Even though Hospitality Strategic Management (HADM 4800) is the designated CTW course, a number of other hospitality courses support the CTW philosophy. We hear regularly from our industry recruiters that critical thinking is key to the success of our graduates. Most of the hospitality courses include some type of applied project or simulation. The faculty want more teaching techniques that support critical thinking development. Several of us will attend this summer a conference which will include a day-long session on the case method of teaching. I see this as very positive in supporting the CTW initiatives.

**Georgia State University**

**Assessment Data by Section**

**2010-2011 CTW Human Resources**

As of: 12/12/2016 04:10 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

### Mission / Purpose

Critical thinking has four components: identifying consequential issues, generating alternatives, anticipating outcomes, and drawing correct conclusions. When making HR decisions that have a legal component, managers need knowledge of the law, HR practices, and strategy. Furthermore, it is important to consider all forms of risk, not just legal ones. Effective decision-makers generate several views of a problem and alternative solutions that account for various advantages and disadvantages. This includes sensitivity to the organization’s mission, values, strategies, goals, HRM practices, performance, and reputation. The ability to conceptualize and articulate solutions is essential for convincing various stakeholders to adopt a strategic rather than legalistic view.

### Goals

**G 1: Knowledge of HR Law and Practices**

Students will become knowledgeable about the legal implications of HR policies and programs.

**G 2: Critical Thinking Skills and Processes**

Students will learn specific techniques for analyzing situations, diagnosing problems, and developing solutions.

**G 3: Organizationally-sensible Decision-Making**

Students will be better prepared for the "real world" where HR decision-making should be driven, not just by legal considerations, but by organizational strategy, culture, image, competition, and ethics.

### Student Learning Outcomes/Objectives

**SLO 1: Identify Relevant Facts (G: 1, 2, 3) (M: 1, 2)**

Students will be able to distinguish relevant from trivial or unrelated facts. The target for this objective is that 75% of my students score at least satisfactory and 50% score outstanding on the rubric.

**General Education/Core Curriculum Associations**

1. Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

**Institutional Priority Associations**

1. Student retention
2. Student promotion and progression
3. Timely graduation

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 2: Specify Legal Issues (G: 1, 2, 3) (M: 1, 2)**

Students will be able to specify the legal issues related to the situation. The target for this objective is that 75% of my students score at least satisfactory and 50% score outstanding on the rubric.

**General Education/Core Curriculum Associations**

1. Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

2. Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.
Institutional Priority Associations
1 Student retention
2 Student promotion and progression
3 Timely graduation

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 3: Discuss Legal Principles (G: 1, 2, 3) (M: 1, 2)
Students will be able to discuss relevant cases, statutes, and regulations related to the situation and explain what is required of employees and employers. The target for this objective is that 75% of my students score at least satisfactory and 50% score outstanding on the rubric.

General Education/Core Curriculum Associations
1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.
3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.
9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Institutional Priority Associations
1 Student retention
2 Student promotion and progression
3 Timely graduation

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 4: Draw Reasonable Conclusions (G: 1, 2, 3) (M: 1, 2)
Students will be able to make conclusions based on pertinent legal and HRM principles. The target for this objective is that 75% of my students score at least satisfactory and 50% score outstanding on the rubric.

General Education/Core Curriculum Associations
1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.
3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.
9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Institutional Priority Associations
1 Student retention
2 Student promotion and progression
3 Timely graduation

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 5: Write Clearly and Organize Logically (G: 1, 2, 3) (M: 1)
Students will be able to write clearly and present ideas logically. The target for this objective is that 75% of my students score at least satisfactory and 50% score outstanding on the rubric.

General Education/Core Curriculum Associations
1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.
3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.
9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Institutional Priority Associations
1 Student retention
2 Student promotion and progression
3 Timely graduation

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)
Measures, Targets, and Findings

M 1: Vignette (O: 1, 2, 3, 4, 5)

Students analyzed “in-class” and on-line critical incident vignettes. These “minicases” were based on actual legal findings, but written from the perspective of the management professional rather than an attorney. They helped students gain experience so that once they are working in organizations, their “past experiences and solution activities comes quick to mind when new situations are encountered (Smith, G. F. 2003. Beyond CT and decision making: Teaching business students how to think. Journal of Management Education, 27: 24-51). Over the course of the semester, by comparing their first few and last few assignments, I found substantial improvement using the five rubric criteria (outcomes). Moreover, most students gained confidence in their reasoning skills and ability to write clearly and organize logically. The following comment I received from a student (after the end of the semester) who struggled early is typical: “I just have not had one [course] challenge me quite like yours. When you said that our critical writing and thinking skills would improve because of this course, I thought that was a rather bold statement to make. Having endured and enjoyed this class, I'm happy to say I was wrong.”

Source of Evidence: Written assignment(s), usually scored by a rubric

M 2: Situational Judgment Test (O: 1, 2, 3, 4, 5)

I added several situational judgment test items. I used these early in the semester to “ease” students into writing critically. Writing short (50 to 100 words) justifications still required critical thinking and knowledge of employment law but less writing. Because SJTs demand less grading time, I could offer more student assessments early in the semester. Generally, I returned assignments by the next class allowing the students to quickly build CTW abilities. Students perceived SJTs are the typical multiple-choice test. This reduced their anxiety to writing, although justifying a response required complex thinking. Based on student comments, I found SJTs fostered more positive attitudes toward performing meaningful CTW tasks and improved self-efficacy about CTW performance. Because it was possible to have more than one right answer based on the student’s reasonable interpretation, it was relatively easy to evaluate students’ ability to apply domain knowledge to realistic situations. Memorizing a few key cases and reciting regulations and statutes have little value in the real world where HR situations are intricate and context-bound. For instance, context is a key factor in sexual harassment cases. An identical behavior could be illegal in a law office but legal in an automobile repair shop.

Source of Evidence: Written assignment(s), usually scored by a rubric

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Develop New Assignments Based on Situational Judgment Test Methodology

Over the past year, I experimented with various forms of SJT items. The items are based on actual legal findings but written from the perspective of the management professional rather than an attorney. This is the same process I use to develop the in-class and on-line vignettes. I asked students to provide a written justification for their answers. A review of the literature indicates this format can be effective in assessing domain knowledge (Bailin, S., Case, R., Coombs, J. R., & Daniels, L. B. 1999. Common misconceptions of SJTs in the workplace and their implications for the development of a scoring rubric. Journal of Management Education, 14, 269-283) as well as critical thinking (Ennis, R. H. 1993. Critical thinking assessment. Theory into Practice, 32, 179-186).

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Resistance to CTW

Until the summer 2011 semester, most students selected this course as an elective. Many students are initially concerned about the demands of the course, and a few students struggle throughout the semester contending that the assignments are arduous, time-consuming, or unfair. Research suggests that it is likely that the percentage of poor performing students will increase when the course is a requirement for graduation [see Darby, J. (2006). The effects of the elective or required status of courses on student achievement. Journal of Vocational Education and Training, 58, 19-29]. The objective of this plan is to develop strategies to recognize sources of resistance and generate strategies to reduce resistance.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High
Implementation Description: 1. Review literature related to student resistance, self-regulation, and critical thinking pedagogy with the goal of understanding the causes of and interventions to address the various causes of student resistance. 2. Collect quantitative and qualitative data related to students’ self-regulation, beliefs about writing, course expectations, and attitudes toward various CTW learning and assessment activities. 3. Develop learning and assessment techniques that reduce resistance to CTW.

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

1. Because written assignments are returned to students with feedback, vignettes cannot be "recycled." Consequently, I created dozens of new vignettes based on legal rulings. 2. I conducted an extensive review of the literature related to three topics: student resistance to CTW assignments, situational judgment tests, and inadequacy of management education. 3. Currently, I have a manuscript under review titled “Is Management Education Academically Adrift?” The purpose of this paper is to discuss factors that may contribute to the inadequacy of management education and describe how incorporating critical thinking through writing into the program of study can address current weaknesses in the curriculum. 4. I collected quantitative and qualitative data related to student self-regulation, beliefs about writing, course expectations, and attitudes toward various CTW learning and assessment activities. I developed and piloted a scale to measure student attitudes. 5. I supervised a directed reading on training and development for a graduate student serving as my CTW writing consultant. One outcome of the course was a proposal for training writing consultants to cope with student resistance to CTW.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Over the course of the semester, by comparing their first few and last few assignments, I found substantial improvement using the five rubric criteria (outcomes). Moreover, most students gained confidence in their reasoning skills and ability to write clearly and organize logically. As they were exposed to more "real-world" situations, students became more mentally agile. There was an

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
The changes for me, over the years, have been enormous. I know that I am a better teacher, and I believe that my students are better prepared for the “real world” where critical thinking is essential.

CTW Section Responses

Most Important Accomplishments for Year
1. Because written assignments are returned to students with feedback, vignettes cannot be “recycled.” Consequently, I created dozens of new vignettes based on legal rulings. 2. I conducted an extensive review of the literature related to three topics: student resistance to CTW assignments, situational judgment tests, and inadequacy of management education. 3. Currently, I have a manuscript under review titled “Is Management Education Academically Adrift?” The purpose of this paper is to discuss factors that may contribute to the inadequacy of management education and describe how incorporating critical thinking through writing into the curriculum can address the challenges of globalization, and involving corporate international business analysis and international data gathering.

Challenges for Next Year
Beginning in the fall, the majority of students will be taking this course as a requirement. Studies show that college students taking a course as an elective have a significantly more positive perception of the course and the instructor. This is especially true for more rigorous courses. The second challenge will be time-management. I will be teaching seven sections (25 students per section) compared to three sections in previous years.

 Modifications in Intended Outcomes
I will not change my expectations for the coming year.

 Modifications in Measurement Methods
I will replace a few of the in-class vignettes with SJT items.

Georgia State University
Assessment Data by Section
2010-2011 CTW International Business
As of: 12/12/2016 04:10 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The Institute of International Business does not offer an undergraduate major. However, it does provide a core required course for all RCB students. The course is also the gateway to the International Business Certificate. This course is the one being used for the first phase of CTW. Each department in the College will offer the higher level discipline-specific CTW course. CTW criteria are applied in the course writing assignment called the Individual Term Paper (international business proposal). This addresses basic international business functions in the context of the challenges of globalization, and involving corporate international business analysis and international data gathering.

Goals
G 1: International Business Issues
The underlying goal of the assignment is to familiarize the students with the role of basic international business processes (Export/Import, Out-sourcing; Off-shoring; Foreign Direct Investment; etc.). Analysis: students will demonstrate an ability to analyze basic international business processes, operations, and the challenges of globalization. Communication: students will demonstrate the ability to communicate their knowledge of international business processes directly to business leaders. They will put their analysis in written form appropriate for presenting a business proposition based on their understanding of the fundamentals of the field and their research. Research Skills: students will develop research skills and an awareness of the limitations of on-line material related to international business, including the use of foreign media sources.

Outcomes/Objectives
O/O 1: Term Paper (G: 1) (M: 1, 2)
With the CTW assignment (Country Market Report) the students will demonstrate an understanding of the requirements for making a clear and concise international business proposition. The students will also effectively support the proposition in a manner that could be persuasive for making an investment decision. At the same time, the proposition and evidence will logically relate to realities in the target country.

Measures, Targets, and Findings
**M 1: Rubric for International Business (O: 1)**

Rubrics Applied to BUSA 3000 "Globalization and Business Practices." To date, rubric scores have not been compared either over time or across the many sections of the course. The multiple instructors need to be consulted on the potential application of this measurement strategy. For 2010-2011, the rubrics have been modified to better capture the nature of the writing assignment. For example, we realized that the assignment as indicated in the Syllabus and on the rubrics referred to "thesis and proposition." Further discussion among the faculty lead to the conclusion that "thesis" does not capture our purpose well. Since we are focusing on business writing, it was decided that "business proposition" best captures our intent. We will need to refine the rubric changes in consultation with the faculty and then apply the new criteria to grading the papers. Once the changes are approved, we will aim for a target a score of 70% for the average rubric scores across sections.

Source of Evidence: Written assignment(s), usually scored by a rubric

**M 2: Rubric application (O: 1)**

Faculty approved the change in rubrics. The new definitions of the categories now better reflect the substance of the assignment. However, it remains difficulty to apply the rubric scoring to comparative analysis across sections. This is especially true due to the large number of instructors, including several PTIs, which results in a lack of consensus on using the scoring in a uniform way. Therefore, in 2011-2012 the focus will be more on the substantive aspects of the assignment rather than the scoring by rubrics.

Source of Evidence: Written assignment(s), usually scored by a rubric

---

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

### Action Plan 2010-2011, International Business

**Action Plan: 2010-2011**

The student response rates to the official CTW evaluations have been uneven. Thus, we intend to conduct in-class evaluations in all the sections of BUSA 3000 Evaluation across the multiple sections of the course has been difficult. Efforts will be made to ensure that all instructors use the rubric scoring system to provide more comparable data. The instructors need to reach consensus on the proposed changes to the rubrics. We will continue to urge instructors to use standard headings for the written assignment. Each semester training session will be conducted for faculty and GRAs (both continuing and new). Training sessions will include a focus faculty and GRA use of the WAC on-line evaluation system.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High
- **Projected Completion Date:** 04/2011

### Action Plan 2011-2012

1. As in the past, we will conduct workshops at the beginning of each semester involving faculty and CTW GRAs, including training on the use of on-line WAC.
2. Response rates to the on-line evaluations have been low. We believe that an In-class evaluation process should be used a couple of weeks before the end of the term.
3. Rubric scoring has not been embraced by the faculty. Therefore, we propose an evaluation session with faculty/GRAs after the end of each term.
4. The sample papers will be merged into test case papers to be made available to faculty to share with students in discussions of "best practices."
5. We will continue to stress the role of standard headings on the papers.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** High

**Georgia State University**

**Assessment Data by Section**

**2010-2011 CTW Journalism**

*(As of: 12/12/2016 04:10 PM EST)*

*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)*

### Mission / Purpose

The Journalism faculty members view the process of critical thinking as part of the routine of professional journalists/PR practitioners who use journalistic norms, standards and conventions of objectively assessing information and then decide what portions of synthesized information their audiences will receive.

### Goals

**G 1: Evaluation**

find and evaluate credible sources of information

**G 2: Interpreting information**

to analyze and interpret information for bias and objectivity

**G 3: Creating appropriate materials**

to apply ethical standards and conventions of journalism and related to the mass communication industries when creating original content, e.g. news stories, press releases, newsletters, etc.,

**G 4: Producing original materials**

to understand the professional standards and apply them to produce materials in a variety of different media appropriate to diverse audiences.
**Student Learning Outcomes/Objectives**

**SLO 1:** •Think critically, creatively and independently (G: 1, 2, 3, 4) (M: 1, 2)  
operationalized: rubric item Critical Thinking

**SLO 2:** •Critically evaluate their own work and that of others (G: 1, 2, 4) (M: 1)  
Critically evaluate their own work and that of others for accuracy and fairness, clarity, appropriate style and grammatically correctness (operationalized: rubric item Writing Competency)

**SLO 3:** •Demonstrate an understanding of professional ethical principles (G: 3, 4) (M: 5)  
Demonstrate an understanding of professional ethical principles and work ethically in pursuit of truth, accuracy, fairness and diversity (operationalized: rubric item Logic/reasoning)

**SLO 4:** •Write correctly and clearly in forms and styles appropriate (G: 3, 4) (M: 3, 6)  
Write correctly and clearly in forms and styles appropriate for the communication professions, audiences and purposes they serve (operationalized: rubric items: Audience Awareness + Content)

**SLO 5:** Apply appropriate tools and technologies (G: 4) (M: 6)  
Apply tools and technologies appropriate for the communications professions in which they work (operationalized: rubric item Content + Logic/reasoning)

**SLO 6:** Understand concepts and apply theories (G: 4) (M: 1, 4)  
Understand concepts and apply theories in the use of and presentation of images and information (operationalized: rubric item Writing Competency + Research Competency)

**Measures, Targets, and Findings**

**M 1: Writing Competency (O: 1, 2, 6)**  
Critically evaluate their own work and that of others for accuracy and fairness, clarity (paragraph construction, coherent flow and transitions), appropriate style, grammatical correctness, accurate spelling and proper punctuation  
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1:** •Think critically, creatively and independently  
75% of the students in the senior capstone course will score 16 or higher on the 20-point Critical Thinking rubric.

**Findings 2010-2011 - Target: Met**  
76.6% of the students in the senior capstone courses scored 16 or higher on the Critical Thinking rubric. 75% of the Jour 4040 students; 77.8% of the Jour 4800 students.

**Target for O2:** •Critically evaluate their own work and that of others  
Average score will be a minimum of 16 out of 20 points on the rubric item (80%)

**Findings 2010-2011 - Target: Partially Met**  
Jour 3010: Average score was 14.75 on the rubric item. Jour 4040: Average score was 17.6. Jour 4800: Average score was 16.8.

**Target for O6:** Understand concepts and apply theories  
Average score will be a minimum of 32 out of 40 points (80%) on the combined rubric items of Writing Competency and Research Competency

**Findings 2010-2011 - Target: Partially Met**  
Jour 3010: Average score of 29.9 on the combined rubric of Writing Competency (13.9) and Research Competency (16). Jour 4040: Average score of 35.9 on the combined rubric of Writing Competency (17.5) and Research Competency (18.4). Jour 4800: Average score of 35.1 on the combined rubric of Writing Competency (17.8) and Research Competency (17.3).

**M 2: Critical Thinking (O: 1)**  
assessment and judgment used to select credible sources that provide evidence; demonstration of ability to discern facts from assertions, opinions and/or unwarranted claims; use of recognized standards to develop own reasoning and arguments; present a synthesis of information from diverse sources  
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1:** •Think critically, creatively and independently  
Average score will be a minimum of 16 out of 20 points on the rubric item (80%)

**Findings 2010-2011 - Target: Partially Met**  
Jour 3010: Average score of 14.75 on 20-point rubric. Jour 4040: Average score of 17.6 on 20-point rubric. Jour 4800: Average score of 16.8 on 20-point rubric.
M 3: Audience Awareness (O: 4)
understanding of the academic nature of the report and use of appropriate format and syntax
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O4: Write correctly and clearly in forms and styles appropriate**
average score of 8 out of 10 or 80%

**Findings 2010-2011 - Target: Met**

M 4: Research Competency (O: 6)
survey of credible sources to provide historical context and to include diverse viewpoints not only from those supportive of the author's arguments
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O6: Understand concepts and apply theories**
average score of 16 out of 20 points or 80%

**Findings 2010-2011 - Target: Met**
Jour 3010: Average score of 16 on 20-point rubric. Jour 4040: Average score of 18.4 on 20-point rubric. Jour 4800: Average score of 17.3 on 20-point rubric.

M 5: Logic/reasoning (O: 3)
factual information and opinions presented in a logically consistent manner
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Demonstrate an understanding of professional ethical principles**
average score of 8 out of 10 or 80%

**Findings 2010-2011 - Target: Met**
Jour 3010: Average score of 8 on 10-point rubric. Jour 4040: Average score of 9.4 on 10-point rubric. Jour 4800: Average score of 8.1 on 10-point rubric.

M 6: Content (O: 4, 5)
report contains facts and opinions that meet the requirements of the assignment
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O4: Write correctly and clearly in forms and styles appropriate**
average score of 16 out of 20 points or 80%

**Findings 2010-2011 - Target: Partially Met**
Jour 3010: Average score of 13.4 on 20-point rubric. Jour 4040: Average score of 17.9 on 20-point rubric. Jour 4800: Average score of 16.9 on 20-point rubric.

**Target for O5: Apply appropriate tools and technologies**
average combined score of Content + Logic/reasoning of 24 out of 30 or 80%

**Findings 2010-2011 - Target: Partially Met**
Jour 3010: Average combined score of 21.4 [Content (13.4 of 20) and Logic/reasoning (8 of 10)]. Jour 4040: Average combined score of 27.3 [Content (17.9 of 20) and Logic/reasoning (9.4 of 10)]. Jour 4800: Average combined score of 25 [Content 16.9 of 20] and Logic/reasoning (8.1 of 10)].

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

content for Jour 3010
The average score for the content of Jour 3010 was 71.1%, below the target score of 80%. This low score can be partially explained by the low score for the learning outcome of research competency because not enough sources with varied perspectives were found or used by the students in their stories. A meeting with the Jour 3010 instructors will help strategize how to improve the quality of the story content, including earlier interventions by the instructors before the final stories are written. One reason why the score is so low is that the stories were not randomly chosen for the assessment process. The instructor provided several in each of the categories of “superior,” “average” and “below average,” and clearly the submissions in the latter two categories resulted in such poor content quality to drive down the overall learning outcome average. More on this in the analysis section.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Content | Outcome/Objective: Write correctly and clearly in forms and styles appropriate
Implementation Description: meeting with Jour 3010 instructors
Critical Thinking
The average score for Jour 4800 was below the target of 16 out 20 points or 80% on the rubric item: 15.3 or 76.5%. The average score for Jour 4040 met the minimum of 80%, and so the combined average score for the two senior capstone courses in Journalism was below the target of 80%: 15.7 or 78.5%. There can be several explanations for the underperformance to be detailed in the analysis section. A few items to consider for next year to improve the critical thinking component: - improved instruction on finding, evaluating and interpreting credible sources of information; - a detailed rubric for critical thinking to help determine if there is one or more specific components of the critical thinking process that is lacking so better instruction can be targeted to help students improve; - a random selection of students' reports to have better representation of Jour 4800 student performance; - an assessment of the students' annotated bibliography to determine at an earlier stage in the course if their critical thinking skills need to be improved prior to the start of the final research report.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
  Measure: Critical Thinking | Outcome/Objective: - Think critically, creatively and independently
  Implementation Description: meeting with Jour 4800 instructors
  Projected Completion Date: 08/2010
  Responsible Person/Group: CTW Ambassador and Jour 3010 instructors
  Additional Resources: none
  Budget Amount Requested: $0.00 (no request)

Logic/reasoning for Jour 3010
The average score for logic/reasoning was 73%, below the target of 80%. This score was low because most of the stories written by the students did not have a logical structure and poorly transitions among the different viewpoints that should be included in their stories. The CTW Ambassador will meet with the instructors of Jour 3010 to determine if more emphasis should be given to improving the outline of stories before they are written to allow greater input from the instructors before the first draft of the story is submitted.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
  Measure: Logic/reasoning | Outcome/Objective: - Demonstrate an understanding of professional ethical principles
  Implementation Description: meeting with Jour 3010 instructors
  Projected Completion Date: 08/2010
  Responsible Person/Group: CTW Ambassador and Jour 3010 instructors
  Additional Resources: none
  Budget Amount Requested: $0.00 (no request)

Logical content for Jour 3010
The average combined score of Normal 0 false false false MicrosoftInternetExplorer4 71.7% for content and logic/reasoning was below the target of 80%. This demonstrates that the stories were not well constructed and should have had more diverse sources included in the stories. A meeting with the Jour 3010 instructors will help strategize how to improve the students' writing to emphasize more perspectives and better transitions among the different viewpoints that should be included in their stories before writing the final draft.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
  Measure: Content | Outcome/Objective: - Apply appropriate tools and technologies
  Implementation Description: meeting with Jour 3010 instructors
  Projected Completion Date: 08/2010
  Responsible Person/Group: CTW Ambassador and Jour 3010 instructors
  Additional Resources: none
  Budget Amount Requested: $0.00 (no request)

Research Competency
The average score for Jour 4800 Research Competency measure of the learning outcome of "Understanding Concepts and Applying theory" was below the target of 80% at 15.7 out of 20 or 78.5%. There may be several explanations for the underperformance to be detailed in the analysis section. The CTW Ambassador will consult with the instructor and any other faculty assigned to Jour 4800 to strategize about how to improve the research competency of the students. Some suggestions may include: - more rigorous instruction in searching for more and varied sources to be included in the research report; - different measure for Research Competency; - random sampling of students' final research paper; - a random sampling of students' annotated bibliography submitted earlier in the semester to assess earlier research efforts.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
  Measure: Writing Competency | Outcome/Objective: - Understand concepts and apply theories
  Implementation Description: CTW Ambassador meeting with Jour 4800 instructors
  Projected Completion Date: 08/2010
  Responsible Person/Group: CTW Ambassador and Jour 4800 instructors
  Additional Resources: none
**Research for Jour 3010**
The average score for research competency for Jour 3010 was 77%, below the target of 80%. The CTW Ambassador will meet with the instructors of 3010 to determine if greater emphasis should be given in the instruction of 3010 assignments that require the students to obtain more sources with a variety of perspectives.

Jour 3010 Writing Competency

The writing competency of Jour 3010 was below the target. Improving the writing mechanics (grammar, spelling, punctuation, etc.) of students has been a long time struggle for instructors. The Dept. has a new ad hoc committee of Journalism faculty to improve students' writing, and its recommendations will be implemented for the fall semester.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

AY 2010-11 was somewhat of a holding pattern for Journalism CTW as the revised curriculum was not approved. This did not substantially affect the CTW courses because they remain the same, but the critical thinking aspects are not emphasized throughout the current curriculum as they will be in the revised curriculum which has more writing-intensive courses. The most significant accomplishment was a revised definition of critical thinking. This was a collaborative effort among the faculty at a meeting held by the CTW Ambassador. The faculty member who has taught Jour 4800, one of the senior CTW capstone courses, initiated the revised definition, and at the meeting several other faculty members suggested minor revisions. A consensus was then reached on the final wording. The meeting also allowed for a meaningful discussion about the importance of critical thinking for Journalism majors, and how the aspects of the critical thinking process can be incorporated into other courses. My sense is that regular meetings about the Journalism curriculum and CTW will help improve the senior capstone assessment results, especially when the revised curriculum is implemented. Another achievement was a change in the sampling students' works for the assessment. Last year the CTW Ambassador asked instructors to select writings in three levels: excellent, average and below average. This year the instructors selected randomly to provide the best chance to have a representative sample of work by Journalism students. The results from last year could be described as skewed because a deliberate selection of weak writings was submitted for assessment. This year's sample is more likely to include a cross-section of students' writings.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

The results of this year's assessment clearly show that there is improvement regarding CTW from the junior-level course to the senior-level course. The learning outcome #2, critically evaluate own work and that of others, had one of the lowest average rubric scores for the entire assessment by this year's Jour 3010 students. But the target was exceeded by students in both senior capstone courses. There was also an improvement in the Jour 4800 students from last year's assessment, but as noted in Reflection #1, the 2009-10 results were not from a random selection and possibly skewed to a lower result than if a random selection were employed.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

The greatest need for Journalism CTW is improvement in the junior-level course for both critical thinking and writing. The Dept. Chair has formed an ad hoc Journalism writing committee to provide suggestions on how to improve students' writing. The first suggestions from this committee, which the CTW Ambassador is a member, will be implemented in the next academic year beginning with Jour 1010. It will likely be at least two years before improvement can be detected in the junior-level CTW course. One aspect of implementing CTW has been inconsistently publicizing critical thinking in the course syllabi. Without the definition of critical thinking on the syllabi, the CTW Ambassador is concerned that it is not emphasized from the first day and may then become an afterthought as the semester continues. This implementation may become more difficult as more faculty are assigned to teach CTW courses in the future as more sections will have to be scheduled to accommodate the growing number of Journalism majors who are progressing to graduation. The CTW Ambassador intends to hold regular meetings of the faculty assigned to teach CTW courses and to meet individually, if necessary, with faculty who will be teaching the CTW courses for the first time to ensure that critical thinking is emphasized initially and throughout the semester.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

There were two primary changes from last year. This year the selection of the sample of writings was improved by using random selection rather than the instructor selecting writings in three performance categories. This year's results should be more representative of Journalism majors. The other change was the definition of critical thinking arrived by consensus among the faculty. There must be consistent publicity of the definition in all sections of CTW courses. There is now an ad hoc Journalism writing committee which will be making recommendations on how to improve students' writing, and once implemented with a revised curriculum, should result in better performance by Journalism majors.
**Mission / Purpose**

"Critical thinking is a reflective process of acquisition, analysis, and evaluation of information and ideas that leads to the development and active implementation of reasonable and defensible solutions to problems, issues, and situations."

**Goals**

**G 1: Gather, organize, classify, analyze and evaluate**

Students should be able to gather, organize, classify, and analyze pertinent information, materials, and data and then evaluate assumptions, evidence, ideas, and information.

**G 3: Integrate information, develop conclusions**

Students should be able to consider and/or integrate new and disparate ideas, information, methods, systems, and beliefs and develop rational, reasonable, and informed conclusions.

**G 6: Present conclusions, apply to new problems**

Students should be able to present a clear expression of derived conclusions, judgments, and solutions and apply understanding and knowledge to new and different problems and situations.

**Student Learning Outcomes/Objectives**

**SLO 1: Exercise physiology journal summaries (G: 1, 3, 6) (M: 3)**

Students will examine five original research papers in exercise physiology in scholarly journals and write a concise summary of the important aspects of each paper. The purpose of this assignment is to examine original research papers in exercise physiology in scholarly journals and to write a concise summary of the important aspects of each paper. There are a total of five (5) papers to be reviewed, one in each of the following general areas of exercise physiology: Exercise Metabolism, Neuromuscular, Cardiovascular, and Pulmonary. The journal articles will be provided to you in pdf format on uLearn. The article summaries will be due at various times throughout the semester – please see the course schedule.

**Standard Associations**

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)
4 Outcomes of research (3.3.1.4)

**SLO 2: Student Laboratory Assignments (G: 1, 3, 6) (M: 3, 4)**

Students will collect, analyze and synthesize data from the laboratory and use this information to solve complex problems.

**SLO 3: Structured academic controversy (G: 1, 3, 6) (M: 1)**

Students will present review relevant information and present written and oral arguments arguments for and against an academic controversy (Abstinence Education vs. Comprehensive Human Sexuality Education). Overview Structured academic controversy requires students to use high level reasoning and critical thinking. At the end of this experience students will experience the following benefits: • Increased understanding of both sides of the controversy • More insight into ways to formulate an argument • Greater mastery and retention of material • Ability to generalize concepts to a wider variety of situations and contexts • Opportunity to reach a consensus from different points of view • Higher academic self-esteem • Higher levels of reasoning and different levels of critical thinking skills

**Standard Associations**

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)
4 Outcomes of research (3.3.1.4)

**SLO 4: Reflection papers (G: 1, 3, 6) (M: 1)**

Students will develop two reflection papers on school-based sexuality education. First Reflection: From class discussion, interviews, and assigned readings, reflect on the interaction among the parent, teacher, and child during the process of school-based sexuality education. Consider disparate values and needs that influence this process; discuss the influence of culture on this process; and develop rational, reasonable, and informed solutions for effective school-based sexuality education. The paper is limited to no fewer than three and no more than five pages single spaced. Second Reflection: From class discussion, interviews, and assigned readings, reflect on methods and materials you plan to integrate into your school-based sexuality education to effectively adapt information and activities for students with special needs. Present a clear expression of derived conclusions, judgements, and conclusions. The paper is limited to no fewer than three and no more than five pages single spaced.

**Standard Associations**

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 5: Fitness facility evaluation (G: 1, 3, 6) (M: 2)**

Students will visit one commercial, community, corporate, or clinical fitness facility and evaluate the facility against national standards.

**Standard Associations**

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)
## Measures, Targets, and Findings

### M 1: Structured Academic Controversy (O: 3, 4)
Total number of students who successfully completed the structured academic controversy assignment.
Source of Evidence: Capstone course assignments measuring mastery

**Target for O3: Structured academic controversy**
Achievement target was set at a minimum of 73%

**Findings 2010-2011 - Target: Met**
100% of students either met or exceeded the achievement target.

**Target for O4: Reflection papers**
Achievement Target was set at 83%.

**Findings 2010-2011 - Target: Met**
100% of students met or exceed the achievement target for the the reflection paper assignments.

### M 2: Fitness Facility Evaluation (O: 5)
Percentage of students who successfully complete the fitness facility evaluation assignment.
Source of Evidence: Project, either individual or group

**Target for O5: Fitness facility evaluation**
Achievement target was set at 73%.

**Findings 2010-2011 - Target: Not Met**
Data not currently available.

### M 3: Exercise physiology Journal Assignments (O: 1, 2)
Percentage of students who successfully complete the journal assignments.
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Exercise physiology journal summaries**
Achievement target was set at 73%.

**Findings 2010-2011 - Target: Met**
87% of students met or exceeded the target for the journal assignments.

**Target for O2: Student Laboratory Assignments**
Achievement target was set at 83%

**Findings 2010-2011 - Target: Met**
95% of students met or exceeded the achievement target.

### M 4: Laboratory assignments (O: 2)
Students will collect, analyze, and synthesize data and apply this information to a laboratory problem.
Source of Evidence: Written assignment(s), usually scored by a rubric

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Raise assessment target
Based on student performance, it appears as if the assessment target is too low. Target will be raised to 83% for the next review cycle.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Fitness Facility Evaluation
  - **Outcome/Objective:** Fitness facility evaluation
- **Implementation Description:** Raise target.
- **Projected Completion Date:** 08/2010
- **Responsible Person/Group:** CTW instructors.
- **Additional Resources:** None.
- **Budget Amount Requested:** $0.00 (no request)

#### raise target
It appears that the current target measure is too low. Target will be raised to 83%.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
Raise target

Based on student performance it appears that the assessment target was set too low. Target will be raised to 83% for the next review cycle.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
  Measure: Structured Academic Controversy | Outcome/Objective: Structured academic controversy

Implementation Description: Raise target measure.
Projected Completion Date: 07/2010
Responsible Person/Group: CTW instructors.
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Raise target

Based on student performance it appears that the assessment target was set too low. Target will be raised to 83% at 83%

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
  Measure: Exercise physiology Journal Assignments | Outcome/Objective: Exercise physiology journal summaries

Implementation Description: Raise target.
Projected Completion Date: 08/2010
Responsible Person/Group: CTW instructors.
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Raise target

Based on student performance it appears that the target measure was set too low. Target will be raised to 83%

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
  Measure: Fitness Facility Evaluation | Outcome/Objective: Fitness facility evaluation

Implementation Description: Raise target measure.
Projected Completion Date: 07/2010
Responsible Person/Group: CTW instructors.
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Raise target

It appears as if the assessment target was set too low. New target of 83% will be set for the next academic year.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
  Measure: Structured Academic Controversy | Outcome/Objective: Reflection papers

Implementation Description: Raise assessment target.
Projected Completion Date: 08/2010
Responsible Person/Group: CTW instructors.
Additional Resources: None

- Outcome/Objective: Structured academic controversy

Implementation Description: Review targets with relevant faculty.
Projected Completion Date: 08/2011
Responsible Person/Group: CTW Coordinator and course instructor.

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

CTW assignments were refined in several areas. Strong consideration is being given to changing the CTW course in the physical education program.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

No majors improvements from last year.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

Faculty in the HPE program are expressing dissatisfaction with the CTW course in their area and are proposing a different course as a replacement.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

No major changes except as noted previously in the HPE program.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Faculty in the HPE program are proposing a different CTW course which should better meet the needs of their students and the CTW effort in general.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Minor curriculum changes were made in the exercise science program as a result of the CTW results. Faculty in the HPE program have determined that the required CTW course is not meeting the intent of the CTW effort and are proposing an alternative course.

ADMINISTRATIVE DEPT QUESTION 1:
Explain how your department used the results from last year’s (2009-2010) assessment. What actions did you take? What changes did you make as a result?

Proposed a new CTW course in the HPE program.

ADMINISTRATIVE DEPT QUESTION 2:
What have you learned from your assessment this year (2010-2011)?

Nothing new compared to last year.

ADMINISTRATIVE DEPARTMENT QUESTION 3:
What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

Increased achievement targets in several areas and a new CTW course in the HPE program.
The mission of the Marketing Department, with respect to the undergraduate major, is to produce students who can analyze business situations, define problems accurately based on their analysis; evaluate the options, and make sound recommendations regarding the best decision for their organization. This will be accomplished through the use of pedagogies designed to give students hands-on experience with marketing decision-making that goes beyond a simple descriptive knowledge of marketing to build skills that will permit the student to apply their knowledge of marketing and related business concepts.

### Goals

**G 1: Making logical, coherent recommendations**

Students need to be able to define a specific recommendation and logically defend it based on the qualitative and quantitative analysis they have conducted.

### Student Learning Outcomes/Objectives

**SLO 1: Situation Analysis (G: 1) (M: 1)**

Students will be able to conduct a situation analysis which identifies facts related to the industry, company and trends.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 2: Problem definition (M: 2)**

Students will identify the central marketing problem in a case study accurately and define the problem clearly and concisely in writing.

**Relevant Associations:** XXX

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

### Other Outcomes/Objectives

**O/O 3: Alternative Evaluation (M: 3)**

Students will first identify all relevant alternatives and then comprehensively examine the advantages and disadvantages of each alternative using both quantitative and qualitative arguments. The quantitative analysis is a basic skill required to comprehensively evaluate the various alternatives.

**Relevant Associations:** XXX

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**O/O 4: Recommended Action (M: 4)**

Students must select a course of action from among the relevant alternatives that they have identified and evaluated and defend their choice. They must be able to explain their recommendation both orally and in writing. They must also be able to argue for their position and explain why they consider their recommendation to be the best course of action. They should be knowledgeable of all the relevant alternatives and be able to argue for their recommendation by identifying weaknesses and strengths of other options. They must be able to effectively incorporate quantitative arguments into their recommendation.

**Relevant Associations:** XXX

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

### Measures, Targets, and Findings

**M 1: Rubric for Situation Analysis (O: 1)**

The rubric for the situation analysis breaks the situation down into three dimensions: Industry, Company and Trends.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

**Target for O1: Situation Analysis**

The average student score as measured by the rubric for problem definition will be 75% or greater out of 100%.

**Findings 2010-2011 - Target: Met**

The average score for the situation analysis objective in 2010-2011 was 78%. This number is based on five sections of the course taught during the period and represents the scores of a total of 117 students. It exceeds the target of 75%.

**M 2: Problem Definition Scores from Rubric (O: 2)**

The rubric for the problem definition assesses the student's understanding of the problem in the case and their ability to completely and accurately define it.

**Source of Evidence:** Academic direct measure of learning - other

**Target for O2: Problem definition**

The average student score as measured by the rubric for problem definition will be 75% or greater out of 100%.
The average score for Problem Definition for 2010-2011 was 75.2% which barely exceeds the target. One hundred and seventeen students in five sections of MK4900, Marketing Problems, were assessed.

**M 3: Alternative Identification and Evaluation (O: 3)**

The rubric that measures students’ knowledge of the alternatives in the case evaluates their understanding of the options available and their understanding of the advantages and disadvantages of each alternative.

Source of Evidence: Academic direct measure of learning - other

**Target for O3: Alternative Evaluation**

The average score on the rubric items related to alternative identification and evaluation shall be 75% or greater out of a total of 100%.

**Findings 2010-2011 - Target: Not Met**

Students scored an average of 72.5% during 2010-2011 in five sections of the course. This result is slightly less than the target score of 75%.

**M 4: Recommendation (O: 4)**

The rubric that assesses the students’ recommendation requires that the students select one of the alternatives and then produce a coherent and compelling set of arguments that support their recommended solution to the case problem.

Source of Evidence: Academic direct measure of learning - other

**Target for O4: Recommended Action**

The target mean for all students on the recommendation measure is 75% out of 100%.

**Findings 2010-2011 - Target: Not Met**

The average score on the recommendation dimension during 2010-2011 was 74.1%. This is slightly below the target score of 75%. The score is based on data from 117 students in five sections of Marketing Problems, MK4900.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Alternative Evaluation**

Student scores averaged 72.5% which is below the 75% target. The problem is believed to reside in the depth of evaluation of the alternatives and not in the initial step of identifying the relevant alternatives. Greater attention to describing the evaluation process including enhanced examples of excellent evaluations will be provided.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):

Measure: Alternative Identification and Evaluation
Outcome/Objective: Alternative Evaluation

Implementation Description: Starting Summer Semester 2011 more time will be devoted to describing the case analysis process with particular attention given to the alternative evaluation portion of that discussion.

Responsible Person/Group: Hiram Barksdale
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

**Recommendation Depth and Detail**

Students scored 74.1% on the Recommendation which is below the target score of 75%. It is believed that the issue results from failing to provide sufficient detail and explanation to sufficiently justify their recommendation rather than recommending an irrelevant course of action. The case analysis pedagogy, may not be familiar to the students. To address inadequate depth and detail given to support their recommendation, an example case will be assigned and discussed prior to assigning a case to be written up for a grade.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):

Measure: Recommendation
Outcome/Objective: Recommended Action

Implementation Description: To address inadequate depth and detail, an example case will be assigned and discussed prior to assigning a case to be written up for a grade.

Responsible Person/Group: Hiram Barksdale
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

**Analysis Questions and Analysis Answers**

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

The key achievement is the change that has begun in all courses in the undergraduate marketing major. One which is key to the action plans for MK4900, Marketing Problems, is that at least one, in-depth case analysis, is to be used in every class at some point during the semester. Students typically indicate that they have done no case work prior to MK4900. The addition of at least one case
to every section of every course in the major will eventually mean that students will have at least had some exposure to the case analysis process prior to entering MK4900.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

The College of Business handles the gateway course differently by requiring all business majors to take the same gateway class rather than each major or department offering a gateway CTW course. As a result, I cannot give an informed answer to this question.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

The first and foremost answer to this question is that now that two instructors teach the capstone CTW course, MK4900, greater coordination between them would help. Attempts at this have met with little success as it is difficult to “require” colleagues to do something in a particular way. How do you make someone conform and do things in a particular way? I wish I knew.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

Although it would be overarching to claim that CTW has resulted in significant alterations to the department’s undergraduate curriculum, CTW has certainly played a role. The students, however, seem largely oblivious as do most of the faculty who agree with it so long as they don’t have to do anything differently. The addition of a required case in every section of every course caused a lot of complaining but eventually when the department chair added it to the annual review/evaluation of every faculty member people got in line. Our department has capped the class sizes in the course at 25 students. This is both a blessing and a curse. We are offering more sections and we cannot obtain assistance with evaluating the written work from CTW.

ACADEMIC PROGRAM QUESTION 1:

What changes in the assessment process have your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Assessment remains the concern of only a few people—those responsible in the undergraduate CTW course and the department’s Masters program coordinator. Most faculty think that assessment is just something that they colleagues at other schools are worried about. They don’t see that their courses will soon be impacted. Trying to encourage colleagues to be proactive and begin to use rubrics has not met with success. People focus on what they have in front of them right now.

ACADEMIC PROGRAM QUESTION 2:

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

One can argue that the assessment has been instrumental in causing a significant overhaul in the undergraduate curriculum. However, I believe that assessment is one small part of the significant changes that are underway in the department. The data is not well known outside of 3 or 4 people. Curriculum changes including the addition of new courses and overhauling others, requiring at least one case in every course taught and having a significant hands-on project in every class are all changes that have been in process for several years and really predate the assessment process.

ADMINISTRATIVE DEPT QUESTION 1:

Explain how your department used the results from last year’s (2009-2010) assessment. What actions did you take? What changes did you make as a result?

Again, the results of the assessment were one small part of a much greater set of causal factors which have combined to lead to a significant change in the undergraduate curriculum—the most significant change in at least 30 years. New course have been created, new pedagogies required, etc.

ADMINISTRATIVE DEPT QUESTION 2:

What have you learned from your assessment this year (2010-2011)?

I have learned that we seem to have slipped slightly going from results that all exceeded the target in 2009-2010 to results that are slightly below the target for two out of the four dimensions. Whether this slip is statistically significant is not clear. It is troubling whether statistically significant or not. Although it may be obfuscation, the students seem to have been less engaged and less interested. It is hard to claim it changed significantly in just one year but students don’t want to invest the time and energy that the analysis of the cases demands. They do a cursory job, in part because they have not been held to a very high standard in other classes and have gotten used to submitting mediocre work and being awarded good grades for it. As our department ratchets up the demands particularly with respect to quantitative analysis, it will be interesting to see what happens to our enrollments. I suspect that our major has been one of last resort for students in the College of Business. I suspect that we will be perceived as less desirable as we implement the changes we have agreed to make. Assessment has helped to focus me and a few others in this department on revising our standards to make them more rigorous.

ADMINISTRATIVE DEPARTMENT QUESTION 3:

What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

While part of the problems that the data identify can be attributed to the students, some are the result of the tyranny of freedom. Some instructors have extremely low standards and others have high standards even though they may teach the same course. Strategies we will implement over the coming year include course coordinators in every course where we offer more than one section in an effort to standardize the experience from the students’ perspective. We will require more quantitative analysis through the addition of a new metrics course will help alert students to the fact that marketing demands quantitative analysis along with subjective judgement. And we will also require case analysis in every course to help give students greater ability to apply their knowledge to real problems. I believe that all the changes we are making will help to better balance rigor and relevance. Students will be better prepared for their careers because of these changes. However, I do not believe that these changes will radically change anything. As long as many faculty remain in their comfort zone and avoid change until it forced upon them, assessment will remain the job of a few committed people who care more about the quality of their teaching than their colleagues who gravitate towards a different set of rewards.
Challenges for Next Year
Changing a culture costs a fortune and it takes forever. That is the objective, however.

Georgia State University
Assessment Data by Section
2010-2011 CTW Mathematics
As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
Critical thinking in math usually means (1) analyzing and evaluating mathematical arguments, (2) formulating and presenting a proof or a counterexample in support of conclusions, and, (3) deriving an abstract claim from examples and solving a problem by applying known results.

Goals

G 1: Analysis
Students will be able to analyze and evaluate mathematical arguments.

G 2: Deductive reasoning
Students will be able to formulate and present a proof or a counterexample in support of conclusions.

G 3: Problem solving
Students will be able to derive an abstract claim from examples and solve a problem by applying known results.

Outcomes/Objectives

O/O 1: Giving proofs (G: 1, 2, 3) (M: 1)
A proof is a complete explanation of why a claim is true. Most assignments in Math 3000 ask students to prove or disprove (i.e., give a counterexample) a mathematical claim. For example, Prove that the sum of any two odd integers is divisible by 2 but not divisible by 4. To prove this claim, students need to use a direct proof together with a proof by contradiction. In math 4991 students need to give proofs to more complicated claims (e.g. Intermediate Value Theorem in Calculus). They also need to present proofs by Latex, a high-quality typesetting system designed for scientific documentation.

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

O/O 2: Solving problems by math softwares (G: 1, 3)
In math 4991, students need to solve a computation problem by using math softwares, e.g. Maple.

O/O 3: Reviewing papers (G: 1, 2, 3) (M: 2)
In math 4991, students choose an article from an undergraduate math journal (e.g. Rose-Hulman Institute of Technology Undergraduate Mathematics Journal), write a report (20 pts) including: • Section 1 (5 pts): Introduction. Minimum 1 page. It contains a brief introduction to the problem, background, and history. You should not simply copy from the paper; you should read related textbooks, references, or online materials. • Section 2 (5 pts): Main results. Minimum 1.5 pages. It contains the main result(s) in the paper with proofs. Similarly you should present the proof in your own words, instead of copying form the paper. • Section 3 (7 pts): Remarks. Minimum 1 page. Your mathematical comments, answers to open problems, and discussion on possible generalization of the results. This section usually differentiates an excellent report from other reports. • References (3 pts) should be given at the end (but not included in the page count) and be cited.

Measures, Targets, and Findings

M 1: Rubric for simple assignments (O: 1)
Excellent: Student fully understands the logic required to do the proof. Flow of logic is correct (or very nearly so). Correct notation is used throughout. Satisfactory: Student understands the logic required to do the proof, but has one major flaw in the argument. Correct notation is used throughout the majority of the argument. Marginal: Student somewhat understands what is to be done. There are several flaws or a major hole in the argument. Notational errors may or may not occur. Poor: The argument is fundamentally incorrect and/or uses incorrect notation throughout.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Giving proofs
60% of students score at least satisfactory based on our rubric.

Findings 2010-2011 - Target: Met
In fall 2010, among 15 students taking Math 3000, there are 4 excellent, 4 satisfactory, 3 marginal, and 4 poor. In spring 2011, among 17 students taking Math 3000, there are 5 excellent, 7 satisfactory, 4 marginal, and 1 poor. Considering two semester together, there are total 32 students in Math 3000, 9 excellent, 11 satisfactory, 7 marginal, and 5 poor. This means that more than 60% student scored at least satisfactory.
M 2: Rubric for 4991 projects (O: 3)

Excellent: students understand the background and history of the problem, give a detailed introduction, present the main result and and its proof correctly, give valuable comments, and cite related references. Satisfactory: students give a reasonable introduction and a list of references, present results and proofs correctly but can not give good comments. Marginal: give no or very brief introduction, present results with some proofs. Poor: give no or very brief introduction, can not present results and proofs.

Source of Evidence: Project, either individual or group

Target for O3: Reviewing papers

At least 70% score satisfactory or excellent.

Findings 2010-2011 - Target: Met

In fall 2010, 16 students took Math 4991, all finished the project on paper review. There are 6 excellent, 6 satisfactory, 3 marginal, and 1 poor. In spring 2011, 17 students took Math 4991, 16 of them finished the project on paper review, There are 10 excellent, 2 satisfactory, 3 marginal, and 1 poor. Overall, among total 33 students in Math 4991, there are 16 excellent, 8 satisfactory, 6 marginal, 3 poor (including the one who did not attempt).

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Improve student scores on proofs

First I will work with the instructors of Math 3000 to learn how to improve students' scores on proof. Second the prerequisite of 3000 is Math 2420. The technique of giving proofs is mentioned but usually not emphasized in 2420. I plan to work with the department chair and 2420 instructors to make sure that this technique is covered well in 2420.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Relationships (Measure | Outcome/Objective):
  Measure: Rubric for simple assignments | Outcome/Objective: Giving proofs

Redesign 4991 projects

Last year some 4991 students complained about the amount of writing. This year we redesign 4991 projects so that they require less writing. We will continue working on this action plan.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High

Interest of writing proofs

It is difficult but necessary for a math major to write a rigorous proof. In the recent years, we have seen the improvement from our Math 3000 students on writing proofs. We need to continue working with Math 3000 instructors such that they can help to build students' interests of writing proofs. For example, instead of proving simple but tedious algebra equalities, they may assign more interesting practical problems, e.g. those related to games and sports.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

1. Math 3000: we see the improvement of student performance on writing proofs: last year less than 60% students received excellent or satisfactory this year slightly more than 60% students achieved this. 2. Math 4991: we have adjusted the amount of writing, especially in spring 2011, so that students have more time working on (fewer) projects. It seems that students were happy with this change. 3. Math 4991: in spring 2011 students are allowed to use the computer lab in our department to work on their projects, In the past many students have to use their own computer to do projects. This saved students' time and gave them convenience.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Not yet.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

On one hand, Math 4991 is a developing course -- it is not clear what are best way of teaching students to conduct research. On the other hand, to many students and faculty members, senior seminar may not be a proper title for Math 4991. They overlooked this course and regarded it as a seminar course. To solve this problem, we will continue working closely with instructors of 4991 to see if any adjustment is necessary. With the assistant of department chair, I will make sure that every faculty (even those who do not teach 4991) knows the importance of 4991. We may let more faculty members to teach this course. We also consider changing the title of 4991 to reflect its content better.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

Students now have to write intensively in two CTW courses. This helps students to become better math majors because a good writing in math reflects (and also requires) a good understanding of math. Faculty members who taught these CTW courses became
more aware of the relation between critical thinking and writing.

Georgia State University
Assessment Data by Section
2010-2011 CTW Middle Level Education
As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

### Mission / Purpose

MISSION: To engage preservice teachers in assignments, activities, and field experiences that enhance critical thinking skills. To create teachers who can apply critical thinking skills to their current and future practices. PURPOSE: The Middle Grades Education BSE program, in the Department of Middle-Secondary Education and Instructional Technology, considers the development critical thinking skills to be one of the most important goals of the program. For middle grades teachers, critical thinking skills are essential in the design of and reflection on selected teaching strategies, the analysis of student work and assessment data, and the adjustment of instruction based on local socio-cultural contexts. For the purposes of our program, and in conjunction with our Professional Education Faculty Conceptual Framework, we define critical thinking as "(1) the ability to reflect upon data as part of a recursive process when planning, implementing and assessing teaching, learning, and development, (2) the ability to identify and critically analyze various educational practices and strategies that affect learners in metropolitan contexts, and (3) the ability to formulate and present convincing arguments for or against major theories of teaching and learning."

### Goals

**G 1: Candidates are Experts in Recursive Data Analysis**
Candidates are able to reflect upon data as part of a recursive process when planning, implementing, and assessing teaching, learning, and development.

**G 2: Candidates are Experts at Critical Written Reflection**
Candidates are able to identify and critically analyze various educational practices and strategies that affect learners in metropolitan contexts.

**G 3: Candidates are Experts at Argument Development**
Candidates are able to formulate and present convincing arguments for or against major theories of teaching and learning.

### Student Learning Outcomes/Objectives

**SLO 1: Students demonstrate the ability to collect and critically analyze data (G: 1)**
Students are able to collect and analyze data. They are able to provide an in-depth explanation of their data collection process, followed by a detailed description and analysis of their findings. They give detailed explanations with examples cited to support conclusions and connections. They critically reflect upon the data collection and analysis process, and talk specifically about how this process informs their teaching practices.

**General Education/Core Curriculum Associations**

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

**Standard Associations**

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)
4 Outcomes of research (3.3.1.4)

**Strategic Plan Associations**

1.1 Increase the level of scholarship support for undergraduate students.

**SLO 2: Students demonstrate the ability to think critically through written reflection (G: 2) (M: 2)**
Students demonstrate critical thinking processes through written reflection. Student reflections include (1) discussions of how they make decisions about teaching and learning, (2) how they challenge assumptions and bias they come across with group members, fellow teachers or professional readings, (3) analysis of critical events that led to changes in thinking about teaching and learning, and (4) a description of what was learned (or yet to be learned) related to the teaching and how that effects their professional development.

**General Education/Core Curriculum Associations**

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.
9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

**Standard Associations**

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 3: Students demonstrate the ability to formulate and present convincing arguments (G: 3) (M: 3, 4)**

Students demonstrate the ability to formulate and present convincing arguments for or against major theories of teaching and learning. Students demonstrate the ability to communicate their opinions and uses of teaching and learning strategies presented in professional texts and journals. Students demonstrate the ability to use data to support or refute specific teaching and learning strategies for specific students, and write about those data findings with a critical lens. Students demonstrate an ability to analyze their own teaching as it relates to major theories of teaching and learning.

**General Education/Core Curriculum Associations**

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary.

**Measures, Targets, and Findings**

**M 2: Critical Incident Video Rubric (O: 2)**

Critical Incident Video Rubric from EDCI 4640:

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Students demonstrate the ability to think critically through written reflection**

90% of students will score at the "proficient" level or higher.

**Findings 2010-2011 - Target: Met**

90% of students did score at the "proficient" level or higher on all components of the critical incident video rubric.

**M 3: Professional Book Group Discussion Reflection Rubric (O: 3)**

From EDRD 4600: Professional Book Group Discussion Reflection Rubric

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Students demonstrate the ability to formulate and present convincing arguments**

100% of students will score at the "proficient" level or better.

**Findings 2010-2011 - Target: Met**

All students scored at the "exemplary" level, which exceeds our achievement target. See report here: https://c1.livetext.com/misk5/xcreports/view_report/sid/73745?key=de7b8dd7d4e38a5ae135fc07231f53f1

**M 4: Professional Book Group Discussion Paper Rubric (O: 3)**

From EDRD 4600: Professional Book Group Discussion Paper Rubric

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Students demonstrate the ability to formulate and present convincing arguments**

100% of students will score at the "proficient" level or higher.

**Findings 2010-2011 - Target: Partially Met**

While 100% of the students scored at the "exemplary" level in their reactions to the book and citations, only 60% of the students were able to articulate the reasons behind why certain aspects of the book were useful or not useful in their professional development as teachers at the "exemplary" level. 40% of the students scored either "proficient" or "partially proficient." See report here: https://c1.livetext.com/misk5/xcreports/view_report/sid/73744?key=6b1af9a16dec877376b439351702a6b8

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Assignment Outcomes**
CTW Course Plan to Implement Fall 2010

The B.S.E. in Middle Grades Education is a new program in the College of Education. The first cohort of students, who started in Spring 2010, will take their first CTW course this Fall 2010 and their second CTW course in Spring 2011. Because our program is new, this action plan relates to what we have done and will continue to do related to course development. Assignment Development: During Fall 2009 and Spring 2010, our BSE MLE faculty developed course assignments for the two CTW courses. Both courses include informal writing assignments (such as journals and weekly reflections) and formal writing assignments (such as research papers and text development). Rubric Development: During Spring 2010, we developed rubrics for specific writing assignments, in addition to an overall CTW assignment rubric included in this report. Faculty Development: The CTW coordinator has met with the other CTW instructor (a reading/writing specialist) three times over the past two semesters to refine our program CTW definitions, write program goals, and create course assignments. We will continue to meet in Fall 2010 and Spring 2011 to evaluate CTW course assignments and make adjustments for future courses. Collection/Analysis of Student Work: During Fall 2010 and Spring 2011, the CTW instructors will work to evaluate CTW assignments based on our included rubric. With student permission, we will share assignments across instructors in order to evaluate student work and the overall effectiveness of assignments.

During Fall 2010, Dr. Yarbrough and Dr. Cross will work on fleshing out rubric descriptions and determining appropriate assignment outcomes and target goals.

| Established in Cycle: | 2009-2010 |
| Implementation Status: | Finished |
| Priority: | High |
| Projected Completion Date: | 05/2011 |
| Responsible Person/Group: | Stephanie Behm Cross (CTW Ambassador and Course 2 instructor) |

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

During Fall 2009 and Spring 2010, our BSE MLE faculty developed course assignments for the two CTW courses. Both courses include informal writing assignments (such as journals and weekly reflections) and formal writing assignments (such as research papers and text development). Rubric Development: During Spring 2010, we developed rubrics for specific writing assignments, in addition to an overall CTW assignment rubric included in this report. Faculty Development: The CTW coordinator has met with the other CTW instructor (a reading/writing specialist) three times over the past two semesters to refine our program CTW definitions, write program goals, and create course assignments. We will continue to meet in Fall 2010 and Spring 2011 to evaluate CTW course assignments and make adjustments for future courses.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

Students in the first CTW course appeared to have difficulty articulating their stance on varying topics in the teaching and learning of young adolescents. For example, not all students were proficient at defending topics and content in professional books and journals, and also had a hard time articulating why they wanted to implement certain strategies and action research plans in their classrooms. At the end of the second CTW course, however, all but one student was proficient at articulating their stance on specific strategies in teaching and learning with specific groups of students. We are pleased with this progression.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**
Because different instructors teach the CTW courses, it is hard to make sense of students’ progression to becoming more critical thinkers. It has also been hard to maintain a focus on critical thinking throughout both courses, as there are so many other skills and topics to discuss. One fear of the faculty is that students really don’t leave the courses with the ability to articulate what it means to be critical thinkers through their writing, and why this is important to them as professional educators. We hope to make this more of a focus of the courses in the future.

**CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?**

Because we are at the beginning phase of CTW for our program (first course offered in Fall 2010), the greatest impact we have seen so far has been on faculty. This initiative has pushed us to come together and really think about what critical thinking means for our students, and how to best measure their critical thinking progress through the program. These conversations have allowed us all to think more carefully about our course assignments, readings, and in-class activities, in CTW and in other required program courses.

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

This year’s assessment report is much different from last year’s report. We made changes in our learning outcomes, measures, and targets. This is most likely due to the fact that our outcomes, measures, and targets were simply projections last year, as we did not start teaching the CTW courses until Fall 2010. We needed to more carefully and specifically align our outcomes and measures in particular, so that our findings and action plans for next year will make more sense and better inform our CTW courses.

**ACADEMIC PROGRAM QUESTION 2:**

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

N/A

**ADMINISTRATIVE DEPT QUESTION 1:**

Explain how your department used the results from last year’s (2009-2010) assessment. What actions did you take? What changes did you make as a result?

N/A

**ADMINISTRATIVE DEPT QUESTION 2:**

What have you learned from your assessment this year (2010-2011)?

N/A

**ADMINISTRATIVE DEPARTMENT QUESTION 3:**

What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

N/A

---

### Georgia State University

#### Assessment Data by Section

**2010-2011 CTW Music**

(As of: 12/12/2016 04:11 PM EST)

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

#### Mission / Purpose

The mission of Critical Thinking in the School of Music is to provide students the skills to identify, analyze and evaluate arguments and claims about music. Because the School of Music offers curricula in a variety of areas of concentration in music, critical thinking has been approved as the desired method of learning and writing in the following areas: 1) the theoretical understanding of music, 2) music in historical and cultural contexts, 3) the use of technology in creating, performing and listening to music, 4) the individual and collective performance of music, 5) the composition and improvisation of music, 6) the conducting of music, 7) the processes of educating others about music, and 8) the development of careers in music. Critical Thinking through Writing (CTW) about music involves written interpretation and evaluation of the knowledge, the performance, and the creative, technical and instructional skills associated with music.

#### Goals

**G 1: CTW Methods in Music**

The goal of CTW courses in music is to provide students with the cognitive skills to be able to use analyze critically data from the perspective of synthesis, analysis, evaluation, application, comparison, contrast, and inference and to present these findings in written form about a selected topic in music of their choice.

#### Student Learning Outcomes/Objectives

**SLO 1: Proposal for Research Paper Assignment (G: 1) (M: 1)**

Course: World Music MUS 4820 This research paper should be based on fieldwork conducted on some aspect of music discussed in class or on the music of a culture of the student's choice, with the instructor's approval. The “Critical Thinking through Writing”
component of the research paper will be graded on a rubric that will be provided to each student. The first part of this three-part assignment is to write a proposal for a research paper, an outline for the paper, and an annotated bibliography. Course: Music History - MUS 4810 Music History, MUS 4810 (1750 to the Present), has been designated a Critical Thinking through Writing (CTW) course by the School of Music in compliance with Georgia State University’s Quality Enhancement Plan (QEP). This means that specific writing assignments will be used to assess the progress and quality of critical thinking as demonstrated through writing. The required research paper should be based on some aspect (style, composer, composition, etc.) of Western European or American art music. The first part of the three-part assignment is to write a proposal for a research paper, an outline, and an annotated bibliography.

**SLO 3: Central Position and Primary Objective**
Evidence that the central position and primary objective can maintained throughout the research of a topic of music from a cultural or historical perspective.

**SLO 3: Revised Draft of Research Paper (G: 1)**
In World Music, the final part of this three-part assignment is to revise the draft of the research paper. The final paper should also include a one-page transcription (word-for-word) or a synopsis of an interview with a person (musician, music historian, etc) knowledgeable of the music of the culture about which the paper is written. The transcription or synopsis of the interview should contain at least 5 interview questions pertinent to the research topic. Students must make the recommended changes to the graded research proposal draft that is returned to them. Next, students should revise the draft and amend it to reflect a development, analysis, and application of some element of the music of a culture of choice that demonstrates the use of "critical thinking." Students will present a synopsis of the findings of the revised draft paper in the form of a 7 to 10 minute power point or multi-media presentation in class. The presentation should include two audio-visual examples of music and a handout of relevant terms for other students in the class. In Music History, the final part of this three-part assignment is to revise the draft of the research paper. Students must make the recommended changes to the graded research proposal draft that will be returned to them. Next, students should revise the draft and amend it to reflect a development, analysis, and application of some element of Western European or American art music that demonstrates the use of "critical thinking." No in-class presentation is required of students in Music History. The same rubric for the revised final research paper is used in World Music and Music History.

**Other Outcomes/Objectives**

**O/O 2: Draft of Research Paper (G: 1)**
In World Music the second part of this three-part assignment is to draft a 7 to 10-page research paper about the music of a culture of interest. In Music History the second part of this three-part assignment is to write a draft of a 7 to 10-page research paper about some aspect of Western European or American art music. The same rubric for the draft of the research paper was used in World Music and Music History.

**O/O 4: CTW Objectives in Music**
An analysis of findings from the Summer CTW World Music class is based on papers submitted by 15 students. Assessment with the rubric is based on eight categories with a range of 0 to 12, with 12 being the highest. The average score for the entire class was 9.7. This shows an increase in the average assessment student score of 0.55 from the Fall World Music course. I attribute this to improvements (more detailed description) to the rubric for the draft and a better explanation of requirements of each of the three assignments. Please see the three attached tables: CTW Final Course Findings Summer10, and Comparison Fall 2009 & Summer 2010. (I decided to omit findings from the Spring 2010 World Music course from this report because it was taught as a Special Topic course and contained an enrollment of 3 students). Though the rubrics were not used in assessing student papers in Music History, the instructor did include comments on the student drafts and the final revised papers to justify grades given. Comments on the final papers specifically addressed areas where students were lacking, for example: little to no critical thinking, a weak central position, poor organization, insufficient scholarly support, little analysis of data, and a conclusion that was merely a summary of the paper and/or did not raise potential topics or questions for further inquiry.

**Measures, Targets, and Findings**

**M 1: Rubric for Research Paper (O: 1)**
The “Critical Thinking through Writing” component of the Revised (or final) Research Paper will be graded on a rubric. The rubric is composed of eight components, each of which has been identified as significant to critical thinking for this assignment. These components are (1) Central position and primary objective, (2) Methodology, concepts, and theories of inquiry, (3) Organization of data, (4) Context of data and scholarly support, (5) Analysis of data, (6) Personal findings with scholarly support, (7) Relevance and implications in concluding thoughts, and (8) Writing style and quality of communication. Up to four (4) points can be earned in each of the eight sections. A maximum of one hundred points (100) can be earned for the revised critical thinking research paper.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Proposal for Research Paper Assignment**
In World Music the objective is for students to earn an 85 on the final revised paper, that is an average of 9 out of a possible 12 in each of the 8 categories on the rubric for the final revised research paper. Points in each category range from 0 to 12, with 12 being the highest. In Music History no achievement target was set for 2010 - 2011 since this was the first time an attempt was made to use the rubrics for the Music History CTW course.

**Findings 2010-2011 - Target: Partially Met**
The attachment, “World Music Mus 4820 CTW Final Rubric Finding Summer 2010,” contains the student assessment scores in each of the eight categories on the rubric for the final revised research paper. The available points in each category ranges from 0 to 12, with 12 being the highest. Students scores ranged from 3 to 12, with the majority being between 8 and 12. The table also contains an average of student scores in each of the eight categories. Based on the target of 85 percent of student scores between 9 and 12, this class did not meet the target. However, the attachment World Music Fall 2009 and Summer 2010 Score Comparison, reveals that the Summer 2010 scores showed an increase of .55 in the overall average score when compared to the Fall 2009: 9.15 for Fall 2009 to 9.7 for Summer 2010. Therefore improvement was made. I should state that the Summer 2010 course was taught during Maymester. Though I knew the research paper assignment would be challenging...
for a Maymester course, I did not think that it would be too demanding on the students since most students take 1 Maymester class and the required length of the paper was only 7 pages. However, I realized that though the course met daily, the three-week tenure of the class was not enough time for me to read the drafts and provide helpful comments without suffering eye strain. I do think that more time is needed for the students to write a draft and make the suggested corrections. If the course is taught again during the summer, it should be taught during the regular 7-week summer semester. Additional information about enrollment, the number of proposals, drafts, and final papers submitted—including average scores (e.g. 88.6 points out of 100)—is also provided. Total Student Enrollment - 21 Number of students who submitted the Proposals-Outline-Annotated Bibliography assignment – 19. The average score was 18 out of a possible 25 points. Number of students who submitted Research Paper Drafts – 17. The average score was 33.8 out of a possible 50 points. Number of students who submitted Revised Research Papers – 15. The average score 88.6 out of a possible 100 points. In Music History 34 students submitted papers with the following break down based on letter grades: 16 received an A, 7 received a B, 9 received a C and 2 received a D.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Determining the Effectiveness and Value CTW Assignments in Music**
The School of Music believes that these CTW assignments will lead to improvements in the quality and depth of student critical thinking and writing. Professors for CTW courses will collect examples of research papers exhibiting effective, less effective, and ineffective critical thinking for students to view. (Of course the anonymity of student’s work will always be maintained.) The action plan for the School of Music is to determine the effectiveness and value of the assignments and rubrics in the two CTW courses currently taught. In World Music (MUS 4820), anonymous samples of student papers of each component of the three part assignment (1. the proposal, outline and annotated bibliography; 2. the draft of the research paper, and 3. final revised research paper) will be placed online through ULearn to serve as reference guides.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High
- **Implementation Description:** Plans are to review and compare student work in each component of the three part CTW project assignment. The purpose of this comparison is to determine if the objectives of each assignment were clear to the majority of students and if the student papers adequately reflected the use of critical thinking. A student survey will be administered to students concerning the value of the assignment and rubrics in music research. Students will be allowed to make suggestions for possible changes to both.
- **Responsible Person/Group:** The departmental ambassador with the assistance of the additional faculty member who is teaching a CTW course will be responsible for gathering student responses and compiling the results.

**Continued Use or Rubrics and More Departmental CTW Meetings**
The plan for 2011 - 2012 will be to continue using the current rubrics (draft and final revised rubrics) for the course. As the ambassador, I will continue to monitor the progress of students from one semester of one year to a semester of the previous year. I think comparisons of classes of similar sizes during the regular academic year will yield the most usable data. Plans are also to continue to discuss the assignments and rubrics with instructors teaching the same CTW world music course as well as the other CTW course in music history.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** High
- **Implementation Description:** Meetings with CTW instructors and rubric data tabulation
- **Responsible Person/Group:** Oliver Greene
- **Additional Resources:** None
- **Budget Amount Requested:** $0.00 (no request)

**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**
The major CTW accomplishments the Music Department for 2010 to 2011 was an overall improvement (though slight) in the student assessment scores based on the rubric for the final revised research paper. The quality of writing and the expression of ideas and the analysis of data in the form of critical thinking has improved noticeably. There was also greater participation on the part of faculty and the department in the CTW initiative. Other CTW instructors are beginning to realize the value of this initiative and have also seen improvement in student paper writing and critical thinking.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**
Improvements have been made in the areas of paper structure or organization and in an analysis and synthesis of data and ideas that reflect some level of critical thinking. The attachment World Music Fall 2009 and Summer 2010 Score Comparisons shows that improvements were made in the following areas as listed on the rubric: Central Position and Primary Objective, Methodology, Concepts, and/or Theories of Inquiry, Relevance of Implications in Concluding Thoughts, and Writing style and Quality of Communication.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**
The areas of the CTW program in music that still need improvement are instructor participation and better use of the rubrics. Plans are also to continue discussing the assignments and rubrics with instructors teaching the same CTW world music course as well as the other CTW course in music history.

**CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?**
The emphasis on the significance of written research displaying critical thinking in music has finally seemed to register as a skill of importance to many of the music students, most of whom major in some area of performance. I have also stressed the importance of the CTW research project because it may be a value when applying to graduate school and in obtaining fellowships and/or financial assistance beyond that which may be based solely on performance. (In previous years, when I taught Writing Across the Curriculum...
The School of Music has made no changes to the department's CTW initiative since last year's report.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

No changes were made to the assessment process. No changes will be made to the assessment process in the upcoming academic year.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The CTW report in Music was served as an important and positive component of the School of Music's report to the National Association of Schools of Music. Due to the scarcity of music courses that lend themselves critical thinking through writing, no additional courses are targeted to become CTW courses in music in the near future.

ADMINISTRATIVE DEPT QUESTION 1:
Explain how your department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?

The CTW Report that I completed for the School of Music included the definition for CTW in Music, an explanation of the three-part CTW assignment, the list of CTW courses in music, a syllabus from one of the courses, rubrics for the draft and final revised research paper, the rubric showing the assessment findings of two semesters of World Music courses, and a table comparing the composite scores of these two classes. This information was included in the School of Music's report that was given to members of the visiting committee for our 10-year review by the National Association of Schools of Music. No major changes or recommendations have been made from the department concerning the CTW courses in music. As a result of last year's report, emphasis has been placed on getting fellow CTW course instructors more involved in the use of rubrics in the assessment component of the CTW assignment.

ADMINISTRATIVE DEPT QUESTION 2:
What have you learned from your assessment this year (2010-2011)?

I have learned the following concerning the CTW assessment this year: 1) The results of assessment scores based on the rubrics are of the most use to the department when assessment results compare classes that are similar in enrollment size and are offered primarily during semesters of equal length, e.g., two 15 week semesters, as opposed to comparing findings from one 15 week semester course and one 3-week Maymester course. 2) More emphasis needs to be placed on explaining the eight individual components listed on the final revised rubric.

ADMINISTRATIVE DEPARTMENT QUESTION 3:
What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

More time will be spent explaining the three-part research assignment and reviewing each component on the rubrics for the draft and the final revised research paper.

Georgia State University
Assessment Data by Section
2010-2011 CTW Nursing

Mission / Purpose
Critical Thinking is defined by the School of Nursing as, "a process of reflective and cognitive thought that involves systematic, rational, and creative thinking. Critical thinking leads to the formation of accurate inferences, conclusions, appropriate alternatives and strategies in the process of clinical and non-clinical decision making".

Goals
G 1: Problem Solving
The students will become better problem-solvers in the care of their clinical patients.

G 2: Critical Thinking
The students will demonstrate critical thinking skills necessary to interpret patient data and formulate appropriate nursing interventions in the care of their clinical patients.

G 3: Making plausible generalizations and explanations
The students will be able to make plausible generalizations regarding patient disease processes and be able to give explanations.

G 4: Analysis and Evaluation
The student will be able to analyze existing leadership styles and evaluate their effectiveness.
Measures, Targets, and Findings

M 1: NURS 2080 Rubric (O: 1)

Georgia State University School of Nursing Critical Thinking in Patient Care Rubric 1. Identifies, summarizes and completely presents history of the problem or issue(s). Emerging Developing Mastering 1 2 3 4 5 6 Does not attempt to identify and summarize accurately using available data. No history of problem presented. No detail provided. Summarizes problem, some aspects are incorrect, confusing or narrow in scope. Overlooks key aspects. Incomplete history presented. Clearly identifies implicit aspects and history of the problem. Identifies integral relationships when analyzing the problem. Comments: 2. Develops, presents, and communicates own perspective of the existing problem. Emerging Developing Mastering 1 2 3 4 5 6 Perspective is clearly adopted with little original consideration. Does not justify own opinion. Position is unclear or simplistic. Perspective includes some original thinking that acknowledges, refutes other assertions. Presents own position though inconsistently, is generally clear although gaps may exist. Perspective demonstrates ownership for constructing knowledge and integrates objective analysis and intuition. Identifies own position on the problem, draws support from experience. Clearly presents and justifies own view and integrates contrary views. Positively integrates thinking. Comments: 3. Presents clearly developed. Demonstrates integrative thinking; identifies treatment options. Emerging Developing Mastering 1 2 3 4 5 6 No evidence of evaluation skills. Repeats information without question or dismisses evidence without adequate justification. Inadequate interpretation of data and evidence. Assessments incomplete. Demonstrates adequate skill in evaluating. Selectively uses evidence. Interpretation of data may be flawed or may show some inaccuracies. Assessments show some relevant data, lack thoroughness. Evaluation skills are thorough. Examines evidence for relevance and completeness. Accurate interpretation of data. Assessments complete and demonstrate overall analysis of data used to support diagnosis. Comments: 4. Identifies nursing interventions and rationale for implementation. Emerging Developing Mastering 1 2 3 4 5 6 Selection of interventions may be inappropriate or of little value for problem resolution. Does not provide sound rationale for nursing interventions. Interventions may be appropriate but may not provide sound rationale for implementation. Implements appropriate interventions that address the problem(s) and provides accurate rationale. Comments: 5. Identifies and formulates conclusions regarding patient's state of health; identifies treatment options. Emerging Developing Mastering 1 2 3 4 5 6 Fails to identify conclusions or treatment options, or conclusion is a simplistic summary. May attribute conclusion to external authority. Conclusions consider or provide evidence of consequences extending beyond a single discipline or issue. Presents implications that may impact other issues. Vague description of options. Identifies, discusses, and extends conclusions. Considers assumptions, data and evidence. Treatment options are clearly developed. Comments: 6. Critical thinking is evident in the Clinical Narrative and during the decision making process. Outcomes: Makes accurate inferences; defends an interpretation; explains the cause of a problem. Emerging Developing Mastering 1 2 3 4 5 6 Decision making process is not clearly evident. Thinking is basic and without thought. Does not make accurate inferences, defend an interpretation or explain cause of problem. Contributes only marginally to the decision-making process.
making process. Thinking is in-depth but may lack creativeness. Inferences are marginally accurate. Some interpretations are defended. Cause of problems may be identified but not in entirety. Understands thoroughly and contributes usefully to the decision making process. Thinking is systematic, rational and creative. Makes accurate inferences. Stated interpretations are thoroughly defended. The cause of problems are explained thoroughly and accurately. Comments: 7. Communicates effectively. Emerging Developing Mastering 1 2 3 4 5 6 Language obscures meaning and thought. Work is unfocused and poorly organized; lacks logical connectedness. No proofreading. Little evidence of grammar; sentence structure and spelling does not interfere with communication. Basic organization is apparent; transitions connect ideas, although they may be mechanical. Errors are not distracting or frequent. Some problems with style and voice. Minor problems with grammar, sentence structure and spelling. Language clearly and effectively communicates ideas. Organization is clear; transitions between ideas enhance presentation. Errors are minimal. No evidence of grammar, spelling or sentence structure errors. APA Comments: [Headings, Font, Size, Spacing, References, Margins, Use of abbreviations, etc] Overall Rating Assignment Completeness a. Which questions were unanswered?

Target for O1: Written Clinical Narratives

We anticipate that 50% of the students will show an improvement in total score [#1-5 on the rubric] and improvement in the critical thinking ability score [#6 on the rubric] by the 4th clinical narrative CTW assignment.

Findings 2010-2011 - Target: Met

1. Total Score: For Fall 2010 - We found that 64 of 76 students (84%) had an improvement in their total score by the last clinical narrative assignment; 8 of 76 (10%) total scores decreased; 4 of 76 (5%) total scores remained the same. For Spring 2011 - We found that 63 of 67 students (94%) had an improvement in their total score by the last clinical narrative assignment; 3 of 67 (4%) had a decrease in their total score; 1 of 67 (1%) total score stayed the same. 2. Critical Thinking Ability Score: For Fall 2010 - We found that 54 of 76 (71%) had an increase in their critical thinking score; 10 of 76 (13%) had a decrease in score. For Spring 2011 - 61 of 67 (91%) had an improvement in their critical thinking scores; 4 of 67 (5.9%) scores remained the same; 2 of 67 (2%) had a decrease in score.

M2: NURS 4600 Rubric (O: 2)

For each of the seven criteria below, assess the work by: a) circling specific phrases that describe the work, and writing comments b) circling a numeric score Identifies, summarizes (and appropriately reformulates) the issue. Emerging Developing Mastering 1 2 3 4 5 6 Does not attempt to or fails to identify and summarize accurately. Summarizes issue, though some aspects are incorrect or confused. Nuances and key details are missing or glossed over. Clearly identifies the challenge and subsidiary, embedded, or implicit aspects of the issue. Identifies integral relationships essential to analyzing the issue. Comments: 2. Develops, presents, and communicates OWN perspective, or position. Emerging Developing Mastering 1 2 3 4 5 6 Position is clearly inherited or adopted with little original consideration. Addresses a single source or view of the argument, failing to clarify the established position relative to one’s own. Fails to present and justify own opinion or forward. Position is unclear or simplistic. Position includes some original thinking that acknowledges, refutes, synthesizes or extends other assertions, although some aspects may have been adopted. Presents own position though inconsistently. Presents and justifies own position without addressing other views, or does so superficially. Position is generally clear, although gaps may exist. Position demonstrates ownership for constructing knowledge or framing original, coherent, objective analysis and intuition. Appropriately identifies own position on the issue, drawing support from experience, and information not available from assigned sources. Clearly presents and justifies own view while qualifying or integrating contrary views or interpretations. Position demonstrates sophisticated, integrative thought and is developed and clearly throughout. Comments: 3. Presents, assesses, and analyzes appropriate supporting data/evidence. Emerging Developing Mastering 1 2 3 4 5 6 No evidence of search, selection or source evaluation skills. Repeats information provided without question or dismisses evidence without adequate justification. Does not distinguish among fact, opinion, and value judgments. Conflates cause and correlation; presents evidence and analytic assertions out of sequence or sources, inaccurate, inappropriate, and unrelated to topic. Demonstrates adequate skill in searching, selecting, and evaluating sources to meet the information need. Use of evidence is qualified and selective. Discerns fact from opinion and may recognize bias in evidence, although attribution is inappropriate, Distinguishes causality from correlation, though presentation may be flawed. Appropriate data/evidence or sources provided, although exploration appears to have been routine. Evidence of search, selection, and source evaluation skills; notable identification of influential and relevant views. Examines evidence and its source; questions its accuracy, relevance, and completeness. Demonstrates understanding of how facts shape but may not confirm opinion. Recognizes bias, including selection bias. Correlations are distinct from causal relationships between and among ideas. Sequence of presentation reflects clear organization of ideas, subordinating for importance and impact. Information need is clearly defined and integrated to meet and exceed assignment, course or personal interests. Comments: 4. Integrates issue with OTHER (disciplinary) perspectives and positions. Emerging Developing Mastering 1 2 3 4 5 6 Deals with a single perspective and fails to discuss others’ perspectives. Adopts a single idea or limited ideas with little question. If more than one idea is presented, alternatives are not integrated. Engages ideas that are obvious or agreeable. Averts challenging or discomforting ideas. Treats other positions superficially or misrepresents them. Little integration of perspectives and little or no evidence of attending to others’ views. No evidence of reflection or self-assessment. Begins to relate alternative views to qualify analysis. Rough integration of multiple viewpoints and comparison of ideas or perspectives. Ideas are investigated, but In clear or a way that overstates or misrepresents them. Engages ideas tentatively or superficially. Engages ideas superficially and tentatively. May dismiss alternative views hastily. Analysis of other positions is thoughtful and mostly accurate. Acknowledges and integrates different ways of knowing. Some evidence of reflection and/or self-assessment. Addresses others’ perspectives and additional diverse views drawn from outside information to qualify analysis. Fully integrated perspectives from variety of sources; any analogues are used effectively. Integrates own and others’ ideas in a complex process of judgment and justification. Clearly justifies own view while respecting views of others. Analysis of other positions is accurate, nuanced, and respectful. Integrates different disciplinary and epistemological ways of knowing. Connects to career and civic responsibilities. Evidence of reflection and self-assessment. Comments: 5. Identifies and assesses conclusion, implications, and consequences. Emerging Developing Mastering 1 2 3 4 5 6 Fails to identify conclusions, implications, and consequences, or conclusion is a simplistic summary. Conclusions presented as absolute, and may attribute conclusion to external authority. Conclusions consider or provide evidence of consequences extending beyond a single discipline or issue. Presents implications that may impact other people or issues. Presents conclusions as relative and only loosely related to consequences. Implications may include vague reference to conclusions, identifies, discusses, and extends conclusions, implications, and consequences. Considers context, assumptions, data, and evidence. Qualifies own assertions with balance. Conclusions are qualified as the best available evidence within the context. Consequences are considered and integrated. Implications are clearly developed, and consider ambiguities. Comments: 6. Communicates effectively Emerging Developing Mastering 1 2 3 4 5 6 In many places, language obscures meaning. Grammar, syntax, or other errors are distracting or repeated. Little evidence of proofreading. Style is inconsistent or inappropriate. Work is unfocused and poorly organized; lacks logical connection of ideas. Format is absent, inconsistent or distracting. Few sources are cited or used correctly. In general, language does not interfere with communication. Errors are not distracting or frequent, although there may be some problems with more difficult
aspects of style and voice. Basic organization is apparent; transitions connect ideas, although they may be mechanical. Format is appropriate although at times inconsistent. Most sources are cited and used correctly. Language clearly and effectively communicates ideas. May at times be nuanced and eloquent. Errors are minimal. Style is appropriate for audience. Organization is clear; transitions between ideas enhance presentation. Consistent use of appropriate format. Few problems with other components of presentation. All sources are cited and used correctly, demonstrating understanding of economic, legal and social issues involved with the use of information. Comments: Overall Rating Criteria Score 1. Identify problem, question, or issue 2. Develop own position or hypothesis 3. Present and analyze supporting data 4. Integrate other perspectives 5. Identify conclusions and implications 6. Communicate effectively Comments:

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Critical Thinking Leadership Paper**

- 60% of students will score over 29 points on the overall rating (rubric 1-6) by the last graded assignment. Sixty percent of students will score over 4 on rubric sections 1-5.

**Findings 2010-2011 - Target: Met**

- 50 of 76 students (65%) of students in NURS 4600 achieved the target of over 29 points on the overall rating (rubric 1-6) by the last graded assignment. 26 of the 76 students (34%) in NURS 4600 did not achieve the target. 93% of students' scores improved.

**M 3: 2080 & 4600 Rubric Description**

The NURS 2080 "Critical Thinking in Patient Care" Rubric is divided into 7 criteria sections that assesses the clinical narrative student assignment. Sections 1 - 5 are directly related to each of the five questions the student writes about in the clinical narrative based on a clinical patient. The 2080 rubric adds in Question 6 specifically addresses Critical Thinking & Question 7 reflects Communication of the written word. The NURS 4600 rubric is similar to the 2080 rubric and adds in Question 6 specifically for Communication. This rubric was adopted from Washington State University with permission and adapted to Patient Care and the Leadership assignment. The rubric is a reflection of the 5 stage model of adult skill acquisition by Dreyfus.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Improvement in rubric scores**

Those students who show a decrease in total scores and critical thinking ability scores as identified on the rubric will be required to set up a meeting with the CTW consultant to enhance their learning experience.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** High

**Implementation Description:**
Both CTW Consultants attended 3 class periods each semester after class was concluded to meet with students to discuss their previously critiqued CTW assignments. Consultants also made contact with students via email to discuss their assignments.

- **Projected Completion Date:** 06/2011

**Improvement in Rubric Scores**

For 2080 course, improvements in the CTW assignments will be conducted with a revision for enhanced critically thinking. This will hopefully result in a direct improvement in the critical thinking scores of the students as measured on the rubric.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** High

- **Projected Completion Date:** 06/2012

**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

Major Accomplishments: 1. I oriented a new nursing faculty, Ms. Karis Casseus to the NURS 2080 course and trained her on the CTW initiative for the school of nursing. 2. I trained 4 new CTW consultants for the academic year, 2 for NURS 2080 and 2 for NURS 4600 courses, that was on-going throughout the academic year. 3. Conducted an annual CTW meeting for all involved consultants, faculty and course coordinators in August. 4. Presented to the School of Nursing faculty progress and updates to our CTW initiative for the nursing program. With the addition of another faculty member in NURS 2080, and sharing the workload of grading the CTW assignments, along with meeting with individual students to help them improve their critical thinking and writing abilities, I believe this was a major factor in the increase of rubric scores and critical thinking scores over the previous academic year as set forth in the action plan.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

In the NURS 2080 course, their CTW assignments were linked to their clinical patients they took care of at a hospital for the course 2160. We found that students who had indeed improved in the abilities to critically think at the bedside with their assigned patients. This was acknowledged by several of the 2160 faculty throughout the academic year.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**

The area that needs to be redeveloped and will be revised this next academic year in NURS 2080 is the actual CTW assignment and the questions involved that students have to reflect on for their assignment. Both faculty for this course have already discussed the issue and have made plans to revise the assignment questions.
CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

No major changes were made in the CTW initiative since 2009-2010 assessment year. We did expand the time frame for assignment submissions. What continues to be apparent is the improvement of the student's ability to critically think in the clinical setting as detected by other faculty. However, we still get some feedback from the students that the CTW assignments are time consuming, unnecessary, among other things. On the other hand, many students feel that the CTW assignments have helped them look at the bigger picture of their clinical patients.

Georgia State University
Assessment Data by Section
2010-2011 CTW Nutrition
As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The Division of Nutrition defines critical thinking as the ability to identify a nutrition or dietetics-related question and to select, critique, analyze, synthesize and communicate information that address the question. To function effectively as future nutrition and dietetic professionals, dietetic students must be able to access and accurately interpret the scientific literature and make practice-related decisions based on strength of evidence and evidence-based guidelines.

Goals
G 1: Interpretation
Students will demonstrate the ability to translate information from the nutrition literature without altering the intended meaning.

G 2: Analysis
Students will demonstrate the ability to access and accurately analyze the scientific literature and make practice-related decisions based on strength of evidence and evidence-based guidelines.

G 3: Evaluation
Students will be able to integrate ideas, context, assumptions, and evidence when reaching conclusions.

Outcomes/Objectives
O/O 1: Interpretation (M: 3)
Assignment: Research Papers for NUTR 3010 and 4950 Students write a research paper in both CTW courses. Both assignments meet the goal since each student translates information from research articles for the paper with the intent of interpreting the source without altering the intended meaning. NUTR 3010: Each student writes a "mini-review" of a stated problem, which is derived from information ascertained from 10 peer reviewed journal articles selected earlier in the semester. NUTR 4950: Each student writes a position paper or review paper incorporating articles based on a research question. Each student selects at least 30 articles addressing her/his research question using evidence-based guidelines to reach logical and justifiable conclusions. The student critically examines the evidence and sources of such evidence, questioning accuracy, relevance and completeness.

O/O 2: Analysis (M: 1)
Assignments: Presenting Research (NUTR 3010) and Annotated Bibliography (NUTR 4950) The Presenting Research (NUTR 3010) assignment requires students to analyze data and the Annotated Bibliography (NUTR 4950) assignment requires students to analyze scholarly nutrition work. Presenting Research (NUTR 3010) Each student completes a food frequency questionnaire. The class is divided into groups of three; each group analyzes select food items assigned food frequency questionnaires. Analysis involves calculations of means, standard deviations, and confidence intervals use Microsoft Excel. Each group develops graphs on the data and presents results to class. Annotated Bibliography (NUTR 4950): Assignment Description: Each student selects at least 15 articles addressing her/his research question using evidence-based guidelines to reach logical and justifiable conclusions. Students critically examine the evidence and sources of such evidence, questioning accuracy, relevance and completeness. At least 75% of the articles must be original research, meta-analyses and/or systematic reviews.

O/O 3: Evaluation (M: 3)
NUTR 3010 and NUTR 4950 Research Papers Students evaluate evidence (research articles) to reach conclusions and recommendations. Assignment: NUTR 3010: Each student writes a "mini-review" of a stated problem, which is derived from information ascertained from 10 peer reviewed journal articles selected earlier in the semester. Each student demonstrates ability to evaluate evidence-based references and to integrate information into a research paper. NUTR 4950: Each student writes a position paper or review paper incorporating articles based on a research question. Each student selects at least 30 articles addressing her/his research question using evidence-based guidelines to reach logical and justifiable conclusions. The student critically examines the evidence and sources of such evidence, questioning accuracy, relevance and completeness.

Measures, Targets, and Findings
M 1: Annotated Bibliography (O: 2)
Grading Rubric for Annotations Identifies and summarizes the scope and main purpose Limited proficiency 0 - 1 Some proficiency 2 Proficiency 3 High proficiency 4 Fails to identify the main purpose of the articles Does not address the argument, and fails to
Grading Rubric for Research Paper (O: 1, 3)

Correctly identifies the main purpose of the articles but summarizes it in an ambiguous fashion. Addresses the argument but simplistically, and only basically differentiates position from own view. Successfully identifies and summarizes the main purpose of the articles in a clear manner. Presents own position or hypothesis, though inconsistent with differentiation/comparison. The main purpose of the articles is summarized in a succinct manner; along with identifying other peripheral issues and their impact Appropriately addresses the argument and differentiates/compares established position and own view. Presents and analyzes the major findings by using supportive evidence. Limited proficiency 0 -1

Some proficiency 2 Proficiency 3 High proficiency 4 Dismisses evidence without adequate justification. Confuses cause and correlation. Treats the findings as absolute. Does not identify any biases or does so superficially. Use of evidence is appropriate. Able to distinguish between cause and correlation. At a minimal level. Explores findings in a limited context. Is able to recognize bias in sampling and results and any conflict of interest. But reports them in a routine manner. Examines evidence and its sources. Distinguishes between cause and correlation. Explores findings in the context of the real world. Is able to differentiate fact from opinion and addresses bias in a thoughtful manner. Examines evidence and its source; questions its relevance and accuracy. Able to distinguish causality from correlation by providing evidence. Major findings are presented in the context of subordination and impact. Identifies the different types of biases. Offers explanation of how to overcome bias. Points:

1. Evaluation includes and assesses conclusions, implications and consequences. Limited proficiency 0 -1
Some proficiency 2 Proficiency 3 High proficiency 4 Evaluation/conclusion is simplistic. Does not raise any additional questions. Does not adopt a clear idea. Does not question Assesses conclusion appropriately and begins to see a connection between conclusions and implications. Adopts limited ideas with little questioning. Does not integrate ideas. Considers context, assumptions and evidence in reaching conclusions. Asserts own conclusions by providing evidence. Ideas are integrated, but in a rudimentary manner. Questions Implications are clearly developed and consider ambiguity. Clear integration of conclusions and implications. Fully integrates ideas and positions and clearly justifies viewpoints. Points:

2. Organization is clear and transitions between the ideas enhances the presentation. Limited proficiency 0 -1
Some proficiency 2 Proficiency 3 High proficiency 4 Fails to include ≥ 3 of the required components. Fails to include ≤ 2 of the required components. No integration between the various components. Includes all the required components. Some integration between the various components. All required components are included in clear manner. Integration and transition between the various components is smooth. Points:

3. Language clearly and effectively communicates ideas. Errors are minimal. Language clearly and effectively communicates ideas in an eloquent manner. Organization is clear and transitions between the ideas enhances the presentation. Points:

Source of Evidence: Written assignment(s), usually scored by a rubric.

Target for O2: Analysis

We expect 85% of the students to receive at least 50 total points on the assignment.

Findings 2010-2011 - Target: Met

There were 19 students in the class. Seventeen of the 19 students successfully completed the assignment and received 50 points.

M 3: Grading Rubric for Research Paper (O: 1, 3)

NUTR 4950 Grading Rubric for Paper (Final Copy) Developing 1 Goal-oriented 2 Mastery 3 Introduction Identifies the issue, though some aspects are incorrect, incomplete, or confusing. Clearly identifies the issue and key details are included in a comprehensive manner. Analyzes the issue and presents in a comprehensive and scholarly manner. Demonstrates adequate skill in searching, selecting, and evaluating sources to meet the information need. Evidence of search, selection, and source evaluation skills. Identifies and selects information directly related to paper topic. Organization Basic organization is apparent; evidence of logical organization of various topics within the paper. Organization is clear; consistent use of appropriate format with key components are being discussed. Organization is clear; consistent use of appropriate format; transitions between ideas are present. Content/Body of Paper Distinguishes causality from correlation, though presentation may be flawed. Appropriate data/evidence or sources provided. Relates alternative views to qualify analysis. Integrates multiple viewpoint, comparison of ideas or perspectives. Ideas are investigated but in a limited way. Conclusions consider or provide evidence of consequences extending beyond a single issue. Examines evidence and its source; questions its accuracy, relevance, and completeness. Analysis of positions is thoughtful and mostly accurate. Clearly justifies own view while respecting others. Presents conclusions as relative and loosely related to consequences. Includes connections to conclusions. Content of the paper reflects originality, evidence of synthesis and analytical discussion of results with appropriate conclusions. Position or hypothesis (research question) demonstrates sophisticated, integrated thought. Clearly justifies own view while respecting others; qualifies contrary views or interpretations. Conclusions are qualified as the best available evidence; implications are developed and ambiguities are considered. Writing Mechanics In general, language does not interfere with communication. Errors are not distracting or frequent. Some problems with more difficult aspects of style and voice. Most sources are cited and used correctly. Language clearly and effectively communicates ideas. Errors are minimal. Style is appropriate for audience. Consistent use of sources with appropriate format. Language clearly and effectively communicates ideas, often eloquent. Errors are barely present. Consistent use of sources with appropriate format. All sources are cited and used correctly. Source of Evidence: Capstone course assignments measuring mastery.

Target for O1: Interpretation

All of the students at the emerging and developing stages on the rubric in NUTR 3010 will progress to the goal-oriented level on the rubric for NUTR 4950. At least 50% of the class will advance one performance level from NUTR 3010 to NUTR 4950.

Findings 2010-2011 - Target: Met

All of the students in NUTR 4950 performed at or exceeded the goal-oriented level. Seventy-five percent of the students advanced one performance level.

Target for O3: Evaluation

All of the students at the emerging or developing stage on the rubric in NUTR 3010 will progress to the goal-oriented level on the rubric for NUTR 4950. At least 50% of the class will advance one performance level from NUTR 3010 to NUTR 4950.

Findings 2010-2011 - Target: Met

All of the students in NUTR 4950 performed at or exceeded the goal-oriented level. Seventy-five percent of the students advanced one performance level.
Details of Action Plans for This Cycle (by Established cycle, then alpha)

Revision of Rubrics for Grading Papers
The rubric for NUTR 4950 was revised to better evaluate student progress in CTW from the introductory course (NUTR 3010) to the capstone course (NUTR 4950). The grading rubric for 3010 has 3 levels of performance: Emerging, Developing, and Goal Oriented. The rubric for NUTR 4950 was changed to include performance levels: Developing, Goal-Oriented, and Mastery. Each student's performance in NUTR 4950 (paper) is compared to his/her performance in NUTR 3010 (mini-review paper). Students are expected to improve their performance level in NUTR 4950 from NUTR 3010 (e.g., Developing to Goal Oriented or Goal Oriented to Mastery).

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High
Projected Completion Date: 08/2010
Responsible Person/Group: Instructors for NUTR 3010 and NUTR 4950.

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
The definition for critical thinking has remained the same, however critical thinking assignments have been added to other courses in the curriculum. In order for students to achieve a high level of conceptualizing, applying, analyzing, synthesizing, and evaluating information, the faculty believe that students require many opportunities to develop and practice the skills. This means that all courses serve as building blocks to mastery achievement.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
Through revision of the rubric for NUTR 4950, we have been able to compare performance in the entry CTW course to performance in the capstone course (NUTR 4950). All students reached or surpassed goal oriented. At least 75% of the students reached mastery level. Students are able to review evidence-based articles, extract key findings, and report these findings in a research style paper.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
Continuous improvement of the assignments and rubric will always be goals for the program. The time involved in teaching a CTW course is problematic, especially with course load. CTW courses in our department often do not meet the required number for graduate student assistance.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
Faculty are committed to CTW and have been working towards incorporating critical thinking activities/assignments in their respective courses. The major change occurred in the capstone course NUTR 4950: rubric change and comparison of student performance as they progressed from NUTR 3010 to NUTR 4950.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process have your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
The undergraduate program adopted new standards with new learning outcomes established by the Commission on Accreditation of Dietetics Education (CADE). Each learning outcome was connected to assessment strategies within the curriculum. Data will be collected and evaluated to assess outcome achievement. Performance achievement is reported every 5 years to CADE.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.
Based on data from program and student assessment, the curriculum was revised. New courses (three) were added and course sequence was changed.

ADMINISTRATIVE DEPT QUESTION 2:
What have you learned from your assessment this year (2010-2011)?
Revision of the rubric for the capstone project provided a better picture about improvement in critical thinking skills from entrance into the dietetics program to completion of the program.

Georgia State University
Assessment Data by Section
2010-2011 CTW Operations Management
As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
Managerial Sciences adapts 1987 definition of the National Council on Excellence in Critical Thinking for the Department’s different
Critical thinking is an intellectually disciplined process that has three main components. First is skillfully and broadly gathering or generating data. Second is analyzing, synthesizing, and/or evaluating the information in that data through the use of systematic, logical reasoning processes and the applications of relevant decision assisting tools developed ex ante. And third is the ability to reach conclusions and make recommendations for action that are logical, supported by evidence, and devoid of pre-existing individual bias or preference. Operations Managers should be able to use rational problem solving techniques and be able to express in a cogent manner what the problem is, set criteria for evaluation of potential solutions, establish alternatives to the problem and analytically evaluate the alternatives based on the established criteria.

**Goals**

**G 1: Business Plan Vision**
Ability to organize, develop and advance a service operation business plan vision using critical thinking through writing at a business level, as opposed to an academic level.

**Student Learning Outcomes/Objectives**

**SLO 1: Executive Summary (G: 1) (M: 1)**
Students will decide on a service company concept and develop an "Executive Summary". This component of the eight page paper consist of two pages, states the value discipline, service concept and target market and acts as the guide for the balance of the paper.

**SLO 2: Execution of First Draft - Business Plan (G: 1) (M: 1)**
Contains portions of all 8 sections of the Business Plan.

**SLO 3: Development of Final Paper (Business Plan) (G: 1) (M: 1)**
Students will complete the eight point suggested Business Plan for the Final Paper. The final paper contains the completed Executive Summary, as well, a discussion of the other seven components of the paper.

**Standard Associations**

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Measures, Targets, and Findings**

**M 1: Rubric for Service Operations Management (O: 1, 2, 3)**
This rubric is designed for the benefit of the student as a guide for the development of the CTW Final Paper with respect to context, content and grammar.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Executive Summary**
60% of student population will score in a range of "2" or better out of a "4" point rubric. This scoring is based on the four categories of the rubric.

**Findings 2010-2011 - Target: Met**
67% of the students scored in a range of 2 to 3 on the syllabus rubric. Specifically, 1 student scored a 3 and 9 students scored a 2 out of 15 students. 5 students scored outside the range at a score of 1. There were no scores of 4.

**Target for O2: Execution of First Draft - Business Plan**
80% of student population will score in a "2 or better out of a "4" on the rubric. This scoring is based on the four categories of the syllabus rubric.

**Findings 2010-2011 - Target: Met**
93 percent of the students who did submit their first draft achieved a score in a "2 or better out of a 4 on the rubric. One student scored a '1' on the rubric, because of a lack of understanding of the eight section business plan provided. There were no '4's scored.

**Target for O3: Development of Final Paper (Business Plan)**
80% of student population will score a "3" or better out of a "4" on the rubric. Additionally, 20% will score a "4" out of a "4". The final paper scoring will use these two criteria to measure success on the CTW experience in this course. This scoring is based on the four categories of the syllabus rubric.

**Findings 2010-2011 - Target: Met**
The third component of the CTW assignment is the final paper containing the executive summary and the seven additional components of the business plan paper. 93 percent of the students scored a "3" or better out of a "4" on the rubric. Additionally, 67 percent of the students scored a "4" out of a "4". A score of "4" reflects a sophisticated level of relevant facts and details on the assignment. In both measurements, the instructor was pleasantly surprised with the results, based on the earlier scores of the Executive Summary component. There, 14 of 15 students were at a "not yet competent regarding relevant facts and details".

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**
Executive Summary
Ensure that the service company selected is practical and will be appropriate for the Service Company vision.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Rubric for Service Operations Management | Outcome/Objective: Executive Summary

CTW Business Plan
On-going review of the Service Management, CTW Business Plan for MGS 4770 to ensure students understand the key components of the paper and instructions for developing the paper are clear and concise.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Implementation Description: Review continues after review and changes made during the Spring 2011 semester.
Projected Completion Date: 12/2011
Responsible Person/Group: Walter L. Wallace

CTW Paper Topics
Prior to the Spring semester, 2011, I completed a review of the required ten components of the CTW Business Plan and shortened the outline to eight components. I changed the length of the paper from ten pages to eight full pages. I changed the Achievement Targets for 1) Executive Summary 2) Execution of the First Draft and 3) Development of the Final Paper.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Implementation Description: The intent in making these changes was to allow for a better understanding of the objectives of the CTW Business Plan by the students and to ensure more practical measurement targets for the development of the paper by the students.
Projected Completion Date: 01/2011
Responsible Person/Group: Walter L. Wallace

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
The major CTW accomplishment for my Spring 2011 Service Management course was the student results. The business plan developed by each of the students is an eight page paper with supplemental attachments, e.g., process flow chart, service quality attributes. Based on the development of the Executive Summary (one component of eight components), my expectations were set low: 93% of the students scored at a level of "Not yet competent regarding relevant facts and details" or less. Based on the final paper submitted on April 12, 2011, 93% of the students had scored at a level of "Competent relative to relevant facts and details" or "Sophisticated level of relevant facts and details". I found that comments on the Executive Summary and the First Draft were of great value to the students as they worked toward the completion of the CTW assignment.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
Developing an understanding with my students of the value of being able to write in their discipline. On every occasion in class and in my office, one-on-one with students, I shared how important it is to the business community that business school graduates be able to communicate within their discipline verbally and in writing. Having a competitive advantage in writing and speaking can separate a good employee and the one that gets the next advancement.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
Perhaps the design of the "Rubric". It appears to be adequate, but I'm not sure how revealing it is for the students. I have changed the length of the CTW, Business Plan paper several times. I have now settled on 8 pages, with previous assignments being as much as 12 pages. Grading of the papers is an interesting exercise. With a small class size of 15 to 25, I have been able to read all three assignments and score them. I do not know what would happen if I went over 25 students.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
I am not aware of what changes have been made from a departmental standpoint. I have continued to make minor changes in the assignment, refining the content requirements and deliverables. I feel these changes make for a better assignment in CTW. I'm convinced that the length of the paper is less important than the assignment of writing in the discipline. There are three other individuals in my department offering CTW classes, but I am not aware of changes each has made in their particular discipline.

Georgia State University
Assessment Data by Section
2010-2011 CTW Philosophy
As of: 12/13/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The Department of Philosophy has developed this policy to set out its student learning outcomes and assessment procedures. Philosophy has a central role in any university. The writings of philosophers such as Aristotle, Descartes, Hume, and Kant are among the greatest products of the human mind. They are worth studying for their inherent value as well as for their impact on subsequent history. Much philosophical work is concerned with abstract and fundamental questions: Are there objective moral truths? Is there a God? These issues have moved minds for centuries. At the same time, philosophy is deeply involved with practical issues, such as the nature of the good life and what constitutes a just society. In the last two decades there has been an explosion of activity in applied philosophy with the result that philosophers now work in numerous cross-disciplinary fields such as business ethics, bioethics, philosophy of law, philosophy of science, philosophy of language and philosophy of mind. Despite its wide range of applications, philosophy has one overarching theme: it is fundamentally concerned with good reasoning. Although philosophers by no means have a monopoly on logical argumentation, only philosophy systematically studies what distinguishes good arguments from bad. Consequently, those who teach philosophy are as much concerned with fostering reasoning skills as with imparting information.

Goals

G 1: Critical Thinking
Despite its wide range of applications, philosophy is fundamentally concerned with good reasoning. Although philosophers by no means have a monopoly on logical argumentation, the systematic study of what distinguishes good arguments from bad is central to the philosophical enterprise. Consequently, those who teach philosophy are as much concerned with fostering critical thinking skills and clear argumentative writing as with imparting information. We believe our major should and does do both. This first goal is to foster critical thinking.

G 2: Writing Skills
Despite its wide range of applications, philosophy is fundamentally concerned with good reasoning. Although philosophers by no means have a monopoly on logical argumentation, the systematic study of what distinguishes good arguments from bad is central to the philosophical enterprise. Of course, especially in the contemporary world, much of this reasoning is distributed in written form, whether in books, journals, or in some digital media. Consequently, those who teach philosophy are as much concerned with fostering critical thinking skills and clear argumentative writing as with imparting information. We believe our major should and does do both. This goal is to foster good writing skills.

Student Learning Outcomes/Objectives

SLO 1: Critical Thinking (G: 1) (M: 1)
New policy, as of 2010-2011 cycle. Every Fall, instructors of all Phil 3000 and Phil 4990 classes include on their syllabi the requirement that final papers be submitted electronically to the professor. The instructors of these classes will send these to the Assessment Coordinator. The Assessment Coordinator will use a random number generator (such as that found at www.random.org) to select 15 papers total from all Phil 3000 classes and 10 (current policy says 15; we will adjust) papers total from all Phil 4990 classes. (These should come equally from each of the classes. Example, if there are 3 Phil 3000 classes, 5 papers should be chosen from each class; if there are 2 Phil 4990 classes, 7 papers should be chosen from each class and a 15th paper should be chosen at random from the combined set of papers from both.) Every Spring, the Assessment Coordinator distributes the selected papers to the other three members of the Assessment Committee. Those three continuing faculty (tenured, tenure-track or lecturers) assign each paper a letter score (A+, A, A-, B+, B, etc.) on critical thinking. When the scoring is complete, the Assessment Coordinator calculates the average score of the Phil 3000 papers and the average score of the Phil 4990 papers.

Other Outcomes/Objectives

O/O 2: Writing Skills (G: 2) (M: 2)
New Policy as of 2010-2011 cycle: Every Fall, instructors of all Phil 3000 and Phil 4990 classes include on their syllabi the requirement that final papers be submitted electronically to the professor. The instructors of these classes will send these to the Assessment Coordinator. The Assessment Coordinator will use a random number generator (such as that found at www.random.org) to select 15 papers total from all Phil 3000 classes and 10 (current policy says 15; we will adjust) papers total from all Phil 4990 classes. (These should come equally from each of the classes. Example, if there are 3 Phil 3000 classes, 5 papers should be chosen from each class; if there are 2 Phil 4990 classes, 7 papers should be chosen from each class and a 15th paper should be chosen at random from the combined set of papers from both.) Every Spring, the Assessment Coordinator distributes the selected papers to the other three members of the Assessment Committee. Those three continuing faculty (tenured, tenure-track or lecturers) assign each paper a letter score (A+, A, A-, B+, B, etc.) on written communication skills. When the scoring is complete, the Assessment Coordinator calculates the average score of the Phil 3000 papers and the average score of the Phil 4990 papers.

Measures, Targets, and Findings

M 1: Critical Thinking (Q: 1)

Three tenured or tenure track members of the Assessment Committee score student's final papers on critical thinking. These scores are given on the A-F scales with +/- using the rubric below. These scores are not student grades (neither grades on particular assignments nor semester grades). The scores use the same scale as course grades in order to enhance inter-grader reliability. We expect to see lower scores in Phil 3000 that in Phil 4900 as those in 3000 will be in the beginning of their philosophy studies (and again, these are not student grades). We can compare the scores merited in Phil 4900 to those merited in Phil 3000 to assess how well the Department is teaching Critical Thinking and Writing. Critical Thinking A: An A paper provides a charitable and accurate explanation of the philosophical positions and distinctions that are relevant to its thesis. It presents an insightful and compelling argument for its thesis, and it considers and responds to viable objections to this argument. The paper presents an original argument, one that goes beyond what was said in class and in the readings. B: A B paper provides a fair and accurate explanation of the philosophical positions and distinctions that are relevant to its thesis. It presents a compelling argument for its thesis and considers possible objections to its argument. However, the paper’s argument is not original, in that it does not go much beyond what was said in class and in the readings, and/or the paper does not develop some important points fully enough. C: A C paper provides an explanation of the philosophical positions and distinctions that are relevant to its thesis, but this explanation is inaccurate in some important ways. The paper presents an argument for its thesis, but the argument is not original or compelling. The paper fails to consider possible objections and/or leaves important points undeveloped. D: A D paper provides little or no explanation of the
philosophical positions and distinctions that are relevant to its topic. It does not have a thesis even if it does have a unified topic. The paper asserts views but there is little or no attempt to use arguments to defend those views. F: An F paper provides no coherent explanation of the philosophical positions and distinctions that are relevant to its topic. It does not have a unified topic. Views are asserted but there is virtually no attempt to defend those views. It reflects a lack of understanding of the assignment.

Source of Evidence: Academic direct measure of learning - other

**Target for O1: Critical Thinking**
Papers of 3000 students should, on average, be evaluated as 2.50 in critical thinking

**Findings 2010-2011 - Target: Not Met**
In this 2010-2011 cycle, the average 3000 student's critical thinking ability was assessed a 2.49 and the average 4990 student's critical thinking ability was assessed a 2.68. In the Fall of 2009 the average 3000 student's critical thinking ability was assessed a 2.89; in the Spring of 2010 it was 3.12. Part of the lower assessment in this new cycle is likely explained by increased emphasis on the fact that we are seeking to compare 3000 level students to where we believe our BA graduates should be. We believe this is the appropriate standard and will have to determine if we should lower our target or alter Phil 3000 in some way to improve the students' performance. (This is the first cycle with 4990 students.)

**M 2: Writing Skills (O: 2)**
Three tenured or tenure track members of the Assessment Committee score student's final papers on writing skills. These scores are given on the A-F scales with +/- using the rubric below. These scores are not student grades (neither grades on particular assignments nor semester grades). The scores use the same scale as course grades in order to enhance inter-grader reliability. We expect to see lower scores in Phil 3000 that in Phil 4900 as those in 3000 will be in the beginning of their philosophy studies (and again, these are not student grades). We can compare the scores merited in Phil 4900 to those merited in Phil 3000 to assess how well the Department is teaching Writing. Writing A: An A paper has a well-organized structure that follows from a clear thesis. It has varied sentence structure and no significant grammar or spelling mistakes. It is a polished paper that reflects excellent self-editing through multiple drafts. The paper also displays a sense of personal writing style and is written in clear prose that is pleasurable to read. B: A B paper has a well-organized structure that follows from a clear thesis. It has varied sentence structure and very few grammar and spelling mistakes. It has been self-edited and does not read like a first draft. C: A C paper has a thesis statement and some organization of paragraphs, but overall the paper but does not flow. It contains a significant number of grammar or spelling errors. It reads like a first draft. D: A D paper is poorly organized, and its paragraphs do not have a coherent structure. It contains numerous grammar and/or spelling errors. It reads like a first draft that has not been proofread. F: An F paper is similar to a D paper, but contains so many grammar and/or spelling errors that the very meaning of some sentences becomes ambiguous and hard to understand.

Source of Evidence: Academic direct measure of learning - other

**Target for O2: Writing Skills**
Papers of 3000 students should, on average, be evaluated as 2.50 in writing.

**Findings 2010-2011 - Target: Met**
In this 2010-2011 cycle, the average 3000 student's written communication ability is assessed a 2.62 and the average 4990 student's written communication ability is assessed a 2.88. In the Fall of 2009 the average 3000 student's written communication ability was assessed a 2.8; in the Spring of 2010 it was 3.12. Part of the lower assessment in this new cycle is likely explained by increased emphasis on the fact that we are seeking to compare 3000 level students to where we believe our BA graduates should be. We believe this is the appropriate standard and will have to determine if we should lower our target or alter Phil 3000 in some way to improve the students' performance. (This is the first cycle with 4990 students.)

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Monitor, Discuss, Refine**
The Department will continue to monitor the progress of the program. As teaching students to use critical thinking skills in writing is already central to the philosophy curriculum, we don't anticipate problems, but if we are not happy with the progress of the students, we will make changes as necessary. The Department is and has long been committed to responding to empirical evidence regarding teaching methods.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Implementation Description: We will continue to discuss the program as needed.
Responsible Person/Group: Andrew Jason Cohen
Additional Resources: none

**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**
It has not. In a field that is more than 2000 years old, it would be surprising if it changed in a 2 year period.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**
We have now offered Phil 4990 for a full year, very successfully.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**
Attendance at these workshops inevitably results in the learning (or sparking) of a few small tips to improve our processes.
CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

See the answer to CTW Reflection 1 above.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Beginning in this cycle, we have moved to using the Department Assessment Committee to assess our CTW program. We believe this will improve the value of the data we collect.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

See the answer to CTW Reflection 1 above.

ADMINISTRATIVE DEPT QUESTION 1:
Explain how your department used the results from last year’s (2009-2010) assessment. What actions did you take? What changes did you make as a result?

We sought to improve our assessment process. See the answer to academic question #1 above.

Georgia State University
Assessment Data by Section
2010-2011 CTW Physics & Astronomy
As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The Department of Physics & Astronomy prepares students in the B.S. in Physics program for a wide variety of career paths including scientific research, high technology commercial, military, and education. In all these paths, physics majors are expected to exhibit scientific critical thinking and to be able to communicate in writing using appropriate formats. The department incorporates these expectations in its definition of critical thinking which follows the basic scientific method: a. Students develop research questions appropriate for research. b. Students appropriately collect experimental or theoretical data to address identified research questions. c. Students analyze and interpret data to evaluate research questions. d. Students use results of data analysis to formulate new research questions. In addition, since the ability to communicate this critical thinking in the forms appropriate in a scientific context, the department adds the following aspects of critical thinking that are important to successful scientific writing: e. Students choose appropriate ways to communicate information in words, graphs, and figures. f. Students communicate correct kinds of information in each section of scientific report. g. Students understand and reflect an understanding of the appropriate audience.

Goals
G 1: Scientific Thinking
Students will follow the scientific process in developing and testing hypotheses, drawing conclusions, and formulating future research questions.

G 2: Scientific Writing
Students make appropriate decisions to communicate scientific information effectively in the accepted format. This includes the particular requirements of scientific publications such as journals. In particular, students will decide when the most effective way to communicate technical or quantitative information involves words, graphs, table, or figures.

Student Learning Outcomes/Objectives
SLO 1: Laboratory Experiment Reports (G: 1, 2) (M: 1)
In Phys3300, Advanced Physics Laboratory, students write reports for three laboratory experiments. These reports follow the standard format of scientific journal articles and include a title, abstract, background, experimental methods, results, discussion, conclusion, and foot-noted references. Unlimited revisions are allowed until the end of the semester. Students are encouraged to revise one report multiple times in order to learn the scientific writing skills before working on the remaining reports.

SLO 2: Research Project Report (G: 1, 2) (M: 2)
In Phys4900, Research project, students write a long-form report for their research project. The report is written in sections over the course of the semester as their project proceeds. This report follows the standard format of scientific journal articles and include a title, abstract, background, experimental methods, results, discussion, conclusion, and foot-noted references. Unlimited revisions are allowed for each section until the end of the semester.

Measures, Targets, and Findings
M 1: Phys3300 Physics Rubric (O: 1)
The rubric used to evaluate laboratory reports is linked. It contains four elements of critical thinking and three elements of scientific writing skills necessary to write a high-quality report. Each element is evaluated on a four point scale indicating mastery, competency, developing competency, or lack of competency.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

### Target for O1: Laboratory Experiment Reports

Students in Phys3300 write three lab reports. They are encouraged to revise the report for their first lab until it is scoring high marks in each area before writing their remaining two reports. Our first target is that at least 80% of students in Phys3300 will achieve 3 out of 4 (competency) on each criterion of the rubric for their first laboratory report after all revisions are completed. In addition, at least 50% of the final evaluations will be 4 out 4 (mastery) for each criterion.

### Findings 2010-2011 - Target: Met

Phys3300 was taught in the Fall 2010 semester with 15 students enrolled. Due to the larger number of students (five groups of three students), each student completed 5 laboratory experiments and 5 lab reports instead of 3 as in the previous year. Twelve students successfully completed the course. Twelve students (all physics majors) completed Phys3300 in the Fall of 2010. They achieved scores for the initial version of their first lab report averaging 2.8, 2.8, 2.7, 2.5, 2.6, 2.7, and 2.8 out of possible 4.0 for the seven criteria in the rubric, respectively. Most of the students revised the first report and students achieved scores averaging 3.5, 3.4, 3.7, 3.5, 3.1, 3.5, and 3.5 for the seven criteria in the rubric, respectively. Scores for all twelve students were either 3 or 4 on all criteria for the final versions of the first report except for one student receiving a 2 on one criterion and another student receiving a 2 on each of 3 criteria. On the final version of each lab report, 50% of the scores on the seven criteria were 4 out 4.

**M 2: Phys4900 Physics Rubric (O: 2)**

The rubric used to evaluate project reports is linked. It contains four elements of critical thinking and three elements of scientific writing skills necessary to write a high-quality report. Each element is evaluated on a four point scale indicating mastery, competency, developing competency, or lack of competency.

**Source of Evidence:** Senior thesis or culminating major project

### Target for O2: Research Project Report

At least 80% of students will achieve 3 out of 4 (competency) on each criterion of the rubric after all revisions are completed. At least 50% of the final evaluations will be 4 out 4 (mastery) for each criterion.

### Findings 2010-2011 - Target: Not Reported This Cycle

No findings were obtained for 2010-2011. This course was offered for the second time in Spring 2011. However, there were not any students under the CTW requirement taking the course. The two students who completed the course performed their research outside of the department. Both wrote long form research reports over the semester. One of these was overseen in the Math department as part of its existing RIMMES program. We expect a sufficient number of students to take this class in Spring 2012 to run the class as designed with formal class meetings.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Adding Electronics training into Phys3300

In Phys3300 in the Fall of 2010, an activity was added to the course prior to the laboratory experiments to refresh and supplement the students electronics knowledge and skills. In addition, one laboratory experiment was added dealing specifically with measuring properties of electronic devices (Transistor Lab).

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** High
- **Implementation Description:** Add content in electronic circuits to Phys3300.
- **Responsible Person/Group:** Brian Thoms

#### Increased time on analysis and graphing in Phys3300

In Phys3300 for Fall 2009, the lowest areas of performance according to the assessment were in performing data analysis and presenting graphs and tables. In Fall 2010 the amount of time spent in before the first lab on data analysis and graphing was increased with an experimental design and analysis activity added to the course. This resulted in significantly higher scores on the rubric criterion for graphing and data analysis in Fall 2010.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Phys3300 Physics Rubric
  - **Outcome/Objective:** Laboratory Experiment Reports
- **Implementation Description:** Syllabus and schedule changes to add additional content on data analysis and graphing.
- **Responsible Person/Group:** Brian Thoms

#### Revised class structure for Phys3300

In the first offering of Phys3300, students performed all three experiments in close succession. However, they were encouraged to perform revisions of the first lab report and delay writing the second and the third until they received feedback and improved the first report to a high level. The delay in writing the remaining two reports made it harder for the students to write those reports since they were not fresh in their minds. Furthermore, the student learning from the writing and revising process may have had benefits in the performance of remaining labs (knowing how you will analyze and report the results affects how you obtain the results). So for Fall 2010 the lab schedule was changed so that the performance of the labs (five labs were performed this year) were more spread out giving time for writing and revising the first lab report before the subsequent labs were performed.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

When Phys3300, Advanced Physics Lab - CTW, was created the department took the opportunity to create a course that would explicitly seek to prepare the students in all areas needed to perform high quality research for their required Research Project. This preparation included scientific writing in the style of physics and astronomy journal articles but also included many other research skills. Over the last two years a large number of students after completing the first CTW course were able to perform research at a level high enough to lead to publications and conference presentations. So the major accomplishment was the high level of performance of the students in the subsequent research projects. Last year’s action plan responded to the areas of low performance in the experimental skills, data analysis skills or writing skills of the students. Those changes are directly connected to improvements in students ability to perform high quality research. Note: Most of the research projects are being completed under the old research course and not the new CTW research course. That should change this year.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Since the exit class has not yet been successfully populated, we don’t have clear data on the improvement. However, we have seen improved research skills resulting in higher quality research in the student projects. More students have performed research of high enough quality to result in journal papers or conference presentations. However, most of these have been performed under the old research class and not the new CTW research class, so our evidence is only anecdotal at this point.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

Since the second of the two CTW courses has not been taught yet, that course will undoubtedly need some work after its first offering. In the first CTW course (Phys3300), we are still working on the balance between the amount of lab reports to write and the amount of time left for revisions. The first year, there were only 3 lab reports while in the second year there were 5 lab reports. More revisions were performed the first year. However, we also made improvements in the preparation work leading up to the lab reports. In the end the performance on the final reports was about the same in both years, in each case quite good. The course seems to be working well and only minor tweaking of the preparation exercises, the number of lab reports, and the timing of the reports is needed.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

The impact of the first CTW course (Phys3300 - Advanced Physics Lab) has been an obvious improvement in the skills and preparation of the students for performing high quality research and in their ability to present that research. However, that data is mostly anecdotal since the second CTW course (Phys4900 - Research Project) has not had enough students yet and most of this research has been completed under the old research course (Phys4950) without the coordination or assessment from the CTW Ambassador. There are beginning to be impacts seen in the faculty as they adapt to having more undergraduates performing larger projects and coming equipped with better skills. Those impacts will be seen more clearly this year in the second CTW course, Phys4900. There have been no major changes to the CTW Initiative in the department.
## Mission / Purpose

The Department endorses the definition of Critical Thinking proposed to the Faculty Senate. Political Science courses will be designed to train students to “develop the wide range of cognitive skills and intellectual dispositions needed to effectively identify, analyze, and evaluate arguments and truth claims; to discover and overcome personal prejudices; to formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about what to believe and what to do.” The political science CTW courses will be designed to develop and practice the following specific critical thinking skills - identification of a question or issue, consideration of assumptions and/or context, formulation of a testable hypothesis, collection and presentation of facts/data, analysis of facts/data, integration and synthesis of other perspectives and presentation of conclusions.

## Goals

<table>
<thead>
<tr>
<th>G1: Identifying the Issue</th>
<th>Students will be able to identify a question or issue to investigate</th>
</tr>
</thead>
<tbody>
<tr>
<td>G2: Consideration of assumptions and context</td>
<td>Students will be able to consider assumptions and/or context of the issue</td>
</tr>
<tr>
<td>G3: Formulation of testable hypothesis</td>
<td>Students will be able to formulate a testable hypothesis</td>
</tr>
<tr>
<td>G4: Collection and presentation of data</td>
<td>Students will be able to collect and present of facts/data</td>
</tr>
<tr>
<td>G5: Analysis of Data</td>
<td>Students will be able to analyse facts/data</td>
</tr>
<tr>
<td>G6: Integration of perspectives</td>
<td>Students will be able to integrate and synthesize of other perspectives</td>
</tr>
<tr>
<td>G7: Presentation of Conclusions</td>
<td>Students will be able to effectively present conclusions of their research</td>
</tr>
</tbody>
</table>

## Outcomes/Objectives

<table>
<thead>
<tr>
<th>O/O 1: Effective Formulation of Research Question (G: 1, 2, 3) (M: 1, 2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will demonstrate through a paper or oral presentation the effective formulation of a research question. The central question, embedded and subsidiary issues, as well as relationships needed for effective analysis will be clearly identified, underlying assumptions will be identified and analyzed, and a clearly stated and testable hypothesis with a clear understanding of its drawback developed</td>
</tr>
</tbody>
</table>

### Standard Associations

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

<table>
<thead>
<tr>
<th>O/O 2: Effective collection and use of data (G: 4, 5) (M: 1, 2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will demonstrate effective collection and use of data through a paper in which they will identify most relevant facts, show evidence of search, selections and source evaluation and using appropriate methodology subject the data to complete analysis including an examination of possible shortcomings of the data</td>
</tr>
</tbody>
</table>

### Standard Associations

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

<table>
<thead>
<tr>
<th>O/O 3: Effective Communication of results (G: 6, 7) (M: 1, 2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will demonstrate effective communication through a paper and/or oral presentation of conclusions of research by providing clearly stated conclusions with examination of implications or consequences of conclusions. Students will also integrate other perspectives thoughtfully and respectfully</td>
</tr>
</tbody>
</table>

### Standard Associations

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

## Measures, Targets, and Findings

<table>
<thead>
<tr>
<th>M1: Rubric for Political Science 3800 (O: 1, 2, 3)</th>
</tr>
</thead>
<tbody>
<tr>
<td>In Political Science 3800, we used a rubric which measured the following CT skills (see Rubric): 1. Identification of research question 2. Formulation of a Testable Hypothesis 3. Analysis of facts/data 4. Presentation of Conclusions Student achievement was scored on a three level scale - Absent (0), Developing (1), Competent (2) - on each of the four CT skills above. For descriptions of each level of scoring see rubric POLS 3800</td>
</tr>
</tbody>
</table>

Source of Evidence: Written assignment(s), usually scored by a rubric
**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Improving CT skill in Formulation of testable hypothesis**

Though the learning outcome target for this item on the rubric was met in both POLS 3800 and POLS 4900 the assessment data shows some weakness in this CT skill. This was specially the case in POLS 4900 where students had to meet a much higher standard of sophistication to earn a score of 3 or more on this item in the rubric. In POLS 4900 student scores on the rubric were as follows - 34.4% scored 5 (Sophisticated), 40.6% scored 4 (higher end of Competent) and 21.9% scored 3 (lower end of Competent). The plan is to devote more time and learning to developing this skill in POLS 4900. In particular differences between a thesis, a hypothesis and...
a conclusion and developing a hypothesis that is testable and not leading to a single conclusion

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

The CTW program continued to expand and develop in the department. More sections of the CTW courses were offered this year than last year. In addition several changes were made to the implementation of the program as well as the assessment of student learning to make the CTW reports more accurate. The following were the major changes: 1. The rubric for POLS 4900 was modified to more readily accommodate assessment of development of testable hypothesis for non-quantitative research. This modified version of the rubric will be used to assess students starting the fall of 2011. 2. Faculty training was enhanced to hold assessment scores of 5 to a higher standard than last year. In addition several changes were made to the implementation of the program as well as the assessment of student learning to make the CTW reports more accurate. The following were the major changes:

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**
- **Measure:** Rubric for Political Science 3800 | **Outcome/Objective:** Effective Formulation of Research Question
- **Measure:** Rubric for Political Science 4900 | **Outcome/Objective:** Effective Formulation of Research Question

**Implementation Description:** The Plan requires the following enhancements to the teaching of POLS 4900: 1. A review session on developing a testable hypothesis early in the semester. 2. An in-class or online peer review session devoted to discussion of research hypothesis developed as part of the research paper requirement of the course. 3. A minimum of three iterations of the hypothesis development process as part of the research paper requirement of the course

**Projected Completion Date:** 05/2012

**Responsible Person/Group:** CTW ambassador and faculty teaching POLS 4900 in Fall 2010 and Spring 2011

**Improving CT skill in integration of other perspectives**

While the assessment data shows that our first CTW course POLS 3800 is comfortably meeting the CT learning outcome targets, our second CTW course POLS 4900 while meeting its learning outcome target shows clear gaps in student CT skills in the area of integration of other perspectives into their work. Though students showed marked improvement in this area between pre-course and post-course performance and target of 80% of students scoring 3 or higher on this item on the rubric was met only 34.4% had a score of 5 (Sophisticated), whereas 37.5% scored 4 (higher end of Competency) and 21.9% scored 3 (lower end of Competency). Faculty teaching the course noted that this was a major weakness of students coming into the course. The plan is to give added stress to developing this skill in POLS 4900.

**Established in Cycle:** 2009-2010

**Implementation Status:** In-Progress

**Priority:** High

**Relationships (Measure | Outcome/Objective):**
- **Measure:** Rubric for Political Science 4900 | **Outcome/Objective:** Effective Communication of results

**Implementation Description:** Three actions will be implemented as part of the plan to improve CT skills in this area: 1. Students will be assigned readings reflecting a wide spectrum of viewpoints as part of the course. 2. The course will include one exercise devoted exclusively to the development of this CT skill 3. Greater weight will be given in grading to the ability to show competence in this area.

**Projected Completion Date:** 05/2012

**Responsible Person/Group:** CTW ambassador and Faculty teaching POLS 4900 in Fall 2010 and Spring 2011

**Analysis Questions and Analysis Answers**

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Improvements in all areas of critical thinking have been recorded in both POLS 3800 and POLS 4900. However, only in the coming year or two will it be possible to compare across courses as the students taking POLS 4900 will have also taken POLS 3800 as a CTW course. Even so the comparison will be of a cohort rather than individual students as the department is not tracking assessment of each student from one course to another.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

We anticipate a major shortage of faculty resources to teach POLS 3800 and POLS 4900 as the number of political science majors required to take these courses are now increasing rapidly. In the Fall Spring and Summer semesters of 2010-2011 the department offered 15 sections of POLS 3800 and 4 sections of POLS 4900. There is already pressure on faculty who are unable to offer other upper division courses in which they have expertise in order to staff all sections of POLS 3800 and POLS 4900 that our major's will require.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

The CTW program has had some change in the courses in the department. In both POLS 3800 and POLS 4900 there is greater emphasis on identified critical thinking skills. The ability to frame testable hypotheses and integrating other points of view into writing assignments have been identified as areas needing improvement among our students. The changes in assignments and teaching in CTW courses reflects this need. The plan is to devote some time at the annual departmental faculty retreat to discussion on incorporating assignments into other upper division courses to improve CT skills. In terms of the changes to the CTW plan the rubric for POLS 4900 has been adjusted to be able to assess non-quantitative research question formulation.

**ACADEMIC PROGRAM QUESTION 1:** What changes in the assessment process have you made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
Three important changes were made to the assessment process for this year. First, some additional training on the use of the rubrics for POLS 3800 and POLS 4900 was given to ensure greater consistency in assessment scores. Second, faculty were trained to be critical when assigning scores of 5 on the POLS 4900 rubric. Third the rubric for POLS 4900 was modified to accommodate non-quantitative research projects (This last change will be in effect for the following year.

**ADMINISTRATIVE DEPT QUESTION 1:**
Explain how your department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?
Please see details of the action plans in the section above and the report on their impact on CT assessments

**ADMINISTRATIVE DEPT QUESTION 2:**
What have you learned from your assessment this year (2010-2011)?
The CTW program seems to be going well. Some minor adjustments, already discussed, have been and will be made to the program to improve CT skills among our majors and to better assess these skills

**ADMINISTRATIVE DEPARTMENT QUESTION 3:**
What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?
The two action plans already in place will be implemented this year. We anticipate that student learning outcome assessments will continue to improve.

**Assessment Data by Section**

**2010-2011 CTW Psychology**

*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)*

### Mission / Purpose

In addition to meeting the requirements of the University’s CTW policy, the proposed CTW courses are designed to address recommendations by the American Psychological Association (APA) related specifically to the development of critical thinking skills in undergraduate psychology majors. For this reason, we shall operationally define and assess critical thinking in terms outlined by the APA, such as students' ability to "evaluate the quality of information, including differentiating empirical evidence from speculation," "use reasoning to recognize, develop, defend, and criticize arguments and other persuasive appeals," "demonstrate an attitude... of persistence, open-mindedness, tolerance for ambiguity, and intellectual engagement," and "use scientific principles and evidence to resolve conflicting claims" (APA, 2007, p. 15).

### Goals

**G 1: Critical thinking skills in psychology (APA 3.1-3.4)**
Respect and use critical and creative thinking, skeptical inquiry, and, when possible, the scientific approach to solve problems related to behavior and mental processes.

**G 2: Integrative writing (APA 7.1)**
Demonstrate effective writing skills in various formats (e.g., essays, correspondence, technical papers, note taking) and for various purposes (e.g., informing, defending, explaining, persuading, arguing, teaching).

### Student Learning Outcomes/Objectives

**SLO 1: Uses critical thinking effectively (APA 3.1) (G: 1) (M: 1, 2)**
- a. Evaluate the quality of information, including differentiating empirical evidence from speculation and the probable from the improbable
- b. Identify and evaluate the source, context, and credibility of information
- c. Recognize and defend against common fallacies in thinking
- d. Avoid being swayed by appeals to emotion or authority
- e. Evaluate popular media reports of psychological research
- f. Demonstrate an attitude of critical thinking that includes persistence, open-mindedness, tolerance for ambiguity, and intellectual engagement
- g. Make linkages or connections between diverse facts, theories, and observations

**SLO 4: Demonstrate effective writing skills in various formats and for various purposes (APA 7.1) (G: 2) (M: 1, 2)**
- a. Demonstrate professional writing conventions (e.g., grammar, audience awareness, formality) appropriate to purpose and context
- b. Use APA style effectively in empirical reports, literature reviews, and theoretical papers

### Other Outcomes/Objectives

**O/O 2: Uses reasoning to recognize, develop, defend, and criticize arguments and other persuasive appeals (APA 3.3) (G: 1) (M: 1, 2)**
- a. Identify components of arguments (e.g., conclusions, premises/assumptions, gaps, counterarguments)
- b. Distinguish among assumptions, emotional appeals, speculations, and defensible evidence
- c. Weigh support for conclusions to determine how well reasons support conclusions
- d. Identify weak, contradictory, and inappropriate assertions
- e. Develop sound arguments based on reasoning and evidence

**O/O 3: Approaches problems creatively and effectively (APA 3.2 & 3.4) (G: 1) (M: 1, 2)**

a. Intentionally pursue unusual approaches to problems b. Recognize and encourage creative thinking and behaviors in others c. Evaluate new ideas with an open but critical mind d. Recognize ill-defined and well-defined problems e. Articulate problems clearly f. Generate multiple possible goals and solutions g. Evaluate the quality of solutions and revise as needed h. Select and carry out the best solution

**Measures, Targets, and Findings**

**M 1: 3530 Final Paper (O: 1, 2, 3, 4)**

PSYC 3530 provides psychology majors with experience in research design, data analysis, and scientific communication needed for higher-level understanding in 4000-level courses, the development and writing of senior-year theses, and graduate study. Topics include the structure and style of scientific writing in psychology, experimental design, statistical techniques, and the preparation of a formal research paper in APA style. The form of the final paper varied across terms: Students who took the course in Fall 2010 completed an APA-style research project proposal, including Introduction, Method, and Projected Results sections, with 10 recent peer-reviewed articles as primary sources; students who took the course in Spring 2011 completed an APA-style literature review based on 4-10 recent peer-reviewed articles as primary sources. Note: We were not able to include data from one PSYC 3530 instructor, because he/she used the 2008 CTW rubric, rather than the updated 2010 version, for rating assignments.

Source of Evidence: Written assignment(s), usually scored by a rubric in instructor, because he/she used the 2008 CTW rubric, rather than the updated 2010 version, for rating assignments.

**Target for O1: Uses critical thinking effectively (APA 3.1)**

In the 2010 CTW Writing Assessment Rubric, instructors rate the student’s submission for Organization and Logic on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. Is unquestioning of his/her acceptance of unproven or poorly supported claims 1. Is skeptical, but is unable to explain why or support claims with evidence 2. Supports claims with evidence, but this evidence is usually inappropriate, inaccurate, or irrelevant 3. Supports most claims with evidence that is appropriate, accurate, and relevant 4. Consistently supports claims with appropriate, accurate, and relevant evidence. However, some important evidence is missing. 5. Consistently and thoroughly supports claims with appropriate, accurate, and relevant evidence. For PSYC 3530, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Use of Evidence on this assignment.

**Findings 2010-2011 - Target: Met**

The median score for Organization and Logic was 3, which is in the 'developing' range, and 93% of the students were rated a score of 2 (the lower end of the 'developing' range) or higher. The median score for Use of Evidence was 3, which is in the 'developing' range, and 98% of the students were rated a score of 2 (the lower end of the 'developing' range) or higher. The proportions of students in each performance category is summarized in Figure 1.

**Target for O2: Uses reasoning to recognize, develop, defend, and criticize arguments and other persuasive appeals (APA 3.3)**

In the 2010 CTW Writing Assessment Rubric, instructors rate the student’s submission for Position and Balance on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. Is unquestioning of his/her acceptance of unproven or poorly supported claims 1. Is skeptical, but is unable to explain why or support claims with evidence 2. Supports claims with evidence, but this evidence is usually inappropriate, inaccurate, or irrelevant 3. Supports most claims with evidence that is appropriate, accurate, and relevant 4. Consistently supports claims with appropriate, accurate, and relevant evidence. However, some important evidence is missing. 5. Consistently and thoroughly supports claims with appropriate, accurate, and relevant evidence. For PSYC 3530, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Use of Evidence on this assignment.

**Findings 2010-2011 - Target: Met**

The median score for Position and Balance was 3, which is in the 'developing' range, and 95% of the students were rated a score of 2 (the lower end of the 'developing' range) or higher. The proportions of students in each performance category is summarized in Figure 2.

**Target for O3: Approaches problems creatively and effectively (APA 3.2 & 3.4)**

In the 2010 CTW Writing Assessment Rubric, instructors rate the student’s submission for Use of Evidence on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. Is unquestioning of his/her acceptance of unproven or poorly supported claims 1. Is skeptical, but is unable to explain why or support claims with evidence 2. Supports claims with evidence, but this evidence is usually inappropriate, inaccurate, or irrelevant 3. Supports most claims with evidence that is appropriate, accurate, and relevant 4. Consistently supports claims with appropriate, accurate, and relevant evidence. However, some important evidence is missing. 5. Consistently and thoroughly supports claims with appropriate, accurate, and relevant evidence. For PSYC 3530, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Use of Evidence on this assignment.
Target for O4: Demonstrate effective writing skills in various formats and for various purposes (APA 7.1)

In the 2010 CTW Writing Assessment Rubric, instructors rate the student's submission for Grammar and Mechanics on the scale below. A score of 3 or 4 is considered Developing and meets advanced expectations. A score of 4-5 is considered Mastering and meets advanced expectations. A score of 4-5 is considered Mastering and meets advanced expectations. A score of 0-4 is considered Emerging and is below expectations.

M 2: 4800 Final Paper (O: 1, 2, 3, 4)

PSYC 4800 is a senior seminar; each section focuses on a different topic. As such, the types and topics of the CTW posttest writing assignments vary across sections. Below is a brief description of the different assignments for which student samples have been provided, organized by section. PSYC 4800, Section 2 (4800-2) The Case: In 1996 Oprah Winfrey had a guest on her show from the Human Society who discussed the practice of feeding cows ground-up meat from dead livestock. This practice, now banned by the Food and Drug Administration in the United States, is believed to have contributed to the spread of bovine spongiform encephalopathy, commonly known as "mad cow disease". Oprah, after hearing of the risks associated with this practice, pronounced her intentions clearly expressed. For PSYC 3530, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Content and Development on this assignment. "*** In the 2010 CTW Writing Assessment Rubric, instructors rate the student's submission for Citation and Use of Sources on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. A score of 0-4 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations.
Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Action Plan 2010**

"revise rubric" action plan) so that the goals and objectives better align with the measures.

**Established in Cycle:** 2009-2010

---

Findings 2010-2011 - Target: Met

The median score for Organization and Logic was 5, which is in the ‘mastering’ range, and 96% of the students were rated a score of 4 (the lower end of the ‘mastering’ range) or higher. The median score for Use of Evidence was 5, which is in the ‘mastering’ range, and 78% of the students were rated a score of 4 (the lower end of the ‘mastering’ range) or higher. The proportions of students in each performance category is summarized in Figure 1.

Target for O2: Uses reasoning to recognize, develop, defend, and criticize arguments and other persuasive appeals (APA 3.3)

In the 2010 CTW Writing Assessment Rubric, instructors rate the student’s submission for Use of Evidence on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. Does not take any position on the issue. Does not take a consistent position on the issue 1. Takes a consistent position on the issue, but ignores relevant counterevidence and alternate points of view 2. Takes a consistent position on the issue and attempts to address some relevant counterevidence and/or alternate points of view 3. Takes a consistent position on the issue and addresses the relevant counterevidence and/or alternate points of view 4. Takes a consistent position on the issue and addresses the relevant counterevidence and/or alternate points of view

---

Findings 2010-2011 - Target: Met

The median score for Position and Balance was 5, which is in the ‘mastering’ range, and 100% of the students were rated a score of 4 (the lower end of the ‘mastering’ range) or higher. The proportions of students in each performance category is summarized in Figure 2.

Target for O3: Approaches problems creatively and effectively (APA 3.2 & 3.4)

In the 2010 CTW Writing Assessment Rubric, instructors rate the student’s submission for Use of Evidence on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. The frequency and variety of errors obscures the writer’s intentions completely. 1. The frequency and variety of errors is disruptive to the reader. 2. The frequency and/or variety of errors is somewhat disruptive to the reader. 3. Errors are infrequent and inconsequential to the reader. 4. Errors are rare and inconsequential to the reader. 5. The reader’s intentions are clearly expressed. For PSYC 4800, our senior/exit CTW course, the target is for the majority of students to be in the Mastering (4-5) range for Use of Evidence on this assignment.

---

Findings 2010-2011 - Target: Met

The median score for Use of Evidence was 5, which is in the ‘mastering’ range, and 78% of the students were rated a score of 4 (the lower end of the ‘mastering’ range) or higher. The proportions of students in each performance category is summarized in Figure 3.

Target for O4: Demonstrate effective writing skills in various formats and for various purposes (APA 7.1)

In the 2010 CTW Writing Assessment Rubric, instructors rate the student’s submission for Grammar and Mechanics on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. The frequency and variety of errors is disruptive to the reader. 1. The frequency and variety of errors is somewhat disruptive to the reader. 2. Errors are infrequent and inconsequential to the reader. 3. Errors are rare and inconsequential to the reader. 4. Errors are rare and inconsequential to the reader. 5. The reader’s intentions are clearly expressed. For PSYC 4800, our senior/exit CTW course, the target is for the majority of students to be in the Mastering (4-5) range for Grammar and Mechanics on this assignment.

---

Findings 2010-2011 - Target: Met

The median score for Grammar and Mechanics was 4, which is in the ‘mastering’ range, and 68% of the students were rated a score of 4 (the lower end of the ‘mastering’ range) or higher. The median score for Content and Development was 5, which is in the ‘mastering’ range, and 76% of the students were rated a score of 4 (the lower end of the ‘mastering’ range) or higher. The median score for Citation and Use of Sources was 5, which is in the ‘developing’ range, and 82% of the students were rated a score of 4 (the lower end of the ‘mastering’ range) or higher. The proportions of students in each performance category is summarized in Figure 4.

---

**Action Plan 2010**

Next year, CTW goes full scale as we offer for the first time a full complement of both junior- and senior-level CTW courses. A main goal is to staff and train instructors for all sections. To that end, faculty are being strongly encouraged to submit proposals for senior-level CTW sections. Another goal is to provide additional supports for students who are struggling with their writing; findings from this year’s outcomes show that a number of them still struggle after completing the junior CTW course. To that end, the department began to pilot a writing support center staffed by Psychology GRAs this past semester. Budget permitting, this program will be expanded next year. Additionally, the definition of critical thinking will be revisited, and the CTW rubric will be revised (see separate “revise rubric” action plan) so that the goals and objectives better align with the measures.
CTW Instructor Workshops

Revise rubric

The CTW rubric will be revised to be able to independently assess this facet of APA's critical thinking in psychology definition and to be more useful and less confusing to students and faculty.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High

Plagiarism Materials and Policy

Faculty who teach CTW courses -- as well as other courses with substantive writing assignments -- report an increased number of students who are plagiarizing content in the work they submit. This form of academic dishonesty is occurring despite a specific focus in the entry level CTW course on how to recognize plagiarism, how to avoid it, and why plagiarism is unethical and inappropriate in an academic environment. To address this problem, beginning Fall 2011 a department approved policy will appear in all undergraduate course syllabi describing what constitutes plagiarism in APA style writing and the consequences of engaging in this sort of unethical conduct in any psychology course. The goal of this policy is to present a consistent message to students that plagiarism is never acceptable and that all cases of plagiarism will be reported to authorities at the Department, College, and University levels. In addition to the policy, members of the Undergraduate Program Committee developed materials that faculty can use in any undergraduate course to teach students about what constitutes plagiarism in our discipline, and why we as academic professionals care about preventing it. The CTW Ambassadors will gather data about the frequency and severity of plagiarism cases during the 2010-2011 and 2011-2012 academic years and compare them to determine if this change in policy has resulted in a decrease in the number of plagiarism cases observed by faculty. It is our hope that by expanding the discussion about plagiarism and students' awareness of this problem to all undergraduate courses in Psychology, administrators at the College and University levels will recognize our discipline-specific definition of plagiarism and will support our faculty when they report violations of the Student Code of Conduct in this regard.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium

Budget Amount Requested: $2,000.00 (recurring)

CTW Instructor Workshops

As the number of faculty who are teaching CTW courses within the Psychology department increases, it is becoming increasingly difficult for the CTW Ambassadors to provide one-on-one training to faculty regarding assignment design, feedback, and assessment.

To address this concern, Dr. Darnell will be offering a CTW instructor training workshop before the beginning of the Fall and Spring terms, with a specific focus on the entry level CTW course, PSYC 3530. Dr. Tusher will conduct a needs assessment of faculty who have taught PSYC 4800 and work with Dr. Darnell to prepare the appropriate materials and training to respond to faculty requests regarding instructional support for the exit level CTW course.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium
Responsible Person/Group: CTW Ambassadors
**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

The Psychology department accomplished several things with regard to CTW this year. First, in response to feedback from our previous annual report, we revised the CTW Writing Assessment Rubric to more effectively measure the learning outcomes related to critical thinking; these revisions were described in detail under Academic Program Question 1. Second, we increased the number of sections of both our entry level course (PSYC 3530) and our exit level course (PSYC 4800) that are offered each semester. PSYC 3530 is now offered in six versions/sections each semester, putting us on target toward our ultimate goal of 6 sections per semester in Fall 2012. Third, the College approved our request to limit retakes in PSYC 3530 to one per student. As such, all students must successfully complete this course with a grade of C or better in two attempts (not including withdrawals) to continue in the Psychology major.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit level?**

From the entry level CTW course to the exit level CTW course, students are improving in their critical thinking skills. Specifically, the vast majority of students’ median scores on all measures (i.e., Organization & Logic, Use of Evidence, and Position & Balance) were in the Developing category at the end of the entry level CTW course (PSYC 3530) and in the Mastering category at the end of the exit level CTW course (PSYC 4800). Students’ writing skills – which we consider fundamental to their development and expression of critical thinking skills – also appear to improve between the entry level to the exit level CTW course; students are showing improved attention to detail, thoughtfulness about organization of ideas, and awareness of stylistic issues as they advance through the CTW sequence. Specifically, the vast majority of students’ median scores on all measures (i.e., Grammar & Mechanics, Content & Development, and Citation & Use of Sources) were in the Developing category at the end of the entry level CTW course (PSYC 3530) and in the Mastering category at the end of the exit level CTW course (PSYC 4800).

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**

We need more faculty to submit proposals for the senior/exit level CTW course to accommodate the number of students who will need the course to fulfill the college requirement in the coming years. We have nine versions of the course (e.g., Forensic Psychology, Psychology of War, Primate Models of Human Behavior) that have been approved, six of which have been taught one or more times. Four of these faculty have taught in various stages of revision and approval. By Fall 2012, we hope to regularly offer a minimum of six versions of the course each fall and spring semester. To facilitate the number of faculty who are teaching sections of this course, the chair of the department is not permitting any faculty member to teach PSYC 4800 for more than three consecutive semesters. We plan to continue work on the CTW Writing Assessment Rubric and possibly modify it better assess and allow faculty to assess a broader range of dimensions in writing assignments in the senior/exit level CTW course. Faculty are hesitant to teach the entry level CTW course because of their concerns about the quality of student writing at the junior level and their own lack of formal training to provide students with useful guidance and feedback on the writing process. Although the ambassadors and the department chair have been successful in encouraging several faculty to teach the course who have not taught it before, there have been several requests that the ambassadors provide workshops and/or materials and additional support to help faculty help students write better. As ambassadors, we request that the CTW program provide in-house workshops (e.g., before or after a department faculty meeting) for faculty who will be teaching CTW courses, but are not CTW ambassadors. Because of the specific requirements of scientific writing, specifically APA style, and how the style may differ to the style students may have learned in English composition, we would like to work closely with the representatives of the CTW program to make sure that the workshop materials reflect the values and expectations of psychology as a discipline. There is debate in the department about whether any CTW courses should be offered in summer semester because to the limited amount of time students have to absorb and reflect on material and faculty have to provide sufficient, meaningful feedback on written assignments. The focus on academic writing brought about by the CTW initiative has increased opportunities for instructors to provide students with prompt and useful feedback on these assignments. For example, there has been at least one documented case of plagiarism during each semester of PSYC 3530, and in some cases many more. This issue is particularly concerning as students receive specific instruction about what constitutes plagiarism in APA style and how to avoid it as part of the PSYC 3530 curriculum. To address this problem, beginning Fall 2011 a department approved policy will appear in all undergraduate course syllabi describing what constitutes plagiarism in APA style and the consequences of engaging in this sort of unethical conduct. The psychology course is not a consistent measure of this policy, but all students that plagiarize will be reported to authorities at the department, college, and university levels. In addition to the policy, members of the Undergraduate Program Committee developed materials that faculty can use in any undergraduate course to teach students about what constitutes plagiarism in our discipline, and why we as academic professionals care about whether or not students plagiarize on assignments. We recognize that CTW courses place an increased demand on students to read and write at a sophisticated level and the desire to meet these demands may encourage some students to plagiarize. However, we believe that with sufficient preparation and feedback, any student has the ability to write at an appropriate level without plagiarism. That being said, some students arrive in PSYC 3530 with such limited skills in reading and writing at the college level that they are not able to take advantage of the opportunities offered by CTW courses. It is simply not possible for the PSYC 3530 instructor to provide them with the support they need to develop their academic literacy to an appropriate level to succeed in a CTW environment. We would like to request that the CTW program design a screening tool for incoming students that is low cost and easy to administer. We recommend including such a tool at the time of admission to our university.

**CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?**

Anecdotally, faculty who teach in the junior/entry level CTW course is a prerequisite suggest that students’ writing and thinking skills are better than those demonstrated by students who took PSYC 3030, the non-CTW research methods course that PSYC 3530 replaced. Additionally, faculty who teach 4000-level courses for which PSYC 3530 is not a prerequisite note that those students who have taken 3530 perform more thoughtfully and effectively on written assignments than students who have not taken PSYC3530; for this reason, some faculty are considering making PSYC 3530 a prerequisite for those courses in the future. The opportunity to teach CTW courses is used as a reward for incoming faculty and a recruitment tool for potential incoming faculty. One of our CTW ambassadors was inspired to teach CTW courses because the undergraduate level was a positive and contributing factor in his/her decision to accept a position at GSU for Fall 2011. There is increasing awareness among the department’s administration that the demanding nature of teaching CTW courses well places faculty who regularly do so at increased risk for burn out. The Undergraduate Program Committee recommended to the chair that no faculty member be asked to teach more than one CTW section per semester and that faculty who have taught CTW courses for three
ACADEMIC PROGRAM QUESTION 1:

What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

One criticism of our 2009-2010 CTW Writing Assessment Rubric was that it did not independently measure each of our stated learning outcomes. To address this concern, we revised the rubric, making changes to some measures and adding others. The original measures, the revised/added measures, and the relevant changes are described below.

OUTCOME 1: Use critical thinking effectively.

2009-2010 CTW Writing Assessment Rubric element Organization: Elements are thoughtfully and effectively arranged in a manner appropriate to the purpose and audience, including consistent and appropriate evidence to support the argument.

2010-2011 CTW Writing Assessment Rubric element Organization and Logic: Ideas are arranged in a logical, coherent, and effective way – a somewhat more obvious and direct application of the skills and concepts they learn in PSYC 1101/1102.

As a result, they are often ill-prepared to organize and express their ideas in writing, even when they are not being required to use the scientific writing style of the discipline (i.e., APA style). This basic lack of comfort and familiarity with writing at the college level makes writing in a scientific style even more difficult. Students also appear to have limited exposure to scientific writing beyond what they have seen in textbooks or sources, much less the ability to draw on scientific sources as models in their own writing. For them, this is challenging. Collectively, these issues suggest that we need to think about adding training in scientific literacy to the curriculum before the freshman and junior year to make it possible for students to receive the maximum benefit of the CTW sequence.

OUTCOME 2: Use reasoning to recognize, develop, and argue for position(s) on an issue.

The new measures, Position and Balance and Use of Evidence, address these concerns.

Critical Thinking: Understands thoroughly and contributes usefully to the argument 0.

The changes are discussed after both new measures are presented.

Critical Thinking: Understands thoroughly and contributes usefully to the argument with original ideas or evidence NOTE: This measure was replaced with two new measures: Position and Balance and Use of Evidence, each of which relates to a separate outcome. The changes are discussed after both new measures are presented. 2010-2011 CTW Writing Assessment Rubric element Position and Balance 0. Does not take any position on the issue 1. Does not take a consistent position on the issue 2. Takes a consistent position on the issue, but ignores relevant counter-evidence and alternate points of view 3. Takes a consistent position on the issue and attempts to address some relevant counter-evidence and/or alternate points of view 4. Takes a consistent position on the issue and addresses the relevant counter-evidence and/or alternate points of view. However, claims and/or evidence could be presented more clearly and/or objectively. 5. Takes a clear and balanced position on the issue, though claims and/or evidence relevant to the argument may not be presented adequately or objectively.

Use of Evidence 0.

2010-2011 CTW Writing Assessment Rubric element Use of Evidence 0. Is unquestioning of his/her acceptance of unproven or poorly supported claims 1. Is skeptical, but unable to explain why or support claims with evidence 2. Supports claims with evidence, but this evidence is usually inappropriate, inaccurate, or irrelevant 3. Supports most claims with evidence that is appropriate, accurate, and relevant 4. Consistently supports claims with appropriate, accurate, and relevant evidence. However, some important evidence is missing 5. Consistently supports claims with appropriate, accurate, and relevant evidence.

CHANGES: The original measure, Critical Thinking: understands thoroughly the scientific/logical arguments made by others, which is not as relevant to the PSYC 3530 research project assignment as the students’ ability to form a cohesive, meaningful argument of their own when making a case for a proposed research study. Students simply don’t have enough time or skill to read enough of the relevant scientific literature to understand and evaluate the full discourse that the scientific community is having on any given issue in psychology. It is also seen to some extent to which the original measure was not always meaningful. For example, “understanding original” to the scientific dialogue they are joining in on through their research project. Although the APA does want undergraduate students in the junior/entry level CTW course report that understanding the scientific writing style of the discipline (i.e., APA style), this basic lack of comfort and familiarity with writing at the college level makes writing in a scientific style even more difficult. Students also appear to have limited exposure to scientific writing beyond what they have seen in textbooks or sources, much less the ability to draw on scientific sources as models in their own writing. For them, this is challenging. Collectively, these issues suggest that we need to think about adding training in scientific literacy to the curriculum before the freshman and junior year to make it possible for students to receive the maximum benefit of the CTW sequence.

OUTCOME 3: Approach problems creatively and use reasoning to generate creative solutions.

This measure was replaced with two new measures: Position and Balance and Use of Evidence, each of which relates to a separate outcome. The changes are discussed after both new measures are presented.

Critical Thinking: Understands thoroughly and contributes usefully to the argument 0.

The changes are discussed after both new measures are presented.

Critical Thinking: Understands thoroughly and contributes usefully to the argument with original ideas or evidence NOTE: This measure was replaced with two new measures: Position and Balance and Use of Evidence, each of which relates to a separate outcome. The changes are discussed after both new measures are presented. 2010-2011 CTW Writing Assessment Rubric element Position and Balance 0. Does not take any position on the issue 1. Does not take a consistent position on the issue 2. Takes a consistent position on the issue, but ignores relevant counter-evidence and alternate points of view 3. Takes a consistent position on the issue and attempts to address some relevant counter-evidence and/or alternate points of view 4. Takes a consistent position on the issue and addresses the relevant counter-evidence and/or alternate points of view. However, claims and/or evidence could be presented more clearly and/or objectively. 5. Takes a clear and balanced position on the issue, though claims and/or evidence relevant to the argument may not be presented adequately or objectively.

Use of Evidence 0.

2010-2011 CTW Writing Assessment Rubric element Use of Evidence 0. Is unquestioning of his/her acceptance of unproven or poorly supported claims 1. Is skeptical, but unable to explain why or support claims with evidence 2. Supports claims with evidence, but this evidence is usually inappropriate, inaccurate, or irrelevant 3. Supports most claims with evidence that is appropriate, accurate, and relevant 4. Consistently supports claims with appropriate, accurate, and relevant evidence. However, some important evidence is missing 5. Consistently supports claims with appropriate, accurate, and relevant evidence.

CHANGES: The original measure, Critical Thinking: understands thoroughly the scientific/logical arguments made by others, which is not as relevant to the PSYC 3530 research project assignment as the students’ ability to form a cohesive, meaningful argument of their own when making a case for a proposed research study. Students simply don’t have enough time or skill to read enough of the relevant scientific literature to understand and evaluate the full discourse that the scientific community is having on any given issue in psychology. It is also seen to some extent to which the original measure was not always meaningful. For example, “understanding original” to the scientific dialogue they are joining in on through their research project. Although the APA does want undergraduate students in the junior/entry level CTW course report that understanding the scientific writing style of the discipline (i.e., APA style), this basic lack of comfort and familiarity with writing at the college level makes writing in a scientific style even more difficult. Students also appear to have limited exposure to scientific writing beyond what they have seen in textbooks or sources, much less the ability to draw on scientific sources as models in their own writing. For them, this is challenging. Collectively, these issues suggest that we need to think about adding training in scientific literacy to the curriculum before the freshman and junior year to make it possible for students to receive the maximum benefit of the CTW sequence.

OUTCOME 4: Demonstrate effective writing skills in various formats and for various purposes.

2009-2010 CTW Writing Assessment Rubric element Grammar and Mechanics: The language clearly communicates the author’s intentions 0.

Frequency and/or variety of errors obscures the writer’s intentions completely 1. Frequency and variety of errors is somewhat disruptive 2. Errors are few and generally not disruptive 3. Errors are rare and
inconsequential. 5. The language clearly communicates the writer's intentions 2010-2011 CTW Writing Assessment Rubric element Grammar and Mechanics 0. The frequency and variety of errors obscures the writer's intentions completely. 1. The frequency and variety of errors is disruptive to the reader. 2. The frequency and/or variety of errors are somewhat disruptive to the reader. 3. Errors are few and generally not disruptive to the reader. 4. Errors are rare and inconsequential to the reader. 5. The language clearly expresses the writer's intentions to the reader. CHANGES: Some minor changes in wording only. Specifically, the phrase "to the reader" has been added to options 1-4. In option 5, we have restated the phrase to "the writer", which is more grammatically correct. It is not the writer's responsibility to "mine" a piece of writing for the writer's intended meaning. 2009-2010 CTW Writing Assessment Rubric element Development: the author offers complete, relevant, and accurate details in an appropriately concise manner 0. No details 1. Offers few details, and these are generally inaccurate or irrelevant 2. Offers a variety of relevant and accurate details, but some are inaccurate or irrelevant 3. Offers a variety of relevant and accurate details, but some relevant details are missing 4. Offers thorough, relevant, and accurate details, but could be more concise 5. Offers complete, relevant, and accurate details in an appropriately concise manner 2010-2011 CTW Writing Assessment Rubric element Development: the author offers complete, relevant, and accurate details in an appropriately concise manner 0. No details 1. Offers few details, and these are generally inaccurate or irrelevant 2. Offers a variety of relevant and accurate details, but some are inaccurate or irrelevant 3. Offers a variety of relevant and accurate details, but some relevant details are missing 4. Offers thorough, relevant, and accurate details, but could be more concise 5. Offers complete, relevant, and accurate details in an appropriately concise manner **CHANGES:** Some minor changes in wording only. Specifically, the phrase "to the reader" has been added to options 1-4. In option 5, we have restated the phrase to "the writer", which is more grammatically correct. It is not the writer's responsibility to "mine" a piece of writing for the writer's intended meaning.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The vast majority of students in our program are meeting the learning goals related to critical thinking. We are happy with the various versions of our CTW courses that the faculty have created and believe that the activities, assignments, and topics are successfully fostering critical thinking skills in psychology majors. However, we believe that many students are not able to take full advantage of the opportunities afforded by our CTW courses because of their limited writing skills. To address this problem, one of our PSYC 3530 instructors, Dr. Marika Lamoreaux, has created a learning support center for psychology students where they can receive individual help from a tutor on all major writing assignments. At least one instructor goes so far as to pair each of her students who is struggling with a specific writing tutor. Student response to the tutoring provided at the learning support center has been extremely positive.

CTW program administrators have met repeatedly with Dr. Lamoreaux and have recruited her to help faculty in other departments with a specific writing tutor. Her responsibilities include tutoring in writing and APA style, as well as in the content areas of statistics and research methods. The tutoring center is staffed entirely by volunteer undergraduates who have been recommended by faculty for their demonstrated skills in the various tutoring areas. Students in PSYC 3530 who are identified as needing substantial help with writing via the learning assessment pretest (i.e., a writing sample that is the first three pages of a rough draft of their course notes on a regular basis and get help from a tutor on all major writing assignments. At least one instructor goes so far as to pair each of her students who is struggling with a specific writing tutor. Student response to the tutoring provided at the learning support center has been extremely positive.

At least one instructor goes so far as to pair each of her students who is struggling with a specific writing tutor. Student response to the tutoring provided at the learning support center has been extremely positive.

Administrative DEPT QUESTION 1: Explain how the department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?

Data from the CTW Writing Assessment Rubric was included in the general report regarding learning outcomes for the department. Because of the positive results, the department decided to continue using the CTW Writing Assessment Rubric. The CTW Ambassadors continue to encourage interest and enthusiasm about the CTW initiative as a whole and about teaching CTW courses in Psychology.

Administrative DEPT QUESTION 2: What have you learned from your assessment this year (2010-2011)?

With regard to the reporting process, the organization of information in WEAVE is unintuitive and unhelpful. The terms used for various categories and subcategories (e.g., Goal, Outcome, Measure) are inconsistent with how the same terms are used in our discipline. For individuals who are new to the WEAVE program, determining where information and documents should be included is
Georgia State University
Assessment Data by Section
2010-2011 CTW Public Management and Policy
As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
Critical thinking in Public Management and Policy involves evaluating arguments and making and justifying claims based on theoretical understandings and/or empirical assessment.

The Department of Public Management and Policy is committed to community service with the goal of improving government, society, and quality of life in the Atlanta area, the Southeast region, and throughout the United States and other countries.

Goals
G 1: Reflection
Students will be able to reflect on their experiences in public and non-profit organizations and think critically about how they relate to readings and class discussions.

G 2: Critically analyze scholarly readings
Students will be able to express their critical analysis and thoughts orally in class and through written assignments.

G 3: Understand links between theory and research
Students must demonstrate the ability to connect theoretical issues involving policy with empirical assessment techniques.

G 4: Select appropriate methods for assessment
Students must be able to select appropriate methods for a policy assessment design. Options might include interviews, experiments, survey research, qualitative research, and document reviews.

Outcomes/Objectives
O/O 1: Discussion of assignment (G: 1, 2, 3) (M: 1)
P/MAP 3021 Citizenship, the Community, and the Public Sector O 1, 2, 3: Discussion of Final Project Assignment For sections taught by Harvey Newman, Professor - For a term project, students will be required to write a report on how citizens can engage the public often confusing and time consuming. There also appear to be problems in the editing feature that result in errors being introduced into proper HTML code when information is saved. It is also frustrating that the same (kind of) information is asked for in multiple places. However, after working through these challenges, we successfully completed the report and the process did prompt us to reflect on the progress of the CTW initiative in Psychology. With regard to our data outcomes, we were surprised that the scores on both critical thinking and writing related outcomes were as high as they were, given the consistency of faculty's verbal reports that students' thinking, reasoning, and writing skills are often below their expectations. We have several thoughts on why this disconnect may be taking place. If the ratings are inaccurate and the "faculty talk" is accurate, it may be that faculty are grading writing assignments more generously than students' performance actually warrants. This is of particular concern in PSYC 3530, because students must pass the research writing portion of the course with a grade of C or better to pass the course as a whole, and must pass the course as a whole in no more than two attempts to stay in the major. Faculty don't want to be "the one" who gives a student a grade that keeps him/her from staying in the major or graduating with a college degree. Also, faculty who share the results of the CTW rubric with students may be concerned that students will respond with poor Student Evaluation of Instruction if they receive feedback on their written work that suggests it is less than satisfactory. PSYC 3530 papers are also submitted at the very end of the term, when faculty have the least time and energy to deal with student complaints regarding grading; as such, some faculty may give students higher grades than warranted on the final paper to avoid conflicts with students that arise when final course grades are lower than expected. If the ratings are accurate and the "faculty talk" is not, this may be an example of the availability heuristic in action. Cases of particularly bad thinking/writing may stand out to faculty more than those that meet their expectations, thereby seeming more common than they actually are. The fact that the PSYC 4800 scores are so high (mostly 5s) is less of a concern than the scores for PSYC 3530. The topic of the PSYC 4800 courses (and, correspondingly, the assignments) is more focused and the students have had the opportunity to write several essays of the same type and receive feedback on those essays prior to submitting the one on which they are rated for CTW learning outcome assessment. All Psychology majors have to take PSYC 3530, but PSYC 4800 still has a large proportion of students who are taking it as an elective. PSYC 4800 students also get to choose the topic of the course they take (and thus the topic of the assignments they must complete), whereas PSYC 3530 students all cover the same content and have their final paper topics selected for them, at least in general, by the course instructor. We also note that the post-test assignments for PSYC 4800 (e.g., a critique of a single article) are not as extensive and do not seem as rigorous as those for PSYC 3530 (e.g., a literature review incorporating information from 10 peer-reviewed sources). It seems that one solution to the concerns about inaccurate ratings in PSYC 3530 is to discourage faculty from sharing the scores from the CTW rubric with students, thereby avoiding some negative student response to low ratings. However, it is important that there be good consistency between students' ratings on the assessment rubric and their grades in the course; we do not want faculty to give lower "private" ratings (i.e., those not seen by students) and higher "public" ratings (i.e., those seen by students). It may be that the CTW Ambassadors for Psychology simply need to have more open dialogue with instructors about inter-rater reliability on the various rubric measures and discuss formalizing the operational definitions that faculty are using to complete the rubric. We will continue to brainstorm on this issue.

Administrative Department Question 3:
What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

We are satisfied with the current level of progress demonstrated by our students across the two-course CTW sequence, and hope that they will continue on this trajectory. We do not plan to implement any new strategies beyond those described in the action plans.
sector around an issue. The report will be based on the student's theoretical understanding of citizenship as well as personal involvement in a community or public organization. For sections taught by Deon Locklin, Instructor - Service Learning Essay: Each student will prepare an essay that reflects the student's conceptual understanding of citizenship as a result of his/her participation in the course and involvement in the community service learning activity over the semester. The final paper will be approximately 1,500 words, plus cover sheet and reference list.

### O/O 2: Preparation of a research proposal (G: 3, 4) (M: 3)
PMAP 4051 Evaluating Public Policy O 3, 4: Discussion of Final Project Assignment Students will write an evaluation research proposal integrating research methods and evaluation theory into a real problem. Students will draw on information and analytical skills obtained during the course including knowledge on how to pose research questions, form hypotheses, measure concepts, and take appropriate samples and how to analyze various modes of observation: experiments, surveys, field research and unobtrusive research. Students will also draw on their learned ability to critically analyze evaluation designs and alternative approaches to evaluations.

### Measures, Targets, and Findings

#### M 1: Rubric (O: 1)
Description of rubric. See repository.
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Discussion of assignment**
70% of students score 3 or higher on rubric.

**Findings 2010-2011 - Target: Met**
86.02% of students at least partially met objective. 45.1% Exceeded objective/skill 35.5% Fully demonstrated 5.4% Partially demonstrated 1.08% Barely demonstrated 12.9% Did not demonstrate Measurement: Final course project.

#### M 3: Prepare proposal for evaluation project (O: 2)
Students will prepare a proposal to conduct an evaluation of a policy issue. There is also an oral presentation of the research design.
Source of Evidence: Academic direct measure of learning - other

**Target for O2: Preparation of a research proposal**
70% of students will at least partially demonstrate adequate preparation of a research proposal.

**Findings 2010-2011 - Target: Partially Met**
64.52% of students at least partially demonstrated adequate preparation of a research proposal. 16.1% Exceeded objective/skill 16.1% Fully demonstrated 32.3% Partially demonstrated 12.9% Barely demonstrated 22.6% Did not demonstrate

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Designate new course as initial CTW course
Replace PMAP 3021, Citizenship, the Community and the Public Service as the initial designated CTW course. The new course will be PMAP 3311, Critical Policy Issues.
- Established in Cycle: 2009-2010
- Implementation Status: In-Progress
- Priority: High
- Implementation Description: The change in designation must be approved by the faculty of the PMAP Department and the AYSPS faculty as a whole during the fall semester 2010 and slowly phased in over the following years.
- Responsible Person/Group: Janelle Kerlin and Harvey Newman

#### Evaluation research proposal
Improve student outcomes on evaluation research proposal.
- Established in Cycle: 2010-2011
- Implementation Status: Planned
- Priority: High
- Projected Completion Date: 05/2013

#### Rubric
Better use of rubric(s) in scoring assignments.
- Established in Cycle: 2010-2011
- Implementation Status: Planned
- Priority: High
- Projected Completion Date: 05/2012

### Analysis Questions and Analysis Answers

#### CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
We have started the process of changing one of our designated CTW courses from the Citizenship course to the Critical Policy
CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
CTW instructors did not provide this information.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
We need to develop more and improved rubrics for scoring CTW assignments. Implementation of CTW has been problematic due to high turn over of instructors teaching the courses. More assistance on rubric development may be helpful.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
I have only been a CTW ambassador for the PMAP department for one year thus it is difficult to discern the impact of CTW at this time. It may have helped some faculty to focus more on improving student writing. Our department has begun switching one of the CTW designated courses to another more appropriate course. Some of the CTW assessment assignments have been changed.

---

### Georgia State University

**Assessment Data by Section**

**2010-2011 CTW Real Estate**

As of: 12/12/2016 04:11 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

---

**Mission / Purpose**
The BBA real estate major provides the student with the real estate knowledge and analytical skills necessary to support real property decisions in business environments as well as the requisite skills to effectively communicate them. Critical thinking through writing in Real Estate is defined as using writing to assist students in developing the ability to apply problem-solving skills to formulate and communicate convincing solutions to real estate business problems.

---

**Goals**

**G 1: Problem solving**
Students will become more adept at solving real estate business problems.

**G 2: Clear communication of real problem solutions**
Students will demonstrate their ability to communicate solutions to real estate business challenges clearly

---

**Student Learning Outcomes/Objectives**

**SLO 1: Data Evaluation (G: 1) (M: 1)**
Students will demonstrate the ability to organize and evaluate data and information in a real estate business context by analyzing the Pilgram Assurance Case (attached) as evaluated by the corresponding item "Gather, organize, and classify data" in the grading rubric (attached).

**SLO 2: Analytical skills (G: 1) (M: 1)**
Students will become better analysts of verbal and mathematical data by analyzing the Pilgram Assurance case (attached) as evaluated by the corresponding item in the rubric "Analyze information."

**SLO 3: Evaluation of evidence (G: 1) (M: 1)**
Students will demonstrate the ability to critically evaluate assumptions, evidence, ideas, and information from a variety of sources by analyzing the Pilgram Assurance case (attached) as evaluated by the corresponding item in the rubric "Analyze information."

**SLO 4: Integration of materials (G: 1) (M: 1)**
Students will demonstrate ability to compare and integrate conflicting and competing ideas and information by analyzing the Pilgram Assurance case (attached) as evaluated by the corresponding item in the rubric "Integration of materials."

**SLO 5: Conclusions (G: 2) (M: 1)**
Students will demonstrate ability to write rational, reasonable, and informed conclusions by analyzing the Pilgram Assurance case (attached) as evaluated by the corresponding item in the rubric "Develop rational, reasonable, logical conclusions."

**SLO 6: Communication (G: 2) (M: 1)**
Students will demonstrate ability to present a clear written expression of derived conclusions, judgments, and solutions by analyzing the Pilgram Assurance case (attached) as evaluated by the corresponding item in the rubric "Clearly communicate conclusions, judgments, solutions."

---

**Measures, Targets, and Findings**
See connected rubric. Rubric will be used to score responses on questions to each case. A score on each objective will be recorded along with a total score for each student. Students can use the scores on each item to learn where they have performed well and where they can improve. Faculty can use the scores to assess how well students are performing on each facet of the assignments and make adjustments as necessary.

**Source of Evidence**: Written assignment(s), usually scored by a rubric

### Target for O1: Data Evaluation
75% of students achieve score of 2.0 out of 3.0 on corresponding element of the rubric.

**Findings 2010-2011 - Target: Met**
100% of the Real Estate majors achieved a score of 2.0 out of 3.0 on the "Gather, organize, and classify data" element of the rubric evaluating the written analysis of the Pilgram Assurance case.

### Target for O2: Analytical skills
75% of students achieve score of 2.0 out of 3.0 on corresponding element of the rubric.

**Findings 2010-2011 - Target: Met**
100% of the Real Estate majors achieved a score of 2.0 out of 3.0 on the "Analyze information" element of the rubric evaluating the written analysis of the Pilgram Assurance case.

### Target for O3: Evaluation of evidence
75% of students achieve score of 2.0 out of 3.0 on corresponding element of the rubric.

**Findings 2010-2011 - Target: Met**
100% of the Real Estate majors achieved a score of 2.0 out of 3.0 on the "Evaluate assumptions, ideas, evidence and information" element of the rubric evaluating the written analysis of the Pilgram Assurance case.

### Target for O4: Integration of materials
75% of students achieve score of 2.0 out of 3.0 on corresponding element of the rubric.

**Findings 2010-2011 - Target: Met**
100% of the Real Estate majors achieved a score of 2.0 out of 3.0 on the "Synthesize information" element of the rubric evaluating the written analysis of the Pilgram Assurance case.

### Target for O5: Conclusions
75% of students achieve score of 2.0 out of 3.0 on corresponding element of the rubric.

**Findings 2010-2011 - Target: Met**
100% of the Real Estate majors achieved a score of 2.0 out of 3.0 on the "Develop rational, reasonable, logical conclusions" element of the rubric evaluating the written analysis of the Pilgram Assurance case.

### Target for O6: Communication
75% of students achieve score of 2.0 out of 3.0 on corresponding element of the rubric.

**Findings 2010-2011 - Target: Met**
71% of the Real Estate majors achieved a score of 2.0 out of 3.0 on the "Clearly communicate conclusions, judgments, solutions" element of the rubric evaluating the final written analysis of the Pilgram Assurance case. 100% of the Real Estate majors achieved a score of 2.0 out of 3.0 on the "Clearly communicate conclusions, judgments, solutions" element of the rubric evaluating the final written analysis of the Pilgram Assurance case.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**CTW in Real Estate review and improvement**
Continue with development of RE4700 course and materials. Conduct workshop with current and future instructors of course to review CTW requirements and resources annually. Review offering of course and results. Report assessment.

- **Established in Cycle**: 2009-2010
- **Implementation Status**: In-Progress
- **Priority**: Medium
- **Projected Completion Date**: 06/2011

**Change Achievement Targets to similar criteria as program targets**
Currently the CTW Achievement Targets are a minimum percentage of students attaining a "Satisfactory" score of 2.0 on each element of the grading rubric. The faculty want to change the Achievement Targets to be similar to overall program Targets for next year, setting a minimum 2.0 overall class average as the target.

- **Established in Cycle**: 2010-2011
- **Implementation Status**: Planned
- **Priority**: Medium

**Relationships (Measure | Outcome/Objective):**
Continued instructor training
In order to ensure consistency and that the rubric scoring is consistent, the Ambassador will hold 1 workshop at end of each semester with the assigned instructor for the upcoming semester to review the previous semester’s experience along with the planned syllabus, CTW assignment, grading, and assessment for the upcoming semester. This will be the time to review any questions and direct instructor to CTW materials.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium
Relationships (Measure | Outcome/Objective):
| Measure: Rubric | Outcome/Objective: Analytical skills
| Communication | Conclusions | Data Evaluation | Evaluation of evidence | Integration of materials

Projected Completion Date: 05/2012
Responsible Person/Group: Ambassador

Verify and clarify level of student performance
The instructor indicates that the only area in which any real estate majors were below a satisfactory level on their draft reports was in the area of clear communication. Then all the students achieved satisfactory level on their final report. It appears that in revising and resubmitting the paper that all students were able to meet a satisfactory level of problem solving and communication. The faculty want to ensure that this is a result of the process working and not using a rubric that sets standards too low.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium
Relationships (Measure | Outcome/Objective):
| Measure: Rubric | Outcome/Objective: Analytical skills
| Communication | Conclusions | Data Evaluation | Evaluation of evidence | Integration of materials

Implementation Description: Faculty will review examples of unsatisfactory, satisfactory, and superior reports and examine the student performance relative to the scores. The ambassador will meet with the instructor to communicate the faculty’s findings and recommendations.

Projected Completion Date: 05/2012
Responsible Person/Group: Department faculty and then Ambassador

Analysis Questions and Analysis Answers
CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
We made changes to the CTW goals and objectives as recommended by the review last year. We finished development of the RE4700 course and materials. The CTW ambassador met with the current/planned instructor to review CTW requirements and resources Spring 2011. The faculty reviewed the first offering and results. The faculty made suggestions for the Ambassador to talk with the instructor about minimum standards. The faculty recommended changing the Achievement Targets for next year. We reported our findings through the assessment process. These are all the actions we had specified in the Action Plan.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
We are unable to discern improvement from the entry level to the exit level class because we do not teach the entry level course. During this course, the students’ work improved as they became familiar with expectations and standards. The majority of the students improved in their ability to synthesize information and draw logical conclusions from the case material provided. They improved in their ability to analyze and focus attention on the key points relevant to central issue in the cases instead of being distracted by minor details. The instructor thought all the real estate majors were satisfactory at written communication upon entry to the course.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
We still need to more clearly delineate the CTW learning objectives from the other course learning objectives to reduce instructor confusion about evaluation of overall assignment and the CTW component. We also need to review the grading/scoring scale and the minimum standards the instructor is using. The largest problems we have encountered have been with coordinating multiple people involved with course development, CTW assignments and rubrics, teaching, and assessment. Each new person involved in the process has to learn about the CTW purpose, requirements, assignments, and assessments. Our faculty members are stretched thin with keeping their course content fresh and current, incorporating technology into the classroom, developing case and project assignments, conducting research, participating in professional organizations, and maintaining essential alumni and business relationships. Developing, using, and reporting on CTW assignments as well as tracking students through the advisement process to ensure they enroll in the proper CTW courses is additional work. The most needed assistance is more formalized centralized training and materials for instructors.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?
The primary change in our academic program was to create a case study course that would provide assignments that fit the CTW initiative while giving our students experience solving business cases. The primary impact on the students is that they are writing in their two CTW courses in addition to the writing intensive course that we already had in the major. The primary impact on faculty involved in the initiative is the creation of additional work in the form of formal plans, reports, and meetings. Since last year’s CTW report, the department assigned a different instructor to the course and he modified the CTW assignments.
Georgia State University
Assessment Data by Section
2010-2011 CTW Religious Studies

As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
Critical thinking as applied to the field of religious studies consists of the valid and fact-based analysis, understanding and comparison of religious phenomena in their varied contemporary and historical contexts. It emphasizes the individual's ability to grasp, assess, and comment with scholarly insight on religious texts--both primary and secondary--theories, rituals, beliefs, and actions.

Goals
G 1: Thinking
In Rels 3750 (Theories) students will demonstrate competency in critical thinking about religious phenomena. In Rels 4750 (capstone seminar) students will demonstrate clear critical thinking about religious phenomena and demonstrate the ability to evaluate arguments scholars have offered regarding those phenomena.

G 2: Writing
In Rels 3750 students will demonstrate competency in writing clearly and effectively about religious themes and topics. In Rels 4750 students will demonstrate the ability to write clearly and effectively about religious themes and topics and the ability to articulate original ideas pertaining to the themes and topics they have reviewed.

G 3: Evaluation
In Rels 3750 students will demonstrate the ability to understand and to compare and contrast religious claims and scholarly arguments about religious phenomena, drawing on textual evidence to support their claims. In Rels 4750 students will be able to understand and evaluate religious claims and scholarly arguments, identifying strengths, weaknesses, and implications of scholars' arguments.

Student Learning Outcomes/Objectives

SLO 1: Written Communication (G: 1, 2, 3) (M: 1, 2)
Through paper assignments, students will demonstrate clear communication and organizational skills and the ability to write without grammatical errors that detract from the clarity of the argument. In Rels 3750, students will organize a clear paper that compares and contrasts two scholars' arguments clearly and effectively. This paper will incorporate quoted material in an appropriate manner. In Rels 4750 students shall demonstrate the abilities to formulate a clear thesis statement, to support this thesis statement with appropriate facts or evidence, to consider the facts and evidence in a logical manner, and to draw appropriate conclusions from the findings. This paper will incorporate quoted material in an appropriate manner and a works cited or bibliography section.

Measures, Targets, and Findings

M 1: Writing for CTW (O: 1)
Rels 3750: In a final paper, students will compare and contrast two theorists that have been discussed in class. Students' comparative papers should utilize knowledge and materials assigned in the course and that require the formulation of critical judgments and assessment by the student. The assignment will include the statement of a focused comparison, organization, support for claims, clear writing, and appropriate grammar and syntax. Rels 4750: In brief response essays as well as a final paper, students will write about topics that the instructor determines are relevant to the class. Students' writing should utilize knowledge and materials assigned in the course and that require the formulation of critical judgments and assessment by the student. The assignments will include the presentation of a focused point of view (presented in the form of a thesis in the final paper), organization, support for claims, clear writing, and appropriate grammar and syntax. The final paper in Rels 3750 and the final paper and final response essay in Rels 4750 will all be assessed based on the following rubric. Each ranking will be multiplied by 5, so that each section will have a possible 25 points, with a possible total score for each assignment of 100 points. FOCUS 1. Does not have a thesis 2. Thesis is unclear 3. Thesis is stated but is not sustained over the course of the paper 4. Thesis is clear but focus on thesis could be stronger 5. Thesis is clear and is pursued throughout the paper (Possible 25 points) ORGANIZATION 1. There is no discernible organization 2. The organization of the paper is unclear 3. The organization is at times clear/sections of the paper are organized 4. The paper is organized but in a way that is not optimal 5. The paper's organization is clear and logical and it helps the author make his/her claims (Possible 25 points) IDEAS AND CONTENT 1. Ideas are largely incorrect 2. Ideas represent an adequate summary of other thinkers' views on the subject 3. Ideas represent a strong summary of other thinkers' views but evidence little original thought 4. Ideas evidence some sophisticated creative or new ideas 5. Ideas are consistently sophisticated and creative (Possible 25 points) WRITING 1. A large number of grammar, punctuation and style errors are present 2. A fair number of grammar, punctuation and style errors are present 3. Some grammar, punctuation OR stylistic errors are present 4. Very few grammar, punctuation or style problems are present 5. No significant grammar, punctuation or style problems are present (Possible 25 points) Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Written Communication
In Rels 3750, students will organize a clear paper that compares and contrasts two scholars' arguments clearly and effectively. This paper will incorporate quoted material in an appropriate manner. In Rels 4750 students shall demonstrate the abilities to formulate a clear thesis statement, to support this thesis statement with appropriate facts or evidence, to consider the facts and evidence in a logical manner, and to draw appropriate conclusions from the findings. This paper will incorporate quoted material in an appropriate manner and a works cited or bibliography section. In Rels 3750 and Rels 4750, the final papers will be evaluated
using the rubric, with scores of up to 25 points for focus, organization, ideas/content (support for claims), and accurate writing mechanics (appropriate grammar and syntax). Targets for final papers in Rels 3750 and 4750: at least 75% of our students shall score 18 out of 25 (72%) on Focus; at least 75% of our students shall score 18 out of 25 (72%) on Organization; at least 75% of our students shall score 18 out of 25 (72%) on Ideas Content; and at least 75% of our students shall score 18 out of 25 (72%) on Writing. Target for final response essay in Rels 4750: at least 75% of our students shall score 18 out of 25 (72%) on Focus; at least 75% of our students shall score 18 out of 25 (72%) on Organization; at least 75% of our students shall score 18 out of 25 (72%) on Ideas Content; and at least 75% of our students shall score 18 out of 25 (72%) on Writing.

Findings 2010-2011 - Target: Partially Met

For Rels 3750: In spring '11 the CTW ambassador reviewed 10 final papers written for the Rels 3750 class using the rubric. 83% of the papers received a score of 18 or higher for focus; 83% of the papers received a score of 18 or higher for organization; 67% of the papers received a score of 18 or higher for ideas/content; and 67% of the papers received a score of 18 or higher for writing mechanics. Based on this finding, it appears that students completing the initial CTW course for Religious Studies majors are more successful at focusing on the ideas of the essay and writing mechanics effectively. However, they have greater difficulty demonstrating mastery of content and incorporating material from a primary or secondary source effectively, and they do not display competence in basic academic writing skills. However, they have greater difficulty demonstrating mastery of content and incorporating material from a primary or secondary source effectively, and they do not display competence in basic academic writing skills. One possible strategy to implement is to pass this information on to the Rels 4750 instructor and target these skills for special attention in the capstone seminar. For 4750: In spring '11 the CTW ambassador reviewed 10 final responses essays written for Rels 4750 using the rubric. 70% of the papers received a score of 18 or higher for focus; 70% of the papers received a score of 18 or higher for organization; 40% of the papers received a score of 18 or higher for ideas/content; and 60% of the papers received a score of 18 or higher for writing. The CTW ambassador also reviewed 10 final papers written for Rels 4750. 50% of the papers received a score of 18 or higher for focus; 40% of the papers received a score of 18 or higher for organization; 50% of the papers received a score of 18 or higher for ideas/content; and 30% of the papers received a score of 18 or higher for writing mechanics. In order to address the low scores, the Rels 4750 instructor will make changes to the syllabus to focus less on the content material and more on writing skills.

M 2: Rubric-based assessment of a series of progressively more advanced writing assignments (O: 1)

CTW Plan

Critical thinking in our discipline involves carefully analyzing religious phenomena in their different contexts, developing valid interpretations of these phenomena, and communicating these interpretations persuasively in writing. Since all upper-level Religious Studies courses require significant writing and since many of our majors go off to top graduate programs, the goal of our CTW program will be to hone skills introduced in other courses, generate active discussions about critical thinking and writing and help students apply their skills directly to theories and questions central to the discipline. CTW Assessment Plan Both of our CTW classes involve reading challenging primary texts; analyzing these texts, other arguments and theories in class; and discussing course material in seminar-style settings. Faculty members will emphasize "low-stakes" short writing assignments in order to build key competencies such as close reading, summarizing texts, evaluating evidence, and constructing and evaluating arguments. At least one assignment in each course will require students to revise written work previously submitted to the instructor. Longer writing assignments, in which students will be required to use skills learned in shorter tasks, also will be required. Each semester, CTW instructors will employ the rubric below to help evaluate the various written assignments in the course. While not necessarily consistent with the primary basis for grading in the course, the scores earned on each assignment by students will be recorded throughout the semester--both as a pedagogical tool for students in the course and to provide data for annual CTW assessment.

CTW instructors will provide copies of the Rel's 3750 final papers and the Rel's 4750 final papers and final response essay to the CTW ambassador. Each year the CTW ambassador will select randomly at least ten final papers from each CTW section taught in the previous calendar year. The CTW ambassador will not know what grades the instructor assigned to these assignments, and the papers will be chosen "blindly," without knowing the students' names or overall performance in class. The CTW ambassador will then review these papers (independently from the CTW instructor's assessment), using the same rubric employed by the course instructor, as follows. Note that the ranking for each category (focus, organization, ideas, and writing mechanics) is multiplied by 5 to yield a possible score of up to 25 in each category and a total possible score of 100. FOCUS 1. Does not have a thesis 2. Thesis is unclear 3. Thesis is stated but is not sustained over the course of the paper 4. Thesis is clear but focus on thesis could be stronger 5. Thesis is clear and is pursued throughout the paper (25 possible total points) ORGANIZATION 1. There is no discernible organization 2. The organization of the paper is unclear 3. The organization is at times clear/sections of the paper are organized 4. The paper is organized but in a way that is not optimal 5. The paper's organization is clear and logical and it helps the author make his/her claims (25 possible total points) IDEAS 1. Ideas are largely incorrect 2. Ideas represent an adequate summary of other thinkers' views on the subject 3. Ideas represent a strong summary of other thinkers' views but show little original thought 4. Ideas show sophisticated, creative, or interpretative sophistication 5. Ideas are consistently sophisticated and creative (25 possible total points) WRITING 1. A large number of grammar, punctuation and style errors are present 2. A fair number of grammar, punctuation and style errors are present 3. Some grammar, punctuation OR stylistic errors are present 4. Very few grammar, punctuation or style problems are present 5. No significant grammar, punctuation or style problems are present (25 possible total points) Once all selected papers are assessed, the CTW ambassador will aggregate all of the performance measures and draft an assessment report based on these findings. The CTW ambassador will then convene a faculty meeting at which faculty can discuss ways to improve the rubrics, alter assignments, and find other ways to teach more successfully critical thinking and writing. Targets for final papers: at least 75% of our students shall score 18 (out of 25) on Focus; at least 75% of our students shall score 18 (out of 25) on Organization; at least 75% of our students shall score 18 (out of 25) on Ideas & Content; and at least 75% of our students shall score 18 (out of 25) on Writing. 2010-2011 RESULTS In Fall 2010 Rel's 3750 "Theories and Methods in Religion" (CTW) was offered, with 25 students enrolled. In Spring 2011 Rel's 4750, "Seminar in Religious Studies" (CTW) was offered, with 25 students enrolled. The instructor used the rubric that was created in 2009-10 to evaluate all students. In Spring 2011, the CTW ambassador for Religious Studies reviewed 10 final student papers, as per the Department plan, and evaluated them according to the rubric. 2010 RESULTS Because of enrollment issues, the only CTW section offered in 2009-2010 was during the Spring 2010 semester and to employ the rubric to assess these assignments.

Target for O1: Written Communication

In Rels 4750 students shall write 3 short essays in response to prompts. The final response essay will be evaluated using the rubric, with scores of up to 25 points for focus, organization, ideas/content (support for claims), and accurate writing mechanics.
Most Important Accomplishments for Year

In 2010-11 we implemented the rubric that had been established in the past cycle for reviewing student work. The CTW ambassador reviewed the final response essay assigned for Rels 4750 according to the rubric. 70% of our students shall score 18 out of 25 (72%) on Focus; 70% of our students shall score 18 out of 25 (72%) on Organization; 40% of our students shall score 18 out of 25 (72%) on Ideas Content; and 60% of our students shall score 18 out of 25 (72%) on Writing.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Implement scoring via rubric of assignments and collection of final papers

As explained above, the key players in the CTW program within Religious Studies have met and developed a plan for 2010-2011. We will continue to use the series of progressively more advanced assignments developed in the departments’ CTW offering during Spring 2010 (described in detail above), and we will implement the other aspects of the existing CTW plan. Specifically: (1) the CTW instructor will use the departmental CTW rubric to assess all CTW assignments in the course and will collect and preserve these scores; (2) the CTW instructor will collect and preserve 10 randomly selected final papers from each section taught; and (3) the department assessment committee in conjunction with the CTW Ambassador and CTW instructors will assess the collected final papers based on the rubric and will use these assessments as the basis for a departmental discussion of student learning in CTW during the Spring 2011 semester.

Action plan in response to 2010-11 findings.

While some of the targets were met in Rels 3750, none of the achievement targets were met in Rels 4750. The syllabus for 4750 will be adjusted to spend less time on content material (readings) and more time on writing skills.

<table>

Strategy for improving idea/content, writing mechanics achievements.

As noted in the findings, students completing Rels 3750 (the introductory Religious Studies CTW course) do not adequately exhibit mastery of content presented in the course readings, and they are not able to incorporate material from a primary or secondary source effectively. Finally, the findings indicate that they do not display competence in basic academic writing skills. The CTW ambassador will pass this information on to the Rels 3750 instructor, suggesting that more class time be spent discussing these writing issues when discussing the final paper. In addition, the Rels 4750 instructor will target these skills for special attention in the capstone seminar.

Annual Report Section Responses

Findings 2010-2011 - Target: Not Met

The CTW ambassador reviewed the final response essay assigned for Rels 4750 according to the rubric. 70% of our students shall score 18 out of 25 (72%) on Focus; 70% of our students shall score 18 out of 25 (72%) on Organization; 40% of our students shall score 18 out of 25 (72%) on Ideas Content; and 60% of our students shall score 18 out of 25 (72%) on Writing. All of these fall short of our achievement goal.

Most Important Accomplishments for Year

In 2010-11 we implemented the rubric that had been established in the past cycle for reviewing student work. The CTW ambassador...
assessed student work, compiled the results, and reported these through WEAVE online. The CTW ambassador also made arrangements to meet with the CTW instructors to review the results and target areas for improvement.

**Challenges for Next Year**
The challenge for next year will be 1) to maintain continuity as the CTW ambassador changes in the department, and 2) to make changes to the Rels 4750 syllabus to improve student achievement in the four writing areas targeted for improvement.

**Modifications in Intended Outcomes**
There are no modifications to intended outcomes from the previous cycle.

**Modifications in Measurement Methods**
None.

**University-wide Committee Participation**
None.

**Publications and Presentations**
None.

**Academic Teaching Activities**
None.

**International Activities**
None.

**Contributions to Student Retention**
None noted.

**Service to the External Community**
Nothing noted.

---

**Georgia State University**

**Assessment Data by Section**

**2010-2011 CTW Respiratory Therapy**

*(As of: 12/12/2016 04:11 PM EST)*

*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)*

**Mission / Purpose**
The Division of Respiratory Therapy will merge the principles of logical reasoning, problem solving, judgment, decision making, reflection, and lifelong learning in respiratory therapy.

**Goals**

**G 1: Registered Respiratory Therapist**
Each student will be able to make acceptable clinical decisions to become a Registered Respiratory Therapist (RRT).

**Outcomes/Objectives**

**O/O 1: NBRC (M: 1)**
All students will pass the national certification and registration exams offered by the National Board for Respiratory Care.

**Measures, Targets, and Findings**

**M 1: NBRC Results (O: 1)**
The graduating class, May 2011 passed both national examinations provided by the National Board for Respiratory Care (NBRC) at Georgia State University. The first time pass rate for the certification examination was 100%, the national average is 70%. Ninety-four percent of the class passed the written registry on the first attempt. The national average for this exam is 65%. Seventy-nine percent of the class passed the clinical simulation exam on the first attempt. The national average for this exam is 57%. The passage of these exams allow students to obtain a state medical practice license to practice respiratory therapy. We feel a correlation may exist with our CTW courses which stresses the need to critically evaluate material in order to correctly treat a patient successfully.

Source of Evidence: Certification or licensure exam, national or state

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Action Plan**
CTW courses will continue to develop the critical thinking ability of our students to complete the courses and to pass the national examinations. The goal will be to have a 100% first-time pass rate for the certification exam. The written registry and clinical simulation examinations will have a goal of 90% first-time pass rate.

*Established in Cycle: 2010-2011*
*Implementation Status: Finished*
Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
All students received a "C" or better in RT 3027 and RT 4085. A first-time pass rate for our students on the certification, written registry, and clinical simulation examination was 100%, 94%, and 79%, respectively. These results are similar to last year's results with biggest change in the pass rate of the clinical simulation.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
None currently.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
The faculty continue to strengthen the course assignments for the CTW courses. The most problematic of these have been the assignments for RT 4085. This course has been a WAC course and we continue to work on productive CTW writings. The assistance from the CTW small group meetings have been helpful.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
The primary impact is for all student to pass the national examinations. Currently have exceedingly better numbers than the national average. No changes have been made as this time.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
None.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.
None.

ADMINISTRATIVE DEPT QUESTION 1:
Explain how your department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?
The results were used to set the goals for this current year. No changes were made.

ADMINISTRATIVE DEPT QUESTION 2:
What have you learned from your assessment this year (2010-2011)?
We beleive that CTW instruction is more unified than in the past. We have had the same courses with the same instructors for the past 2 years. We will continue this consistency next year as all instructors from the past 2 years are currently assigned for next year.

ADMINISTRATIVE DEPARTMENT QUESTION 3:
What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?
We will continue to make changes to course assignments as needed to reflect the changing environment of respiratory therapy education.

Georgia State University
Assessment Data by Section
2010-2011 CTW Risk Management
As of: 12/13/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
For the purposes of our courses, critical thinking is defined as the ability to evaluate a set of facts, use the facts in conjunction with a theory to develop a conclusion. Specifically, the structured assignments will be designed to train the student to: 1) identify relevant facts; 2) identify relevant issues; 3) identify which approaches are candidates to solve the problem; and 4) identify the appropriate approach and be able to explain why this approach dominates others.

Goals
G 1: Critical Thinking in Risk Management
Students will demonstrate how risk management adds value to an organization through the use of a case study.
### Outcomes/Objectives

**O/O 1: Goal 1 Risk Assessment Process (G: 1) (M: 1)**

A number (5) of mini cases are assigned throughout the semester. These mini cases will relate to a specific part of the risk management process. The final case will be a summation of the students' efforts. The final case assignment will show improvement for 90% of the class based on the case rubric.

**O/O 2: Goal 2 Value of Risk Management (M: 2)**

Students should be able to describe the theoretical basis for risk management and distinguish it from risk minimization.

### Measures, Targets, and Findings

**M 1: Final Case (O: 1)**

Each student will be given a case study company to analyze. The case study will have five main parts. Each part will be based upon exercises completed during the semester. First, the student will assess of the firm's risk tolerance. Second, the student will develop qualitative and quantitative assessments of the firm's risks. Third, the student will be able to describe the portfolio of risks held by the firm and its appropriateness given the firm's risk tolerance. Fourth will be an assessment of the firm's risk financing and its appropriateness given the firm's strategy and risk tolerance. Fifth, will be assessment of the firm's ability to manage risks.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Goal 1 Risk Assessment Process**

The department of Risk Management expects that 75% of students will score 12 or higher out of 16 on the CTW rubric.

**Findings 2010-2011 - Target: Met**

2010-On the final case risk analysis 95% scored higher than the equivalent 12 out of 16 points on the new rubric.

**M 2: Exam Question (O: 2)**

Each student will be given a question on the first exam and on the final exam which assess their understanding of the risk management process. The question is not identical on each test, but should generate a similar answer. Here is a sample final question. You have been working for a company for a number of years. The director of enterprise risk management for your company was killed in a car accident. She was texting while driving, smoking, drinking coffee, and she was not wearing her seat belt when her car was struck by lightning. She was killed in the resulting accident. Unfortunately all the risk management documents for the company were also destroyed in the accident. The CEO asks that you take her job because you had a class in college on this topic. In a brief memo to your boss, J.P. Moneybags, explain what you will need to do get the risk management function operational once more. The first question was something like: Describe the elements of the risk management process. Results: On the final exam 82% received a 8 out of 10 on the rubric.

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O2: Goal 2 Value of Risk Management**

Target: 75 percent receive at least 8 out of 10 on the rubric.

**Findings 2010-2011 - Target: Met**

Results: On the final exam 82% received a 8 out of 10 on the rubric. However, the remaining students scored less than 6 with a number of students with 0 points.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Rethink Assignments**

We received a number of complaints about the mini case study assignments. One of the problems was that the students had no context in which to conduct a risk assessment. They wanted an example case. I wanted them to use their imagination to look at the materials and then come up with a rough draft of an assessment. I really didn’t want to provide them with an example (as we developed a detailed rubric). I believe they will just copy the example and not really think about the assignment. So, instead of making thing the students look at a number of different companies, we will make them choose one for the semester. Each of the assignments will related to a part of the risk management process (Identification of risk tolerance, risk identification, risk quantification, etc) and we will develop a new rubric for each part of the assessment and link it to an example case. Because there are no books for this subject, I am conceding the need for some written material, and I am willing to develop a handbook on risk assessment for the class which in its first draft will be an example case. We will also be using a new case with a risk management simulation model which should also tie these concepts together. I need to develop new assignments using this case too.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**

- **Measure:** Exam Question | **Outcome/Objective:** Goal 2 Value of Risk Management

**Projected Completion Date:** 08/2011

**Responsible Person/Group:** M Grace

### Analysis Questions and Analysis Answers

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this
Our goals were relatively modest as we essentially were trying to get students to think about the value of risk management and the process underlying it. These modest goals are met. I think we need to think about more challenging goals. Unfortunately, we are changing the course so much to find the right approach that we can only attempt to measure these modest goals right now. As we refine the course and reduce the number of new elements, we can challenge the students with higher order assessments. There is no standard curricula for this class. We are teaching this class differently than almost every other school and we do not yet have external benchmarks that can help us in terms of texts books or other materials.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
In the RCB, we do not yet have the ability to answer this question. We have an entry level class BA 3000 taught by people outside of our department and we do not really know what they are doing. I'd say that most students do not have much in terms of critical thinking skills when they get to our class. They are not required to make many critical decisions in their undergraduate classes and receive no reinforcement in any of the classes.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
The biggest problem is developing a CTW class for a course that is fluid. We spend a great deal of time thinking about the class and what we are teaching. We are not floundering, but we are experimenting a great deal. It is almost like a new prep every time it is taught. Our biggest need is to develop the right course and it is really up to us to get that done. Once we have that almost better course in place, we can really make improvements on the CTW content.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?
So far we have had no changes as a result of the CTW program. However, I am suggesting that we make one of our early-in-the-major classes a CTW class (in addition to the BA 3000 class) so we can make sure that we are getting our students the right types of CT skills. We are going to re-examine our undergrad program and as co-chair of the committee this is one of my main goals for our UG program. I’d also like to have more of my colleagues take part in the CTW thought processes. Only two of us teach an official CTW course, but I’d like to get the faculty who teach other courses to start to think about CT skills and how to reinforce them all the classes.

---

**Georgia State University**

**Assessment Data by Section**

**2010-2011 CTW Social Work**

(As of: 12/12/2016 04:11 PM EST)

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

**Mission / Purpose**

The mission of the undergraduate social work program is to prepare students for generalist social work practice in a range of roles and services that deal with the existing and developing challenges that confront individuals, families, groups, and communities. A central feature of social work education is to support student's recognition and use of critical thinking skills to support practice behaviors.

The critical thinking initiative in the School of Social Work supports the overall mission of the social work program by cultivating undergraduate students to conceptualize and write at a high level of ordered thinking in the context of social work generalist practice. Critical thinking, in a social work context, is viewed as a process to assess, critique, and evaluate theories and knowledge, varying modes of practice, beliefs and attitudes, and research. Social work practitioners always consider alternative or opposing view points to reach well-reasoned solutions and conclusions. Undergraduate social work majors may demonstrate their critical thinking abilities by:

1. Raising important questions and problems, and articulating them concisely and precisely;
2. Gathering and assessing relevant information, and showing the ability to interpret it effectively;
3. Maintaining an open mind when considering alternative thinking/ideas, assessing and evaluating assumptions, implications and practical consequences;
4. Developing well-reasoned conclusions and solutions to problems, using relevant criteria and standards; and
5. Communicating effectively with others when articulating complex problems and possible solutions.

**Goals**

**G 1: SW3330: Apply critical thinking to inform and communicate professional judgements related to early human development**

Distinguish, appraise, and integrate multiple sources of knowledge, including research-based knowledge, that informs understanding about early child development.

**G 4: SW3340: Apply knowledge of human behavior and the social environment during adulthood.**

Apply various conceptual frameworks to support social work practice behaviors with adult populations.

**G 7: SW3930: Develop interpretations and inferences about social problems and the necessity for a policy response.**

Analyze and interpret social problems that require a public policy response.

**G 3: SW3330: Acknowledge diversity and difference in early human development**

Learn to recognize and communicate the importance of diversity in shaping early life experiences and social work practice.
G 5: SW3340: Acknowledge diversity and difference in human development during adulthood
Recognize and communicate an understanding of diversity in shaping life experiences in early, mid and late adulthood stages.

G 6: SW3340: Apply critical thinking to inform and communicate professional judgements about social work practice with adults
Demonstrate written communication skills using multiple sources of information.

Student Learning Outcomes/Objectives

SLO 3: SW3930: Develop a written legislative brief on a current state policy (G: 7) (M: 3)
Students in SW3930 demonstrated critical thinking skills through the development of a written legislative brief based on tracking a state bill during the current Georgia legislative session in response to a social problem. However, only two sections of the paper were CTW designated - Problem Description and Problem Definition. Students were required to define and analyze the social problem addressed by the legislative bill. Literature reviews, data gathering, interviews with community stakeholders were all part of the process to describe the pervasiveness and intensity of the problem. Secondly, students determined how legislators and community stakeholders defined the problem addressed in a legislative bill.

Measures, Targets, and Findings

M 1: SW3330 Assignment Measures
The final paper for the course integrates course content using a specific case study. In the assignment, students demonstrated the ability to assess a problem within a theoretical framework, consider ethical case management decisions, and identify/evaluate possible practice interventions. Students were required to submit one draft of the paper in October; the final submission was due in December. The rubric was used to assist in identifying the student’s writing strengths and weaknesses, as well as the final grading. (Please see the document repository for SW3330 assignment and rubric). The assignment grade had a maximum of 80 points (40% of the total course grade). The full paper sections were problem assessment, literature review, ethics, intervention and evaluation. In addition, students were assessed on the paper format (e.g., APA style, use of citations, grammar, etc.). For the draft, students were only required to submit three sections of the paper (problem assessment, literature review, ethics), worth a total of 31 points.

Source of Evidence: Written assignment(s), usually scored by a rubric

M 3: SW3930: Assignment Measures (O: 3)
Students were required to develop a legislative brief for the course, worth 40% of the total course grade. However, only two sections were designated as CTW focused, Section 1- Problem Description and Section 2 - Problem Definition. The complete description of the sections, as well as the entire assignment can be found in SW3930 Legislative Brief Instructions located in the document repository. Two sections of the evaluation rubric assessed the student’s critical thinking skills: Item 4: to distinguish, appraise, and integrate multiple sources of knowledge based on background research on the social problem (e.g., use of multiple knowledge sources used to define social problem and policy response; and integration of knowledge sources in paper). Item 10: provide sufficient number of references; appropriate use of grammar and punctuation; appropriate use of APA formatting and communication format (e.g., graphs, tables, figures). The score range on the rubric scale is from 0 - 10, (0 = very low competency, and 10 = very high competency).

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: SW3930: Develop a written legislative brief on a current state policy
51% of the students will achieve a final rubric score of 7/10 or higher on each of the two evaluation rubric items, or a total of 14/20. This represents a majority of students achieving 70% of the assessed points for the CTW portion of the paper.

Findings 2010-2011 - Target: Met
A total of 85 students were enrolled in the course, divided into 3 sections. Three faculty had teaching responsibilities for the course. There was inconsistency in the submission of drafts across course sections. Students’ drafts were scored using the assignment rubric for two course sections; one section of 24 students did not have draft scores using the rubric for the two CTW portions of the paper. For the two sections that provided rubric scores for the drafts consisting of 61 students or 72% of the total student enrollment, the average draft score for item #4 (distinguish, appraise, and integrate multiple sources of knowledge) was 7.05, with a range of 4-10; the average score for item #10 (demonstrate effective written communication skills) was 6.75, with a range of 2-10. The final rubric scores for the two assessed items across all three sections are as follows: average score for item #4 was 7.8, with a range of 6-10; average score for item #10 was 7.55, with a range of 4-10. 82% of the 85 students enrolled in the course achieved a score of 7 or higher on item #4 and 75% of students achieved a score of 7 or higher on item #10.

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
Under the leadership of the CTW ambassador and the CTW coordinator for CHHS, training sessions were held with CTW teaching faculty and writing consultants at the beginning of the Fall and Spring semesters. These trainings were specified in the 2009/2010 action plan to help organize faculty and orient writing consultants for the tasks required to implement the program. The trainings were held September 2, 2010 and January 27, 2011. CTW class sizes were reduced for the academic year, which was specified in the 2009-2010 action plan. Previously, the class sizes raised concerns among the faculty about the workload burden. In 2010 academic year, the class sizes were reduced so that 3 sections of a course were offered to students. Also the number of writing consultants were increased to accommodate the added number of course sections; three writing consultants were hired in the fall, and six were hired in the spring. The social work librarian, Sarah Steiner, contributed to the CTW work team. Her specific contributions included conducting a bibliography/literature review workshop for students, and serving as a consultant for students with individualized
CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Based on the assessment scoring for CTW portions of course assignments, students have improved in various skills related to critical thinking. Specifically, in the policy class, students ability to analyze the varying sources of information has improved. The data sources included interviews with legislators to obtaining state data information on foster care services, as well as peer review information from periodicals. There are no “great leaps” in improvement, but students are recognizing the significance of their ability to critically analyze and synthesize information in a concise way. It must be noted that the emphasis on critical thinking is not limited to CTW courses in social work. The Council on Social Work Education (CSWE), the accrediting body for schools of social work, has as one of its mandated competencies in social work education the emphasis on critical thinking (Educational Policy 2.1.3, 2008). As a result, all social work courses have an emphasis on critical thinking integrated in course assignments, readings or practice applications.

Students come to recognize the importance of critical thinking in social work practice very early in the program, and continues for the two years as a social work major. The concepts of critical thinking are reiterated constantly in every course in the curriculum. Therefore, the CTW designated courses in social work are only one additional aspect of a concept that is infused throughout the entire curriculum. It is very likely that there is a “spillover” effect that occurs when students are applying critical thinking skills in one course, and it is apparent in other course outcomes, as well.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

1. There is the need to gain consistency across faculty in a given course. Faculty seem to “drift” to their own instructional desires regarding assignments or how assignments are implemented. Discrepancies occur even after attending training orientations and participating in discussions about the necessity to have consistency in course assignments.

2. The consistent use of writing consultants continues to be a concern. Some faculty have a portion of the grade attributed to working with a writing consultant, other faculty do not, even for the same course.

3. Developing CTW course assignments that are not overly burdensome to faculty is an area that needs further development. Faculty tend to stick with assignments that may be too cumbersome for CTW focus. Helping faculty to divide up a large assignment into more manageable CTW assignments is a requested area that faculty have an interest.

4. Faculty finding creative and innovative ways of developing an assignment for a course. The traditional term paper is a staple in social work, which often lacks creativity.

5. Faculty interest in CTW is waning. Faculty are feeling overwhelmed with managing CTW assignments, writing consultants, and the other responsibilities they are required to do for the school. Assistance is needed on helping to re-engage faculty again.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

An issue that was raised as a concern was the requirement of having students take two CTW required courses during the spring semester. SW3340 and SW3930. Students felt overwhelmed with having to schedule to meet with two different writing consultants, the demands of the writing assignments, and the seemingly redundancy in addressing similar critical thinking issues across courses. Faculty also recognized that students were essentially choosing which course they would give attention for CTW purposes. For example, if both CTW courses required students to meet with the writing consultant, students would meet with only one, and forfeit the other. However, there is no acknowledgement that in working with one writing consultant for a course, students may use that information for other CTW and non-CTW courses. Therefore, depending on the student's needs and assignment requirements, it may not be necessary for a student to schedule multiple consultation visits with different writing consultants when taking more than one CTW course at a time. Working with one consultant may be sufficient to address multiple needs.

In response to this issue, the faculty in the School of Social Work made the decision to modify the CTW course options for social work majors. The BSW curriculum committee voted unanimously at their February 16, 2011 meeting to reduce the spring CTW course load by discontinuing SW3340 as a CTW course requirement; Social Welfare Policy (SW3930) will remain as the sole CTW course in the spring semester. This change in CTW course options will occur beginning the 2011-2012 academic year. The course change maintains the program requirements of providing two mandated CTW courses for social work majors (SW3330 and SW3930). Faculty will review the course options again at the end of the 2012 academic year to determine the effectiveness of this decision.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Efforts continue to refine assignments that reflect CTW course goals and objectives. As stated earlier, faculty are finding difficulty using old assignments to fit with the necessary criteria for CTW. This is especially true for SW3330. Discussions will occur over the summer to modify assignments. It would be helpful to have workshops on types of course assignments sponsored by CTW staff. At present, the course learning outcomes, and targets appear reasonable, however, this may change if assignments are modified.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

As stated earlier, the faculty in the School of Social Work made the decision to modify the CTW course options for social work majors due to the intensity of the workload required in both course. The BSW curriculum committee voted unanimously at their February 16, 2011 meeting to reduce the spring CTW course load by discontinuing SW3340 as a CTW course requirement; Social Welfare Policy (SW3930) will continue as the sole CTW course in the spring semester. This change in CTW course options will occur beginning the 2011-2012 academic year. The course change maintains the program requirements of providing two mandated CTW courses for social work majors (SW3330 and SW3930). A method to inform faculty of the CTW findings is important to help them recognize their efforts have value. To date, a formalized way of communicating to faculty the outcomes of CTW has not been executed. During a faculty meeting in the fall semester, faculty will learn the CTW findings. It is hoped that this information will help them to recognize their positive efforts and the areas where additional work is required.
Mission / Purpose
The mission of our department's CTW program is to offer a changing range of courses across our three specialty areas that develop students' analytical, interpretive, and communication skills. Students will be assessed in terms of how well they are able, through their writing, to demonstrate these components of critical thinking: a written articulation of their understanding of sociological work (research reports, articles, books and theories); the ability to analyze and interpret sociological work; and the capability to use the results of their analyses to formulate new research questions and/or to extend analyses in new directions.

Goals
G 1: critical understanding
Students will learn to articulate in writing their understanding of sociological work.

G 2: critical writing
Students will learn to write critically, analytically, and interpretively about sociological work.

G 3: original critical expansion
Students will learn to formulate new research questions and/or to extend analyses of sociological work in new directions in their writing.

Student Learning Outcomes/Objectives
SLO 1: understanding (G: 1) (M: 1)
Professors of CTW courses will evaluate students' ability to demonstrate an understanding of sociological work in their writing assignments over the course of the semester. They will evaluate students using this scale: Excellent (4), Very Good (3), Good (2), and Poor (1).

SLO 2: writing (G: 2) (M: 2)
Professors of CTW courses will evaluate students' demonstration of their ability to critique, analyze, and interpret sociological work in their written assignments over the course of the semester, utilizing a four point scale: Excellent (4), Very Good (3), Good (2), and Poor.

SLO 3: expansion (G: 3) (M: 3)
Professors will assess students' demonstration of their ability to use results of analyses to formulate new research questions and/or to extend analyses in new directions in their written assignments over the course of the semester, utilizing a four-point scale: Excellent (4), Very Good (3), Good (2), and Poor (1).

Measures, Targets, and Findings
M 1: understanding (O: 1)
Seven professors reported on students in ten CTW courses taught during the past academic year: eight sections of "Sociological Methods," one section of "Families and Society," and one section of "Gender and Sexuality." Data were submitted on 246 students. For examples of assignments, please see attached syllabi. Professors assessed 29% of students as "Excellent" in terms of their demonstration of sociological understanding in their writing assignments across the semester; they assessed 35% as "Very Good"; 20% as "Good"; and 16% as "Poor."
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: understanding
Our goal is to have a majority of students score "excellent" or "very good" (3 or 4) on this measure; 64% did. This is a significant decline from last year -- 78% -- when far fewer students were assessed and fewer professors participated in assessment. The decline may be a result of these changes, and our students' higher level of success in past years may have been exaggerated. However, our achievement target for next year is to have a higher proportion of students show strength in this area.

M 2: writing (O: 2)
Seven professors reported on students in ten CTW courses taught during the past academic year: eight sections of "Sociological Methods," one section of "Families and Society," and one section of "Gender and Sexuality." Data were submitted on 246 students. For examples of assignments, please see attached syllabi. Professors assessed 28% of students as "Excellent" in terms of their ability to critique, analyze, and interpret sociological material in their written work over the course of the semester; they assessed 34% as "Very Good"; 20% as "Good"; and 17% as "Poor."
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O2: writing
Our goal is to have a majority of students score "excellent" or "very good" (3 or 4) on this measure; 62% did this year. This is a substantial decline from last year -- 73% -- when far fewer students were assessed and fewer professors participated in assessment. The decline may be a result of these changes, and our students' higher level of success in past years may have been exaggerated. However, our achievement target for next year is to have a higher proportion of students show strength in this area.

M 3: expansion (O: 3)
Seven professors reported on students in ten CTW courses taught during the past academic year: eight sections of "Sociological
Methods," one section of "Families and Society," and one section of "Gender and Sexuality." Data were submitted on 246 students.
For examples of assignments, please see attached syllabi. Professors assessed 28% of students as "Excellent" in terms of their ability to use results of their analyses to formulate new research questions and/or extend analyses in new directions in their written work over the course of the semester. They assessed 33% as "Very Good"; 22% as "Good"; and 17% as "Poor."

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: expansion

Our goal is to have a majority of students score "excellent" or "very good" (3 or 4) on this measure; 55% did this year. This is a substantial decline from last year -- 63% -- when far fewer students were assessed and fewer professors participated in assessment. The decline may be a result of these changes, and our students' higher level of success in past years may have been exaggerated. However, our achievement target for next year is to have a higher proportion of students show strength in this area.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

assessment tracking

This academic year, faculty judged that 64% of students are either excellent or very good in terms of demonstrating an understanding, in their writing, of sociological work. Faculty judged that 62% of students are either excellent or very good in terms of demonstrating, in their writing, the ability to analyze and interpret sociological work. Faculty judged that 61% of students are either excellent or very good in terms using the results of their analyses to formulate new research questions and/or extend analyses in new directions. Last year, professors rated 78% of students as "excellent" or "very good" in their ability to demonstrate "understanding"; 73% as "excellent" or "very good," in their demonstration of critical thinking in their writing (the "writing" measure); and 84% as "excellent" or "very good" in their ability to critically expand on ideas and research (the "expansion" measure). The changes (with a lower percentage of students in each category) may indicate that the increased number of courses evaluated this year were more challenging to students; this is likely since so many of the courses evaluated this year were methods course, which tend to be more difficult for students than other courses we offer. I will continue to gather and track assessment measures; our goal is that they (continue to) show a high level of achievement among students taking CTW courses.

Responsible Person/Group: CTW ambassador

development and promotion of offerings

One goal of our CTW plan is to offer a diversity of offerings from our three specialty areas, "Gender and Sexuality," "Family, Health, and the Life Course," and "Race and Urban Studies," and general courses (in addition to our "Sociological Methods" course, which is now always a CTW course). In addition to our Methods course, this past year, we offered CTW courses in "Social Psychology," "Gender and Sexuality," and "Families and Society," broadening our offerings from the previous year, and thus achieving our goal of expanding a diversity of offerings. Our CTW courses must have different course numbers, and hence, different names, than our "regular" courses on the same subjects without the CTW component. This apparently confused students in past years. We have striven to inform them via a variety of social networking strategies, about the CTW courses, feel like we have been successful in this regard this year also.

Implementation Description: In concert with our Undergraduate Advisor and the Programming Committee, I will strive to diversify future offerings, and to monitor student satisfaction with the diversity of courses offered. We will also be attentive to any further confusion generated by the complexity of naming and numbering CTW courses to distinguish them from non-CTW courses.

Responsible Person/Group: CTW Ambassador, Undergraduate Advisor, Programming Committee

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

We are achieving success in our goal of offering a variety of CTW courses across our specialty areas. Assessment reporting on the part of faculty teaching CTW courses has increased. Our methods course, SOCI 3020, is always a CTW course; this year I have made several attempts toward getting the faculty who teach this course to articulate their CTW goals more clearly on their syllabi. We
have maintained generally consistent positive results, consistent with data collected in past years.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Our assessment measures are not specific to individual or common assignments. Because the faculty teaching these courses is not consistent, and because faculty teach courses differently, and because we do not do entry-exit type assessment, we do not have any data that precisely answer this question.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

My impression is that the evaluative committee has never strongly approved of our broad approach to CTW courses, nor of our broad and simple approach to assessment. Faculty in this department want to keep the demands of assessment as basic as possible. I would like support in achieving this goal.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

The primary change is that students who take CTW courses and faculty who teach them enjoy a class size of 25, when most of our courses cap at 45 (though “Sociological Methods” has long been limited to 25). We offered two new CTW courses in the past year, “Families and Society,” and “Gender and Sexuality.” I have attempted to address the criticisms offered on last year’s report in this current report.

ACADEMIC PROGRAM QUESTION 1:

What changes in the assessment process has your degree program made since last year’s assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

I have revised my report from last year, to address reviewers’ concerns. Our program has not changed, nor has our rubric used to assess students’ learning outcomes.

ACADEMIC PROGRAM QUESTION 2:

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The data show we are accomplishing our goals. We do not plan any changes in our CTW program for next year, except to add new courses.

ADMINISTRATIVE DEPT QUESTION 1:

Explain how your department used the results from last year’s (2009-2010) assessment. What actions did you take? What changes did you make as a result?

The results were used for last year’s report, of which faculty were informed. The assessment data did not generate any need for action or change to our courses. Faculty continue to refine their own syllabi and assignments, of course; as far as I know, no one utilizes the assessment data we collect toward this end.

ADMINISTRATIVE DEPT QUESTION 2:

What have you learned from your assessment this year (2010-2011)?

We have learned that we are doing a good job of teaching critical thinking through writing. The data collected this year are consistent with data collected in previous years. Faculty judged that 64% of students are either excellent or very good in terms of demonstrating an understanding, in their writing, of sociological work. Faculty judged that 62% of students are either excellent or very good in terms of demonstrating, in their writing, the ability to analyze and interpret sociological work. Faculty judged that 61% of students are either excellent or very good in terms using the results of their analyses to formulate new research questions and/or extend analyses in new directions.

ADMINISTRATIVE DEPARTMENT QUESTION 3:

What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

I will continue to refine methods for communicating with and collecting data from faculty, as our program expands. I will consult with the Undergraduate Committee and the department overall to see whether they think changes should be made to our program.
Goals

G 1: CTW courses in the Spanish section will prepare students to engage fully with Hispanic societies and ideas.
   a) Contextual analysis: students will demonstrate an ability to identify and analyze cultural and historical traditions related to Hispanic culture. b) Textual analysis: students will demonstrate an ability to understand Hispanic literary texts and to analyze them with respect to basic literary concepts. c) Scholarly analysis: students will demonstrate an ability to analyze scholarly arguments related to Hispanic culture and literary traditions. d) Effective written communication skills: students will demonstrate an ability to present their ideas and arguments corresponding to goals a-c in clear and persuasive prose.

Student Learning Outcomes/Objectives

SLO 1: Active reading skills (G: 1) (M: 1)
SPAN 3307 Introduction to the Study of Literary Texts - One possible informal CTW assignment would require students to read all but the final paragraph of a story. Students will then be asked to write down the ending of the story as they imagine it; they will be intrigued if not shocked by the actual ending; at the very least, students will need to think of the story from an unusual vantage point and will need to pay very close attention to the story’s subtleties, including the way it engages with cultural motifs.

SLO 2: Historical analysis (G: 1) (M: 1)
SPAN 3307 Introduction to the Study of Literary Texts - In another possible informal assignment, students would be asked to imagine in writing how one of our authors (a female poet/nun from late 17th-century Mexico) would respond to a contemporary feminist treatise by a Puerto Rican writer. Doing so will require students to process and compare currents of thought expressed by authors writing in very different times and places, but who actually have much in common intellectually.

Measures, Targets, and Findings

M 1: Assessment Rubric (O: 1, 2)
Score of 6 – Consistently does all or almost all of the following: Accurately interprets evidence, statements, graphics, questions, etc. Identifies the salient arguments (reasons and claims) pro and con. Thoroughly analyzes and evaluates major alternative points of view. Generates alternative explanations of phenomena or event. Justifies key results and procedures, explains assumptions and reasons. Fair-mindedly follows where evidence and reasons lead. Makes ethical judgments. Language clearly communicates ideas and is often nuanced and elegant. Errors are minimal to non-existent. Score of 5 – Does most of the following: Accurately interprets evidence, statements, graphics, questions, etc. (Thinks through issues by) Identifying relevant arguments (reasons and claims) pro and con. Offers analysis and evaluation of obvious alternative points of view. Generates alternative explanations of phenomena or event. Justifies (by using) some results or procedures, explains reasons. Fair-mindedly follows where evidence and reasons leads. Language clearly communicates ideas. Errors are minimal. Score of 4 – Does most of the following: Describes events, people, and places with some supporting details from the source. Makes connections to sources, either personal or analytic. Demonstrates a basic ability to analyze, interpret, and formulate inferences. States or briefly includes more than one perspective in discussing literature, experiences, and points of view of others. Takes some risks by occasionally questioning sources, or stating interpretations and predictions. Demonstrates little evidence of rethinking or refinement of one’s own perspective. Style is appropriate to genre of work. Score of 3 – Does most or many of the following: Responds by retelling or graphically showing events or facts. Makes personal connections or identifies connections within or between sources in a limited way. Is beginning to use appropriate evidence to back ideas. Discusses literature, experiences, and points of view of others in terms of own experience. Responds to sources at factual or literal level. Includes little or no evidence of refinement of initial response or shift in dualistic thinking. Demonstrates difficulty with organization and thinking is uneven. In general, language does not interfere with communication. Errors in grammar and syntax are not frequent; there may be some problems of style. Score of 2 – Does most or many of the following: Misinterprets evidence, statements, graphics, questions, etc. Fails to identify strong, relevant counter-arguments. Draws unwarranted or fallacious conclusions. Justifies few results or procedures, seldom explains reasons. Regardless of the evidence or reasons, maintains or defends views based on self-interest and/or preconceptions. In many places language obscures meaning. Grammar, syntax or other errors are distracting with little evidence of proofreading. Score of 1 – Consistently does all or almost all of the following: Offers biased interpretations of evidence, statements, graphics, questions, information or the points of view of others. Fails to identify or hastily dismisses strong, relevant counter-arguments. Ignores or superficially evaluates obvious alternative points of view. Argues using fallacious or irrelevant reasons, and unwarranted claims. Does not justify results or procedures, nor explains reasons. Exhibits close-mindedness or hostility to reason. In most places language obscures meaning. Grammar, syntax or other errors are repeated with no evidence of proofreading. Goal is 4

Target for O1: Active reading skills
75% of students will score at least 4/6 on this writing assignment based on the assessment rubric.

Findings 2010-2011 - Target: Not Met
72% of students scored at least 4/6 on this assignment: 14% scored 6/6, 27% scored 5/6, 31% scored 4/6 = 72%. 18% scored 3/6, 7% scored 2/6, 3% scored 1/6, 0% scored 0/6.

Target for O2: Historical analysis
75% of students will score a minimum of 4/6 on this writing assignment based on the assessment rubric.

Findings 2010-2011 - Target: Not Met
70% of students scored a minimum of 4/6 on this writing assignment: 12% scored 6/6, 21% scored 5/6, 37% scored 4/6 = 70% attainment. 18% scored 3/6, 10% scored 2/6, 2% scored 1/6, 0% scored 0/6 = 30% no attainment.
### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### 75% of students attain 4/6 on assessment rubric

Based on the CTW assessment rubric, the CTW ambassador for the Spanish section (along with other participating faculty) will continue working to educate students taking Spanish CTW classes on the various elements of said rubric and its function in measuring student gains in critical thinking. Participating faculty will place greater emphasis on the attainment of a satisfactory score (4/6) based on the rubric and may implement a series of revisions to ensure attainment of minimum standards.

</tr>
</tbody>
</table>

#### 75% of students reach 4/6 based on assessment rubric

This particular assignment is more challenging to students because it calls on them to recall details of a text they read earlier in the semester. The greater difficulty is undoubtedly related to the lower percentage of students attaining a satisfactory score based on the rubric than in the other activity ("active reading skills"). Based on the CTW assessment rubric, the CTW ambassador for the Spanish section (along with other participating faculty) will continue working to educate students taking Spanish CTW classes on the various elements of said rubric and its function in measuring student gains in critical thinking. Participating faculty will place greater emphasis on the attainment of a satisfactory score (4/6) based on the rubric and may implement a series of revisions to ensure attainment of minimum standards.

</tr>
</tbody>
</table>

#### Continued efforts toward attainment of 75% goal

As the Spanish section continues its implementation of the CTW initiative, it will make greater and more concerted efforts toward student achievement of the 75% (score 4/6 or higher) goal. To this end, the ambassador for the Spanish section will notify participating faculty during the semester midpoints to clarify and underscore the presence of the 75% goal so as to encourage better student performance.

#### Increased clarity and visibility of CTW assignments

The action plan for this particular measure is similar to the one on close reading skills (see below). The Spanish section has, I believe, sound CTW assignments, rubrics, and measures; at this point, the task becomes one of continuing our progress toward the desired 75% attainment goal. A central task for the 2011-12 academic year will be to increase the clarity and visibility of CTW assignments. While the Spanish section is making steady progress in its implementation of the CTW initiative, occasionally participating faculty and students are not constantly aware throughout the semester that they are part of the initiative until it becomes time to report on findings for the semester in question. Consequently, while we are making improvements toward the 75% attainment goal (72% this year vs. 70% last year), my task in the year ahead is to more regularly emphasize our work toward the desired goal.

### Annual Report Section Responses

#### Modifications in Measurement Methods
None

#### Challenges for Next Year
The one area of CTW in our program that needs fine tuning is the reporting provided by faculty participating in the program. Part of the difficulty lies in highlighting CTW-driven changes to courses that many faculty had already been teaching over a number of years. In the year ahead (2011-12), I will have a greater store of literature/questionnaires to be given to faculty at intermittent stages of each semester.

#### Modifications in Intended Outcomes
There was a slight uptick in our efforts to reach the 75% benchmark in the attainment of our CTW assignments. While students still fall slightly below the benchmark (72% and 70%), the figures are rising and in the next year or two should be attained.

#### Most Important Accomplishments for Year
The Spanish section is making steady progress toward the implementation of the CTW initiative. Perhaps the greatest accomplishment in the previous year is the general implementation of the CTW initiative into the mindset of both students and professors: it is an initiative that is gradually becoming more central to the general aims of courses of which it is a part. Based on end-of-year reports submitted by students and on a scale from 0-5, the prevailing view is that CTW has been a useful tool. For example, the average score to the assertion "CTW assignments improved my ability to think like discipline" was 4.33; this score strongly indicates that students consider CTW assignments a helpful introduction to the kind of thinking that characterizes the discipline of Hispanic studies. While a slightly lower percentage (4.166) agreed with "CTW assignments improved my ability to write like discipline," this score is still satisfactory, although still a bit below the "5" optimum. The same score (4.166) was given to "CTW assignments prepared me for job I plan to pursue." This score suggests that students consider CTW a valuable tool, on the whole, for the pursuit of their overall professional plans.

#### CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
The Spanish section is making steady progress toward the implementation of the CTW initiative. Perhaps the greatest accomplishment in the previous year is the general implementation of the CTW initiative into the mindset of both students and professors: it is an initiative that is gradually becoming more central to the general aims of courses of which it is a part. Based on end-of-year reports submitted by students and on a scale from 0-5, the prevailing view is that CTW has been a useful tool. For example, the average score to the assertion "CTW assignments improved my ability to think like discipline" was 4.33; this score strongly indicates that students consider CTW assignments a helpful introduction to the kind of thinking that characterizes the discipline of Hispanic studies. While a slightly lower percentage (4.166) agreed with "CTW assignments improved my ability to write like discipline," this score is still satisfactory, although still a bit below the "5" optimum. The same score (4.166) was given to "CTW assignments prepared me for job I plan to pursue." This score suggests that students consider CTW a valuable tool, on the whole, for the pursuit of their overall professional plans.

#### CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
Participating faculty report that, because of CTW, students more clearly understand the value of critical thinking and writing in the discipline of Hispanic studies. While the Spanish section has modified and improved the organization of the CTW component within the Spanish major and it remains a bit early to draw conclusions based on comparisons between the entry level and exit classes, students have become more conscientious about the presence and value of the CTW initiative.

#### CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
The one area of CTW in our program that needs fine tuning is the reporting provided by faculty participating in the program. Part of the difficulty lies in highlighting CTW-driven changes to courses that many faculty had already been teaching over a number of years. In the year ahead (2011-12), I will have a greater store of literature/questionnaires to be given to faculty at intermittent stages of each semester.

#### CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes have your department made to the CTW initiative since last year's CTW Assessment Report?
CTW has been instrumental in fostering closer scrutiny of the Spanish major in terms of the expectations we have for students completing our program. It has made the Spanish section (whether explicitly or implicitly in terms of CTW) reassess the coherence of the major and how all its moving parts work in unison.

---

### Analysis Questions and Analysis Answers

#### CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

### Georgia State University

#### Assessment Data by Section

#### 2010-2011 CTW Speech

As of: 12/12/2016 04:11 PM EST
Mission / Purpose

In Speech “critical thinking” is the art of actively producing and analyzing arguments for particular audiences in specific cultural and historical contexts. Critical thinkers are able to construct and assess arguments in their cultural situatedness; evaluate stated or unstated claims and their supporting forms; recognize the creation of knowledge through symbol systems; and converse and pose question about the production of knowledge through the communicative process.

Goals

G 1: Understand Cultural Context
Since the cultural context of any communicative act is critical to the understanding of that act, students should be able to recognize the cultural context, construct arguments clearly, and adapt those arguments to that cultural context.

G 2: Evaluation
Students should be able to evaluate supporting materials and conclusions effectively in their own analyses.

Student Learning Outcomes/Objectives

SLO 3: Response Papers (G: 1) (M: 1)
Students wrote several response papers which required them to relate a specific concept from the day’s material to either their own experiences or to materials the instructor provided. Two of these papers were used in this assessment. Students were required to clearly define the concept, clearly explain the situation, and clearly connect the concept to the situation. Specific “prompts” were used to guide the students’ papers, and these prompts are provided in the attached document.

General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

4.0 Students effectively analyze the meanings of texts and/or works of art or music, express ways that culture shapes values, and critically evaluate them.

7.0 Students demonstrate understanding of the United States and its related political, social, and/or institutional developments.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)
4 Outcomes of research (3.3.1.4)

Strategic Plan Associations

3.1 Enhance a research culture.

SLO 4: Targeted Health Message (G: 1, 2) (M: 2)
Students studied a particular group all semester, and for this assignment, they completed a “targeted health message” for their group. This required identifying a specific health concern, explaining that concern and articulating how that concern was appropriate for their group; in addition, they were expected to identify the format of this health message (e.g., banner ad on website, print advertisement in paper, public service announcement on the radio, etc.), explain the details of the format, and articulate how this was appropriate to their selected group.

General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)
4 Outcomes of research (3.3.1.4)

Strategic Plan Associations

3.1 Enhance a research culture.

Measures, Targets, and Findings

M 1: Critical Thinking Rubric 1 (O: 3)
This rubric focuses on defining the concept (scored 0-4), explaining the situation surrounding the concept (scored 0-4), and clearly connecting the concept to the situation (scored 0-10). Although these scores were components of the grade on each assignment,
these scores did not constitute the entire grade; an additional 7 points focused on other academic issues not related to critical thinking and are thus, not reported here. See attached sheet "Assessed Response Papers Assignment Persuasion 2011."

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: Response Papers

scores of 80% by the majority of the students, preferably on both assessed response papers but at least on the second assessed response paper; an 80% would mean 3/4 on the first two measures and 8/10 on the second measure.

Findings 2010-2011 - Target: Partially Met

On the FIRST assessed response paper, 14/20 students achieved a score of 3 or higher on "defined the concept" and 17/20 students achieved a score of 3 or higher on "explained the situation" and thus, our achievement target was met. Unfortunately, students did not perform as well on the third rubric item "clearly connected the concept and the situation" and only 7/20 students achieved a score of 8 or higher. This did not meet our achievement target. On the SECOND assessed response paper, our achievement targets were met for all 3 rubric items, also showing an improvement from the first assessed paper to the second assessed paper. For this paper, 21 students achieved a score of 8 or higher on the third rubric item "clearly connected the concept and the situation." (N=21 student papers)

Target for O4: Targeted Health Message

The majority of students will achieve an average of 4/5, or a score of 80%, as an average across all 6 rubric items.

Findings 2010-2011 - Target: Met

This rubric was used for students in SPCH 4800 Communication and Diversity for both the fall and spring semesters. Of the 32 students evaluated, 19 students achieved an average of 4.0 or higher. The achievement target was met.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Rubric Revision

Written in summer 2010: The rubric may need to be expanded or tailored more directly to individual assignments. The speech faculty will review these results and the rubric in the fall to determine how the rubric should be revised. Written in 2011: Discussions in the Fall of 2010 resulted in the creation of the two rubrics used this past academic year, one for each CTW course in the speech major. These rubrics are tailored to the current assignments but need to be discussed further by the faculty to determine how validly these may measure "critical thinking" as the faculty have defined it.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Critical Thinking Rubric 1 | Outcome/Objective: Response Papers
Measure: Critical Thinking Rubric 2 | Outcome/Objective: Targeted Health Message

Implementation Description: Topic to be on agenda for fall 2011 speech faculty meeting
Responsible Person/Group: All speech faculty

Assignment Bank Development

The speech faculty discussed in the Fall of 2010 the idea of creating a list of possible assignments to use in our CTW courses. In 2009-2010, two assignments were used in the SPCH 3250 Persuasion course, and in 2010-2011 a new assignment was used in this course. This was the first year we offered SPCH 4800, and the same assignment was used both semesters, though that assignment differed from those offered in the persuasion course. As new faculty move into the teaching rotation for these courses, it will become important to develop a bank of possible assignments that meet assessment requirements while still allowing instructors to have freedom in teaching the courses. Several assignments now exist, and it will be important to develop additional ones, as well as determine how effective any of these assignments have been for our students.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Critical Thinking Rubric 1 | Outcome/Objective: Response Papers
Measure: Critical Thinking Rubric 2 | Outcome/Objective: Targeted Health Message

Implementation Description: This topic will be on the agenda for a fall 2011 speech faculty meeting.
Responsible Person/Group: Entire speech faculty

Faculty Training

The speech major has grown significantly over the past several years, and we will need additional sections of both CTW courses each year. This will require a more standard training procedure for the faculty.

Established in Cycle: 2010-2011
Implementation Status: Planned
Student Advancement

In our Capstone course (SPCH 4800 Communication & Diversity), we require the students to "describe" a targeted health message that they would create for the group they have studied all semester long. The students have managed to describe interesting, appropriate, and research-based messages, and our assessment indicates that these have been effective (i.e., our achievement targets have been met for all fall and spring semesters). Now it is time to advance this project, to challenge the students to "create" these messages rather than merely describe them. The description will still be required, as this description is the explanation/justification that the content and format of their targeted health message is appropriate for their particular groups. When the speech faculty first discussed this assignment, their intent was that the students would actually "create" these messages, thus fulfilling part of the major's mission (not just knowing what was involved in an effective message or analyzing effective and ineffective messages but also creating effective messages). This coming academic year, faculty will be encouraged to have students "create" these targeted health messages rather than merely describing them in their final portfolio.

Implementation Description: More faculty so that we can offer more sections of both CTW courses.
Responsibility Person/Group: CTW Ambassador Jaye Atkinson

Student Articulation

In our SPCH 3250 course, one of our achievement targets was not met (for the first writing assignment assessed, though it was met for the second writing assignment assessed). This suggests that further instruction explaining how to connect a particular course concept to a specific situation could benefit the students earlier in the course. The experience of writing these papers does seem to improve their ability to perform, but additional instruction could enhance their performance even more. As such, the speech faculty will discuss shorter writing assignments that require students to articulate the connections between course material (e.g., theory or theoretical concept or research finding) and a particular situation (e.g., presidential campaign slogan, public service announcement, etc.). Brainstorming on these types of assignments will add to our "assignment bank" and will enable instructors to offer students further experience articulating the relationship between concepts and situations.

Implementation Description: More faculty to brainstorm and discuss, then instructors for SPCH 3250 will need to implement these new assignments in their courses.
Responsibility Person/Group: Speech faculty to brainstorm and discuss, then instructors for SPCH 3250 will need to implement these new assignments in their courses.

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
We have taught two sections of our capstone CTW course: SPCH 4800 Communication & Diversity - it finally "made!" We trained a new instructor for CTW courses. The "targeted health message" assignment was successfully completed in both sections of the capstone course, and the students understood its relationship to their entire speech major experience. That is, they understood how various speech courses helped them complete that aspect of the capstone portfolio project. All of the students in our SPCH 3250 course improved their critical thinking scores from the early paper to the later paper.

Implementation Description: Instructors for SPCH 4800 will need to alter the final assignment in the course.
Responsibility Person/Group: CTW Ambassador Jaye Atkinson, as CTW Ambassador, will alter the final assignment in her section of the course AND offer training and support to other faculty teaching SPCH 4800 this academic year.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
In our SPCH 3250 Persuasion course, students definitely improved their critical thinking from one assignment to the next assessed assignment. Although a majority of students met the target for the first two rubric items, all of them met the achievement target for all 3 rubric items on the second paper. In the capstone course (SPCH 4800 Communication and Diversity), students understood and even enjoyed how their research over the semester (and information they had received in past speech courses) informed their "targeted health message." A majority of those students achieved the target, but with only 19/32 students achieving that target, there is definitely room for improvement in future sections of that course.

Implementation Description: The speech faculty to brainstorm and discuss, then instructors for SPCH 3250 will need to implement these new assignments in their courses.
Responsibility Person/Group: Speech faculty to brainstorm and discuss, then instructors for SPCH 3250 will need to implement these new assignments in their courses.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
We have three main areas still in development: assignments, rubrics, and faculty training. All of these have improved greatly in the last 2 years, but now that more sections of these courses have been taught, more assignments have been created, and our definition of critical thinking needs to be re-evaluated. Our lofty ideals are valuable but need to be revised for the reality of the speech major. In the past 2 years, we have also revised the curriculum of the speech major, including a complete revision of the mission, goals, learning outcomes. Those revisions must now be reflected in our understanding of critical thinking and how that should be measured. Basically, we need to continue our determination to create an assignment bank for the CTW courses and reconsider our definition of critical thinking and how to measure it. Finally, the major has grown tremendously over the last several years, and we need to train more faculty so that we can offer more sections of both CTW courses. Training has been fairly informal in the past, and now it needs to become more formal and routine. As for assistance, I would find it helpful to continue workshops in a more focused fashion. I loved the conference we had last fall. Listening to formal presentations from faculty from other departments enabled me to see the diversity...
of definition and measurement for critical thinking. This significantly helped us improve our rubrics for this year, and yet, more improvement is definitely sought. If possible, could we duplicate that conference next fall and then offer some less formal version of it in the spring? Inviting our CTW instructors would also be extremely productive, though not sure how to encourage them to attend. (By the way, I disagree with some of the feedback last year that suggested we should be grouped by commonalities; I learned a lot from departments/majors I felt were quite different from my own.)

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
The primary change has been the conscious decision to add more thoughtful writing assignments to our courses, even designing the capstone portfolio as a true major capstone experience. Rather than requiring writing assignments that summarize past research or define concepts, we are now requiring our students to use past research and definitions to create arguments and targeted messages. In the mission for the speech major, we state that "speech communication explores the construction, diffusion, analysis, and impact of messages as they occur among individuals, groups, organizations, and cultures in the media age." Our CTW courses truly emphasize the mission of our major in a clear and focused manner. Changes include the assignments and the rubrics; these remain in development and discussion, as mentioned in previous reflection questions and action plans. We have improved our rubrics, but they are not yet what we want them to be. The 3 sections of our CTW courses this past year have illuminated our need to reconsider our definition of critical thinking - to be sure it reflects the newly revised curriculum and the reality of what we teach.

Annual Report Section Responses
Most Important Accomplishments for Year
We have taught two sections of our capstone CTW course: SPCH 4800 Communication and Diversity - it finally "made!" We trained a new instructor for CTW courses. The "targeted health message" assignment was successfully completed in both sections of the capstone course, and the students acknowledged its relationship to their entire speech major experience. That is, they understood how various speech courses helped them complete that aspect of the capstone portfolio project. All of the students in our SPCH 3250 course improved their critical thinking scores from the early paper to the later paper.

Challenges for Next Year
More faculty will be involved in BOTH CTW courses this upcoming year. This past year only 2 instructors were involved. Training will need to be enhanced. Also, the assignments we are using need to be examined and discussed by the entire speech faculty; further assignment options should be created. Finally, the rubrics and our critical thinking definition need to be reviewed again by the entire speech faculty; developments over the past year (e.g., offering our capstone course for the first time) may have helped us clarify how we should define critical thinking (and thus, how we should measure it).

Modifications in Measurement Methods
As mentioned for "challenges for next year," we need to review our rubrics again and determine if these are effectively measuring all aspects of critical thinking. Our current definition is rather detailed and slightly different from our measures; thus, both need to be reviewed and modified.

Georgia State University
Assessment Data by Section
2010-2011 CTW Women's Studies
As of: 12/12/2016 04:14 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
Women's Studies at Georgia State University contributes to the university's broader mission of encouraging critical thinking through a focus on feminist and womanist interdisciplinary scholarship, teaching, and community participation. Women's Studies began by explicating the ways in which gender and sexuality, in connection with other categories such as race, class, ability, and age, construct our understandings of the world. Furthermore, we analyze the ways public discourse relies on gender and sexuality to conceptualize such issues as war and militarism, policy, the environment, education, healthcare, economics, the media, and popular culture. These courses will help students develop cognitive and analytical skills necessary to fulfill our learning outcomes: they will be able to identify and analyze arguments, they will be able to demonstrate knowledge of theoretical perspectives pertinent to women's studies, they will be able to demonstrate their writing skills as defined by the ability to organize material, provide sufficient evidence, and formulate new research questions.

Goals
G 1: Process of constructing arguments
These courses will help students develop cognitive and analytical skills necessary to fulfill our learning outcomes: they will be able to identify and analyze arguments, they will be able to demonstrate their writing skills as defined by the ability to organize material, provide sufficient evidence, and formulate new research questions.

G 2: Demonstration of knowledge
Students will be able to demonstrate both their knowledge of the field(s) and ability to use feminist/womanist perspectives in their work.

G 3: Critical thinking through reading
Students will demonstrate their ability to critically interpret texts, including finding main points and outlining arguments.

### Measures, Targets, and Findings

#### M 1: In 3010, Final Paper (O: 2, 3)

Your final paper will be a 5-7 page paper in which you both revise and expand on one of your short papers. Your final paper must demonstrate that you have re-thought the ideas presented in your short paper -- it will be both revised and developed.

Source of Evidence: Written assignment(s), usually scored by a rubric

#### Target for O2: demonstrate knowledge of theoretical perspectives

We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

#### Findings 2010-2011 - Target: Partially Met

Because this finding involved assessing a revised and expanded version of the earlier paper, it is not surprising that the scores are a bit higher than on the previous ones. In terms of the final paper, 90% of students received a 3, and 70% received a 4 or 5. This score is much closer to our goal.

#### Target for O3: writing skills

Again, on each item of the rubric associated with writing skills, our target is for 75% of students to achieve a 4 or 5, and for all students to receive a 3.
On this assignment, 90% of students received a 3, and 60% of students received a 4/5. Again, it is unclear whether we scored these harder this time, or whether expecting 100% of students to do anything is unrealistic. Some of these students have always had difficulty with writing, so I think we need to make our target more reasonable.

M 2: In 3010, Short Papers (O: 1, 3)

Students will write 2-3 page papers that explore course readings and themes in greater detail. You might: 1) Use (at least 2) theorists from course readings to analyze some aspect of popular culture, daily life, or social interactions, politics, literature, art, etc. 2) Take issue with a theory or theorist we have read. In this case, you will need to use other sources (in addition to the ones you critique, either from course readings or from outside sources), to back up your claims. 3) Put two (or more) theorists from course readings in conversation with one another to expand on or develop a key debate within feminist theory. These are just suggestions — as long as you have an original and clear thesis statement that is grounded in course readings, you may develop a paper about whatever you are interested in exploring further.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Identify main points and arguments

We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

Findings 2010-2011 - Target: Not Met

On this measure 80% of students received a 3, and only 60% of students received a 4 or 5. This is lower than last year's, so we either need to examine the way in which we assessed this, or clarify on the assignment the desired goal of requiring that students really engage with course readings for this assignment.

Target for O3: writing skills

We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

Findings 2010-2011 - Target: Not Met

On this assignment, 75% of students received at least a 3, and 50% received a 4/5. Perhaps our standards are too high, or the scoring is too low, or else we need to clarify our assignment. Given that students knew that they were going to rewrite one of these papers for their final, they may have also not taken them as seriously as final papers.

M 3: In 4920/4950, Final Paper (O: 4, 5, 6, 7)

Senior Research in Women's Studies gives students an opportunity to do advanced work on a chosen topic. Both student and instructor will decide upon a project that the student will complete during the semester. The instructor is responsible for meeting with the student at agreed-upon times during the semester, for guiding and evaluating the student's work, and for assigning a grade. The student is responsible for completing the requirements agreed upon with the instructor. The main requirement for this course is the major paper, which should be approximately 20-25 pages long, and follow appropriate academic conventions for a research paper, including a substantial, properly cited bibliography. 1) Students must meet with their advisor regularly 2) Students must turn in material by the agreed-upon due dates. Since course predominantly focuses on the creation of a major paper, the paper requirements will include various due dates throughout the semester. These due dates comprise dates both that various readings must be completed as well as the material involved in writing and revising a major paper. Various due dates will include: a. Due date for working thesis b. Due date for bibliography c. Due date for outline d. Due date for introduction e. Due date for completed first draft f. Due date for Final paper g. If necessary, another due date for a revised draft (I can't fix the formatting on this to go back to the original indentation). Interns will also write a research paper (7-10 pp.) on a topic related to the organization's work. The paper should follow an acceptable academic style (APA, MLA, etc.) and should include academic references, such as books and articles in recognized journals. The paper might also include interviews with on-site personnel and/or publications by the organizations. The paper should be analytical and not merely report on the day-to-day activities of the intern. It must also go through a revision process, in which the advisor has the opportunity to read a complete draft before the student submits the final paper (50%).

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O4: Demonstrate writing skills

We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

Findings 2010-2011 - Target: Partially Met

80% of students achieved at least a 3, which partially meets our goals, and 60% of students received a 4, which does not quite meet our target.

Target for O5: Theoretical Perspectives

We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

Findings 2010-2011 - Target: Partially Met

For this outcome, all students did indeed receive at least a 3, but only 60% received a 4 (instead of the targeted 75%). While our students are doing decent work, then, they are not performing as strongly as we would like.

Target for O6: Apply skills

We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

Findings 2010-2011 - Target: Met

On this measure, all students received at least a 3, and 80% received a 4 or 5. Our action plan therefore worked in terms of
this particular outcome, in that we were able to focus on students’ application of the skills they have learned throughout their major classes more successfully this year than last.

**Target for O7: Connect to lived experiences**

We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

**Findings 2010-2011 - Target: Met**

On this measure, we found that 100% of students received a 4 (good). The action plan that involved increasing the focus on applying skills also proved beneficial in terms of the impact on connecting the theoretical perspectives to lived experiences.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Explore ramifications**

One thing that we noticed in assessing the results of the capstone class is that students could explore the implications of their research in more detail. In particular, we would like to help students work on how to use their research to contribute to the theoretical perspectives they are utilizing, in order to increase the integration of theory and results.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** Medium

**Relationships (Measure | Outcome/Objective):**

- Measure: In 4920/4950, Final Paper | Outcome/Objective: Theoretical Perspectives
- **Responsible Person/Group:** Julie Kubala

**Improve writing skills**

We intend to try to implement more early intervention into writing skills in order to help students improve their writing skills in these short papers. One of the major challenges here is that these are ungraded papers; as such, students are not particularly motivated to work hard in their writing here. On the other hand, ungraded writing assignments have proven quite useful in contributing to improving students' writing in general.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**

- Measure: In 3010, Short Papers | Outcome/Objective: writing skills
- **Responsible Person/Group:** Julie Kubala and Amira Jarmakani

**Peer Review**

While we established a revisionary process for the 3010 class this year, we realized that we could strengthen the process through providing more stringent guidelines for peer review and establishing ways to hold students accountable for their participation in the process.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**

- Measure: In 3010, Final Paper | Outcome/Objective: writing skills
- **Responsible Person/Group:** Julie Kubala and Amira Jarmakani

**Increase time for revision**

While we have been doing a good job with this in terms of the Senior Research paper, what we realized this cycle is that we do not enforce enough time for revision for the final paper for the internship. We should ensure that students turn in a complete draft of their internship paper with at least 2 weeks for revision (which we do with the Senior Research paper). We hope this would increase the demonstration of writing skills in the internship final paper. Also, this year, in the single example of senior research, the student did not allow sufficient time for revision. We need to strengthen our emphasis on revision and on finishing tasks more quickly in order to have students write a strong research paper within a single semester.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**

- Measure: In 4920/4950, Final Paper | Outcome/Objective: Demonstrate writing skills
- **Projected Completion Date:** 05/2012
- **Responsible Person/Group:** Director of Undergraduate Studies

**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

The major CTW accomplishment for this year involves the improvement of the revision process in WSt 3010. This year, instead of solely using the students to do peer review, the instructor used a process that involved both student peer review and teacher feedback. Rather than have a number of weekly papers, the students turned in two (longer) short papers, which had undergone a peer review process, then the teacher provided substantive feedback, and then students expanded one of those papers into their
final paper. In terms of the student peer review process, the results, (predictably) were mixed. Some groups worked hard to provide clear and useful feedback, whereas others did not. Similarly, some students seemed to really incorporate and address the criticisms, whereas others did not. On the other hand, students did much more revision from the short paper to the long. One of the biggest challenges has been the revision process is convincing students of its utility. Having teacher feedback, as well as the pressure of the final assignment, did seem to be fairly effective in terms of convincing students of the importance of actually re-engaging with their papers so that they could substantially rework them into stronger arguments. Dr. Jarmakani's reflections also added, "My impressions were strong enough, though, that I would definitely try this assignment again…. I think one thing that really made a difference is that they had some weeks (or even months) to let the short paper simmer before they came back to it for the final, and it is that forced simmering period that is so hard to get normally. Also, I think it really helped them synthesize major concepts from class. They chose the one paper that they were really interested in, and came back to develop it after having read and discussed everything from class. Because they were interested in it, they could devote time to thinking more about it, and because they had a head start (a short paper), they could really build on and develop ideas, rather than having to be brilliant all at once when they were exhausted." The above analysis addresses two specific action plans: Improving the peer review process, and increasing writing intervention. In terms of the capstone classes, we wanted to expand the attention paid to exploring the ramifications of theoretical perspectives. In general, we were fairly successful in terms of helping students think through the connections between theory and practice, but again, it is difficult to make any sorts of generalizations with such a small sample size. In particular, this year we had far more students choose to take the Internship course rather than the Senior Research class. It seems obvious that the final paper from an internship course would be more concerned with addressing the implications of theoretical projects, so I do not want to overstate the effectiveness of this intervention.

CTW Reflection 2:  Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class ?

Within our department, we generally have two sets of critical thinking through writing goals. The first set, loosely categorized under "demonstrating theoretical knowledge" has consistently been more successful than the second, which involves more general writing and reading skills. Therefore, we have focused much of our intervention, especially in the 3010 class, on the writing/reading skills. In general, one of the areas we have focused on involves some basic critical reading skills, such as finding the main points and the arguments supporting them within class readings. Students are improving in terms of these skills, as we are seeing improvement in the ability to differentiate between author arguments and the opinions of the students. In other words, students are learning to be able to articulate the authors' points as separate from what students think they should be arguing. In terms of increasing writing skills, we have been using the revision process to address our persistent problems, which involve developing clear and focused thesis statements and providing sufficient evidence for students' arguments. I think our results here have been mixed. One of the central reasons that we chose the revision process (as well as providing clear instruction) for these issues is because I do think students learn best through concrete feedback on their particular papers; writing is an individual process that requires specific feedback. This process can be, though, quite time-consuming, so we have found it particularly helpful to focus on specific areas of concern and asking students to write about those areas. We have been using the revision process to address our persistent problems, which involve developing clear and focused thesis statements and providing sufficient evidence for their claims. One persistent problem that we encounter involves the ability to contribute to improvement within the time limits of undergraduate careers. We continually find that students who have significant writing problems in our lower-level classes may improve, but they often do not improve as much or as quickly as we would like them to. Similarly, students who are doing really well in the capstone class have generally always been strong writers. We would like to develop more ways to address these disparities, if possible.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

In general, I think we are doing a good job of accomplishing our ctw goals. We still could refine the revision process further. In particular, in 3010, we are still working to develop the most effective method of requiring students to revise their papers. It requires a balance between sufficient time to let ideas percolate, the time constraints of the semester, the amount of time any instructor has, and the desire that students not use original assignments as rough drafts to be edited by the teacher. In terms of the capstone classes, we need to require students to submit a complete draft earlier, so that there is sufficient time for revision. We have not always had hard-and-fast schedules here, especially with the internship, but I think we will need to mutually agree on some dates at the beginning of the semester so that we can ensure that students will really have time to re-engage with their own work as part of the revision. Furthermore, we are continually revising our writing instructional materials so that we can more effectively address common writing problems that students may have.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

It is hard to really think through the primary impact of CTW in our department, in part because our discipline has always focused on critical thinking, writing, and the connections between them. While we have always been committed to these practices, the most significant impact of the CTW program has been in making our teaching more consistent and formalizing certain instruction practices. We have collectively developed worksheets on writing instruction, for example. Most importantly, however, we have begun requiring revision within the CTW classes. As we work through which revision processes seem most helpful for writing and thinking, we are documenting and discussing the kinds of attention to pedagogy that we may have been using, but we hadn't been discussion and collecting information about in such a deliberate fashion. We have not really made substantial changes to the CTW initiative. Rather, we are continuing to work on refining the sorts of practices that we have started in order to strengthen what have always been our goals: getting students to read thoughtfully, write well, and think critically.
SLO 3: Articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources (M: 3)
Articulate and apply the theoretical basis and the practical issues in the healthcare delivery system and the resources that comprise it. This includes the overall planning, organization, management, evaluation, quality, and major health policy issues.

Other Outcomes/Objectives

O/O 1: Identify security and privacy circumstances and required controls (M: 1)
Students will be able to articulate security and privacy circumstances and to propose appropriate controls.

O/O 2: Design and appropriately employ ubiquitous and pervasive information systems (M: 2)
After completing this course successfully, a student should have: · An in-depth knowledge of ubiquitous and pervasive information systems · A high-level understanding of UPIS applications and their usage scenarios · An understanding of multiple networking technologies to be used in UPIS environment · The skills to identify and design the infrastructure-support for ubiquitous and pervasive information systems · An in-depth knowledge of devices and middleware challenges in UPIS environment · A high-level knowledge of network and quality of service management · Skills to derive security and data-access requirements of different UPIS applications · An understanding of multiple factors in offering, adoption and usage of UPIS services · An awareness of emerging trends and development in UPIS

O/O 4: Identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems (M: 4)
Envision and describe considerations in the analysis, design, selection, implementation, operation, and evaluation of health information systems in a variety of settings such as health systems, hospitals, and medical practices with a focus on the critical role of e-health and information systems in the planning, operation, and management of health care organizations.

Measures, Targets, and Findings

M 1: Students will understand and analyze security and privacy circumstances and will propose appropriate control decisions. (O: 1)
Students will understand and analyze security and privacy circumstances and will propose appropriate control decisions.
Source of Evidence: Writing exam to assure certain proficiency level

Target for O1: Identify security and privacy circumstances and required controls
75% of students will be rated at or above 2.0. Measurement will be done by applying the Rubric below to the midterm or final paper in CIS 8080. Learning Objective: Identify security and privacy circumstances and required controls Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure: Accurately analyze security and privacy circumstances and propose appropriate control decisions. Students were not able to accurately articulate security and privacy circumstances and to propose appropriate control decisions. Students were able to accurately articulate security and privacy circumstances and to propose appropriate control decisions. Students were able to accurately articulate security and privacy circumstances and to propose appropriate control decisions.

Findings 2010-2011 - Target: Not Reported This Cycle
Only one student in this program took CIS 8080 during 2011-2012. This is not sufficient to assess.

M 2: Design and appropriately employ ubiquitous and pervasive information systems (O: 2)
Students will design and appropriately employ ubiquitous and pervasive information systems.
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O2: Design and appropriately employ ubiquitous and pervasive information systems
75% of students will be rated at or above 2.0. Measurement will be done by applying the Rubric below to the midterm or final paper in CIS 8080. Learning Objective: Design and appropriately employ ubiquitous and pervasive information systems Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure: Accurately design and appropriately employ ubiquitous and pervasive information systems Students were not able to accurately design and appropriately employ ubiquitous and pervasive information systems. Students were able to accurately design and appropriately employ ubiquitous and pervasive information systems. Students were able to accurately design and appropriately employ ubiquitous and pervasive information systems. Students were able to accurately design and appropriately employ ubiquitous and pervasive information systems.

Findings 2010-2011 - Target: Not Reported This Cycle
CIS 8070 was not offered during 2010-2011.

M 3: Articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources (O: 3)
Students will be able to articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources.
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: Articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources
75% of students will be rated at or above 2.0. Measurement will be done by applying the Rubric below to the student work in HA.
8160 Health Care System. Learning Objective: Articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources. Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure 1: Accurately articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources. Students were not able to accurately articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources. Students were not able to accurately articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources. Students were not able to accurately articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources.

Findings 2010-2011 - Target: Not Reported This Cycle

Only one student in this program took this HA 8160 during 2010-2011. This is too few to assess.

M 4: Identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems (O: 4)

Students will identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O4: Identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems

75% of students will be rated at or above 2.0. Measurement will be done by applying the Rubric below to the student work in HA 8670 Health Information Systems. Learning Objective: Identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure 1: Accurately identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems. Students were not able to accurately identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems. Students were not able to accurately identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems.

Findings 2010-2011 - Target: Not Reported This Cycle

No MBA HAIS students took HA 8670 during 2010-2011.

Georgia State University
Assessment Data by Section
2010-2011 Early Childhood Education BSED
As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The purpose of the Bachelor of Science in Education Program in Early Childhood Education at Georgia State University is to prepare teacher candidates who will be qualified to direct the education of young children from pre-school through elementary grades. The theme of this program is to develop teachers as facilitators of learning. Coursework, extensive field experience and collaboration among school and university faculty combine to develop a program that supports the professional growth of the novice educator.

Goals
G 1: Content Knowledge
The teacher candidate will have the content knowledge necessary to understand the curriculum he or she teaches.

G 2: Pedagogical Content Knowledge & Skills
The teacher candidate will have the pedagogical content knowledge and skills to be able to plan and implement effective instruction.

G 3: Student Learning
The teacher candidate will use varied assessment techniques and critical reflection to increase student achievement.

G 4: Diversity
The teacher candidate will meet the cultural, linguistic, learning and behavioral needs of all learners.

Student Learning Outcomes/Objectives
SLO 1: Demonstrates content knowledge (G: 1) (M: 3, 5, 6)
Teacher candidates understand the central concepts, tools of inquiry, and structures of the discipline he or she teaches and creates learning experiences that make these aspects of subject matter meaningful for students.

General Education/Core Curriculum Associations
1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience,
meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

2.0 Students understand and apply mathematical concepts and reasoning using verbal, numeric, graphical and/or symbolic forms.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

4.0 Students effectively analyze the meanings of texts and/or works of art or music, express ways that culture shapes values, and critically evaluate them.

5.0 Students demonstrate understanding of the physical universe, the nature of science, and the scientific method, and/or understand and apply mathematical concepts and reasoning using verbal, numeric, graphical or symbolic forms.

6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

7.0 Students demonstrate understanding of the United States and its related political, social, and/or institutional developments.

8.0 Students demonstrate understanding of the physical universe, the nature of science, and the scientific method, and/or understand and apply mathematical concepts and reasoning using verbal, numeric, graphical or symbolic forms.

Institutional Priority Associations

1 Student retention
2 Student promotion and progression
3 Timely graduation

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Strategic Plan Associations

1.1 Increase the level of scholarship support for undergraduate students.
1.3 Implement an Undergraduate Signature Experience.
1.5 Other efforts in support of Goal 1 (Undergraduate Education).
3.1 Enhance a research culture.
5.4 Enhance the global competency of students, faculty and staff.

SLO 2: Plans effectively for instruction (G: 2) (M: 1, 3)

Teacher candidates plan instruction based upon knowledge of subject matter, students, the community, and curriculum goals.

General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Institutional Priority Associations

1 Student retention
2 Student promotion and progression
3 Timely graduation

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Strategic Plan Associations

1.1 Increase the level of scholarship support for undergraduate students.
1.3 Implement an Undergraduate Signature Experience.
1.5 Other efforts in support of Goal 1 (Undergraduate Education).
3.1 Enhance a research culture.
5.4 Enhance the global competency of students, faculty and staff.

SLO 3: Applies content and pedagogy for successful clinical practice (G: 1, 2, 3, 4) (M: 3)

Teacher candidates use their knowledge of academic disciplines and their understanding of how children learn, develop, and differ in their approaches to learning to create, implement and evaluate instructional opportunities that are meaningful for all students. They use a variety of instructional strategies to encourage student development of critical thinking, problem solving, and performance skills. Teacher candidates use their understanding of individual and group motivation and behavior to create learning environments that encourage positive social interaction, active engagement in learning, and self motivation. They use knowledge of effective verbal, nonverbal, and media communication techniques to foster active inquiry, collaboration, and supportive interaction in the classroom. They are reflective practitioners who continually evaluate the effects of their choices and actions on others (students, parents, and other professionals in the learning community) and who actively seek out opportunities to grow professionally. Teacher candidates foster relationships with school colleagues, parents, and agencies in the larger community to support students’ learning and well-being.

General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

2.0 Students understand and apply mathematical concepts and reasoning using verbal, numeric, graphical and/or symbolic forms.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points
4.0 Students effectively analyze the meanings of texts and/or works of art or music, express ways that culture shapes values, and critically evaluate them.

5.0 Students demonstrate understanding of the physical universe, the nature of science, and the scientific method, and/or understand and apply mathematical concepts and reasoning using verbal, numeric, graphical or symbolic forms.

6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

7.0 Students demonstrate understanding of the United States and its related political, social, and/or institutional developments.

8.0 Students demonstrate understanding of political, social, economic, and/or institutional developments across the globe.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Institutional Priority Associations

1. Student retention
2. Student promotion and progression
3. Timely graduation

Standard Associations

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Strategic Plan Associations

1.1 Increase the level of scholarship support for undergraduate students.
1.3 Implement an Undergraduate Signature Experience.
1.5 Other efforts in support of Goal 1 (Undergraduate Education).
3.1 Enhance a research culture.
5.4 Enhance the global competency of students, faculty and staff.

SLO 4: Uses assessment methods to document student learning (G: 3) (M: 2, 3)

Teacher candidates understand and use formal and informal assessment strategies to evaluate and ensure the continuous intellectual, social, and physical development of the learner.

General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Institutional Priority Associations

1. Student retention
2. Student promotion and progression
3. Timely graduation

Standard Associations

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

1.3 Implement an Undergraduate Signature Experience.
1.5 Other efforts in support of Goal 1 (Undergraduate Education).
3.1 Enhance a research culture.
5.4 Enhance the global competency of students, faculty and staff.

SLO 5: Values and displays professional and ethical dispositions (G: 4) (M: 3, 4, 6)

Teacher candidates are reflective practitioners who continually evaluate the effects of their choices and actions on others (students, parents, and other professionals in the learning community) and who actively seek out opportunities to grow professionally. They know and use ethical and professional guidelines related to educational practice. Teacher candidates foster relationships with school colleagues, parents, and agencies in the larger community to support students' learning and well-being. They are informed advocates for sound educational practices and policies.

General Education/Core Curriculum Associations

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Institutional Priority Associations

1. Student retention
2. Student promotion and progression
3. Timely graduation

Standard Associations

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)
### Measures, Targets, and Findings

#### M 1: Supported Reading Project (O: 2)

Teacher candidates have multiple opportunities in their course and field experience work to plan and implement lessons. The Supported Reading Project is a comprehensive, instructional project in which teacher candidates develop supported reading lessons that they implement with elementary aged students. Candidates plan reading lessons to address the instructional needs of their students. Candidates reflect upon their teaching of each reading lesson, create new lessons that address both the strengths and weaknesses of the initial lesson, and use self-evaluation and feedback to improve future lessons. Candidates write reflections that discuss their evaluations of each lesson. This is a mid-program key assessment in ECE 3601: Reading and Language Arts in Early Childhood Education that assesses teaching diverse groups of learners, planning effectively for instruction, understanding and using assessment for student learning, and practicing professional reflection. The rubric used to assess the Supported Reading Project highlights competencies aligned with the INTASC national standards for initial teacher licensure. A 50 point rubric is used to rate/score the candidate’s project on three components: planning, instructing, and reflecting. Ratings include: 4 ("proficiently met"), 3 ("adequately met"), 2 ("partially met"), and 1 ("minimally met"). The teacher candidate is expected to receive a rating of at least 3 ("adequately met") on a 4 point scale rubric to demonstrate competency in planning effectively for instruction (outcome 2). If the teacher candidate does not receive this rating, the teacher candidate has an opportunity to review the instructor’s feedback and revise and resubmit lessons for further evaluation. The project score is factored into the course grade. Teacher candidates must receive a passing grade of "C" or better in the course, or they will be required to repeat the course before moving forward in the program.

Source of Evidence: Project, either individual or group

#### Target for O2: Plans effectively for instruction

The teacher candidate is expected to achieve a rating of 3 ("adequately met") on a 4 point scale.

#### Findings 2010-2011 - Target: Met

The ECE BSE Traditional Program (Early Childhood Education) and ECE BSE SPE Dual Certification (Early Childhood & Special Education) teacher candidates met and surpassed the target rating of 3 with a mean score of 3.84 and a modal score of 4. The aggregate pass rate for this assessment was 95% or 145/152 students. Data was collected using the assessment management system, LiveText, that converted rubric ratings to mean scores.

#### M 2: Planning, Teaching, Learning Module (PTLM) (O: 4)

Teacher candidates continuously have opportunities to impact student achievement. Through intentionally designed assignments they are required to document their use of an array of assessment tools including KWLS charts, pre and post tests, learning gains graphs, and grade books. The Planning, Teaching, Learning Module (PTLM), in the student teaching course ECE 4661, is a comprehensive, teacher work sample documenting the teacher candidate’s use of all of these assessment tools. The teacher candidate uses content knowledge to plan and implement the integrated thematic unit, motivate and manage students, and assess student learning. Throughout the project, the teacher candidate provides written reflection on student progress as well as her/his own professional development. The rubric used to assess the PTLM highlights competencies aligned with the INTASC national standards for initial teacher licensure. A 100 point rubric is used to rate/score the candidate’s project on four components: planning, implementing, assessing, and reflecting. Ratings include: 5 ("proficiently met"), 4 ("adequately met"), 3 ("partially met"), 2 ("minimally met"), and 1 ("not met"). The teacher candidate is expected to receive a rating of at least 4 ("adequately met") on the assessing components in order to demonstrate competency is using assessment methods to document student learning (outcome 4). If the teacher candidate does not demonstrate that she/he has met these performance standards with ratings of at least 4 for each assessing component, an action plan is generated. The university supervisor monitors the teacher candidate’s progress in meeting goals outlined in the action plan prior to the completion of student teaching. (Note: The rubric was revised as follows: 4 ("proficiently met"), 3 ("adequately met"), 2 ("partially met"), 1 ("minimally met"), and 0 ("not met"). The teacher candidate is expected to receive a rating of at least 3 ("adequately met") on the assessing components in order to demonstrate competency is using assessment methods to document student learning (outcome 4). Teacher candidate mastery of the assessing components must be demonstrated prior to the completion of student teaching and the recommendation for certification.

Source of Evidence: Project, either individual or group

#### Target for O4: Uses assessment methods to document student learning

The teacher candidate is expected to achieve at least a rating of 3 ("adequately met") on a 5 point scale on the revised rubric.

#### Findings 2010-2011 - Target: Met

The ECE BSE Traditional Program teacher candidates met and surpassed the target rating of 3 ("adequately met") with the mean score of 3.88 and the modal score of 4. The ECE BSE Dual Program teacher candidates met the target rating of 3 ("adequately met") with the mean score of 3.22 and the modal score of 4. The aggregate pass rate for this assessment was 99% or 146/148 teacher candidates. Data was collected using the assessment management system, LiveText, that converted rubric ratings to mean scores.

#### M 3: Final Student Teaching Evaluation (Appendix E) (O: 1, 2, 3, 4, 5)

Teacher candidates in the ECE BSE Traditional and Dual Certification Programs are expected to demonstrate knowledge, skills/performance and dispositions that are essential for high quality early childhood education for all students in grades prekindergarten through fifth grade. These competencies must be demonstrated in field settings with children, parents, and colleagues, as well as in the university course work. Teacher candidates have three practicum field experiences prior to their clinical practice (student teaching) with up to 1300 hours of field experiences over the course of the program. The Final Student Teaching Evaluation (Appendix E) is an overall evaluation of the candidate and is completed by the university supervisor at the end of student teaching, in the course ECE 4661. The evaluation is a comprehensive review of the candidate’s competencies across all 5 learning outcomes and the rubric is aligned to the INTASC national standards for initial teacher licensure. The university supervisor rates the
Source of Evidence: Field work, internship, or teaching evaluation

**Target for O1: Demonstrates content knowledge**

The teacher candidate is expected to achieve a mean score of 2 ("satisfactory") on a 5 point scale revised rubric for certification; however, the new program target has been identified at level 3 ("very good"). This report will use the achievement target of level 3 on the revised rubric.

**Findings 2010-2011 - Target: Met**

The ECE BSE Traditional Program teacher candidates met and surpassed the target rating of 3 with a mean score of 3.85. The ECE BSE Dual Program teacher candidates met and surpassed the target with a mean score of 3.85.

**Target for O2: Plans effectively for instruction**

The teacher candidate is expected to achieve a mean score of 2 ("satisfactory") on a 5 point scale revised rubric for certification; however, the new program target has been identified at level 3 ("very good"). This report will use the achievement target of level 3 on the revised rubric.

**Findings 2010-2011 - Target: Met**

The ECE BSE Traditional Program teacher candidates met and surpassed the target rating of 3 with a mean score of 3.74. The ECE BSE Dual Program teacher candidates met and surpassed the target with a mean score of 3.48.

**Target for O3: Applies content and pedagogy for successful clinical practice**

The teacher candidate is expected to achieve a mean score of 2 ("satisfactory") on a 5 point scale revised rubric for certification; however, the new program target has been identified at level 3 ("very good"). This report will use the achievement target of level 3 on the revised rubric.

**Findings 2010-2011 - Target: Met**

The ECE BSE Traditional Program teacher candidates met and surpassed the target rating of 3 with a mean score of 3.82. The ECE BSE Dual Program teacher candidates met and surpassed the target with a mean score of 3.64.

**Target for O4: Uses assessment methods to document student learning**

The teacher candidate is expected to achieve a mean score of 2 ("satisfactory") on a 5 point scale revised rubric for certification; however, the new program target has been identified at level 3 ("very good"). This report will use the achievement target of level 3 on the revised rubric.

**Findings 2010-2011 - Target: Met**

The ECE BSE Traditional Program teacher candidates met and surpassed the target rating of 3 with a mean score of 3.78. The ECE BSE Dual Program teacher candidates met and surpassed the target with a mean score of 3.53.

**Target for O5: Values and displays professional and ethical dispositions**

The teacher candidate is expected to achieve a mean score of 2 ("satisfactory") on a 5 point scale revised rubric for certification; however, the new program target has been identified at level 3 ("very good"). This report will use the achievement target of level 3 on the revised rubric.

**Findings 2010-2011 - Target: Met**

The ECE BSE Traditional Program teacher candidates met and surpassed the target rating of 3 with a mean score of 3.86. The ECE BSE Dual Program teacher candidates met and surpassed the target with a mean score of 3.72.

**M 4: Dispositions (O: 5)**

The new Dispositions Survey (implemented fall 2010 and forward) called Five Dispositions of Effective Educational Professionals is a university supervisor rating of candidates’ dispositions (values and actions) as observed in clinical practice in the following areas: Empathy, Positive View of Others, Positive View of Self, Authenticity, and Meaningful Purpose and Vision. Data presents mean scores across these five areas.

Source of Evidence: Field work, internship, or teaching evaluation

**Target for O5: Values and displays professional and ethical dispositions**

The teacher candidate is expected to achieve a mean score of 4.0 on a 5 point scale at the completion of student teaching (clinical practice). A rating of 5.0 is expected one year post graduation (prior to fall 2010). Fall 2010 forward: Using the new rubric, Five Dispositions of Effective Educational Professionals, the teacher candidate is expected to achieve a mean score of 3.0 on a 4 point scale at the completion of student teaching (clinical practice). A rating of 4.0 is expected one year post graduation.

**Findings 2010-2011 - Target: Met**

The ECE BSE Traditional and Dual Program teacher candidates met and surpassed the target rating of 3 with a mean score...
Details of Action Plans for This Cycle (by Established cycle, then alpha)

ESOL Endorsement: Assessment Methods

Current data from the Final Student Teaching Evaluation indicate "met" targets in all areas; however, it was noted that the lowest ratings were identified in the areas of planning and assessment. 08-09 assessments also showed lowest ratings in these areas. In follow-up to these results, the BSE program has been revised beginning fall 2010 to require the ESOL Endorsement for all "traditional - non dual certification" program students. This decision was made in an effort to address the changing demographics and pupil needs in metro Atlanta as noted in the ECE strategic plan and to improve preparation of pre-service teachers in the areas of planning and assessment. Faculty will closely monitor these areas and note any differences in data, specifically outcome 2 (plans effectively for instruction) and outcome 4 (uses assessment methods to document student learning) as identified in the Final Student Teaching Evaluation.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Final Student Teaching Evaluation (Appendix E) | Outcome/Objective: Uses assessment methods to document student learning

Implementation Description: ECE 3440: ESOL Curriculum & Instruction will be required for all "traditional - non dual certification" program students. This decision was made in an effort to address the changing demographics and pupil needs in metro Atlanta as noted in the ECE strategic plan and to improve preparation of pre-service teachers in the areas of planning and assessment. Faculty will closely monitor these areas and note any differences in data, specifically outcome 2 (plans effectively for instruction) and outcome 4 (uses assessment methods to document student learning) as identified in the Final Student Teaching Evaluation.

Projected Completion Date: 05/2012
Responsible Person/Group: BSED faculty and supervisors
Additional Resources: The proposed change requires a net gain of one load fall 2011 and each spring semester thereafter and will be covered by current ECE faculty. No additional resources will be needed as ESOL supervision will be restructured and included as
part of general education supervision. This change in supervision coverage will absorb the cost of the additional load.

**Budget Amount Requested:** $0.00 (no request)

### Dispositions Assessment Review - Dual Program

A review of programs by concentration revealed an aggregate pass rate on the Dispositions Assessment for Traditional and Dual concentration programs combined at 94%; however, the Dual concentration candidate pass rate in this area was 88% or 22/25 candidates, somewhat lower, in meeting the target on the assessment. BSE faculty will monitor closely by reviewing Disposition Assessment results 2011-2012 to see if there is any change in the Dual concentration program data.

**Established in Cycle:** 2010-2011
**Implementation Status:** Planned
**Priority:** High

**Relationships (Measure | Outcome/Objective):**

- Measure: Dispositions
- Outcome/Objective: Values and displays professional and ethical dispositions

**Projected Completion Date:** 05/2012

**Responsible Person/Group:** BSE Faculty

**Budget Amount Requested:** $0.00 (no request)

### ESOL Endorsement: PTLM Assessment

Although current data from the Planning, Teaching, Learning Module indicate "met" targets in using assessment for learning, it was noted that pre-service teachers experienced most difficulty with the assessment components of the project. 08-09 assessments also showed lowest ratings in using assessment for learning. In follow-up to these results, the BSE program has been revised beginning fall 2010 to require the ESOL Endorsement for all "traditional – non dual certification" program students. This decision was made in an effort to address the changing demographics and pupil needs in metro Atlanta as noted in the ECE strategic plan and to improve preparation of pre-service teachers in the areas of planning for differentiated instruction and assessment. Data indicated an increase in the aggregate pass rate from 95% to 99% from 2009-2010 to 2010-2011. Faculty will closely monitor these areas and note any differences in data in the 2011-2012 academic year, specifically outcome 4 (assessment components) as identified in the Planning, Teaching, and Learning Module.

**Established in Cycle:** 2010-2011
**Implementation Status:** Planned
**Priority:** High

**Relationships (Measure | Outcome/Objective):**

- Measure: Planning, Teaching, Learning Module (PTLM)
- Outcome/Objective: Uses assessment methods to document student learning

**Implementation Description:** ECE 3440: ESOL Curriculum & Instruction will be required for all "traditional - non dual certification" program students. ESOL/TESOL Standards addressed in ECE 3250 will be integrated into the following courses: ECE 3021 (Child Development), ECE 3600 (Language & Literacy in ECE), and ECE 3360 Assessment.

**Projected Completion Date:** 05/2012

**Responsible Person/Group:** BSED faculty and field supervisors

**Additional Resources:** The proposed change requires a net gain of one load fall 2011 and each spring semester thereafter and will be covered by current ECE faculty. No additional resources will be needed as ESOL supervision will be restructured and included as part of general education supervision. This change in supervision coverage will absorb the cost of the additional load.

**Budget Amount Requested:** $0.00 (no request)

### Planning and Assessment; ELL & Special Education Focus

Current data from the Final Student Teaching Evaluation indicate "met" targets in all areas; however, it was noted that the lowest ratings were identified in the areas of planning and assessment for the Dual concentration program with the following mean scores 3.48 for planning and 3.53 for assessment compared to Traditional concentration program mean scores of 3.74 in planning and 3.78 in assessment. Additionally, data from end program candidate surveys indicate that Traditional and Dual concentration program candidates rate themselves lower in confidence in working with students with special needs and/or linguistic needs. As a result faculty will provide course inputs in ESOL for Dual program candidates and continued inputs in Special Education for Traditional program candidates. Also faculty will closely monitor assessments and note any differences in data, specifically outcome 2 (plans effectively for instruction) and outcome 4 (uses assessment methods to document student learning) as identified in the Final Student Teaching Evaluation.

**Established in Cycle:** 2010-2011
**Implementation Status:** Planned
**Priority:** High

**Relationships (Measure | Outcome/Objective):**

- Measure: Final Student Teaching Evaluation (Appendix E)
- Outcome/Objective: Plans effectively for instruction

**Implementation Description:** Course inputs in ESOL for Dual concentration program and continued course inputs in Special Education for Traditional ESOL concentration program. Monitor key assessments in planning and assessment.

**Projected Completion Date:** 05/2012

**Responsible Person/Group:** BSED faculty and/or part time instructors

**Additional Resources:** One faculty load to cover course inputs in ESOL and special education.

**Budget Amount Requested:** $0.00 (no request)

### Technology for Student Learning

In an effort to increase pre-service teacher knowledge and skills in implementing technology for student learning, program faculty have embedded the NET Standards throughout program course work, designating specific assignments that will target this area. Additionally, a two day Digital Literacy Seminar for all candidates enrolled in ECE 3602: Reading and Language Arts II with a focus on creating digital literacies for student use in learning. It had been noted by university supervisors, that pre-service teachers have sufficient knowledge and skills in implementing lessons that require teacher use of technology; however, more instruction in student use of technology for learning would be beneficial. BSED faculty will expect to see higher ratings for Outcome 3; specifically, Standard 6C: Communication Skills - Demonstrates competency in using technology to support student learning.

**Established in Cycle:** 2010-2011
**Implementation Status:** Planned
**Priority:** High
The mission of Birth Through Five (B-5) is to provide an exemplary, interdisciplinary teacher preparation program for early care and education professionals, in order to positively impact the quality of programs for very young children in the urban metropolitan Atlanta region. The program prepares new teachers, current teachers or career changers for employment in varied settings with very young school based personnel. We will continue to use LiveText to document, collect, analyze, and report program data.

Changes and improvements to the educational program based on this year’s assessment data are as follows: 1.) In review of student performance mean scores and aggregate pass rates across all five learning outcomes, BSE students met or surpassed all identified assessment targets. A review of programs by concentration revealed an aggregate pass rate on the Dispositions Assessment for Traditional and Dual concentration programs combined at 94%; however, the Dual concentration candidate pass rate in this area was 88% or 22/25 candidates, somewhat lower, in meeting the target on the assessment. Additionally, current data from the Final Student Teaching Evaluation indicate "met" targets in all areas; however, it was noted that the lowest ratings were identified in the areas of planning and assessment for the Dual concentration program with the following mean scores 3.48 for planning and 3.53 for assessment compared to Traditional concentration program mean scores of 3.74 in planning and 3.78 in assessment. In the coming year we will specifically monitor the results on the Final Student Teaching Evaluation and the Dispositions Assessments for the Dual concentration program, and faculty will continue to maintain and monitor progress in all other areas. 2.) In earlier years the lowest assessment results have been identified in the areas of adapting instruction for diverse learners and in using assessment for learning. As a result in 2005 an Assessment course was added and scores improved but still continued to be lower than the other areas. Beginning fall 2010 the BSE program was revised to require the ESOL Endorsement for all “traditional – non dual certification” program students (Note: Traditional concentration candidates receive P-5 certification in Early Childhood Education and the ESOL Endorsement and Dual concentration candidates receive P-5 certification in Early Childhood Education and P-12 certification in Special Education, General Curriculum). This decision was made in an effort to address the changing demographics and pupil needs in metro Atlanta as noted in the ECE strategic plan and to improve preparation of pre-service teachers in the areas of planning for differentiated instruction and assessment. Additionally, this year faculty noted that candidate surveys completed at the end of the education program also indicated that candidate confidence was lowest in areas specified in working linguistically diverse learners and learners with special needs. For Dual concentration candidates, faculty have been identified and will provide supplemental course inputs in ESOL supporting this program, while Traditional concentration candidates will continue to receive additional course inputs in special education. Candidates in both program concentrations work with diverse learners in diverse field experience practicum internships and during student teaching. Traditional concentration candidates have additional experiences working with ESOL certified teachers and English language learners. Dual concentration candidates have additional experiences in classrooms with full inclusion (i.e. general and special education collaborative teaching) at the elementary level and additionally at the middle and high school levels. The program faculty will continue to monitor these areas and note any differences in data upon the implementation of these program changes. The first cohort of Traditional ESOL concentration candidates is expected to graduate spring 2012 and the affected Dual concentration cohort will graduate spring 2013. 3.) Follow up to the 2009-2010 plan to increase pre-service teacher knowledge and skills in implementing technology for student learning, program faculty not only embedded the NET Standards throughout program course work, designating specific assignments that will target this area; but also, faculty will facilitate a two day Digital Literacy Seminar where candidates will create digital technologies for the purpose of student use for learning. Faculty are continuing to collect data and results will be reported in the next year. We will also review candidate scores on the performance-based Observation Field Performance Evaluation, including a focus for observation on the use of technology. 4.) In follow up to the pilot program, BSE Writing Mentor Support, developed and implemented by Early Childhood Education BSE faculty in the 2010-2011 academic year, initial data indicate that candidates are developing as writers and becoming more confident. Faculty are continuing to collect data and results will be reported in the next year.
children (birth through Kindergarten) both typically developing and those with special education needs. Graduates of the program are well prepared for jobs as certified teachers, administrators, or early education specialists in the Birth Through Five and Preschool Special Education fields. Our program is committed to principles and practices that are respectful of the unique characteristics of the children, families, and teacher candidates with whom we work.

The new B-5 program (opened Fall, 2008) provides a unique collaboration with the Georgia System of Technical Colleges. A system-wide articulation agreement allows a pathway to the B-5 bachelor's degree completion for students with an Associates Degree in Early Care and Education from an accredited technical college program. As of June, 2011 forty-six (46) students have been admitted to the B-5 program, with 12 graduates during the 2010-2011 academic year.

**Goals**

**G 2: Pedagogical Knowledge and Skills**
The teacher candidate will possess the pedagogical content knowledge and skills to plan and teach effectively.

**G 3: Student Learning**
The teacher candidate will use varied instructional strategies, assessment techniques and critical reflection to document children's development and learning.

**G 4: Professional Dispositions**
The teacher candidate will work collaboratively with diverse professionals and display professional and ethical behaviors.

**G 1: Content Knowledge**
The teacher candidate will possess the content knowledge necessary to understand the content in the curriculum they teach.

**Student Learning Outcomes/Objectives**

**SLO 1: Demonstrates content knowledge (G: 1) (M: 1)**
The teacher candidate understands child development and learning and the central concepts of the subject areas she/he teaches and creates learning experiences that are developmentally appropriate.

**SLO 2: Plans effectively for development and learning (G: 2) (M: 2)**
The teacher candidate plans for the educational progress of children based upon knowledge of the individual student, curriculum and behavioral goals, family goals and community.

**SLO 3: Uses assessment methods to document student learning (G: 3) (M: 3)**
The teacher candidate understands the goals and benefits of assessment and uses formal and informal strategies to evaluate the development and learning of the child.

**SLO 4: Values and exhibits professional and ethical dispositions (G: 4) (M: 4)**
The teacher candidate knows and uses the ethical guidelines of the profession. She/he uses reflection to improve practice and displays interpersonal and communication skills with diverse learners, families and colleagues.

**Measures, Targets, and Findings**

**M 1: Evaluation of Field Performance (Clinical Practice) (O: 1)**
This measure rates the candidate's overall professional performance in the early childhood classroom. The measure/rubric is based on the 15 professional standards of the early care and education profession (NAEYC and CEC). At the completion of student teaching (clinical practice), teacher candidates must receive a rating from the university supervisor of "meets" or "exceeds" on each standard/element of the rubric. If a candidate does not receive a minimum rating of "meets," s/he will be required to extend or repeat student teaching with additional coaching and action plans until mastery of standards is demonstrated.

Source of Evidence: Field work, internship, or teaching evaluation

**Target for O1: Demonstrates content knowledge**
85% of candidates will receive ratings of "meets standard" or "exceeds standard" for all standards demonstrating content knowledge in the field.

**Findings 2010-2011 - Target: Met**
92% of teacher candidates (12/13) received ratings of "meets standard" or "exceeds standard" for all standards demonstrating content knowledge in the field. The mean rating for candidates was 2.7 / 3.0. One teacher candidate did not pass student teaching and received ratings of "does not yet meet standard" on this measure.

**M 2: IEP/IFSP Project (O: 2)**
This measure rates the teacher candidate's ability to plan for a young child with special needs by completing a sample IEP or an ISFP. An IEP is the formal plan that teachers, parents and specialists develop to meet the educational needs of a student age 3-21 who is eligible for special education services. An IFSP is the formal plan that describes a child's and family's needs and the services to be provided for children with disabilities from birth through age three. Candidates develop the formal plan in a methods course for exceptional children EXC 4530. A 32 point rubric aligned with professional standards (NAEYC and CEC) is used to rate the candidate's project on eight (8) indicators. Ratings include: mastery (4), accomplished (3), developing (2), and beginning (1). Candidates are expected to receive a rating of at least "developing" on each indicator at mid-point in the program since it may be their first exposure to the IEP/IFSP process and the project proceeds their full-time student teaching experience. Birth-Five candidates will receive the Preschool Special Education Endorsement upon program completion.

Source of Evidence: Project, either individual or group
Details of Action Plans for This Cycle (by Established cycle, then alpha)

Report data for "completers" only or revise schedule of assigned standards

This is a new program with no current "completers." The data for this outcome is for 12 candidates who are "in progress," rather than "completers." These candidates were not assigned standards for demonstrating professional and ethical practices in this assessment cycle. This is an unintended design flaw in this assessment; our attempts to provide "formative" data in Weave are incomplete. In the future, the program will report measures for "completers" only. Completers will have addressed all standards by the end of student teaching. Another possible solution would be to modify the schedule of assigned standards so that all outcomes have some data from the e-portfolio in the assessment cycle.

Findings 2010-2011 - Target: Partially Met

100% of teacher candidates (13/13) received a rating of at least "developing" on six of the eight indicators. A few teacher candidates did not receive the minimum rating of "developing" on the indicators of "transition plan" and "establishing dates of service." The mean rating for candidates was 3.6 / 4.0.

Findings 2010-2011 - Target: Met

92% of teacher candidates (12/13) received ratings of "satisfactory" or "exceeds expectations" on the portfolio rubric rating for "impact on student learning." The five 2010 Fall completers all received ratings of "exceeds" with DOL project scores ranging from 93-100. The eight 2011 Spring candidates received ratings of "exceeds" (3), "satisfactory" (4) and "unsatisfactory" (1). The candidate who received a rating of "unsatisfactory" on this measure did not successfully complete student teaching.

Findings 2010-2011 - Target: Met

The mean rating for the five B-5 program completers in Fall, 2010 exceeded 3.0 with an average of 3.8. The mean rating for the 8 candidates in Spring 2011 also exceeded 3.0 and ranged from 3.25 - 3.62 on the dispositions survey. One teacher candidate in the Spring 2011 group received ratings below the "acceptable" level on the dispositions survey. This candidate did not pass student teaching and did not complete the program.

Findings 2010-2011 - Target: Met

85% of teacher candidates will obtain "satisfactory" or "exceeds expectations" on the portfolio rubric rating for "impact on student learning." This rating includes scores on the Documentation of Learning (DOL) Project from 73 - 92 (satisfactory) or 93 - 100 (exceeds).

Findings 2010-2011 - Target: Met

92% of teacher candidates (12/13) received ratings of "satisfactory" or "exceeds expectations" on the portfolio rubric rating for "impact on student learning." The five 2010 Fall completers all received ratings of "exceeds" with DOL project scores ranging from 93-100. The eight 2011 Spring candidates received ratings of "exceeds"(3), "satisfactory"(4) and "unsatisfactory"(1). The candidate who received a rating of "unsatisfactory" on this measure did not successfully complete student teaching.

M 3: Portfolio (Documentation of Learning) (O: 3)

This measure rates the teacher candidate’s performance against national standards through a professional portfolio. The portfolio includes artifacts and reflective narratives. Examples of artifacts are lesson plans, child case studies, research reviews, and photo documentation of children's learning. Candidates organize the portfolio based on the standards of the National Association for the Education of Young Children (NAEYC) and the Council for Exceptional Children (Division of Early Childhood DEC/CEC). Candidates submit assigned artifacts and rationales each semester for progress monitoring. The final portfolio evaluation is completed at the end of student teaching. One key component of the portfolio is the Documentation of Learning (DOL) Project that measures the candidate's impact on student learning. This project requires the candidate to document children’s learning during a 10 day thematic unit implemented during student teaching. The portfolio rubric element that rates the candidate's performance on the DOL project is titled "impact on student learning." Rubric ratings are "exceeds expectations," "satisfactory," and "unsatisfactory."

Source of Evidence: Portfolio, showing skill development or best work

M 4: Dispositions Survey (O: 4)

The College of Education administers an online survey to assess all teacher candidate's professional dispositions. The measure is called "Five Dispositions of Effective Educational Professionals." Candidates receive a rating from program faculty mid program and end of program. Ratings are as follows: Exceptional (4 pts), Acceptable (3 pts), Marginal (2 pts), Unacceptable (1pt).

Source of Evidence: Academic indirect indicator of learning - other

M 5: Portfolio (Documentation of Learning) (O: 3)

This measure rates the teacher candidate’s performance against national standards through a professional portfolio. The portfolio includes artifacts and reflective narratives. Examples of artifacts are lesson plans, child case studies, research reviews, and photo documentation of children's learning. Candidates organize the portfolio based on the standards of the National Association for the Education of Young Children (NAEYC) and the Council for Exceptional Children (Division of Early Childhood DEC/CEC). Candidates submit assigned artifacts and rationales each semester for progress monitoring. The final portfolio evaluation is completed at the end of student teaching. One key component of the portfolio is the Documentation of Learning (DOL) Project that measures the candidate's impact on student learning. This project requires the candidate to document children’s learning during a 10 day thematic unit implemented during student teaching. The portfolio rubric element that rates the candidate's performance on the DOL project is titled "impact on student learning." Rubric ratings are "exceeds expectations," "satisfactory," and "unsatisfactory."

Source of Evidence: Portfolio, showing skill development or best work

Findings 2010-2011 - Target: Met

The achievement target is a mean rating of 3.0 on a 4.0 scale. This rating would indicate that B-5 teacher candidates demonstrated professional dispositions at the "acceptable" level at the end of program.

Findings 2010-2011 - Target: Met

The five 2010 Fall completers all received ratings of "exceeds" with DOL project scores ranging from 93-100. The eight 2011 Spring candidates received ratings of "exceeds"(3), "satisfactory"(4) and "unsatisfactory"(1). The candidate who received a rating of "unsatisfactory" on this measure did not successfully complete student teaching.

Findings 2010-2011 - Target: Met

The candidate who received a rating of "unsatisfactory" on this measure did not successfully complete student teaching.

Findings 2010-2011 - Target: Met

The mean rating for the five B-5 program completers in Fall, 2010 exceeded 3.0 with an average of 3.8. The mean rating for the 8 candidates in Spring 2011 also exceeded 3.0 and ranged from 3.25 - 3.62 on the dispositions survey. One teacher candidate in the Spring 2011 group received ratings below the "acceptable" level on the dispositions survey. This candidate did not pass student teaching and did not complete the program.
Report data for "completers" only or revise schedule of assigned standards

This is a new program with no current "completers." The data for this outcome is for 12 candidates who are "in progress," rather than "completers." These candidates were not assigned standards for demonstrating their competence in assessment this reporting cycle. This is an unintended design flaw in this assessment; our attempts to provide "formative" data in Weave are incomplete. In the future, the program will report measures for "completers" only. Completers will have addressed all standards by the end of student teaching. Another possible solution would be to modify the schedule of assigned standards so that all outcomes have some data from the e-portfolio in the assessment cycle.

Course assignment will be redesigned

There are three indicators on the IEP/IFSP project rubric where more than 85% of candidates received ratings of "beginning," which is below the achievement target. These indicators are: "provides statement of environments other than natural or general education classroom," "identifies the person responsible for implementation," and "provides for transition planning." Among these three indicators, over half of the candidates (61%) scored below expectation in "provides for transition planning." An analysis of the student work and rubric ratings revealed that students did not follow the specific guidelines in the assignment or use the rubric to insure that all indicators/elements were included in the project. It was determined that the lower ratings did not result from students' lack of knowledge of these indicators. The course instructor has determined that a suitable action plan will be to give students a specific template with all indicators/elements to be filled in. This template, along with the assignment instructions and rubric, should assist the candidates in providing all required project components. Additionally, the students will have two courses to work on the IEP/IFSP (EXC 4530/EXC 4520). It is expected that their scores will improve in the second course, although assessment data will only be reported from one course EXC 4530 (these courses are not required to be taken sequentially).

Revise assessment and extend assessment over two courses

There are three indicators on the IEP/IFSP project rubric where more than 85% of candidates received ratings of "beginning," which is below the achievement target. These indicators are: "provides statement of environments other than natural or general education classroom," "identifies the person responsible for implementation," and "provides for transition planning." Among these three indicators, over half of the candidates (61%) scored below expectation in "provides for transition planning." An analysis of the student work and rubric ratings revealed that students did not follow the specific guidelines in the assignment or use the rubric to insure that all indicators/elements were included in the project. It was determined that the lower ratings did not result from students' lack of knowledge of these indicators. The course instructor has determined that a suitable action plan will be to give students a specific template with all indicators/elements to be filled in. This template, along with the assignment instructions and rubric, should assist the candidates in providing all required project components. Additionally, the students will have two courses to work on the IEP/IFSP (EXC 4530/EXC 4520). It is expected that their scores will improve in the second course, although assessment data will only be reported from one course EXC 4530 (these courses are not required to be taken sequentially).
**ACADEMIC PROGRAM QUESTION 1:**
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The B-5 program has revised and simplified learning outcomes to match those required by state and national accreditation standards, as well as the conceptual framework of the unit (Professional Education Faculty). These changes were made to provide clearer reporting and update alignment of assessments. As described in the action plan, improvements will be made to one assessment, the IEP/IFSP project, so that students will follow the rubric more closely. Additionally, students will have more opportunity to master the content of the assessment over two courses, rather than one.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The data obtained from assessment findings confirms that Birth Through Five students are achieving required learning outcomes at target levels. The program will continue to maintain and monitor student's performance data for the coming assessment cycle. There are no recommended revisions to curriculum, courses, sequence, etc., at this time.

---

### Mission / Purpose

Normal 0 false false false The Educational Specialist in Early Childhood Education (Ed.S.) is designed to extend the academic and teaching skills of experienced classroom teachers in their classrooms and schools in order to develop as teacher researchers. As a cohort group, participants collaborate with university faculty and each other to do work inside and outside their schools and classrooms. The program is based on the assumption that learning is a constructive process that builds on the knowledge and experience of the learner. Through an integrated approach that provides choices and opportunities for decision making and dynamic group interactions including virtual professional learning community, the Ed.S. program provides graduates with the knowledge, skills, and dispositions needed to serve as effective educational leaders and decision makers in their schools and communities. Successful completion of the program leads to a Specialist degree (T-6) and Teacher Support Specialist (T.S.S.) endorsement. Successful graduates may also apply 18 credit hours toward Ph.D. program in ECE after admission to the ECE doctoral program.

### Goals

**G 1: Teachers as Researchers**

Normal 0 false false false MicrosoftInternetExplorer4 The primary professional responsibility for each successful candidate in the Ed.S. program is to become researchers and leaders who use data to inform their policies, practices, procedures and beliefs.

**G 2: Teachers as Learner-Centered Practitioners**

Normal 0 false false false MicrosoftInternetExplorer4 The Ed.S. program is based on the assumption that learning is a constructive process that builds on the knowledge and experience of the learner. We provide graduates with the knowledge, skills, and dispositions needed to serve as effective educational leaders and decision makers in their schools and communities. Thus, learning and teacher education curriculum must be fundamentally connected to the school and classroom.

**G 3: Teachers as Professional Learners**

Normal 0 false false false MicrosoftInternetExplorer4 The third goal for the program is to develop the habits of maintaining learning as a lifelong process. Teachers adapt to the changing needs of the school and their own growth as quality educators. Doing so requires the development of the understandings and skills needed to discover the answers to ongoing educational issues through learning challenges and opportunities.

### Student Learning Outcomes/Objectives

**SLO 1: Shows commitment to learning and development (M: 1, 4, 6)**

Normal 0 false false false Educators adjust their practice according to learners' individual differences. Educators have an understanding of how learners develop and use this knowledge to make decisions about how to teach. Educators treat learners equitably. An educator's mission extends beyond developing the cognitive capacity of their learners to address the needs of the whole child and the development of a nurturing learning environment.

Relevant Associations: NAEYC; NBPTS #1; PSC Standard Domain: Effects on P-12 Learning

**SLO 2: Applies expertise for learning and development (M: 2, 4, 5, 6)**

Normal 0 false false false Educators appreciate how knowledge in their subject is created, organized and linked to other disciplines. Educators have specialized knowledge about how to convey content to learners. Educators generate multiple paths to learning.

Relevant Associations: NAEYC; NBPTS#2; PSC Standard Domain: Content Knowledge

**SLO 3: Manages and monitors student learning/development (M: 1, 2, 5)**

Normal 0 false false false Educators call on multiple methods to meet clearly defined goals. Educators orchestrate learning in different groupings and settings. Educators place a premium on learners' engagement. Educators regularly assess learners' progress.
Measures, Targets, and Findings

M 1: Disposition Survey (NBPTS) (O: 1, 3, 5)

Normal 0 false false false MicrosoftInternetExplorer4 Prior to 2010, dispositions were measured using the NBPTS Advanced Program Survey. Each TSS participant was rated by the Ed.S. program faculty using a scoring guide from 1.0 (Not demonstrated) to 5.0 (Advanced). Six items (see list for Fall 2009) comprised the disposition questions for 2009, 12 items for 2007 and 2008. Target for disposition measure is at the Intermediate (4>) level at midpoint and Advanced (5) at the end of the program. Beginning in Summer 2010, the COE adopted a new disposition measure. The Dispositions Survey [1] is built upon National Board of Professional Teaching Standards (NBPTS) based upon the Five Core Propositions: 1: Teachers are Committed to Students and Learning 2: Teachers Know the Subjects They Teach and How to Teach Those Subjects to Students 3: Teachers are Responsible for Managing and Monitoring Student Learning 4: Teachers Think Systematically about Their Practice and Learn from Experience 5: Teachers are Members of Learning Communities Program instructors rate EdS candidates on five dispositions using formative and summative data collected throughout the program at two transition points (midyear- end of fall semester and end of program-summer 2/follow through). The Likert rating includes: 1: Unsure means that the rater (self or other) is not sure if the student holds the disposition. 2= Emerging means that the rater (self or other) has seen evidence of the disposition. 3= Developing means that the student is aware of the disposition and values it. 4= Strength means that the disposition is a pervasive trait of the student. Source of Evidence: Professional Standards [1] The Dispositions Survey was adapted from Usher, L., Usher, M., & Usher, D. (2003). Five dispositions of effective teachers. Paper presented at the 2nd National Symposium on Teacher Dispositions. November 20-21, Richmond, KY.

Source of Evidence: Professional standards

Target for O1: Shows commitment to learning and development

Each EdS participant is rated by the Ed.S. program faculty in team discussions on elements using the following rubric at the end of the fall semester. Targets: Midyear-Intermediate (4>); End of the Program-Advanced (5>-old measure Midyear-Acceptable (3>); End of the Program-Exceptional (4>-new measure We increased the achievement targets this year from 3 to 4 for the midpoint and 4 to 5 for end of the program completion.

Findings 2010-2011 - Target: Met

Findings (2010-2011) (data table attached) The majority of EdS participants were rated at acceptable on all five dispositions at the midpoint assessment. No unacceptable ratings were reported. Four areas evidenced rates as Exceptional with highest in Positive View of Self (42% as exceptional). All candidates were rated either acceptable or marginal on Empathy but it is expected that these dispositions will improve in ratings by the end of the EdS program. At midpoint assessment, students are continually challenged to examine their personal perspectives leading to cognitive dissonance in some cases. Although increases are expected overall in the next assessment, the area of Authenticity is where instruction is targeted for spring and summer terms. Prior to 2010, dispositions were measured using the NBPTS Advanced Program Survey. Each TSS participant was rated by the Ed.S. program faculty using a scoring guide from 1.0 (Not demonstrated) to 5.0 (Advanced). Six items (see list for Fall 2009) comprised the disposition questions for 2009, 12 items for 2007 and 2008. Target for disposition measure is at the Intermediate (4>) level at midpoint and Advanced (5) at the end of the program. At midpoint, the majority of students were on target with range of 3.93 (item 5.1) to 4.07 (items 4.1, 4.2). Data for end of program completion is being compiled in livetext currently. Due to transition from old disposition measure to new instrument and the transition to use of the assessments in livetext, the end of program dispositions for this group was not compiled in livetext. Currently reentering data.

M 2: Evaluation of Ed.S. Supervisor by Intern (O: 2, 3)

Preservice teachers rate their college supervisors on the ECE Supervisor Evaluation Form (Please see Appendix G, pp.91-92 in the Traditional Student Teaching Handbook). This is a 16 item instrument with 12 items designed using a 5 point Likert scale with 5 = strong agreement and 1 = strongly disagree. The remaining 4 items address whether or not supervisors had clear plans of action for every conference, gave relevant and ongoing feedback, were knowledgeable and professional. The remaining 4 items invite respondents to comment upon supervisor strengths, weaknesses, whether or not they would recommend the supervisor and finally, observations of overall supervisory performance.

Source of Evidence: Student course evaluations on learning gains made

Target for O2: Applies expertise for learning and development

An overall Likert score of 4.0 or better is expected for all supervisors.

Findings 2010-2011 - Target: Met

On average, student interns rated the EdS teachers who served as their supervisor on average 4.574 out of 5.0; ratings represent placements and supervision during the Fall 2009 semester (n= 17). The number of supervisors for Fall 2010 were reduced dramatically due to low program enrollment. Supervisor ratings were high, ranging 4.5-5.0 with average of 4.92. All student evaluations were used to calculate the mean. Data for the last years is provided for comparisons. Data Table ECE Preservice Teachers of ECE EDS Supervisors Summer 2010 Program Completers Supervision Fall 2009 (n=17) Summer 2011 Entries Supervision Fall 2010 (n=6) Average 4.574 4.92 Minimum 2.833 4.50 Maximum 5.0 5.0
The supervision summative report is based on the TSS and NBPTS standards. Candidates must address each standard in their performance assessments and through artifacts submitted indicating the candidate's proficiency at meeting the standard. Candidates must also be able to articulate how she/he demonstrates proficiency and understanding of the standard through narrative. The academic performance of all students is evaluated toward the end of the fall semester when the summative report is due.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Shows commitment to learning and development**

Students are assessed using a rubric that details quality performance across categories required in the project. A total of 100 points are given. Target is B or better on the project (83>). Program target is that 80% of participants will achieve this target.

**Findings 2010-2011 - Target: Met**

Students who meet this criteria are scored 100 points across 4-point scale from proficient (4) to beginning (1) with an “not met” option.

The goal of action research is for teacher-researchers to solve educational problems by engaging in a systematic process of inquiry. This process enables teacher-researchers to make informed decisions at both the classroom and school level. In the Ed.S. program, each participant conducted an action research project in the classroom or school thereby bridging theory and practice. The project begins each fall term and after completion of the two TSS specific courses each fall term. This process enables teacher-researchers to make informed decisions at both the classroom and school level. In the Ed.S. program, each participant conducted an action research project in the classroom or school thereby bridging theory and practice. The project begins each fall term and after completion of the two TSS specific courses each fall term.

**Target for O2: Applies expertise for learning and development**

Normal 0 false false false MicrosoftInternetExplorer4 The capstone experience is designed by faculty and participants to provide final refection and documentation of an individual's work and accomplishments toward program objectives. As the culminating experience, it incorporates: self- and peer- assessment, reflection, and presentation of action research project to an outside audience.

Students are assessed using a rubric that details quality performance across categories required in the project. A total of 100 points are given. Target is B or better on the project (83>). Program target is that 80% of participants will achieve this target.

**Findings 2010-2011 - Target: Met**

Students who meet this criteria are scored 100 points across 4-point scale from proficient (4) to beginning (1) with an “not met” option.

The content knowledge GPA is computed every semester with the expectation that the student maintains a 3.0 or better during the program. This assessment is directly related to the PSC/NBPTS standards. Discrete assessment data is used in the courses and designed to ensure these standards are assessed. Two GPAs are calculated. The first content GPA is for the TSS Endorsement and is calculated using final grades for the two key courses (ECE 8400, ECE 8680) and provides evidence of meeting TSS standards. This GPA is determined for the current cohort at the midpoint in the program and after completion of the two TSS specific courses each fall term. The second content GPA is calculated using the content courses (ECE 8100, ECE 8200, ECE 8400, ECE 8410, and ECE 8920). The internship (ECE 8860), the capstone (ECE 8800), and the elective (ECE 9850) are not used in the overall content GPA as a key assessment for program completion. The overall content GPA is calculated after completion of all coursework, typically at the end of the summer 2.

Source of Evidence: Academic direct measure of learning - other

**Target for O1: Shows commitment to learning and development**

Normal 0 false false false MicrosoftInternetExplorer4 The academic performance of all students is evaluated after each semester (summer 1, fall, spring, summer 2). Criterion for program continuation includes maintaining a GPA of 3.0 or better. Students who fall below this meet with program faculty and set up an action plan for remediation.
**Findings 2010-2011 - Target: Met**

Date Table: Content GPA Summer 2010 Ed.S. Program Completers (program entry summer 2009) (n=15) Fall 2010 TSS Program Completers Ed.S. Midpoint Program (program entry summer 2010) (n=8) Average Exit GPA 3.92 4.03 Low GPA 3.63 3.72 High GPA 4.26 (program moved to grade +/- schedule, A+ available) 4.30

## Details of Action Plans for This Cycle (by Established cycle, then alpha)

### Action Research Cycle
Data reported here represents program completers from summer 2008. Shift cycle to match PSC for 2009-2010 and participants who enter summer 2009 and complete coursework in summer 2009, fall 2009, and spring 2010. There will be no expected program completers for next report cycle as this group will not complete the action research project until summer 2010 and will be counted in the next round.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Action Research Project
  - **Outcome/Objective:** Applies expertise for learning and development
- **Projected Completion Date:** 04/2010
- **Responsible Person/Group:** Program Director

### Capstone Cycle
Data reported here represents program completers from summer 2008. Shift cycle to match PSC for 2009-2010 and participants who enter summer 2009 and complete coursework in summer 2009, fall 2009, and spring 2010. There will be no expected program completers for next report cycle as this group will not complete the capstone until summer 2010 and will be counted in the next round.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Capstone Experience
  - **Outcome/Objective:** Shows commitment to learning and development
- **Projected Completion Date:** 04/2010
- **Responsible Person/Group:** Program Director

### Electronic Worksamples
The program is moving to pilot a system for electronic collection of work samples and key assessments for the program for future management, analysis and reporting purposes. The program will pilot livetext with ECE 8800 in summer 2010 to meet this goal.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Supervision Summative Report
  - **Outcome/Objective:** Reflects on & learns from professional experience
- **Projected Completion Date:** 05/2010
- **Responsible Person/Group:** Program Director

### STARS Survey
Revise use of STARS survey with new unit conceptual framework.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** Medium
- **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Disposition Survey (NBPTS)
  - **Outcome/Objective:** Shows commitment to learning and development
- **Projected Completion Date:** 07/2009
- **Responsible Person/Group:** Program Director

### Achievement Targets
Inclusion of the preservice teachers ratings of supervisors has provided useful information on how our students perceive their supervisors and whether they are applying the skills associated with the TSS standards. However, the program faculty need to determine better achievement targets that indicate supervision quality.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** Medium
- **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Evaluation of Ed.S. Supervisor by Intern
  - **Outcome/Objective:** Applies expertise for learning and development
- **Projected Completion Date:** 04/2011
- **Responsible Person/Group:** EdS program Coordinator

### New Disposition Measure
STARS Survey as Measure Aligned with NBPTS: We increased the achievement targets this year from 3 to 4 for the midpoint and 4 to 5 for end of the program completion. Doing so provided more variability but not enough to be able to use discrete data to make program changes (standard deviations among items ranged from 0 to 0.45 but averaged around 0.25). This is, in part, due to the fact that each item must be scored in whole units. We concluded that the STARS survey does not serve adequate assessment purposes and have decided to only use the disposition items from the previous survey for the time being as we explore additional
Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Since the 2010-2011 assessment report, the following changes have been made: All faculty in the Ed.S. Program are using LiveText for assessments. All assessment rubrics have been aligned with the new COE conceptual framework. Refined rubrics to be more sensitive to student learning. Disposition measure for Unit changed. Program adapted new instrument and aligned assessments with NBPTS. The number of required Supervision Cycles was reduced in response to student feedback on the logistical and time constraints they experienced due to being enrolled in the Ed.S. Program and teaching in the classroom full time. Supervision Cycles are incorporated into the summative report which is a key assessment for the TSS portion. Offered flexible options for assignment design and completion for performance-based measures, i.e. combined Problem-Solution project with action research. Provided information to students on how to seek external support for their action research. One student was successful in securing funding.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

1. The disposition survey indicated that the students had a low overall score on “Empathy” at the midpoint assessment. To rectify this, we intend to be more explicit and intentional with the students about our assessments of their dispositions. At the start of the Fall semester, 2011, each student was given a copy of the NBPTS Dispositions Survey. Each faculty member will be considering ways in which the NBPTS Dispositions can be addressed and developed throughout their courses. ECE 8100 and ECE 8200 are particularly sensitive to student learning. Since the 2010-2011 assessment report, the following changes have been made:

   - The number of required Supervision Cycles was reduced in response to student feedback on the logistical and time constraints they experienced due to being enrolled in the Ed.S. Program and teaching in the classroom full time. Supervision Cycles are incorporated into the Summative Report which is a key assessment for the TSS portion. Offered flexible options for assignment design and completion for performance-based measures, i.e. combined Problem-Solution project with action research. Provided information to students on how to seek external support for their action research. One student was successful in securing funding.

   - The disposition survey indicated that the students had a low overall score on “Empathy” at the midpoint assessment. To rectify this, we intend to be more explicit and intentional with the students about our assessments of their dispositions. (Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The UACM is a rigorous program that seeks to promote the success of elementary students schooled in urban contexts through the development of pedagogically competent, equity-oriented, caring, empowered teachers who are change agents inside and outside the classroom.

The UACM beliefs:

- We believe that teachers have the ability and power to provide experiences in which children succeed. This success provides the confidence and competence for children to continue to succeed.

- We believe that in order to foster these successful experiences, teachers must engage and connect with students. This connection is demonstrated by treating children with respect, by having high standards and by helping children to believe that they can achieve.

- We believe that in order to foster successful experiences, teachers must be knowledgeable about the child's culture and must actively integrate this into the best practices of teaching and learning.

- We believe that from structure comes freedom. The teacher must create a purposeful, structured environment in which children are free to explore, experiment, and learn.

- We believe that teachers need to establish an environment in their classrooms where children are respectful of each other, their environment and the adults in their lives.

- We believe that teachers should respect the language of their children and have knowledge of its background and principles. We also believe that teachers should model and expect mastery of mainstream American English for their students.

Goals
G 1: Content Knowledge
Teacher candidates will have the content knowledge necessary to understand the curriculum they teach.

G 2: Pedagogical Content Knowledge and Skills
Teacher candidates will have the pedagogical knowledge and skills to be able to plan and implement effective instruction.

G 3: Student Learning
Teacher candidates will use varied assessment techniques and critical reflection to increase student achievement.

G 4: Diversity
Teacher candidates will meet the cultural, linguistical, learning, and behavioral differences of all learners.
### Student Learning Outcomes/Objectives

**SLO 3: Effectively teaches diverse groups of learners (G: 4)**

The teacher candidate understands how students differ in their approaches to learning and creates instructional opportunities that are adapted to diverse learners.

Relevant Associations: INTASC, NAEYC, NCTM, IRA, NCSS, NSTA

**SLO 4: Knows and uses multiple instructional strategies (G: 2) (M: 4)**

The teacher candidate understands and uses a variety of instructional strategies to encourage student development of critical thinking, problem solving, and performance skills.

Relevant Associations: INTASC, NAEYC, NCTM, IRA, NCSS, NSTA

**SLO 5: Motivate and manage students for learning (G: 2) (M: 5)**

The teacher candidate uses an understanding of individual and group motivation and behavior to create a learning environment that encourages positive social interaction, active engagement in learning, and self motivation.

Relevant Associations: INTASC, NAEYC, NCTM, IRA, NCSS, NSTA

**SLO 6: Uses communication skills and technology (G: 2) (M: 6)**

The teacher candidate uses knowledge of effective verbal, nonverbal, and media communication techniques to foster active inquiry, collaboration, and supportive interaction in the classroom.

Relevant Associations: INTASC, NAEYC, NCTM, IRA, NCSS, NSTA

**SLO 7: Effectively plans for instruction (G: 2) (M: 7)**

The teacher candidate plans instruction based upon knowledge of subject matter, students, the community, and curriculum goals.

Relevant Associations: INTASC, NAEYC, NCTM, IRA, NCSS, NSTA

**SLO 8: Understands and uses assessment for learning (G: 3) (M: 8)**

The teacher candidate understands and uses formal and informal assessment strategies to evaluate and ensure the continuous intellectual, social, and physical development of the learner.

Relevant Associations: INTASC, NAEYC, NCTM, IRA, NCSS, NSTA

**SLO 9: Practices professional reflection (G: 3) (M: 9)**

The teacher candidate is a reflective practitioner who continually evaluates the effects of his or her choices and actions on others (students, parents, and other professionals in the learning community) and who actively seeks out opportunities to grow professionally.

Relevant Associations: INTASC, NAEYC, NCTM, IRA, NCSS, NSTA

**SLO 10: Fosters relationships with school and community (G: 4) (M: 10)**

The teacher candidate fosters relationships with school colleagues, parents, and agencies in the larger community to support students’ learning and well being.

Relevant Associations: INTASC, NAEYC, NCTM, IRA, NCSS, NSTA

### Measures, Targets, and Findings

**M 3: Faculty Rating 3 - Diverse Groups of Learners**

Candidates' knowledge and skills of Teaching Diverse Groups of Learners are assessed by faculty and entered into the STARS database for Standard 3. Faculty ratings of candidates are based on the following assessments: a.) Student Support Team Project, and b.) Field Experience Observations.

Source of Evidence: Academic direct measure of learning - other

**M 4: Faculty Rating 4-Multiple Instructional Strategies (O: 4)**

Candidates' knowledge and skills of Multiple Instructional Strategies are assessed by faculty and entered into the STARS database for Standard 4. Faculty ratings are candidates are based on the following assessments: a.) ELL Responsive Instruction Analysis, and b.) Field Experience Observation.

Source of Evidence: Academic direct measure of learning - other

**M 5: Faculty Rating 5 - Motivate and Manage Students (O: 5)**

Candidates' knowledge and skills of Motivating and Managing Students are assessed by faculty and entered into the STARS database for Standard 5. Faculty ratings of candidates are based on the following assessments: Motivate and Manage Students.

Source of Evidence: Academic direct measure of learning - other

**M 6: Faculty Rating 6 - Communication Skills and Technology (O: 6)**

Candidates' knowledge and skills of Communication Skills and Technology are assessed by faculty and entered into the STARS database for Standard 6. Faculty ratings of candidates are based on the following assessments: a.) Critical Discourse Analysis, and b.) Field Experience Observation.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Add EPRS 7920 Classroom Testing, Grading, and Assessment

To address the not met Standard 8 - Assessment for Learning, the program will replace one of the three Action Research courses in the current Program of Study with EPRS 7920 Classroom Testing, Grading, and Assessment. By adding this course to the program of study, candidates will be better prepared to create, implement, analyze, and use assessment in ways that enhance student learning.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Faculty Rating 8 - Assessment for Learning | Outcome/Objective: Understands and uses assessment for learning
- **Implementation Description:** We plan to offer this course for the first time during the summer 2010 semester.
- **Projected Completion Date:** 05/2010
- **Responsible Person/Group:** Program Director - Nancy Jo Schafer
- **Additional Resources:** N/A
- **Budget Amount Requested:** $0.00 (no request)

#### Add Lesson Planning/Assessment to Opening School Experience Orientation

The program will add Lesson Planning and Assessment to the Opening School Experience Orientation agenda. This will allow candidates to have an earlier introduction to the importance of assessment in lesson planning and student learning. At this time Blooms Taxonomy will also be introduced to candidates to enhance lessons and assessments so that they are planned at higher levels of cognitive demand.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Faculty Rating 8 - Assessment for Learning | Outcome/Objective: Understands and uses assessment for learning
- **Implementation Description:** The Opening School Experience Orientation occurs in July of each year.
- **Projected Completion Date:** 06/2010
- **Responsible Person/Group:** Program Faculty
- **Additional Resources:** N/A
- **Budget Amount Requested:** $0.00 (no request)

#### Monitor and Maintain

Currently the Early Childhood Education GATAPP Program has met all of its objectives except Standard 8 - Assessment for Learning. Program faculty will continue to maintain the effective components of the program, assess all outcomes and objectives, and monitor students’ performance on each objective.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Faculty Rating 9 - Professional Reflection | Outcome/Objective: Practices professional reflection
  - Measure: Faculty Rating 10 - Professional Relationships | Outcome/Objective: Fosters relationships with school and community
  - Measure: Faculty Rating 3 - Diverse Groups of Learners | Outcome/Objective: Effectively teaches diverse groups of learners
  - Measure: Faculty Rating 4 - Multiple Instructional Strategies | Outcome/Objective: Knows and uses multiple instructional strategies
  - Measure: Faculty Rating 5 - Motivate and Manage Students | Outcome/Objective: Motivate and manage students for learning
  - Measure: Faculty Rating 6 - Communication Skills and Technology | Outcome/Objective: Uses communication skills and technology
  - Measure: Faculty Rating 7 - Plan for Instruction | Outcome/Objective: Effectively plans for instruction
Mission / Purpose

The Collaborative Master's Program (CMP) provides a unique approach to educational graduate studies, unparalleled in the nation. Educational equity and student-focused teaching are guiding tenets of the program. We believe students from all backgrounds should have equal access to quality instruction, resources, and other educational opportunities. Each year we invite teachers from the metropolitan Atlanta area to explore the practices, ideas, and beliefs which guide and direct their teaching. In line with our focus on educational equity, teachers consider questions such as, How do my lived experiences impact how I view my students, how my students learn, and their families? What does teaching for educational equity look like? Why is there an achievement gap? Are the interests of my students reflected in my instruction? Our focus on student-centered teaching asks teachers to consider questions such as, Why do I teach the way that I do? When are my students engaged in learning? Does my instruction meet the needs of all of my students? During the year-long program, teachers engage in rigorous study, debate, and research focused on improving their teaching and their students' learning. The teachers' classrooms are the contexts for their work. Their classrooms are their laboratories. The teachers are guided by faculty who are educators and researchers.

Goals

G 1: teachers will become empowered
Teachers will become empowered as instructional decision makers.

G 2: teachers will advocate for students' instructional needs
Teachers will advocate for instruction that addresses the needs of their students.

G 3: teachers will advocate for educational justice
Teachers will advocate for educational justice for all students.

Student Learning Outcomes/Objectives

SLO 1: Educators manage and monitor student learning. (M: 3)
Faculty visit each educator approximately 8 times while the educator is in the program. The visits include an observation of the educator and a follow-up debriefing. After the visit, the educator submits a written reflection describing what was learned and how future work will be influenced by this new information. Faculty rating is based on the educator's preparation for the visit, quality of reflection, and alterations of future teaching.

Relevant Associations: This objective is from National Board Performance Teaching Standard

SLO 2: Educators demonstrate subject matter knowledge. (M: 2, 3)
Educators have mastery over the subject(s) they teach and the skill and experience in teaching the subject(s).

Relevant Associations: This outcome is from National Board Teaching Performance Standards

Other Outcomes/Objectives

O/O 3: Educators reflect on their practice. (M: 1, 2)
Educators critically examine their practice on a regular basis to deepen knowledge, expand their repertoire of skills, and incorporate new findings into their practice.

Relevant Associations: This objective is from NBPTS

O/O 4: Educator will collaborate with peers and others. (M: 2)
Educators collaborate with others to improve student learning and they know how to work collaboratively with parents.

Relevant Associations: This objective is from NBPTS

O/O 5: Educator will show commitment to student learning. (M: 2)
Educators are dedicated to making knowledge accessible to all students. They believe all students can learn and they understand how students develop and learn. They respect the cultural and family differences students bring to their classroom.

Relevant Associations: This objective is from NBPTS
Measures, Targets, and Findings

**M 1: Benchmark (O: 3)**

The “Impact of Program Rubric” assesses the candidate's perception of how the CMP program impacted his/her views of teaching and learning. Assessment of candidate's occurs twice during the program—end of Spring semester, via Benchmark assignment, and then at the end of the second summer semester, via a Capstone assignment. The rubric is aligned with the PEF Conceptual Framework and the NBPTS graduate teaching standards. Specifically, the rubric assesses the candidate's: (a) knowledge of child-centered pedagogy (Conceptual Framework standard: 1.1, 1.2 and NBPTS Standard: 1, 2, 3) (b) knowledge of the content (Conceptual Framework standard: CF.1.1, 1.2 and NBPTS Standard: 2, 4) (c) ability to monitor and manage student learning; (Conceptual Framework standard: 1.3, 2.2, 3.1, 3.2; NBPTS Standard: 3) (d) to think systematically about their practice and learn from performance (Conceptual Framework standard: 1.2, 1.3, 2.3 and NBPTS Standard: 4) (e) participation in a learning community (Conceptual Framework standard: 2.2, 2.3, 3.1, 3.2, 3.3, and NBPTS Standard: 5).

Source of Evidence: Written assignment(s), usually scored by a rubric.

**Target for O3: Educators reflect on their practice.**

Benchmark The Benchmark is a mid-program personal written reflection that: (1) identifies three ways the program has altered personal conceptions of teaching and learning (2) provides specific examples which demonstrate the change, and (3) reflects on how these changes have impacted personal conceptions of teaching and learning. Target for Benchmark is 75%. This is a mid year assessment so it is expected that the students will not achieve at the same level as expected for the end of program performance as measured by the Capstone.

**Findings 2010-2011 - Target: Partially Met**

Target is 75%. For the 13 students the scores ranged from 15-22 out of 24. The average score is 18; therefore students as a whole met target.

**M 2: Capstone (O: 2, 3, 4, 5)**

The “Impact of Program Rubric” assesses the candidate's perception of how the CMP program impacted his/her views of teaching and learning. Assessment of candidate's occurs twice during the program—end of Spring semester, via Benchmark assignment, and then at the end of the second summer semester, via a Capstone assignment. The rubric is aligned with the PEF Conceptual Framework and the NBPTS graduate teaching standards. Specifically, the rubric assesses the candidate's: (a) knowledge of child-centered pedagogy (Conceptual Framework standard: 1.1, 1.2 and NBPTS Standard: 1, 2, 3) (b) knowledge of the content (Conceptual Framework standard: CF.1.1, 1.2 and NBPTS Standard: 2, 4) (c) ability to monitor and manage student learning; (Conceptual Framework standard: 1.3, 2.2, 3.1, 3.2; NBPTS Standard: 3) (d) to think systematically about their practice and learn from performance (Conceptual Framework standard: 1.2, 1.3, 2.3 and NBPTS Standard: 4) (e) participation in a learning community (Conceptual Framework standard: 2.2, 2.3, 3.1, 3.2, 3.3, and NBPTS Standard: 5).

Source of Evidence: Performance (recital, exhibit, science project).

**Target for O2: Educators demonstrate subject matter knowledge.**

The Capstone is similar to a Showcase Portfolio in that it includes written reflections, samples of educator's work while in the program as well as samples of their students’ work. All are included to demonstrate the educator's growth while in the CMP program. Educators who score at the 80% level are considered to have met the target performance level. A rubric is used to score student performance. Total possible score is 24. For a 24 point scale, 20 is score needed to achieve 80%.

**Findings 2010-2011 - Target: Partially Met**

Target is 80%; or a score of 20/24. For the 13 students the scores ranged from 19-24 out of 24. A score of 20 is at the 80% mark. For this group, the average score is 20; therefore students as a whole met target. However, of the 13 students, only 5 of the 13 students scored at or above 20; whereas 8 scored at 19. Although target was met as a group, action plans have been identified to ensure that more students score at least at the 80% mark.

**Target for O3: Educators reflect on their practice.**

The Capstone is similar to a Showcase Portfolio in that it includes written reflections, samples of educator's work while in the program as well as samples of their students’ work. All are included to demonstrate the educator's growth while in the CMP program. Educators who score at the 80% level are considered to have met the target performance level. A rubric is used to score student performance. Total possible score is 24. For a 24 point scale, 20 is score needed to achieve 80%.

**Findings 2010-2011 - Target: Partially Met**

Target is 80%; or a score of 20/24. For the 13 students the scores ranged from 19-24 out of 24. A score of 20 is at the 80% mark. For this group, the average score is 20; therefore students as a whole met target. However, of the 13 students, only 5 of the 13 students scored at or above 20; whereas 8 scored at 19. Although target was met as a group, the following action plans have been identified to ensure that more students score at least at the 80% mark.

**Target for O4: Educator will collaborate with peers and others.**

The Capstone is similar to a Showcase Portfolio in that it includes written reflections, samples of educator's work while in the program as well as samples of their students’ work. All are included to demonstrate the educator's growth while in the CMP program. Educators who score at the 80% level are considered to have met the target performance level. A rubric is used to score student performance. Total possible score is 24. For a 24 point scale, 20 is score needed to achieve 80%.

**Findings 2010-2011 - Target: Met**

Target is 80%; or a score of 20/24. For the 13 students the scores ranged from 19-24 out of 24. A score of 20 is at the 80% mark. For this group, the average score is 20; therefore students as a whole met target. However, of the 13 students, only 5 of the 13 students scored at or above 20; whereas 8 scored at 19. Although target was met as a group, action plans have been identified to ensure that more students score at least at the 80% mark.

**Target for O5: Educator will show commitment to student learning.**
The Capstone is similar to a Showcase Portfolio in that it includes written reflections, samples of educator's work while in the program as well as sample of their students' work. All are included to demonstrate the educator's growth while in the CMP program. Educators who score at the 80% level are considered to have met the target performance level. A rubric is used to score student performance. Total possible score is 40. For a 40 point scale, 33 is score needed to achieve 80%.

**Findings 2010-2011 - Target: Not Reported This Cycle**

Target is 80% or a score of 20/24. For the 13 students the scores ranged from 19-24 out of 24. A score of 20 is at the 80% mark. For this group, the average score is 20; therefore students as a whole met target. However, of the 13 students, only 5 of the 13 students scored at or above 20; whereas 8 scored at 19. Although target was met as a group, action plans have been identified to ensure that more students score at least at the 80% mark.

**M 3: Teacher Development (O: 1, 2)**

This project enables teacher candidates to improve their classroom practice. Two program activities focus directly on the teacher's in-classroom practice: faculty classroom visits and teacher video clubs. Faculty Classroom Visits: Program faculty visit each teacher two times during the Fall semester and two times during Spring semester. The visits include an observation of the educator and a follow-up debriefing. After the visit, the educator submits a written reflection describing what was learned and how future work will be influenced by this new information. Teacher Video Clubs: Teachers meet in small groups three times Fall semester and three times Spring semester. At each meeting, one to three teachers share a 5 to 10 minute video clip of a lesson. Teachers prepare to share their clips by completing the protocol.

**Target for O1: Educators manage and monitor student learning.**

Educators who score at the 80% level are considered to have met the target performance level. A rubric is used to score student performance. Total possible score is 40. For a 40 point scale, 33 is score needed to achieve 80%.

**Findings 2010-2011 - Target: Met**

Out of 13 students: 3 students received 30/40; 6 students received 35/40; 4 students received 40/40. Average score for 13 is 35. Therefore students as a whole met target.

**Target for O2: Educators demonstrate subject matter knowledge.**

Educators who score at the 80% level are considered to have met the target performance level. A rubric is used to score student performance. Total possible score is 40. For a 40 point scale, 33 is score needed to achieve 80%.

**Findings 2010-2011 - Target: Met**

Out of 13 students: 3 students received 30/40; 6 students received 35/40; 4 students received 40/40. Average score for 13 is 35. Therefore students as a whole met target.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Examine literature on achievement gap between majority and minority students.**

During the Glue classes attention will be directed toward examining reasons behind the achievement gap between majority and minority students. Students will read a variety of texts and hold classroom discussions.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Implementation Description:** Students will be given their first reading related to the achievement gap at the first glue class in August.
- **Projected Completion Date:** 07/2009
- **Responsible Person/Group:** The two program directors will be responsible for selecting readings and for leading the discussions.

**Incorporate monthly video clubs**

Teachers will meet 1 Wednesday of each month with their video club groups. The focus of the clubs is on the student – teacher language interactions. Each teacher will seek feedback on her language interactions during either a math, literacy, community language lesson.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Implementation Description:** Introduce video clubs to students at first glue class in August
- **Projected Completion Date:** 07/2009
- **Responsible Person/Group:** Lynn Hart will take the lead. Three faculty in the program: Lynn Hart, Julie Dangel, and Mona Matthews will visit each video club one time during the year
- **Additional Resources:** We submitted a proposal requesting technology funds to purchase cameras

**Action Plans**

Although target was met as a group, the following action plans have been identified to ensure that more students score at least at the 80% mark. An analysis of the Capstones identified two areas that need to be addressed. These are: writing using the professional literature and writing to illustrate reflective thinking. To address these areas of need, the program will intensify its focus on writing. Specifically, 1. The literacy course will include a more intensive focus on writing. A literature review will be assigned during the summer. To help with organization, the students will be provided a template for organizing a literature review. Also a Writing Workshop structure will be used in class to included mini lessons and in-class revision sessions. 2. The Benchmark assignment will be used to focus on reflective writing. Again a Writing Workshop structure will be used in class to included mini lessons and in-class revision sessions.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** High
Analysis Questions and Analysis Answers

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Rubrics for Impact of Program Rubric I and II and Teacher Development I and II were created and will be used for the 2011-2012 assessment cycle. The inclusion of these rubrics will enable Weave assessments to align with the College of Education Livetext assessment system.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Although target was met as a group, the following action plans have been identified to ensure that more students score at least at the 80% mark. An analysis of the Capstones identified two areas that need to be addressed. These are: writing using the professional literature and writing to illustrate reflective thinking. Georgia State University
Assessment Data by Section
2010-2011 Early Childhood Education MEd GATAPP
As of 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The UACM is a rigorous program that seeks to serve the needs and aspirations of elementary students schooled in urban contexts by eradicating deficit perspectives through the development of pedagogically competent, equity-oriented, empowered teachers who are change agents inside and outside the classroom.

The UACM beliefs:

- We believe that teachers have the ability and power to provide experiences in which children succeed. This success provides the confidence and competence for children to continue to succeed.

- We believe that in order to foster these successful experiences, teachers must engage and connect with students. This connection is demonstrated by treating children with respect, by having high standards and by helping children to believe that they can achieve.

- We believe that in order to foster successful experiences, teachers must be knowledgeable about the child's culture and must actively integrate this into the best practices of teaching and learning.

- We believe that from structure comes freedom. The teacher must create a purposeful, structured environment in which children are free to explore, experiment, and learn.

- We believe that teachers need to establish an environment in their classrooms where children are respectful of each other, their environment and the adults in their lives.

- We believe that teachers should respect the language of their children and have knowledge of its background and principles. We also believe that teachers should model and expect mastery of mainstream American English for their students.

Goals
G 1: Content and Pedagogical Knowledge, Skills and Dispositions
Master's candidates will have the content and pedagogical knowledge, skills and dispositions to be able to plan and implement effective, culturally responsive instruction.

G 2: Teaching as a Profession
Master's candidates will develop as reflective and collaborative professionals.

Student Learning Outcomes/Objectives
SLO 1: Shows commitment to student learning & development (G: 1) (M: 1)
Educator is committed to students and their learning and/or development.
Relevant Associations: NBPTS, NAEYC, NCTM, IRA, NCSS, NSTA

SLO 2: Applies expertise for learning and development (G: 1) (M: 2)
The educator is an expert in his/her field and can effectively apply that expertise to promote learning/development.
Relevant Associations: NBPTS, NAEYC, NCTM, IRA, NCSS, NSTA

SLO 3: Manages and monitors student learning/development (G: 1) (M: 3)
The educator is responsible for managing and monitoring student learning/development.

Relevant Associations: NBPTS, NAEYC, NCTM, IRA, NCSS, NSTA

**SLO 4: Engages in scholarship about teaching and learning (G: 2) (M: 4)**
The educator thinks systematically about his/her practice and learns from professional experience.

Relevant Associations: NBPTS, NAEYC, NCTM, IRA, NCSS, NSTA

**SLO 5: Participates in professional learning communities (G: 2) (M: 5)**
The educator is a member of one or more learning communities.

Relevant Associations: NBPTS, NAEYC, NCTM, IRA, NCSS, NSTA

**Measures, Targets, and Findings**

**M 1: Faculty Rating 1 - Committed to Student Learning (O: 1)**
Scores for candidates on the following assessment are aggregated and entered into the UACM MEd database for Standard 1: Disposition Assessment.

Source of Evidence: Academic direct measure of learning - other

**Target for O1: Shows commitment to student learning & development**
90% of program completers will demonstrate an intermediate or higher level of dispositions needed to achieve this standard through independent and autonomous reflection, planning, and action.

**Findings 2010-2011 - Target: Met**
95% of Master's candidates achieved satisfactory or better on this standard.

**M 2: Faculty Rating 2- Expertise for Learning & Develop (O: 2)**
Scores for candidates on the following assessment are aggregated and entered into the UACM MEd database for Standard 2: Capstone Project.

Source of Evidence: Academic direct measure of learning - other

**Target for O2: Applies expertise for learning and development**
90% of program completers will demonstrate an intermediate or higher level of knowledge, skills and dispositions needed to achieve this standard through independent and autonomous planning and action.

**Findings 2010-2011 - Target: Met**
95% of Master's candidates achieved satisfactory or better on this standard.

**M 3: Faculty Rating 3-Manage & monitor student learning (O: 3)**
Scores for candidates on the following assessment are aggregated and entered into the UACM MEd database for Standard 3: Teaching and Learning Project.

Source of Evidence: Academic direct measure of learning - other

**Target for O3: Manages and monitors student learning/development**
90% of program completers will demonstrate an intermediate or higher level of knowledge and skills needed to achieve this standard through independent and autonomous planning and action.

**Findings 2010-2011 - Target: Met**
100% of Master's candidates achieved satisfactory or better on this standard.

**M 4: Faculty Rating 4 - Engaging in Scholarship (O: 4)**
Scores for candidates on the following assessment are aggregated and entered into the UACM MEd database for Standard 4: Action Research Project.

Source of Evidence: Academic direct measure of learning - other

**Target for O4: Engages in scholarship about teaching and learning**
90% of program completers will demonstrate an intermediate or higher level of knowledge and skills needed to achieve this standard through studying the effectiveness of one’s pedagogy.

**Findings 2010-2011 - Target: Met**
95% of Master's candidates achieved satisfactory or better on this standard.

**M 5: Faculty Rating 5-Professional Learning Communities (O: 5)**
Scores for candidates on the following assessment are aggregated and entered into the UACM MEd database for Standard 5: Field Experience Observation, which Cross Career Learning Community is a part of the overall score.

Source of Evidence: Academic direct measure of learning - other

**Target for O5: Participates in professional learning communities**
90% of program completers will demonstrate an intermediate or higher level of knowledge and skills needed to achieve this...
standard through active engagement as a member of the teaching profession.

**Findings 2010-2011 - Target: Met**

95% of Master's candidates achieved satisfactory or better on this standard.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Add MEd Orientation to Summer Semester

The program faculty will add a MEd Orientation to the summer semester prior to starting ECE course work in the Master's year of the Program of Study. The orientation will focus on the program schedule and major activities/projects. The major activities/projects include: the mentorship experience and the capstone project. Candidates will also be introduced to the program text (The New Teacher), which will be read across all of their ECE courses. This orientation will allow candidates to grasp the Master's program scope and sequence prior to starting their career as teachers. As currently implemented, when the orientation is done on the first day during the fall semester, candidates become overwhelmed with all of the information they receive as they negotiate being a first-year teacher.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Terminated
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**
- **Measure:** Faculty Rating 2 - Expertise for Learning & Develop | **Outcome/Objective:** Applies expertise for learning and development
- **Measure:** Faculty Rating 3 - Manage & monitor student learning | **Outcome/Objective:** Manages and monitors student learning/development
- **Measure:** Faculty Rating 4 - Engaging in Scholarship | **Outcome/Objective:** Engages in scholarship about teaching and learning
- **Measure:** Faculty Rating 5 - Professional Learning Communities | **Outcome/Objective:** Participates in professional learning communities

**Implementation Description:** The MEd. Orientation will be scheduled in July of each year.

**Projected Completion Date:** 07/2011

**Responsible Person/Group:** Program Faculty

**Additional Resources:** N/A

**Budget Amount Requested:** $0.00 (no request)

#### Monitor and Maintain

The Early Childhood Education UACM MEd (GATAPP) Program has met all of its objectives. Program faculty will continue to maintain the effective components of the program, assess all outcomes/objectives, and monitor students’ performance on each objective.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** In-Progress
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**
- **Measure:** Faculty Rating 1 - Committed to Student Learning | **Outcome/Objective:** Shows commitment to student learning & development
- **Measure:** Faculty Rating 2 - Expertise for Learning & Develop | **Outcome/Objective:** Applies expertise for learning and development
- **Measure:** Faculty Rating 3 - Manage & monitor student learning | **Outcome/Objective:** Manages and monitors student learning/development
- **Measure:** Faculty Rating 4 - Engaging in Scholarship | **Outcome/Objective:** Engages in scholarship about teaching and learning
- **Measure:** Faculty Rating 5 - Professional Learning Communities | **Outcome/Objective:** Participates in professional learning communities

**Projected Completion Date:** 09/2011

**Responsible Person/Group:** Program Faculty

**Additional Resources:** N/A

**Budget Amount Requested:** $0.00 (no request)

#### Start Fall Mentorship Earlier

As a part of the UACM MEd (GATAPP) mentorship course, university mentors initially spend an entire day to help induct our new Master's candidates into the teaching profession. Mentors guide our Master’s candidates in the area of lesson planning, classroom management, assessment, organization, and school politics. The earlier this experience is in the fall the quicker candidates are able to negotiate the learning curve of being a new teacher. We plan to start the mentorship experience the first week students (PreK-5) report back to the GSU classes.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** In-Progress
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**
- **Measure:** Faculty Rating 2 - Expertise for Learning & Develop | **Outcome/Objective:** Applies expertise for learning and development
- **Measure:** Faculty Rating 3 - Manage & monitor student learning | **Outcome/Objective:** Manages and monitors student learning/development
- **Measure:** Faculty Rating 5 - Professional Learning Communities | **Outcome/Objective:** Participates in professional learning communities

**Implementation Description:** Target date is the first week students (PreK-5) report back to GSU classes.

**Projected Completion Date:** 09/2011

**Responsible Person/Group:** Program Faculty

**Additional Resources:** N/A

**Budget Amount Requested:** $0.00 (no request)
Once a Week Classes
We have adjusted the program schedule to better meet the needs of our student. All of our students are first year teachers, and previously our program required them to come to GSU twice a week for classes. Our students now only come to GSU on Mondays for longer period of time relieving them some of their burden. We will interview students on the effectiveness of this new schedule.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: Medium

Relationships (Measure | Outcome/Objective):
- Measure: Faculty Rating 1 - Committed to Student Learning | Outcome/Objective: Shows commitment to student learning & development
- Measure: Faculty Rating 2 - Expertise for Learning & Develop | Outcome/Objective: Applies expertise for learning and development
- Measure: Faculty Rating 3 - Manage & monitor student learning | Outcome/Objective: Manages and monitors student learning/development
- Measure: Faculty Rating 4 - Engaging in Scholarship | Outcome/Objective: Engages in scholarship about teaching and learning
- Measure: Faculty Rating 5 - Professional Learning Communities | Outcome/Objective: Participates in professional learning communities

Implementation Description: Faculty coordinated the program schedule to ensure that students could receive all of their contact time on Monday evening.
Projected Completion Date: 04/2011
Responsible Person/Group: UACM Faculty
Additional Resources: N/A
Budget Amount Requested: $0.00 (no request)

Assess and Revise Assessment Rubrics
The UACM MEd (GATAPP) program is assessing and revising our assessment rubrics to improve the effectiveness of the data collected. First, the assessment rubrics are being adapted to a 5-point scale in the hopes of getting more refined data. Second, the assessment rubrics are being aligned with the new COE conceptual framework.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Implementation Description: The program director in coordination with appropriate faculty members will review and revise each rubric to be on a five-point scale.
Responsible Person/Group: Program Director and UACM Faculty
Additional Resources: N/A
Budget Amount Requested: $0.00 (no request)

Implement New Assessment System
In the 2011-2012 academic year, the UACM MEd (GATAPP) program will implement a new assessment system called Livetext for program assessment storage and reporting. The program is now moving to using Livetext for all key assessments with the new cohort beginning in fall 2011. All program faculty have been trained in livetext.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Implementation Description: Faculty were trained on the Livetext system. Key assessment rubrics were reviewed and revised. Key assessment and rubrics were loaded into Livetext, and faculty will score these assessments in Livetext at designated benchmarks in the program.
Responsible Person/Group: UACM Program Director and Faculty
Additional Resources: N/A
Budget Amount Requested: $0.00 (no request)

Restructure ECE 6415 Literacy/Social Studies Integration
The UACM MEd (GATAPP) program is an unique approach to teacher certification and graduate school. After an accelerated certification process, candidates continue their graduate studies into their first year as a teacher of record. In order to meet the demands of a first-year teacher who is also attending graduate school, courses need to be structured to bridge the gap between theory and practice. Currently, ECE 6415 is a traditional graduate course with many of its requirements not related to the lived experiences of our candidates. The UACM faculty is committed to analyzing and restructuring this course to facilitate candidates’ critical thinking in order to improve their pedagogy.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Implementation Description: Faculty will meet to discuss and restructure ECE 6415 to meet the goals of the program.
Responsible Person/Group: UACM Faculty
Additional Resources: N/A
Budget Amount Requested: $0.00 (no request)

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Since the last assessment report, the following changes have been made: LiveText Assessment System now is being used for assessment data collection and analysis. All assessment rubrics have been aligned with the new COE’s new conceptual framework. Rubrics have been refined to be more sensitive to student learning. Disposition measure for Unit changed. Program adapted a new field observation instrument, which is aligned with the Georgia Framework and NBPTS.
ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The Early Childhood Education UACM MEd (GATAPP) Program has met all of its objectives. Program faculty will continue to maintain the effective components of the program, assess all outcomes/objectives, and monitor students’ performance on each objective. Although, all objectives were met, a closer analysis of the data revealed that candidates tend to score lower in greater numbers around their ability to reflect and analyze practice. This has led the UACM faculty to conclude that by restructuring some components of the program, it will reduce the candidates’ stress allowing candidates the ability to think in more critical ways, facilitating their growth in becoming more effective teachers. The UACM MEd (GATAPP) program is an unique approach to teacher certification and graduate school. After an accelerated certification process, candidates continue their graduate studies into their first year as a teacher of record. In order to meet the demands of a first-year teacher who is also attending graduate school, the program needs to be structured to bridge the gap between theory and practice. Thus, the program faculty made the flowing changes to the program: 1. As a part of the MEd mentorship course, university mentors spend an entire day to help induct our new Master’s candidates into the teaching profession. Mentors guide our Master’s candidates in the area of lesson planning, classroom management, assessment, organization, and school politics. The earlier this experience is in the fall the quicker candidates are able to negotiate the learning curve of being a new teacher. We will start these observations early in the fall semester. 2. We have adjusted the program schedule to better meet the needs of our students. All of our students are first-year teachers, and previously our program required them to come to GSU twice a week for classes. Our students now only come to GSU on Mondays for longer period of time relieving them some of their burden. 3. Currently, ECE 6415 is a traditional graduate course with many of its requirements not related to the lived experiences of our candidates. The UACM faculty is committed to analyzing and restructuring this course to facilitate candidates’ critical thinking in order to improve their pedagogy. 4. We have reviewed and revised the key assessment rubrics, making them clear for candidates and providing the program better data. 5. We started implementing the LiveText assessment tracking system to help organize and evaluate program assessment date to improve the program.

Georgia State University
Assessment Data by Section
2010-2011 Early Childhood Education PhD
As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
Pursuing a doctoral degree is more than completing a series of courses; it is a coherent and integrated process designed to develop scholars and leaders in early childhood and elementary education. Congruent with the vision of the National Association for the Education of Young Children, the ECE faculty believe that the "primary outcome for the doctoral candidate is to become a leader who influences the practice of early childhood education through the generation of knowledge, the education of early childhood professionals, the conduct of research, the development, implementation and evaluation of curriculum, the administration of early childhood programs and services, and the analysis and generation of public policy" (NAEYC Core Principles for Advanced Degrees, 2003).

Goals
G 1: Overall Goal
The overall goal is to recruit, retain, and graduate high quality graduates in a learning environment that supports students’ success.

Student Learning Outcomes/Objectives
SLO 1: Thoughtful writers and speakers (M: 1, 3)
Graduate will be thoughtful writers and speakers.
Relevant Associations: NAEYC graduate standards

SLO 2: Active seeker of knowledge (M: 1, 2, 3)
Active seeks of knowledge remain current on theory and research and are able to critique, synthesize and implement these ideas in their practice.
Relevant Associations: NAEYC graduate standards

SLO 3: Demonstrate research skills (M: 1, 3)
Graduates will conduct quality, valid, and socially responsible inquiry related to early childhood education.
Relevant Associations: NAEYC graduate standards

SLO 4: Knowledgeable teachers (M: 2)
Knowledgeable teachers who are capable of challenging their students’ thinking and constructing knowledge relative to early childhood education
Relevant Associations: NAEYC graduate standards

Measures, Targets, and Findings
M 1: Comprehensive examination (O: 1, 2, 3)
The comprehensive exam is used to provide evidence of ECE three outcomes

Source of Evidence: Comprehensive/end-of-program subject matter exam

**Target for O1: Thoughtful writers and speakers**

80% will pass the comprehensive exams on the first attempt; all will pass by the second attempt.

**Findings 2010-2011 - Target: Met**

Five out of five students passed their comprehensive exams in 2010-11 (Czaplickik, Hooper, Cronin, Lewis, Bernard). All passed on the first attempt.

**Target for O3: Demonstrate research skills**

80% will pass the comprehensive exams on the first attempt; all will pass by the second attempt.

**Findings 2010-2011 - Target: Met**

100% of those taking comprehensive exams (total 5) passed on their first attempt.

**M 2: Teaching apprenticeship (O: 2, 4)**

The teaching apprenticeship requires students to: 1. Prepare a comprehensive course syllabus including objectives, schedule of class topics, reading list, and evaluative procedures, 2. Have responsibility for actual teaching, which will include the development of subject matter, content, and method of presentation (specific guidelines for this requirement must be developed with the faculty supervisor in order to provide a consistent experience for students in the course), 3. Establish methods for evaluating him or herself (e.g., teaching portfolio, journals, surveys) and the course, 4. Use and interpret data gathered from all course evaluations.

Source of Evidence: Field work, internship, or teaching evaluation

**Target for O2: Active seeker of knowledge**

All eligible students will successfully complete a university teaching apprenticeship.

**Findings 2010-2011 - Target: Not Met**

Six of seven students completed their university teaching apprenticeship in 2010-11 (Cain, Barrett-Mynes, Pendergrast, Lewis, Alicia, Carothers).

**Target for O4: Knowledgeable teachers**

All eligible students will successfully complete a university teaching apprenticeship.

**Findings 2010-2011 - Target: Not Met**

Six of seven students successfully completed their university teaching apprenticeship for 2010-11.

**M 3: Dissertation presentation (O: 1, 2, 3)**

The student presents a research project including reviewing the literature, analyzing data, and writing a final report for publication.

Source of Evidence: Senior thesis or culminating major project

**Target for O1: Thoughtful writers and speakers**

We want 100% of our eligible PHD students to have rigorous dissertations.

**Findings 2010-2011 - Target: Met**

Four out of four (100%) of our students completed rigorous dissertations in 2010-11 (Matthews, Faran, Kavanagh, Lacke).

**Target for O2: Active seeker of knowledge**

One (out of 1) or 100% of our eligible PHD students successfully defended a rigorous dissertation.

**Findings 2010-2011 - Target: Met**

100% of eligible students presented a rigorous dissertation.

**Target for O3: Demonstrate research skills**

One (out of 1) or 100% of our eligible PHD students successfully defended a rigorous dissertation.

**Findings 2010-2011 - Target: Met**

100% (4 out of 4) eligible students presented a rigorous dissertation.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Comprehensive exams revised**

While we met our goal, we have revised our comprehensive exams (based on feedback from earlier years). The first students electing to use the revised comps format will do so summer 2009. It will be required of those entering fall 09. We plan to monitor the process and products associated with the revised comprehensive exams.

*Established in Cycle: 2008-2009*

*Implementation Status: Planned*

*Priority: High*
Comprehensive exams revised
While we met our goal, we have revised our comprehensive exams (based on feedback from earlier years). The first students electing to use the revised comps format will do so summer 2009. It will be required of those entering fall 09. We plan to monitor the process and products associated with the revised comprehensive exams.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High

Quality of dissertations
While we want to ensure our students are graduating in a timely manner, we also want to ensure quality in their dissertations. This year we plan to develop an instrument to document levels of quality for students’ presentation of their dissertation.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High

Quality of dissertations
While we want to ensure our students are graduating in a timely manner, we also want to ensure quality in their dissertations. This year we plan to develop an instrument to document levels of quality for students’ presentation of their dissertation.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High

Quality of dissertations
While we want to ensure our students are graduating in a timely manner, we also want to ensure quality in their dissertations. This year we plan to develop an instrument to document levels of quality for students’ presentation of their dissertation.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High

Summary of Professional Growth
Develop a checklist for mentors to assess students during teaching apprenticeship.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: Medium

Summary of research skills form
Continue to research and develop a checklist of communication and research skills to use in evaluating the presentation of the dissertation.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High

Monitoring of comp exam process
Analysis Questions and Analysis Answers

**ACADEMIC PROGRAM QUESTION 1:** What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

A committee is currently meeting (2011) to discuss changes in PHD program based on anticipated changes in the college. The goals will remain the same but there will likely be changes in the process/format of the program.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

A change needed based on assessment of our University teaching apprenticeship is to create a systematic way to provide feedback to students that is supportive, useful, and accurately matches requirements of the apprenticeship.

UTA as coursework

Now that the university teaching apprenticeship is a required course, the success rate is higher and the outcomes are more systematic. Continue to monitor.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
- Measure: Comprehensive examination
- Outcome/Objective: Thoughtful writers and speakers

Responsible Person/Group: Coordinator of PHD program

UTA assessment

Our first student did not pass her University Teaching Apprenticeship. The good news is because it is now a course, we have ways to monitor and guide students who are not yet competent in university teaching. What we need is a systematic way to give feedback to students that is supportive, useful, and accurately matches requirements of the apprenticeship.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium

Implementation Description: Julie will take this issue to the PHD advisory committee. As they deliberate changes in the PHD program, this can be part of the discussion. Looking at what other universities do might be helpful.

Georgia State University

Assessment Data by Section

2010-2011 Early Childhood Mathematics Education MED

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose

Program Theme: Teaching PreK-5 Mathematics in a Learner Centered Classroom

Program Description: The Master of Education (M.Ed.) program in Early Childhood Education is designed for the teacher who wishes to establish a learner-centered classroom. Through an integrated approach that provides choices and opportunities for decision making and dynamic group interactions, teachers participating in one of the master’s program become partners with faculty in shaping the path or paths by which content is learned. The M.Ed. in ECE program is based on the assumption that learning is a constructive process which builds on the knowledge and experience of the learner. The teacher functions as a collaborator with parents and children to focus on strategies for enhancing effective child learning. Therefore, All ECE coursework and instruction will incorporate reflective practice, collaboration, theories of child development, and strategies for managing classrooms and affirming diversity. Within the Master’s program there are two courses of study: Collaborative and Mathematics Education. Upon meeting the College of Education admissions requirements, students are eligible to pursue either of these courses of study. However, admission into the Collaborative program also requires an interview with the Early Childhood Education faculty. All applicants must hold certification in early childhood education. Mathematics Education The M.Ed. in Early Childhood Education with an elementary mathematics education concentration (the Program) is designed for the PreK-5 teacher who wants to understand mathematics and become a teacher-leader in establishing learner-centered classrooms consistent with the standards of the National Council of Teachers of Mathematics (NCTM) and the National Association for the Education of Young Children (NAEYC). Through this graduate level program, teachers become knowledgeable of current research and methods for teaching mathematics in today’s diverse PreK-5 classrooms. This Program is closely aligned with the Vision, Mission, and related Outcomes established by the Georgia State University (GSU) Professional Education Faculty (PEF) unit. The Outcomes related to the conceptual framework are measured through several key assessments: Vision: The vision of the Program is aligned with the vision of the PEF: to provide international leadership in educational research and to create and implement exemplary educational programs in metropolitan areas. As a part of the PEF unit, the program envisions a world that
embraces diversity; where social justice, democratic ideals, and equal opportunity can be increasingly enacted; and where technology is used to enhance opportunities for human development. Finally, as a part of the PEF faculty, the program faculty believe that all people should be lifelong learners. Mission: The mission of the Program is aligned with the mission of the GSU PEF, which represents a joint enterprise within an urban research university between the College of Arts and Sciences and the College of Education, working in collaboration with P-16 faculty from diverse metropolitan schools. Grounded in these collaborations, the mission of the program is to prepare educators who are: • informed by research, knowledge and reflective practice; • empowered to serve as change agents; • committed to and respectful of all learners; and • engaged with learners, their families, schools, and local and global communities.

Goals

G 1: Knowledge of Content and Curriculum
Knowledge of Elementary Mathematics Content and Curriculum: Candidates will understand and use the major concepts of mathematics appropriate for grades K-5.

G 2: Knowledge of Learners, Learning, and Teaching
Knowledge of Learners, Learning, and Teaching: Candidates will understand and use research-based knowledge of how children learn mathematics with understanding and effective strategies for teaching for understanding.

G 3: Assessment of Student Learning
Assessment of Student Learning: Candidates will understand and use multiple, appropriate assessment methods to assess student learning and improve program effectiveness.

G 4: Knowledge of Diversity
Knowledge of Diversity: Candidates will understand and use knowledge of student diversity to affirm and support full participation and continued study of mathematics by all students.

Student Learning Outcomes/Objectives

SLO 1: Demonstrates Knowledge of Content and Curriculum (G: 1) (M: 1, 3, 5)
Learning Objectives: The following objectives summarize the requirements of the Georgia Professional Standards Commission for the K-5 Mathematics Endorsement (see PSC 505-3-68). These objectives are consistent with the GSU PEF Conceptual Framework. Demonstrates knowledge of elementary mathematics content and curriculum (G1): Candidates appropriately use knowledge of mathematical content and curriculum emphasized in national, state, and local standards for grades K-5 in preparing learning experiences for children.

SLO 2: Demonstrates Pedagogical Content Knowledge (G: 2) (M: 4, 5)
Demonstrates research-based pedagogical content knowledge (G2): Candidates use instructional strategies based on current research and applicable standards and use appropriate technology and a variety of physical and visual materials for exploration of mathematical concepts and procedures and development of children’s thinking, understanding, and problem solving across the strands of the elementary mathematics curriculum.

SLO 3: Assesses Student Learning and Program Effectiveness (G: 3) (M: 2)
Assesses student learning and program effectiveness (G3): Candidates understand and use multiple, appropriate assessment methods to assess student learning and improve program effectiveness.

SLO 4: Demonstrates Knowledge of Student Diversity (G: 4) (M: 2)
Demonstrates knowledge of student diversity (G4): Candidates demonstrate knowledge of student diversity (e.g., gender, ethnicity, socioeconomic background, language, special needs, etc.) and use this knowledge to affirm and support the learning of mathematics by all students.

Measures, Targets, and Findings

M 1: Worthwhile Mathematical Tasks Collection (O: 1)
The Worthwhile Mathematical Tasks Collection Assessment is graded at the end of each of the four mathematics content/pedagogy courses in the program (ECE 7393, ECE 7394, ECE 7395, and ECE 7396). Instructions to candidates for this assessment are as follows: Collection of Worthwhile Mathematical Tasks and Rationales The NCTM Professional Standards for Teaching Mathematics (1991) emphasizes the posing of learning activities it calls worthwhile mathematical tasks. These tasks are to be based on— Sound and significant mathematics; Knowledge of students’ understandings, interests, and experiences; Knowledge of the range of ways that diverse students learn mathematics; And these tasks are intended to— Engage students’ intellect Develop students’ mathematical understandings and skills; stimulate students to make connections and develop a coherent framework for mathematical ideas; Call for problem formulation, problem solving, and mathematical reasoning; Promote communication about mathematics; Represent mathematics as an ongoing human activity; Display sensitivity to, and draw on, students’ diverse background experiences and dispositions; Promote the development of all students’ dispositions to do mathematics. (p. 25) “In selecting, adapting, or generating mathematical tasks, teachers must base their decisions on three areas of concern: the mathematical content, the students, and the ways in which students learn mathematics” (pp. 25-26) Stein, Smith, Henningsen, and Silver (2000) encourage the analysis of mathematics instructional tasks for “the kind and level of thinking required of students in order to successfully engage with and solve the task” (p. 11). Their analysis of cognitive demands divides mathematics tasks into two general categories, each of which are divided further into two subcategories: Lower-Level Demands (including Memorization Tasks and Procedures Without Connections Tasks) and Higher-Level Demands (including Procedures With Connections Tasks and Doing Mathematics Tasks). “Since the tasks with which students become engaged in the classroom form the basis of their opportunities for learning mathematics, it is important to be clear about one’s goals for student learning. Once learning goals for students have been clearly articulated, tasks can be selected or created to match these goals. Being aware of the cognitive demands of tasks is a central consideration in this matching” (p. 11). The NCTM Principles and Standards for School Mathematics (2000) elaborates on the role of problem solving in learning mathematics by specifying that— Instructional programs from prekindergarten through grade 12 should enable all
students to—build new mathematical knowledge through solving problems; solve problems that arise in mathematics and in other contexts; apply and adapt a variety of appropriate strategies to solve problems; monitor and reflect on the process of mathematical problem solving. (p. 51) “Problem solving means engaging in a task for which the solution method is not known in advance. [The 1989 NCTM Curriculum and Evaluation Standards called this nonroutine problem solving.] In order to find a solution, students must draw on their knowledge, and through this process, they will often develop new mathematical understandings. Solving problems is not only a major means for learning mathematics, but also a major means for understanding mathematics. Students should be given a variety of opportunities to formulate problems, grapple with, and solve complex problems that require a significant amount of effort and should then be encouraged to reflect on their thinking.” (NCTM, 2000, p. 51) Tasks and Rationales: Select, adapt, or generate (and organize) ten (10) worthwhile mathematical tasks across grades 2-5 focusing on developing the understanding of the major concepts of elementary mathematics emphasized in this course. For each task collected, provide a rationale/cover page that identifies the following (refer to Stein, Smith, Henningsen, & Silver, 2000, pp. 16, 21); Anticipated students (age, grade level, and prior knowledge/experience); Goals for student learning (identified in the NCTM Standards or mathematical features of the task, including what students are asked to do, in what context, with what tools (including the impact of the use of calculators or other technology), etc.; Level of cognitive demands (kinds of thinking required by the task); Rationale for the categorization of cognitive demands. Your Solutions to the Tasks: For each of the tasks in your collection, provide a complete solution of your own work. Following your solution, explain in writing your thinking used to complete the task. This assessment is graded using the Worthwhile Mathematical Tasks Collection Rubric.

Source of Evidence: Project, either individual or group

**Target for O1: Demonstrates Knowledge of Content and Curriculum**

Rubric average score of Meets Expectations / High Quality (80%).

**Findings 2010-2011 - Target: Met**

Across four uses of this measure during 2010-2011, 100% of candidates scored Meets Expectations / High Quality or better for a mean rating of 4.80 out of 5 or a percentage equivalent of 96.0% compared to a target of 80%.

**M 2: Student Interview Assessments (O: 3, 4)**

The Student Interview Assessments are graded during three of the four mathematics content courses in the program (ECE 7393, ECE 7394, and ECE 7395). These assignments provide a model for student-centered teaching. Instructions to candidates for these assessments are as follows: Student Interview Assessments The Teaching Principle from the NCTM Principles and Standards for School Mathematics indicates teachers’ must understand children’s thinking to make effective curricular and instructional decisions. Specifically—Effective teaching requires knowing and understanding mathematics, students as learners, and pedagogical strategies. Teachers need several different kinds of mathematical knowledge—knowledge about the whole domain; deep, flexible knowledge about how ideas relate and about the interconnections to their grade level; and knowledge about the strategies that students are likely to encounter in learning these ideas; knowledge about how the ideas can be represented to teach them effectively; and knowledge about how students’ understanding can be assessed. This knowledge helps teachers make curricular judgments, respond to students’ questions, and look ahead to where concepts are leading and plan accordingly. (NCTM, 2000, p. 16) Interviewing individual students provides an opportunity to apply research on children’s thinking and to develop a deep understanding of how children construct conceptual understandings in the context of solving nonroutine problems. Interactions with individual children provide the foundation for developing student-centered instruction attending to each child’s needs. For this assignment during the Number and Operations Course (3 Interviews): Interview #1: Addition and Subtraction (First Grade) a. Prepare a script of 11 potential addition and subtraction word problems to pose to a child in First Grade. Include one of each type of problem identified in the CGI framework of addition and subtraction problem types. Vary the names of participants, objects, and numbers used in the collection of problems. Provide for your selection of alternative number sizes during the interview, depending on the as yet unknown needs of the child. The problems must make sense with all of the alternate number sizes. Use realistic contexts for all problems, but make the problems as simple in context and syntax as possible. The goal is for the problems to be engaging yet easily understandable. b. Interview one child with the purpose of coming to know what that child understands about solving addition and subtraction word problems. Provide a collection of appropriate physical materials as well as paper and pencil for the child to use in solving the problems. Begin by asking one of the easier problems from your script and record in as much detail as possible what the child does and does not understand. Then solve the problem on the basis of the child’s understanding and success in solving the problems you pose. Additional problems that will explore the depth of the child’s understanding and success in solving the problems you pose. c. Write a report that lists the problem you posed, identifies the problem type from the CGI framework (e.g., JRU for Join Result Unknown), describes the child’s response as completely as possible, and analyzes the child’s response on the basis of the CGI framework for solution strategies. Repeat this process (problem as posed, CGI problem type, and CGI analysis) for each of the problems that you posed. At the end of this report, write one paragraph that summarizes what you learned about the child’s understanding of addition and subtraction, the types of problems the child successfully solved and struggled with, the range of numbers with which the child was familiar, and the types of strategies the child demonstrated. Conclude the report with an Instructional Decision as follows: Write one word problem that is an appropriate next problem to ask this student to solve to continue developing the student’s understanding of addition and subtraction. Identify the CGI problem type and justify your choice of next problem based on the CGI research. Interview #2: Multiplication and Division (Second Grade) a. Prepare a script of 10-12 potential multiplication and division word problems to pose to a child in Second Grade. Most of the problems for this interview should be Grouping and Partitioning problems (multiplication, measurement division, and partitive division) as identified in the CGI framework. Include only one multiplication problem from each of the Rate, Price, and Multiplicative Comparison types at the end of your script. Include at least one partitioning problems with a remainder, considering the four different types of problems. Use realistic contexts for all problems as simple in context and syntax as possible. The problems must make sense to a child. The goal is for the problems to be engaging yet easily understandable. b. Interview one child with the purpose of coming to know what that child understands about solving grouping and partitioning word problems. Provide a collection of appropriate physical materials as well as paper and pencil for the child to use in solving the problems. Begin by asking one of the easier problems from your script and record in as much detail as possible what the child does and says in trying to solve the problem. On the basis of the child’s strategy and success in solving the first problem, sequence additional problems that will explore the child’s strategies and understanding while continuing to encourage and support the child’s success in solving the problems you pose. c. Write a report that lists the problem you posed, identifies the problem type from the CGI framework (e.g., G/P-FD for Grouping/Partitioning-Partitive Division), describes the child’s response as completely as possible, and analyzes the child’s response on the basis of the CGI framework for solution strategies. Repeat this process (problem as posed, CGI problem type, child’s response, and CGI analysis) for each of the problems that you posed. At the end of this report, write one paragraph that summarizes what you learned about the child’s understanding of grouping and partitioning the types of problems the child successfully solved and struggled with, the types of strategies they demonstrated. Conclude the report with an Instructional Decision as follows: Write one word problem that is an appropriate next problem to ask this student to solve to continue developing the student’s understanding of multiplication and division. Identify the CGI problem type and justify your choice of next problem based on the CGI research. Interview #3: Base-Ten Understanding (Third Grade) a. Prepare a script of 10-12 potential word problems to pose to a child in Third Grade with the purpose of determining what the child understands about base ten concepts. Most of the problems for this interview should be grouping and partitioning problems that use groups of ten and addition problems that encourage the use of invented algorithms to deal with carefully selected number combinations. Provide for your selection of
Interview a small group of children (or an individual child) with the purpose of coming to know what each child understands about equality. Provide appropriate materials for the children to use in solving the problems. Record in as much detail as possible what the children do and say in trying to solve the problems. On the basis of the children's responses, sequence additional problems that will explore the extent of the children's understanding while continuing to encourage and support the children's success with the problems you pose. c. Write a paragraph that summarizes what you learned about the children's understanding of equality. Conclude the report with an Instructional Decision as follows: Write an appropriate next problem to ask this student to continue developing this student's understanding of equality. Justify your choice of next problem based on the research on children's understanding of equality. Interview #5: Children's Relational Thinking. a. Design an adaptive performance assessment of understanding of equality. Target the assessment to a specific (P-5) grade level of your interest. Prepare a script of 6-10 problems, including open number sentences (e.g., 8 + 4 = 5 + ?) and True-False number sentences (e.g., 8 + 3 = 7 + 4 True or False?). See Thinking Mathematically, pp. 9-24 for examples. Carefully and deliberately choose numbers and your problem sequence to elicit children's understanding of equality (both the concept and the symbol) and explore the extent of children's understanding. b. Interview one child with the purpose of coming to know what each child understands about equality. Provide appropriate materials for the children to use in solving the problems. Record in as much detail as possible what the children do and say in trying to solve the problems. On the basis of the children's responses, sequence additional problems that will explore the extent of the children's understanding while continuing to encourage and support the children's success with the problems you pose. c. Write a paragraph that summarizes what you learned about the children's understanding of equality. Conclude the report with an Instructional Decision as follows: Write an appropriate next problem to ask this student to continue developing this student's understanding of equality. Justify your choice of next problem based on the research on children's understanding of equality. Interview #6: Children's Understanding of Geometry OR Measurement a. Design an adaptive performance assessment of understanding of key concepts of geometry or measurement through solving nonroutine problems. Target the assessment to a specific (P-5) grade level of your interest. Use realistic contexts for all problems, but make the problems as simple in context and syntax as possible. The goal is for the problems to be nonroutine, engaging, and challenging, yet easily understandable. b. Interview one child to assess what that child understands about geometry or measurement as well as the child's ability to use that understanding in nonroutine problem solving consistent with grade-level expectations. Provide a collection of appropriate physical materials as well as paper and pencil for the child to use. On the basis of the child's strategy and success in solving the first problem, sequence additional problems that will explore the extent of the child's strategies and understanding while continuing to encourage and support the child's success in solving the problems you pose. c. Write a paragraph that lists the problems you posed, describes the children's responses as completely as possible, and analyzes each child's relational thinking. At the end of this report, write one paragraph that summarizes what you learned about the children's relational thinking. Conclude the report with an Instructional Decision as follows: Write an appropriate next problem to ask this student to continue developing this student's relational thinking. Justify your choice of next problem based on the research on children's relational thinking. Interview #6: Children's Understanding of Geometry OR Measurement b. Design an adaptive performance assessment of understanding of geometry or measurement through solving nonroutine problems. Target the assessment to a specific (P-5) grade level of your interest. Use realistic contexts for all problems, but make the problems as simple in context and syntax as possible. The goal is for the problems to be nonroutine, engaging, and challenging, yet easily understandable. b. Interview one child to assess what that child understands about geometry or measurement as well as the child's ability to use that understanding in nonroutine problem solving consistent with grade-level expectations. Provide a collection of appropriate physical materials as well as paper and pencil for the child to use. On the basis of the child's strategy and success in solving the first problem, sequence additional problems that will explore the extent of the child's strategies and understanding while continuing to encourage and support the child's success in solving the problems you pose. c. Write a paragraph that lists the problems you posed, describes the children's responses as completely as possible, and analyzes each child's relational thinking. At the end of this report, write one paragraph that summarizes what you learned about the children's relational thinking. Conclude the report with an Instructional Decision as follows: Write an appropriate next problem to ask this student to continue developing this student's relational thinking. Justify your choice of next problem based on the research on children's relational thinking.

Target for O3: Assesses Student Learning and Program Effectiveness
Rubric average score of Meets Expectations / High Quality (80%).

Findings 2010-2011 - Target: Met
Across six uses of this measure during 2010-2011, 100% of candidates scored Meets Expectations / High Quality or better, with an mean rating of 4.76 out of 5 or 95.2% compared to the target of 80%.

Target for O4: Demonstrates Knowledge of Student Diversity
Rubric average score of Meets Expectations / High Quality (80%).

Findings 2010-2011 - Target: Met
Across six uses of this measure during 2010-2011, 100% of candidates scored Meets Expectations / High Quality or better, with an mean rating of 4.76 out of 5 or 95.2% compared to the target of 80%.

M 3: Data Project and Presentation Assessment (O: 1)
The Data Project and Presentation Assessment is graded using the data analysis and probability content/pedagogy course in the program (ECE 7396). Instructions to candidates for this assessment are as follows: Data Project and Presentation Assessment is adapted from Russell, S. J., Schifter, D., & Bastable, V. (2002). Working with data: Facilitator's guide. Parsippany, NJ: Dale Seymour (Pearson Learning Group). People collect data in order to answer a question or to illuminate some aspect of their lives. For this

the use of electronic-recording media for

reason, every aspect of data collection and analysis must be evaluated in light of the purpose of the investigation. For example, was the investigation designed in such a way that it produced the needed data? Did respondents interpret the survey question in the way it was intended? Were the measurements accurate enough to be reliable? Does the way the data are represented in a graph or table give a view of the data that helps answer the original question? (Russell, Schifter, & Bastable, 2002, p. 122) Assignment Instructions:

1. Prepare a written Data Project Report that documents the following activities: a. Form a worthwhile, interesting, researchable question that involves a familiar context, involves numerical data that can be consistently interpreted, anticipates the range of possible responses, compares data from at least two groups, and is likely to get the information required to accomplish the purpose of the study. b. Gather applicable data, differentiating between the real-world event and the abstracted data documenting some aspects of that event. c. Create and interpret data displays that support the purpose of the study and communicate a useful picture of the range and distribution of the data to the intended audience. Appropriately treat values of zero and zero frequencies in these displays. Use available technology (e.g., Excel) in preparing these data displays. d. Analyze, summarize, and interpret the data recognizing emergent features of the aggregated data (such as center, spread, and shapes that are not visible within the variability of the individual cases; provide a summary of appropriate averages and consider the various ways in which typically is communicated by midrange, majority, mode, median, and mean; and interpret the data by comparing group results using averages or other representative values. e. Relate the interpretations of the data back to the real situation by making statements and claims about the real-world situation rather than just the representations of the data. 2. Prepare and present (a) a poster presentation and (b) a PowerPoint presentation to convey your question, methods, and findings to your peers. This assessment is graded using the Data Project and Presentation Grading Rubric.

Target for O1: Demonstrates Knowledge of Content and Curriculum

Rubric average score of Meets Expectations / High Quality (80%).

Findings 2010-2011 - Target: Met

Thirty-two out of 33 candidates (97.0%) enrolled in ECE 7396 during 2010-2011 scored Meets Expectations / High Quality (80%) or better. The mean rubric score was 4.48 out of 5, which is an equivalent percentage of 89.6% compared with the target of 80%.

The Professional Portfolio Project is graded at the end of the clinical practice course in the program (ECE 7740). Instructions to candidates for this assessment are as follows: Professional Portfolio Project This assignment is adapted from the PSC K-5 Mathematics Endorsement Program Portfolio Guidelines. The portfolio is organized into three sections and must include a minimum of ten lesson plans and other artifacts that illustrate your effective implementation of mathematics student achievement. The portfolio will be evaluated as Satisfactory (S) or Unsatisfactory (U) based on completeness and the quality of included artifacts. Section 1. Content Implementation This section of the portfolio includes artifacts generated from demonstrating implementation of content knowledge in teaching. A minimum of four lesson plans demonstrating implementation of instructional strategies, one from each of the four mathematics content areas in ECE 7393, 7394, 7395, and 7396). These lesson plans must have been taught by you and must include your written lesson reflection and analysis. Observer notes and comments regarding a minimum of two taught mathematics lessons based on a pre-established observation rubric. Section 2. Student Learning The portfolio must include a minimum of two different types of artifacts illustrating evidence of impact on student mathematics learning. A minimum of four lesson plans (which you have taught and include your written reflection and analysis) with collected student work or other assessment evidence demonstrating the impact of the lesson on student learning. At least one of these lesson plans must demonstrate the following: A lesson developed in response to formative student assessment data. May include recommendations for enrichment or remediation. A differentiated lesson based on specific student needs or interests. A written response to a lesson-observation rubric completed by an observer, specifying lesson modifications intended to improve the impact of the lesson on student mathematics learning. Section 3. Technology Integration The portfolio must include a minimum of two artifacts demonstrating the integration of available technology into mathematics instruction. A minimum of two lesson plans (which you have taught and include your written reflection and analysis) incorporating available technology into mathematics instruction. A personal statement that could be shared with parents on the effective use of technology in mathematics instruction to support learning mathematics with understanding. Notes: All lesson plans, teaching, and reflections included in the portfolio must originate while enrolled in K-5 Mathematics Endorsement Program courses (ECE 7393, 7394, 7395, 7396, and/or 7740). A minimum of 2 of the 10 lesson plans included in the portfolio must be taught in a grade band (K-2 or 3-5) that is different from your regular classroom assignment. A minimum of 2 of the 10 lesson plans included in the portfolio must provide evidence of working with diverse students as demonstrated by submitting demographics of the classes taught with the lesson plans. The use of electronic-recording media for the purpose of lesson analysis is not considered technology incorporation into mathematics instruction. This portfolio is graded using the Professional Portfolio Project Rubric.

Source of Evidence: Portfolio, showing skill development or best work

Target for O2: Demonstrates Pedagogical Content Knowledge

Rubric average score of Meets Expectations / Satisfactory (80%).

Findings 2010-2011 - Target: Met

Twenty-nine out of 32 students (90.6%) enrolling in ECE 7740 during Spring 2011 have completed the course with a portfolio rating of Meets Expectations / Satisfactory. Three students have not yet completed the course pending satisfactory completion of the portfolio. The mean portfolio score for 2010-2011 is 90.6%. This meets the achievement target for the year.

Target for O1: Demonstrates Knowledge of Content and Curriculum

GPA of 3.00 or better for all candidates in the specified courses.

Findings 2010-2011 - Target: Met

The aggregate GPA for the four elementary mathematics content courses during 2010-2011 was 3.774 (A-). All candidates achieved a GPA for those courses of 3.00 or better.

M 4: Professional Portfolio Project (O: 2)

M 5: Selected Course Grades (O: 1, 2)

Course grades from the four courses in the program integrating content and pedagogy in elementary mathematics classrooms reflect candidate knowledge of major concepts of mathematics content appropriate for grades K-5. These courses are as follows: ECE 7393: Number and Operations in the Elementary Classroom; ECE 7394: Geometry and Spatial Sense in the Elementary Classroom; ECE 7395: Algebra in the Elementary Classroom; ECE 7396: Data Analysis and Probability in the Elementary Classroom

Source of Evidence: Academic direct measure of learning - other

Source of Evidence: Project, either individual or group
GPA of 3.00 or better for all candidates in the specified courses.

Findings 2010-2011 - Target: Met
The overall GPA for the four elementary mathematics content courses during 2010-2011 was 3.774 (A-). All candidates achieved a GPA for those courses of 3.00 or better.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Increase Pedagogical Emphasis and Tools
The qualitative data from program key assessments has indicated a need for greater emphasis and support for implementing standards-based pedagogy. We have introduced a standards-based lesson plan format for use in each of the math content/pedagogy courses that supports teachers' attention to important elements of standards-based pedagogy. This increased emphasis will be continued through the current cycle of four math content/pedagogy courses that concludes in May 2012. Results from key assessments for 2011-2012 will be analyzed for improvement in attention to these pedagogical details.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High
Projected Completion Date: 05/2012
Responsible Person/Group: Program Co-Coordinators (Dr. Smith and Dr. Swars)
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
2010-2011 is the first year of this program. We met all outcome objectives. We are very pleased with the data provided by the key assessments. No changes in the assessment process have been made or are currently planned. The key assessments are doing a good job of providing data that is helpful in planning adjustments in the program and its courses.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.
The assessment findings identified an opportunity to improve the program curriculum as indicated in the Action Plans, specifically to provide a greater emphasis on standards-based pedagogy in the four math content/pedagogy courses. The assessment findings also indicated that the program has been successful in meeting our expectations and objectives. No additional program changes are planned at this time.

Georgia State University
Assessment Data by Section
2010-2011 Economics Assessment of Core
As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The mission of the Department of Economics's undergraduate program and its central role in the University core curriculum is to increase substantive knowledge, analytical skills and communication skills by educating students about economic principles and by imparting an appreciation of economic issues from a global perspective.

Goals

G 1: goals
The goals of the Department of Economics's undergraduate program and its central role in the University core curriculum include teaching students the "economic way of thinking", and helping them appreciate and understand the global economy in which we live today.

G 2: new goals/outcomes
NOTE: We have decided to move to the new core curriculum learning outcomes this reporting cycle. We have three courses in area E of the core curriculum: ECON 2100 (The Global Economy), ECON 2105 (Principles of Macroeconomics), and ECON 2106 (Principles of Microeconomics). One of those courses (ECON 2100) is also one of the designated courses for the BOR Global Perspectives (GL) overlay. The new social science core learning outcome (which is really more of a goal, so we list it here - we further refine this as a learning outcome for our courses in the outcomes section of this report) is: Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change. The new BOR Global Perspectives (GL) learning outcome (which is really more of a goal, so we list it here - we further refine this as a learning outcome for our courses in the outcomes section of this report) is: Students demonstrate understanding of political,
social, economic, and/or institutional developments across the globe.

**Student Learning Outcomes/Objectives**

**SLO 1**: social science core learning outcome - econ (G: 2) (M: 1)

Students will demonstrate knowledge about how economists think about human behavior and the interactions between humans as they make choices.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 2**: Global Perspectives (G: 2) (M: 2)

Students demonstrate understanding of global and cultural differences across the globe and how they apply to the field of economics.

**Measures, Targets, and Findings**

**M 1**: Multiple Choice Questions on Final Exams (O: 1)

Five multiple choice questions which can be used to assess the new social science learning outcome were embedded on the final exams of selected sections of economics courses in the core (ECON 2100 – The Global Economy; ECON 2105 – Principles of Macroeconomics; ECON 2106 – Principles of Microeconomics). Different questions were used in different classes, but all questions were selected from an approved list that can be used to measure the learning outcomes. See the attached file to see the actual questions used.

Source of Evidence: Standardized test of subject matter knowledge

Target for O1: social science core learning outcome - econ

We are reporting the data this year in the new way we started last year. This year, we include a table with the exact questions used and the number of students (as well as the percentage of students) that got each question correct. We also report the average of those percentages for each set of questions (which generally correspond to a single section, with some exceptions where instructors used the same questions in multiple sections). We then report the weighted average of the percentage of correct answers across all sets of questions for each of the three separate courses (2100, 2105, and 2106) assessed. (See the attached document in the measures section.) We would like to see the weighted average of the percentage of correct answers across all sets of questions for each course to be at least 75%.

Findings 2010-2011 - Target: Partially Met

For ECON 2100, the weighted average of the percentage of correct answers across all sets of questions was 69.8%. There were a total of 241 students assessed across 4 different sections with 3 different instructors. See the attached document in the measures section for more details on the questions and the variations in the percentage of correct answers. We are generally pleased with these results. For ECON 2105 the weighted average of the percentage of correct answers across all sets of questions was 73%. There were a total of 110 students assessed in one section reported. See the attached document in the measures section for more details on the questions and the variations in the percentage of correct answers. For ECON 2106, the weighted average of the percentage of correct answers across all sets of questions was 77.3%. There were a total of 502 students assessed across 4 different sections with 3 different instructors. See the attached document in the measures section for more details on the questions and the variations in the percentage of correct answers. We had already planned changes in our assessment plans for the future before we gathered the data this year, but it was too late to follow the new plan. Next cycle, we expect to have a standard set of questions for each course and to require every instructor to use them, so the number of students assessed will increase next year.

**M 2**: Multiple Choice questions embedded on unit exams (O: 2)

Five multiple choice questions which can be used to assess the new global perspectives learning outcome were embedded on the exams of selected sections of ECON 2100: The Global Economy. See the attached file to see the actual questions used.

Source of Evidence: Standardized test of subject matter knowledge

Target for O2: Global Perspectives

We would like to see the weighted average of the percentage of correct answers across all sets of questions for each course to be at least 75%.

Findings 2010-2011 - Target: Not Met

The weighted average of the percentage of correct answers across all sets of questions was 66.6%. There were a total of 241 students assessed across 4 different sections with 3 different instructors. See the attached document in the measures section for the results of each individual question.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

increase number of students assessed

Each year, the Department of Economics asks instructors of the economics courses in the core curriculum to volunteer to participate in assessment of the contemporary issues general education learning outcomes. In the future, we hope to get more instructors involved in the assessment, and therefore, increase the number of students assessed. Starting in Fall 2012, all instructors of ECON 2100, 2105, and 2106 will be required to participate in assessment efforts.

Established in Cycle: 2007-2008

Implementation Status: Planned
compose new assessment questions
After reviewing last year's assessment report, the Department of Economics Undergraduate Program Committee decided to compose a standard set of questions to be used for each core course (ECON 2100, 2105, and 2106) and to require instructors to embed those questions on an exam and report results to the Committee for the assessment report. We are in the progress of composing such questions; it was too late to implement this strategy this year, but we hope to do so for next year's report.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: Medium
Relationships (Measure | Outcome/Objective):
  Measure: Multiple Choice questions embedded on unit exams | Outcome/Objective: Global Perspectives
  Measure: Multiple Choice Questions on Final Exams | Outcome/Objective: social science core learning outcome - econ

Projected Completion Date: 04/2012
Responsible Person/Group: Department of Economics Undergraduate Program Committee

Academic Program Question 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We are revising the questions we ask and revising our plan for how to do the assessment in the core courses - it will no longer be voluntary for instructors to participate - everyone will include the assessment questions on one of their exams throughout the semester.

Academic Program Question 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

We have not made changes to our program, but we are considering changes to the principles courses. We might start going with a "less is more" approach because we are concerned that students are being overwhelmed with too much minutiae at the expense of missing the big important themes.
M 1: Tracking Examination (O: 1, 2)

To measure the success of Economics majors in the undergraduate program in learning core economic concepts, the Department of Economics developed two Tracking Exams (TEs), one for Principles of Microeconomics (MicroTE) and one for Principles of Macroeconomics (MacroTE). Each exam is comprised of 50 multiple choice questions that cover the core concepts taught in the two principles courses. The TEs were previously administered each fall and spring semester in a selection of 3000/4000 level courses. At the end of the 50 questions, the student is asked whether or not they are majoring in Economics, and the student is presented with a list of all undergraduate economics courses and is asked to indicate which courses they have taken. Students are not allowed to take a copy of the exam with them, and are not given the answers to the exam at any point. The two TEs were developed and first administered in Fall 2004. Starting in Fall 2006, the TEs were administered in the newly developed ECON 4999: Senior Capstone Course in Economic Policy. The TEs count for 5% of the final course grade in ECON 4999 (addressing a concern a couple of years ago about students taking the TEs seriously). ECON 4999 is required for all new undergraduate economics majors, effective Fall 2009 (effective Fall 2006, it was required for all undergraduate economics majors except the BA in International Economics and Modern Languages; effective Fall 2009, it is required for all BA IEML majors too). The exam is administered twice - once during the first week of classes and again at the end of the semester - and the higher of the two scores is the one that counts toward the course grade. Several questions were selected this fall and spring to measure learning outcomes 1 and 2. See the attached document for the questions that were used for each learning outcome.

Source of Evidence: Capstone course assignments measuring mastery

Target for O1: Economics Basic Theories

We would like to see the average on the questions selected to assess each of the learning outcomes be at least 65%. While this may seem like a low target to an outsider, we believe it is appropriate because these questions are not necessarily emphasized in the ECON 4999 course. These are really questions that assess skills learned in the introductory (ECON 2105 and 2106) courses, and it may be quite some time since the students took those courses by the time they take the ECON 4999 course. We hesitate to ask questions beyond the introductory level because of the way our program is set up - students have a good bit of flexibility in selecting their upper level economics courses, and therefore, students in the ECON 4999 course will likely have taken different 4000 level courses. The only courses we can be sure they've all had are the introductory and intermediate courses.

Findings 2010-2011 - Target: Met

Note to review committee: See the table in the link provided (called econ tracking exam results 2011 report). While the percentage correct of a few questions decreased from last year to this one, most of them increased, as well as the average across all questions. We are pleased to see this. Our target of 65% was met.

Target for O2: Apply to specific fields

We would like to see the average on the questions selected to assess each of the learning outcomes be at least 65%. While this may seem like a low target to an outsider, we believe it is appropriate because these questions are not necessarily emphasized in the ECON 4999 course. These are really questions that assess skills learned in the introductory (ECON 2105 and 2106) courses, and it may be quite some time since the students took those courses by the time they take the ECON 4999 course. We hesitate to ask questions beyond the introductory level because of the way our program is set up - students have a good bit of flexibility in selecting their upper level economics courses, and therefore, students in the ECON 4999 course will likely have taken different 4000 level courses. The only courses we can be sure they've all had are the introductory and intermediate courses.

Findings 2010-2011 - Target: Met

Note to review committee: See the table in the link provided (called econ tracking exam results 2011 report). While the percentage correct of a few questions decreased from last year to this one, most of them increased, as well as the average across all questions. We are pleased to see this. Our target of 65% was met.

M 2: Group Project in ECON 4999 (O: 4)

The group project will allow students to work together to analyze how the benefits and costs of a particular public policy are to be evaluated. The topic will be chosen by the group and should not be one covered in class. Groups consisting of no more than five students (and no fewer than two) will be assigned during the second week of the semester. Group presentations will take place during the last two weeks of classes, and should last about 15 minutes each. Groups must use PowerPoint for their presentations, which they will hand in at the time of the presentation. (A paper is not required for the group project.) Library research is required for the group project, and sources should be carefully noted within the presentation. The presentation should be about ten minutes long. The group can choose who speaks during the presentation. The group may have more than one of the group members speak during the presentation if the group feels it would enhance the presentation. Each individual must also hand in the evaluation sheet provided on the last page of the syllabus. The group project will count for 20% of the course grade. During this assessment cycle, the project was broken down by different skills and groups were assessed individually on these different skills. See the attached file for the rubric on the group presentation.

Source of Evidence: Capstone course assignments measuring mastery
Details of Action Plans for This Cycle (by Established cycle, then alpha)

determine best way to assess learning outcome #3

We have made adjustments to our assessment of learning outcomes based on feedback from the review committee of our previous assessment reports. Instead of reporting the average score for the micro and macro tracking exams as in the past, this cycle, we selected particular questions to assess the first 2 learning outcomes in 2009-2010 and 2010-2011. We are planning to change the tracking exam questions for the first 2 learning outcomes. We did not select questions from the tracking exams to assess learning outcome #3 in either cycle. We are still thinking about the best way to assess that learning outcome. We also did not use the tracking exam to assess learning outcome #4; we used the group project in ECON 4999 for that instead.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Projected Completion Date: 05/2012
Responsible Person/Group: undergraduate programs committee in consultation with ECON 4999 instructors

change questions for the tracking exam

Upon inspection of the findings from last year, the Department of Economics’ Undergraduate Program Committee decided to change the tracking exam questions to better reflect the learning outcomes we are seeking to measure.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
- Measure: Tracking Examination | Outcome/Objective: Apply to specific fields
- Measure: Economics Basic Theories

Projected Completion Date: 05/2012
Responsible Person/Group: economics undergraduate programs committee in consultation with ECON 4999 instructors

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We decided that our tracking exam questions should be changed. We felt that some of the questions were not necessarily assessing the most important concepts. We put together some subcommittees to make new questions for the tracking exams and hope to implement those in classes next year.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

We are considering broad questions about how our courses are taught, particularly at the principles level. We are concerned that students leave the intro courses overwhelmed with the level of details taught in the courses at the expense of missing the main points. We are considering moving to a "less is more" approach in those courses. We are also considering questions like what is the optimal mix of teaching faculty - how many clinical teaching faculty, tenure-track faculty, PTIs, and GTAs should be teaching our...
undergraduate courses? Curriculum changes may come out of these discussions, but we are still in the quite early stages of the discussions.

--

*As of: 12/12/2016 04:11 PM EST*  
*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)*

### Mission / Purpose

The Master of Arts in Economics program is designed to train students for careers in local, state, and federal government and in the private sector. The program emphasizes basic analytical skills, micro- and macro-economic theory, and mathematical statistics, at a level necessary for contributing to and assessing policy research. Microeconomic skills are taught in Economics 8100. Macroeconomic skills are taught in Economics 8110. Statistical skills are taught in Economics 8740 and 8840. Students’ mastery of these skills is assessed with midterm and final examinations in the respective courses. The program also emphasizes advanced understanding of selected topics. Students must take seven additional economics courses, chosen in consultation with their advisors. They must demonstrate mastery of this course material through midterm exams, final exams, and research papers. A final high-quality research paper chosen by the student must demonstrate that the student has the ability to examine an economic problem at a level consistent with advanced graduate course work.

### Goals

**G 1: Theoretical and applied background.**  
To equip the MA program graduates with wide-ranging and in-depth knowledge of theoretical and applied economics. Graduates should be able to perform applied economic analysis based on sound theory and data analysis.

**G 2: Professional success and continued education.**  
To facilitate the continued academic and professional development of the MA program graduates. Graduates should possess the necessary theoretical and analytic background to perform successfully in the job market and to be able to pursue further graduate level education.

### Student Learning Outcomes/Objectives

**SLO 3: Analytical Skills. (G: 1, 2) (M: 1, 2)**  
To learn and grasp basic analytical skills of microeconomics, macroeconomics, and econometrics.

### Other Outcomes/Objectives

**O/O 1: Applying Economic Models. (G: 1, 2) (M: 2, 3)**  
To be able to use and develop economic models to analyze various economic issues and to make policy recommendations.

**O/O 2: Economic Disciplines. (G: 1, 2) (M: 1, 2)**  
To learn to identify various disciplines of economics and their ways of thinking economic issues.

**O/O 4: Economic Data. (G: 1, 2) (M: 2)**  
To be able to understand, use and analyze economic data.

### Measures, Targets, and Findings

**M 1: Core exams. (O: 2, 3)**  
All graduating Master of Arts in Economics students will be assessed on their basic learning of microeconomics, macroeconomics, and econometrics (e.g., Master of Arts in Economics, Learning Outcome 1). The assessment will be based on the performances of their final examinations in macroeconomics, microeconomics and econometrics, the three required courses in their programs. Each exam will be graded on a discrete scale (e.g., A, A-, B+, B, B-, C+, C, C-, D, and F). Questions on the examinations will be classified by type (e.g., definitional, mathematical, policy-relevant, and so on), so that graders of the examination will be able to report more exactly the quality of each examination and the performance in specific areas.  
*Source of Evidence: Writing exam to assure certain proficiency level*

**Target for O2: Economic Disciplines.**  
Target not set in this cycle.

**Findings 2010-2011 - Target: Met**  
There were 17 students that took the macroeconomics exam. There was an improvement in the two weakest areas in last year’s exam: Math and Analytics. In 2009-10, the scores were Math (3.18) and Analytics (3.36). In 2010-11, the scores improved to 4 and 3.47, respectively. There were 24 students that took the microeconomics exam during 2010-11. Scores ranged from 3.92 to 4.2 across categories, a similar range to last year. Analytics (4.2) and Application (4.16) were the
strongest areas. There were 18 students who took the econometrics course in 2010-11. Scores were very good across all categories ranging from 4.05 (Analytics) to 4.47 (Defintional). Overall, the results showed good performance across categories in each of these three core exams.

**Target for O3: Analytical Skills.**

Target not set in this cycle.

**Findings 2010-2011 - Target: Met**

There were 18 students who took the econometrics course in 2010-11. Scores were very good across all categories ranging from 4.05 (Analytics) to 4.47 (Defintional). Overall, the results showed good performance across categories in each of these three core exams.

**M 2: Essay. (O: 1, 2, 3, 4)**

All students will submit a research paper to demonstrate their learning in a chosen subject of their own and to show their understanding, usage, and analysis of economic data. The Essay will typically be a product of the interaction with at least one faculty member in the Department of Economics, and will be assessed by the faculty member(s) involved. The Essay will be evaluated on several criteria (e.g., overall contribution to the literature, understanding of the literature, writing, technical proficiency, and so on).

Source of Evidence: Senior thesis or culminating major project

**Target for O1: Applying Economic Models.**

Target not set in this cycle.

**Findings 2010-2011 - Target: Met**

Seven essays were submitted in 2010-11. Applying economic models were judged by the following two categories: Ability to Cover the Research Question and by Economic Analysis. The average for both of these categories was 4.16, which indicate a solid performance.

**Target for O2: Economic Disciplines.**

Target not set in this cycle.

**Findings 2010-2011 - Target: Met**

This category was measured by Comprehension of the Literature. The average grade was 4.5 which indicates strong performance in this category.

**Target for O3: Analytical Skills.**

Target not set in this cycle.

**Findings 2010-2011 - Target: Met**

This category was measured by the Theoretical Skills and Overall Contribution rankings. The average score in Overall Contribution was 4.0 which indicates solid performance. The average score in Theoretical Skills was 3.5, which while not a high score, is consistent with the applied orientation of our MA program.

**Target for O4: Economic Data.**

Target not set in this cycle.

**Findings 2010-2011 - Target: Met**

This category was evaluated by Data Collection, Measurement and Computation. The average score was 4.16, which indicates good, solid performance.

**M 3: Alumni survey. (O: 1)**

All graduates of this program will be asked to complete a questionnaire that assesses how what was learned in the program contributes to their performance in their current job. This survey will be given at one year and three years after graduation.

Source of Evidence: Alumni survey or tracking of alumni achievements

**Target for O1: Applying Economic Models.**

Target not set in this cycle.

**Findings 2010-2011 - Target: Partially Met**

We received 5 responses to the alumni survey. The responses were generally favorable. In response to, "The program improved my ability to carry out research projects," the average response by the alumni was 4.8. This is encouraging as it would indicate that graduates feel that the program adequately improved their research skills. In addition, when asked if alumni would recommend our program to their peers, the average score was 4.0. This score was the same as last year, which indicates an overall positive experience in the program. On the other hand, alumni felt that we could improve in two particular areas. First, integrating MA students more into departmental life/events. Second, we could provide more support for them to identify and pursue job opportunities.
**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

### Alumni
- Compile a database of alumni and reinvigorate the contact with them to track job performance over time and satisfaction with the MA program.
  - **Established in Cycle:** 2008-2009
  - **Implementation Status:** In-Progress
  - **Priority:** High
  - **Responsible Person/Group:** Bess Blyler

### Collect timely information
- Execute the newly developed surveys of current and graduating students to track experiences in a timely manner.
  - **Established in Cycle:** 2008-2009
  - **Implementation Status:** Finished
  - **Priority:** High

### Exchange programs
- Increase the number of students who participate in international exchange programs by providing comprehensive information.
  - **Established in Cycle:** 2008-2009
  - **Implementation Status:** In-Progress
  - **Priority:** High

### High standards in core classes
- Work with the instructors of the core classes to maintain high standards across all measured outcomes, with particular emphasis on providing theoretical content with applied relevance and analytical skills.
  - **Established in Cycle:** 2008-2009
  - **Implementation Status:** Finished
  - **Priority:** High
  - **Projected Completion Date:** 11/2011

### Improve research essays
- The MA program advisor has received several inquiries from both faculty and students about the essay requirements. We expect an immediate improvement in the quality of research papers from clarifying these guidelines and requiring higher standards for passing.
  - **Established in Cycle:** 2008-2009
  - **Implementation Status:** Finished
  - **Priority:** High
  - **Projected Completion Date:** 11/2011

### New website
- Build a comprehensive website for the MA program to use in the advising process, program administration, and promotion.
  - **Established in Cycle:** 2008-2009
  - **Implementation Status:** Finished
  - **Priority:** High
  - **Projected Completion Date:** 11/2011

### Professional experience
- Increase the number of internships and fellowships available to students to enrich their professional background and preparedness for employment. Also, provide more information about career events and opportunities.
  - **Established in Cycle:** 2008-2009
  - **Implementation Status:** In-Progress
  - **Priority:** High
  - **Implementation Description:** An internship course has been created, ECON 8941. It will run parallel to the PMAP course. This should encourage our students to obtain more internships.

### Recruitment
- Compile a large dataset of contacts where we can advertise the program.
  - **Established in Cycle:** 2008-2009
  - **Implementation Status:** Planned
  - **Priority:** High

### Recruitment
- Increase recruitment efforts in the U.S. and internationally. The new website will be essential in this effort.
  - **Established in Cycle:** 2008-2009
  - **Implementation Status:** In-Progress
  - **Priority:** High

### Start a Seminar Series for our MA students
- A special seminar series that met a couple of times a semester will be developed. The purpose is to integrate MA students specifically into our departmental activities. There are many other seminars offered throughout the semester, but are only typically attended by doctoral students and faculty. This new MA seminar series would be on topics specifically of interest to them such as: talks by alumni of the program on their job experiences and advise; talks by faculty about topical issues at a level accessible to MA students, etc.
  - **Established in Cycle:** 2010-2011
  - **Implementation Status:** Planned
  - **Priority:** High
Analysis Questions and Analysis Answers

**ACADEMIC PROGRAM QUESTION 1:**
What changes in the assessment process has your degree program made since last year's assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The assessment process that we have (outcomes, measures, targets) is generally fine. We have not implemented any major changes. We have, however, implemented various changes in response to assessments, which is the subject of the next question.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

There are several changes implemented in response to findings. First, we have established a set of guidelines for the MA-Econ non-thesis paper. These guidelines make clear the expectations for the content of the non-thesis paper. Second, we have begun to address the issue of better integration into department life that was brought up in the alumni survey. In Fall 2011, the MA Symposium was started with presentations of exclusive interest for MA-econ students. In addition, we have also begun to provide more career service advice to our students with the establishment of a dedicated Career Services office at our college, AYSPS, this year. This office will hold workshops, critique resumes, bring employers to meet students, and other activities that should be helpful for our students in their job search.

**ADMINISTRATIVE DEPT QUESTION 1:**
Explain how your department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?
See response to Academic Program Question 1.

**ADMINISTRATIVE DEPT QUESTION 2:**
What have you learned from your assessment this year (2010-2011)?
See response to Academic Program Question 2.

**ADMINISTRATIVE DEPARTMENT QUESTION 3:**
What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

The program is well established and is generally doing well. Only minor changes to continue improving the outcomes are needed as described above.

---

**Georgia State University**

**Assessment Data by Section**

**2010-2011 Economics PhD**

As of: 12/12/2016 04:11 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

---

**Mission / Purpose**

The Ph.D. in Economics program seeks to develop a high level of competence in conducting basic and applied policy research. The doctoral program requires that students demonstrate mastery of a large and complex body of knowledge. In particular, students must master microeconomics, macroeconomics, and econometrics at a level required for professional independent research. Necessary skills for microeconomics are taught in Economics 9010, 9040, and 9050. Necessary skills for microeconomics are taught in Economics 9020, 9040, and 9050. Necessary skills for macroeconomics are taught in Economics 8030, 9710, 9720, and 9730. Students' mastery of these respective skills is assessed in mid-term and final exams in these courses. Skills for microeconomics and macroeconomics are also assessed in comprehensive exams, normally taken after the first year. Additional mastery is required in one field of the student's choosing (Environmental and Urban Economics, Experimental Economics, Labor Economics, or Public Economics). Three courses are taken from the chosen field. Skills are assessed using midterm exams, final exams, and research papers in these courses. Field comprehensive exams (covering all three courses in one field) are required and usually are taken in the third year. A secondary field is optional; the requirement includes taking at least two courses from the chosen secondary field.

The doctoral program also requires that students demonstrate proficiency in the techniques of teaching and research. This is evidenced by participation with faculty members in research, presentation of papers and reports, and the writing of a dissertation. Students learn this proficiency in Economics 9500, 9510, 9515 and 9940. In these courses, they work individually with professors on research projects and gain skills in presenting and understanding new research. Satisfactory progress is indicated by a passing grade in these courses. Finally, proficiency in these skills is determined by the successful completion of an oral examination on the subject of the student's dissertation.

**Goals**

**G 1: Knowledge**

To equip the Ph.D. students with wide-ranging and in-depth knowledge of theoretical and applied economics and to achieve a high level of mastery of the issues, theories, and latest advances in at least one of the fields of economics
G 2: Research
To develop a high level of competence in conducting independent and original basic and applied research.

Student Learning Outcomes/Objectives

SLO 1: Analytical Skills (G: 1)
To achieve a high level of competence understanding and using analytical skills of microeconomics, macroeconomics, and econometrics.

SLO 2: Theoretical and Quantitative Methods (G: 1) (M: 3)
To achieve a high level of competence in understanding the most recent theoretical and quantitative methods in economics.

SLO 3: Field Specialization (G: 1) (M: 2, 3)
To demonstrate mastery of the issues, theories, and latest advances in at least one of the fields in economics offered by the program.

SLO 4: Conducting Independent Research (G: 2) (M: 3, 4, 5)
To demonstrate ability to conduct independent and original basic and applied research in economics.

Measures, Targets, and Findings

M 2: Field Examination (O: 3)
All Ph.D. students take a Comprehensive Examination at the end of the first-year after taking the core courses. This examination tests their basic learning of microeconomics and macroeconomics (e.g., Ph.D. in Economics, Learning Outcome 1). The examination is graded, on a discrete scale (e.g., High Pass, Pass, Low Pass, High Fail, Fail), and students are given feedback. Questions on the examinations are classified by type (e.g., definitional, mathematical, policy-relevant, and so on), so that graders of the examination are able to report more exactly the quality of each examination and the performance in specific areas.

Source of Evidence: Comprehensive/end-of-program subject matter exam

Findings 2010-2011 - Target: Met
The Public Finance field exam was given to 4 students in summer 2010. Three of the four students passed the exam. The average evaluation scores per category were comparable to the last year’s group of students. The Labor Economics field exam was given to 5 students in summer 2010. Four of the five students passed the exam. The one student who failed passed the exam (on the third attempt) in Summer 2011. The Urban/Environmental field exam was given to 2 students in Spring of 2011. One of the two students passed the exam. The other student passed the exam on the second in Spring 2011; he received a “High Pass” On his second attempt. The Experimental Economics field exam was given to 1 student in summer 2010. The student passed the exam. In comparison with the previous year, the number of students who took field examinations went up from 7 to 12. Examinations were given in four different fields doubling the previous year figure of two.

M 3: Dissertation (O: 2, 3, 4)
After completion of the program’s coursework, students write a Dissertation. The dissertation is written with close supervision of a faculty dissertation chair and a dissertation committee. The Dissertation is evaluated on several criteria (e.g., overall contribution to the literature, understanding of the literature, writing, technical proficiency, and so on).

Source of Evidence: Senior thesis or culminating major project

Findings 2010-2011 - Target: Met
Since the end of Spring 2010 12 Ph.D. dissertations have been successfully defended. The averages in each category are comparable to those of previous years. The average score for the overall contribution to the literature was about 4.48 (out of 5); this figure is similar to the average score of 4.46 during the Spring 2009 - Spring 2010 period. In 5 cases, the dissertation committee judged that the work would deserve publication in the top journal of the particular field.

Target for O3: Field Specialization
NA

Findings 2010-2011 - Target: Met
Since the end of Spring 2010 12 Ph.D. dissertations have been successfully defended. The averages in each category are comparable to those of previous years. The average score for the overall contribution to the literature was about 4.48 (out of 5); this figure is similar to the average score of 4.46 during the Spring 2009 - Spring 2010 period. In 5 cases, the dissertation committee judged that the work would deserve publication in the top journal of the particular field.

Target for O4: Conducting Independent Research
NA
Findings 2010-2011 - Target: Met

Since the end of Spring 2010 12 Ph.D. dissertations have been successfully defended. The averages in each category are comparable to those of previous years. The average score for the overall contribution to the literature was about 4.48 (out of 5); this figure is similar to the average score of 4.46 during the Spring 2009 - Spring 2010 period. In 5 cases, the dissertation committee judged that the work would deserve publication in the top journal of the particular field.

M 4: Alumni Survey (O: 4)

Graduates of the Ph.D. program are asked to complete a questionnaire that assesses how what was learned in the program contributed to their performance in their current job. This survey includes questions about whether the dissertation (or parts of the dissertation) have been submitted for publication or have already been published. This survey is given at one year and three years after graduation.

Source of Evidence: Alumni survey or tracking of alumni achievements

Target for O4: Conducting Independent Research

NA

Findings 2010-2011 - Target: Met

Seven alumni responded to the survey this year; they were graduated during 2007-2008. Overall the alumni gave high scores to the program; the average scores varied from 3.9 (improved oral ability to communicate ideas) to 4.4 (improved job opportunities). They state that the program has expanded their job opportunities; the score was 4.4 (out of 5). They suggested that the program should utilize different teaching pedagogies and that publishable research should be emphasized. The program's effects on acquired analytical skills, carrying out research projects and improving the ability of collaboration with professionals all received scores of 4.3 (out of 5). All seven alumni would recommend the program to their peers (4.2 out of 5). These alumni are performing quite successfully. They have published a total of 29 papers (since the year they graduated) and have been presenting their work in 56 conferences all over the world. Four of them have academic positions in Minnesota, Arkansas, United Kingdom and Mexico and one is a post-doc at IFPRI in Washington.

M 5: Senior Ph.D. Student Survey (O: 4)

Ph.D. students in their 4th and 5th year are asked to complete a questionnaire that evaluates the program. The survey includes questions about the students' current research output, including published and submitted research papers and presentations at research conferences.

Source of Evidence: Exit interviews with grads/program completers

Target for O4: Conducting Independent Research

NA

Findings 2010-2011 - Target: Met

Seven PhD students responded to the survey. Overall the students valued the program highly. They would recommend the program to their peers (3.9 out of 5). They value the program with respect to improved analytical skills (4.1); improved oral communication of ideas, collaboration with professionals in their fields and perceived value of the program on expanding job opportunities all earned a score of 4. Slightly lower scores were obtained on preparation for an academic career (3.6) and teaching (3.3). All students participated in reporting on their research activities. The total number of papers, book chapters and policy reports already published is 14; the figure for working papers is 28. Furthermore, there were 11 paper presentations at conferences and professional meetings. Five students have teaching experience and two of them taught as instructors at Georgia State University. Overall, from the students' point of view the program seems to be on track; they appreciate the core courses and econometrics but they also recommend that a mixture of applied and theoretical econometrics should be emphasized more in the program.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

CV writing course
We organized a CV writing course for Ph.D. students.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High

High standards in core classes
Work with the instructors of the core classes to maintain high standards across all measured outcomes, with particular emphasis on providing theoretical content with applied relevance and analytical skills.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High

Job market preparation
Organize the consulting sessions during which faculty will give advice to students on how to prepare their job market applications. This activity is organized by the GSA.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High

Job market presentation
We continue to require that all graduating students present job market papers in the brown bag during the Fall semester. As reported in findings this change has been shown to improve job market outcomes.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High
Micro sequence
The microeconomics sequence was reorganized from three semesters to two semesters. This change eliminated the overlap in material from previous courses. It also allows students to have their first summer course free; students can focus solely on preparing for their comprehensive exams. We also eliminated summer courses in the first year; we no longer count the summer as one of the two semesters for students to get off of academic warning for low GPA. This allows students to focus exclusively on preparing for their comprehensive exams, as opposed to the previous practice in which students would try to take additional courses in the summer to raise their GPA, only to fail their comprehensive exams. As we had expected, students' performance on those exams improved significantly. All first year students passed the Macroeconomics comprehensive exam. In comparison with the previous year, the percentage of students who passed the Macroeconomics comprehensive exam on the first attempt increased from 81% to 100%; with respect to the Microeconomics comprehensive exam, the percentage of students who passed the exam on the first attempt went up from 53% to 67%.

Re-organization of the summer semester I
We moved ECON 8500 “History of Economic Thought” from the summer of the second year to the spring of the first year. This change eliminated mandatory courses in the summer of the second year. This allows students to do internships in their second year and have more time to study for field comprehensive exams in the second year. This also helps with GPA requirements, since students tend to do well in this particular course.

Re-organization of the summer semester II
We also eliminated summer courses in the first year; we no longer count the summer as one of the two semesters for students to get off of academic warning for low GPA. This allows students to focus exclusively on preparing for their comprehensive exams, as opposed to the previous practice in which students would try to take additional courses in the summer to raise their GPA, only to fail their comprehensive exams.

Additional dissertation workshop
Students will be required to take an additional dissertation workshop (ECON 9515) in which they will present research and give peer feedback. Particular attention will be paid to presentation skills and the substance of the research; students will be videotaped while presenting.

Econometrics sequence
To help differentiate the Ph.D. level courses from the MA level courses, we have proposed renumbering the courses in the econometrics curriculum. These proposed changes are in line with the policy of using course numbers starting with 9 for PhD level courses. ECON 8730 was re-numbered to Econ 9710. ECON 8750 was re-numbered to Econ 9720. The prerequisites reflect the proposed course renumbering in the econometrics curriculum. ECON 8760 was re-numbered to Econ 9730. The prerequisites reflect the proposed course renumbering in the econometrics curriculum. ECON 8790 was re-numbered to Econ 9740. The prerequisites reflect the proposed course renumbering in the econometrics curriculum. ECON 8770 was re-numbered to Econ 9750. The prerequisites reflect the proposed course renumbering in the econometrics curriculum.

Students' characteristics and success in the program.
We are working on creating a database with students' individual characteristics, their academic performance during the years in the program, placements in the job market and their subsequent research activates. The purpose is to identify determinants of what students' characteristics are correlated with success in the program and out of the program. This will help in developing a data-driven strategy in assessment of the program which will complement the information we get from the self-reporting surveys.

Summer support
Development of an administrative procedure that enforces professional performance responsibilities on graduate students who receive summer support.

Tutoring Experience
We continue to rotate all 3rd year students through the tutoring lab. Last year this helped with staffing the tutoring lab and provided graduates with valuable teaching experience, which we expect to increase their value on the job market.
Coordination of tutoring assignments with research schedules

Coordinate rotation of tutoring lab assignments with research schedules. All 3rd year students will continue to be rotated through the tutoring lab. This will continue to help with staffing the tutoring lab and provide graduates with valuable teaching experience which will increase their value on the job market. Coordination of the tutoring lab assignments with sponsored research grant support from faculty and students’ own research grants will minimize conflicts between program objectives.

Further Development of procedures for summer support

Further development of the administrative procedure that enforces professional performance responsibilities on graduate students who receive summer support. Develop specific procedures for inclusion of research and educational activities carried out at non-university sites with approval by faculty advisers.

New Course on Casual Inference

We added a new course: ECON8899/PMAP8899: Causal Inference and Evidence-based Policy. This course on causal inference is intended for graduate students in social and behavioral sciences broadly and is appropriate for students with advanced empirical training as well as students with only the pre-requisites (graduate-level statistics course covering probability theory and multivariate regression). The course emphasizes a deeper understanding of causality and the designs and methods used to draw causal inferences from experimental and non-experimental (observational) data. It comprises readings, class participation, practice problems, a manuscript review and a term paper and presentation.

Use information from the database to inform admission decisions for applicants to the graduate program

Begin the process of using the graduate student database to inform the admissions decision. We have been developing a database with students’ individual characteristics, their academic performance during the years in the program, placements in the job market and their subsequent research activities. The purpose is to identify determinants of what students’ characteristics are correlated with success in the program and out of the program. A next step is to use information from the database to inform admission decisions for applicants to the graduate program.

ACADEMIC PROGRAM QUESTION 1: What changes in the assessment process has your degree program made since last year’s assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We continued with implementation of two surveys to complement our alumni survey. One of the surveys is administered to the graduating class and current students and inquires about their publications, research in progress, policy reports, participation at conferences, teaching experience, and other measurable outcomes. The information was used for assessing the research and teaching outcomes of students. The second survey is anonymous and consists of questions about the strengths and weaknesses of the program. The survey was administered to graduating students as well as to current students. The objective is to have timely and comprehensive information about the program. That information will be used to make adjustments to the curriculum, administration, and other aspects of the program. We are working on creating a database with students’ individual characteristics, their academic performance during the years in the program, placements in the job market and their subsequent research activities. The purpose is to identify what students’ characteristics are correlated with success in the program and out of the program. This will help in developing a data-driven strategy in assessment of the program which will complement the information we get from the self-reporting surveys. Other important changes to the Ph.D. program that the department implemented last year are as follows. 1. Students now are required to take an additional dissertation workshop (ECON 9515) in which they present research and give peer feedback. All job market candidates are required to give a full 1 hour and 30 minute talk with other students in the class critically assessing their market candidates are required to give a full 1 hour and 30 minute talk with other students in the class critically assessing their performance. Particular attention is paid to presentation skills and the substance of the research. 2. All 3rd year students now are rotated through the tutoring lab. This helps with staffing the tutoring lab and provide graduates with valuable teaching experience which will increase their value on the job market. 3. We have developed an administrative procedure that enforces professional performance responsibilities on graduate students who receive summer support. Prior to the summer each graduate student is queried to determine whether or not they intend to be at GSU and available to work for the summer. If they agree to these terms they are awarded a RA assignment but if they intend to be out of the Georgia and unavailable they do not receive a RA assignment and the payment that goes with it. 4. With respect to job market preparation we continued: (i) to organize a CV writing course for Ph.D. students; (ii) to run consulting sessions during which faculty gave advice to students on how to prepare their job market applications; (iii) to require that all graduating students present job market papers in the brown bag seminar during the fall semester. We expect these changes to help to improve job market outcomes. 5. To maintain high standards in core classes, instructors of the core classes paid special attention in their teaching towards providing theoretical content with applied relevance and analytical skills.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.
The findings suggest that we need to maintain high requirements in terms of the quantitative component of the program. We also need to maintain high standards in core microeconomics and macroeconomics classes. Acquired analytical skills and the diverse content of the program produce visible and important results for current students and alumni. The department intends to continue to:

1. work with the instructors of the core classes to maintain high standards across all measured outcomes, with particular emphasis on providing theoretical content with applied relevance and analytic skills.
2. organize the CV writing course for Ph.D. students. We expect that this change will help with job market outcomes.
3. conduct consulting sessions during which faculty will give advice to students on how to prepare their job market applications and encourage the students to use the University career services for additional experience for job talks. We expect that these changes will help with job market outcomes.
4. require that all graduating students present job market papers in the brown bag seminar series during the fall semester. We expect that this change will help with job market outcomes.

This year we also added a new course: ECON8899/PMAP8899: Causal Inference and Evidence-based Policy. This course on causal inference is intended for graduate students in social and behavioral sciences broadly and is appropriate for students with advanced empirical training as well as students with only the pre-requisites (graduate-level statistics course covering probability theory and multivariate regression). The course emphasizes a deeper understanding of causality and the designs and methods used to draw causal inferences from experimental and non-experimental (observational) data. It comprises readings, class participation, practice problems, a manuscript review and a term paper and presentation.

**Administrative Dept Question 1:**

Explain how your department used the results from last year's (2009-2010) assessment. What actions did you take? What changes did you make as a result?

See answers to Academic Question 1.

**Administrative Dept Question 2:**

What have you learned from your assessment this year (2010-2011)?

The assessment is an important tool to gather information from the variety of sources and evaluate our progress with the PhD program. The improvements since last year also show that changes to the program produce changes in outcomes.

**Administrative Dept Question 3:**

What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

See answers to Academic Question 2. The program is well established, and students show strong performance. Therefore, radical changes are not needed. Yet, continued emphasis on objectives is essential to maintain and further raise the standards. From an administrative point of view, it is important to have an established plan for carrying out all the tasks involved in running the program. This allows us to add new components to enrich the experience of students and to streamline even further the logistics of the program.
Students will develop expertise in research skills, specifically the ability to design, implement and evaluate their own research studies. They will also prepare their results for publication and submit their finding to refereed journals. Students will also develop skills in grant writing.

Relevant Associations: Related Measure: Doctoral Indicator Survey-Research section

SLO 2: Students will teach at the university level (G: 2) (M: 2)
Students will develop expertise in teaching at the university level through teaching (or assisting in teaching) university courses, course lectures, and/or practicum supervision.

Relevant Associations: Related Measure: Doctoral Indicator Survey- Teaching Section

SLO 3: Students will participate in presentations (G: 3) (M: 3)
Students will participate in professional development activities, including presentations and participation in professional organizations.

Relevant Associations: Related Measure: Doctoral Indicator Survey- Professional Development

SLO 4: The student will meet course/program requirements (G: 4) (M: 4)
The student will demonstrate content expertise by earning satisfactory course grades, participating in class, passing the comprehensive exam, and successful defense of the prospectus (as appropriate).

Measures, Targets, and Findings

M 1: Doctoral Indicator Survey- Research section (O: 1)
Evidence of submitted database articles, number of published articles, number of book chapters, and participation in grant development as compiled from the research activities section of the Ph.D. doctoral programs indicator survey.

Source of Evidence: Performance (recital, exhibit, science project)

Target for O1: Students will design and conduct investigations
By candidacy, 100% of students will have submitted a manuscript in which they are senior author to a refereed journal.

Findings 2010-2011 - Target: Met
We continued to have students participate in a wide range of activities as specified below: Scholarly Activities In 10-11, all students who reached candidacy submitted a manuscript as a senior author to a refereed journal. Additionally, 40 articles were submitted by 18 students (with students being the senior author on 11 of these articles); 21 articles were published by 15 students (with students being the senior author on 6 articles); 6 book chapters were authored or co-authored by 4 students, and 9 grants were prepared with the assistance of 5 students.

M 2: Evidence of teaching college courses (O: 2)
Evidence of teaching college courses as teaching assistant and/or instructor, number of guest lectureres, number of students who supervised practica, as compiled from the teaching activities section of the Ph.D. doctoral programs indicator survey.

Source of Evidence: Performance (recital, exhibit, science project)

Target for O2: Students will teach at the university level
By candidacy, 100% of the students will have completed their requirement of assisting or teaching a university course.

Findings 2010-2011 - Target: Met
Teaching Experience In 10-11, all students who had reached candidacy has assisted or taught at least one university course. For the 10-11 year, 14 students assisted in teaching 58 courses; 11 students taught 21 courses as GTAs, 12 students gave 19 guest lectures; and 8 students supervised 93 practicum students.

M 3: Evidence of professional development (O: 3)
Evidence of professional development including presentations and participation in professional organizations as compiled from the professional development section of the Ph.D. doctoral programs indicator survey.

Source of Evidence: Performance (recital, exhibit, science project)

Target for O3: Students will participate in presentations
100% of the students will have made at least one conference workshop presentation by candidacy.

Findings 2010-2011 - Target: Met
Presentations and Involvement in Community In 10-11, all students who had reached candidacy had assisted or taught at least one conference or workshop presentation. 16 students made 33 national conference presentations, 13 students made 17 state conference presentations; 8 students made 11 workshop presentations; and 1 student held office in professional organizations.

M 4: Successful rating on annual evaluation (O: 4)
The student will demonstrate content expertise through successful rating on annual evaluation consisting of a review of course grades and participation, comprehensive exam scores, and prospectus (as appropriate).

Source of Evidence: Performance (recital, exhibit, science project)

Target for O4: The student will meet course/program requirements
Students will rate a satisfactory or higher on annual evaluations which include a review of course grades and participation,
**Findings 2010-2011 - Target: Met**

In 2010-11, there were a total of 31 doctoral students, including 3 who had graduated, 1 who withdrew, and 1 who was dropped from the program. All 31 students demonstrated expertise with major concepts, theoretical perspectives, and empirical findings in special education. Seventeen of the students received funding support. Outcomes were very positive this year as evidenced by the annual evaluation results.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

### Exit interviews need to be further refined

Exit interviews have been redesigned and a newly designed questionnaire has been sent to graduated PhD students. We are in the process of collecting data.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** Medium

  **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Successful rating on annual evaluation
  - **Outcome/Objective:** The student will meet course/program requirements

  **Implementation Description:** The redesigning of the exit interview for graduated PhD students has been completed.

  **Projected Completion Date:** 04/2011

  **Responsible Person/Group:** PMA committee

### Goal/objective has been met

Goal/objective has been met this year with no further action planned.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Evidence of teaching college courses
  - **Outcome/Objective:** Students will teach at the university level

### Goal/Objective has been met

Goal/Objective has been met this year year with no further action needed.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Doctoral Indicator Survey - Research section
  - **Outcome/Objective:** Students will design and conduct investigations

### Goal/objective has been met this year

Goal/objective has been met this year and no further action is needed.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Evidence of professional development
  - **Outcome/Objective:** Students will participate in presentations

### Doctoral Program Changes

A restructuring of the EXC doctoral program is anticipated to align with proposed changes being made by the College of Education. The current EXC PhD program will be reexamined to determine appropriate changes, taking into consideration assessment data. When program changes are approved and implemented, assessment data will be used to determine effectiveness.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Successful rating on annual evaluation
  - **Outcome/Objective:** The student will meet course/program requirements

  **Implementation Description:** Implementation will consist of a new EXC doctoral program with restructured/new courses. Once implemented, assessment data will be examined to determine the programs' effectiveness on doctoral students' knowledge and skill in research, teaching and service.

  **Projected Completion Date:** 08/2013

  **Responsible Person/Group:** PMA committee/ department

### Analysis Questions and Analysis Answers

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year's assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The exit interview were reexamined again with further revision to the exit interview questions and to the process of conducting the exit interview. Changes were made to this a smoother process and to be sure the questions captured the targeted data.
**Mission / Purpose**

The mission of the Ed.S. program in Educational Leadership is to prepare our students to demonstrate critical/intellectual capacity and moral vision so they can create and sustain democratic communities within their schools and districts. We hope to educate and prepare school leaders with the capacity to transform schools and improve student learning. This mission focuses on the education and preparation of urban educational leaders with a commitment to social justice and systemic change. The Ed.S. degree is an advanced leadership program that builds on the requirements for initial licensure obtained in the M.Ed. and L-5 certification programs. By engaging students in advanced academic and field-based preparation, candidates in the Ed.S. program are prepared to be positive change agents within the rapidly changing contexts of schools. Leaders are prepared to facilitate reflective inquiry on teaching and learning throughout the school. Students enrolled in the program come from highly diverse backgrounds, varied educational backgrounds, and possess multiple needs, interests, and abilities. The Ed.S. program recognizes this diversity and provides opportunities to meet the needs of the individual student. The program seeks to create and structure learning environments so that educational leaders can meaningfully incorporate new knowledge into existing knowledge structures. This is accomplished through an active, social and authentic learning process. Student input is not only encouraged but also required in the courses and field experiences. Teaching and learning strategies are guided by current research, community need, and the diversity of the students. The Ed.S. program adheres to the belief that teaching and learning occur through a process incorporating reflection, inquiry, and action within the context of practice. Consequently, the Ed.S. program has been designed to align course work with actual leadership practice. This facilitates students' ability to integrate abstract theoretical knowledge with practice, which gives students the opportunity to directly engage in practice as informed, analytical, and critical learners.

The mission of the educational leadership program mutually reinforces the framework of the university's Professional Education Council. The manner in which the program has operationalized its mission through its program revisions supports the aim of "providing scholarship and leadership focused on learning and development." Further the program has articulated a more explicit normative grounding in democratic principles in order to make a difference not only in the manner in which future school leaders do their jobs, but also in a manner in which that work will significantly impact the quality of life for Georgia citizens.

**Goals**

**G 1: Stewardship of a vision**

An education leader promotes the success of every student by facilitating the development, articulation, implementation, and stewardship of a vision of learning that is shared and supported by all stakeholders.

**G 2: School culture and instructional program**

An education leader promotes the success of every student by advocating, nurturing, and sustaining a school culture and instructional program conducive to student learning and staff professional growth.

**G 3: Management of the organization**

An education leader promotes the success of every student by ensuring management of the organization, operation, and resources for a safe, efficient, and effective learning environment.

**G 4: Collaboration with stakeholders**

An educational leader promotes the success of every student by collaborating with faculty and community members, responding to diverse community interest and needs, and mobilizing community resources.

**G 5: Integrity, fairness, and ethics**

An education leader promotes the success of every student by acting with integrity, fairness, and in an ethical manner.

**G 6: Legal and ethical considerations**

Students will apply relevant legal principles and demonstrate the ability to assess the ethical considerations involved hypothetical cases presented in class. (EPEL 8330).

**Student Learning Outcomes/Objectives**

**SLO 1: Professional Development (G: 2) (M: 1)**

Students will develop a professional development plan that addresses the needs that were determined from the collection and analysis of relevant data and evidence. The plan will be reflective of input from stakeholders who will participate in the professional development and will be consistent with effective adult learning strategies and effective professional development. (EPEL 8420).
**Measures, Targets, and Findings**

**M 1: Professional development (O: 1)**

Students will develop a professional development plan that addresses the needs that were determined from the collection and analysis of relevant data and evidence. The plan will be reflective of input from stakeholders who will participate in the professional development and will be consistent with effective adult learning strategies and effective professional development. (EPEL 8420).

ASSESSMENT RUBRIC: Exceeds Expectations: Use data/evidence from multiple sources as a basis for development of a professional development plan for a select group of faculty and/or staff that addresses instructional, safety, and/or learning environment issues. Plan is consistent with effective adult learning strategies and effective professional development. Makes professional development plan presentation relevant to the implementation of school improvement strategies and initiatives. Demonstrates full knowledge by answering all questions with explanations and elaborations. Budget is thorough, complete, and matches the needs consistent with what is required for the proposed professional development plan. Plan is consistent with the requirements for Exceeds Expectations and shows evidence of revisions based on stakeholder input. Meets Expectations: Use data/evidence from two sources as a basis for development of a professional development plan for a select group of faculty and/or staff that addresses instructional, safety, and/or learning environment issues. Plan is somewhat consistent with effective adult learning strategies and effective professional development. Makes professional development plan presentation somewhat relevant to the implementation of school improvement strategies and initiatives. Is at ease with all questions, but fails to elaborate. Budget somewhat matches goals and objectives, but lacks specification in certain items. Plan is consistent with the requirements for Meets Expectations and shows little evidence of revisions based on stakeholder input. Does Not Meet Expectations: Little or no thought given to the identification, description, and analysis of a major educational problem; relevant and feasible development of an action plan for resolving the problem; effective use of strategies that unite the members of the school community and empower them to work collaboratively to address areas of primary need. Makes professional development plan presentation somewhat relevant to the implementation of school improvement strategies and initiatives. Students will participate in professional development activities that address personal and professional needs. Source of Evidence: Portfolio, showing skill development or best work.

**Target for O1: Professional Development**

90 percent of students receiving Exceeds Expectations and/or Meets Expectations on the professional development rubric (EPEL 8420).

**M 2: Significant educational problem (O: 2)**

Students will provide a description and analysis of a significant educational problem that is present in their school or districts. They will apply appropriate methods and theories to ameliorate the problem based on collaborating with administrators, teachers, and other appropriate stakeholders in order to create an action plan that directly addresses the problem including the organizational and personnel supports that are needed to make the plan succeed. (EPEL 8000). EDUCATIONAL PROBLEM RUBRIC: Exceeds Expectations: Highly thoughtful identification, description, and analysis of a major educational problem; relevant and feasible development of an action plan for resolving the problem; effective use of strategies that unite the members of the school community and empower them to work collaboratively to address areas of primary need. Makes professional development plan presentation relevant to the implementation of school improvement strategies and initiatives. Students will participate in professional development activities that address personal and professional needs. Source of Evidence: Portfolio, showing skill development or best work.

**Target for O2: Significant Educational Problem**

90 percent of students receiving Exceeds Expectations and/or Meets Expectations on the significant educational problem rubric (EPEL 8000).
Target for O2: Analysis of significant educational problem
90 percent of students receiving Exceeds Expectations and/or Meets Expectations on the significant educational problem rubric (EPEL 8000).

M 3: Legal and ethical considerations (O: 3)
Students will apply relevant legal principles and demonstrate the ability to assess the ethical considerations involved in hypothetical cases presented in class. (EPEL 8330). LEGAL AND ETHICAL CONSIDERATIONS RUBRIC: Exceeds Expectations: Highly effective selection and use of resources regarding legal issue; thoughtful consideration of differing views regarding the issue; high degree of justification regarding the analysis of the legal issue and the conclusions drawn; very clear representation of information and ideas; thorough identification of laws applicable to the legal topic. Meets Expectations: Effective selection use of resources regarding legal issue; consideration of differing views regarding the issue; adequate justification regarding the analysis of the legal issue and the conclusions drawn; clear representation of information and ideas; adequate identification of laws applicable to the legal topic. Does Not Meet Expectations: Minimal effective or ineffective use of resources regarding legal issue; little or no consideration of differing views or misguided representation of one view regarding the issue; little to no justification regarding the analysis of the legal issue; little to no conclusions drawn or conclusions undetermined; little or no identification of laws applicable to the legal topic.
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: Legal and ethical considerations
90 percent of students receiving Exceeds Expectations and/or Meets Expectations on the legal and ethical considerations rubric (EPEL 8330).

M 4: Equity audit (O: 4)
Students will initiate and facilitate an equity audit using key stakeholders with their school or districts in order to determine the school's or district's status regarding diversity (i.e. whether the school or district is a monolithic, diverse, or multicultural organization). Students will help school and/or district stakeholders identify diversity issues related to school policies, curriculum, instruction, culture, management, and operations, personnel, and parent involvement and then apply those issues toward the audit. (EPEL 8020). EQUITY AUDIT RUBRIC: Exceeds Expectations: Student presents a thorough, holistic report of multiple diversity issues related to his/her school or district based on an equity audit involving significant stakeholders. Student is able to help stakeholders who were involved on the audit committee to understand the complex issues concerning a multicultural organization. Meets Expectations: Student submits an acceptable report of multiple diversity issues related to his/her school or district based on an equity audit involving significant stakeholders. Student achieves moderate success in helping stakeholders who were involved on the audit committee to understand the complex issues concerning a multicultural organization. Does Not Meet Expectations: Student submits a report that omits significant diversity issues related to his/her school or district based on an equity audit involving a subset of significant stakeholders. Student achieves little success in helping stakeholders who were involved on the audit committee to understand the complex issues concerning a multicultural organization.
Source of Evidence: Portfolio, showing skill development or best work

Target for O4: Equity audit
90 percent of students receiving Exceeds Expectations and/or Meets Expectations on the equity rubric (EPEL 8020).

M 5: Curriculum reform model (O: 5)
Each student will work with a group of teachers and parents within the school or district to evaluate a school reform model or curriculum package based on principles of curriculum theory and design. Based on the analysis, the student and his or her team of stakeholders will determine the appropriateness of the model or package for the district, the resources needed for successful implementation, potential modifications for the sake of consistency with district/school mission and the needs of the particular population, and a consistent means for ongoing monitoring of the package or reform. (EPSF 8440). CURRICULUM REFORM MODEL RUBRIC: Exceeds Expectations: Student meets all indicators outlined in the curriculum analysis guidelines (purpose, aims, and goals; macro-curricular structures; micro-curricular structures; assessment and evaluation; and overall analysis) and provides a thorough, thoughtful, well-documented analysis with highly significant recommendations for the school and/or district. Student leads a presentation that clearly and effectively communicates analysis and recommendations. Meets Expectations: Student meets at least 80% of the indicators outlined in the curriculum analysis guidelines (purpose, aims, and goals; macro-curricular structures; micro-curricular structures; assessment and evaluation; and overall analysis) and provides adequate, documented analysis with appropriate recommendations for the school and/or district. Student leads a presentation that adequately communicates analysis and recommendations. Does Not Meet Expectations: Student meets less than 80% of the indicators outlined in the curriculum analysis guidelines (purpose, aims, and goals; macro-curricular structures; micro-curricular structures; assessment and evaluation; and overall analysis) and provides an inadequate, poorly documented analysis with few or no recommendations for the school and/or district. Student leads a presentation that does not adequately communicate analysis and recommendations.
Source of Evidence: Presentation, either individual or group

Target for O5: Curriculum reform model
90 percent of students receiving Exceeds Expectations and/or Meets Expectations on the curriculum reform model rubric (EPSF 8440).

M 6: Instructional leadership (O: 6)
Students will identify a teacher and provide instructional supervision and support that teacher that teacher. The support and supervision with include a self assessment for the supervised teacher, classroom observations, periodic conferences, review of lesson plans, examination of student work, review of test scores assessment of class policies, plus other relevant data and information. (EPEL 8420). INSTRUCTIONAL LEADERSHIP RUBRIC: Exceeds Expectations: Highly thoughtful and coherent selection of supervision instruments to address specific needs of each teacher/support staff member; highly responsive to needs of teachers/support staff throughout supervision process. Use instruments with high degree of integrity, thoughtfully integrate findings from various sources of data regarding teacher/support staff performances. Create supportive rapport with teachers; demonstrate highly responsive and sensitive support to teachers/support staff throughout process; help teachers/support staff improve in the self assessment of their work. Astute analysis of teacher/support staff strengths and possible areas for improvement and/or enrichment; meaningful recommendations for teacher/support staff; very thoughtful conclusions regarding the role of the school/district leader as a supervisor with meaningful conclusions regarding future supervisory work. Meets Expectations: Thoughtful and coherent selection of supervision instruments to address specific needs of each teacher/support staff member; somewhat responsive to needs of teachers/support staff throughout the supervision process. Use instruments with moderate integrity, some integration of findings from
Mission / Purpose

Mission STATEMENT and PROGRAM DESCRIPTION The mission of the Masters in Educational Leadership at Georgia State University is to prepare graduates to be effective instructional leaders who positively impact student achievement. Masters of Educational Leadership: The mission of the Masters in Educational Leadership at Georgia State University is to prepare graduates to be effective instructional leaders who positively impact student achievement. The program is developed around a set of academic and field experiences that provide basic knowledge and skills for educational leadership positions. The masters degree program of study includes EPEL 7000 and EPEL 7330 which are prerequisites for the Specialist in Educational Leadership. M.Ed. GOALS (What we want our students to BE): Goal 1: Vision, Mission, and Goals: Graduates will possess the knowledge and understanding of how to guide the development and implementation of a shared vision of learning, strong organizational mission and high expectations for every student. Goal 2: Teaching and Learning: Graduates will possess the knowledge and understanding of organizational systems and resources for a safe, high-performing learning environment. Goal 4: Collaborating with Families and Stakeholders: Graduates will possess the knowledge and understanding of how to ensure the success of all students by collaborating with families and stakeholders who represent diverse community interests and needs and mobilizing community resources that improve teaching and learning. Goal 5: Ethics and Integrity: Graduates will possess the knowledge and understanding of professional ethical behavior and integrity. Goal 6: The Education System: Graduates will possess the knowledge and understanding of interrelated systems of political, social, economic, legal, and cultural contexts that effect education. OBJECTIVES (What we want our students to KNOW OR BE ABLE TO DO). Note: Objectives are measurable. Objective 1: Vision, Mission, and Goals: Graduates will demonstrate the knowledge and understanding of how to guide the development and implementation of a shared vision of learning, strong organizational mission and high expectations for every student. Goal 2: Teaching and Learning: Graduates will demonstrate the knowledge and understanding of how to monitor and continuously improve teaching and learning. Objective 3: Managing Organizational Systems and Safety: Graduates will demonstrate the knowledge and understanding of organizational systems and resources for a safe, high-performing learning environment. Objective 4: Collaborating with Families and Stakeholders: Graduates will demonstrate the knowledge and understanding of how to ensure the success of all students.

Various sources of data regarding teacher/support staff performances. Create positive rapport with teachers/support staff; demonstrate some degree of responsiveness and sensitivity in supporting teachers/support staff throughout process; some attempt made to help teachers/support staff improve in the self assessment of their work. Adequate analysis of teacher/support staff strengths and possible areas for improvement and/or enrichment; adequate recommendations for teacher/support staff; and somewhat thoughtful conclusions regarding future supervisory work. Does Not Meet Expectations: Little or no thought or coherence regarding the selection of supervision instruments; failure to address specific needs of teacher/support staff member throughout the supervision process; little or no integrity in the use of supervision instruments; poor or no analysis of findings. Create a negative relationship with teachers/support staff; fail to demonstrate responsiveness and sensitivity to the needs of teachers/support staff throughout process; fail to help teachers/support staff improve in the self assessment of their work. Poor to no analysis of teacher/support staff strengths and possible areas for improvement and/or enrichment; poor or no recommendations for teacher/support staff; poor or no conclusions regarding future supervisory work.

Target for O6: Instructional Leadership

90 percent of students receiving Exceeds Expectations and/or Meets Expectations on the instructional leadership rubric (EPEL 8420).

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Extending program by one semester
Since this is the first year with the new program, we have talked with the students about the things they thought were very good about the new program and things they would recommend that we change. Based on their feedback related to the intensity of the program, we are planning to extend the program by one semester.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High
Projected Completion Date: 07/2010
Responsible Person/Group: Educational Leadership Unit
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Revision of coaching model
Since this is the first year with the new program, we have talked with the students about the things they thought were very good about the new program and things they would recommend that we change. Based on their feedback we are also in the process of revising our coaching process and our portfolio format. Coaching and the portfolio are components that are required by the state.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High
Projected Completion Date: 12/2009
Responsible Person/Group: Educational Leadership Unit
Additional Resources: None
Budget Amount Requested: $0.00 (no request)
GOALS

G 1: Goals 1-4

OUTCOMES/OBJECTIVES

O/O 1: Outcomes/Objectives 1-4 (M: 1)

Student is able to apply general theories of leadership to practice Student Learning Outcome: Yes Established in Cycle: 2005-2006 Active Through: Keep Active Entry Status: Final Last Updated By: Jami Berry on 09/30/2009 Established By: Migration Tool on 10/13/2008 Relevant Associations: Georgia PSC Standards—ELCC - Educational Leadership Constituent Council, 2001) 1. Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by facilitating the development, articulation, implementation, and stewardship of a school vision supported by the school community. 2. Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by understanding, responding to, and influencing the local, political, social, economic, legal, and cultural context. 3. Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by making the organization, operations, and resources in a way that improves a positive school culture, providing an effective instructional program, and designing comprehensive professional growth plans for staff. 4. Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by acting with integrity, fairly, and in an ethical manner. 5. Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by collaborating with families and other community members, responding to diverse community interests and needs, and mobilizing community resources. 6. Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by acting with integrity, fairly, and in an ethical manner. 7. Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by understanding, responding to, and influencing the local, political, social, economic, legal, and cultural context. 8. Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by articulating, implementing, and stewardship of a school vision supported by the school community. 9. Candidates who complete the program are educational leaders who have the knowledge and ability to design a school environment that promotes the success of all students by designing comprehensive professional growth plans for staff. 10. Candidates who complete the program are educational leaders who have the knowledge and ability to design a school environment that promotes the success of all students by designing comprehensive professional growth plans for staff.
have the knowledge and ability to promote the success of all students by managing the organization, operations, and resources in a way that promotes a safe, efficient, and effective learning environment. 4. Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by understanding, responding to, and influencing the larger political, social, economic, legal, and cultural context. 7. Internship: The internship provides significant opportunities for candidates to synthesize and apply the knowledge and practice and develop the skills identified in standards 1-6 through substantial, sustained, standards-based work in real settings, planned and guided cooperatively by the institution and school district personnel for graduate credit.

#### Details of Action Plans for This Cycle (by Established cycle, then alpha)

### Action Research

The data indicate that students can perform action research at an acceptable rate. However, the Educational Leadership unit has redesigned the master’s program to ensure higher levels of effectiveness and understanding in action research by focusing more on the data analysis and action research in the two practicum courses. The in-school performances have been shifted to the courses to allow for more attention in the practicum courses on data analysis and action research.

#### Change Agent in Schools

The data indicate that students can be effective change agents at an acceptably high rate. With the redesign of the master’s program, students will have even more opportunity to serve as leaders through common essential performance assessments and through new emphasis on issues of diversity in schools and communities.

#### Leadership Theory in Schools

The data indicate that students can apply leadership knowledge at an acceptably high rate. However, the Educational Leadership unit has just undergone a comprehensive program redesign required by the Georgia Board of Regents and the Professional Standards Commission. With this change, we have significantly altered the master’s program to embed performance-based assessments and practicum experiences in each class. We feel this is the best way to integrate theory and practice, and the students in the program concur.

### Analysis Questions and Analysis Answers

**ACADEMIC PROGRAM QUESTION 1:** What changes in the assessment process have your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

There have been no changes made to the assessment process for this academic year as our MEd programs are currently under revision in order to better align with the PSC (Professional Standards Commission’s) new certification rules. We anticipate making...
substantive changes in the next two reporting cycles.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The Professional Standards Commission has proposed and adopted substantive changes to both teacher leader certification and educational leadership certification. As a result of these changes, our programs are undergoing substantive change. These changes will take place in draft form during the 2011-2012 reporting year and in final form beginning 2012-2013.

---

**Georgia State University**

**Assessment Data by Section**

**2010-2011 Educational Policy Studies PhD**

*As of: 12/12/2016 04:11 PM EST*

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

### Mission / Purpose

The Department of Educational Policy Studies offers a Ph.D. degree in Educational Policy Studies with concentrations in educational leadership, social foundations of education, and research, measurement, and statistics. The program allows students to examine the philosophy and practice of education and to develop skills in both the methodology and the study of educational practice. Students will prepare to become policy makers and examiners of policy and the effects of policy on education. The broader requirements of the Department of Educational Policy Studies offer students the opportunity to linked their programs of study with broader social and educational issues in such areas as race, gender, leadership, and policy. This broader context established an understanding of the programs of study as essential components rather than separate structures of our social, economic, and political lives.

### Goals

**G 1: Critically Evaluates Literature**

This goal is important for the department to evaluate whether our doctoral students have demonstrated the ability to critique, summarize, and interpret the findings from published research and scholarship.

**G 2: Interprets Schooling/Education in Diverse Contexts**

The purpose of this goal is to evaluate whether our doctoral students have demonstrated a knowledge base of theories on how to analyze educational issues about race, class, and gender.

**G 3: Conducts Scholarly Research**

The purpose of this goal is to evaluate whether doctoral students have demonstrated the ability to design and execute a major research study in their program.

### Student Learning Outcomes/Objectives

**SLO 1: Students will examine policymaking power (G: 1) (M: 1)**

Although student learning comes from a number of classes, we are using just one of the doctoral cohort classes—EPS 9270—for measuring the assessment. The policy paper must examine a key characteristic of policymaking: power. There are, as we will examine in the readings on policy, a number of ways to examine policy. To some degree there are two sets of policy studies, one focused on how to make the system work better and one focused on how deeply flawed the system is. Yet underneath both sets, and sometimes brought to the forefront of policy discussions, is an important question: What is power?

**Strategic Plan Associations**

2.2 Leverage our national reputation in professional degree programs for the development of societal leaders.
3.1 Enhance a research culture.

**SLO 2: Students will prepare a cultural studies analysis (G: 2) (M: 2)**

A critique and analysis of the readings in light of the ways cultural meanings of race, class and gender are represented in education via media. Each student will be asked to carefully observe print media and television/movies (of your choosing)—in order to interpret the class readings and conceptual treatments among the courses themes: Critical Race Theory, White Privilege, Youth Subcultures, (Post) Colonialism & Globalization, Masculinities & Femininities, Sexualities, and Social Class Differences.

**Strategic Plan Associations**

2.2 Leverage our national reputation in professional degree programs for the development of societal leaders.
3.1 Enhance a research culture.

**SLO 3: Students will write high quality dissertations (G: 3) (M: 3)**

We plan to discuss an assessment to measure the quality of dissertations that will guide students and faculty committee members as they work together to develop high quality dissertations.

**Strategic Plan Associations**

2.2 Leverage our national reputation in professional degree programs for the development of societal leaders.
3.1 Enhance a research culture.
### Measures, Targets, and Findings

#### M 1: Power Analysis (O: 1)

The paper of at least ten pages, with at least ten scholarly or research references, addressing the following questions: what is power?, who exercises it in United States educational policy?, and how do they exercise it? You may use as references the required and recommended readings for this course, but you will also need to use at least six other references, and they must be research or scholarly references. The instructor uses an Analytical Rating Guide rubric (see Document Repository).

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Students will examine policymaking power**

95% of students will obtain a score of 2 or better as evaluated by program faculty for this activity.

#### Findings 2010-2011 - Target: Met

Three Social Foundations doctoral students met the outcomes.

#### M 2: Cultural Studies Analysis (O: 2)

For purposes of evaluation, the student will prepare a paper, 5-7 pages consisting of the following 3 parts: (Part A) identification and discussion of media images chosen; (Part B) theoretical analysis of Part A using textual readings for supporting evidence; (Part C) concluding remarks or summary statements on the potential media bias and/or impact of popular cultural consumption. The paper will be evaluated using the following rubric: 3=exceeded outcomes. Comprehensive, insightful, creative, inquisitive, demonstrates conceptual clarity, integrates reading, terms, concepts, and shows syntactical accuracy. 2=met outcomes. Generally clear, somewhat connected to reading, terms, concepts, some instances of syntactical errors (e.g., passive voice, excessive pronouns,) loose analysis, tentative conclusions. 1=did not meet outcomes. Fragmented, indifferent, unimaginative, lacks clarity, superficial and weak.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Students will prepare a cultural studies analysis**

95% of students will obtain a score of 2 or better as evaluated by program faculty for this activity.

#### M 3: Dissertation Scoring Assessment (O: 3)

The activity and scoring assessment of dissertations is under discussion among the faculty at this time.

Source of Evidence: Senior thesis or culminating major project

**Target for O3: Students will write high quality dissertations**

95% of students successfully passed their dissertation defenses.

#### Findings 2010-2011 - Target: Met

Three Social Foundations doctoral students graduated during the reporting period.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Cultural Studies Analysis

Program faculty will maintain existing outcome measures for the doctoral cohort and monitor current levels of performance.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** In-Progress
- **Priority:** Medium

  **Relationships (Measure | Outcome/Objective):**
  - Measure: Cultural Studies Analysis
  - Outcome/Objective: Students will prepare a cultural studies analysis

  **Responsible Person/Group:** LOA Coordinator
  **Additional Resources:** None
  **Budget Amount Requested:** $0.00 (no request)

#### Dissertation Quality

Program faculty will discuss the evaluation of dissertation defenses, and consider the design and implementation of a scoring rubric for quality writing outcomes.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** Medium

  **Relationships (Measure | Outcome/Objective):**
  - Measure: Dissertation Scoring Assessment
  - Outcome/Objective: Students will write high quality dissertations

  **Projected Completion Date:** 06/2012
  **Responsible Person/Group:** LOA Coordinator
  **Additional Resources:** None
  **Budget Amount Requested:** $0.00 (no request)

#### Power Analysis

Program faculty will maintain existing outcome measures for the doctoral cohort and monitor current levels of performance.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** In-Progress
- **Priority:** Medium
**Relationships (Measure | Outcome/Objective):**
- **Measure:** Power Analysis
- **Outcome/Objective:** Students will examine policymaking power

**Responsible Person/Group:** LOA Coordinator

**Additional Resources:** None

**Budget Amount Requested:** $0.00 (no request)

---

**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1:**
What changes in the assessment process has your degree program made since last year's assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We created an analytical rating guide (uploaded) to inform our evaluation of students' written work. We revised the dissertation rubric to identify work that the program faculty could signify as "honors" level quality. The honoree would receive a certificate at COE honors day.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

No planned revisions to curriculum and courses at this time. We will receive further assessment data from OIR for the APR report, and use that to inform our program goals and objectives.

---

**Georgia State University**

**Assessment Data by Section**

**2010-2011 Educational Psychology MS**

*As of: 12/13/2010 04:11 PM EST*

*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)*

**Mission / Purpose**

The mission of the Educational Psychology Program is to offer students a unique opportunity to apply the principles of experimental psychology to the systematic study of education. Majoring in educational psychology allows the student to master content areas such as learning, instruction, cognition, motivation, life-span development, applied behavior analysis and socialization. The educational psychology program at the Masters level prepares students to pursue a variety of career paths, including research, evaluation, and the applied practice of a number of disciplines, including K-12 instruction. There were 25 students (including two concurrent students) in the MS program as of summer 2014; of these 9 students graduated during this report period.

**Goals**

**G 1: Displays expertise with major concepts**
Displays expertise with major concepts

**G 2: Participates in scholarly activities**
Participates in scholarly activities

**G 3: Values underpinning educational psychology**
Values underpinning educational psychology

**G 4: Apply research methods**
Apply research methods

**G 5: Professional Seminar**
Attendance of a professional seminar in their first semester of enrollment in the EPY program.

**Student Learning Outcomes/Objectives**

**SLO 1: Students demonstrate expertise in Ed. Psych. (G: 1) (M: 1)**
Students demonstrate expertise with major concepts, theoretical perspectives, and empirical findings in the field of Educational Psychology.

**SLO 2: Students demonstrate independence and competence (G: 2) (M: 2)**
Students demonstrate independence and competence in scholarly activities.

**SLO 3: Students demonstrate values underpinning ed. psych (G: 3) (M: 3)**
Students can weigh evidence, tolerate ambiguity, act ethically, and reflect other values underpinning educational psychology

**SLO 4: Understand and apply research methods (G: 4) (M: 4)**
Understand and apply research methods including research design, data analysis, and interpretation.
### SLO 5: Exposure to the field of EPY (G: 5) (M: 5)

Students will attend EPY 8961 to obtain exposure to major concepts, theoretical perspectives, and empirical findings in the field of Educational Psychology.

### Institutional Priority Associations

2 Student promotion and progression

### Measures, Targets, and Findings

#### M 1: Masters Comprehensive Exam (O: 1)

Each MS student in the Educational Psychology program must complete a comprehensive exam before finishing the program. Faculty read and score comprehensive exams as pass/fail. The comprehensive exam is made up of two parts. The first part consists of writing either a thesis or a project. For the thesis, students conduct their own research, and for the project students write an in-depth analysis of an area within the field. The written component of the comprehensive exam is followed by an oral defense of the thesis or project and is conducted by the student’s committee.

**Source of Evidence:** Comprehensive/ end-of-program subject matter exam

**Target for O1: Students demonstrate expertise in Ed. Psych.**

All students will pass the oral and written portions of the comps.

**Findings 2010-2011 - Target: Met**

All students passed their comprehensive exams

#### M 2: Thesis or Project (O: 2)

Each MS student in the Educational Psychology program must complete a thesis research study or a comprehensive literature review project. For the thesis, students conduct their own research, and for the project students write an in-depth analysis of an area within the field. The written component of the comprehensive exam is followed by an oral defense of the thesis or project and is conducted by the student’s committee.

**Source of Evidence:** Presentation, either individual or group

**Target for O2: Students demonstrate independence and competence**

All student will complete their theses/projects

**Findings 2010-2011 - Target: Met**

All students successfully completed their theses/projects

#### M 3: Portraying values of Ed. Psych. (O: 3)

As part of the comprehensive exam, each MS student in the Educational Psychology program must either complete an empirical study which shows evidence of the ability to weigh evidence, tolerate ambiguity, and act ethically; or must complete a scholarly literature review which shows evidence of the ability to weigh evidence and tolerate ambiguity inherent in many research studies.

**Source of Evidence:** Senior thesis or culminating major project

**Target for O3: Students demonstrate values underpinning ed. psych**

All students who engage in theses/projects will successfully portray values of EPY.

**Findings 2010-2011 - Target: Met**

All students who engaged in theses/projects successfully portrayed values of EPY.

#### M 4: Research Design and Statistics (O: 4)

All students in the MS program are required to complete coursework related to research design and statistics. This coursework is agreed upon by the students and two faculty members and becomes a part of the student’s planned program. Generally, this coursework includes developing expertise in ANOVA, ANCOVA, MANOVA, multiple regression and qualitative techniques. Students decide with their adviser and committee which skills meet individual needs and goals.

**Source of Evidence:** Academic direct measure of learning - other

**Target for O4: Understand and apply research methods**

All students will successfully complete coursework related to research expertise prior to beginning work on their project or thesis

**Findings 2010-2011 - Target: Met**

All students successfully completed coursework related to research expertise prior to beginning work on their project or thesis.

#### M 5: Educational Psychology Seminar (O: 5)

All EPY students are required to enroll in EPY 8961 during the first semester of their first year. As part of this seminar, students discuss current issues and topics in Educational Psychology.

**Source of Evidence:** Performance (recital, exhibit, science project)

**Target for O5: Exposure to the field of EPY**

All students will complete this professional development seminar.
Findings 2010-2011 - Target: Met
All students successfully completed this professional development seminar.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Review of program
Faculty will review the program to determine if changes need to be made.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High
Implementation Description: As decided last year, all new students, in the fall of 2010 took EPY 8961, a course which orients them to GSU, EPSE, and EPY. This past fall, the COE approved our decision to make this a requirement. During this year, we discussed implementing a test option for students to choose from, in addition to selecting a project or thesis. Details need to be finalized, and this option will either become available in the spring of 2012 or the fall of 2012.
Projected Completion Date: 05/2012
Responsible Person/Group: Program Coordinator
Additional Resources: none

Tracking of Applicants
Applicants' demographics (such as race, gender, age, GPA/GRE scores) will be tracked for the following categories: Accepted and Enrolled, Accepted and Did Not Enroll, Rejected.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High
Implementation Description: This is an ongoing action
Projected Completion Date: 05/2012
Responsible Person/Group: Program Coordinator
Additional Resources: none

Master's Handbook
The Master's Handbook will be updated to reflect new changes in policy and new URL addresses.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Implementation Description: This is an ongoing action
Projected Completion Date: 05/2012
Responsible Person/Group: Program Coordinator and EPY faculty
Additional Resources: none

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
The current assessment process of gathering data on student performance has been effective and will be continued.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.
This was the first year we required our first semester Master’s students to take EPY 8961. We are pleased with the results of this course, and will continue to monitor its success this coming fall when we require our new students to take it. This coming fall is the first time that we will encourage advanced Master’s students (those ready to work on their thesis/project) to take EPY 8010. This class focuses on writing literature reviews and proposal, and we think it may be beneficial for these students. We discussed providing students with a test option instead of the project or thesis, and will probably implement this alternative in the spring or fall of 2012.

Georgia State University
Assessment Data by Section
2010-2011 Educational Psychology PhD
As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The mission of the Educational Psychology Program is to offer students a unique opportunity to apply the principles of experimental psychology to the systematic study of education. Majoring in educational psychology allows the student to emphasize content areas such as learning, instruction, cognition, motivation, life-span development, applied behavior analysis and socialization. The educational psychology program at the Doctoral level prepares students for careers in teaching in schools, colleges, and universities; as researchers in state and city departments of education; and professionals in training research programs in government and industry. There were 30 students as of Fall 2010 in the Ph.D. program; of these 3 graduated during this academic year.
Goals

G 2: Annual Review
Students will undergo an annual review of their PhD performance

G 3: Professional Seminar
Students will attend a professional seminar in their first semester of enrollment in the EPY PhD program.

G 4: Dissertation
Students will undergo the scholarly activity of writing and defending a dissertation.

G 5: College teaching
Develop competence in college teaching

G 6: Scholarly activities
Participates in scholarly activities

Student Learning Outcomes/Objectives

SLO 2: Communicate professionally, orally and in writing (G: 2) (M: 1)
Students will receive a satisfactory or better on their annual reviews, indicating their developing abilities to communicate professionally, orally and in writing

SLO 3: Exposure to the field of EPY (G: 3) (M: 2)
Students will attend EPY 8961 to obtain exposure to major concepts, theoretical perspectives, and empirical findings in the field of Educational Psychology

SLO 4: Demonstrate expertise with research design, data analysis, and interpretation (G: 4) (M: 3)
Students will successfully write and defend their dissertation, indicating that they understand and apply research methods including research design, data analysis, and interpretation.

SLO 5: Develop competence in college teaching (G: 5) (M: 4)
Develop competence in college teaching

SLO 6: Demonstrate competence in scholarly activities (G: 6) (M: 5)
Demonstrate independence and competence in scholarly activities.

Measures, Targets, and Findings

M 1: Annual review (O: 2)
This review includes all students who have not completed the comprehensive examination. The evaluation of each student includes a review of academic progress, residency progress, professional growth, and professionalism.

Source of Evidence: Academic direct measure of learning - other

Target for O2: Communicate professionally, orally and in writing
All students will receive a rating of "satisfactory" or better in their annual review.

Findings 2010-2011 - Target: Partially Met
All students except for 2 received a rating of "satisfactory" or better in their annual review. These 2 students were informed in writing about areas in which they are not meeting goals of the program, and will meet with their adviser, so that a remediation plan will be prepared and signed by the both of them.

M 2: Educational Psychology seminar (O: 3)
All EPY doctoral students are required to enroll in EPY 8961 during the first semester if their first year. As part of this seminar, students discuss current issues and topics in Educational Psychology.

Source of Evidence: Academic direct measure of learning - other

Target for O3: Exposure to the field of EPY
All doctoral students will complete this professional development seminar during the first semester of their first year.

Findings 2010-2011 - Target: Met
All first year doctoral students completed this seminar in their first semester. The four students from last year, who did not complete this professional development seminar, completed the seminar during this year, and received satisfactory grades.

M 3: Dissertation (O: 4)
All students must defend a dissertation based on a data-based study to their dissertation committee.

Source of Evidence: Senior thesis or culminating major project
### Target for O4: Demonstrate expertise with research design, data analysis, and interpretation

All students who attempt, will successfully defend their dissertation.

**Findings 2010-2011 - Target: Met**

All students who attempted, successfully defended their dissertation.

### M 4: Teaching Internship (O: 5)

The teaching internship includes attending class sessions, teaching a specified unit of the class under supervision of the instructor, assessing students on the material taught during the unit, and providing feedback to the class regarding their performance.

Source of Evidence: Academic direct measure of learning - other

### Target for O5: Develop competence in college teaching

All students who attempt the teaching internship will successfully complete the requirements.

**Findings 2010-2011 - Target: Met**

All students who attempted the teaching internship successfully completed the requirements.

### M 5: Presentations and Publications (O: 6)

All students in EPY are expected to present papers at professional organizations and publish in professional journals.

Source of Evidence: Presentation, either individual or group

### Target for O6: Demonstrate competence in scholarly activities

Students will present, publish and write grant proposals related to their areas of interest.

**Findings 2010-2011 - Target: Met**

During this reporting period, approximately 30 presentations, publications, and grant proposals were authored or coauthored by Educational Psychology doctoral students.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**EPY 9660**

The teaching residency will become an official course, called EPY 9660: Internship in Educational Psychology.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High
- **Implementation Description:** The course became available in August of 2009.
- **Projected Completion Date:** 07/2009
- **Responsible Person/Group:** Program Coordinator

### Remedial Plan

When a student receives a rating of unsatisfactory, students are informed in writing about areas in which they are not meeting goals of the program, and a remediation plan is prepared and signed by both the student and the advisor.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** In-Progress
- **Priority:** High
- **Implementation Description:** This is an ongoing process.
- **Projected Completion Date:** 05/2012
- **Responsible Person/Group:** Program Faculty

### Remediation Plan

When a student receives a rating of unsatisfactory, students are informed in writing about areas in which they are not meeting goals of the program, and a remediation plan is prepared and signed by both the student and the advisor.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High
- **Implementation Description:** This is an ongoing process and no longer needs to be included in our action plan.
- **Projected Completion Date:** 05/2011
- **Responsible Person/Group:** Program Faculty
- **Additional Resources:** None

### Student Representation

Two students will be nominated (by the other students) to attend part of EPY program programs to share student perspectives on program issues.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High
- **Implementation Description:** This was implemented over the course of last year. We reviewed it during this year, to see if this turned out to be a worthwhile action, and decided that it was not. Due to the sensitive nature of most of our discussions, students only ended up attending about 15 minutes of the meeting and since most of the time they had traveled to GSU just for the meeting, it was decided that it was not the best use of their time.
- **Projected Completion Date:** 05/2011
- **Responsible Person/Group:** EPY faculty and students
Tracking of Applicants

Applicants’ demographics (such as race, gender, age, GPA/GRE scores) will be tracked for the following categories: Accepted and Enrolled, Accepted and Did Not Enroll, Rejected. We will also keep records in the same excel file for each applicant in regards to evaluations of the different sections of their applications.

- Established in Cycle: 2008-2009
- Implementation Status: In-Progress
- Priority: High
- Implementation Description: This was conducted during this past year and will continue as an action plan. A new addition that we started this year, is to also record our evaluations of the different aspects of their application, such as their essays, vita, letters of recommendation, etc.
- Projected Completion Date: 05/2012
- Responsible Person/Group: Program Coordinator
- Additional Resources: none

PhD Handbook

The PhD handbook will be continuously reviewed and updated to reflect new requirements and URL address changes.

- Established in Cycle: 2009-2010
- Implementation Status: In-Progress
- Priority: High
- Implementation Description: This is an ongoing action
- Projected Completion Date: 05/2012
- Responsible Person/Group: EPY coordinator and faculty
- Additional Resources: none

Remedial Plan

When a student receives a rating of unsatisfactory, students are informed in writing about areas in which they are not meeting goals of the program, and a remediation plan is prepared and signed by both the student and the advisor.

- Established in Cycle: 2010-2011
- Implementation Status: Finished
- Priority: High
- Implementation Description: This is an ongoing process
- Projected Completion Date: 02/2011
- Responsible Person/Group: Program Faculty
- Additional Resources: None
- Budget Amount Requested: $0.00 (no request)

Analysis Questions and Analysis Answers

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year’s assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The current assessment process of gathering data on student performance has been effective and will be continued.

**ACADEMIC PROGRAM QUESTION 2:**

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

During this past year, we required all students to take EPY 8961 in their first semester. This practice will continue. We have also made changes to EPY 8010 and this course will be taught in the new way for the first time, this fall. Both changes were approved by the COE curriculum committee. This year we will discuss the possibility of requiring directed readings. We also will encourage all students to teach an undergraduate course prior to graduation. We decided that inviting students to our program meetings did not make sense, because they were only able to participate for 15 minutes, and this did not make sense given their commute time (our meetings occur on Fridays—days most of our graduate students do not have to attend academic functions). Finally, we will continue to monitor our acceptances in terms of GRE scores and demographic characteristics.

Georgia State University

Assessment Data by Section

2010-2011 Educational Research MS

As of: 12/12/2016 04:11 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

**Mission / Purpose**

The mission of the Research, Measurement, and Statistics program is to cultivate and develop future educational researchers who are capable of investigating complex problems of the 21st century.

This is in keeping with the university’s overarching goal to be recognized as a dynamic academic community where teaching and research combine to produce leaders and create solutions to conquer the challenges of the 21st century.
**Goals**

G 2: Provide training relevant to research-related jobs

By the time students graduate with an Educational Research M.S., they should have qualifications that will improve their vocational options, either by enhancing the credentials they already had or by providing them with credentials that will make them eligible for new job opportunities in which conducting research, analyzing data, and/or reporting results are a major component of the job duties.

**Student Learning Outcomes/Objectives**

SLO 1: Form a clear, useful, and practical research query (G: 2) (M: 1, 5, 6)

Develop a research idea into a query that is clearly stated, that has a useful place in the extant literature, and that can be practically addressed through research.

SLO 2: Review and critique the research literature (G: 2) (M: 1, 2, 5, 6)

Be able to write a review of an article found in a professional journal.

SLO 3: Design a research study (G: 2) (M: 3, 5, 6)

Students will be able: 1. to select an appropriate design for addressing a research query 2. to choose an appropriate population from which to sample 3. to choose an appropriate sampling technique for the intended level of generalizability 4. to operationalize all variables of interest, including, as applicable, the selection of measurement instruments intended to gather data on said variable(s) 5. to craft an appropriate procedure for data collection 6. to write a professional-level Method section of a research report, describing the above aspects of a design

SLO 4: Analyze data and report the results (G: 2) (M: 4, 5, 6)

Be able: 1. to recognize an appropriate technique for analyzing data, given the research query and the design used to collect the data 2. to conduct the analysis(es) appropriate for the research query and the design used to collect the data 3. to interpret and to report on the results of the analysis(es) appropriate for the research query and the design used to collect the data

**Measures, Targets, and Findings**

M 1: Course assessment: Write a literature review (O: 1, 2)

In preparing a high-quality literature review, students demonstrate that they can: 1. form a clear research question and support its relevance to the extant literature 2. understand the content of research reports in having to provide some information about those reports 3. critique the literature by choosing the sources to cite and by pointing out the strengths/weaknesses of various studies in shaping their own research queries and designs. A literature review written as a course assessment will be assessed by the instructor(s) of the course(s) in which literature reviews are assigned.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Form a clear, useful, and practical research query**

100% of students meet or exceed the standard

**Target for O2: Review and critique the research literature**

100% of students meet or exceed the standard

M 2: Course assessment: Article review (O: 2)

Students will write multiple article reviews, with high quality article reviews reflecting a student’s ability to understand published research articles and to critique the theory/implementation presented in the research articles. An article review written as a course assessment will be assessed by the instructor(s) of the course(s) in which article reviews are assigned.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Review and critique the research literature**

100% of students meet or exceed the standard

M 3: Course assessment: Write a Method section (O: 3)

Depending on the courses taken, students will write a Method section of a research paper reporting on a research design used or potentially intended for use and indicating the analysis(es) to be used once/as the data are collected. A Method section written as a course assessment will be assessed by the instructor(s) of the course(s) in which Method sections are assigned.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Design a research study**

100% of students meet or exceed the standard

M 4: Course assessment: Write a Results section (O: 4)

In completing a high quality Results section of a research report, students demonstrate that they can select an appropriate analytic technique and that they can communicate the results of said analysis using relevant technical format/jargon. A Results section written as a course assessment will be assessed by the instructor(s) of the course(s) in which Results sections are assigned.

Source of Evidence: Written assignment(s), usually scored by a rubric
### Target for O4: Analyze data and report the results

100% of students meet or exceed the standard

### M 5: Master's project/thesis (O: 1, 2, 3, 4)

The final project for master’s students is a major paper or a thesis. In this assessment, faculty will be able to evaluate a student’s overall understanding of research and the research process, thereby providing a summative assessment of the student’s research capabilities. Master’s projects/theses are assessed by the project advisor or the thesis committee.

Source of Evidence: Senior thesis or culminating major project

### Target for O1: Form a clear, useful, and practical research query

100% of projects/theses submitted by students are approved by the advisor/committee

### Target for O2: Review and critique the research literature

100% of projects/theses submitted by students are approved by the advisor/committee

### Target for O3: Design a research study

100% of projects/theses submitted by students are approved by the advisor/committee

### M 6: Other assessments relevant to learning outcomes (O: 1, 2, 3, 4)

Although Measures 1-5 are useful for evaluating the learning outcomes, other course assessments may also apply, such as shorter descriptions of data collection procedures, brief write-ups of the findings from data analysis, etc.

Source of Evidence: Written assignment(s), usually scored by a rubric

### Target for O1: Form a clear, useful, and practical research query

100% of students meet or exceed the standard

### Target for O2: Review and critique the research literature

100% of students meet or exceed the standard

### Target for O3: Design a research study

100% of students meet or exceed the standard

### Target for O4: Analyze data and report the results

100% of students meet or exceed the standard

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Incorporate LOA-relevant assessments into courses

Although several of our doctoral courses have one or more of the assessments for evaluating students on the learning objectives, these assessments are scarce in our master’s level courses. We will incorporate them into our master’s courses for 2006-2007 and update the report when we have data.

- **Established in Cycle:** 2005-2006
- **Implementation Status:** Planned
- **Priority:** High
- **Implementation Description:** Some already in FA06, more to come in SP06
- **Projected Completion Date:** 01/2013
- **Responsible Person/Group:** RMS Faculty

#### Put more emphasis on analysis & reporting results

Our students need to have superior skills at analyzing data and reporting on the results of those analyses. Expectations at the master’s level are not quite as high as at the doctoral level, but we still have high standards for our master’s students in this area, and those standards were not met by all students this year. We will therefore provide more emphasis on instruction on the analysis of data, the interpretation of the results, and the communication of both the results and the interpretation.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Course assessment: Write a Results section
  - **Outcome/Objective:** Analyze data and report the results
- **Projected Completion Date:** 07/2009
- **Responsible Person/Group:** RMS Faculty
Georgia State University
Assessment Data by Section
2010-2011 English Assessment of Core
As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

### Mission / Purpose
Lower Division Studies in the English Department is committed to providing the highest level of writing and reading instruction for our students as they enter the University. We seek to develop students' writing skills, critical thinking, and reading comprehension by engaging them in a variety of expository, argumentative, and literary (on the sophomore level) readings that lead to competent writing skills; and through encouraging understanding of the social and discourse communities that shape writing.

### Goals

**G 1: Competency in Writing**
Student will demonstrate competency in writing through organization, mechanics, development, and audience awareness (rhetorical situation);

**G 2: Reading Comprehension**
Student will demonstrate ability to interpret a text accurately, particularly in terms of main ideas or important concepts

**G 3: Developing Critical Readers and Writers**
To realize our mission of developing critical and effective readers and writers, the core courses in English are committed to helping our students 1) develop critical thinking through analytical reading of literary, cultural, and other works.

### Student Learning Outcomes/Objectives

**SLO 1: Organization (G: 1, 3) (M: 1)**
Students will demonstrate effective and logical organization in their writing.

**General Education/Core Curriculum Associations**
1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

**Institutional Priority Associations**
1. Student retention
2. Student promotion and progression
3. Timely graduation

**Standard Associations**
1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**
1. Increase the level of scholarship support for undergraduate students.

**SLO 2: Development (G: 1, 3) (M: 1)**
Students will demonstrate logical and clear development of their ideas through examples, illustrations, and details.

**General Education/Core Curriculum Associations**
1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

**Institutional Priority Associations**
1. Student retention
2. Student promotion and progression
3. Timely graduation

**Standard Associations**
1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**
1. Increase the level of scholarship support for undergraduate students.

**SLO 3: Rhetorical Situation (G: 1, 2, 3) (M: 1)**
Students will demonstrate an awareness of audience and rhetorical situation as they consider a given or changing context.

**General Education/Core Curriculum Associations**
1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate...
comprehension of written material: purpose, message, and rhetorical situation.

**Institutional Priority Associations**
1. Student retention
2. Student promotion and progression
3. Timely graduation

**Standard Associations**
1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**
1.1 Increase the level of scholarship support for undergraduate students.

**SLO 4: Mechanics/Usage (G: 1, 3) (M: 1)**
Students will demonstrate appropriate standard written English.

**General Education/Core Curriculum Associations**
1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

**Institutional Priority Associations**
1. Student retention
2. Student promotion and progression
3. Timely graduation

**Standard Associations**
1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**
1.1 Increase the level of scholarship support for undergraduate students.

**SLO 5: Reading Comprehension (G: 2, 3) (M: 2)**
Students demonstrate comprehension of texts through summary

**General Education/Core Curriculum Associations**
1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

**Institutional Priority Associations**
1. Student retention
2. Student promotion and progression
3. Timely graduation

**Strategic Plan Associations**
1.1 Increase the level of scholarship support for undergraduate students.
5.4 Enhance the global competency of students, faculty and staff.

**SLO 6: Articulate Argument in Readings (G: 2, 3) (M: 2)**
Students will demonstrate interpretation and argument within readings

**General Education/Core Curriculum Associations**
1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

**Institutional Priority Associations**
1. Student retention
2. Student promotion and progression
3. Timely graduation

**Standard Associations**
1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Measures, Targets, and Findings**

**M 1: Written assignment assessing writing skills (O: 1, 2, 3, 4)**
In order to assess writing skills, instructors gave ENGL1101 students a choice of three essay topics based on the university-required summer reading, Outcasts United by Warren St. John. Students' writing was then assessed following a rubric that evaluated writing skills: organization, development, rhetorical situation, and mechanics/usage.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Organization**
Students will score at least a "3" out of "4" on Organization.

**Findings 2010-2011 - Target: Partially Met**
Students' scores averaged 2.88 on a 4-point scale on Organization.

**Target for O2: Development**
Students will score at least a "3" out of "4" on Development.

**Findings 2010-2011 - Target: Partially Met**
Students' scores averaged 2.88 on a 4-point scale on Development.

**Target for O3: Rhetorical Situation**
Students will score at least a "3" out of "4" on Rhetorical Situation.

**Findings 2010-2011 - Target: Met**
Students' score averaged 3 on a 4-point scale on Rhetorical Situation.

**Target for O4: Mechanics/Usage**
Students will score at least a "3" out of "4" on Mechanics/Usage.

**Findings 2010-2011 - Target: Met**
Students' scores averaged 3.11 on a 4-point scale on Mechanics/Usage.

**M 2: Written assignment assessing reading comprehension (O: 5, 6)**
In order to assess reading comprehension skills, instructors gave ENGL1101 students a choice of three essay topics based on the university-required summer reading, Outcasts United by Warren St. John. Students' reading was then assessed following a rubric that evaluated reading comprehension and argument.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O5: Reading Comprehension**
Students will score at least a "3" out of "4" on Rhetorical Comprehension.

**Findings 2010-2011 - Target: Partially Met**
Students' scores averaged 2.72 on a 4 point scale on Reading Comprehension.

**Target for O6: Articulate Argument in Readings**
Students will score at least a "3" out of "4" on Articulate Argument in Readings.

**Findings 2010-2011 - Target: Met**
Students' scores averaged 3 on a 4 point scale on Articulate Argument in Readings.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Written Communication - Core**
The data collected from our new Writing Assessment Rubrics indicates students are doing well with previously low-scoring areas (thesis and structure). However, it appears students are having issues expressing alternative points of view and providing clear support for their claims. These issues, we feel, will improve when the students exit 1102, as that course is designed to teach students how to include oppositional viewpoints and evidence.

- Established in Cycle: 2007-2008
- Implementation Status: In-Progress
- Priority: High
- Implementation Description: Spring, 2009
- Responsible Person/Group: Angela Hall-Godsey, LDS program

**Lower Division Lit Survey Assessment**
Currently, lower division is working to implement new assessment strategies for the literature survey courses. The office of lower division is working with the lower division studies committee to create a new plan assessment of these courses. Pending approval of the committee, in summer 2012, all literature survey courses will include a list of three assessment goals on the syllabus, and each goal will be tested by one assignment: essay, exam, and digital media. Assignments will be submitted to the office of LDS in advance and approved. Summer 2012 will be used to pilot the assessment, which, if all goes well, will begin full scale in fall 2012.

- Established in Cycle: 2010-2011
- Implementation Status: Planned
- Priority: High
- Implementation Description: Committee discussion in spring 2012 pilot in summer 2012 Implement in fall 2012
- Responsible Person/Group: Office of LDS (Associate Director, Angela Hall-Godsey) and LDS committee

**Revise Rubrics**
The reading comprehension rubrics did not provide adequate information for assessment in the 2010/2011 review of lower division. Lower division will allow GTAs to revise the rubric to fit their assignment headings, using the same rubric dimensions and
We hope this will give us a better idea of the types of assignments they are assessing so that we know what each number stands for when they are assessing. We will review the changes in the 2011/2012 assessment of lower division studies and consider revising the rubric and assignments if they 2011/2012 findings do not give us a clearer idea of how the students are doing.

**Established in Cycle:** 2010-2011  
**Implementation Status:** Planned  
**Priority:** High  
**Relationships (Measure | Outcome/Objective):**  
Measure: Written assignment assessing reading comprehension  |  Outcome/Objective: Articulate Argument in Readings  
|  Reading Comprehension

**Implementation Description:** Discuss changes with GTAs at annual conference.  
**Responsible Person/Group:** GTAs and office of lower division studies

### Georgia State University  
**Assessment Data by Section**

**2010-2011 English Concentration in Creative Writing**  
*As of: 12/12/2016 04:11 PM EST*  
*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)*

---

**Mission / Purpose**

The mission of the Department of English at Georgia State University is to promote the pursuit and development of knowledge, critical inquiry, creative endeavor, and professional training in areas of English language studies, global and multi-ethnic literary and cultural studies, pedagogy, critical theory, creative writing, rhetoric and composition, professional and technical writing, and secondary education. Our students will develop strong oral, written, and electronic communication skills as they progress through our programs.

---

**Goals**

**G 1: Knowledge of language**  
Students will demonstrate an awareness of the centrality of language to human experience as well as an understanding of some of the structures and functions of language.

**G 2: Effective written communications**

Students will be able to apply knowledge of the elements of rhetoric for effective communications in writing; to write for a variety of forms as appropriate to audience, purpose, and occasion; to recognize a range of social, academic, and professional situations and adapt language accordingly; and to comprehend the grammatical and syntactical patterns of the English language and use them as tools in writing and revising.

**G 3: Ability to interpret texts**

Students will be able to interpret figurative language, to identify literary and thematic patterns, to read for multiple meanings, to apply knowledge of conventions from different periods and genres; to read and use scholarly and theoretical works, and to evaluate critical arguments and construct alternative positions when necessary.

---

**Student Learning Outcomes/Objectives**

**SLO 1: Demonstrate Content Knowledge related to Creative Writing (M: 2)**

Students will demonstrate an understanding of content knowledge related to Creative Writing (writers that have influenced their creative output, literary techniques they have used in their own writing, vocabulary they have learned about the genre they have selected, etc).

**SLO 2: Demonstrate familiarity with appropriate examples of literary works (M: 2)**

Students will demonstrate a familiarity with representative examples of writing in fiction or in poetry, depending upon the student’s choice of genre.

---

**Measures, Targets, and Findings**

**M 2: Senior Exit Portfolio (O: 1, 2)**

While the senior exit portfolios have been required of students since the fall of 2002, we have collected data only since the fall of 2004. In the middle of his or her final semester, every graduating senior submits a portfolio, which consists of selected writings produced during the course of the student's career in the program as well as a reflective essay in which the student considers his or her progress as a student of English. The specific instructions for the compilation of the portfolio are different for each of the department's four concentrations: Literature, Secondary English, Rhetoric and Composition, and Creative Writing. Every portfolio is read by two faculty members associated with the student's particular concentration. The faculty members assess the portfolios, using criteria aligned with the department's undergraduate learning outcomes. Each criterion is rated on a 5-point scale, and the results are tabulated with mean scores and median scores for each criterion. In the summer, the Assessment Coordinator meets with each of the directors of the four concentrations to analyze the data and make suggestions for procedural and programmatic change. The suggestions are presented to the full faculty at the first department meeting of the semester and, if approved, integrated into the yearly assessment plan. From 2004-2010, the portfolios for all concentrations were reported on in one assessment report, but in 2009-2010, the department decided that each concentration would report separately. This switch has also opened up the possibility for each concentration to select particular outcomes to concentrate on for a particular assessment cycle (even though the portfolio review still involves assessment for all the criteria listed on an assessment form). In the 2009-2010 assessment plan, the Creative...
Writing concentration chose to focus on two outcomes: demonstration of content knowledge related to Creative Writing and the demonstration of familiarity with appropriate examples of literary works.

**Source of Evidence:** Portfolio, showing skill development or best work

### Target for O1: Demonstrate Content Knowledge related to Creative Writing

The 2009-2010 assessment plan indicated that a target of 4.2 out of 5.0 would be set for this outcome concerning the demonstration of content knowledge related to Creative Writing.

**Findings 2010-2011 - Target: Partially Met**

Twenty-three fiction students submitted senior portfolios this year as did eight poetry students. The average score for the fiction students for this outcome was a 4.28, meaning that these portfolios did meet the target. The average score for the poetry students was a 4.15, slightly below the target. This was the first year that this outcome was included on the assessment form, so there is no comparative data from previous years.

### Target for O2: Demonstrate familiarity with appropriate examples of literary works

The 2009-2010 assessment plan indicated that a target of 4.2 out of 5.0 would be set for this outcome concerning the demonstration of familiarity with appropriate examples of literary works.

**Findings 2010-2011 - Target: Partially Met**

Twenty-three fiction students submitted senior portfolios this year as did eight poetry students. The average score for the fiction students for this outcome was a 4.56, meaning that these portfolios exceeded the target. The average score for the poetry students was a 4.0, below the target. In the past two assessment cycles, the fiction score has been a 4.3, meaning that this year’s score was an improvement. The previous poetry scores were a 3.8 and a 4.0, in 2008-2009 and 2009-2010 respectively.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Change the focus of next year’s assessment process, starting in Jan. 2011

Instead of focusing on language, interpretation, and effective written communications, the Creative Writing concentration will give particular attention to two other criteria on the portfolio assessment form: "the ability to demonstrate content knowledge related to Creative Writing" (this is the newly formed criterion as indicated in one of the other action plans) and "the ability to demonstrate familiarity with appropriate examples of literary works." They want to establish a target of 4.2 out of 5.0 for these two outcomes.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** High
- **Projected Completion Date:** 01/2011
- **Responsible Person/Group:** Assessment Coordinator, Renee Schatteman
- **Budget Amount Requested:** $0.00 (no request)

#### Investigate the disparity between the number of fiction and poetry students

This year’s assessment work in Creative Writing revealed that only one student graduated with a concentration in poetry while eight graduated with a concentration in fiction. The Creative Writing faculty will investigate reasons for this disparity and the implications for teaching. In addition, they will consider the disparity in portfolio results between the two genres, as poetry portfolios have fared less successfully for the past two assessment cycles.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** Medium
- **Projected Completion Date:** 09/2010
- **Responsible Person/Group:** Director of Creative Writing in consultation with other Creative Writing faculty
- **Budget Amount Requested:** $0.00 (no request)

#### Make changes to the Creative Writing senior portfolio assessment form

As per the Director of Creative Writing, three of the criteria on the Creative Writing portfolio assessment form (does the student show knowledge of literary composition and aesthetics, does the student demonstrate the knowledge of vocabulary for discussing the genre, and does the student use a variety of techniques to create effective work?) will be combined to form a single criterion which reads "How well does the student’s reflective essay demonstrate content knowledge related to Creative Writing, including literary composition and aesthetics, vocabulary for discussing the genre, and a variety of techniques to create effective work?"

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** Medium
- **Projected Completion Date:** 01/2011
- **Responsible Person/Group:** Assessment Coordinator, Renee Schatteman
- **Budget Amount Requested:** $0.00 (no request)

#### Rewrite mission, goals, and objectives to better suit the particulars of the Creative Writing concentration

Now that the department has decided to break down the assessment work into the four different concentrations, faculty members in each concentration will examine the mission, goals, and objectives to see if they want to make changes in order to better match the specific skills and knowledge their students are expected to gain and the particular types of assignments they are expected to produce.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** Medium
- **Projected Completion Date:** 01/2011
- **Responsible Person/Group:** Faculty in Creative Writing
- **Budget Amount Requested:** $0.00 (no request)
Continue to track the discrepancy between the number of fiction students and poetry students

There year, there was a sizable discrepancy between the number of poetry students (8) and the number of fiction students (23). The Creative Writing Faculty is still uncertain of the reason for this gap. They will continue to track the numbers and try to find the cause for it and to consider the implications of it.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium
Projected Completion Date: 08/2011
Responsible Person/Group: Director of Creative Writing

Lower target for outcome (familiarity with appropriate examples) for poetry portfolios

Since the poetry faculty have had a harder time norming their grades, the poetry portfolios often do not meet the targets. Therefore, the poetry target for this outcome (familiarity with appropriate examples of literary works) will be set at 4.0 for poetry in the next assessment cycle while the target of 4.2 for fiction portfolios will remain the same.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Senior Exit Portfolio | Outcome/Objective: Demonstrate familiarity with appropriate examples of literary works

Projected Completion Date: 08/2011
Additional Resources: Assessment Coordinator

Lower the target for this outcome (Content Knowledge Related to Creative Writing) on the poetry portfolios

Since the poetry faculty have had a harder time norming their grades, the poetry portfolios often do not meet the targets. Therefore, the poetry target for this outcome (Content Knowledge related to Creative Writing) will be set at 4.0 for poetry in the next assessment cycle while the target of 4.2 for fiction portfolios will remain the same.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Senior Exit Portfolio | Outcome/Objective: Demonstrate Content Knowledge related to Creative Writing

Projected Completion Date: 08/2011
Responsible Person/Group: Assessment Coordinator

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

No changes took place in the assessment process for this concentration since last year’s assessment report, but during the course of this year: the mission statement and goals will be revised so that the language is more relevant to the particulars of Creative Writing.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Two findings from last year’s assessment results have significance. First, there continues to be a discrepancy between the number of students in the fiction section and the number in the poetry section. Historically, fiction has always attracted more students, but the difference has not usually been so great. The Creative Writing faculty will continue to track this difference to try to determine the cause and to see if it has any implications for the program. Secondly, because the poetry portfolios again have not met the targets set for Creative Writing portfolios, the fiction portfolios will continue to use the target of 4.2 but the poetry portfolios will use a target of 4.0 instead.

Georgia State University
Assessment Data by Section
2010-2011 English Concentration in Literature
As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The mission of the Department of English at Georgia State University is to promote the pursuit and development of knowledge, critical inquiry, creative endeavor, and professional training in areas of English language studies, global and multi-ethnic literary and cultural studies, pedagogy, critical theory, creative writing, rhetoric and composition, professional and technical writing, and secondary education. Our students will develop strong oral, written, and electronic communication skills as they progress through our programs.

Goals
G1: Knowledge of language
Students will demonstrate an awareness of the centrality of language to human experience as well as an understanding of some of the structures and functions of language.

**G 2: Effective written communications**
Students will be able to apply knowledge of the elements of rhetoric for effective communications in writing; to write for a variety of forms as appropriate to audience, purpose, and occasion; to recognize a range of social, academic, and professional situations and adapt language accordingly; and to comprehend the grammatical and syntactical patterns of the English language and use them as tools in writing and revising.

**G 3: Ability to interpret texts**
Students will be able to interpret figurative language, to identify literary and thematic patterns, to read for multiple meanings, to apply knowledge of conventions from different periods and genres; to read and use scholarly and theoretical works, and to evaluate critical arguments and construct alternative positions when necessary.

**Student Learning Outcomes/Objectives**

**SLO 1: Ability to think critically and interpret texts (M: 1)**
Students will be able to interpret figurative language, to identify literary and thematic patterns, to read for multiple meanings, to apply knowledge of conventions from different periods and genres, to read and use scholarly and theoretical works, and to evaluate critical arguments and construct alternative positions when necessary.

**SLO 2: Knowledge of literary history, major figures, and genres (M: 1)**
Students will demonstrate knowledge of major figures, genres, and historical periods of English, American, and World literature.

**SLO 3: Mastery of basic elements of writing (M: 1)**
Students will demonstrate an ability to use basic elements of writing (such as grammar, punctuation, diction, syntax, and organization).

**Measures, Targets, and Findings**

**M 1: Literature Senior Exit Portfolio (O: 1, 2, 3)**
While the senior exit portfolios have been required of students since the fall of 2002, we have been collecting data only since the fall of 2004. In the middle of his or her final semester, every graduating senior submits a portfolio, which consists of selected writings produced during the course of the student’s career in the program as well as a reflective essay in which the student considers his or her progress as a student of English. The specific instructions for compiling the portfolio are different for each of the department’s four concentrations: Literature, Secondary English, Rhetoric and Composition, and Creative Writing. Every portfolio is read by two faculty members associated with the student’s particular concentration. The faculty members assess the portfolios, using criteria aligned with the department’s undergraduate learning outcomes. Each criterion is rated on a 5-point scale, and the results are tabulated with mean scores and median scores for each criterion. In the summer, the Assessment Coordinator meets with each of the directors of the four concentrations to analyze the data and make suggestions for procedural and programmatic change. The suggestions are presented to the full faculty at the first department meeting of the semester and, if approved, integrated into the yearly assessment plan. From 2004-2010, the portfolios for all concentrations were reported on in one assessment report, but in 2009-2010, the department decided that each concentration would report separately. This switch has also opened up the possibility for each concentration to select particular outcomes to concentrate on for a particular assessment cycle (even though the portfolio review still involves assessment for all the criteria listed on an assessment form). In 2009-2010, the Literature concentration chose to focus on three outcomes: knowledge of literary history, major figures, and genres; ability to think critically and interpret texts; and mastery of the basic elements of writing.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O1: Ability to think critically and interpret texts**
The target for this outcome related to critical thinking and interpretation skills is a 4.2 out of 5.0.

**Findings 2010-2011 - Target: Met**
There were 43 portfolios submitted in the Literature concentration this year. The average score for this outcome related to critical thinking and interpretation skills was a 4.3, meaning that it met the target. This average was also in keeping with the scores earned for this outcome in the previous six years, which ranged from 4.3 - 4.4.

**Target for O2: Knowledge of literary history, major figures, and genres**
The target for this outcome related to the knowledge of literary history, major figures, and genres is a 4.2 out of 5.0.

**Findings 2010-2011 - Target: Not Met**
The average score for this outcome related to the knowledge of literary history, major figures, and genres was a 4.1, meaning that it did not meet the target. This average was also on the low end of the scores earned for this outcome in the previous six years, which ranged from 4.1 - 4.3.

**Target for O3: Mastery of basic elements of writing**
The target for this learning outcome related to the mastery of basic elements of writing is a 4.2 out of 5.0.

**Findings 2010-2011 - Target: Met**
The average score for this outcome related to the mastery of basic elements of writing was a 4.35, meaning that it met the target. This is the first year that this outcome was included on the Literature portfolio assessment form.
**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

### Change focus of portfolio assessments
Instead of focusing on language, interpretation skills, and effective written communications, faculty in the Literature concentration will focus on the following three outcomes in the portfolio assessment process: outcome 1: knowledge of literary history, major figures, and genres; outcome 5: ability to think critically and interpret texts; and outcome 6: mastery of basic elements of writing. A target of 4.2 out of 5.0 will be set for these three learning outcomes.

### Change the criteria on the Literature portfolio assessment form
The Literature portfolio assessment sheet has been revised so that the criteria read as follows: criterion 1: presentation: portfolio’s appearance, organization, and comprehensiveness; criterion 2: quality of thought in the reflective essay; criterion 3: knowledge of major figures and genres, periods and movements, and approaches and literary terms; criterion 4: knowledge of criticism and theory; criterion 5: careful and detailed reading of texts; criterion 6: insightful interpretation of texts; criterion 7: ability to use basic elements of writing (such as grammar, punctuation, diction, syntax, and organization); criterion 8: skills at written communications (including rhetorical strategies); criterion 9: researching skills; criterion 10: overall impression.

### Make revisions to the full list of learning outcomes for the Literature concentration
The faculty in the Literature concentration have revised the full list of learning outcomes for the Literature concentration to the following: outcome 1: knowledge of literary history, major figures, and genres; outcome 2: ability to use literary terms; outcome 3: knowledge of language and linguistics; outcome 4: knowledge of criticism and theory; outcome 5: ability to think critically and interpret texts; outcome 6: mastery of basic elements of writing; outcome 7: ability to use rhetorical strategies to communicate effectively in writing; outcome 8: Ability to engage in effective oral communications; outcome 9: ability to research effectively.

</tbody>
</table>

### Separate basic writing skills from rhetorical skills on the portfolio assessment
Since the portfolios from 2009-2010 did not meet the target set for effective written communications, the Literature concentration is going to score basic writing skills separate from rhetorical skills on the portfolios starting in spring 2011 to try to isolate the writing problem.

**Relationships (Measure | Outcome/Objective):**
- **Measure:** Literature Senior Exit Portfolio
- **Outcome/Objective:** Mastery of basic elements of writing

| Projected Completion Date: | 01/2011 |

### Advise students about portfolio contents
Because the writings in a number of the Literature portfolios have demonstrated a limited breadth of knowledge, we need to help students see the importance of including a wider range of essays (American/British/world literature, from different periods, with theoretical engagement). More detailed instructions about the need to a diverse selection of writings will be supplied to instructors of the senior seminar so that these instructors can provide better guidance to students as they prepare their portfolios.

### Continue using same outcomes and targets in portfolio assessment
This concentration will continue to focus on the following three outcomes in their assessment of the senior portfolios: the ability to think critically and interpret texts; the knowledge of literary history, major figures, and genres; and the mastery of basic elements of writing. The targets will also remain the same.

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Last year was the first year that this concentration focused on the following three outcomes in their assessment of the portfolios: ability to think critically and interpret texts; knowledge of literary history, major figures, and genres; and mastery of basic elements of writing. The targets were met for two of these outcomes but not for the one concerning content knowledge. The faculty associated with this concentration think that this problem is related more to the choices students are making in terms of the selection of writings rather than to their mastery of content knowledge. Therefore, the Director of Undergraduate Studies will provide an instruction sheet for those faculty members who are teaching the senior seminar course so that their students can be informed of the importance of submitting works that reflect a wide variety of periods, regions, and authors. They will continue to track this outcome to see if these enhanced instructions result in portfolios that reflect a more comprehensive knowledge of English studies.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Faculty associated with the Literature concentration were pleased to see that the outcome related to the mastery of basic elements of writing was met, especially since this was the first year this outcome was assessed. It suggests that students are getting adequate writing instruction during the course of their program. Since the only target that was not met is assumed to have been caused by a procedural problem rather than a programmatic problem, there are no changes to the program planned for this year.

Georgia State University
Assessment Data by Section
2010-2011 English Concentration in Rhetoric/Composition
As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose

The mission of the Department of English at Georgia State University is to promote the pursuit and development of knowledge, critical inquiry, creative endeavor, and professional training in areas of English language studies, global and multi-ethnic literary and cultural studies, pedagogy, critical theory, creative writing, rhetoric and composition, professional and technical writing, and secondary education. Our students will develop strong oral, written, and electronic communication skills as they progress through our programs.

Goals

G 1: Knowledge of language and linguistics
Students will demonstrate an awareness of the centrality of language to human experience as well as an understanding of some of the structures and functions of language.

G 2: Effective Written Communications
Students will be able to apply knowledge of the elements of rhetoric for effective communications in writing; to write for a variety of forms as appropriate to audience, purpose, and occasion; to recognize a range of social, academic, and professional situations and adapt language accordingly; and to comprehend the grammatical and syntactical patterns of the English language and use them as tools in writing and revising.

G 3: Interpretive Skills
Students will be able to interpret figurative language, to identify literary and thematic patterns, to read for multiple meanings, to apply knowledge of conventions from different periods and genres; to read and use scholarly and theoretical works, and to evaluate critical arguments and construct alternative positions when necessary.

Student Learning Outcomes/Objectives

SLO 1: Ability to think critically and interpret texts (M: 1)
Students will be able to interpret figurative language, to identify literary and thematic patterns, to read for multiple meanings, to apply knowledge of conventions from different periods and genres, to read and use scholarly and theoretical works, and to evaluate critical arguments and construct alternative positions when necessary.

SLO 2: Effective written communications (M: 1)
Students will develop the skills to use language effectively in written communications.

SLO 3: Knowledge of language and linguistics (M: 1)
Students will demonstrate an awareness of the centrality of language to human experience as well as an understanding of some of the structures and functions of language.

Measures, Targets, and Findings
Details of Action Plans for This Cycle (by Established cycle, then alpha)

Continue targets set in last year's assessment report
The Rhetoric and Composition faculty will continue to focus on the following learning outcomes in their assessment work in 2009-2010: knowledge of language and linguistics (with a target of 4.2); ability to think critically and to interpret texts (with a target of 4.2); and ability to produce effective written communications (with a target of 4.3).

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Projected Completion Date: 01/2011

Revise the mission, goals, and objectives to match the particulars of the Rhetoric/Composition concentration
Now that the undergraduate assessment is being broken down into the four concentrations, each concentration will revise the mission, goals, and objectives so that they are more relevant to the particulars of their program. This work will be done in the fall 2010 semester.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High

Switch the criterion used to determine effective written communications in the Rhetoric and Composition portfolios
The scores on the 2009-2010 Rhetoric and Composition portfolios did not meet the target, in large part because students did not include a wide enough range of papers and projects for the readers of the portfolios to give an accurate judgment of this outcome. The faculty in this concentration would like to use the criterion that reads "ability to write with structural integrity and conventional usage" as the indicator for the outcome related to effective written communications instead.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Change the outcomes assessed for the senior portfolios
The portfolio outcomes currently read "ability to think critically and interpret texts," "effective written communications," and "knowledge of language and linguistics." To more effectively reflect the assessment process in this concentration, these outcomes will be changed to read "ability to think critically through writing," "ability to write with structural integrity and conventional usage," and "knowledge of rhetorical theories and history of rhetoric."

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium
Projected Completion Date: 08/2011
Responsible Person/Group: Assessment Coordinator

Change the portfolios to a 5-point rather than a 4-point assessment
When the Rhetoric and Composition faculty began doing senior portfolios entirely on line, they used a 4-point ranking system rather than a 5-point ranking system. Since that differs from the other undergraduate concentrations and causes confusion, they are going to revise their on-line form to a 5-point system and put it in place for the next round of assessments.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium
Projected Completion Date: 08/2011
Responsible Person/Group: Assessment Contact Person in Rhetoric and Composition

Set new targets for the portfolios
Given that the portfolios are going to be ranked on a 5-point scale, the following targets will be set: 4.0 for the ability to think critically and interpret texts; 4.1 for effective written communications, and 4.0 for knowledge of language.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Projected Completion Date: 09/2011

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

There were no changes in the assessment process for this degree program in the past year. However, four procedural changes will be made during the upcoming year: the assessment form for the senior portfolios will have a 5-point scale, the targets will be changed to reflect the change in rankings, the mission statement and goals will be revised to reflect the particulars of this concentration; and the outcomes on the senior portfolio assessment report will be changed to reflect the specificities of this concentration.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The targets set for the three learning outcomes on the portfolios were all met, suggesting that Rhetoric and Composition students turned in successful work this year. There are therefore no changes planned to the educational program right now.
### G 2: Knowledge of reading, writing, and literature
Students in this undergraduate concentration grow knowledgeable about the processes of reading and writing and the study of literature.

### G 3: Application of content knowledge to classroom
Students in this undergraduate concentration become capable of transferring content knowledge from the college classroom to a middle or secondary school setting.

### G 4: Understanding of various pedagogical approaches
Students in this undergraduate concentration begin to learn various pedagogical approaches appropriate to the subject and the setting.

### Measures, Targets, and Findings

<table>
<thead>
<tr>
<th>M 1: Secondary English Senior Exit Portfolio (O: 2, 3, 4)</th>
</tr>
</thead>
<tbody>
<tr>
<td>While the senior exit portfolios have been required of students since the fall of 2002, we have collected data only since the fall of 2004. In the middle of his or her final semester, every graduating senior submits a portfolio which consists of selected writings produced during the course of the student’s career in the program as well as a reflective essay in which the student considers his or her progress as a student of English. The specific instructions for compiling the portfolio are different for each of the department’s four concentrations: Literature, Secondary English, Rhetoric and Composition, and Creative Writing. Every portfolio is read by two faculty members associated with the student’s particular concentration. The faculty members assess the portfolios, using criteria aligned with the department’s undergraduate learning outcomes. Each criterion is rated on a 5-point scale, and the results are tabulated with mean scores and median scores for each criterion. In the summer, the Assessment Coordinator meets with each of the directors of the four concentrations to analyze the data and make suggestions for procedural and programmatic change. The suggestions are presented to the full faculty at the first department meeting of the semester and, if approved, integrated into the yearly assessment plan. From 2004-2010, the portfolios for all concentrations were reported on in one assessment report, but in 2009-2010, the department decided that each concentration would report separately. This switch has also opened up the possibility for each concentration to select particular outcomes to concentrate on for a particular assessment cycle (even though the portfolio review still involves assessment for all the criteria listed on an assessment form). In 2009-2010, the Secondary English concentration chose to focus on three outcomes: knowledge of language and linguistics; effective written communications; and the ability to reflect upon teaching.</td>
</tr>
<tr>
<td>Source of Evidence: Portfolio, showing skill development or best work</td>
</tr>
</tbody>
</table>

#### Target for O2: Knowledge of language and linguistics

According to the 2009-2010 assessment report, the target for this outcome related to the knowledge of language and linguistics is a 4.2 out of 5.0.

**Findings 2010-2011 - Target: Met**

Thirty Secondary English senior portfolios were submitted this year. Students averaged a 4.22 for this outcome related to the knowledge of language and linguistics, meaning that their portfolios met the target for this outcome. It should be noted, however, that on 11 portfolios, reviewers were unable to determine a score for this criterion, suggesting that there is some confusion about how students might be able to demonstrate this knowledge in the content of the senior portfolio. The range of scores for this outcome in the past six years was from 3.7-4.3.

#### Target for O3: Effective Written Communications

According to the 2009-2010 assessment report, the target for this outcome related to the effective written communications is a 4.2 out of 5.0.

**Findings 2010-2011 - Target: Met**

Students averaged a 4.43 for this outcome related to effective written communications, meaning that their portfolios met the target for this outcome. This score was at the higher end of the averages earned in the past six years, which ranged from 3.9 - 4.5.

#### Target for O4: Ability to Reflect upon Teaching

According to the 2009-2010 assessment report, the target for this outcome related to the ability to reflect upon teaching is a 4.2 out of 5.0.

**Findings 2010-2011 - Target: Met**

The average score for this outcome was a 4.48. This score met the target and was in the middle of the scores earned over the past six years, which ranged from 4.2 - 4.6.
**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Revise the Secondary English portfolio assessment form**

Faculty members in the Secondary English concentration have made a number of changes to their portfolio assessment form. The revised form, which will be put into use starting in the spring of 2011, includes the following: criterion 1: adequate knowledge of genres, approaches, and critical terms; criterion 2: adequate knowledge of language and linguistics (as evidenced in work included in the portfolio from any of the department’s language courses or in the student’s reflective essay); criterion 3: adequate reading interpretation skills; criterion 4: ability to understand and incorporate literary criticism; criterion 5: adequate written communication skills (style, editing, voice, diction, audience awareness, argumentative strategies, etc.); criterion 6: adequate researching skills (finding sources, integrating sources, citing sources); criterion 7: engagement with and passion for the teaching profession; criterion 8: knowledge of literature, language, and composition potentially suitable for middle and secondary classroom instruction; criterion 9: ability to reflect upon teaching; and criterion 10: overall evaluation.

**Established in Cycle:** 2009-2010  
**Implementation Status:** Finished  
**Priority:** High  
**Projected Completion Date:** 01/2011  
**Responsible Person/Group:** Assessment Coordinator

**M 2: Senior Seminar Exam (O: 4)**

Starting in 2009-2010, the Senior Seminar for students in the Secondary English concentration has included a question on the final exam that asks students to reflect upon what they have learned about the profession of English teaching from the various elements of the course (lesson and unit planning, the integration of the standards in teaching, resources available for classroom instruction, classroom management as demonstrated by teachers at their observation sites, and content enhancement possibilities through teaching conferences). Scores for the question on the exam that asks students to reflect upon teaching will be tabulated and reported as part of the assessment report.

**Source of Evidence:** Writing exam to assure certain proficiency level

**Target for O4: Ability to Reflect upon Teaching**

No target was set for this measure. Since this is the first year we will get data on this measure, we will use that information to set a target for the 2011-2012 assessment cycle.

**Findings 2010-2011 - Target: Met**

Twenty-seven students took the senior seminar final exam. On the question that asked student to reflect upon the practice of teaching, students averaged a 90.6%. Four students earned a B (86%), two students earned a B+ (87-88%), fifteen students earned an A- (90-92%), and six students earned an A (93-95%).

**Revise the mission, goals, and outcomes to better match the specifics of the Secondary English program**

Now that the undergraduate assessment is being broken down into the four concentrations, each concentration will revise the mission, goals, and objectives so that they are more relevant to the particulars of their program.

**Established in Cycle:** 2009-2010  
**Implementation Status:** Finished  
**Priority:** Medium  
**Projected Completion Date:** 01/2012  
**Responsible Person/Group:** Secondary English committee

**Investigate the possibility of offering an elective on the Professionalization of Teaching**

Two years ago, the Secondary English faculty made an adjustment to the senior portfolio instruction document so that the expectations of this concentration’s portfolio would be more similar to the expectations of the Literature concentration’s portfolio (for example, requiring only five pieces of evidence rather than six). One result of this shift is that recent portfolios have not included as much in the way of content or reflection upon teaching. Acting on the assumption that our undergraduates would benefit from more involvement in the schools before they finish the program, faculty will investigate the possibility of offering an elective course on the Professionalization of Teaching. One possibility is that this course could be run as a type of internship program in which students go out to observe in schools and come back to the classroom to process their experiences.

**Established in Cycle:** 2009-2010  
**Implementation Status:** In-Progress  
**Priority:** Medium  
**Projected Completion Date:** 08/2011  
**Responsible Person/Group:** Members from the Secondary English committee will brainstorm ideas for this course and will meet with the director of the department’s internship program, Malinda Snow, as well as with our counterparts in MSIT to get their recommendations and suggestions.

**Budget Amount Requested:** $0.00 (no request)

---

Findings 2010-2011 - Target: Met

Twenty-seven students took the senior seminar final exam. On the question that asked student to reflect upon the practice of teaching, students averaged a 90.6%. Four students earned a B (86%), two students earned a B+ (87-88%), fifteen students earned an A- (90-92%), and six students earned an A (93-95%).
Set target for three areas of focus for the Secondary English portfolio assessment
In 2009-2010, all four concentrations focused on learning outcomes related to knowledge of language, interpretation skills, and effective written communications. Starting in the spring of 2011, the Secondary English concentration will keep these areas of emphasis with the exception of one. Instead of focusing on interpretation skills, they will add the focus on the learning outcome related to the ability to reflect upon teaching. A target of 4.2 out of 5.0 will be set for all three outcomes.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Projected Completion Date: 01/2011

Design a special Introduction to Literary Studies course for concentration
A special section of English 3040 (Introduction to Literary Studies) will be offered starting in the fall of 2012. The purpose of this course will be to introduce Secondary English concentration students to the teaching profession and to the basic concepts of pedagogy early in their academic program. This course will also encourage the Secondary English student to approach all of their courses in the major from the perspective of a potential teacher. If this course proves successful, the department plans to offer one section of this specialized 3040 course each year.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Projected Completion Date: 07/2012
Responsible Person/Group: Renee Schatteman (instructor for the course in the fall 2012)

Promote and Support the internship program for Secondary English students
Efforts were made in the spring and summer to encourage students in the Secondary English concentration to sign up to do an internship in a school at some point in their program. As a result, some ten students will likely be doing internships this year. Funding has been allocated for an instructor to serve as the director of this specialized internship program. We plan to advertise the internship program again this year (by distributing fliers in the 3040 classes, sending out reminders on the undergraduate listserv, and offering an internship workshop) so that an even greater percentage of Secondary English students get experience in the schools as interns. While we are not yet requiring this as a course, we are strongly encouraging this group of students to take advantage of this opportunity.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Projected Completion Date: 08/2011
Responsible Person/Group: Secondary English Committee
Additional Resources: Funding needed to provide one course release for an instructor to direct this specialized internship program.
Budget Amount Requested: $0.00 (no request)

Require students to include a paper about language in portfolios
Starting in the spring of 2012, students will be required to include in their senior portfolios a piece of evidence demonstrating their explicit knowledge of language. This writing should come out of one of the following classes: Practical Grammar (English 3105), Language Analysis for Teachers of English (English 3190), Introduction to the English Language (English 3200), Advanced Grammar (English 3210), History of the English Language (English 3220), and Language in the African-American Community (English 3955). This requirement is in addition to the requirements already listed in the portfolio instructions for this concentration.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Secondary English Senior Exit Portfolio | Outcome/Objective: Knowledge of language and linguistics

Projected Completion Date: 12/2011
Responsible Person/Group: Renee Schatteman, Assessment Coordinator

Requiring students in the senior seminar and the specialized 3040 class to write a statement about their teaching philosophy
Last year, we asked students in the Senior Seminar to write a final exam question that required them to reflect upon the practice of teaching. This year, we will instead ask students to write a statement which articulates their teaching philosophy, drawing upon the various experiences they have had in this course. Starting in the fall of 2012, the instructor who teaches the specialized introductory class (English 3040) for prospective teachers will also ask students to write a teaching philosophy statement. At first, we will look at the scores from each class to see how much students are learning in these two individual classes. In a few years’ time, we will be able to compare the teaching philosophy statement written at the beginning of a student’s program with the statement that same student is able to write at the end of the program, which will give us a sense of development in this learning outcome over the full program.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Senior Seminar Exam | Outcome/Objective: Ability to Reflect upon Teaching

Projected Completion Date: 01/2012
Responsible Person/Group: Instructors of the 4330 class and the specialized 3040 class

Set target for the teaching philosophy assignment
The expectation for the teaching philosophy assignment to be completed by students in the senior seminar is that at least 75% will receive a 90% or above for this assignment. For all the portfolio outcomes, the department will use the same targets as were used in the last portfolio assessment cycle.
Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium
Projected Completion Date: 08/2011
Responsible Person/Group: Assessment Coordinator

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The Secondary English faculty have recently revised the mission statement and the goals for this undergraduate concentration so that they are more specific to the particulars of teaching.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

All the targets set for the portfolios in this concentration were met. This suggests that students performed effectively on these learning outcomes. One concern was that for over one third of the portfolios, readers were not able to determine a score for the outcome related to the knowledge of language and linguistics. This is because a number of the portfolios do not include evidence that explicitly demonstrate of language. Since we feel that language knowledge is such a critical component of English teaching, we have decided to require that students include a piece of writing from one of the department's language classes. By making this a requirement, we intend to stress the importance of this aspect of English studies in their chosen profession. Students will include this piece of evidence as an addition to the five pieces of writing already required for the portfolio. This new requirement will start in the spring of 2012. Another outcome we have given particular attention to in this past assessment cycle was the ability to reflect upon teaching. We asked students in the Senior Seminar to answer a question on the final exam, describing what they have learned about the profession from the various activities of the course. This exam question was met with success (the average score was a 90.6%), but for next year, we have decided to tweak this assignment. We will ask students in this class to write a teaching philosophy statement at the end of the course.

When asked about the Secondary English program, students in the Senior Seminar strongly suggested that more classes about English pedagogy be offered before their senior year. To answer this request, we have decided to offer a specialized Introduction to Literary Studies class for students interested in teaching. This course will be offered in the fall of 2012 and if it is successful we will offer it at least once a year. The aim of this course will be to teach students to study literature from the perspective of a prospective teacher and to make them more aware of the profession. It will also serve as an opportunity to advertise the Internship program as a means of getting classroom experience before the end of their undergraduate program.

2010-2011 English Creative Writing MFA
As of: 12/12/2016 04:11 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The mission of the Department of English at Georgia State University is to promote the pursuit and development of knowledge, critical inquiry, creative endeavor, and professional training in areas of English language studies and creative writing. Our students will develop strong oral, written, and electronic communication skills as they progress through our programs.

Goals
G 1: Assure mastery of content knowledge
The department will strive to assure that MFA students master the content knowledge related to the Creative Writing concentration to the level that is expected for masters work.

G 2: Encourage scholarly engagement with critical approaches, theoretical frameworks, and/or historical contexts
The department will emphasize the importance of a scholarly engagement with critical approaches, theoretical frameworks, and/or historical contexts in masters work, in particular in the thesis writing.

G 3: Foster effective written communications
The department will work to foster effective written communication skills in MFA students.

Student Learning Outcomes/Objectives
SLO 1: Content Knowledge (M: 1, 2)
M.F.A. students will demonstrate a thorough familiarity with representative examples of writing by major figures in fiction or poetry, English and American literary history of fiction or poetry, and form and theory of fiction or poetry, depending on the student's choice of genre.

SLO 2: Application of Literary Studies (M: 1)
Students will be able to draw upon the knowledge of composition and aesthetics gained in their English studies to compose meaningful literary works. They will also be able to develop vocabularies for studying and discussing poetry and fiction, depending on the student's choice of genre.

**SLO 3: Craftsmanship (M: 1)**
Students will be able to produce writing that is authentic and engaging, in part by identifying and accessing material from their own lives and interests and is of sufficient quality to be deemed publishable in national literary journals.

**SLO 4: Revising Skills**
Students will be able to evaluate the strengths and weaknesses of both published and student writing and to offer specific and constructive criticism. Students will also be able to evaluate the range of critical responses from fellow students and the instructor and to revise their creative writing to create work of a sufficient quality to be deemed publishable in national literary journals.

**SLO 5: Effective Communication Skills (M: 2)**
Students will be able to communicate effectively in a wide range of written and spoken communications.

**SLO 6: Researching Skills**
Students will conduct graduate-level research on topics related to English studies and will demonstrate mastery in using traditional methods of research as well as non-traditional information technology.

**SLO 7: Evaluative Skills**
Students will be able to evaluate information and materials for their accuracy, persuasiveness, and relevance to a research project.

**Measures, Targets, and Findings**

**M 1: M.F.A. Thesis (O: 1, 2, 3)**
The Creative theses have been assessed since 2009-2010. During that first year, only 1 thesis was assessed compared to the 4 MFA theses assessed this year. Students who finish their thesis are assessed collectively by their thesis committee members who fill out a form (with a 5-point scale) that is aligned to the graduate learning outcomes (see attached assessment form). If there are dissenting opinions about the scores, those different scores can be indicated on the assessment form. The committee chair is responsible for making sure that the assessment form is completed and turned into the assistant to the Graduate Director after the thesis work has been submitted. A student cannot be advanced for graduation if this assessment step has not been done.

Source of Evidence: Senior thesis or culminating major project

**Target for O1: Content Knowledge**
In 2009-2010, the target for the content knowledge outcome of the MFA thesis was set at 4.7 out of 5.0.

**Findings 2010-2011 - Target: Met**
The average score for the content knowledge outcome (familiarity with representative examples of writing, an understanding of literary history, and an understanding of form and theory of fiction or poetry) on the M.F.A. thesis was a 4.8. That score met the target.

**Target for O2: Application of Literary Studies**
In 2009-2010, the target for the application of literary studies outcome of the MFA thesis was set at 4.7 out of 5.0.

**Findings 2010-2011 - Target: Met**
The average score for the application of literary studies outcome on the M.F.A. thesis was a 4.8. That score met the target.

**Target for O3: Craftsmanship**
In 2009-2010, the target for the application of craftsmanship learning outcome of the MFA thesis was set at 4.7 out of 5.0.

**Findings 2010-2011 - Target: Met**
The average score for the craftsmanship learning outcome (the ability to produce work that is authentic and engaging, the ability to produce work that is grammatically sound and syntactically correct, and the use of a variety of literary techniques)) on the M.F.A. thesis was a 4.8. That score met the target.

**M 2: M.F.A. Exams (O: 1, 5)**
M.F.A. students in the Creative Writing Program are required to pass two four-hour exit exams given over two days. The exam given on the first day tests the student's knowledge of literary vocabulary, major literary figures, literary history, and form and theory in the literature of the student's chosen genre before the twentieth century. The exam given on the second day tests the student's knowledge of literary vocabulary, major literary figures, literary history, and form and theory in the literature of the student's chosen genre after the beginning of the twentieth century. Each M.F.A. exam is read and graded by a committee of three faculty chosen by the student. The committee consists of the student's major professor, a second member who must be in the relevant area of creative writing, and a third member from the English department.

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O1: Content Knowledge**
In the 2009-2010 assessment plan, a target was set for the Creative Writing MFA exams that 25% or fewer of the examinees would earn a low pass of a fail on their exams.
Findings 2010-2011 - Target: Met

Two MFA exams were taken this year (one in poetry and one in fiction) and neither student received a low pass or failing grade. The poetry exam was awarded a high pass while the fiction exam earned a pass. The target was met, and the 0% low pass/failure rate was a considerable increase over the past two assessment cycles, where the low pass/failure rates were 14% and 20%.

Target for O5: Effective Communication Skills

In the 2008-2009 assessment plan, the department determined to set a target for all M.F.A. exams stating the intention that fewer than 15% of examinees would earn a low pass of a fail on their exams. This target was set to build upon the progress shown in last year’s were only 14% of exams were given a score of a low pass or a failure.

Findings 2010-2011 - Target: Met

Two MFA exams were taken this year (one in poetry and one in fiction) and neither student received a low pass or failing grade. The poetry exam was awarded a high pass while the fiction exam earned a pass. The target was met, and the 0% low pass/failure rate was a considerable increase over the past two assessment cycles, where the low pass/failure rates were 14% and 20%.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Create explanation sheet for M.F.A. thesis rankings

The Director of Creative Writing will create a list of criteria to accompany the M.F.A. thesis assessment form, similar to the criteria developed for the PhD dissertation assessment tool.

Established in Cycle: 2005-2006
Implementation Status: In-Progress
Priority: High
Implementation Description: The Assessment Coordinator will work with the Director of Creative Writing to develop this form.
Projected Completion Date: 12/2012
Responsible Person/Group: Director of Creative Writing

Set target for M.F.A. exams

The department will set a target that fewer than 15% of examinees will earn a low pass or a failure on exams taken in fall of 2009 or spring of 2010.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Relationships (Measure | Outcome/Objective):
Measure: M.F.A. Exams | Outcome/Objective: Content Knowledge
Implementation Description: This target will take effect in the fall of 2009 and be applied to the M.F.A. exams taken in this semester as well as in the spring 2010 semester.
Projected Completion Date: 07/2009
Responsible Person/Group: Assessment Coordinator and Director of Creative Writing
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Set target for M.F.A. thesis

Since this will be the first year that the department will collect assessment data on the M.F.A. thesis, it is difficult to set particular targets for this measure. Therefore, the department will set a basic threshold of 4.5 (based on a six-point scale) for all the criteria used on the thesis assessment form. The data that is generated from the 2009-2010 results will enable the Director of Creative Writing to set more specific targets in future years, as the department comes to a fuller understanding of what the M.F.A. thesis is intended to demonstrate.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Relationships (Measure | Outcome/Objective):
Measure: M.F.A. Thesis | Outcome/Objective: Content Knowledge
Implementation Description: This target will take effect in the fall of 2009 and will be applied to the M.F.A. theses completed in the fall of 2009 or the spring of 2010.
Projected Completion Date: 07/2009
Responsible Person/Group: Assessment Coordinator and Director of Creative Writing
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Adjust the target for the low pass/failure rate on the MFA exams to 25 % or less

The Creative Writing department is changing the target for the low pass/failure rate on the MFA exams to 25% or less.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Relationships (Measure | Outcome/Objective):
Measure: M.F.A. Exams | Outcome/Objective: Effective Communication Skills
Projected Completion Date: 09/2010
Responsible Person/Group: Assessment Coordinator
Budget Amount Requested: $0.00 (no request)
Adjust the target for the MFA thesis to 4.7 on all learning outcomes
The target for the learning outcomes on the MFA thesis (content knowledge, application of literary studies, craftsmanship) will be moved from a 4.5 to a 4.7.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Projected Completion Date: 09/2010
Responsible Person/Group: Assessment Coordinator
Budget Amount Requested: $0.00 (no request)

Adjust the target of MFA exam to a low pass/failure rate of 25% or less
The target for the MFA exam will be adjusted so that 25% or fewer of the examinees receive a low pass or failure for the exam.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: M.F.A. Exams | Outcome/Objective: Content Knowledge
Projected Completion Date: 09/2010
Responsible Person/Group: Assessment Coordinator, Renee Schatteman
Budget Amount Requested: $0.00 (no request)

Create a document that explains the rankings on the thesis assessment form
The Graduate of Creative Writing, in conjunction with other Creative Writing faculty, will create a document that explains the meaning of each of the rankings of the thesis assessment form (outstanding, excellent, good, fair, poor, inadequate) in terms of the specific work of this concentration. This intention of this action step is that the explanation of the rankings can help in the norming process to better ensure accurate and useful results.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Projected Completion Date: 01/2011
Responsible Person/Group: Director of Creative Writing
Budget Amount Requested: $0.00 (no request)

Reach 100% compliance on MFA thesis assessment process
During 2009-2010, half of the thesis assessment forms were submitted with the signature sheets for completed MFA theses (one out of two). To guarantee that the thesis assessment sheet is completed by the thesis committee, it will be attached to signature sheets and distributed to a thesis committee chair by the Assistant to the Graduate Director. In the future, a signature sheet will not be accepted for graduation unless the assessment form is included.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Projected Completion Date: 09/2010
Responsible Person/Group: Assistant to Graduate Director
Budget Amount Requested: $0.00 (no request)

Rewrite mission and goals for MFA program
By spring of 2011, faculty in the Creative Writing concentration will revise the mission statement and their goals on the assessment report. Presently, these items reflect the mission and goals for the whole of the MA program. Now that we have broken up the assessment reporting in terms of concentration, Creative Writing can rewrite these items to more specifically match their program.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Projected Completion Date: 01/2011
Responsible Person/Group: Director of Creative Writing in collaboration with other Creative Writing faculty
Budget Amount Requested: $0.00 (no request)

Change MFA thesis assessment from a 5 point range to a 6 point range
MFA theses are presently assessed like the Literature theses, using a 5-point scoring range. This was determined by the Literature concentration because there are not many theses that are immediately ready for publication, in contrast to the PhD dissertation. But the MFA is a terminal degree, and the quality of work is expected to be comparable to the PhD. Therefore, the Creative Writing faculty would like to use a 6-point scale so that they can indicate outstanding ranking for those theses that are ready for publication.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Projected Completion Date: 08/2011
Responsible Person/Group: Assessment Coordinator

Distinguish between primary and secondary exams on MFA exams
To provide more information about the exam results for the MFA, primary exam results will be distinguished from secondary exam results.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium
Projected Completion Date: 08/2011
Responsible Person/Group: Assistant to the Graduate Director
Set a target of 5.0 out of 6.0 for the criteria on thesis assessment sheet

A new target of 5.0 out of 6.0 will be set for all the criteria on the revised (6 point) thesis assessment form.

- Established in Cycle: 2010-2011
- Implementation Status: Planned
- Priority: High
- Projected Completion Date: 08/2011
- Responsible Person/Group: Assessment Coordinator

Analysis Questions and Analysis Answers

**ACADEMIC PROGRAM QUESTION 1:** What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

No new procedures were put into place in the assessment cycle. This year, we are going to make three changes to the process: the MFA thesis form will have six possible rankings instead of five; the MFA exam results will distinguish between primary and secondary exam, an explanation of the rankings will be created for the thesis assessment form, and the mission statements and goals will be revised to reflect the particulars of this graduate program.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The MFA thesis results were very encouraging as they met all the targets. The exam results were also positive as these targets were also met; consequently, no programmatic changes are necessary for the next assessment cycle.

---
