Georgia State University
Assessment Data by Section
2011-2012 Accountancy BBA
As of: 12/12/2016 04:40 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

### Mission / Purpose
The mission of the Bachelors of Business Administration, Accountancy Major is to provide the technical and analytical accounting knowledge to become a professional in accounting and to pursue a fifth (graduate) year of professional study.

### Goals

**G 1: Technical Accounting Knowledge**
Technical Accounting Knowledge

**G 2: Analytical Accounting Knowledge and Skills**
Students demonstrate analytical accounting knowledge and skills in financial accounting, auditing, accounting information systems, taxation, and managerial accounting

### Student Learning Outcomes/Objectives

**SLO 1: Principles of Accounting (ACCT 2101 and 2102) (G: 1) (M: 1, 2, 3)**
Students display knowledge of Principles of Accounting

**Standard Associations**
1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 2: Financial Accounting (ACCT 4111, 4112, 4113) (G: 2) (M: 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15)**
Students display financial accounting knowledge

**SLO 3: Managerial Accounting (ACCT 4210) (G: 2) (M: 16, 17, 18)**
Students display knowledge about Managerial Accounting

**SLO 4: Accounting Information Systems (ACCT 4310) (G: 2) (M: 19, 20, 21, 22)**
Students display knowledge about accounting information systems

**SLO 5: Taxation (ACCT 4510) (G: 2) (M: 23, 24, 25)**
Students display knowledge about Taxation

**SLO 6: Audit and Assurance (ACCT 4610) (G: 2) (M: 26, 27, 28, 29, 30)**
Students display Audit and Assurance knowledge

### Measures, Targets, and Findings

**M 1: Translate business activities into accounting information (ACCT 2101 and 2102) (O: 1)**
Translate activities related to essential business processes into accounting information reflected in the accounting information system

Source of Evidence: Writing exam to assure certain proficiency level

#### Target for O1: Principles of Accounting (ACCT 2101 and 2102)
Mean of 70% or higher on exam questions

#### Findings 2011-2012 - Target: Partially Met
Mean ranged from 62% to 93%. For 2011/2012, we had two primary objectives: (1) improve attendance and (2) increase the number of students who attend the accounting lab. Although average attendance remained at 75%, we had a definite improvement in the number of students who attended the accounting lab. First, the number of hours the accounting lab was open increased from 15 hours per week to 30 hours per week. In fall 2011, 203 students visited the accounting lab a total of...
In spring 2012, 193 students visited the accounting lab a total of 1,023 times. In previous semesters total visits averaged 220 with approximately one third of the visits from a handful of students. Another possible effect of the accounting lab was that the withdrawal rate for the course dropped to 9% compared to 10 – 11% in earlier years as students get more personalized help.

M 2: Solve operating problems using accounting information (ACCT 2101 and 2102) (O: 1)
Solve operating problems by identifying relevant information from the accounting system and using appropriate tools
Source of Evidence: Writing exam to assure certain proficiency level
Target for O1: Principles of Accounting (ACCT 2101 and 2102)
Mean of 70% or higher on exam questions
Findings 2011-2012 - Target: Partially Met
Mean ranged from 50.5% to 79.7% For 2011/2012, we had two primary objectives: (1) improve attendance and (2) increase the number of students who attend the accounting lab. Although average attendance remained at 75%, we had a definite improvement in the number of students who attended the accounting lab. First, the number of hours the accounting lab was open increased from 15 hours per week to 30 hours per week. In fall 2011, 203 students visited the accounting lab a total of 865 times. In spring 2012, 193 students visited the accounting lab a total of 1,023 times. In previous semesters total visits averaged 220 with approximately one third of the visits from a handful of students. Another possible effect of the accounting lab was that the withdrawal rate for the course dropped to 9% compared to 10 – 11% in earlier years as students get more personalized help.

M 3: Comprehend the usefulness of accounting information (ACCT 2101 and 2102) (O: 1)
Comprehend the usefulness of accounting information to stakeholders making business decisions
Source of Evidence: Writing exam to assure certain proficiency level
Target for O1: Principles of Accounting (ACCT 2101 and 2102)
Mean of 70% or higher on exam questions
Findings 2011-2012 - Target: Partially Met
Mean ranged from 47.2% to 81.9% For 2011/2012, we had two primary objectives: (1) improve attendance and (2) increase the number of students who attend the accounting lab. Although average attendance remained at 75%, we had a definite improvement in the number of students who attended the accounting lab. First, the number of hours the accounting lab was open increased from 15 hours per week to 30 hours per week. In fall 2011, 203 students visited the accounting lab a total of 865 times. In spring 2012, 193 students visited the accounting lab a total of 1,023 times. In previous semesters total visits averaged 220 with approximately one third of the visits from a handful of students. Another possible effect of the accounting lab was that the withdrawal rate for the course dropped to 9% compared to 10 – 11% in earlier years as students get more personalized help.

M 4: Identify, analyze and record journal entries (ACCT 4111) (O: 2)
Identify, analyze and record journal entries for business transactions, including adjusting and closing entries
Source of Evidence: Writing exam to assure certain proficiency level
Target for O2: Financial Accounting (ACCT 4111, 4112, 4113)
Mean of 65% or more on exam questions
Findings 2011-2012 - Target: Met
Mean ranged from 75% to 86%

M 5: Prepare financial statements (ACCT 4111) (O: 2)
Prepare the financial statements of a business with no complex transactions
Source of Evidence: Writing exam to assure certain proficiency level
Target for O2: Financial Accounting (ACCT 4111, 4112, 4113)
Mean of 65% or more on Exam questions
Findings 2011-2012 - Target: Met
Mean ranged from 75% to 94%

M 6: Recognize Revenue (ACCT 4111) (O: 2)
Recognize revenue for a variety of business models
Source of Evidence: Writing exam to assure certain proficiency level
Target for O2: Financial Accounting (ACCT 4111, 4112, 4113)
Mean of 65% or higher on exam questions
Findings 2011-2012 - Target: Met
Mean ranged from 71% to 84%

M 7: Time Value of Money (ACCT 4111) (O: 2)
Apply time value of money concepts to financial accounting measurements

<td>Exam score for new WheelsNow case: In process</td>
<td></td>
</tr>
<tr>
<td><strong>Findings 2011-2012 - Target:</strong> Met</td>
<td>Because a new case was developed for assessing database query performance, no direct comparison with the prior year's performance is possible. The case needs to be revised before establishing target scores next year. The new case has two parts, one for improved spreadsheet skills and one for distinguishing between spreadsheets and databases for specific analytical applications as it develops students' querying skills.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>M 20: Design Business Processes (ACCT 4310) (O: 4)</th>
<th>That students design business processes and represent them with documentation tools</th>
<th>Source of Evidence: Writing exam to assure certain proficiency level</th>
</tr>
</thead>
</table>
Target for O4: Accounting Information Systems (ACCT 4310)

Performance on 24-Seven part 1 case questions: 72.2

Findings 2011-2012 - Target: Met

The least-squares mean of 68.7 was not significantly different from the target. FY2011 was the second year a new case was used for developing business process skills. While it was not associated with improved performance on the learning objective, scores on its sub-parts were significant predictors of performance on the learning objective.

M 21: Design and Implement Databases (ACCT 4310) (O: 4)

That students design and implement well-structured databases to enable business processes

Target for O4: Accounting Information Systems (ACCT 4310)

Better than 2006-07 performance on BloomScape case questions (62.2)

Findings 2011-2012 - Target: Met

The least-square mean of 62.9 was not significantly different from the target. Students have a really hard time assimilating a large volume of information about a business situation and making sense of it.

M 22: Evaluate Internal Control (ACCT 4310) (O: 4)

That students evaluate internal control in information systems and design controls to mitigate risks associated with information systems

Target for O4: Accounting Information Systems (ACCT 4310)

Exam score for 24-Seven Part 2 questions: 62.3

Findings 2011-2012 - Target: Partially Met

The least-squares mean of 55.2 (4% less than the mean in FY2011) was below the target. This year’s decline in performance is likely attributable to one week less class time devoted to the learning objective due to an additional week being spent on database querying at the beginning of the term.

M 23: Identify Tax issues (ACCT 4510) (O: 5)

Identify tax issues in unique fact patterns

Target for O5: Taxation (ACCT 4510)

Mean of 75% or higher on exam questions

Findings 2011-2012 - Target: Met

Mean was 75%

M 24: Select and Apply Tax Laws (ACCT 4510) (O: 5)

Select and apply appropriate tax laws to unique fact patterns

Target for O5: Taxation (ACCT 4510)

Mean of 75% or higher on exam questions

Findings 2011-2012 - Target: Met

Mean was 76%

M 25: Make Investment Decisions using Tax Law (ACCT 4510) (O: 5)

Make investment decisions requiring knowledge of the tax law and its effect

Target for O5: Taxation (ACCT 4510)

Mean of 75% or higher on exam questions

Findings 2011-2012 - Target: Met

Mean was 77%

M 26: Differentiate among the various types of auditing (ACCT 4610) (O: 6)

Differentiate among the various types of auditing and the procedures applied on the financial statements audits and audits of Internal Controls over Financial Reporting

Target for O6: Audit and Assurance (ACCT 4610)
### Mean of 70% or above

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**ACCT 4310**
Develop better thinking models to help students evaluate internal control.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High
- **Projected Completion Date:** 07/2009
- **Responsible Person/Group:** A. Faye Borthick

**ACCT2101 and ACCT2102**
In ACCT 2101 one of the most challenging aspects of the course has been our inability to get students to attend the teaching assistants' office hours. Fewer than 5% of the students take advantage of this resource. For 2009/2010 we will change the name from “office hours” to “tutoring sessions” and make them more “user friendly” by including some mini-tutorials along with the more common question & answer format for office hours. The teaching assistants will also be required to post weekly to the discussion boards in the hopes of involving more acct 2101 students in critical thinking topics and tips for succeeding in the course. Finally, two more videos will be posted on iTunesU. The first experimental videos were posted in 2008/2009 and although only 21% of the students watched the videos, almost 80% said they were a good idea. Feedback from many students noted that the students were unaware of how to access the accounting videos on the GSU's iTunesU site. We will try and remedy that issue by having a brief tutorial in class on navigating the iTunesU site and give the videos a second year to “catch on”. In ACCT2102, one of the challenges that we face in this course is getting more students to attend the Teaching Assistants' office hours. In an average week, roughly 10%
of students will attend office hours with one of the four teaching assistants. During 2009-2010, we are renaming the "office hours" to "tutoring sessions" and will incorporate mini-tutorials along with the more common question and answer format which we have traditionally used. Each Teaching Assistant will be required to post a minimum of three times weekly on the discussion board with the hope of involving more students in critical thinking topics and improving the utilization of the teaching assistants as a valuable course resource. Although the course digital tutors have wide acceptance among the students, these tutorials will be introduced during the first week of class during the lecture or Friday breakout session so that students see the value of the digital tutors right from the beginning of the course. Last, additional practice problems will be incorporated into both the lecture and the homework that require the integration of multiple financial statements to solve the problem, with special focus on the cash flow chapter.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 07/2009
Responsible Person/Group: Kris Clark and Cathy Patridge

ACCT2101 and ACCT2102
See Action Plan for Measure 1

Responsible Person/Group: Kris Clark and Cathy Patridge

ACCT2102 and ACCT2102
See Action Plan for Measure 1.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 07/2009
Responsible Person/Group: Kris Clark and Cathy Patridge

ACCT4210
We improved the assessment process by providing a standard set of questions to be included on exams in all sections effective Fall 08. The result of the new, standardized approach is that the question sets used for assessing learning objectives are not directly comparable to 07-08. Thus, changes in means may reflect more rigor in the questions (prior questions included subjective evaluations and partial credit). Going forward the standardization will allow us to better assess how changes to the program affect student performance. We adopted a new text beginning in Fall 2008 to return to a more traditional approach. We had tried a text that emphasized ambiguity; however, this hindered the students' learning of technical concepts. We will focus in 09-10 on improving students' abilities to model business problems and analyze causes of variances as student performance in these areas lags expectations. Instructors will devote more class time and develop additional assignments in these two areas in order to help students master these concepts.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 07/2009
Responsible Person/Group: Tim Mitchell

ACCT4210
See Action Plan for Measure 8

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 07/2009
Responsible Person/Group: Tim Mitchell

ACCT4510
Refine "ChrisNotes" pertaining to this measure. Spend more class on these measures.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 07/2009
Responsible Person/Group: Chris Fenn

ACCT4510

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 07/2009
Responsible Person/Group: Chris Fenn

Delete Course and Revise Curriculum
In ACCT4410, students performed below target in a significant number of sub-learning outcomes pertaining to Measures #26 and #27. ACCT4410 relies a lot on the material learnt in ACCT4110. You cannot analyze certain parts of the financial statements if you dont know how to prepare or understand those parts of the financial statements. Since ACCT4110 omitted many important topics, students were ill-prepared for ACCT4410 on these topics and performed poorly on them. The above two issues indicate an urgent need to revise the curriculum to include more financial accounting. Given that there is a course similar to ACCT4410 at the graduate
Delete Course and Revise Curriculum
In ACCT4410, students performed below target in a significant number of sub-learning outcomes pertaining to Measures #26 and #27. ACCT4410 relies a lot on the material learnt in ACCT4110. You cannot analyze certain parts of the financial statements if you don't know how to prepare or understand those parts of the financial statements. Since ACCT4110 omitted many important topics, students were ill-prepared for ACCT4410 on these topics and performed poorly on them. The above two issues indicate an urgent need to revise the curriculum to include more financial accounting. Given that there is a course similar to ACCT4410 at the graduate level (ACCT8700) we plan to eliminate ACCT4410 and replace it with an additional 3 credit class in financial accounting.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 07/2009
Responsible Person/Group: Siva Nathan

Revise Curriculum
Revise the undergraduate curriculum to add three more credits of Intermediate Accounting, so that the relevant material can be covered in class.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 07/2009
Responsible Person/Group: Siva Nathan

Emphasis on selected topics
Revenue theory, analysis of discontinued operations, cash flow statement, cash versus accrual basis, revenue recognized using installment method, and using PV/FV will be emphasized during 2010 since those were the lowest percent correct on the cumulative final exam. Instruction will include providing more homework in these areas and spending more class time on these topics. A “Digital Tutor” (short instructional video) will be added on Installment Method Accounting to improve the learning outcomes for this harder topic. Further, students will be given more guidance on how to get started on Jag & Elk to help them get a quick start on the project.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Recognize Revenue (ACCT 4111) | Outcome/Objective: Financial Accounting (ACCT 4111, 4112, 4113)

Projected Completion Date: 08/2010

Reduce grace days and focus on budget analysis
For 2012/2013, we will reduce the “grace days” a student is allowed to miss class. We have been fairly generous in the participation points a student earns by attending class allowing several drops in this category but it may have caused attendance to be lower as students are not motivated to attend class if they have “grace days”. Budgeting and relevant variable analysis continue to be a difficult topics for the students. We will revamp these chapters to try and narrow the focus without losing the learning objectives. It is possible our approach to these topics is too broad; therefore, not allowing us to delve deeply enough into just a few examples of these topics.

Established in Cycle: 2011-2012
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Comprehend the usefulness of accounting information (ACCT 2101 and 2102) | Outcome/Objective: Principles of Accounting (ACCT 2101 and 2102)

Projected Completion Date: 08/2012
Responsible Person/Group: Clark

Shift lease chapter to ACCT 4112
Shift lease chapter to ACCT 4112 so that the pensions chapter can be covered in ACCT 4113.

Streamline students’ study
Streamline students' study of internal control to enable them to grasp the essential concepts of internal control more quickly.

Video Tutorials
We will start preparing video tutorials that focus on the more procedural components of the course so that we can spend more time in class on developing problem formulation and critical thinking skills.

Video Tutorials
We will start preparing video tutorials that focus on the more procedural components of the course so that we can spend more time in class on developing problem formulation and critical thinking skills.
Mission / Purpose
Develop in graduates a high level of confidence in conducting research and in teaching business disciplines by requiring (1) training in theory, (2) training in general research techniques as well as research techniques specific to a discipline, (3) research experience with faculty members on contemporary research problems and issues, and (4) training on teaching methodology reinforced with active classroom teaching experience.

Goals
G 1: Discipline knowledge - evaluate research
Students should be able to critically evaluate and discuss theoretical developments and the results of original research.

G 2: Discipline knowledge - conduct research
Students should be able to conduct and present original research in collaboration with faculty.

G 3: Research competence
Students should be able to conduct original research individually.

G 4: Placement
Most graduates will accept positions at institutions where the research skills learned in the program will be used and developed further.

G 5: Teaching competency
Develop a high level of competence in conducting university level teaching.

Student Learning Outcomes/Objectives

SLO 1: Comprehensive exams (G: 1) (M: 1)
Successful completion of comprehensive examinations as judged by a committee of appropriate faculty members.

SLO 2: Critical evaluation of research (G: 1) (M: 2)
Demonstrate the ability to critically evaluate research by providing comments to presenters at internal workshops.

SLO 3: Collaborative research activity (G: 2) (M: 3)
Students will conduct research with faculty in order to develop their research skills and experience with the publication process.

SLO 4: Research presentations (G: 2) (M: 4)
Students will present their research at internal workshops and professional meetings.

SLO 5: Dissertation defense (G: 3) (M: 5)
Successful defense of the dissertation conducted before a faculty committee.

SLO 6: Initial placements - research (G: 4) (M: 6)
Students will accept positions at research institutions, preferably at schools offering doctoral degrees in accounting.

SLO 7: Teaching - training (G: 5) (M: 7)
Successful completion of 9200, Seminar in University Teaching.

SLO 8: Teaching - competency (G: 5) (M: 8)
Students will develop their teaching competency by teaching and obtaining feedback via SEIPs.

SLO 9: Placement - teaching (G: 5) (M: 9)
Students will place in institutions where the teaching skills learned in the program will be used and developed further.

</tbody>
</table>
Of the five students who graduated in the past six years, three (60%) have placed at research-focused universities. This exceeds our target of 50%.

**M 7: Teaching - training (O: 7)**
Successful completion of 9200, Seminar in University Teaching.
Source of Evidence: Academic direct measure of learning - other

**Target for O7: Teaching - training**
100% of students will complete the seminar on teaching (9200) in their first year of the program.

**Findings 2011-2012 - Target: Met**
All students who have entered the program in the past five years have completed the seminar in their first semester, before teaching for the first time in the summer.

**M 8: Teaching - competency (O: 8)**
Students will develop their teaching competency by teaching and obtaining feedback via SEIPs.
Source of Evidence: Student course evaluations on learning gains made

**Target for O8: Teaching - competency**
All students will teach during their programs. 50% will teach an upper division course before graduating. All students will achieve a minimum average overall effectiveness rating of 4.0 in semesters beyond the first one that they teach. 60% of students will achieve overall effectiveness ratings of at least 4.2 before graduating.

**Findings 2011-2012 - Target: Met**
All students currently in the program have taught in their first summer, and after passing their comprehensive exams. All graduates in the past six years have taught an upper-level course, which is greater than our 50% goal. Of the six students currently in the program who have taught beyond their first course, all have attained a score of 4.2 in at least one section. Five of the six do so consistently. Although these data show that we meet our goal this year, we are still pursuing our action plan for improving teaching effectiveness.

**M 9: Placement - teaching (O: 9)**
Students will place in institutions where the teaching skills learned in the program will be used and developed further.
Source of Evidence: Job placement data, esp. for career/tech areas

**Target for O9: Placement - teaching**
80% of graduates will place at institutions with AACSB accreditation.

**Findings 2011-2012 - Target: Met**
Of the five students who graduated in the past six years, 100% have placed at an AACSB accredited university.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Improve Teaching Effectiveness**
International students tend to have the most challenge with SEIPs. All students, especially international students, are encouraged to observe the teaching of our most effective faculty and PhD students before they teach their first course. SEIPs are reviewed for each student. Any student who continually achieves ratings below 4.0 is required (rather than encouraged) to observe other faculty in the classroom as well as receive feedback from a faculty mentor. Students with average SEIPs below 4.2 are encouraged to observe other faculty and receive feedback from a faculty mentor.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** In-Progress
- **Priority:** High
- **Implementation Description:** Beginning of the Fall 2010 semester
- **Projected Completion Date:** 07/2012
- **Responsible Person/Group:** SOA Doctoral Program Committee

**Improve initial pass rate on comprehensive exams**
The initial pass rate is slightly lower than our target rate of 70%. However, our pass rate on the second attempt is above our target rate. The net effect is an overall pass rate consistent with our expectations given our desire to place students at research institutions. Therefore, we are not concerned about the overall pass rate. To improve the initial pass rate, we have restructured our assistantship funding effective in 2011-2012 such that students will not be required to teach during the summer session while studying for their comprehensive exam. This should allow them more time to prepare for the exam.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** Medium

**Improve research collaborations**
Although we are meeting our target of 50% published/submitted papers by graduation, we are below our target in terms of stimulating collaborative research.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** Medium
Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

We did not place any graduates in this cycle. The major achievements related to goals from last cycle was to improve the teaching evaluations for existing students. We also worked on improving the research focus of the students by improving the rigor required for the 2nd year paper and, by providing funding for the second summer, providing more time for students to work on a quality research project.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Students are more active in the research workshops. We have initiated a requirement for students to sit in the front row and instructed presenters to call on students first. This has put pressure on students (in a good way) to be more active in the workshops. As such, they are developing their critical analyses abilities.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

We still struggle with how to get joint research projects going with students. We need additional faculty resources in order to be able to work more with students. As it stands now, the students need to be proactive in generating research ideas. Whereas this works well for the more confident students, other students could benefit from more faculty time.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

The major changes have been to try to develop closer faculty/student relations. We have also worked on encouraging students to mentor each other. This has resulted in improved teaching evaluations and more active research workshops.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We have not changed our learning outcomes, measures or targets since the last report.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The assessment data has highlighted two shortcomings in our program: 1. The need for students to have a larger research portfolio upon graduation. The process has stimulated us to institute a formal annual meeting with each student to review their work, a monitoring system to encourage workshop participation, a formal second year summer paper, and to restructure our teaching/research stipend system in order to allow the students more time to conduct research. 2. The need for some students to improve their teaching abilities. The process has stimulated us to monitor the students and to take steps (such as mentoring) to help them improve their teaching skills.

ADMINISTRATIVE DEPT QUESTION 1: Explain how your department used the results from the previous cycle’s (2010-2011) assessment. What actions did you take this past year based on the results from the previous cycle? What changes did you make as a result?

Based on last year’s results, we moved the comprehensive exam date forward in order to allow students more time to work on their second year summer papers. That is, we continued to look for impediments to student research productivity and found that they were focused on the known task of comp preparation to the detriment of the more ill-defined task of research. We also began fully funding students via research stipends in year 2 and through the first semester of their 3rd year in order to free up research time.

ADMINISTRATIVE DEPT QUESTION 2: What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department’s effectiveness?

The findings reveal that we need more faculty depth to fully mentor the PhD students. There needs to be a decent sized student body for the students to be energized but the trade-off is the need for more faculty resources.

ADMINISTRATIVE DEPARTMENT QUESTION 3: How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

We are going to evaluate how many students to admit for 2013-2014. We are also trying to recruit more senior faculty members.

Annual Report Section Responses

Most Important Accomplishments for Year—Briefly describe the major things you accomplished over the past year. Be sure to note previous Action Plans that were executed this year, plus any accomplishments that are not otherwise mentioned in your outcomes reporting.

Improving student comps pass rate; improving student teaching evaluations. Recruiting three students with GMAT scores above 700 - this should provide us with a nice incoming class.

Challenges for Next Year—Briefly describe any special challenges (related to budget, personnel, increased standards, new projects, new expectations, etc.) that you will be facing during the next reporting cycle that might affect your department’s outcomes.

Challenges for next year are related to faculty hiring. If we can hire more senior faculty to mentor the students, research productivity and student placements should improve.
Modifications in Intended Outcomes—If you modified any of your intended outcomes since the previous reporting cycle, please note those here.

not applicable

Modifications in Measurement Methods—If you modified any of the measures or methods you use in the measurement process, please note those here.

n/a

University-wide Committee Participation—Use this space to document any staff participation on University-wide committees (e.g., University Senate).

Assessment Data by Section
2011-2012 Actuarial Science BBA
As of: 12/12/2016 04:40 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

**Mission / Purpose**

BBA-AS PROGRAM MISSION: The BBA in Actuarial Science is designed to prepare students to: (1) Have a broader foundation of business courses and quantitative analytical training; (2) Have introductory-level knowledge on actuarial valuation of insurance liabilities and financial valuation of assets, integrating the actuarial contingencies and the time value of money; and (3) Pass the first two professional exams offered by the Society of Actuaries/Casualty Actuarial Society.

RMI DEPARTMENT MISSION: To enhance social well being by developing knowledge and providing education in risk and its management.

RMI DEPARTMENT VISION: To be the world’s leader in risk management scholarship and education. Through the collaboration of experts in multiple disciplines, we will be recognized internationally as leaders in: a) the development of integrated applications of economics, law, mathematics, and probability theory to the quantitative and qualitative measurement of risks; b) the selection and design of individual, organizational, and societal strategies for the efficient management of risk; and c) the dissemination of this knowledge.

**Goals**

G 1: Broader foundation and quant. analysis skills
Upon completion of the BBA-AS program, students will have a broader foundation of business courses and quantitative analytical training.

G 2: Introductory-level actuarial science knowledge
Upon completion of the BBA-AS program, students will have introductory-level knowledge on actuarial valuation of insurance liabilities and financial valuation of assets, integrating the actuarial contingencies and the time value of money.

G 3: Pass the first two SOA/CAS professional exams
Upon completion of the BBA-AS program, students will pass the first two professional exams offered by the Society of Actuaries/Casualty Actuarial Society.

**Student Learning Outcomes/Objectives**

SLO 1: Structure and solve problems (G: 1, 2, 3) (M: 1, 2)
BBA-AS graduates will be able to structure and solve actuarial and related business problems with sound analytical techniques.

SLO 2: Comprehension of theoretical & technical materials (G: 1, 2, 3) (M: 1, 2)
BBA-AS graduates will be able to comprehend the theoretical and technical material in appropriate actuarial journals.

SLO 3: Mastery of life contingencies (G: 1, 2, 3) (M: 1, 2, 3)
BBA-AS graduates will demonstrate the technical mastery of life contingencies and risk theory. The student will also demonstrate a mastery of actuarial modeling techniques.

SLO 4: Completion of first two actuarial exams (G: 1, 2, 3) (M: 4)
To be recognized as a professional actuary, a person must become a member of the Society of Actuaries or the Casualty Actuarial Society by passing a series of examinations. By graduation, our BBA-AS students will have passed the first two professional exams: Exam P – Probability and Exam FM – Financial Economics.

**Measures, Targets, and Findings**

M 1: Selected and Identified Quiz Questions in AS 4340 (O: 1, 2, 3)
Each student will demonstrate through performance on selected and identified quiz questions in AS 4340 Life Contingencies an understanding of the concepts of insurance liabilities, including "interest discounting" and "survival discounting" of actuarial valuation.

Source of Evidence: Academic direct measure of learning - other

Target for O1: Structure and solve problems
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE ONE RUBRIC to a random selection of students during each 4-year evaluation period.

**Target for O2: Comprehension of theoretical & technical materials**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE ONE RUBRIC to a random selection of students during each 4-year evaluation period.

**Target for O3: Mastery of life contingencies**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE ONE RUBRIC to a random selection of students during each 4-year evaluation period.

**M 2: Selected Projects in RMI 3750 (O: 1, 2, 3)**
Each student will demonstrate through performance on selected projects in RMI 3750 Probability Theory and Simulation Analysis in Risk Management an understanding of the sources of uncertainty in a business application.

Source of Evidence: Project, either individual or group

**Target for O1: Structure and solve problems**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE TWO RUBRIC to a random selection of students during each 4-year evaluation period.

**Target for O2: Comprehension of theoretical & technical materials**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE TWO RUBRIC to a random selection of students during each 4-year evaluation period.

**Target for O3: Mastery of life contingencies**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE TWO RUBRIC to a random selection of students during each 4-year evaluation period.

**M 3: Identified Exam Questions in AS 4230 (O: 3)**
Each student will demonstrate through performance on identified exam questions in AS 4230 Theory of Interest and understanding of the basic concept of compound theory of interest and the term structure of interest rates.

Source of Evidence: Performance (recital, exhibit, science project)

**Target for O3: Mastery of life contingencies**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE THREE RUBRIC to a random selection of students during each 4-year evaluation period.

**M 4: Completion of first 2 professional actuarial exams (O: 4)**
BBA-AS graduates will have passed the first two professional exams offered by the Society of Actuaries and the Casualty Actuarial Society: Exam P – Probability and Exam FM – Financial Economics.

Source of Evidence: Certification or licensure exam, national or state

**Target for O4: Completion of first two actuarial exams**
70% of our BBA-AS graduates will have taken and passed both Exam P – Probability and Exam FM – Financial Economics by the time they finish the program.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Course revision to improve instruction across relevant items**
The course will be revised to improve instruction on random variable distributions, recursion formulas and interest conversion formulas.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Selected and Identified Quiz Questions in AS 4340 | Outcome/Objective: Comprehension of theoretical & technical materials
  | Mastery of life contingencies | Structure and solve problems

Projected Completion Date: 12/2010
Responsible Person/Group: Eric Ulm

Georgia State University
Assessment Data by Section
2011-2012 Actuarial Science MAS
As of: 12/12/2016 04:40 PM EST
Mission / Purpose

MAS PROGRAM MISSION: The MS in Actuarial Science is designed to prepare students to: (1) Undertake actuarial valuation of liabilities and financial risk modeling of assets for insurance companies, financial institutions and consulting firms; (2) Develop integrated thinking and communication skills; and (3) Pass the early professional actuarial exams offered by the Society of Actuaries and the Casualty Actuarial Society.

RMI DEPARTMENT MISSION: To enhance social well being by developing knowledge and providing education in risk and its management.

RMI DEPARTMENT VISION: To be the world’s leader in risk management scholarship and education. Through the collaboration of experts in multiple disciplines, we will be recognized internationally as leaders in: a) the development of integrated applications of economics, law, mathematics, and probability theory to the quantitative and qualitative measurement of risks; b) the selection and design of individual, organizational, and societal strategies for the efficient management of risk; and c) the dissemination of this knowledge.

Goals

G 1: Actuarial valuation and risk modeling
Upon completion of the MAS program, students will be prepared to undertake actuarial valuation of liabilities and financial risk modeling of assets for insurance companies, financial institutions and consulting firms.

G 2: Integrated thinking and communication skills
Upon completion of the MAS program, students will be prepared to develop integrated thinking and communication skills.

G 3: Pass the first two SOA/CAS professional exams
Upon completion of the MAS program, students will be prepared to pass the early professional actuarial exams offered by the Society of Actuaries and the Casualty Actuarial Society.

Student Learning Outcomes/Objectives

SLO 1: Explanation of technical concepts (G: 1, 2, 3) (M: 3)
The MAS graduate will be able to explain technical concepts to non-actuarial associates or clients.

Other Outcomes/Objectives

O/O 2: Concepts of Investment Risk Evaluation (G: 1, 2, 3) (M: 1, 2)
The MAS graduate will have the basic conceptual knowledge and technical skill in evaluating major types of risks for a typical insurance company’s investment portfolio.

O/O 3: Concepts of Liability Risk Evaluation (G: 1, 2, 3) (M: 1, 2, 3)
The MAS graduate will have the basic conceptual knowledge and technical skills in evaluating major types of risks for a typical insurance company’s liability portfolio.

O/O 4: Enterprise Risk and Integration (G: 1, 2, 3) (M: 3)
The MAS graduate will have an appreciation of broader enterprise-wide risks and their integrations in insurance companies.

Measures, Targets, and Findings

M 1: Case studies from current events (AS 8810) (O: 2, 3)
Each student will demonstrate through performance on case studies from current events in the AS 8810 Graduate Seminar an understanding of the following: (1) Concepts and tools in calculating market risks (stocks, real estate); (2) Concepts and tools in calculating credit risks (bond yield spreads, Credit Default Swaps, rating transition matrix); (3) Basic shapes of the yield curve and interest rate risk measures (duration and convexity); and (4) Standard products offered by life insurance companies and property-casualty companies.

Source of Evidence: Performance (recital, exhibit, science project)

Target for O2: Concepts of Investment Risk Evaluation
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE ONE RUBRIC to a random selection of student performances on case studies from current events in AS 8810 Graduate Seminar during each 4-year evaluation period.

Target for O3: Concepts of Liability Risk Evaluation
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE ONE RUBRIC to a random selection of student performances on case studies from current events in AS 8810 Graduate Seminar during each 4-year evaluation period.

M 2: Case examples using real company balance sheets (O: 2, 3)
Each student will demonstrate through performance on a project and case studies in the AS 8810 Graduate Seminar an understanding of the following: (1) Concepts and tools in calculating market risks (stocks, real estate); (2) Concepts and tools in calculating credit risks (bond yield spreads, Credit Default Swaps, rating transition matrix); (3) Basic shapes of the yield curve and...
interest rate risk measures (duration and convexity); (4) Standard products offered by life insurance companies and property-casualty companies; and (5) Concepts and tools in calculating property-casualty loss reserves.

Source of Evidence: Project, either individual or group

**Target for O2: Concepts of Investment Risk Evaluation**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE TWO RUBRIC to a random selection of student performances on case examples using real company balance sheets in AS 8810 Graduate Seminar during each 4-year evaluation period.

**Target for O3: Concepts of Liability Risk Evaluation**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE TWO RUBRIC to a random selection of student performances on case examples using real company balance sheets in AS 8810 Graduate Seminar during each 4-year evaluation period.

**M 3: Performance on project (AS 8810 Graduate Seminar) (O: 1, 3, 4)**
Each student will demonstrate through performance on a project in the AS 8810 Graduate Seminar an understanding of the following: (1) Standard products offered by life insurance companies and property-casualty companies; (2) The regulatory environment, the role of rating agencies and investors; and (3) Different accounting (financial reporting) requirements (statutory, GAAP and fair value). Further, graduates will have the ability to explain technical concepts to non-actuarial associates or clients.

Source of Evidence: Project, either individual or group

**Target for O1: Explanation of technical concepts**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE THREE RUBRIC to a random selection of student performances on a project in AS 8810 Graduate Seminar during each 4-year evaluation period.

**Target for O3: Concepts of Liability Risk Evaluation**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE THREE RUBRIC to a random selection of student performances on a project in AS 8810 Graduate Seminar during each 4-year evaluation period.

**Target for O4: Enterprise Risk and Integration**
A 2.0 average on all criteria, with no more than 20% of any criteria falling in category. Measurement will be done by applying the MEASURE THREE RUBRIC to a random selection of student performances on a project in AS 8810 Graduate Seminar during each 4-year evaluation period.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Continue retention of exams/projects**
Continue retention analysis of applicable selected student work until targeted 4-year database is achieved. Maintain rolling 4-year database thereafter.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**
- **Measure:** Case examples using real company balance sheets
- **Outcome/Objective:** Concepts of Investment Risk Evaluation
- **Measure:** Case studies from current events (AS 8810)
- **Outcome/Objective:** Concepts of Investment Risk Evaluation
- **Measure:** Performance on project (AS 8810 Graduate Seminar)
- **Outcome/Objective:** Concepts of Liability Risk Evaluation
- **Enterprise Risk and Integration | Explanation of technical concepts**

- **Projected Completion Date:** 08/2012
- **Responsible Person/Group:** Shaun Wang and MAS Assessment Group
- **Additional Resources:** None
- **Budget Amount Requested:** $0.00 (no request)

**Develop new coursework on in-depth analysis of accounting practices, conventions, and their implications**
Develop a student team project to discuss, in which the various teams will have to perform an in-depth analysis of various accounting practices, conventions, and their implications.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** Medium
- **Projected Completion Date:** 08/2011
- **Responsible Person/Group:** Shaun Wang

**Improve instruction using integrated insurance company data**
Improve instruction using integrated insurance company data with an asset portfolio and liability portfolio.

- **Established in Cycle:** 2009-2010

- **Priority:** Medium
- **Projected Completion Date:** 08/2011
- **Responsible Person/Group:** Shaun Wang
Georgia State University
Assessment Data by Section

2011-2012 African American Studies Assessment of Core
As of: 12/12/2016 04:40 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The mission of the Department of African American Studies (DAAS) at Georgia State University is the advancement of knowledge of people of African descent and their empowerment within the local, national, and international arena. As an interdisciplinary field of concentration, the department offers an interdisciplinary approach to the study of African people nationally and globally. The department's guiding philosophy is African-centered in that we believe that an understanding of the specific cultural and historical experiences of a people must guide and inform any productive analysis and interpretation of that people's past and present, and must guide any viable directives that are offered for their future.

Goals
G 1: To develop Critical Thinking
At the bachelors-level, African American Studies contributes to the university's broader mission of encouraging critical thinking by understanding and communicating how the experience and trajectory of African-descended people is influenced by historical, cultural, geographical, and political factors. In so doing, we prepare our students to identify forms and mechanisms of oppression and apply strategies of advocacy and social change that advance social and economic justice.

Student Learning Outcomes/Objectives
SLO 2: Communication (G: 1) (M: 1)
Students will be able to communicate effectively in writing.

Other Outcomes/Objectives
O/O 1: Analytic (G: 1) (M: 1)
Students will be able to make connections between the African American experience and larger events in the community and world.

Measures, Targets, and Findings
M 1: Service Learning Papers (O: 1, 2)
Students engaged in community service activity and wrote reflection papers based on their experience. The reflection paper assesses student learning based on their ability to analyze and communicate core course concepts. The analytic rubric is a five-item scale where a rating of 5 indicates that the paper reflects a careful reading and understanding of the material. Additionally, the paper focuses on a careful critique of the material, as opposed to a restatement of what the author has stated; 4= Same as 5 above, but paper lacks a careful critique of the material; 3= Same as 4 above, but paper overgeneralizes and / or does not use material from the reading to support conclusions; 2= Paper simply restates what the author has said, but ignores careful critique of the material; and 1= Paper relies primarily on rhetoric (personal expression) and generalized arguments.

Reference cited page is included if sources other than those assigned are used; 4) Same as 5 above with some minor (2 – 4) punctuation, grammatical or syntax mistakes; 3) Same as 4 above with no more than 6 punctuation, grammatical or syntax mistakes; 2) Paper has some lack of clarity as well as several punctuation, grammatical or syntax mistakes; and 1) Paper is confusing or unclear in structure and includes several punctuation, grammar and syntax mistakes. Reference cited page is not included when sources other than those assigned were used.

Source of Evidence: Academic indirect indicator of learning - other

Target for O1: Analytic
Target: 80% of the students will receive a rating of 3 or above.

Findings 2011-2012 - Target: Met
Exceeded goal. 90% of the students were able to comprehend and effectively communicate the desired content in using the appropriate context, grammar, and syntax.
Target for O2: Communication
Target: 80% of the students will receive a score of 3 or higher.

Findings 2011-2012 - Target: Met
Exceeded. 90% of the students were able to comprehend and effectively communicate the desired content in using the appropriate context, grammar, and syntax.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

2010 Action Plan
No action planned required as benchmarks were exceeded or nearly met.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

No action
No action will be taken since the target was nearly met and the findings could be a sampling error.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Service Learning Papers
Outcome/Objective: Communication

Implementation Description: N/A
Responsible Person/Group: N/A

Monitor current outcomes for trends
The instructor will monitor the current outcomes to assess if there are trends based on student demographics (e.g. major, minor, gender, age, etc).

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Low

Implementation Description: Enrollment data will be exported from class into SPSS for descriptive analysis.
Projected Completion Date: 12/2012
Responsible Person/Group: Instructor
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
No changes were made in the assessment process.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.
The data from the assessment suggest that students are demonstrating mastery of both analytic and communication skills in the core curriculum. As a result, no changes or improvements are deemed necessary.

Georgia State University
Assessment Data by Section
2011-2012 African American Studies BA
As of: 12/12/2016 04:40 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The Department of African-American Studies at Georgia State University (GSU) is committed to both the advancement of knowledge of people of African descent and to their empowerment within the local, national and international arena. As an interdisciplinary field of concentration, the GSU African-American Studies Department offers an interdisciplinary approach to the study of African people nationally and globally. The GSU African-American Studies Department provides critiques of knowledge presented within traditional disciplines and professions; scholarly and artistic accounts of the realities of lives of African people; and perspective on social change to empower black people.
### Goals

**G 1: Demonstrate logical reasoning**  
To be able to develop a thesis argument based on a logical set of interrelated concepts.

### Student Learning Outcomes/Objectives

**SLO 1: Demonstrate logical reasoning (M: 1)**  
To be able to develop an argument based on a logical set of interrelated concepts

**SLO 2: Demonstrate communication skills through writing (G: 1) (M: 1)**  
To be able to communicate ideas effectively through clearly written, well organized, and appropriately formatted scholarship

**SLO 3: Demonstrate knowledge of field (G: 1) (M: 1)**  
Demonstrate the ability acquire new knowledge and add to the body of knowledge in the field of African American Studies

### Measures, Targets, and Findings

**M 1: Written Assignment (O: 1, 2, 3)**

The final papers in two courses are used to assess these outcomes: AAS 3975 and 4980. Each course assignment requires students to integrate, synthesize, and interpret concepts relevant to theory and research. The assessment for each of the three areas is as follows:

**Acquisition of Knowledge.**  
5. Paper articulates key concepts and theoretical stance that informs the research. Paper reflects a careful reading and understanding of social science and humanities research. Paper includes a strong critique of ideas and theories and their application to social, cultural, political and economic lives of African American people. Paper reflects an understanding and application of interdisciplinary scholarship;  
4) As 5 above but paper lacks a critique of ideas and theories and application to social, cultural, political, and economic lives of African American people;  
3) As 4 above but paper over generalizes and / or fails to organize data to support conclusions;  
2) Paper reflects collection of data, but ignores critique and / or fails to organize interdisciplinary scholarship; and 1) Paper relies primarily on rhetoric and generalized arguments. Communications Skills.  
5. Paper is clearly written with appropriate punctuation, grammar and syntax. Paper is free of and uses appropriate (APA) writing style required for course. Citations are appropriately included to leave no room for charges of plagiarism. References are included appropriately according to required style;  
4) As 5 above with some minor (2 – 4) punctuation, grammatical or syntax mistakes  
3) As 4 above with no more than 6 punctuation, grammatical or syntax mistakes;  
2) Paper has some lack of clarity as well as several punctuation, grammatical or syntax mistakes and does not properly make citations or references;  
1) Paper is confusing or unclear in structure and includes several punctuation, grammar and syntax mistakes. Paper does not use appropriate writing style and / or does not include citations or references.  

**Analytical Skill:**  
5) Paper reflects skillful collection of data required for research. The paper reflects a careful reading and understanding of social and humanities research. Paper includes a strong critique of ideas and theories and their application to social, cultural, political and economic lives of African American people. Paper reflects an understanding and application of interdisciplinary scholarship;  
4) As 5 above but paper lacks a critique of ideas and theories and application to social, cultural, political, and economic lives of African American people;  
3) As 4 above but paper over generalizes and / or fails to organize data to support conclusions;  
2) Paper reflects collection of data, but ignores critique and / or fails to organize interdisciplinary scholarship; and 1) Paper relies primarily on rhetoric and generalized arguments. Communications Skills.  
5. Paper is clearly written with appropriate punctuation, grammar and syntax. Paper is free of and uses appropriate (APA) writing style required for course. Citations are appropriately included to leave no room for charges of plagiarism. References are included appropriately according to required style;  
4) As 5 above with some minor (2 – 4) punctuation, grammatical or syntax mistakes  
3) As 4 above with no more than 6 punctuation, grammatical or syntax mistakes;  
2) Paper has some lack of clarity as well as several punctuation, grammatical or syntax mistakes and does not properly make citations or references;  
1) Paper is confusing or unclear in structure and includes several punctuation, grammar and syntax mistakes. Paper does not use appropriate writing style and / or does not include citations or references.  

**Acquisition of Knowledge.**  
5. Paper articulates key concepts and theoretical stance that informs the research. Paper includes a clearly stated hypothesis. Paper reflects use of multiple levels of data acquisition (primary, secondary, etc.). Paper demonstrates an understanding of relationship between the lived experiences of African Americans and the Global African community. Paper applies an application of data to understanding the impact of societal, economic and political factors on the life chances of people of African descent;  
4) As 5 above, but the paper does not include a clearly stated hypothesis;  
3). As 4 above but the paper does not reflect us of multiple levels of data acquisition;  
2) Paper is overly focused on personal opinion and generalizations. No data is included to support thesis and / or no application is made to the lived experiences of people of African descent;  
1) Paper has no clear hypothesis and no clear articulation of conceptual / theoretical stance informing research. Data is not applied appropriately to the lived experience of people of African descent.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Demonstrate logical reasoning**  
80% of the students will receive a rating of 3 or higher.

**Findings 2011-2012 - Target: Met**  
AAS 3975: Met. 90% of the students demonstrated their ability to write a reflective critique of an economic, social, and or political issue affecting people of African descent. While the goal was met 50% of those students performed at the lower boundary of the goal. AAS 4980: Met. Of the students who selected the research proposal option, 100% of them scored 3 or better on their ability to analyze socio economic issues affecting the Africana community, communicate effectively, and acquire and apply new concepts. Action taken: Continue to triage students among academic and applied and research projects to allow students to engage in more relevant learning experiences.

**Target for O2: Demonstrate communication skills through writing**  
80% of the students will receive a score of 3 or higher on communication.

**Findings 2011-2012 - Target: Met**  
AAS 3975: Met. 100% of the students demonstrated their ability to write clearly and use appropriate grammar and syntax. Again, while the goal was accomplished, 50% of those students performed at the lower most boundary for the goal. AAS 4980: Met. Of the students who selected the research proposal option, 100% of them scored 3 or better on their ability to analyze socio economic issues affecting the Africana community, communicate effectively, and acquire and apply new concepts. Action taken: Continue to triage students among academic and applied and research projects to allow students to engage in more relevant learning experiences.

**Target for O3: Demonstrate knowledge of field**  
80% of the students will receive a score of 3 or higher on acquisition of knowledge.

**Findings 2011-2012 - Target: Met**  
AAS 3975: Met. 100% of the students demonstrated their ability to acquire and apply new concepts, however 62% of those
students performed at the lower most boundary for the goal. AAS 4980: Met. Of the students who selected the research option, 100% of them scored 3 or better on their ability to analyze socio economic issues affecting the Africana community, communicate effectively, and acquire and apply new concepts. Action taken: Continue to triage students among academic and applied and research projects to allow students to engage in more relevant learning experiences.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Acquisition of knowledge
This outcome is being met with graduating seniors (AAS 4980) but not students still matriculating at the junior level and below. Consider compartmentalizing the process of synthesizing information to create more manageable and sequential steps for students to follow.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** Medium
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Written Assignment | Outcome/Objective: Demonstrate knowledge of field
- **Implementation Description:** May 2010
- **Projected Completion Date:** 04/2010
- **Responsible Person/Group:** Curriculum committee
- **Additional Resources:** Unsure

#### Analytic
Overall, in analytic reasoning students are performing well with 88% and 75% meeting the achievement goal. Consider additional exercises to improve student performance in AAS 3975.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** Low
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Written Assignment | Outcome/Objective: Demonstrate logical reasoning
- **Implementation Description:** May 2010
- **Projected Completion Date:** 07/2010
- **Responsible Person/Group:** Curriculum committee

#### Communication skills
This outcome is not being met well with lowest performance rate at 66% and 37% for both courses. Consider consulting with the English department to obtain recommendations on how best to improve student writing and grammar.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Written Assignment | Outcome/Objective: Demonstrate communication skills through writing
- **Implementation Description:** May 2010
- **Projected Completion Date:** 05/2010
- **Responsible Person/Group:** Curriculum committee
- **Additional Resources:** Unsure

#### Action
The assignment will incorporate a purpose or relevance statement which is designed to help students apply the findings of their research to a larger body of work in the field.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Written Assignment | Outcome/Objective: Demonstrate knowledge of field
- **Implementation Description:** The statement will be incorporated in the course syllabus
- **Responsible Person/Group:** The instructor assigned to the course.
- **Additional Resources:** None
- **Budget Amount Requested:** $0.00 (no request)

#### Monitor trends
The instructor will monitor the current outcomes to assess if there are trends based on student demographics (e.g. major, minor, gender, age, etc).

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** Low
- **Implementation Description:** Download class enrollment data into SPSS for descriptive analysis.
- **Projected Completion Date:** 12/2012
- **Responsible Person/Group:** Instructor
- **Additional Resources:** None
- **Budget Amount Requested:** $0.00 (no request)

---

**Re-write**
Students who score 3 or lower on the pre-midterm assignments will be given the option of re-writing the assignment under the supervision of the writing lab or a WA consultant if applicable.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Written Assignment | Outcome/Objective: Demonstrate knowledge of field

Implementation Description: Faculty will work with the GRA or WAC to develop an early identification system for students who struggle with analysis and synthesis of course content.
Projected Completion Date: 12/2013
Responsible Person/Group: Assigned faculty for the course
Additional Resources: Writing Across the Curriculum consultants
Budget Amount Requested: $2,600.00 (recurring)

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

No changes have been, or will be made, in the assessment process.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Based on the data from the assessment faculty teaching 3975 and 4980 will institute an earlier alert program. The early alert system will target students who score 3 or lower on the initial assignments for revision and resubmit. Students who score 3 or lower will be referred to the writing lab or the WAC consultant for corrective intervention.

Georgia State University
Assessment Data by Section
2011-2012 African American Studies MA
As of: 12/12/2016 04:40 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Goals

G 1: Theory and Application
At the master’s level, African American Studies contributes to the university’s broader mission of encouraging theoretical and applied inquiry by engaging in original research that examines ways in which ethnicity and racial identity affects historical, social, and cultural experiences of African-descended people. In so doing we prepare our students to engage in culturally relevant scholarship that improves the life circumstances of African-descended people.

Student Learning Outcomes/Objectives

SLO 2: Communication (G: 1) (M: 1)
Students will be able to articulate verbally and writing emergent areas of research in the field of African American studies.

Other Outcomes/Objectives

O/O 1: Analytic (G: 1) (M: 1)
Students will be able to systematically analyze and critique empirical research.

Measures, Targets, and Findings

M 1: Research Proposal (O: 1, 2)
AAS 6010 teaches first year graduate students how to critically analyze, synthesize, and deconstruct empirical literature to communicate orally and in writing the central tenets of a research problem/opportunity as it pertains to a social issue affecting the African American community. The primary assignment by which this outcome is assess is a research proposal. A panel of two external reviewers conduct a blind review of student's research proposal on its ability to convey merit of the proposal, significance, innovation, application of theory, methodology, and human subjects concerns. The assignment is designed to give students preliminary feedback on their research proposal prior to submitting the final paper. The external review panel consists of AAS faculty and external researchers. The reviewer's scores are aggregated to compose the students' grade for the assignment. Each mock review lasts between 15 to 20 minutes. This output is related to the following course objectives and student learning outcomes: CO1, CO2, CO4 and SLO2, SLO3, SLO5. Impact Score Descriptor Additional Guidance on Strengths/Weaknesses High 1 Exceptional (A+/100)
Exceptionally strong with essentially no weaknesses 2 Outstanding (A/ 95) Extremely strong with negligible weaknesses 3 Excellent (A-/ 90) Very strong with only some minor weaknesses Medium 4 Very Good (B+/ 89) Strong but with numerous minor weaknesses 5 Good (B/ 85) Strong but with at least one moderate weakness 6 Satisfactory (B- 80) Some strengths but also some moderate weaknesses Low 7 Fair (C+/ 79) Some strengths but with at least one major weakness 8 Marginal (C/ 75) A few strengths and numerous weaknesses 9 Poor (C- 70) Very few strengths and numerous major weaknesses

Source of Evidence: Presentation, either individual or group

Target for O1: Analytic

AAS 6010: 25% of the students will score at the 25th and 100th percentiles with the remaining 50% between the two.

Findings  2011-2012 - Target: Met

The Mock Research Proposal Presentation: This assignment is a mock review of the research proposal. It is designed to give students preliminary feedback on their proposal prior to submitting the final paper. Two external reviewers will be assigned to read each proposal and give feedback on the strengths and weaknesses of the proposal. The external review panel consists of AAS faculty and external researchers. The reviewer's scores are aggregated to compose the students’ grade for the assignment. Each mock review lasts between 15 to 20 minutes. The goal of this assignment is to give students constructive feedback on the primary components of the proposal and its merit in advancing the body of knowledge in AAS. This output is related to the following course objectives and student learning outcomes: CO1, CO2, CO4 and SLO2, SLO3, SLO5. Impact Score Descriptor Additional Guidance on Strengths/Weaknesses High 1 Exceptional (A+/100) Exceptionally strong with essentially no weaknesses 2 Outstanding (A/ 95) Extremely strong with negligible weaknesses 3 Excellent (A-/ 90) Very strong with only some minor weaknesses Medium 4 Very Good (B+/ 89) Strong but with numerous minor weaknesses 5 Good (B/ 85) Strong but with at least one moderate weakness 6 Satisfactory (B- 80) Some strengths but also some moderate weaknesses Low 7 Fair (C+/ 79) Some strengths but with at least one major weakness 8 Marginal (C/ 75) A few strengths and numerous weaknesses 9 Poor (C- 70) Very few strengths and numerous major weaknesses Communication: Goal: Met. Over 80% of the students scored 3 or better on the communication competencies (Introduction & Literature review). Analytic skills: Partially met: 77% of the students scored 3 or better on Analytic skills (Theory/Concepts); Knowledge acquisition: is composed of two elements (Significance & Methodology). 100% of the students scored 3 or better on explaining the benefits of the proposed research, however performed less well on explaining the data collection processes for their proposals (55%)

Target for O2: Communication

AAS 6010: 100% of the students will score above the 80th percentile on the communication portion of the research proposal.

Findings  2011-2012 - Target: Met

The Mock Research Proposal Presentation: This assignment is a mock review of the research proposal. It is designed to give students preliminary feedback on their proposal prior to submitting the final paper. Two external reviewers will be assigned to read each proposal and give feedback on the strengths and weaknesses of the proposal. The external review panel consists of AAS faculty and external researchers. The reviewer's scores are aggregated to compose the students’ grade for the assignment. Each mock review lasts between 15 to 20 minutes. The goal of this assignment is to give students constructive feedback on the primary components of the proposal and its merit in advancing the body of knowledge in AAS. This output is related to the following course objectives and student learning outcomes: CO1, CO2, CO4 and SLO2, SLO3, SLO5. Impact Score Descriptor Additional Guidance on Strengths/Weaknesses High 1 Exceptional (A+/100) Exceptionally strong with essentially no weaknesses 2 Outstanding (A/ 95) Extremely strong with negligible weaknesses 3 Excellent (A-/ 90) Very strong with only some minor weaknesses Medium 4 Very Good (B+/ 89) Strong but with numerous minor weaknesses 5 Good (B/ 85) Strong but with at least one moderate weakness 6 Satisfactory (B- 80) Some strengths but also some moderate weaknesses Low 7 Fair (C+/ 79) Some strengths but with at least one major weakness 8 Marginal (C/ 75) A few strengths and numerous weaknesses 9 Poor (C- 70) Very few strengths and numerous major weaknesses Communication: Goal: Met. Over 80% of the students scored 3 or better on the communication competencies (Introduction & Literature review). Analytic skills: Partially met: 77% of the students scored 3 or better on Analytic skills (Theory/Concepts); Knowledge acquisition: is composed of two elements (Significance & Methodology). 100% of the students scored 3 or better on explaining the benefits of the proposed research, however performed less well on explaining the data collection processes for their proposals (55%)

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Mock Review

The instructor will establish an external Mock Review process to determine student final research proposals scores increase

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Implementation Description: External reviewers will be enlisted to review and assess graduate research proposals. Results will be given in a Mock Review setting.
Projected Completion Date: 12/2012
Responsible Person/Group: Instructor
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Revised Thesis Checklist

Review committee to establish relevant competencies for multidisciplinary program.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High
Implementation Description: Committee to review and report to AAS faculty
Projected Completion Date: 05/2013
Responsible Person/Group: Review committee
Mission / Purpose
The Anthropology Department participates in the general education core curriculum by offering its signature course, Anth 1102: Introduction to Anthropology. The course elucidates the comparative study of humanity across time and space by offering (1) a holistic understanding of human diversity that requires the study of biological, archaeological, social/cultural, and linguistic anthropology; (2) a cross-cultural and comparative study of humanity; and (3) a consideration of human problems within historical, environmental, political-economic, and sociocultural contexts. Students are given an overview of anthropological research strategies, theories, and practices. Topical foci include human evolution, primate behavior, human variation, prehistory and complex societies, global-local articulations, ideology and power, migrants, immigrants, and refugees in the world system, urban processes and populations, identity politics in multicultural societies, and social reform. The course is an option to satisfy Area E of the core curriculum because contemporary and past cultures and societies, and their precursors, are covered in global and local contexts.

Goals
G 2: Application of anthropological perspectives on contemporary social phenomena
Students should understand the applicability and application of the holistic, biocultural anthropological approach to complex phenomena and contemporary issues among human societies, with particular attention to human diversity.

G 1: Biocultural evolution of humans
Students are expected to understand the linkages between human biology and culture in an evolutionary framework. This is a core element of the anthropological perspective on humanity and a main orientation of the Department of Anthropology at GSU.

Student Learning Outcomes/Objectives
SLO 1: Culture and its significance for humanity (G: 1, 2) (M: 1)
Students should understand the concept of culture in shaping human experience and the human condition. Culture is a universal characteristic of human groups, is inextricably linked to human biology and human adaptation, shapes environments and is dynamic and historical. Building on the conceptual foundations of anthropology and exploring examples of cultural manifestations in human groups across space and through time students should become able to distinguish and focus on the cultural bases of human behavior and experience. This objective is particularly significant for cross-cultural communication and competence, and is relevant to institutional goals regarding the global competency of students.

General Education/Core Curriculum Associations
6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

Institutional Priority Associations
2 Student promotion and progression

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Strategic Plan Associations
5.4 Enhance the global competency of students, faculty and staff.

SLO 2: Critique of the race concept (G: 1, 2) (M: 2)
Students should understand the multifaceted anthropological critique of the concept of race as used to explain human variation. Race is a major factor in a multitude of contemporary social problems. Through the application of the scientific method and both the natural and social history of humans and human variation, students should become competent in critiquing the race concept from a biological, historical and sociocultural perspective. This outcome is aligned with a number of institutional priorities including learning about the global and cultural reality of human variation, and positioning the self with respect to human cultural and biological diversity.

General Education/Core Curriculum Associations
6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Strategic Plan Associations
1.1 Increase the level of scholarship support for undergraduate students.
5.4 Enhance the global competency of students, faculty and staff.

Measures, Targets, and Findings
M 1: Writing on Cultural Diversity and Anthropology (O: 1)
Students write short answers to the following question: QUESTION: One of the goals of ethnography is the description and
Students write short answers to the following question.

QUESTION: One of the goals of ethnography is the description and explanation of cultural diversity. A key way this is accomplished is the discovery of local beliefs, practices, perceptions, and meanings, and the comparison of these to other local contexts or to the observations and conclusions reached by the researcher. Answers were evaluated on the following scale: 1 = Unsatisfactory (erroneous or highly problematic and incomplete answer) 2= Satisfactory (demonstrates sufficient understanding but is incomplete OR does not make sufficient use of examples) 3 = Superior (demonstrates clear understanding with good use of examples)

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O1: Culture and its significance for humanity**

- 80% of students should provide satisfactory answers, receiving a ranking of 2 or 3

**Findings 2011-2012 - Target: Met**

- 61% of students received a score of 3 - 30 % of students received a score of 2 - 9% of students received a score of 1

**M 2: Identifying Major Elements of the Anthropological Critique of Race (O: 2)**

Students respond to standardized examination questions on the anthropological critique of race, focusing on the non-biology of the concept and the relationship between race and ethnicity.

Source of Evidence: Standardized test of subject matter knowledge

**Target for O2: Critique of the race concept**

- 80% of the students are expected to correctly identify the non-biology of race, and demonstrate understanding of the race/ethnicity relationship

**Findings 2011-2012 - Target: Partially Met**

- 77% of students correctly identified the non-biology and culturally constructed nature of race - 90% of students correctly understood the problematic nature of the race/ethnicity relation

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Streamlining Instruction, Evaluation and Mentorship

- The faculty will move forward in developing and implementing streamlined rubrics on the critique of the race concept from a biological and cultural standpoint.
- The faculty will continue discussion on whether to implement a similar strategy for the teaching of biocultural evolution in humans.
- The faculty will monitor student performance.
- The faculty will mentor and encourage students to complete related assignments.

**Established in Cycle:** 2008-2009  
**Implementation Status:** Planned  
**Priority:** Medium

**Relationships (Measure | Outcome/Objective):**

Measure: Identifying Major Elements of the Anthropological Critique of Race | Outcome/Objective: Critique of the race concept

**Implementation Description:** We target the next assessment cycle  
**Projected Completion Date:** 09/2010

#### Integrating Instructional and Testing Tools

- The faculty will continue to develop an integrated approach to the teaching of the anthropological critique to race. This will include:  
  1. Further collaborating on instructional techniques and tools and assessments

**Established in Cycle:** 2009-2010  
**Implementation Status:** In-Progress  
**Priority:** Medium

**Relationships (Measure | Outcome/Objective):**

Measure: Identifying Major Elements of the Anthropological Critique of Race | Outcome/Objective: Critique of the race concept

**Streamlining assessment**

The faculty will continue to collaborate on developing instruction modules and assessment questions to track student learning on the concept of culture.

**Established in Cycle:** 2010-2011  
**Implementation Status:** Planned  
**Priority:** Low

**Relationships (Measure | Outcome/Objective):**

Measure: Writing on Cultural Diversity and Anthropology | Outcome/Objective: Culture and its significance for humanity

#### Instructional emphasis on cultural construction

While the target was barely missed on one question, the result indicates that both the critique of the race concept and the notion of cultural construction are both important and challenging, and should remain central foci of core instruction in anthropology. The faculty has discussed these results and jointly decided to emphasize this issue in the classroom.

**Established in Cycle:** 2011-2012  
**Implementation Status:** Planned  
**Priority:** Medium

**Relationships (Measure | Outcome/Objective):**

Measure: Identifying Major Elements of the Anthropological Critique of Race | Outcome/Objective: Critique of the race concept
Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

This year, both objective, standardized test questions as well as the more open-ended short-answer format were used in assessment. This was an experimental change to test different assessment techniques that allow students a greater degree of reflection and expression. The faculty is currently deliberating on the relative merits of each method. The faculty formally decided on the objectives for the coming cycle. We will maintain the focus on the anthropological critique of the race concept, and assess student learning on natural selection.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

These data demonstrated the continued importance of focusing on the anthropological critique on race. As a result, the faculty is formally collaborating on next year’s objectives and targets, streamlining instructional efforts on the chosen themes for each year.

Georgia State University
Assessment Data by Section
2011-2012 Anthropology BA
As of: 12/12/2016 04:40 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The Bachelor of Arts in Anthropology focuses the comparative and holistic study of humanity across space and time. Undergraduate education in the Department of Anthropology is committed to: 1. A holistic and comparative understanding of human diversity derived from the anthropological 4-field approach. Students are exposed to biological, linguistic, cultural and archaeological anthropology, their intersections, and their application. 2. A solid grounding in anthropological theory and methodology, including both quantitative and qualitative components. 3. The combination of academic rigor with global social awareness, and community engagement and praxis. The Department fosters politically responsible and ethically sound applications of empirical knowledge that will serve undergraduate in professional fields, spanning medicine, education, environment, forensics, cultural resource management, business and economics.

Goals
G 1: Holistic and Comparative Curriculum
Upon graduation, students will be grounded in four-field, holistic and comparative anthropology. This means that they will demonstrate an understanding of the interconnections between biology and culture among humans in the past and present, and distinguish the social and historical processes involved in the intersections of biology, society and culture in human diversity.

G 2: Command and application of content: concepts, methods and theory
Students will demonstrate command of key anthropological concepts, issues and perspectives, and apply critical anthropological theory as well as key research methods pertinent to the field.

G 3: Communication skills
Students will communicate effectively and as appropriate to the field in speech and writing.

Student Learning Outcomes/Objectives
SLO 1: Competence in Fundamental Anthropological Methods (G: 1, 2, 3) (M: 1, 2)
Students apply key concepts and methods relevant to each anthropological subfield by conducting specialized methodological exercises. Under the premise that learning is best achieved through application, students identify, utilize and/or critique fundamental anthropological concepts, theory and methodology in cultural, biological, and archaeological anthropology, through conducting original research and/or critically evaluating current, peer-reviewed research in the field.

Institutional Priority Associations
1 Student retention
2 Student promotion and progression
3 Timely graduation

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Strategic Plan Associations
1.5 Other efforts in support of Goal 1 (Undergraduate Education).
### SLO 2: Content knowledge (G: 1, 2, 3) (M: 1, 3, 4)

Students identify, apply and critique anthropological theory, methods and knowledge, appropriate to the subfield.

**General Education/Core Curriculum Associations**

<table>
<thead>
<tr>
<th>3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.</td>
</tr>
<tr>
<td>8.0 Students demonstrate understanding of political, social, economic, and/or institutional developments across the globe.</td>
</tr>
<tr>
<td>9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.</td>
</tr>
</tbody>
</table>

**Institutional Priority Associations**

- 2 Student promotion and progression
- 3 Timely graduation

**Standard Associations**

- 1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**

1.5 Other efforts in support of Goal 1 (Undergraduate Education).

**Measures, Targets, and Findings**

**M 1: Archaeological Methods - Garbology project (O: 1, 2, 3)**

Students apply fundamental archaeological concepts and methods by conducting a mini archaeological investigation of garbage. Students describe, classify and analyze material evidence, through which to reconstruct a profile of daily practice and its agents. Data collection and analysis culminates in a report in which students critically interpret the data to support or disprove their hypotheses. Evaluation is based on the quality of the content of the report (collection and analysis methods), the quality of the interpretation of findings (testing hypotheses through data), and the quality of writing in terms of organization and competent, academic English prose. See attached document for details.

**Source of Evidence:** Project, either individual or group

**Target for O1: Competence in Fundamental Anthropological Methods**

Scores under 30 are Unsatisfactory, 30-34 is fair, 35-36 is good, 37-38 is very good and 38+ is excellent. Target: - 0 students will receive a score under 30, demonstrating satisfactory ability to apply fundamental archaeological methods and create typologies of material types - Average student scores will be Good or above, demonstrating superior application of methods.

**Target for O2: Content knowledge**

- Scores under 30 are Unsatisfactory, 30-34 is fair, 35-36 is good, 37-38 is very good and 38+ is excellent. Target: - 0 students will receive a score under 30, demonstrating satisfactory ability to apply fundamental archaeological concepts and methods - 75% of students will receive scores of Good or above, demonstrating superior critical analysis and interpretation of material remains, to reconstruct lived experience

**Findings 2011-2012 - Target: Met**

- Fair: 1 student - Good: 4 students - Very good: 2 students - Excellent: 10 students

**Target for O3: Competence in oral and written communication**

Students communicate in clear, organized, grammatically correct prose

**Findings 2011-2012 - Target: Met**

All students were rated satisfactory, communicating their findings in clear prose, appropriate for the discipline of archaeology. 12 students (71%) were rated "excellent" demonstrating superior communication quality.

**M 2: Cultural Anthropology - Ethnographic Fieldwork Project (O: 1, 3)**

Students in ANTH 2020 - Introduction to Cultural Anthropology formulate and conduct a short ethnographic project, in which they a. Demonstrate understanding of a. the concept of culture, b. cultural relativism and c. anthropological ethics by applying them to a short examination of an aspect of urban life b. Identify, design and conduct ethnographic data collection c. Produce an ethnographic narrative. The work is holistically evaluated in terms of the following criteria. These axes are unequally weighted and are listed in order of decreasing significance. A. Topic: The student identifies an appropriate topic and formulates a research question, contextualizing it in the culture concept. B. Methodology: The student correctly utilizes ethnographic methods. C. Approach and Development: The student includes evidence through ethnographic detail and effectively addresses the initial topic or question. D. Writing: The student writes in correct English prose. The narrative is clear, organized and grammatically correct. See attached document for details.
### Target for O1: Competence in Fundamental Anthropological Methods

The maximum score for the assignment is 37.5 points, unequally weighted across the 4 axes. Criteria 1, 2, and 3 are most relevant for this objective. The achievement target for this exercise is that - 0 students will receive unsatisfactory scores (below 25) - The average scores will be between 32 and 37.5 reflecting Satisfactory or Superior performance.

#### Findings 2011-2012 - Target: Met

Out of 44 students: 26 students received 37+ points 1 student received 36.5 points 10 students received 36 points 4 students received 35 points 3 students received 34 points 1 student received 33 points 1 student received 31 points 1 student received 27 points. The two students that fell below the target turned in their papers late and thus incurred a penalty. The quality of the work was otherwise on target.

### Target for O3: Competence in oral and written communication

Satisfactory or superior writing is required for scores over 35. The achievement target for this exercise is that - 0 students will receive unsatisfactory scores (below 25) - The average scores will be between 30 and 37.5 - Most students will score over 35 points, reflecting superior ability to construct an ethnographic narrative in proper English prose.

#### Findings 2011-2012 - Target: Partially Met

- 41 students (93%) scored 35 and over, reflecting superior ability in constructing an ethnographic narrative - 2 students provided a competent narrative but received late submission penalties - 1 student provided a satisfactory but not superior narrative

### M 3: Biological Anthropology: Apprehending Evolution (O: 2)

Students demonstrate understanding of Darwinian evolution and its historical context, with attention to its role in shaping our understanding of biological process, by explaining the mechanism of natural selection, providing examples, and discussing its limitations. Evaluation is based on a rubric, which weighs explanatory accuracy, appropriate use of examples and competent prose.

#### Target for O2: Content knowledge

Out of 13 possible points: 0 students will receive below 8 (unsatisfactory) - Over 50% of students will receive a score above 11, demonstrating solid understanding of the biocultural relationship.

#### Findings 2011-2012 - Target: Partially Met

- 79% of students scored over 11 - 5% of students scored below 8

### M 4: Capstone Seminar Paper (O: 2, 3)

The Senor Seminar is the capstone course for the department of anthropology and is a CTW course. Assessment, therefore, is based on writing. The measure chosen to assess student learning is a reflective research assignment in which students draw on literature, synthesize, critically analyze and reflect on the nature of anthropological knowledge. Papers are evaluated according to a rubric which measures outcomes on a scale from 1 to 5: 1=poor, 2=fair, 3=good, 4=excellent, and 5=outstanding.

Source of Evidence: Written assignment(s), usually scored by a rubric

#### Target for O2: Content knowledge

All students should score 3 and above, and 75% should receive a 4 or better Normal 0

#### Findings 2011-2012 - Target: Met

- All students in both sections of the seminar scored 3 and higher - The percentage of students scoring 4 or better were 80% in the first section and 83% in the second section

#### Target for O3: Competence in oral and written communication

The department CTW rubric outlines specific writing quality targets for its ratings of 1 (poor), 2 (fair), 3 (good), 4 (excellent), and 5 (outstanding). The target for writing quality is that all students will score 3 and above, and 75% of students will score 4 or better.

#### Findings 2011-2012 - Target: Met

- 0 students received below a 3 - 17% of students in section 1 and 20% of students in section 2 were rated as 3 (good) - 83% of students in section 1 and 80% of students in section 2 were rated as 4 (excellent) or 5 (outstanding), demonstrating superior communication.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Clarity objectives through discussion and examples**

Most students performance indicated that they successfully assimilated and applied the targeted concepts and methods. The two biggest challenges that require improvement however were a. to properly contextualize and formulate a research question out of the cultural topic students identified and b. to properly present data to support their conclusions. This will be addressed by a. explicitly discussing these issues in class and b. offering examples of proper use of evidence to support argumentation in an ethnographic context.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium

### Relationships (Measure | Outcome/Objective):

| Measure: Cultural Anthropology - Ethnographic Fieldwork Project | Outcome/Objective: Content knowledge |
Implementation Description: I will explicitly draw students' attention to these issues and use examples to illustrate the proper use of evidence to support argumentation in an ethnographic context.

Responsible Person/Group: Instructor

Additional Resources: n/a

Budget Amount Requested: $0.00 (no request)

Identifying intended audience
The instructor will focus on clarifying to the students the intended audience for each writing assignment.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Capstone Seminar Paper | Outcome/Objective: Competence in oral and written communication

Responsible Person/Group: Instructor

Additional Resources: n/a

Budget Amount Requested: $0.00 (no request)

Relating theory to empirical evidence
The instructor has identified and will adopt a new text for the purpose of helping students identify and relate anthropological concepts and theory to both contemporary academic work and their own daily life and experience.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Capstone Seminar Paper | Outcome/Objective: Content knowledge

Responsible Person/Group: Instructor

Additional Resources: n/a

Budget Amount Requested: $0.00 (no request)

Writing assistance
Students will be given access to the pamphlet-format grammar and style guide presenting the most common grammatical errors GSU students make. They will be encouraged to utilize the writing studio as well as to share drafts of their work with the instructor and/or the teaching assistant for review.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Low

Relationships (Measure | Outcome/Objective):
Measure: Cultural Anthropology - Ethnographic Fieldwork Project | Outcome/Objective: Competence in oral and written communication

Implementation Description: Students will be given access to the handout presenting the most common grammatical errors GSU students make. They will be encouraged to seek assistance over drafts of their work.

Responsible Person/Group: Instructor

Additional Resources: n/a

Budget Amount Requested: $0.00 (no request)

Advisement
The instructor will monitor performance and individually advise students to address specific areas of concern

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: Low

Relationships (Measure | Outcome/Objective):
Measure: Biological Anthropology: Apprehending Evolution | Outcome/Objective: Content knowledge

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

In this cycle, all anthropological subdisciplines represented in the department (cultural, biological and archaeological) were included in the assessment. The faculty formally discussed the assessment process in a faculty meeting and: a) reaffirmed the outcomes/objectives focus on methodology, content and communication and b) discussed measures and findings. In the coming academic year, assessment will be further streamlined across mandatory courses.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The assessment data indicate a solid programmatic structure but in the coming cycle the department will pursue including linguistic anthropology to the core curriculum, completing our mission to provide holistic training to students. An appropriate assessment measure will be devised accordingly.
**Mission / Purpose**

The Department of Anthropology offers a Master of Arts in Anthropology. Graduate education in anthropology emphasizes research and teaching on urban contexts, processes, and populations. Students receive rigorous training in local, regional, and global transformations, quantitative and qualitative research methods, and theories of nature, society, and culture. In addition to intellectual maturity, students gain practical skills, including proposal writing, project development, field research, ethnography and ethnographic needs-assessments, community development, and program evaluation. Graduate students are trained in theories, methods, topics, and skills within the discipline and each of its sub-fields. They are encouraged to write a thesis based on independent empirical research, or in collaboration with faculty. Alternatively, students may complete a practicum, in a variety of contexts and human service organizations. Students who obtain a MA in anthropology pursue doctoral studies, or seek employment as professional anthropologists with museums, CRM firms, the CDC, and various NGOs.

**Goals**

**G 1: Content and Method Competency**

Students will firmly ground their research in a broad and relevant body of anthropological knowledge in their field of study. They will demonstrate capacity in a) theory, b) field/area of study and c) appropriate methodologies.

**G 2: Contributing to Anthropological Knowledge and Practice**

Students will demonstrate competence in the practice of anthropology by producing original research in their specific subfield.

**Student Learning Outcomes/Objectives**

**SLO 1: Synthesizing knowledge (G: 1) (M: 1)**

Students will collect, synthesize, analyze and effectively communicate a broad body of anthropological knowledge, theory and methodology framing their particular research interests.

**Standard Associations**

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 2: Producing Original Research (G: 1, 2) (M: 2)**

Students will design, conduct, analyze and present original research in writing and orally. The work of design, data collection in the field, analysis and write-up will be conducted in close interaction with the student's adviser and evaluated by the adviser, and members of the student's thesis committee, selected for their expertise in the relevant field of interest.

**Standard Associations**

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**

2.2 Leverage our national reputation in professional degree programs for the development of societal leaders.

**Measures, Targets, and Findings**

**M 1: MA comprehensive exam (O: 1)**

The graduate students are assessed individually by their committees, which consist of three regular university faculty members, two of whom must be Department faculty members. The comprehensive exam is tailored to each graduate student's interest and is written by the student's major advisor. The three questions include (1) the field of inquiry, (2) theory pertaining to the research, and (3) method to be employed in the research. The graduate students are asked to write 7-10 pages for each question, and to return the completed exam to each committee member within two weeks. The exam is then evaluated; the advisor, in consultation with the committee, rates the exam as a pass, contingent pass or fail. The Anthropology Graduate Program Director was consulted to obtain data on the number students who took the comprehensive exam. Data recorded included (1) the number of students who took the comprehensive exam, (2) the number of students who successfully passed the exam on the first attempt, (3) the number of students who encountered problems with passing the exam, and (4) the number of students who ultimately passed the comprehensive exam.

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O1: Synthesizing knowledge**

In order to continue in the program, all students at the third semester of graduate study at the Department of Anthropology will successfully synthesize, analyze and critically apply anthropological knowledge relevant to their graduate research through a comprehensive examination, which consists of a topical, a theoretical and a methodological segment. The comprehensive examination is evaluated by the faculty members forming the students' committee.

**Findings 2011-2012 - Target: Met**

In the 2011-2012 cycle, 13 third semester graduate students passed their comprehensive examinations demonstrating a. Ability to synthesize and analyse theoretical approaches relevant to their research interests b. Command of anthropological research relevant to the area and topical concerns of their research c. Command of methodological issues, techniques, and ethics relevant to their research project. 11 students passed at the first attempt. 2 students were required to improve on a
portion of the exam by rewriting, and successfully completed it on the second attempt.

**M 2: MA thesis or practicum paper (O: 2)**

In their theses and practicum papers, students have to demonstrate the ability to design and conduct original research, along with an in-depth understanding of the field of inquiry, theory and methods pertaining to the research, and proficiency in the writing conventions and formats of the discipline. Students' theses and practicum papers are evaluated by a committee consisting of three regular university faculty members, at least two of whom must be Department faculty members. Students must orally defend the thesis or practicum paper before their committee. The advisor, in consultation with the committee, rates the thesis or practicum paper as a pass, contingent pass or fail. Data recorded included (1) the number of students who wrote and defended a thesis or practicum paper, (2) the number of students who successfully passed the oral defense on the first attempt, (3) the number of students who encountered problems with passing the defense, and (4) the number of students who ultimately passed the defense and graduated.

Source of Evidence: Project, either individual or group

**Target for O2: Producing Original Research**

At graduation, all students will produce a satisfactory thesis, conduct revisions and successfully defend their thesis or practicum demonstrating competence in their subfield.

**Findings 2011-2012 - Target: Met**

In the 2011-2012 cycle, a total of 18 students reached their final semester in the program. All 18 successfully completed their research projects, and defended their thesis or practicum, completing the study program.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Improving comprehensive examination outcomes**

Faculty, and particularly faculty advisers are discussing mechanisms to enhance student assessment throughout the course of study, in order to further student success. A newly created professionalization seminar course will serve as a hands-on, practical forum in which students will be introduced to, discuss and share experiences regarding the rationale, requirements and strategies of the comprehensive examination process in the first two semesters of study.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** Medium

**Relationships (Measure | Outcome/Objective):**

- **Measure:** MA comprehensive exam
- **Outcome/Objective:** Synthesizing knowledge

**Implementation Description:** The department's new Professionalization seminar course will enhance student preparation for their comprehensive exams.

- **Responsible Person/Group:** faculty
- **Additional Resources:** no
- **Budget Amount Requested:** $0.00 (no request)

**2011-2012 Applied Linguistics BA**

(As of: 12/12/2016 04:41 PM EST)

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

**Mission / Purpose**

Normal 0 false false false EN-US X-NONE X-NONE The B.A. in Applied Linguistics provides a thorough grounding in the study of language structure, use, and acquisition to prepare students for a variety of options for employment or further study in fields in which the scientific study of language is significant, e.g. language teaching (including English as a second/foreign language), anthropology, speech and hearing science, psychology, cognitive science, lexicography, and text and discourse analysis.

**Student Learning Outcomes/Objectives**

**SLO 1: Core Areas of Linguistics (M: 1)**

Students demonstrate understanding of the core areas within linguistic study: phonetics, phonology, morphology, syntax, and semantics.

**SLO 2: Awareness of Bias (M: 2)**

Students demonstrate awareness that different theoretical and cultural perspectives, their own included, are value-laden and prejudicial.

**SLO 3: Analysis of Linguistic Structure (M: 3, 4)**

Students acquire the skills to analyze language and/or interlanguage structures (e.g., sound structure, word structure, sentence structure, and discourse structure).

**SLO 4: Reporting on Primary Research (M: 5)**

Students demonstrate competency in making credible claims about data they have collected and analyzed themselves.

### Measures, Targets, and Findings

#### M 1: Final examinations in foundational course, AL 3021 Introduction to Linguistics (O: 1)

The final examination in AL 3021 is comprehensive and assesses student understanding of core areas of linguistics through analyzing language data and answering open-ended or selected response questions.

**Source of Evidence:** Faculty pre-test / post-test of knowledge mastery

**Target for O1: Core Areas of Linguistics**

80% of students will exhibit mastery of the core areas of linguistic study by achieving a passing score of at least 70% on the final exam in AL 3021.

**Findings 2011-2012 - Target: Met**

During the fall and spring semesters of the 2011-2012 cycle, across 4 separate sections of AL 3021, 98 out of 118 students provided correct answers to over 70% of the questions on the final exam. Since 83.1% of students exhibited mastery of core areas of linguistic study on the final exam of this foundational course, this target has been met.

#### M 2: Final Papers in AL 3031 Language in Society and AL 4151 Communication across Cultures (O: 2)

The CTW papers in AL 3031 are graded on a 4 point rubric that includes the following categories: (A) identifies values and assumptions that underlie different perspectives; (B) shows awareness of prejudicial aspects of the problem. The AL 4151 rubric for CTW papers includes the following categories: (A) demonstrates an honest awareness of one's feelings/thoughts about cultural difference; (B) shows awareness of oneself as a cultural being. The percentage of students scoring at least "competent" on these areas on the final CTW papers in these course will be tabulated.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

**Target for O2: Awareness of Bias**

On final CTW papers in AL 3031 and AL 4151, at least 80% of students will be judged "competent" or "sophisticated" on all relevant criteria on the rubric.

**Findings 2011-2012 - Target: Met**

During fall and spring semesters, 87.8% of students in AL 3031 scored at least competent on "Identifies values and assumptions that underlie different perspectives" and 80.5% scored at least competent on "Shows awareness of prejudicial aspects of the problem". In AL 4151, 92.3% of students scored at least competent on both "Demonstrates an honest awareness of one's feelings/thoughts about cultural difference" and "Shows awareness that oneself is a cultural being". The target was met across all criteria.

#### M 3: Performance on language analysis problems (O: 3)

The final examinations in AL 4011 Phonetics & Phonology and AL 4012 Morphology & Syntax consist primarily of language analysis problems. The number of students demonstrating competency in linguistic analysis on these examinations will be tabulated.

**Source of Evidence:** Academic direct measure of learning - other

**Target for O3: Analysis of Linguistic Structure**

80% of students will demonstrate competence in linguistic analysis by scoring at least 70% on the final examinations in AL 4011 and AL 4012.

**Findings 2011-2012 - Target: Met**

28 out of 32 students answered at least 70% of language analysis problems correctly on the final exam in AL 4011. 28 out of 33 students answered at least 70% of language analysis problems correctly on the final exam in AL 4012. Because the number of students demonstrating competence in linguistic analysis on these exams exceeded 80% (87.5% in AL 4011 and 84.8% in AL 4012), this target has been met.

#### M 4: Performance on language analysis papers (O: 3)

In AL 3041 Second Language Acquisition, students write papers critically examining the characteristics of written or oral language samples produced by non-native speakers (i.e., interlanguage). The number of students successfully completing competent interlanguage analysis papers will be tabulated.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

**Target for O3: Analysis of Linguistic Structure**

80% of students will demonstrate competence in linguistic analysis by scoring at least 70% on interlanguage papers in AL 3041.
Findings 2011-2012 - Target: Met
In AL 3041, 96.5% of students earned passing scores of 70% or more on assigned interlanguage analysis papers.

**M 5: Final Papers in CTW Courses (O: 4)**
The final papers in CTW courses (e.g., AL 3031 Language in Society, AL 4151 Communication across Cultures, and AL 4241 Senior Seminar in Applied Linguistics) are graded on a 4 point rubric that includes the following categories: (C) presents convincing arguments based on linguistic data and 85.4% scored at least competent on "Draws reasonable conclusions". In AL 4151, 80.7% of students scored at least competent on both criteria. Note that the number judged Not Yet Competent includes students who did not complete coursework, failing to submit a final paper.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O4: Reporting on Primary Research**
On final papers in CTW courses, at least 80% of students will be judged "competent" or "sophisticated" on all relevant criteria on the rubric.

**Findings 2011-2012 - Target: Met**
Across fall and spring semesters in the 2011-2012 cycle, 82.9% of AL 3031 students scored at least competent on the final paper with regard to “Presents convincing arguments based on linguistic data” and 85.4% scored at least competent on "Draws reasonable conclusions". In AL 4151, 80.7% of students scored at least competent on both criteria. Note that the number judged Not Yet Competent includes students who did not complete coursework, failing to submit a final paper.

**M 6: Writing assignments in CTW courses (O: 5)**
The final papers in CTW courses (e.g., AL 3031 Language in Society, AL 4151 Communication across Cultures, and AL 4241 Senior Seminar in Applied Linguistics) are rated on a 4 point rubric in five areas, including (E) presents ideas clearly and in a well-organized fashion. The number of students who score "competent" or "sophisticated" in this area on the final papers for these courses will be tabulated.

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O5: Written Communication and Editing Skills**
80% of students will be judged as competent or sophisticated in the area of "presents ideas clearly and in a well-organized fashion" on CTW final papers.

**Findings 2011-2012 - Target: Met**
87.8% of students in AL 3031 and 88.5% of students in AL 4151 earned ratings of competent or sophisticated on their final papers in these CTW courses, meeting the target.

**M 7: Exam results in SLA (O: 6)**
Performance on final examination in AL 3041: Second Language Acquisition will be documented.

Source of Evidence: Academic direct measure of learning - other

**Target for O6: Foundations of language acquisition**
At least 80% of students will score at least 70% on the final project in AL 3041

**Findings 2011-2012 - Target: Met**
86.2% of students scored at least a 70% on the final in AL 3041, meeting the target. This is the last time findings for this measure will be reported; the objective has been removed for future cycles since this is no longer a required course in the major.

**M 8: Language in Society paper (O: 7)**
The final paper in AL 3031 is graded on a rubric that includes the following categories: (A) identifies values and assumptions that underlie different perspectives; (B) shows awareness of prejudicial aspects of the problem; (C) presents convincing arguments based on linguistic principles; (D) draws reasonable conclusions. The percentage of students scoring at least "competent" on these four areas will be tabulated.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O7: Key concepts in sociolinguistics**
At least 80% of students will be judged "competent" or "sophisticated" on all four relevant criteria on the rubric

**Findings 2011-2012 - Target: Met**
80.5% of students in AL 3031 achieved ratings of Competent or Sophisticated on the final paper across all four relevant criteria on the CTW rubric, meeting the target. This is the last time findings will be reported for this measure, since the related objective has been replaced for future cycles with an objective that better reflects the curriculum of AL 3031 Language in Society and AL 4151 Communication across Cultures.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Increasing research-related activities in courses**
It is not clear from our assessment that students are gaining sufficient experience in reading published applied linguistics research and carrying out their own research. The undergraduate committee will investigate options for increasing such opportunities within courses and/or within the department in general.

*Established in Cycle: 2007-2008*

*Implementation Status: In-Progress*
Implementation Description: With primary research now required in all AL CTW courses, the second aspect of this action plan has been implemented. With regard to exposure to published research, syllabi for all required AL major courses will be solicited and examined for incorporation of foundational and current publications in course readings. Findings will be reported in the next cycle.

Responsible Person/Group: Kris Acheson-Clair

reevaluate current measures

In completing our assessment for the first year of our BA program, we realize that our measures are too gross to give us helpful information about improving our curriculum. Thus a committee will reassess the current measures and propose additional measures that can target specific outcomes more effectively.

Established in Cycle: 2007-2008
Implementation Status: Finished
Priority: High
Implementation Description: New measures were developed and implemented for the new set of objectives revised in the 2011-2012 cycle. As an example, assessments specifically measuring linguistic analysis are used across 3 courses for the program objective on demonstrating linguistic analysis skills.

Responsible Person/Group: Lucy Pickering/Undergraduate Committee

Changes to student learning outcomes and associated measures

We are reconsidering our learning outcomes and associated measures as we are making program changes to the BA in Applied Linguistics. These program changes are currently under review and have not yet been implemented. We are working on the following: Outcome 2 & its related measure will need to be changed to reflect the fact that AL 3041 will no longer be a required course. Outcomes 1 & 4 need to be more explicitly differentiated. Outcomes will need to reflect two new required CTW courses: Language in Society and Communication across Cultures.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Implementation Description: Outcomes and Measures were modified in 2011 to better reflect the current curriculum. We now have 5 Outcomes and 6 Measures, all of which were met in 2012.

analysis of linguistic structure—revise measure

In the next cycle we will be adding a measure from data analysis problems for AL 3041.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):

Measure: Performance on language analysis problems | Outcome/Objective: Analysis of Linguistic Structure

Implementation Description: Completed by the faculty during the 2011-2012 cycle. See implementation notes for Revision of Learning Outcomes for further details.

Responsible Person/Group: Kris Acheson-Clair

new outcome

For the next cycle we will add a new outcome related to incultural competence and cultural discovery skills along with associated measures.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Implementation Description: Completed by the faculty during the 2011-2012 cycle. See implementation notes for Revision of Learning Outcomes for further details.

Projected Completion Date: 12/2011
Responsible Person/Group: Kris Acheson-Clair

remove outcome

This is no longer a core outcome for our program and we will be eliminating this outcome in the next cycle.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):

Measure: Exam results in SLA | Outcome/Objective: Foundations of language acquisition

Implementation Description: Faculty revised outcomes and measured in the 2011-2012 cycle and discontinued this outcome.

Responsible Person/Group: Kris Acheson-Clair

revise assignments

In AL 4151, where the achievement target was not met, we have revised preliminary writing assignments to better build towards the final paper. We will continue to monitor this outcome.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):

Measure: Writing assignments in CTW courses | Outcome/Objective: Written Communication and Editing Skills

Implementation Description: Revisions implemented during the last cycle seem to have made a positive impact, and the targets were met for AL 4151 during this cycle.

Responsible Person/Group: Kris Acheson-Clair
**revise measure**
Currently we are using the final examinations for 3 courses to measure this outcome but in the future we will only use the final exam from AL 3021. We are exploring other ways of measuring this outcome and/or changing the achievement target.

**Established in Cycle:** 2010-2011  
**Implementation Status:** Finished  
**Priority:** High

**Relationships (Measure | Outcome/Objective):**  
**Measure:** Final examinations in foundational course, AL 3021 Introduction to Linguistics | **Outcome/Objective:** Core Areas of Linguistics

**Implementation Description:** This action plan was carried out in the AL 2011-2012 cycle and the measure no longer uses elective course data. See implementation notes for Revision of Learning Outcomes for further details.  
**Responsible Person/Group:** Kris Acheson-Clair

**CTW course student retention**
The number of students who fail to complete CTW courses is lowering the percentage of students judged competent on final papers because the students who stop coming to class and do not turn in final writing assignments are automatically judged less than competent. CTW courses are reading and writing intensive, and as such it is not surprising that the withdrawal rate is higher than other courses. The problem lies with students who do not withdraw by mid-semester but still fail to complete the course. A plan will be made by CTW course instructors during this cycle to decrease the failure rate of CTW courses.

**Established in Cycle:** 2011-2012  
**Implementation Status:** Planned  
**Priority:** High  
**Responsible Person/Group:** Kris Acheson-Clair

---

**Georgia State University**
**Assessment Data by Section**  
**2011-2012 Applied Linguistics MA**

(As of: 12/12/2016 04:41 AM EST)  
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

**Student Learning Outcomes/Objectives**

**SLO 1: Knowledge of linguistic systems of English (M: 4, 5)**  
Demonstrates knowledge of the linguistic systems of English phonology, grammar, and discourse

**SLO 2: Teaching methodology (M: 3, 4, 5, 7)**  
Applies the basic principles of ESL/EFL learning and teaching methodology

**SLO 3: Professional development (M: 1, 4, 8)**  
Conducts and participates in professional development activities

**SLO 4: Technology (M: 2, 4, 5)**  
Uses technology effectively in research and teaching

**SLO 5: Communication (M: 2, 3, 4, 5, 6)**  
Communicates effectively in both written and oral language in English

**SLO 6: Connecting theory and practice (M: 4, 5, 6, 7)**  
Analyzes and critiques theory and practice of L2 teaching and learning

**SLO 7: Cultural knowledge (M: 4, 5)**  
Uses cultural knowledge in second language learning and teaching

**Measures, Targets, and Findings**

**M 1: Number of presentations/publications (O: 3)**  
Advisors count the number of conference presentations and/or publications for each student.  
Source of Evidence: Academic indirect indicator of learning - other

**Target for O3: Professional development**  
50% of graduating students will have made at least one conference presentation or written at least one published article.

**Findings 2011-2012 - Target: Met**  
50% of graduating students (9 out of 18) had at least one presentation or published article.
**M 2: Oral presentation of Master’s paper (O: 4, 5)**
During their final semester, students make a formal oral presentation of their Master’s paper. Two faculty members rate the paper for clarity, organization, effective use of visual aids, and overall presentation.

Source of Evidence: Presentation, either individual or group

**Target for O4: Technology**
90% of students will score "good" or "excellent" on their use of technology in presentations.

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target:</th>
<th>Met</th>
</tr>
</thead>
<tbody>
<tr>
<td>100% of the students scored &quot;good&quot; or &quot;excellent&quot; on use of technology for their presentations.</td>
<td></td>
</tr>
</tbody>
</table>

**Target for O5: Communication**
90% of students will score "good" or "excellent" on the overall scores for their presentations.

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target:</th>
<th>Met</th>
</tr>
</thead>
<tbody>
<tr>
<td>100% of the students scored &quot;good&quot; or &quot;excellent&quot; on the overall scores for their presentations.</td>
<td></td>
</tr>
</tbody>
</table>

**M 3: Teaching performance and videotapes (O: 2, 5)**
Students are videotaped teaching a lesson to their peers in AL 8900: Practicum, a required course in the program. The instructor rates the students on a rubric evaluating teaching effectiveness (outcome 1) and oral communication (outcome 5).

Source of Evidence: Performance (recital, exhibit, science project)

**Target for O2: Teaching methodology**
90% of students will meet or exceed expectations for their videotaped teaching performance.

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target:</th>
<th>Met</th>
</tr>
</thead>
<tbody>
<tr>
<td>94% of students met or exceeded expectations by scoring good or excellent for their videotaped teaching.</td>
<td></td>
</tr>
</tbody>
</table>

**Target for O5: Communication**
90% of students will meet or exceed expectations for their videotaped teaching performance.

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target:</th>
<th>Met</th>

<td></td>
</tr>
</tbody>
</table>

**M 4: Survey of graduating students (O: 1, 2, 3, 4, 5, 6, 7)**
Students who graduated between Summer 2008 and Spring 2009 were asked to complete a web-based survey investigating their perceptions of how confident they feel about the areas covered in the learning outcomes.

Source of Evidence: Alumni survey or tracking of alumni achievements

**Target for O1: Knowledge of linguistic systems of English**
90% of graduating students will report confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome "knowledge of linguistic systems of English".

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target:</th>
<th>Met</th>

</tbody>
</table>

**Target for O5: Communication**
90% of graduating students will report confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome “communication.”

**Findings 2011-2012 - Target: Met**

100% of the students reported confidence levels of 4 or 5 for the outcome “communication.”

**Target for O6: Connecting theory and practice**

90% of graduating students will report confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome “connecting theory and practice”.

**Findings 2011-2012 - Target: Partially Met**

88% of the students reported confidence levels of 4 or 5 for the outcome “connecting theory and practice.”

**Target for O7: Cultural knowledge**

90% of graduating students will report confidence levels of 4 or 5 on a 5-point scale, five being highest for the outcome “cultural knowledge”.

**Findings 2011-2012 - Target: Met**

100% of the students reported confidence levels of 4 or 5 for the outcome “cultural knowledge.”

**M 5: Syllabi (O: 1, 2, 4, 5, 6, 7)**

Syllabi for all required courses were collected by the Chair and examined for the presence or absence of specific learning outcomes. Source of Evidence: Curriculum/syllabus analysis of course to program

**Target for O1: Knowledge of linguistic systems of English**

The syllabus for at least one required course will contain “knowledge of linguistic systems of English” as a learning outcome.

**Target for O2: Teaching methodology**

The syllabus for at least one required course will contain “teaching methodology” as a learning outcome.

**Target for O4: Technology**

The syllabus for at least one required course will contain “technology” as a learning outcome.

**Target for O5: Communication**

The syllabus for at least one required course will contain “communication” as a learning outcome.

**Target for O6: Connecting theory and practice**

The syllabus for at least one required course will contain “connecting theory and practice” as a learning outcome.

**Target for O7: Cultural knowledge**

The syllabus for at least one required course will contain “cultural knowledge” as a learning outcome.

**M 6: Master’s papers (O: 5, 6)**

Two faculty members evaluate each graduating student’s master’s papers in four areas: (a) connecting theory with practice; (b) scholarship; (c) writing; (d) appropriate formatting/referencing.

Source of Evidence: Senior thesis or culminating major project

**Target for O5: Communication**

90% of students will be rated “excellent” or “good” in writing and formatting/referencing (Outcome 5).

**Findings 2011-2012 - Target: Met**

100% of the students were rated “excellent” or “good” in writing and formatting/referencing for their MA papers.

**Target for O6: Connecting theory and practice**

90% of students will be rated “excellent” or “good” in connecting theory to practice and scholarship (Outcome 4).

**Findings 2011-2012 - Target: Met**

100% of the students were rated “excellent” or “good” in connecting theory to practice and scholarship on their MA papers.

**M 7: Classroom-based experience forms and reflections (O: 2, 6)**

Students are required to complete 90 hours of classroom-based experience (CBE) during their program. Advisors certify that their advisees have completed this requirement by submitting two documents each semester: a form signed by the student’s supervisor certifying that the CBE has been completed, and a reflective essay in which the student draws connections between the CBE and what has been learned in coursework.

Source of Evidence: Performance (recital, exhibit, science project)
<table>
<thead>
<tr>
<th>Target for O2: Teaching methodology</th>
</tr>
</thead>
<tbody>
<tr>
<td>100% of students will complete this requirement.</td>
</tr>

#### Details of Action Plans for This Cycle (by Established cycle, then alpha)

##### Connecting theory and practice: Confidence level

MA advisors will encourage students to reflect on and explicitly discuss in their MA portfolio reflective overview how they have learned to link theory and practice. The MA Committee will begin looking at three-year trends rather than just the limited survey responses obtained in any single year to determine how well the program is helping students make theory/practice connections.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**  
- **Measure:** Survey of graduating students  
- **Outcome/Objective:** Connecting theory and practice

**Implementation Description:** MA advisors and MA Paper readers will oversee and support students' written discussions of connections between theory and practice. The MA Committee will analyze relevant survey responses over a three-year span.  
**Projected Completion Date:** 04/2011  
**Responsible Person/Group:** MA advisors

##### Professional development: Presentations and publications

Graduate faculty will encourage and offer more scaffolding, in the form of workshops, for conference participation. "Conference participation" itself will be re-conceptualized by the graduate faculty to be more inclusive of a number of relevant professional activities, such as training sessions for fellow teachers, that graduate students may engage in as novice professionals.

- **Established in Cycle:** 2009-2010  
- **Implementation Status:** Planned  
- **Priority:** High

**Implementation Description:** Graduate faculty will offer workshops for MA students. The "conference participation" measure will be reconceptualized and rephrased.  
**Projected Completion Date:** 04/2011  
**Responsible Person/Group:** Department graduate faculty

##### MA paper scholarship and theory/practice connections enhancement

The two faculty readers of each MA paper will be urged to give feedback specifically on scholarship and theory and practice connections on an early draft of the MA paper and work more closely with students who have difficulty in these areas. Additional drafts will be required if the student continues to struggle in these areas.

- **Established in Cycle:** 2010-2011  
- **Implementation Status:** Planned  
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**  
- **Measure:** Master’s papers  
- **Outcome/Objective:** Connecting theory and practice

**Implementation Description:** The Director of Graduate Studies will send queries to graduate faculty each semester regarding the status of in-progress MA papers and will meet with faculty who wish to discuss further intervention needed for individual students.  
**Responsible Person/Group:** Director of Graduate Studies

##### Theory and practice reflection component will be added to MA portfolio.

An explicit discussion of theory and practice connections will be added to the reflective overview in the MA portfolio.

- **Established in Cycle:** 2011-2012  
- **Implementation Status:** Planned  
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**
**Measure:** Survey of graduating students | **Outcome/Objective:** Connecting theory and practice

**Implementation Description:** MA advisors will oversee completion of the theory and practice connections reflection component in the reflective overview included in the MA portfolio.

**Responsible Person/Group:** MA advisors

---

**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1:** What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The assessment process was not changed. For the coming year, regarding the microteaching video, the rating rubric will be revised and input from additional raters will be solicited, e.g., from cooperating teachers who allow MA students to do a microteaching lesson in their classrooms.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

In view of findings over the past several years, we have increased the frequency of offerings of elective courses that connect technology and pedagogy, e.g., Technology and Language Teaching, AL 8620, and Corpus Linguistics, AL 8760. A new elective, Teaching English for Specific Purposes, AL 8630, is being offered for the first time this year. This entire course addresses how theory can inform language teaching in specific contexts. A component on connecting theory and practice will be added to the MA portfolio reflective overview to encourage students to explicitly consider and articulate in writing how they have connected theory and practice throughout their course work and classroom-based experience.

---

**Georgia State University**

**Assessment Data by Section**

**2011-2012 Applied Linguistics PhD**

As of: 12/12/2016 04:41 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

---

**Mission / Purpose**

The Department of Applied Linguistics and English as a Second Language at Georgia State University, one of the few departments of its kind in the United States, offers a PhD in applied linguistics to prepare students to conduct research on adult language learning and teaching and to function as graduate-level educators in programs training language education professionals. Students in the program have an opportunity to work with graduate faculty who specialize in various areas of applied linguistics. The faculty are committed to teaching and research productivity, and are especially interested in mentoring and collaborating with novice members of the profession.

---

**Student Learning Outcomes/Objectives**

**SLO 1: Theory and content knowledge (M: 1, 2, 4)**

Graduates of the program will have expertise with major concepts, theoretical perspectives, empirical findings, and historical trends in the field of Applied Linguistics and their research specialty area.

**SLO 2: Research methodology competence (M: 2, 4)**

Graduates will understand and apply methods that are appropriate to different kinds of research in applied linguistics, including research design, data collection, data analysis, and interpretation.

**SLO 3: Communication skills (M: 2, 4)**

Graduates will communicate effectively in speech and writing.

**SLO 4: Career planning and development (M: 3, 4)**

Graduates will have relevant experience, documented success in disseminating their research, and plans for their career paths.

**SLO 5: Teaching expertise (M: 5)**

Graduates will be experienced teachers who demonstrate pedagogical and content knowledge for teaching a variety of courses.

---

**Measures, Targets, and Findings**

**M 1: Qualifying papers (O: 1)**

The purpose of the Qualifying Paper (QP) is for the PhD candidate to demonstrate strong writing abilities. When reading the completed QP, faculty should recognize the voice of a scholar-writer who is ready to progress to the next stages of the PhD program.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Theory and content knowledge**
90% of students will pass the qualifying paper requirement.

**Findings 2011-2012 - Target: Met**

100% of students (4/4) passed the qualifying paper requirement.

### M 2: Comprehensive examinations (O: 1, 2, 3)

The Comprehensive Exam (CE) consists of three examination questions, which the student has two weeks to answer. The questions require the student to address issues in theory, research methodology, research topics of importance in the field, and/or topics related to the student's intended dissertation research. At least one of the topics requires consideration of issues that overlap the boundaries between language, cognition and communication and language teaching and language teacher development.

**Source of Evidence:** Comprehensive/end-of-program subject matter exam

#### Target for O1: Theory and content knowledge

Students' answers to each of the three questions of the comprehensive exam are evaluated using a rubric. Theory and content knowledge for each question is rated as "Does not meet expectations" (The paper suggests an incomplete understanding of the literature; it may have frequent lapses and/or substantial gaps in coverage), "Meets expectations" (The paper demonstrates a solid understanding of the relevant literature, but may have minor lapses or minor gaps in breadth or depth of coverage), or "Exceeds expectations" (The paper demonstrates an exceptional understanding of the relevant literature and addresses all parts of the question in depth). At least 90% of students will score "Meets expectations or "Exceed expectations" for theory and content knowledge on all questions of their comprehensive exam.

**Findings 2011-2012 - Target: Met**

100% of students achieved a score of at least "Meets expectations" for theory and content knowledge on all questions of their comprehensive exam.

#### Target for O2: Research methodology competence

Students' answers to each of the three questions of the comprehensive exam are evaluated using a rubric. Research methodology competence for each question is rated as "Does not meet expectations" (The paper demonstrates insufficient understanding of research methodology, suggesting that the student is not ready to conduct research without substantial guidance), "Meets expectations" (The paper demonstrates sufficient understanding of research methodology, suggesting readiness to conduct research with guidance), or "Exceeds expectations" (The paper demonstrates thorough understanding of research methodology as appropriate to the task, suggesting readiness for independent research). At least 90% of students will score "Meets expectations or "Exceed expectations" for research methodology competence on all questions of their comprehensive exam.

**Findings 2011-2012 - Target: Met**

100% of students achieved a score of at least "Meets expectations" for research methodology competence on all questions of their comprehensive exam.

#### Target for O3: Communication skills

Students' answers to each of the three questions of the comprehensive exam are evaluated using a rubric. Communication skills for each question is rated as "Does not meet expectations" (The paper demonstrates a level of writing that is not yet publishable), "Meets expectations" (The paper is well written and organized; in terms of writing it could be publishable with revisions), or "Exceeds expectations" (The paper demonstrates a level of writing that would be ready or nearly ready to send to a journal). At least 90% of students will score "Meets expectations or "Exceed expectations" for communication skills on all questions of their comprehensive exam.

**Findings 2011-2012 - Target: Met**

100% of students achieved a score of at least "Meets expectations" for communication skills on all questions of their comprehensive exam.

### M 3: Conference presentations (O: 4)

Graduate students are expected to begin presenting regularly at conferences.

**Source of Evidence:** Academic indirect indicator of learning - other

#### Target for O4: Career planning and development

In the past year, at least 75% of graduate students beyond their second year will have presented at least one paper at a conference.

**Findings 2011-2012 - Target: Met**

At least 82% of graduate students beyond their second year presented at least one paper at a conference, with over half of those presenting multiple papers.

### M 4: Publications (O: 1, 2, 3, 4)

Graduating students are expected to have published at least one scholarly paper.

**Source of Evidence:** Academic indirect indicator of learning - other

#### Target for O1: Theory and content knowledge

By graduation, at least 80% of students will have a refereed scholarly paper either published or accepted for publication.

**Findings 2011-2012 - Target: Not Met**

60% of graduating students had a published or in-press refereed scholarly paper.
Target for O2: Research methodology competence
By graduation, at least 80% of students will have a refereed scholarly paper either published or accepted for publication.

**Findings 2011-2012 - Target: Not Met**
60% of graduating students had a published or in-press refereed scholarly paper.

Target for O3: Communication skills
By graduation, at least 80% of students will have a refereed scholarly paper either published or accepted for publication.

**Findings 2011-2012 - Target: Not Met**
60% of graduating students had a published or in-press refereed scholarly paper.

Target for O4: Career planning and development
By graduation, at least 80% of students will have a refereed scholarly paper either published or accepted for publication.

**Findings 2011-2012 - Target: Not Met**
60% of graduating students had a published or in-press refereed scholarly paper.

**M 5: Teaching experience (O: 5)**
Students will graduate with substantial teaching experience in the Intensive English Program and in undergraduate courses in Applied Linguistics.

Source of Evidence: Academic indirect indicator of learning - other

**Target for O5: Teaching expertise**
100% of students will teach at least 4 semesters at GSU. 90% of students will teach at least two undergraduate courses.

**Findings 2011-2012 - Target: Partially Met**
100% of students who graduated had taught at least 4 semesters at GSU. 60% had taught at least two courses in the undergraduate program, while the other 40% each taught one course in the undergraduate program.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**revisiting/revamping PhD assessment**
mission outcomes goals

- **Established in Cycle:** 2008-2009
- **Implementation Status:** In-Progress
- **Priority:** High

**add teaching expertise measure(s)**
We will explore the possibility of adding a more direct measure of teaching expertise, such as teaching evaluations.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High

**change teaching target**
Since some students have funding through fellowships or assistantships outside the department, it may not be practical for all (or nearly all) graduate students to teach two courses in our undergraduate program. Therefore we are changing the target to 100% of students will have taught 4 semesters and 90% will have taught at least one course in our undergraduate program.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**

- Measure: Teaching experience | Outcome/Objective: Teaching expertise

**develop dissertation assessment rubric**
In order to have more assessment of students exiting the program, we will develop a rubric to assess the dissertation according to our desired outcomes and add the dissertation as an additional measure.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High

**monitor & increase student publication opportunities**
The new system for monitoring student progress includes information about publications, allowing the PhD committee chair and PhD advisors to see which students have not published any papers. This will be used to encourage faculty to mentor students in publishing and possibly to co-author with them.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High
revise QP measure to reflect new program requirement
The Qualifying Paper is now a Qualifying Exam (which includes a Qualifying Paper). We will change the measure and add a rubric to assess the Qualifying Exam to more directly measure learning outcomes.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:

What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We have added a new measure (publications) in order to track what percentage of students have published at least one scholarly refereed paper by graduation. We also added a rubric to more directly assess outcomes measured by student performance on comprehensive exams. The old measure simply calculated the percentage that passed, which was not as informative.

ACADEMIC PROGRAM QUESTION 2:

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

We will monitor student publications more closely so as to increase mentoring of students related to publishing, including the possibility of co-authoring scholarly papers.

Georgia State University
Assessment Data by Section
2011-2012 Art Studio MFA
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The mission of the Studio Art MFA Program within the School of Art and Design is to provide a rigorous, comprehensive and accessible graduate education in the visual arts and art history to a diverse urban constituency. This mission extends to the University at large, to the community and beyond, with the recognition that visual literacy is essential to imagination, creativity and the articulation of ideas in all fields. We address this mission in the following ways:

• Provide students with sophisticated critical thinking and visual literacy skills
• Expand students understanding as practitioners, scholars and advocates of the visual arts
• Prepare students to be competitive in an increasingly technological, interdisciplinary and theoretical art world
• Engage and collaborate with local state, regional, national and global institutions and communities to provide enhanced visual arts opportunities to students and the community.

Student Learning Outcomes/Objectives

SLO 1: Theoretical and critical thinking (M: 1, 3)
Knowledge of art criticism and theory and facility in applying theory and critical thinking to visual analysis.

SLO 2: Contemporary contextual knowledge (M: 1, 3)
Informed of contemporary art and its relationship to the history of the discipline

SLO 3: Advanced research skills (M: 1, 3)
Ability to thoroughly investigate and critically analyze research results

SLO 4: Professional practice (M: 1, 3)
Professional presentation of studio work, polished representation of self on paper, fluency in discussing own work, demonstration of self-assessment skills.

Strategic Plan Associations

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

Measures, Targets, and Findings

M 1: Thesis Paper (O: 1, 2, 3, 4)
Written paper detailing multiple aspects of studio practice.
Source of Evidence: Portfolio, showing skill development or best work

**Target for O1: Theoretical and critical thinking**
With possible scores of 1 = beginning, 2 = developing, 3 = accomplished, and 4 = exemplary, the achievement target is 3.5.

**Findings 2011-2012 - Target: Partially Met**
13 students were assessed for theoretical and critical thinking. 0 were evaluated as 1 (beginning), 3 or 23% as 2 (developing), 4 or 31% as 3 (accomplished), and 6 or 48% as 4 (exemplary).

**Target for O2: Contemporary contextual knowledge**
With possible scores of 1 = beginning, 2 = developing, 3 = accomplished, and 4 = exemplary, the achievement target is 3.5.

**Findings 2011-2012 - Target: Partially Met**
13 students were assessed for contemporary contextual knowledge. 0 were evaluated as 1 (beginning), 3 or 23% as 2 (developing), 5 or 39% as 3 (accomplished), and 5 or 38% as 4 (exemplary).

**Target for O3: Advanced research skills**
With possible scores of 1 = beginning, 2 = developing, 3 = accomplished, and 4 = exemplary, the achievement target is 3.5.

**Findings 2011-2012 - Target: Partially Met**
13 students were assessed for advanced research skills. 0 were evaluated as 1 (beginning), 0 as 2 (developing), 6 or 46% as 3 (accomplished), and 7 or 54% as 4 (exemplary).

**Target for O4: Professional practice**
With possible scores of 1 = beginning, 2 = developing, 3 = accomplished, and 4 = exemplary, the achievement target is 3.5.

**Findings 2011-2012 - Target: Partially Met**
13 students were assessed for advanced professional practice. 0 were evaluated as 1 (beginning), 1 or 8% as 2 (developing), 4 or 31% as 3 (accomplished), and 8 or 61% as 4 (exemplary).

**M 3: MFA Solo Exhibition with Statement and Resume (O: 1, 2, 3, 4)**
A solo exhibition of work done in last two semesters of graduate study accompanied by an artist statement and resume.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O1: Theoretical and critical thinking**
With possible scores of 1 = beginning, 2 = developing, 3 = accomplished, and 4 = exemplary, the achievement target is 3.5.

**Findings 2011-2012 - Target: Partially Met**
13 students were assessed for theoretical and critical thinking. 0 were evaluated as 1 (beginning), 3 or 23% as 2 (developing), 4 or 31% as 3 (accomplished), and 6 or 46% as 4 (exemplary).

**Target for O2: Contemporary contextual knowledge**
With possible scores of 1 = beginning, 2 = developing, 3 = accomplished, and 4 = exemplary, the achievement target is 3.5.

**Findings 2011-2012 - Target: Partially Met**
13 students were assessed for contemporary contextual knowledge. 0 were evaluated as 1 (beginning), 3 or 23% as 2 (developing), 5 or 39% as 3 (accomplished), and 5 or 38% as 4 (exemplary).

**Target for O3: Advanced research skills**
With possible scores of 1 = beginning, 2 = developing, 3 = accomplished, and 4 = exemplary, the achievement target is 3.5.

**Findings 2011-2012 - Target: Partially Met**
13 students were assessed for advanced research skills. 0 were evaluated as 1 (beginning), 0 as 2 (developing), 6 or 46% as 3 (accomplished), and 7 or 54% as 4 (exemplary).

**Target for O4: Professional practice**
With possible scores of 1 = beginning, 2 = developing, 3 = accomplished, and 4 = exemplary, the achievement target is 3.5.

**Findings 2011-2012 - Target: Partially Met**
13 students were assessed for advanced professional practice. 0 were evaluated as 1 (beginning), 1 or 8% as 2 (developing), 4 or 31% as 3 (accomplished), and 8 or 61% as 4 (exemplary).

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Formation of 3-D program**
The Ceramics area and Sculpture area will join to form a 3-D program. This will allow students from both disciplines to enroll in the same Directed Study and Graduate Seminar course under the direction of one faculty member. By forming a larger critical mass of students, they will experience richer and more diversified feedback in their group critiques as well as more exposure to the
possibilities of creative problem solving in their studio practice.

Graduate Program Review
Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Thesis Paper | Outcome/Objective: Theoretical and critical thinking

Implementation Description: Ceramics and Sculpture faculty are in the process of refining the details of a 3-D program yet are moving forward by joining the two disciplines in one Directed Study course this semester. By Fall 2010 all details should be resolved and in full operation.
Projected Completion Date: 07/2010
Responsible Person/Group: Mark Burleson, Christina West, Ruth Stanford, George Beasley

Professional Practice in Higher Education
The graduate studio faculty is going to consider whether making Professional Practice in Higher Education (AE 6100) mandatory for all students (it is currently only required of graduate assistants who are teaching) will improve student achievement in the area of Professional Practice.
Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: MFA Solo Exhibition with Statement and Resume | Outcome/Objective: Professional practice
Measure: Thesis Paper | Outcome/Objective: Professional practice

Implementation Description: Spring 2013
Responsible Person/Group: Stan Anderson

Seminar Reorganization
In order to improve the performance of our students in regard to Theoretical and Critical Thinking and Contemporary Contextual Knowledge, we are planning to restructure the way MFA seminars are taught and rotated, including involving the art history faculty to a greater degree.
Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: MFA Solo Exhibition with Statement and Resume | Outcome/Objective: Contemporary contextual knowledge
| Theoretical and critical thinking

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
Having instituted four critical outcomes in Spring 2011, we are going to maintain this assessment process in order to gather data over multiple years.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.
We are most concerned with improving the scores in Theoretical and Critical Thinking and in Contemporary Contextual Knowledge. We are in the process of restructuring the way MFA seminars are taught and rotated, including involving the art history faculty to a greater degree, in order to improve student skills in these areas. In order to improve student achievement in the area of Professional Practice, we are considering making the standing pedagogy class mandatory.
Mission / Purpose
As part of the core curriculum in Area C, AH survey courses seek to impart knowledge, values and skills to undergraduates through the study of global art and visual cultures. Through analytical, historical, critical and appreciative methods of learning, students develop skills applicable to any major, but particularly those in fine arts, social sciences and humanities. It is the mission of the department that AH courses increase intellectual curiosity and initiate a continuing interest in the arts.

Goals
G 1: Critical thinking
Students will gain broad knowledge of World art history and demonstrate critical-thinking relative to the study of the visual arts.

Student Learning Outcomes/Objectives
SLO 1: Critical thinking in core (G: 1) (M: 2)
“Critical Thinking” outcomes in Art History Core Courses: students develop critical thinking skills through the evaluation and analysis of visual and textual material. The following discipline-specific critical thinking outcomes relate to the General Education “Critical Thinking” outcomes: 1. Students formulate pertinent questions relevant to the evaluation of a work of art or an art historical problem (Gen Ed “Critical Thinking” Outcome #1). 2. Students discern differences and similarities between works of art through the application of aesthetic, contextual and historical knowledge (Gen Ed “Critical Thinking” Outcomes #1 and #2). 3. Students formulate informed opinions about the value of an art historical interpretation (Gen Ed “Critical Thinking” Outcome #3). 4. Students apply knowledge read in their course book and learned in class to solve art-historical problems associated with material not explicitly covered in lectures (Gen Ed “Critical Thinking” Outcome #4).

Measures, Targets, and Findings
M 2: 2010 - 11 exam for AH 1700 (O: 1)
A standardized exam for AH 1700 was used to measure CT in the core. The mean of the CT scores surpassed the target of 75% and reflected the overall test mean.

Source of Evidence: Standardized test of subject matter knowledge
Target for O1: Critical thinking in core
A mean of 75% or better on CT questions on multiple choice exams.

Details of Action Plans for This Cycle (by Established cycle, then alpha)
Critical thinking in Core Action Plan
Continue to: 1) include 15-20 CT questions on every exam and 2) include class discussion of critical thinking in test format.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: Low
Responsible Person/Group: AH faculty
G 1: Visual Arts Literacy
Provide students with sophisticated critical thinking and visual literacy skills so that they may effectively relay ideas and responses in visual, oral and/or written communication as it relates to the visual arts.

G 2: Visual Arts Advocacy
Expand students' understanding as practitioners, scholars and advocates of the visual arts who engage and collaborate with local state, regional, national and global institutions and communities to provide enhanced visual arts opportunities to students and the community.

G 3: Technology and Media
Prepare students to be competitive in an increasingly technological, interdisciplinary and theoretical art world through awareness of and facility with a wide range of media and state of the art technologies.

Student Learning Outcomes/Objectives

SLO 1: Learning Environment (M: 1)
Student is able to clearly describe expectations for student behavior and design and carry out a plan for rewards and consequences. Student is highly organized and manages materials, equipment, and the labeling and storage of student work effectively. Student demonstrates the ability to communicate effectively both verbally and in writing, with colleagues, students, and other stakeholders regarding expectations.

SLO 2: Instruction (M: 1)
Student is able to plan and assess developmental appropriate lessons for Pre-K through 12 students, including those in need of accommodation. Student demonstrates competency in a variety of art mediums, and has broad knowledge of the history and criticism of art, informed by cultural understandings. Students use appropriate vocabulary and is able to discuss and write about artworks and art processes from an informed perspective and communicate information about art to students through a variety of pedagogical strategies. Student is reflective about their teaching practice and revises strategies based on assessments of student learning.

SLO 3: Instructional Resources (M: 1)
Student can create and utilize teaching tools such as slide presentations, demonstrations, displays, critiques, and performance-based assessments to communicate and document expectations, objectives, procedures, outcomes and progress to learners. Student is able to utilize technology effectively in preparing and presenting lessons to students, and in empowering students to utilize technology in their own creative endeavors. Student responds critically to readings and organizes final portfolio to highlight their competencies and growth.

SLO 4: Professionalism (M: 1)
Student has demonstrated and understanding of the professional role of the teacher through appropriate, positive dispositions, including ethical conduct and responsiveness to diverse student needs. Student has articulated a thoughtful teaching philosophy and understands the importance of advocacy and participation in professional development opportunities.

Strategic Plan Associations

1.5 Other efforts in support of Goal 1 (Undergraduate Education).

Measures, Targets, and Findings

M 1: Student Teaching Portfolio (O: 1, 2, 3, 4)
The student teaching portfolio is the capstone assessment and consists of measures for content knowledge, lesson planning, classroom management, instructional strategies, classroom and student behavior management, assessment skills, and professional attributes.

Source of Evidence: Portfolio, showing skill development or best work

Target for O1: Learning Environment
The minimum score for successful completion of this objective is 3. The aim is for an average score of 4.

Findings 2011-2012 - Target: Met
22 students in AE 4750/67/50 were evaluated for learning environment. 22 students achieved the minimum score of 3 for successful completion of the goal. The aim is an average score of 4. The average score achieved by the 22 students was 4.4.

Target for O2: Instruction
The minimum score for successful completion of this objective is 3. The aim is for an average score of 4.

Findings 2011-2012 - Target: Met
22 students in AE 4750/67/50 were evaluated for their instruction. 22 students achieved the minimum score of 3 for successful completion of the goal. The aim is an average score of 4. The average score achieved by the 22 students was 4.36.

Target for O3: Instructional Resources
The minimum score for successful completion of this objective is 3. The aim is for an average score of 4.

Findings 2011-2012 - Target: Met
22 students in AE 4750/67/50 were evaluated for instructional resources. 22 students achieved the minimum score of 3 for successful completion of the goal. The aim is an average score of 4. The average score achieved by the 22 students was
Target for O4: Professionalism

The minimum score for successful completion of this objective is 3. The aim is for an average score of 4.

Findings 2011-2012 - Target: Met

22 students in AE 4750/67/50 were evaluated for professionalism. 22 students achieved the minimum score of 3 for successful completion of the goal. The aim is an average score of 4. The average score achieved by the 22 students was 4.54.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Use of video technology

Video taping of student teachers and student presentations for critical review by faculty in order to ease the time consuming aspects of student placements in K-12 schools and other non-profit settings.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High
Implementation Description: Considering the grant cycle for Tech Fee awards, we intend to make equipment purchases in the summer for use in Fall 2010.
Projected Completion Date: 07/2010
Responsible Person/Group: Melody Milbrandt, Melanie Davenport, Kevin Hsieh

Increase student field experience hours

We have not been collecting data in this particular format long enough to have established a practical baseline but we are hopeful that this streamlined reporting will assist us in determining whether our students are consistently reaching our goals and will inform our efforts to improve the program as needed. Strengths: Implementing new criteria for this report helped the program to consolidate and solidify the relationship between various data sources and their use in program evaluation. Our review this year was more thorough than previous years thanks to this process. Because students in art education are evaluated at the beginning, middle, and endpoint of their certification program, streamlining the data collected should enable us to better track improvement over time. Areas for Improvement: Faculty in art education recognize the need to increase student field-experience hours prior to student teaching, to allow more hands-on experience for students, and allow faculty more insights into student “readiness.” We are currently developing expanded field experience opportunities in courses prior to student teaching. Faculty also recognize the overwhelming burden of reporting and accountability make it essential to streamline data collection to assist in analysis which will then inform program evaluation and revision. Plans are in place to revise the Summative Evaluation form and other rubrics and upload them into Livetext to centralize the collection of information needed for accountability purposes.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
  Measure: Student Teaching Portfolio | Outcome/Objective: Instructional Resources
Projected Completion Date: 06/2012
Responsible Person/Group: Melody Milbrandt, Melanie Davenport, Kevin Hsieh

Maintain condensed objective achievement

We have not been collecting data in this particular format long enough to have established a practical baseline but we are hopeful that this streamlined reporting will assist us in determining whether our students are consistently reaching our goals and will inform our efforts to improve the program as needed. Strengths: Implementing new criteria for this report helped the program to consolidate and solidify the relationship between various data sources and their use in program evaluation. Our review this year was more thorough than previous years thanks to this process. **Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1:** What changes in the assessment process has your degree program made since last year’s assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We have not been collecting data in this particular format long enough to have established a practical baseline but we are hopeful that this streamlined reporting will assist us in determining whether our students are consistently reaching our goals and will inform our efforts to improve the program as needed. Strengths: Implementing new criteria for this report helped the program to consolidate and solidify the relationship between various data sources and their use in program evaluation. Our review this year was more thorough than previous years thanks to this process. Because students in art education are evaluated at the beginning, middle, and endpoint of their certification program, streamlining the data collected should enable us to better track improvement over time. Areas for Improvement: Faculty in art education recognize the need to increase student field-experience hours prior to student teaching, to allow more hands-on experience for students, and allow faculty more insights into student “readiness.” We are currently developing expanded field experience opportunities in courses prior to student teaching. Faculty also recognize the overwhelming burden of reporting and accountability make it essential to streamline data collection to assist in analysis which will then inform program evaluation and revision. Plans are in place to revise the Summative Evaluation form and other rubrics and upload them into Livetext to centralize the collection of information needed for accountability purposes.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Ratings for Learning Environment and Instruction were lower but still exceeded minimum expectations. Because Instruction was the weakest area, faculty recognizes the need to reinforce lesson planning skills in the methods coursework prior to student teaching and has already implemented more field experience hours to allow students greater opportunities to practice what they are learning. Increasing student field-experience hours prior to student teaching, not only allows more hands-on experience for students, but also gives faculty more insights into student “readiness.” We have already implemented another pre-student teaching field experience during the semester immediately prior to student teaching to better assess student readiness. Faculty also recognize the overwhelming burden of reporting and accountability make it essential to streamline data collection to assist in analysis which will then inform program evaluation and revision. Plans are in place to revise the Summative Evaluation form and other rubrics and upload them into Livetext to centralize the collection of information needed for accountability purposes. The art education faculty has implemented an additional pre-student teaching field experience under the supervision of Dr. Hsieh, in order to better assess student readiness. This process has helped faculty gain insights into student performance and identify students who may need remediation prior to student teaching, so that only candidates who are sufficiently prepared and have proven their readiness will be sent into the field. Two students were identified this semester to receive remediation during the summer, in order to be confident they are capable of success in student teaching next fall.
**Mission / Purpose**

The mission of the Art Education MFA Program within the School of Art and Design is to provide a rigorous, comprehensive and accessible graduate education in the visual arts, art education and art history to a diverse urban constituency. This mission extends to the University at large, to the community and beyond, with the recognition that visual literacy is essential to imagination, creativity and the articulation of ideas in all fields. We address this mission in the following ways: •Provide students with sophisticated critical thinking and visual literacy skills •Expand students understanding as visual artists, art educators, scholars and advocates of the visual arts •Prepare students to be competitive in an increasingly technological, interdisciplinary and theoretical art world •Engage and collaborate with local state, regional, national and global institutions and communities to provide enhanced visual arts opportunities to students and the community.

**Student Learning Outcomes/Objectives**

**SLO 1: Research skills in gathering evidence (M: 1)**

Thesis evaluation: Ability to gather evidence to support thesis statement

**SLO 2: Research skills in critically analyzing evidence (M: 1)**

Thesis evaluation: ability to provide a critical analysis of research material as evidence in support of thesis statement

**Strategic Plan Associations**

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

**SLO 3: Written Communication Skills (M: 1)**

Thesis evaluation: effective and persuasive writing in support of thesis statement

**Measures, Targets, and Findings**

**M 1: Thesis (O: 1, 2, 3)**

The written thesis is assessed for providing a scholarly background with theoretical justification, purpose and need for the study. The thesis requires students to collect and analyze data, discuss and synthesize conclusions, and present recommendations for further research.

Source of Evidence: Senior thesis or culminating major project

**Target for O1: Research skills in gathering evidence**

Minimum score for successful completion of goal: 3 Aim for average score: 4.0

Findings 2011-2012 - Target:** Met**

15 students were evaluated for the goal of research skills in gathering evidence. 15 students achieved the minimum goal of 3. In aiming for an average score of 4.0, the average score for this academic year is 4.8.

**Target for O2: Research skills in critically analyzing evidence**

Minimum score for successful completion of goal: 3 Aim for average score: 4.0

Findings 2011-2012 - Target:** Met**

15 students were evaluated for the goal of research skill in critically analyzing evidence gathered. 15 students achieved the minimum goal of 3. In aiming for an average score of 4.0, the average score for this academic year is 4.6.

**Target for O3: Written Communication Skills**

Minimum score for successful completion of goal: 3 Aim for average score: 4.0

Findings 2011-2012 - Target:** Met**

15 students were evaluated for the goal of written and oral communication skills. 15 students achieved the minimum goal of 3. In aiming for an average score of 4.0, the average score for this academic year is 4.6.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Low Residency with Online Course Offerings**

We have restructured the MAEd program to operate as a low-residency program with 40% of the courses now offered online.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Implementation Description:** Beginning in the fall semester 2009.
- **Projected Completion Date:** 07/2009
- **Responsible Person/Group:** Melody Milbrandt, Melanie Davenport, Kevin Hsieh

**Summer triad of courses**
In order to engender greater cross disciplinary activity in our students classrooms, we are focusing on integrating the three required summer courses that address contemporary issues in art education, postmodern art history and a studio mixed media course.

**Survey of cohort program**

Having initiated a cohort aspect to the MAED program this year, we will survey the students at the end of the academic year to understand the effectiveness of this change and address any deficiencies cited in the survey.

**Develop extended support network**

Although all of those evaluated above met our expectations for completion of the Master's degree, this evaluation includes students who were admitted into the MAE prior to the development of the new cohort program. We will be interested to see how ratings for the cohort groups compare to those for students who made their way through the program individually, without that extended support network and a more structured curriculum. Based upon comparative data with next year's completers, we will re-evaluate the cohort program to ensure that it is serving the needs of our students.

**Greater structure in curriculum**

Although all of those evaluated above met our expectations for completion of the Master's degree, this evaluation includes students who were admitted into the MAE prior to the development of the new cohort program. We will be interested to see how ratings for the cohort groups compare to those for students who made their way through the program individually, without that extended support network and a more structured curriculum. Based upon comparative data with next year's completers, we will re-evaluate the cohort program to ensure that it is serving the needs of our students.

**New cohort formation evaluation**

Although all of those evaluated above met our expectations for completion of the Master's degree, this evaluation includes students who were admitted into the MAE prior to the development of the new cohort program. We will be interested to see how ratings for the cohort groups compare to those for students who made their way through the program individually, without that extended support network and a more structured curriculum. Based upon comparative data with next year's completers, we will re-evaluate the cohort program to ensure that it is serving the needs of our students.

### Analysis Questions and Analysis Answers

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

No additional changes have been made.

**ACADEMIC PROGRAM QUESTION 2:**

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.
Although all of those evaluated above met our expectations for completion of the Master's degree, this evaluation includes some students who were admitted into the MAE prior to the development of the new cohort program. We will be interested to see how ratings for the cohort groups compare to those for students who made their way through the program individually, without that extended support network and a more structured curriculum. Based upon comparative data with next year's completers, we will re-evaluate the cohort program to ensure that it is serving the needs of our students. There was one discrepancy in the numbers of graduating MAE students listed in available reports. One was listed as having graduated in Fall 2011, but she has not in fact completed her thesis. Faculty have asked for further information and are investigating this anomaly. There are five or six MAE students who have “fallen off the radar” and have slowed progress toward completion, primarily due to having accepted full-time employment, but we continue to communicate with them and encourage them toward completion. Reflecting upon feedback from the first two MAE cohorts, we have made adjustments to the curriculum in preparation for a new cohort for Fall, 2012.

**Mission / Purpose**

The mission of the Art History BA Program within the School of Art and Design is to provide a rigorous, comprehensive and accessible undergraduate education in the visual arts and art history to a diverse urban constituency. This mission extends to the University at large, to the community and beyond, with the recognition that visual literacy is essential to imagination, creativity and the articulation of ideas in all fields.

**Goals**

**G 1: Visual Arts Literacy**

Provide students with sophisticated critical thinking and visual literacy skills so that they may effectively relay ideas and responses in visual, oral and/or written communication as it relates to the visual arts.

**G 2: Visual Arts Advocacy**

Expand students' understanding as practitioners, scholars and advocates of the visual arts who engage and collaborate with local state, regional, national and global institutions and communities to provide enhanced visual arts opportunities to students and the community.

**G 3: Technology**

Prepare students to be competitive in an increasingly technological, interdisciplinary and theoretical art world through awareness of a wide range of media and state of the art technologies.

**Student Learning Outcomes/Objectives**

**SLO 1: Knowledge of content (M: 1)**

Student is able to recall pertinent art historical facts (i.e., artist, title, date), can identify artworks as belonging to specific cultures, periods, and places, and can define art historical vocabulary.

**SLO 2: Critical thinking skills (M: 1)**

Student is able to apply a range of art historical methods (i.e., formal analysis, semiotics, criticism, etc.), to apply appropriate methods to the analysis of particular works of art, and to make reasoned judgement about the validity of rival claims about art.

**SLO 3: Research skills (M: 1)**

Student is able to design and carry out an independent research project culminating in a substantial written document. Student is able to acquire, evaluate, and critique the scholarship relevant to an art-historical problem, and to propose solutions or contribute new insights into that problem.

**SLO 4: Written communication skills (M: 1)**

Student is able to explain art-historical principles, and to use art-historical terms in their proper context to explain and/or describe works of art or art-historical problems. Student can effectively communicate the results of research and critical thought in a well-written essay.

**Measures, Targets, and Findings**

**M 1: Graduation portfolio (O: 1, 2, 3, 4)**

Students are evaluated on the basis of a graduation portfolio assembled by graduating seniors in consultation with their principal advisors in the course of their final semester (or last 15 credit hours of study). The portfolio consists of a CAPP form, a copy of a test from an upper level Art History course, and an advance writing project involving art historical research.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O1: Knowledge of content**

Evaluation is based on analysis of performance in 1000-level art-history survey classes, and a review of the content-based sections of tests submitted with the graduation portfolio. The minimum score for successful completion of this goal is 3, while our
Details of Action Plans for This Cycle (by Established cycle, then alpha)

AH 4990 as new capstone course for the major
The outcomes for Objectives 1 and 2 (Knowledge of Content and Critical Thinking Skills) were unchanged from the previous academic year. The students we evaluated are meeting our goals in both those areas, and we see no need for changes in our program with respect to these particular goals. One concern that we do have is that these scores may be somewhat inflated, since they are based only on the graduation portfolios submitted, and -- since submission of the graduation portfolio is still essentially voluntary -- the portfolios submitted may not be a representative sample. This problem should be solved in coming years, as more and more of our graduating majors will be required to pass through the new capstone course (AH 4990), and thus be required to submit a graduation portfolio. As we get a more truly representative sample of work, however, we may find that our average scores go down.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High
Implementation Description: AH 4990 has been adopted as the capstone course for the major, though it will be sometime before we have a critical mass taking completing the course. Therefore, we project that within two years we can effectively use it as a measure.
Projected Completion Date: 07/2010
Responsible Person/Group: Glenn Gunhouse, John Decker, Kimberly Cleveland, Maria Gindhart, Melinda Hartwig, Susan Richmond, Akela Reason

AH 4990 has been adopted as the capstone course for the major, though it will be sometime before we have a critical mass taking completing the course. Therefore, we project that within two years we can effectively use it as a measure.

AH 3000 - Intro to Art History Methodology
We have added a new course to our program (AH 3000 - Introduction to Art History Methodology), which we hope will improve the research skills of our majors by giving them training in art-historical methods early in their course of study. As more and more of our graduates are required to take this course as part of their program, we hope to see improvement in the scores for the Research Skills objective. In addition, our students now have the opportunity for instruction in library research skills under the guidance of Neddah Ahmed, the new library instructor in the fine arts area. We plan to take more advantage of this opportunity in the future, with the expectation that it will further improve our students' research skills.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High
Relationships (Measure | Outcome/Objective):
| Measure: Graduation portfolio | Outcome/Objective: Critical thinking skills |
| Knowledge of content | Research skills | Written communication skills |
Implementation Description: This course addition will have increased enrollment in the fall 2009 as a new requirement for the major.
Projected Completion Date: 07/2009
Responsible Person/Group: Glenn Gunhouse, Maria Gindhart, Melinda Hartwig, Kimberly Cleveland, John Decker, Susan Richmond, Akela Reason

AH 3000 and AH 4990 as CTW courses
The average score for Objective 4 (Written Communication Skills) dropped slightly from the previous academic year (from 4.25 to
4.1. This was a disappointing result, given our focus in recent years on the need to improve the quality of our students' writing. We hope that with increased attention to writing in our designated CTW courses (AH 3000 and AH 4990), we will see improvement in the scores for this objective.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High
Implementation Description: All AH majors are required to take two CTW courses in their major beginning Fall 2009.
Projected Completion Date: 07/2009
Responsible Person/Group: Glenn Gunhouse, Maria Gindhart, Melinda Hartwig, Kimberly Cleveland, John Decker, Susan Richmond, Akela Reason

Content Knowledge and Critical Thinking Skills
The outcomes for Objective 1 (Knowledge of Content and Critical Thinking Skills. 3.85 and 3.58 respectively) are lower from the previous academic year. While the students we evaluated were meeting most of our goals, the faculty and course content is more rigorous, requiring more out of students. Our goal is to turn out art history graduates who could go on to any top graduate program in the US. Our concern last year was the somewhat inflated scores based only on the graduation portfolios submitted, which – since submission of the graduation portfolio was essentially voluntary -- the portfolios submitted were not a representative sample. This year we solved the problem by offering graduating majors a new capstone course (AH 4990), and required all to submit a graduation portfolio. This resulted in a more representative sample of work that included a CAPP form, a copy of a test from an upper-level Art History course, and an advanced writing project involving art-historical research, a research response paper, a critical analysis paper, an art analysis paper, and an art history experience paper.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
Measure: Graduation portfolio | Outcome/Objective: Critical thinking skills

Content Knowledge and Critical Thinking Skills
The outcomes for Objective 1 (Knowledge of Content and Critical Thinking Skills. 3.85 and 3.58 respectively) are lower from the previous academic year. While the students we evaluated were meeting most of our goals, the faculty and course content is more rigorous, requiring more of students. Our goal is to turn out art history graduates who could go on to any top graduate program in the US. Our concern last year was the somewhat inflated scores based only on the graduation portfolios submitted, which – since submission of the graduation portfolio was essentially voluntary -- the portfolios submitted were not a representative sample. This year we solved the problem by offering graduating majors a new capstone course (AH 4990), and required all to submit a graduation portfolio. This resulted in a more representative sample of work that included a CAPP form, a copy of a test from an upper-level Art History course, and an advanced writing project involving art-historical research, a research response paper, a critical analysis paper, an art analysis paper, and an art history experience paper. We also believe that the relatively low scores for Objectives 1 and 4 were in part the result of the greater breadth of assessment material, which gave us the opportunity to target more precisely areas that need improvement. Furthermore, many of the students who took AH 4990 Art History Capstone, did not take AH 3000 - Introduction to Art History Methodology. By taking AH 3000, students receive greater attention in their content, critical thinking, research and written communication skills early in their career resulting in better papers and tests.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
Measure: Graduation portfolio | Outcome/Objective: Knowledge of content

CTW Alignment
The average score for Objective 4 (Written Communication Skills) dropped from the previous academic year (from 4.1 to 3.58). This was a disappointing result, given our focus in recent years on the need to improve the quality of our students' writing. We hope that with increased attention to writing in our designated CTW courses (AH 3000 and AH 4990), we will see improvement in the scores for this objective. We also believe that the relatively low scores for Objectives 1 and 4 were in part the result of the greater breadth of assessment material, which gave us the opportunity to target more precisely areas that need improvement. Furthermore, many of the students who took AH 4990 Art History Capstone, did not take AH 3000 - Introduction to Art History Methodology. By taking AH 3000, students receive greater attention in their content, critical thinking, research and written communication skills early in their career resulting in better papers and tests.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
Measure: Graduation portfolio | Outcome/Objective: Written communication skills

Research Plan
The scores for Objective 3 (Research Skills) were quite a bit lower than we’d like to see. The average of 3.75 was considerably below our goal of 4.5, and lower than the results for the other three objectives. We recognize that this is a continuing area of focus for the faculty. We have already added a new course to our program (AH 3000 - Introduction to Art History Methodology), which we hope will improve the research skills of our majors by giving them training in art-historical methods early in their course of study. As more and more of our graduates are required to take this course as part of their program, we hope to see improvement in the scores for the Research Skills objective. In addition, our students now have the opportunity for instruction in library research skills under the guidance of Nedda Ahmed, the new library instructor in the fine arts area. We plan to take more advantage of this opportunity in the future, with the expectation that it will further improve our students' research skills.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
Measure: Graduation portfolio | Outcome/Objective: Research skills
3000-Level Courses
We want to develop more robust 3000-level courses, which will provide students with intermediary critical thinking and writing skills. These courses would be a firm foundation and would better prepare students to perform at higher levels in the 4000-level courses.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
| Measure: Graduation portfolio | Outcome/Objective: Critical thinking skills |
| Knowledge of content | Written communication skills |

Responsible Person/Group: Art History Faculty

Establishing BA in Art History
We are in the process of proposing a BA in Art History, as our current program is a BA in Art with a Concentration in Art History. A self-standing major should be more appealing to students interested in art history and will carry more weight when our art history students apply for jobs and graduate school.

Established in Cycle: 2011-2012
Implementation Status: In-Progress
Priority: High
Responsible Person/Group: Art History Faculty

Undergraduate Seminars
We would like to see all undergraduate majors take at least one seminar class. For this, we would need to make 4900-level classes "undergraduate seminars," with a lower cap on class size to ensure greater one-on-one instruction. Such a seminar would better prepare our students for the rigors of graduate school and would offer them an opportunity to perform more focused research and writing. We need, however, to consider how this will affect such things as RPG and credit-hour generation.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
| Measure: Graduation portfolio | Outcome/Objective: Critical thinking skills |
| Knowledge of content | Research skills | Written communication skills |

Responsible Person/Group: Art History Faculty

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process have your degree program made since last year's assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Our review this year continues to be more thorough than in previous years thanks to the information derived from the capstone portfolio. In particular, the portfolio requires students to submit a paper from the beginning of their Art History studies and one from the end. This “book-ending” approach provides us with a much better grasp of each student’s improvement, or lack thereof, across time. Moving forward, we may reconsider what we ask for in terms of the capstone portfolio if we believe it will allow us to assess student learning even more effectively. The outcome score for Objective 1, Knowledge of Content, is higher than the previous year’s score (2010/11 was 3.76 and 2011/12 is 3.91). To some degree, this gain (.15 points, which is 3.8% of the total) may reflect the Art History area’s continued insistence on more rigor in its course work. For Art History, Knowledge of Content includes the ability to identify information like artist, title, and date with 100% accuracy as well as knowledge of Art Historical terms. In early classes (such as the surveys) students often struggle with learning how to memorize and report this information. As the Art History area increases its expectations regarding student performance, it places more weight on this foundational information and demands higher performance from students, especially majors. The increase in performance in this objective is slight (3.8%) and may be a normal yearly fluctuation. We have not been collecting data long enough to have established a practical baseline and cannot determine whether or not such a small numerical movement is statistically significant. The Art History area’s action plan for this objective is unchanged – we are working toward 100% student achievement and an average score of 4.5. The outcome score for Objective 2, Critical Thinking Skills, is the same as the previous academic year (2010/11 was 3.65 and 2011/12 is 3.65). The stability of this number may be the result of the area’s emphasis on critical thinking in each of its 3000 and 4000-level courses. The methods course (AH 3000) may also be contributing to the consistency in performance. The methods class requires students to learn discipline-specific approaches to research and writing that help students perform at higher levels in 4000-level classes. The course’s focus on critical thinking (it is a CTW course) prepares our majors for the types of inquiry we demand of them in the rest of our upper-division classes. As with our other statistics, we lack sufficient longitudinal data to perform in-depth analysis. The Art History area’s action plan for this objective is unchanged – we are working toward 100% student achievement and an average score of 4.5. The outcome score for Objective 3, Research Skills, is marginally lower than the previous year’s score (2010/11 was 3.76, 2011/12 is 3.74). The change is the smallest of all the objectives (.02 points, which is .5% of the total). The small downward shift we are reporting this year is not statistically significant and is likely attributable to normal yearly fluctuations. The lack of discernable improvement may be the result of the relative difficulties involved in teaching research skills in the Humanities to undergraduates. Art History, as a research field, is intensely interdisciplinary and requires that students be able to read languages other than English; be able to read, process, and critique high-level scholarly articles and books in multiple fields (e.g. history, religious studies, women studies, anthropology, sociology, etc); and be able to make multiple types of arguments (e.g. rhetorical, visual, contextual), each of which has its own methodological and historiographical complications. As part of our continuing effort to improve our students' Critical Thinking Skills, we require an undergraduate methodology course (AH 3000) and have been working with the Fine Arts Library Liaison, Nedda Ahmed, to provide students with more access to research materials and instruction. Based on the stability of the outcomes for Goal 2, it appears that this class is having a positive effect and we are optimistic that it will also increase the outcome for Goal 3 going forward. The Art History area’s action plan for this objective is unchanged – we are working toward 100% student achievement and an average score of 4.5. The outcome score for Objective 4, Written Communication Skills, climbed slightly from the previous academic year (2010/11 was 3.62, 2011/12 is 3.66). The change was relatively small (.04 points, which is 1.09% of the total). Once again, it is uncertain whether or not this change is significant. While the increase is encouraging, we are still disappointed given our focus in recent years on improving our students’ writing. We have instituted CTW courses (AH 3000 and AH 4990) and hope to see
greater improvement. These courses have been available only for a short time and it is still too early to measure any effect they may have on student performance. That said, however, the Art History area has taken steps to emphasize the importance of writing. Specifically, the capstone class (AH 4990) requires students to submit a great deal of written documentation for assessment including an exhibition review assignment, interdisciplinary approach to teaching Art History assignment, conference paper abstract assignment, graduate study application statement of purpose assignment, and a revised research paper. The emphasis on written work is part of our overall strategy to make writing the central feature of how we educate our students. Art History area’s action plan for this objective is unchanged – we are working toward 100% student achievement and an average score of 4.5.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Moving forward, we would like to see all undergraduate majors take at least one seminar class. For this, we would need to make 4900-level classes “undergraduate seminars,” with a lower cap on class size to ensure greater one-on-one instruction. Such a seminar would better prepare our students for the rigors of graduate school and would offer them an opportunity to perform more focused research and writing. We will also need to develop more robust 3000-level courses, which will provide students with intermediary critical thinking and writing skills. These courses would be a firm foundation and would better prepare students to perform at higher levels in the 4000-level courses. These changes may be possible as the Art History area works toward having its BA program recognized as a self-standing major (rather than a concentration).

---

**Assessment Data by Section**

**2011-2012 Art History MA**

*As of: 12/12/2016 04:41 PM EST*

*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)*

### Mission / Purpose

The mission of the Art History MA Program within the School of Art and Design is to provide a rigorous, comprehensive and accessible graduate education in the visual arts and art history to a diverse urban constituency. This mission extends to the University at large, to the community and beyond, with the recognition that visual literacy is essential to imagination, creativity and the articulation of ideas in all fields. We address this mission in the following ways: •Provide students with sophisticated critical thinking and visual literacy skills •Expand students understanding as scholars and advocates of the visual arts •Prepare students to be competitive in an increasingly technological, interdisciplinary and theoretical art world •Engage and collaborate with local state, regional, national and global institutions and communities to provide enhanced visual arts opportunities to students and the community

### Student Learning Outcomes/Objectives

**SLO 1: Research Skills (Gathering of Evidence) (M: 1, 2)**

Relevant Associations: National Association of Schools of Art and Design (NASAD)

#### Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

#### Strategic Plan Associations

2.1 Expand support for doctoral programs.
2.2 Leverage our national reputation in professional degree programs for the development of societal leaders.
2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).
3.1 Enhance a research culture.
3.4 Enhance supporting infrastructure for the conduct of research.
3.6 Other efforts in support of Goal 3 (Leading Public Research University).
4.2 Highlight the arts and media.
5.4 Enhance the global competency of students, faculty and staff.
5.5 Other efforts in support of Goal 5 (Globalizing the University).

**SLO 2: Research Skills (Critical Analysis of Evidence)**

Ability to read, process and critique high-level scholarly articles and books in multiple fields (eg, history, religious studies, women studies, anthropology, sociology, etc), and be able to make multiple types of arguments (e.g. rhetorical, visual, contextual) each of which has its own methodological and historiographical complications.

#### General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.
3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.
4.0 Students effectively analyze the meanings of texts and/or works of art or music, express ways that culture shapes values, and critically evaluate them.
9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

**Institutional Priority Associations**
1. Student retention
2. Student promotion and progression
3. Timely graduation

**Standard Associations**
1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)
4. Outcomes of research (3.3.1.4)

**Strategic Plan Associations**
2.1 Expand support for doctoral programs.
2.2 Leverage our national reputation in professional degree programs for the development of societal leaders.
2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).
3.1 Enhance a research culture.
3.6 Enhance supporting infrastructure for the conduct of research.
5.4 Enhance the global competency of students, faculty and staff.
5.5 Other efforts in support of Goal 5 (Globalizing the University).

**SLO 3: Written Communication skills (M: 3)**

**Measures, Targets, and Findings**

**M 1: Review of thesis (O: 1)**

Source of Evidence: Portfolio, showing skill development or best work

**Target for O1: Research Skills (Gathering of Evidence)**
We are aiming for an average score of: 4.5

**Findings 2011-2012 - Target: Partially Met**
Of the 4 students evaluated for their research skills in gathering evidence, 4 of 4 achieved the minimum score of 3 for successful completion of the goal. The aim for an average score is 4.5, the average score for this goal for this academic year was 4.

**M 2: Review of thesis (O: 1)**

Source of Evidence: Portfolio, showing skill development or best work

**Target for O1: Research Skills (Gathering of Evidence)**
We are aiming for an average score of: 4.5

**Findings 2011-2012 - Target: Partially Met**
Of the 4 students evaluated for their research skills in gathering evidence, 4 of 4 achieved the minimum score of 3 for successful completion of the goal. The aim for an average score is 4.5, the average score for this goal for this academic year was 4.
**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1**: What changes in the assessment process has your degree program made since last year's assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The learning outcomes were revised by reducing the number to three vital concerns. This smaller number allowed us to focus on the process of acquiring knowledge, critically analyzing that knowledge, and effectively presenting that knowledge and analysis in written form, as demonstrated by a written thesis. We are going to maintain this assessment process in order to assess achievement in these areas from year to year.

**ACADEMIC PROGRAM QUESTION 2**: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The 2011/12 outcomes for Art History graduate students reflect a mixed bag of various graduate-student abilities. Specifically, there was one extremely high-functioning graduate student, one weak but acceptable graduate student, and two mid-range graduate students. While we did not meet our desired metric of 4.5 for each of the goals, each segment was at or near 4. This is encouraging as this shows that our graduate students are achieving well above our stated minimum. Moving forward, we would like to offer Methodology and Historiography of Art (AH 8010) every fall so that all graduate students take this course, which introduces them to graduate-level methodology and provides them with the tools needed to carry out high-level research. We plan to continue offering this class (currently we are only able to offer it every other year because of the College's minimum enrollment requirement). In keeping with our recent NASAD review, we also began offering graduate-only seminars. Previously, our graduate students have taken mixed classes and this may have negatively impacted their performances. We are hopeful that the combination of AH 8010 and graduate-only seminars will have continued positive effects on our students.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Instituted Graduate Methodology and Historiography (AH 8010)**

The 2010/11 outcomes for Art History graduate students are significantly better than the previous year. The 2009/10 outcomes reflected the work of two graduates, one a high achiever and the other a low achiever. The sample size for this year's analysis is larger and is more reflective of the quality of graduate students graduating from the Art History program. Scores for objectives 1 and 2 exceeded our stated targets; the score for objective 3 came close to meeting our desired level. One potential reason for the rise in outcomes may be that each of the students assessed benefited from the institution of Graduate Methodology and Historiography (AH 8010). This course introduced students to graduate-level methodology and provided them with the tools needed to carry out high-level research. We plan to continue offering this class (currently we are only able to offer it every other year because of the College's minimum enrollment requirement). In keeping with our recent NASAD review, we will also continue offering graduate-only seminars as we did this past academic year. Previously, our graduate students have taken mixed classes and this may have negatively impacted their performances. We are hopeful that the combination of AH 8010 and graduate only seminars will have continued positive effects on our students.

**Graduate-Only Opportunities**

We are trying to increase enrollment and/or have the College's minimum enrollment requirement waived in order to offer Methodology and Historiography of Art (AH 8010) every fall. This course, which introduces graduate students to graduate-level methodology and provides them with the tools needed to carry out high-level research, should ideally be taken by graduate students in their first semester. Also, in keeping with our recent NASAD review, we plan to offer at least one graduate-only seminar every semester, but meeting the College's minimum enrollment requirement is proving problematic. In keeping with our recent NASAD review, we also began offering graduate-only seminars. Previously, our graduate students have taken mixed classes and this may have negatively impacted their performances. We are hopeful that the combination of AH 8010 and graduate only seminars will have continued positive effects on our students.

**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1**: What changes in the assessment process has your degree program made since last year’s assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The learning outcomes were revised by reducing the number to three vital concerns. This smaller number allowed us to focus on the process of acquiring knowledge, critically analyzing that knowledge, and effectively presenting that knowledge and analysis in written form, as demonstrated by a written thesis. We are going to maintain this assessment process in order to assess achievement in these areas from year to year.

**ACADEMIC PROGRAM QUESTION 2**: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The 2011/12 outcomes for Art History graduate students reflect a mixed bag of various graduate-student abilities. Specifically, there was one extremely high-functioning graduate student, one weak but acceptable graduate student, and two mid-range graduate students. While we did not meet our desired metric of 4.5 for each of the goals, each segment was at or near 4. This is encouraging as this shows that our graduate students are achieving well above our stated minimum. Moving forward, we would like to offer Methodology and Historiography of Art (AH 8010) every fall so that all graduate students take this course, which introduces them to graduate-level methodology and provides them with the tools needed to carry out high-level research, in their first semester (currently we are only able to offer it every other year because of the College's minimum enrollment requirement). In keeping with our recent NASAD review, we will also continue offering graduate-only seminars as we did this past academic year. Previously, our graduate students have almost exclusively taken mixed undergraduate/graduate classes, and this may have negatively impacted their performances.

**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1**: What changes in the assessment process has your degree program made since last year’s assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

In keeping with our recent NASAD review, we will also continue offering graduate-only seminars as we did this past academic year. Previously, our graduate students have almost exclusively taken mixed undergraduate/graduate classes, and this may have negatively impacted their performances.
Mission / Purpose
The mission of the Studio Art BFA Program within the School of Art and Design is to provide a rigorous, comprehensive and accessible undergraduate education in the visual arts and art history to a diverse urban constituency. This mission extends to the University at large, to the community and beyond, with the recognition that visual literacy is essential to imagination, creativity and the articulation of ideas in all fields.

Student Learning Outcomes/Objectives

SLO 1: Technical skills (M: 1, 2)
In their studio work, students demonstrate control of their medium, creative use of formal elements such as shape, line, form, texture, color, and competent use of relevant technologies.

SLO 2: Conceptual Skills (M: 1, 2)
Students demonstrate conceptual and critical thinking skills in their approach to their studio work. They have the ability to investigate and research their individual ideas with a focus on content. Conceptual skills are manifested in the level of sophistication in their studio work as well as in the quality of their participation in critical discussions and the critique process.

SLO 3: Historical and contemporary knowledge (M: 1, 2)
Students demonstrate a knowledge of the historical development of their medium and the critical contemporary issues attached to it. This includes familiarity with movements and trends of the past that have shaped the medium and an awareness of contemporary artists and contemporary critical discourse in their field.

SLO 4: Professional preparation (M: 1, 2)
Students acquire refined professional skills in the presentation and exhibition of their studio work. They demonstrate the ability to represent themselves on paper, which includes writing cogent and effective artist statements, compiling a polished resume and preparing a professional packet for the submission of their work for exhibition consideration.

Measures, Targets, and Findings

M 1: Gateway (Foundations) Portfolio and Statement (O: 1, 2, 3, 4)
Gateway Portfolio of Artwork from first year foundation studio courses plus 2 upper level studio courses including written essay that details information about the student’s portfolio of art and why the student has chosen this art discipline.

Source of Evidence: Portfolio, showing skill development or best work

Target for O1: Technical skills
Target is 2.5 on a scale of 1 (Beginning), 2 (Developing), 3 (Accomplished), 4 (Exemplary).

Findings 2011-2012 - Target: Partially Met
Of the 113 students assessed for their technical skills in their applications to the studio major, 24 or 21% were evaluated as 1 (beginning), 64 or 57% as 2 (developing), 25 or 22% as 3 (accomplished) and 0 as 4 (exemplary). This is an average of 2 on a scale of 4, which is below the target of 2.5.

Target for O2: Conceptual Skills
Minimum target is 2.5 on a scale of 1 (Beginning), 2 (Developing), 3 (Accomplished), 4 (Exemplary).

Findings 2011-2012 - Target: Partially Met
Of the 113 students assessed for conceptual skills, 40 or 35% were evaluated as 1 (beginning), 51 or 45% as 2 (developing), 21 or 19% as 3 (accomplished) and 1 as 4 (exemplary). This is an average of 1.8 on a scale of 4, which is below the target of 2.5.

Target for O3: Historical and contemporary knowledge
Target is 2.5 on a scale of 1 (Beginning), 2 (Developing), 3 (Accomplished), 4 (Exemplary).

Findings 2011-2012 - Target: Partially Met
Of the 113 students assessed for historical and contemporary knowledge, 39 or 35% were evaluated as 1 (beginning), 60 or
54% as 2 (developing), 12 or 11% as 3 (accomplished) and 0 as 4 (exemplary). This is an average of 1.7 on a scale of 4, which is below the target of 2.5.

**Target for O4: Professional preparation**

Target is 2.5 on a scale of 1 (Beginning), 2 (Developing), 3 (Accomplished), 4 (Exemplary).

**Findings 2011-2012 - Target: Partially Met**

Of the 113 students evaluated for professional presentation, 41 or 36% were assessed as 1 (beginning), 54 or 48% as 2 (developing), 17 or 15% as 3 (accomplished) and 1 or 1% as 4 (exemplary). This is an average of 1.8 on a scale of 4, which is below the target of 2.5.

**M2: Final Portfolio, Artist’s Statement, Resume and BFA Senior Exhibition (O: 1, 2, 3, 4)**

Final Portfolio submitted containing 15-20 examples of studio work done in 4500 courses and in capstone classes 4940 and 4950 including artist’s statement evidencing knowledge and understanding of one’s own artistic practice. Artist Statement and Resume further evidence students’ competence in writing and communication skills.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O1: Technical skills**

Final Portfolio Reviews and Assessments are conducted by Faculty committee within each discipline. Student generated portfolios of studio work are evaluated in four categories: Technical skills, conceptual skills, historical and contemporary knowledge and professional preparation. Possible scores are: 1 = beginning, 2 = developing, 3 = accomplished, 4 = exemplary. Target for technical skills is 3.6.

**Findings 2011-2012 - Target: Partially Met**

60 students were evaluated for their technical skills. Of the 60, 2 or 3% were assessed as 1 (beginning), 8 or 13% as 2 (developing), 16 or 27% as 3 (accomplished) and 34 or 57% as 4 (exemplary). This is an average of 3.4 on a scale of 4, which is just below the target of 3.5.

**Target for O2: Conceptual Skills**

Final Portfolio Reviews and Assessments are conducted by Faculty committee within each discipline. Student generated portfolios of studio work are evaluated in four categories: Technical skills, conceptual skills, historical and contemporary knowledge and professional preparation. Possible scores are: 1 = beginning, 2 = developing, 3 = accomplished, 4 = exemplary. Target score for conceptual skills is 3.5.

**Findings 2011-2012 - Target: Partially Met**

60 students were evaluated for their conceptual skills. Of the 60, 0 were assessed as 1 (beginning), 11 or 18% as 2 (developing), 19 or 32% as 3 (accomplished) and 30 or 50% as 4 (exemplary). This is an average of 3.3 on a scale of 4, which is below the target of 3.5.

**Target for O3: Historical and contemporary knowledge**

Final Portfolio Reviews and Assessments are conducted by Faculty committee within each discipline. Student generated portfolios of studio work are evaluated in four categories: Technical skills, conceptual skills, historical and contemporary knowledge and professional preparation. Possible scores are: 1 = beginning, 2 = developing, 3 = accomplished, 4 = exemplary. Target score for historical and contemporary knowledge is 3.5.

**Findings 2011-2012 - Target: Partially Met**

60 students were evaluated for their historical and contemporary knowledge. Of the 60, 3 or 5% were assessed as 1 (beginning), 7 or 12% as 2 (developing), 24 or 40% as 3 (accomplished) and 26 or 43% as 4 (exemplary). This is an average of 3.2 on a scale of 4, which is below the target of 3.5.

**Target for O4: Professional preparation**

Final Portfolio Reviews and Assessments are conducted by Faculty committee within each discipline. Student generated portfolios of studio work are evaluated in four categories: Technical skills, conceptual skills, historical and contemporary knowledge and professional preparation. Possible scores are: 1 = beginning, 2 = developing, 3 = accomplished, 4 = exemplary. Target score for professional preparation is 3.5.

**Findings 2011-2012 - Target: Partially Met**

60 students were evaluated for their technical skills. Of the 60, 2 or 3% were assessed as 1 (beginning), 9 or 15% as 2 (developing), 16 or 27% as 3 (accomplished) and 33 or 55% as 4 (exemplary). This is an average of 3.3 on a scale of 4, which is below the target of 3.5.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**CTW ART 3910 and CTW 4950 Portfolio II in all 7 studio disciplines**

As of Fall 2009, BFA majors will be required to take the new gateway CTW course ART 3910 Critical Issues in Contemporary Art as they begin the foundation level studio courses in Area G. They will also be required to take the newly designated CTW 4950 Portfolio II course as the capstone course for the major.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High
- **Implementation Description:** Fall semester 2009
- **Projected Completion Date:** 06/2011
Responsible Person/Group: All Studio faculty in 7 discipline areas of Photography, Textiles, Interior Design, Graphic Design, Sculpture, Drawing/Painting/Printmaking, Ceramics

Additional Resources: As demand for our CTW gateway course ART 3910 Critical Issues in Contemporary Art increases after 2010, additional faculty may be needed to cover this demand.

Course "Tracking"
We are exploring having "tracks" when more than one section of a 3000-level course is offered in any given semester. This would allow potential BFA majors in the course area in question to be "tracked" into one section, while potential BFA majors from other areas, as well as potential BA in Art with a Concentration in Art, Art Education, and all other majors would be "tracked" into the other section.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Gateway (Foundations) Portfolio and Statement
- Outcome/Objective: Conceptual Skills
  - Historical and contemporary knowledge
  - Professional preparation
  - Technical skills

Implementation Description: Spring 2013
Projected Completion Date: 12/2013
Responsible Person/Group: Associate Director and Area Coordinators in consultation with relevant faculty

Course Sequencing
The associate director and foundations coordinator will meet with relevant area coordinators and faculty to reconsider the sequencing of courses in some studio areas.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
- Measure: Final Portfolio, Artist's Statement, Resume and BFA Senior Exhibition
- Outcome/Objective: Conceptual Skills
  - Technical skills

Implementation Description: Spring 2013
Projected Completion Date: 12/2013
Responsible Person/Group: Associate Director and Foundations Coordinator

Staffing of Courses
We are investigating whether we need to have more regular faculty (rather than GTAs and PTIs) teaching Foundations-level courses and 3000-level courses that are "tracked" for potential majors in a given course area.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Gateway (Foundations) Portfolio and Statement
- Outcome/Objective: Conceptual Skills
  - Historical and contemporary knowledge
  - Professional preparation
  - Technical skills

Implementation Description: Spring 2013
Projected Completion Date: 12/2013
Responsible Person/Group: Associate Director and Foundations Coordinator in consultation with relevant faculty

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Having instituted four identical outcomes for both the gateway course and the capstone course in Spring 2011, we are going to maintain this assessment process in order to gather more data on where and to what degree growth and learning occur from the onset of the degree program to its conclusion.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

We are most concerned about the 16-18% of students who possess only beginning or developing levels in the four outcome areas at the capstone stage, as well as the fact that the lowest (43%) exemplary levels at the capstone stage are in the area of Historical and Contemporary Knowledge. With the recent introduction of AH 2000, which not all recent graduating students have taken, we expect to see continuing improvement in terms of Historical and Contemporary Knowledge. With the recent introduction of two CTW courses, which, again, not all recent graduating students have taken, we expect to see continuing improvement in all areas. In addition, we are informing all faculty of areas warranting attention and expect to see course content adjusted accordingly. In terms of improving Technical and Conceptual Skills, we are studying whether the sequencing of courses in some studio areas needs to be reconsidered and addressed.

Georgia State University
Assessment Data by Section
Mission / Purpose

Coming Soon

Goals

G 1: Coming Soon

Coming Soon

Student Learning Outcomes/Objectives

SLO 1: Collaboration in Scientific Research (M: 2)

Students collaborate effectively with colleagues including other students, postdoctoral researchers, committee members, faculty advisor, and outside research collaborators.

Other Outcomes/Objectives

O/O 2: Motivations and Implications of Research (M: 3, 4)

Students effectively evaluate the implications and applications of research and technology.

O/O 3: Scientific Critical Thinking (M: 3, 4)

Students apply the basic scientific process as they perform and report their research. That is, they develop research questions appropriate for research, appropriately collect experimental or theoretical data to address identified research questions, analyze and interpret data to evaluate research questions, and use results of data analysis to formulate new research questions.

O/O 4: Scientific Communication (M: 2, 3, 4)

Students communicate effectively orally and in writing in a context relevant to scientific research using appropriate formats and styles for scientific journals, meetings, conferences, or colloquia.

O/O 5: Astronomy Knowledge and Math Skills (M: 1, 3, 4)

Astronomy Ph.D. students demonstrate knowledge of core principles, and an ability to apply that knowledge. Areas of required knowledge are: i. at least two of the core physics areas, classical mechanics, advanced electromagnetic theory, advanced quantum mechanics, and advanced statistical mechanics. ii. fundamental astrophysics and astronomical instrumentation and techniques. iii. stellar atmospheres, stellar structure and evolution, the interstellar medium, extragalactic astronomy, and relativistic astrophysics and cosmology. All Ph.D. students shall be able to demonstrate and apply appropriate mathematical skills in the context of their specialization, including matrix algebra, vector and tensor analysis, Fourier series and boundary value problems, and complex analysis.

O/O 6: Scientific & Research Technology (M: 2)

Students effectively use specialized scientific equipment for data collection and effectively use computers for data analysis, literature research and scientific writing in laboratory and research settings.

Measures, Targets, and Findings

M 1: Qualifying Exam 2 (O: 5)

As part of the M.S. program, each astronomy graduate student takes a first qualifying exam, consisting of an extensive written exam on the broad scope of astronomy and astrophysics and the essential skills required to apply the relevant physical and mathematical reasoning. Students are counseled at this point on their preparedness for further study. Each Ph.D. student takes a second qualifying exam, consisting of an extensive written exam on graduate level astronomy and astrophysics, followed by an oral exam with a committee of four faculty members. Students are advised on their degree progress, and for Ph.D. students, on their preparedness for independent research. The learning outcomes related to core principles and math skills are assessed by the exam committee by rating each student on each outcome with a score scaled from 1 to 5. The criteria for these scores are set by the assessment committee in consultation with the faculty and are available in the Qualifying Exam 2 Evaluation Form.

Source of Evidence: Academic direct measure of learning - other

Target for O5: Astronomy Knowledge and Math Skills

Target performance is 4.0 out of 5.0 for each learning outcome.

Findings 2011-2012 - Target: Not Reported This Cycle

Not reported in this cycle.

M 2: Research Advisor Evaluation (O: 1, 4, 6)
The students work in close collaboration with their research advisor throughout the course of their Ph.D. program. The advisor has the opportunity to observe and evaluate the student's progress in collaboration and technology. The learning outcomes are assessed by the research advisor following the student's successful dissertation defense. The advisor rates the student on each outcome with a score scaled from 1 to 5. The criteria for these scores are set by the assessment committee in consultation with the faculty and are the first section of the advisor evaluation form.

Fifteen committee member evaluations were performed of student's dissertation defenses. The average rating for Scientific Communication was 4.6 out of 5.0.

**Target for O5: Astronomy Knowledge and Math Skills**

Target performance is 4.0 out of 5.0 for each learning outcome.

**Findings 2011-2012 - Target: Met**

Fifteen committee member evaluations were performed of student's dissertation defenses. The average rating for Astronomy Knowledge and Math Skills was 4.6 out of 5.0.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Assessment Committee Review and Report**

The departmental assessment committee will present the results for this past year (along with the previous 3 years) to the faculty to keep them informed on the performance of the Ph.D. students in astronomy. The assessment shows very high achievement of learning goals for students in the Ph.D in Astronomy program. In past years there have been occasional low scores in some areas but all results were very good this year. Therefore, the departmental assessment committee will not be recommending any changes in either the assessment methods or the curriculum at this time.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High
Relationships (Measure | Outcome/Objective):
- Measure: Committee Evaluation of Dissertation | Outcome/Objective: Astronomy Knowledge and Math Skills
- Measure: Committee Evaluation of Doctoral Defense | Outcome/Objective: Astronomy Knowledge and Math Skills
- Measure: Qualifying Exam 2 | Outcome/Objective: Collaboration in Scientific Research
- Measure: Research Advisor Evaluation | Outcome/Objective: Collaboration in Scientific Research
- Measure: Scientific & Research Technology | Outcome/Objective: Scientific Communication

Implementation Description: Assessment Committee will present results at a faculty meeting in the Fall of 2009, at the chairman’s discretion.
Projected Completion Date: 05/2012
Responsible Person/Group: Brian Thoms

**Revise Assessment Data Collection**

In 2012-2013 we will revise the collection of assessment data to remedy the data gaps.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High
Projected Completion Date: 06/2013
Responsible Person/Group: Brian Thoms

**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year’s assessment report?
No changes were made in the assessment process in the PhD in Astronomy program this year. In the coming year we will address the missing data with a revised collection process.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

The assessments of the dissertations and defenses are quite good. No curriculum changes are planned.

---

**Georgia State University**

**Assessment Data by Section**

**2011-2012 Behavior and Learning Disabilities Certification**

*As of: 12/12/2016 04:41 PM EST*

*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)*

**Mission / Purpose**

Through a focus on teacher education as an area of excellence and research, the BLD Program in the Department of Educational Psychology and Special Education is committed to preparing special educators who can make decisions that enable them to provide high quality instruction and support services consistent with the diverse needs and abilities of individuals with disabilities and their families. Because there is a critical shortage of teachers for students with mild disabilities in Georgia, the members of the BLD Faculty are committed to attracting and retaining highly qualified students who will become new special education teachers. The members of the BLD Faculty recognize that the personnel we prepare must have the flexibility to adapt to the changing role of the special educator, the changing patterns regarding how special education services are delivered, and the changing social and economic context in which individuals with disabilities will live. The growing availability of technology tools, improvements in field-based learning experiences, implementation of research-supported practices in special education, a focus on effective communication, and working collaboratively with other special educators, general educators, parents, and support personnel all have bearing on the enhancement of student learning. The BLD certification program is a post-baccalaureate program giving students initial teacher certification in Special Education General Curriculum: Consultative. A new program plan was developed and approved during 05-06 for this certification. During 06-07, the BLD certification program had approximately 130 students in the certification program; approximately 40 of them completed the program. During 07-08, the BLD certification program had approximately 111 students in the certification program; approximately 48 of them completed the certification program. During the current 08-09 academic year, the BLD certification program had approximately 90 students in the certification program; 31 of them completed the certification program. During the current 09-10 academic year, the BLD certification program had approximately 123 students in the certification program; 44 of them completed the certification program.

**Goals**

**G 1: Demonstrates content pedagogical knowledge.**

Demonstrates content pedagogical knowledge.

**G 2: Understands student development regarding learning.**

Understands student development regarding learning.

**G 3: Can effectively teach diverse groups of learners.**

Can effectively teach diverse groups of learners.

**G 4: Can Effectively plan and assess instruction.**

Can Effectively plan for and assess instruction.

**Student Learning Outcomes/Objectives**

**SLO 1: Demonstrates content pedagogical knowledge. (G: 1) (M: 1)**

The teacher demonstrates an understanding of the central concepts, tools of inquiry, and structures of the discipline he or she teaches and creates learning experiences that make these aspects of subject matter meaningful for students.

Relevant Associations: Council for Exceptional Children Standards.

**SLO 2: Demonstrates understanding of how children learn. (G: 2) (M: 2)**

The teacher demonstrates understanding of how children learn and develop over a period of time, and provides learning opportunities that demonstrate a child's intellectual, social, and/or behavioral development/growth.

Relevant Associations: Council for Exceptional Children Standards

**SLO 3: Effectively teaches diverse groups of children. (G: 3) (M: 3)**

The teacher demonstrates understanding of how students differ in their approaches to learning and uses effective communication and professional behavior while differentiating instruction based on student need.

Relevant Associations: Council for Exceptional Children Standards.

**SLO 4: Effectively plan and assess instruction. (G: 4) (M: 4)**
The teacher plans for and uses assessment in instruction based upon knowledge of subject matter, student needs, the community and curriculum goals.

Relevant Associations: Council for Exceptional Children standards.

### Measures, Targets, and Findings

**M 1: Teaching Sequence (O: 1)**

EXC 7190 Teaching Sequence using a rubric of 1-4 with 4 being the strongest to include: Rationale and design, lesson plans and continuous assessments and post-assessments and discussion of findings.

Source of Evidence: Project, either individual or group

**Target for O1: Demonstrates content pedagogical knowledge.**

90% of students will score at or above a 3 out of 4 on the EXC 7190 Teaching Sequence Rubric.

**M 2: Pupil change project. (O: 2)**

P-12 change project using a rubric of 1-4 with 4 being the strongest to include a description of the behavior to be changed, a treatment for change, baseline and treatment data, and analysis and discussion of the results.

Source of Evidence: Project, either individual or group

**Target for O2: Demonstrates understanding of how children learn.**

90% of students will score at or above a 3 out of 4 on the P-12 rubric.

**M 3: Performance Evaluation (O: 3)**

Performance Evaluation Rubric of 1-4 with 4 being the strongest to include indicators based on the Georgia Framework.

Source of Evidence: Performance (recital, exhibit, science project)

**Target for O3: Effectively teaches diverse groups of children.**

90% of students will score at or above a 3 out of 4 on the performance evaluation rubric.

**M 4: Lesson Plan (O: 4)**

Lesson Plan Rubric of 1-4 with 4 being the strongest to include lesson title and description, primary learning outcomes, procedures, technology, assessment, modifications, extension, and reflection.

Source of Evidence: Project, either individual or group

**Target for O4: Effectively plan and assess instruction.**

90% of students will score at or above a 3 out of 4 on the lesson plan rubric.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Action Plan for All indicators**

Data for the Initial Certification program in BLD were collected again on the new measures established for the 08-09 academic year as recommended in our APR plan. The data indicate that student performance was met for three measures and was at 86% for the other measure; target for all was 90%. The faculty have indicated that the student's performance on these measures is adequate since they were within 4% points of the target. We will explore increasing reliability in the future. The faculty members are now using the new rubric for performance (mentioned in the 08-09 report) that aligns with the Georgia Framework for Teaching in order to better establish alignment with state standards.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** Medium
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Lesson Plan | Outcome/Objective: Effectively plan and assess instruction.
  - Projected Completion Date: 05/2012
  - Responsible Person/Group: BLD Coordinator and BLD faculty

**Explore reliability of teaching sequence rubric**

BLD faculty will discuss teaching sequence rubric and set up trainings for part time instructors and/or graduate teaching assistants as needed to increase the reliability of the instrument.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** Low
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Teaching Sequence | Outcome/Objective: Demonstrates content pedagogical knowledge.
- **Implementation Description:** The current instructors using the teaching sequence rubric will meet with any new instructors in order to train new instructors on the use of the rubric. They will determine if further training is warranted.
- **Projected Completion Date:** 11/2011
- **Responsible Person/Group:** BLD Coordinator and faculty

**Revise rubric**

After discussion, the BLD faculty decided to use the same rubric for the P-12 change project across programs.
After discussion, the BLD faculty decided to use the same rubric for the P-12 change project across programs.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: Low

Relationships (Measure | Outcome/Objective):
- Measure: Pupil change project.
- Outcome/Objective: Demonstrates understanding of how children learn.

Projected Completion Date: 05/2012
Responsible Person/Group: Susan Easterbrooks and BLD faculty

Sample plans will be provided for students to review
Faculty will provide samples of previous pupil change projects as they review their expectations for assignments with the students.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: Low

Relationships (Measure | Outcome/Objective):
- Measure: Pupil change project.
- Outcome/Objective: Demonstrates understanding of how children learn.

Implementation Description: Students will be provided sample projects connected with scoring rubrics so they will better understand what is expected of them.
Projected Completion Date: 08/2011
Responsible Person/Group: BLD Coordinator and course instructor

---

**Georgia State University**
**Assessment Data by Section**

*2011-2012 Behavior and Learning Disabilities MEd*

*As of: 12/12/2016 04:41 PM EST*
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

**Mission / Purpose**

Through a focus on teacher education as an area of excellence and research, the Behavior and Learning Disorders Program in the Department of Educational Psychology and Special Education is committed to preparing advanced special educators who can make decisions that enable them to provide high quality instruction and support services consistent with the diverse needs and abilities of individuals with disabilities and their families. The M.Ed. program in Behavior and Learning Disabilities provides students who already hold certification in special education with the depth of knowledge and the breadth of skills in educating students with mild disabilities required of a "master teacher."

**Goals**

**G 1: Understands student development regarding learning**
The student demonstrates understanding of how children learn.

**G 2: Can effectively teach diverse learners.**
Can effectively teach diverse groups of learners.

**G 3: Demonstrates content pedagogical knowledge.**
Demonstrates content pedagogical knowledge.

**Student Learning Outcomes/Objectives**

**SLO 1: Student demonstrates understanding of learning. (G: 1) (M: 1)**
The student demonstrates understanding of how children learn and develop over a period of time, by providing learning opportunities that demonstrate a child's intellectual, social, and/or behavioral development/growth.
Relevant Associations: Council for Exceptional Children Standards.

**Strategic Plan Associations**
2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

**SLO 2: Effectively teaches diverse groups of learners. (G: 2) (M: 2)**
The teacher plans for and uses assessment in instruction based upon knowledge of subject matter, student needs, the community and curriculum goals.
Relevant Associations: Council for Exceptional Children Standards.

**SLO 3: Demonstrates content pedagogical knowledge. (G: 3) (M: 3)**
The teacher demonstrates understanding of the central concepts, tools of inquiry, and structures of the discipline he or she teaches and creates learning experiences that make these aspects of subject matter meaningful for students.
Relevant Associations: Council for Exceptional Children Standards.
### Measures, Targets, and Findings

#### M 1: Performance Evaluation (O: 1)
Final score in EXC 7941 (Practicum in Special Education) using a rubric of 1-4 with 4 being the strongest.

**Source of Evidence:** Performance (recital, exhibit, science project)

**Target for O1: Student demonstrates understanding of learning.**
90% of students will score at or above a 3 out of 4

**Findings 2011-2012 - Target: Met**
For Fall 2011-Summer 2012 with an N of 19, 100% scored at or above 3 out of 4 on the rubric with a range and mean of 4.

#### M 2: Assessment for Instruction (O: 2)
Final score in EXC 7130 (Assessment for Instructional Planning) using a rubric of 1-4 with 4 being the strongest.

**Source of Evidence:** Performance (recital, exhibit, science project)

**Target for O2: Effectively teaches diverse groups of learners.**
90% of students will score at or above 3 out of 4.

**Findings 2011-2012 - Target: Met**
For Fall 2011-Summer 2012 with a N of 14, 93% scored at or above 3 out of 4 on the rubric with a range of 1-4 and a mean of 3.43.

#### M 3: Comprehensive Exam (O: 3)
Written Comprehensive Exam scored by a Rubric of 1-4 with 4 being the strongest. We have created a new comprehensive exam using a 0-2 point rubric which will be faded in over the next several years. So students under the 'old' program plan will be scored using the 1-4 rubric and those under the 'new' program plan will be scored using the 0-2 rubric.

**Source of Evidence:** Comprehensive/end-of-program subject matter exam

**Target for O3: Demonstrates content pedagogical knowledge.**
90% of students will score at or above 3 out of 4 on the "old" comprehensive exams; 90% of students will score 1.5 or higher on the 'new' comprehensive exams.

**Findings 2011-2012 - Target: Partially Met**
For Fall 2011-Summer 2012 with a N = 24 and all students completing the "old" comprehensive exam, 83% scored at or above 3 out of 4 on the rubric with a range of 1.03-4 and a mean of 3.11.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Monitoring Student Progress**
Data for the Masters Program in BLD are being collected using new rubrics for two goals 9a) performance evaluation - student demonstrates understanding of learning (goal 90%; achieved 100%), and (b) assessment for instruction - effectively teaches diverse groups of learners (goal 90%; 93% achieved). Both targets were met and data will be monitored on these two goals to determine whether changes are needed. Per earlier data and action plans, the BLD faculty continue to address student data on the third goal - comprehensive exam - demonstrates content pedagogical knowledge. This year, the goal was partially met (goal 90%; 83% achieved). Based on previous student data, the BLD faculty have created a new comprehensive exam format, questions, and rubric which will be rolled out, as an option in Spring 2013 and permanently in Fall 2013 or Spring 2014 which is more reflective of the curricula changes and updates which have been made. The new exam format and questions will better assess the student’s pedagogical knowledge of the content in the program. In addition, a comprehensive literature list will be made available to all students taking comprehensive exams as a study tool.

**Established in Cycle:** 2011-2012
**Implementation Status:** In-Progress
**Priority:** Medium
**Implementation Description:** new comprehensive exam format, question, rubric, and study tool
**Projected Completion Date:** 09/2014
**Responsible Person/Group:** BLD faculty
**Additional Resources:** None

### Georgia State University
**Assessment Data by Section**

**2011-2012 Biology Assessment of Core**

*(As of: 12/12/2016 04:41 PM EST)*

*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)*

### Goals

**G 1: To provide a foundation of Biological concepts.**
In the core, the Department of Biology seeks to introduce basic Biology content with an overview of components of the Scientific Method. Students will be exposed to conventional Biological themes and real-world applications of concepts.
### Student Learning Outcomes/Objectives

<table>
<thead>
<tr>
<th><strong>SLO 1: Content in Biology</strong></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will be able to recall basic content in Biology, including but not limited to: history, conventional metabolic pathways, structure/function of cells, structure/function of human physiology, and how these topics pertain to real-world applications.</td>
<td></td>
</tr>

Communicate effectively in oral and written forms. Biol 4930/6930 Summer 10. n=24. Each student will present a mini lecture and provide a 1-page summary. 84% of students scored 75% or higher. Target: 80% to score 75%

Target for O2: Communication

80% score 75% or above

**M 22: Dilution Scheme problem solving BIO3890 (O: 1, 4, 5)**

Course: BIOL 3890 Assessment: Final Exam Question (complex dilutions) Data: Students are taught to calculate dilution schemes for use in enumeration of bacteria. The following question requires the students take the learned principles and formula and apply them in a new situation (Bloom's level 3). Given the following serial dilution, what is the colony count of the original sample if 0.1 ml of the final dilution yields 185 organisms? 1:10 2:10 1:100 1:100 1:100 (Final Dilution) Outcome: Greater than 75% of the students were able to completely answer the question and demonstrate the mechanics of how they got there.

Source of Evidence: Academic direct measure of learning - other

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Action Plan Biology Fall 2009**

One issue in our curricula that was identified from assessment data collection was the discontinuity of topics covered in the same courses. We realized that in Cell & Molecular Biology, for example, instructors varied more from topic to topic than expected. This is a problem since our courses constitute components of a building, continuous degree program. Our dept. is holding subcommittee meetings with instructors that teach the same courses to form a concrete consensus on what topics must be covered in major courses. This will standardize the degree program so that students receive similar material in the same courses regardless of the instructor.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Projected Completion Date:** 04/2010
- **Responsible Person/Group:** Frank Cruz, Therese Poole

**Curriculum Assessment**

At a recent faculty retreat it was realized that the Biology Department has grown large enough to re-examine the content overlap and gaps between required courses. The first step will be to form an Assessment Committee. The committee will decide how to best assess the curricula in consideration of our departmental goals (which are also being clarified).

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** High

**Plan to more efficiently collect data from faculty**

The Biology Dept. has formed an Assessment Committee to evaluate the structure, content and direction of our curricula. Collection of data from faculty has been difficult. The committee has decided that it appoint 5 faculty members to collect assessment data from various courses. These faculty members will then forward all of their data to Frank Cruz who will submit this data onto the Weave site. This Spring we will collect the data and submit that data onto Weave.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High
- **Implementation Description:** Collection of data from faculty has been difficult. The committee has decided that it appoint 5 faculty members to collect assessment data from various courses. These faculty members will then forward all of their data to Frank Cruz who will submit this data onto the Weave site. This Spring we will collect the data and submit that data onto Weave.

**Relationships (Measure | Outcome/Objective):**

- **Measure:** Mini Lecture followed by 1 page summary
- **Outcome/Objective:** Communication
**Mission / Purpose**

The Department of Biology is firmly committed to the twin goals of Excellence and Distinctiveness set forth in the University's Strategic Plan. The Mission of the Department is:

a. to provide students with a foundation of scientific literacy in biology that is essential for success in the society of tomorrow;  
b. to increase the understanding of biological processes through innovative research programs, thereby providing students with the opportunity to explore exciting new frontiers through biological research; and  
c. to promote collaboration with others in the University system and the state of Georgia in reaching out to the public and communicating the many ways in which new discoveries in biology impact our daily lives and affect the future of our community.

**Goals**

G 1: Scientific Professionals  
There are two tracks: non-thesis (emphasize course content) and thesis (emphasize scientific literacy and research). Successful students will be scientifically literate and possess the ability to synthesize information and formulate logical arguments. In addition to the aforementioned items, successful thesis students will design and perform experiments, analyze and interpret results. Successful students with communicate these results in oral and written formats.

**Student Learning Outcomes/Objectives**

SLO 1: Scientific Literacy (G: 1) (M: 1, 2)  
Students will demonstrate a knowledge of scientific content as it pertains to their chosen area of concentration in biology.

<table>

Measures, Targets, and Findings

M 1: Thesis (O: 1, 2)
The thesis is the capstone assignment. These capstones provide a measure of the accomplishments of thesis students in scientific content, inquiry, and communication. Students will demonstrate the ability to comprehend the current scientific literature; form hypotheses, design experiments, collect data, and evaluate results; place reports of new discoveries into the context of previous scientific progress; and develop an understanding of the impact of these discoveries on science and society. Students will demonstrate a knowledge of scientific content as it pertains to their chosen area of concentration in biology. Students will be able to present their findings and the findings of others in written and/or oral formats.

Source of Evidence: Capstone course assignments measuring mastery

Target for O1: Scientific Literacy
90% of the thesis proposals are expected to be approved for continuation on the thesis track.

Findings 2011-2012 - Target: Met
70 students completed their MS degree between Su2011 and Sp2012. The average time between entrance into the program and receipt of degree was 23.9 months, while the median was 22 months. Of the 70 students awarded a degree, 46 (79%) completed the program in 3 years or less. [Note: three M.S. degrees were offered to biology doctoral students as a non-terminal degree.]

Target for O2: Conduct Research
100% of students conducting laboratory research should complete certification online course.

Findings 2011-2012 - Target: Met
finding for target 1

M 2: Non-thesis (O: 1)
For non-thesis track students must exhibit satisfactory completion of the non-thesis report. The non-thesis report is the capstone assignment. These capstones provide a measure of the accomplishments of M.S. students in scientific inquiry, scientific content and written communication. Students will demonstrate comprehension of current scientific literature; place reports of new discoveries into the context of previous scientific progress; and describe the impact of these discoveries on science and society.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Scientific Literacy
60% of students are expected to achieve a score of 4 or higher on a 5 point scale on rubric component assessing synthesizing and evaluating future research directions.

Findings 2011-2012 - Target: Met
A random sample of 12 non-thesis M.S. graduates were evaluated using the rubric and (10 of 12 (83%) scored 4 or 5).

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We created a more detailed rubric for assessing the non-thesis reports. The analysis of this rubric will be used to create a database that allows for reexamination and tracking of student success. The Department will create a more detailed rubric for evaluating the non-thesis report. We will build a performance database in order to analyze the measures and findings of report outcomes.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

If weaknesses emerge from the database analysis, the Department will re-examine and if necessary modify the curriculum.

Mission / Purpose
The Ph.D. program in the Department of Biology is firmly committed to the twin goals of Excellence and Distinctiveness set forth in the University’s Strategic Plan. The Mission of the Department is: a. To provide students with a basic core of scientific literacy in biology that is essential for success in the society of tomorrow; b. to increase the understanding of biological processes through cutting edge research programs, thereby providing students with the opportunity to explore exciting new frontiers through biological research; and c. to work with others in the University system and the state of Georgia in reaching out to the public and communicating the many ways in which new discoveries in biology impact our daily lives and affect the future of our community. To accomplish the mission the
Ph.D. program is divided into four concentrations: Applied and Environmental Microbiology, Cell and Molecular Biology and Physiology, Molecular Genetics and Biochemistry, and Neurobiology and Behavior.

### Goals

**G 1: Scientific Professionals**

Students in this program should be scientific professionals.

### Student Learning Outcomes/Objectives

**SLO 3: Scientific Communication (G: 1)**

Students will be able to present their findings and the findings of others in written and oral formats.

### General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

2.0 Students understand and apply mathematical concepts and reasoning using verbal, numeric, graphical and/or symbolic forms.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

5.0 Students demonstrate understanding of the physical universe, the nature of science, and the scientific method, and/or understand and apply mathematical concepts and reasoning using verbal, numeric, graphical or symbolic forms.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

### Standard Associations

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

4. Outcomes of research (3.3.1.4)

### Strategic Plan Associations

2.1 Expand support for doctoral programs.

2.2 Leverage our national reputation in professional degree programs for the development of societal leaders.

3.1 Enhance a research culture.

3.4 Enhance supporting infrastructure for the conduct of research.

3.5 Enhance Georgia State’s contributions to the sciences, and health and medical research and education.

5.4 Enhance the global competency of students, faculty and staff.

### Other Outcomes/Objectives

**O/O 1: Scientific Experimental Design (G: 1) (M: 1)**

Students will demonstrate the ability to 1) form hypotheses, design experiments, collect data, and evaluate results; 2) comprehend the current scientific literature; 3) place reports of new discoveries into the context of previous scientific progress; and 4) develop an understanding of the impact of these discoveries on science and society.

### General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

2.0 Students understand and apply mathematical concepts and reasoning using verbal, numeric, graphical and/or symbolic forms.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

5.0 Students demonstrate understanding of the physical universe, the nature of science, and the scientific method, and/or understand and apply mathematical concepts and reasoning using verbal, numeric, graphical or symbolic forms.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

### Standard Associations

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

4. Outcomes of research (3.3.1.4)

### Strategic Plan Associations

2.1 Expand support for doctoral programs.

3.1 Enhance a research culture.

3.2 Establish University-Level Research Centers.

3.4 Enhance supporting infrastructure for the conduct of research.

3.5 Enhance Georgia State’s contributions to the sciences, and health and medical research and education.

3.6 Other efforts in support of Goal 3 (Leading Public Research University).

5.3 Establish a Georgia State University International Center.

5.4 Enhance the global competency of students, faculty and staff.

**O/O 2: Scientific Inquiry (G: 1)**
Students will demonstrate a knowledge of scientific content as it pertains to their chosen area of concentration in biology. [Preview Formatting]Students will be able to present their findings and the findings of others in written and oral formats.

General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

2.0 Students understand and apply mathematical concepts and reasoning using verbal, numeric, graphical and/or symbolic forms.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

4.0 Students demonstrate understanding of the physical universe, the nature of science, and the scientific method, and/or understand and apply mathematical concepts and reasoning using verbal, numeric, graphical or symbolic forms.

5.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

4 Outcomes of research (3.3.1.4)

Strategic Plan Associations

2.1 Expand support for doctoral programs.

2.2 Leverage our national reputation in professional degree programs for the development of societal leaders.

3.1 Enhance a research culture.

3.4 Enhance supporting infrastructure for the conduct of research.

3.5 Enhance Georgia State’s contributions to the sciences, and health and medical research and education.

5.4 Enhance the global competency of students, faculty and staff.

Measures, Targets, and Findings

M 1: PhD Qualifying Exam (O: 1)

Students must prepare, submit and orally defend an NIH-style research proposal. The examination process follows a specific timeline. 1) Students must submit a pre-proposal in which they state the nature of the problem, present their hypothesis, and briefly describe their experimental design. The pre-proposal is evaluated by a 3-member faculty committee who either grant their approval or make suggestions. 2) After the pre-proposal or a revised pre-proposal has been approved, students have two months to complete the full proposal. During this time period, they receive mentoring from their Committee in the form of 1-2 meetings in which they present their progress on developing the proposal and receive suggestions from the Committee. 3) Students submit their completed proposals and orally defend them before their Committees. The Committee then makes one of the following assessments of student performance: a) Pass (satisfactory performance on both the written and oral parts of the examination); b) Qualified Pass (satisfactory performance on the written proposal, but deficiencies noted in the oral defense); c) Conditional Pass (certain parts of the written proposal must be revised); or Fail (unsatisfactory performance on both the proposal and the oral defense). Students who Fail the examination two times are subject to expulsion from the Ph.D. program.

Source of Evidence: Project, either individual or group

Target for O1: Scientific Experimental Design

Achievement Target: 75% of students are expected to receive a Pass on their first attempt, and 90% are expected to receive a Pass, Qualified Pass, or Decision Pending. Of those who receive a Qualified Pass or a Conditional Pass, 80% are expected to meet the conditions stipulated by their Committee within 30 days.

Findings 2011-2012 - Target: Partially Met

Findings (2011-2012) - Achievement Target: Partially Met 10 students took the Ph.D. qualifying examination in the 2011-2012 academic year. Of these 10 (70%) received a Pass on their first attempt, 1 passed on the 2nd attempt. Of those 2 students remaining who did not pass, 1 is retaking the examination during the Fa13 semester, and the third has left the program.

Findings (2010-2011) - Achievement Target: Partially Met 9 students took the Ph.D. qualifying examination in the 2010-2011 academic year. Of these 9 (67%) received a Pass on their first attempt. Of those students who did not pass, 2 are retaking the examination during the Fa12 semester, and the third has left the program. Findings (2008-2009) - Achievement Target: Met 9 students took the Ph.D. qualifying examination in the 2008-2009 academic year. Of these 15 (75%) received a Pass on their first attempt, while 3 (16%) received either a Qualified Pass or Decision Pending and one student (5%) failed the exam for the second time. Those students receiving a Qualified Pass or Decision Pending subsequently satisfied the conditions required to pass the examination. Findings (2007-2008) - Achievement Target: Partially Met Seventeen students took the Ph.D. qualifying examination in the 2007-2008 academic year. Of these 10 (59%) received a Pass on their first attempt, while 13 (76%) received either a Pass, Qualified Pass or Decision Pending. Those students receiving a Qualified Pass or Decision Pending subsequently satisfied the conditions required to pass the examination. Of those students who did not pass, three are retaking the examination during the Fa08 semester, and the fourth has left the program. Findings (2006-2007) - Achievement Target: Met Sixteen students took the Ph.D. qualifying examination in the 2006-2007 academic year. Of these 12 (75%) received a Pass on their first attempt, while 15 (94%) received either a Pass, Qualified Pass or Decision Pending. The student who received the Decision Pending has satisfied the conditions required for a Pass. The two students who received a Qualified Pass took their examinations in the Sp07 semester; therefore, six months have not yet elapsed since the date of their evaluation. Findings (2005-2006) - Achievement Target: Met Eighteen students took the Ph.D. qualifying examination in the 2005-2006 academic year. Of these, 15 (83%) received a Pass, and 17/18 (94%) received a Pass, Qualified Pass, or Decision Pending. Both of the two who received a Qualified Pass met the conditions of their qualified status within six months.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Action Plan for Qualifying Exam

Related Action Plans: Evaluation of Revised Doctoral Examination Format During the 2011-2012 academic year our goal was partially met. In addition there was frustration among faculty regarding systematic areas of weakness and consistency of the evaluations. We
are instituting a grading rubric that will be completed by all of the examiners. (see appendix 2). During the 2010-2011 academic year, the format for the Ph.D. examination was modified in a way that decreases the complexity of the proposal-based format and limits faculty input into the process. Compared with the 2009-2010 year, a lower percentage of students passed the exam on the first attempt. This may be due to the need for both students and faculty to adjust to the new format. The Department has decided to use the new format for another year and, should the trend toward low pass percentages continue, re-evaluate the exam format at that time. For more information, see the Action Plan Details section of this report. M 2: Time to receipt of degree Students are expected to complete their degrees in a timely fashion. The current median time to receipt of degree in the biological disciplines that form the research focus in our department is approximately 6-6.5 years. Achievement Target: 50% of students who receive their Ph.D.s will have spent 6.5 years or less in the doctoral program.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Georgia State University
Assessment Data by Section
2011-2012 Business Analysis MS
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The Master of Science degree is designed for students who wish to work as Business Analysis practitioners. A typical student would have an undergraduate business degree, strong functional experience, or exceptional interest in Business Analysis. The program blends the elements of the Business Analysis (problem solving, information technology and analytical methods) so that every graduate will have a foundation in the Business Analysis discipline. The emphasis is on a deeper understanding of the concepts and techniques used. Graduates of the program will ideally enter a career path requiring analysis and decision support in any functional area of business, or across functional areas.

This Mission was formulated in 2005-2006. It was not moved to this cycle when WEAVE was updated.

Goals
G 1: Goal of the MS in Business Analysis
The goal of the MS in Business Analysis program is to provide students seeking a degree with a singular focus on business analyses tools, techniques and frameworks with the theory, method, and rational for understanding, selecting, and utilizing those tools, techniques, and frameworks over a wide range of applications used in for-profit and not-for-profit organizations in the 21st century.

Student Learning Outcomes/Objectives

SLO 1: Qualitative Analysis of Business Situation (M: 1)
Normal 0 false false false EN-US X-NONE X-NONE Students should be able to qualitatively state the key issues clearly and accurately the issues in a business problem.

SLO 2: Model Building Ability (M: 2)
Normal 0 false false false EN-US X-NONE X-NONE Students will be able to clearly identify the dependent variable(s) and the appropriate metrics in a given business problem.

SLO 3: Understanding of Techniques (M: 3)
Normal 0 false false false EN-US X-NONE X-NONE Students will understand when and how to perform problem solving techniques for business problems and how to interpret the results.

SLO 4: Software Skills (M: 4)
Students will acquire expertise in the selection and use of key decision making software packages.

Measures, Targets, and Findings
M 1: Qualitative Analysis of Business Situation (O: 1)
Normal 0 false false false EN-US X-NONE X-NONE Students will be measured on their ability to a) understand the business goals, b) identify the key variables that need to be analyzed, c) analyze the potential relationships among the variables and d) interpret the results of their analysis.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Qualitative Analysis of Business Situation
80% of students will receive a score of 3.0 or higher on the 4.0 scale. Rubric 1 is to be used in scoring on assignments and projects from courses across the curriculum. Because of the small number of students in the MS Business Analysis program each student in the program will be evaluated on this rubric in every course where it is applicable during the academic year Learning Outcome 1. Rubric Qualitative Analysis of Business Situation Excellent (4) Competent (3) Less than competent (2) Ineffective (1).
Understanding of the business goal / issues is able to state the key issues clearly and accurately. Either clarity or accuracy can be improved. Both clarity and accuracy are below expectation. It is clear that the student does not understand the issues is identifying Key variables that need to be analyzed. Knows clearly what variables must be used to represent the key issue(s). Some lack of clarity in expressing the key variables. Unsure or incomplete understanding of what needs to be analyzed. Does not understand the key variables that relate to the issues. iii. Analysis potential relationships among variables. Accurate and thorough qualitative analysis of the situation. Some lack of clarity in expressing the relationships. Weak understanding of relationships among concepts/variables. Very little understanding of how variables/concepts are related. iv. Interpretation of results. Can clearly relate the results of model building and qualitative analysis back to the main issue. Can make the connection of model results to situation most of the time. Some errors in interpretation of results in the context of the situation. Inability to connect the results of model with the situation at hand.

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target: Met</th>
</tr>
</thead>
</table>
The average score was 3.75. Students generally did very well on this measure. The target was easily met.

**M 2: Model Building Ability (O: 2)**

In developing a model, students will be measured on their ability to a) identify the dependent variable(s) and the appropriate metrics, b) identify key independent variables and their metrics, c) manage data collection, cleaning and transformation, and d) develop and validate a model.

Source of Evidence: Written assignment(s), usually scored by a rubric

<table>
<thead>
<tr>
<th>Target for O2: Model Building Ability</th>
</tr>
</thead>
</table>
80% of students will receive a score of 3.0 or higher on the 4.0 scale. Rubric 2 is to be used in scoring on assignments and projects from MGS 8150. Because of the small number of students in the MS Business Analytics program each student in the program will be evaluated on this rubric in MGS 8150 each time the class is offered. Learning Outcome 2 Model Building Ability Excellent (4) Competent (3) Less than competent (2) Ineffective (1) i. Identifying the dependent variables and appropriate metrics. Can clearly identify the dependent variable(s) and the appropriate metrics. Can identify the variables, but unsure about measuring error about the dependent variable. Does not understand the entire variable. Does not understand the complete variable. ii. Identifying Key independent variables and their metrics. Can clearly identify the independent variable(s) and the appropriate metrics. Can identify the variables, but unsure about measuring error about the independent variables. Does not understand the connection between the dependent and the independent variables. iii. Dealing with Data – collection, cleaning, transformations. Accurate and thorough preliminary analysis of the data. Most parts of preliminary analysis done well. Skipped or misunderstood some aspects of data preparation. Poor understanding of the need to examine data carefully before modeling. iv. Model Development and validation. Clear demonstration of a viable model and results from a validation. Possibly accurate model, not validated sufficiently. Some errors in model building. Model inappropriate or has too many errors.

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target: Met</th>
</tr>
</thead>
</table>
The average score was 3.50 indicating that the target was met. For MS students, we believe that the standards can be raised a little. Since MBA and MS students tend to be in the same elective classes, it is difficult to have separate standards for MS students.

**M 3: Understanding of Techniques (O: 3)**

Students will show skills using a) regression analysis, b) time-series forecasting, c) factor and cluster analysis, and d) discriminant analysis and/or logistic regression.

Source of Evidence: Written assignment(s), usually scored by a rubric

<table>
<thead>
<tr>
<th>Target for O3: Understanding of Techniques</th>
</tr>
</thead>
</table>
80% of students will receive a score of 3.0 or higher on the 4.0 scale. Rubric 3 is to be used in scoring on assignments and projects from across the curriculum. Because of the small number of students in the MS Business Analytics program each student in the program will be evaluated on this rubric in every course where it is applicable during the academic year. Learning Outcome 3 Rubric Understanding of Techniques Excellent (4) Competent (3) Less than competent (2) Ineffective (1) i. Regression Analysis. Clear understanding of when and how to perform the technique and interpret the results. Occasional uncertainty about the application of the technique or interpretation of results. Makes some errors in applying the technique, or in the way the results are interpreted. Poor understanding of why, when and how the technique is applied. ii. Time Series Forecasting. Clear understanding of when and how to perform the technique and interpret the results. Occasional uncertainty about the application of the technique or interpretation of results. Makes some errors in applying the technique, or in the way the results are interpreted. Poor understanding of why, when and how the technique is applied. iii. Factor/Cluster Analysis. Clear understanding of when and how to perform the technique and interpret the results. Occasional uncertainty about the application of the technique or interpretation of results. Makes some errors in applying the technique, or in the way the results are interpreted. Poor understanding of why, when and how the technique is applied. iv. Discriminant Analysis or Logistic Regression. Clear understanding of when and how to perform the technique and interpret the results. Occasional uncertainty about the application of the technique or interpretation of results. Makes some errors in applying the technique, or in the way the results are interpreted. Poor understanding of why, when and how the technique is applied.

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target: Met</th>
</tr>
</thead>
</table>
With an average score of 3.75, the target was easily met. As with the previous measure, we believe the program for MS students can be made a little more intensive. They have the mathematical ability to go deeper into the techniques than we currently do in our courses.

**M 4: Software Skills (O: 4)**

This measure evaluates the students' expertise in using key software in business decision analysis and problem solving situations. It will be assessed during the completion of projects and assignments across the curriculum.

Source of Evidence: Project, either individual or group

<table>
<thead>
<tr>
<th>Target for O4: Software Skills</th>
</tr>
</thead>
</table>
Learning Outcome 4 Rubric Software Skills Excellent (4) Competent (3) Less than competent (2) Ineffective (1) i. Microsoft Excel. Expert use of software. Has ability to perform all required tasks. Well designed spreadsheets. Can perform most tasks well. Needs help with some tasks. Needs more than occasional help to accomplish tasks, or spreadsheet design is lacking in some aspects.

**Findings 2011-2012 - Target: Met**

The average score was 3.50. The target was met. Software skills vary a bit among students, but overall they are learning what they need in order to effectively analyze what is needed.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Continual Improvement Actions

The assessment data show that both the programs are currently meeting or exceeding expectations, and have shown improvement over the data in 2008. With this in mind, the key elements of the action plan are as follows: 1. To continue the efforts made over the past few years in keeping the course material current, updating cases and examples to reflect industry practices today. 2. To add more resources online to aid in software competency. 3. To encourage students to engage in collaborative learning. Students post projects on the web and learn from each others' work. This strategy has over the years yielded very positive results.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** In-Progress
- **Priority:** High
- **Projected Completion Date:** 05/2011
- **Responsible Person/Group:** BA Faculty Members
- **Additional Resources:** None
- **Budget Amount Requested:** $0.00 (no request)

#### To Hire New Faculty

Two trends have been noted in this area: 1. Analytics skills are increasingly used in business, and new techniques are being developed to analyze data. 2. Enrollment in our courses is going up. We need new faculty to meet the demand for existing courses as well as to offer new ones.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** In-Progress
- **Priority:** High
- **Implementation Description:** We are currently in the middle of the hiring process, conducting interviews.
- **Projected Completion Date:** 08/2013
- **Responsible Person/Group:** A hiring committee chaired by Dr. Subhashish Samaddar

#### Consider options for fast track MS in Business Analysis

Given the increasing need for students with Business Analytics skills in organizations, a fast track program can be developed to achieve the following: 1. Create a cohort of just MS students in courses, so that the courses may be tailored to have more mathematical depth than is possible in an MBA class. 2. Create a program that goes across departments within the college. Analytics skills are applied in all areas of an organization, and expertise from various departments will make it a stronger program.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** Medium
- **Implementation Description:** A committee can be formed to assess the feasibility of such a program.
- **Projected Completion Date:** 08/2013
- **Responsible Person/Group:** All the faculty in this area should be involved in this process, along with the Dean’s office.
- **Additional Resources:** Not known at this point.

### Analysis Questions and Analysis Answers

#### ACADEMIC PROGRAM QUESTION 1:

What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The assessment process remains the same as last year.

#### ACADEMIC PROGRAM QUESTION 2:

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

While MS students continue to do well, we find that there is a growing need in industry for people with Business Analytics skills. We need to provide greater depth in the analytics courses to our MS students than we are currently doing. We can do this through a curriculum revision where we create a college-wide interdepartment MS program in analytics to either supplement or replace the program we currently have in the department. One possibility is a fast track MS in Analytics, with students taking classes from various departments within the college.

**Georgia State University**

**Assessment Data by Section**

**2011-2012 Chemistry Assessment of Core**

As of: 12/12/2016 04:41 PM EST
Mission / Purpose
The chemistry department has long supported the University mission. We work to create an environment that provides for the education of students from all walks of life, traditional, non-traditional and people of all races, creeds and genders without bias. We adhere to the principle of liberal arts education with our faculty interacting with our students both inside and outside the classroom on a routine basis. Our goals are to deliver a high quality instructional program both at the undergraduate and graduate levels to prepare our students for productive careers in post-graduate studies and the job market. We endeavor to have both our faculty and our students participate actively in scholarly pursuits, including oral presentations, submission of grant proposals, internships, graduate and undergraduate stipends, and fellowships. A unique characteristic of the chemistry department is our affiliation with the American Chemical Society (ACS). The ACS affiliation provides national standards of learning outcomes and assessment for the professional training of chemists for real life work in the chemical sciences. This includes industrial settings, government work, and academic areas. The intent is to determine what knowledge and skills are needed by practitioners in the field, what is currently taught to undergraduates, and how successful our teaching is. The ACS endeavors to encourage national improvements in curriculum and instruction through the various activities of its Division of Chemical Education and through its certification program. Faculty members are encouraged to attend seminars given by this division at the two national society meetings and at regional meetings each year. The chemistry department is certified by the ACS. This involves a full program review by the ACS every 5 years with a short annual review of senior research reports (our capstone courses) and student certifications. Course syllabi, including content and the number and types of courses taught, undergraduate research reports, and the professional quality of the instrumentation used in our laboratories are of prime consideration in the certification process. Additional benefits of our association with the ACS are the access to standardized tests that allow us to assess our students learning outcomes compared to national standards. In order to graduate with a B.S. in chemistry and be successful in careers after college, the students should show proficiency on these exams as a measure of their obtaining fundamental knowledge of the prescribed chemistry curriculum compared to national standards. Because these tests measure fundamental knowledge, we also employ an extensive laboratory curriculum that encourages analytical thought processes and concludes with devolvement of extensive writing skills leading to final reports and oral presentations in our capstone courses. In conjunction with our use of ACS exams, we also employ an internal review and revision process. We have committees in place for evaluation of each major area of the undergraduate curriculum. This includes freshmen chemistry (all first and second semester core courses), organic chemistry (second year chemistry), biochemistry (third and fourth year chemistry), physical chemistry (third and fourth year chemistry), analytical chemistry (third and fourth year chemistry), and review of senior research theses. A review of student outcomes and their assessment is conducted by each committee with appropriate feedback given to individual instructors to enhance our courses and continue to let them evolve to a better level. Since critical thinking is so important to the discipline this is the measure that we will be addressing in the core.

Goals
G 1: Critical Thinking Assessment in the Core
Area D Critical Thinking Assessment for Chemistry Critical thinking skills center on applying, analyzing, synthesizing, and evaluating information and methods. Students need thorough practical training in research techniques. These must include not only mastery of instrumentation and the calibration of same, but the design of the relevant control experiments. Overall, they need to gain mastery with the techniques that chemists use to measure data, and the conventions that chemists use to express data. Students must learn to evaluate their data, looking in detail for statistical significance. Students not only have to know facts, they should also be able to design experiments to ascertain if these facts are true. It is vital that the skills learned in one situation be transferable to related situations. One of the key aspects of teaching critical thinking is developing the higher order cognitive skills of decision making and problem solving. It is vital to create an atmosphere where students grow in their ability to reason. 1) The American Chemical Society provides national-level exit exams for all the area D courses within the chemistry program. A representative faculty committee for area D was formed in 2004 and 8 questions from each test were chosen as questions that would require critical thinking. The faculty voted that a 2/8 would demonstrate appropriate critical thinking skills. The expected outcomes were based on the Department of Chemistry Learning Outcome rubric submitted to the Provost's office prior to Fall 2004. 2) A rubric was developed to assess critical thinking skills demonstrated in the laboratory reports required for these courses.

Student Learning Outcomes/Objectives
SLO 2: Using critical thinking skills to interpretet data (G: 1) (M: 5)
Laboratory reports are used in order to assess students’ ability to interpret data. A rubric was developed based on American Chemical Society Guidelines to assess the laboratory reports. The department goal is for 85% of students to receive an adequate or better. The rubric is in the document repository.

Other Outcomes/Objectives
O/O 1: Solving Problems related to chemistry (G: 1) (M: 1, 2, 3, 4)
Specific questions from the ACS exit examination for each course were chosen by the faculty. The national mean and medium for these questions is known and the department uses this as an indicator of students' critical thinking skills. The national mean for all exams is between 2.5 and 3.1 questions correct. (Nationally for this subset of questions the average student answers 2.5 - 3.1 of the 8 questions correct) The departmental goal is 4 out of the 8 questions correct.

Measures, Targets, and Findings
M 1: ACS exam questions for 1151 (O: 1)
These questions are copyrighted and can not be placed in report.
Source of Evidence: Standardized test of subject matter knowledge

Target for O1: Solving Problems related to chemistry
Target goal was 4 out of 8. Students averaged 6.2 out of 8.
**Findings 2011-2012 - Target: Met**

Students averaged 6.2 out of 8 questions correct. This is above the national mean.

**M 2: ACS exam in 1152 (O: 1)**

ACS results of 8 critical thinking questions off of Chem 1152 exam

Source of Evidence: Standardized test of subject matter knowledge

**Target for O1: Solving Problems related to chemistry**

Goal was 4/8

**Findings 2011-2012 - Target: Met**

Students averaged 6.8/8 which is above target and national average.

**M 3: ACS Exit exam in 1211 (O: 1)**

Students got 4/8 on 1211 ACS exit exam on critical thinking problems

Source of Evidence: Standardized test of subject matter knowledge

**Target for O1: Solving Problems related to chemistry**

Goal was 4/8.

**Findings 2011-2012 - Target: Not Met**

Students averaged 3.9 out of 8.

**M 4: ACS result in 1212 (O: 1)**

Students should receive at least a 4/8 on critical thinking questions on the ACS exam

Source of Evidence: Standardized test of subject matter knowledge

**Target for O1: Solving Problems related to chemistry**

Goal was 4 out of 8.

**Findings 2011-2012 - Target: Met**

Students averaged 4.9/8

**M 5: Laboratory Reports in 1211 and 1212 (O: 2)**

Assessment of Critical thinking in laboratory report for 1211 and 1212 students via rubric.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Using critical thinking skills to interpret data**

85% of students should receive an adequate or better.

**Findings 2011-2012 - Target: Met**

86% of students who completed course received an adequate or better.

---

**Mission / Purpose**

The chemistry department has long supported the University mission. We work to create an environment that provides for the education of students from all walks of life, traditional, non-traditional and people of all races, creeds and genders without bias. We adhere to the principle of liberal arts education with our faculty interacting with our students both inside and outside the classroom on
a routine basis. Our goals are to deliver a high quality instructional program both at the undergraduate and graduate levels to prepare our students for productive careers in post-graduate studies and the job market. Because these tests measure fundamental knowledge, we also employ an extensive laboratory curriculum that encourages analytical thought processes and concludes with development of extensive writing skills leading to final reports and oral presentations in our capstone courses. In conjunction with our use of ACS exams, we also employ an internal review and revision process. We have committees in place for evaluation of each major area of the undergraduate curriculum. This includes freshmen chemistry (all first and second semester core courses), organic chemistry (second year chemistry), biochemistry (third and fourth year chemistry), physical chemistry (third and fourth year chemistry), analytical chemistry (third and fourth year chemistry), and review of senior research theses. A review of student outcomes and their assessment is conducted by each committee with appropriate feedback given to individual instructors to enhance our courses and continue to let them evolve to a better level.

Goals

G 1: Critical Thinking

Critical thinking skills center on applying, analyzing, synthesizing, and evaluating information and methods. Students need thorough practical training in research techniques. These must include not only mastery of instrumentation and the calibration of same, but the design of the relevant control experiments. Overall, they need to gain mastery with the techniques that chemists use to measure data, and the conventions that chemists use to express data. Students must learn to evaluate their data, looking in detail for statistical significance. Students not only have to know facts, they should also be able to design experiments to ascertain if these facts are true. It is vital that the skills learned in one situation be transferable to related situations. One of the key aspects of teaching critical thinking is developing the higher order cognitive skills of decision making and problem solving. It is vital to create an atmosphere where students grow in their ability to reason. Upon Graduation students will be able to take and analyze real world data to develop a knowledge base and the ability to draw conclusions from this knowledge base. Thought processes should be rational, logical and consequential. Conclusions should grow directly from the data and accepted fundamental chemical principles. In addition, students should not only arrive at conclusions, but be aware that they are expected to defend these conclusions. It is also important to realize that data may be interpreted in more than one way, and that science moves forward as these different data interpretations clash with one another, and are then resolved. Students must therefore learn to deal with open ended questions, deciding which data and variables are important, and which can safely be ignored in creating a picture of the system under study. The ability to think critically about scientific content and processes is key to these students’ futures. Critical thinking over time should become an internal skill, transferable to the rest of the student’s life and career.

G 2: Analytical Skills

Analytical Skills center on mathematically analyzing information that relates to the chemical sciences. Students need a thorough mathematical background in calculus, statistics and algebra and be able to apply these skills to chemical problems.

G 3: Instrumental Skills

Students who graduate need to be familiar with many different instruments and proficient in understanding not only how to use basic techniques (GC, HPLC, IR, UV-Vis and NMR ) but also what information these techniques would allow the user access to.

Student Learning Outcomes/Objectives

**SLO 1: Oral and Written Communication Skills (M: 2)**

Full Description: Each graduate shall develop oral and written communication skills. The written communication skills will be evidenced by 1a and/or 1b. The oral communication skills will be evidenced by 1c and/or 1d. 1a) At least five reports based on laboratory experiments which will comply with current American Chemical Society guidelines. 1b) A term paper, grant proposal, literature review or research paper on a current topic in chemistry. 1c) An oral examination or an oral presentation in class. 1d) Presentation of a poster or oral talk at a Georgia State, local, regional or national meeting. 

Relevant Associations: American Chemical Society

**SLO 2: Critical Thinking in Chemistry (M: 1, 2)**

Each graduate will develop critical thinking skills as relates to Chemistry. 2a Each student will develop high order problem solving skills. 2b. Each graduate will be able to ask pertinent questions and develop logical experimental procedures to answer these questions. 2c Each graduate will learn to interpret original data.

Relevant Associations: American Chemical Society

**SLO 3: Technology (M: 2)**

Students will demonstrate the ability to 1. Use computer graphics. 2. Access chemical databases 3. Access chemical literature 4. Conduct molecular modeling of chemical structures 5. Use normal word processing skills 6. Use state of the art instrumentation in order to solve novel problems in chemistry

Relevant Associations: American Chemical Society
### Other Outcomes/Objectives

**O/O 4: Quantitative skills (M: 1, 2)**  
Students will demonstrate the ability to: 1. Use mathematical skills from algebra, trigonometry and calculus to solve problems and understand theory in chemistry. 2. Understand error analysis to validate experimental results. 3. Translate problem situations into symbolic representations for the purpose of solving problems.  
Relevant Associations: American Chemical Society

### Measures, Targets, and Findings

**M 1: ACS exit exams (O: 2, 4)**  
Many chemistry courses have national exit exams. Specific questions from these exams will be used to target different outcomes.  
Source of Evidence: Standardized test of subject matter knowledge

**Target for O2: Critical Thinking in Chemistry**  
Out of 8 questions related to critical thinking students should answer 4 correct. (National average is 3.9 correct)

**Findings 2011-2012 - Target: Met**  
The average for the courses evaluated was 4.2 out of 8

**Target for O4: Quantitative skills**  
Out of 8 questions that relate to quantitative skills students should receive 4/8 (national average 3.8)

**Findings 2011-2012 - Target: Met**  
The average this cycle was 4.1/8 correct.

**M 2: laboratory reports (O: 1, 2, 3, 4)**  
The senior level analytical courses (4000, 4010 and 4190) use laboratory reports to assess different outcomes.  
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Oral and Written Communication Skills**  
Average of "Adequate" on Rubric

**Findings 2011-2012 - Target: Met**  
78% of students scored adequate on the final paper in Chem 4000.

**Target for O2: Critical Thinking in Chemistry**  
Adequate or better under critical thinking on the rubric.

**Findings 2011-2012 - Target: Not Met**  
76% of students scored adequate or better on the rubric.

**Target for O3: Technology**  
Students demonstrate competence of instrumentation based on lab reports from Chem 4000 (titration systems), 4010 (GC and HPLC) and 4190 (IR, UV-Vis and NMR). Being able to complete a report with data from these methods is adequate.

**Findings 2011-2012 - Target: Met**  
92% scored adequate or better on the rubric.

**Target for O4: Quantitative skills**  
90% of students should be able to use quantitative skills from laboratory measurements.

**Findings 2011-2012 - Target: Met**  
95% of students scored adequate or better.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Action Plan**  
The Department of Chemistry serves not only students who have declared chemistry as their major but also students in biology, for which general chemistry is a prerequisite for the first course in the biology major (Principles of Biology), physics, for which chemistry is a required minor and pre-medical students. In addition any major can use chemistry 1151/1152 or 1211/1212 as the laboratory sequence required by the University for graduation. This report addresses the efforts to increase retention in the courses which are used by both chemistry and non-chemistry majors as part of the core curriculum (1151/1152, 1211/1212) and courses used by persons wishing to minor in chemistry (2400/3410). The second part of the report addresses the efforts to improve the retention, progression and graduation of persons who major in chemistry. Introductory Courses "Many introductory science courses are responsible for driving off many students either from a science major or from taking science courses." (Reform in Undergraduate Science Teaching in the 21st Century.) Because of the “turn off” factor of these 1000 and 2000 level courses one of the key factors
that will affect retention is the number of students who receive a D, F or withdraw from the course. These students either are turned off by science and change majors or are forces to retake the course causing the department to offer more sections both of which are unfavorable outcomes. Over the past four years the department has placed a priority in improving the retention of students in the 1211/1212 sequence believing those courses will affect the most people. These efforts have been supported by the University System of Georgia's RPG initiative and STEM initiative. A three year grant based on the RPG initiative allowed the department to address a problem in the retention of students. The implementation of peer tutorials, weekly communication by the Undergraduate Coordinator has not only given the department another person capable of advisement at the Freshman level but has also alleviated some of the concerns of the Honors program advisors that will hopefully be corrected during the upcoming registration for Fall 2009. The addition of an advisor who can focus on math and science courses based on departmental recommendations found on the web. We are still dealing with a few issues with misinformation that is given to students by university advisors. This group includes the student advisement center, the FLC advisors, parents, and biology majors and a large number of chemistry majors will be involved in learning and researching biologically related topics, we believe that linking the common concepts in biology and chemistry together will facilitate the understanding and relevance of the topics in General Chemistry and help students better integrate the two disciplines. To facilitate this process, we are analyzing the topics covered in General Chemistry I and II in order to determine which topics have biologically relevant examples that can be easily added to the curriculum without taking away from the chemistry department's mission as an American Chemical Society (ACS) certified program. The addition of biological examples and illustrations will help students make connections between the chemistry and biology. We hypothesize that adding biologically-related material will require the "weeding out" of some traditional topics which are no longer relevant, thus allowing a greater emphasis on the more relevant topics. This is the most recent addition to our action plan and is still in the infancy stages. Analysis of the Effect of Action Plan A ten year analysis of the 1151 course shows an increase from 239 students in 1998 to 361 students in 2008 (51% increase). During that time the class sizes have grown while DFW rates have decreased from 25.5 % to 18.6 %. The ACS scores are slightly higher. A ten year analysis of the 1152 course shows an increase from 208 students in 1998 to 333 students in 2008 (60% increase). During that time the class sizes have grown while DFW rates have decreased from 23.5 % to 20.1 % in 2007. In 2008 the department saw a spike in the DFW rate for 1152 up to 35.7 %. The ACS scores are statistically the same. Most of the gains in DFW rates have occurred over the past 5 years. Below is a graph with the ACS scores for both courses over the past 10 years. Departmental goals are 50% percentilie or better. A ten year analysis of the 1211 course shows an increase from 497 students in 1998 to 779 students in 2008 (57% increase). During that time the class sizes have grown while DFW rates have decreased from 44.2 % to 10.5 %. The ACS scores are statistically the same (1211 was first given in 2001). A ten year analysis of the 1212 course shows an increase from 319 students in 1998 to 622 students in 2008 (95% increase). During that time the class sizes have grown while DFW rates have decreased from 34.2 % to 11.4 % in 2008. The department did see a decline in ACS scores when the initial RPG plan was implemented but the results over the past 2 years are statistically the same as in 1998. Below is a graph with the ACS scores for both classes over the past 10 years. Departmental goals are 50% percentilie or better. A ten year analysis of the 2400 course shows an increase from 391 students in 1998 to 645 students in 2008 (65% increase). During that time the class sizes have grown while DFW rates have decreased from 38.2 % to 31.9 %. A ten year analysis of the 3410 course shows an increase from 196 students in 1998 to 564 students in 2008 (180% increase). There has been a large increase in ACS scores of the 3410 over this 10 year period. Upper Division Courses for Majors An analysis of all 4000 level courses required of majors indicates that all courses have less that a 15% DFW rate. The number of students taught in the past ten years has increased with the number of students taking four of the seven courses (4000, 4120, 4190 and 4600) was over double what was taught ten years ago. The ACS scores for the physical chemistry sequence have remained statistically the same as ten years ago and the number of sections offered has not changed. Freshman Retention Statistics In 2002 40 incoming freshman indicated that they were chemistry majors, of these 40 students 35 were still enrolled in the university in fall of 2003 (88%). After 6 years of the initial 40 students 18 (45%) had graduated with a degree (not necessarily in chemistry) and 7 (18%) were still enrolled in a program at Georgia State University. Unfortunately the university defines retention by completing a program which means there is no way to track what the students' final major was. In fall 2007 a total of 65 students entered declaring as chemistry majors. As of Fall 2008 62 (95%) were still enrolled at Georgia State University. The 2007-2008 retention rate for Freshman was the highest of any program with 10% between the College of Arts and the College of Sciences. Again there is not a clear way to tell these statistics apart as some chemistry majors or if they have changed majors as the University tracks only students that are retained in the University. Much of the improved retention at the Freshman level can be attributed to three programs that have been implemented in the past three years; increased opportunities for advisement, direct dialogue between the university advisors and the department, and an increase in faculty and staff that advise. The most common complaint among students in 2006 was the difficulty to schedule advisement appointments. Since the implementation of sign-up sheets outside the Undergraduate Director's office students will not have to e-mail or call to make appointments. One of the major problems that the department has attempted to deal with with mixed success is the misinformation that is given to students by university advisors. This group includes the student advisement center, the FLC advisors and the Honors program advisors. Most of the problems have been solved by asking each of these groups to have students register for math and science courses based on departmental recommendations found on the web. We are still dealing with a few issues with the University program advisors that will hopefully be corrected during the upcoming registration for Fall 2009. The addition of an Undergraduate Coordinator has not only decreased the time that the Undergraduate Director can spend on advisement but has also increased the amount of time that the Undergraduate Director can spend on advisement and other issues by shifting some of the workload.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High
Projected Completion Date: 11/2009
Georgia State University  
Assessment Data by Section  
2011-2012 Chemistry MS  
As of: 12/12/2016 04:41 PM EST  
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

### Mission / Purpose

The Chemistry Department has long supported the University's mission. Our goals are to deliver a high quality instructional program at the graduate level to prepare our students for productive careers in academia, industry and government.

### Goals

**G 1: MS Program Goals**
The M.S. program's goal is to produce well trained professionals who possess a high level of proficiency in modern chemical techniques and knowledge of modern chemical problems.

### Outcomes/Objectives

**O/O 1: Communication (M: 1)**
Students will demonstrate the ability to 1. Communicate effectively in written and oral forms. 2. Read and demonstrate an understanding of scientific literature for content. 3. Critically analyze claims made in the scientific literature. 4. Demonstrate an understanding of scientific terminology. 5. Work effectively in group situations. 6. Students in the masters program must perform research and write a thesis or a non thesis paper detailing their work.

**O/O 2: Critical Thinking (M: 1)**
Students will demonstrate the ability to 1. Construct reasonable hypotheses while asking scientific questions. 2. Design and conduct investigations about a variety of chemical problems. 3. Understand and analyze experimental results. 4. Formulate and defend explanations of theory in chemistry. 5. Solve unique problems based on learned factual matter. 6. Effectively perform laboratory operations to collect appropriate experimental evidence in conjunction with 2.1 - 2.5. 7. Students will be able to apply theory learned in lecture courses to original research performed under the supervision of a faculty member.

**O/O 3: Technology (M: 1)**
Students will demonstrate the ability to 1. Use computer graphics. 2. Access chemical databases. 3. Access chemical literature. 4. Conduct molecular modeling of chemical structures. 5. Use normal word processing skills. 6. Use the internet and online resources. 7. Use state of the art instrumentation in order to solve novel problems in chemistry.

### Measures, Targets, and Findings

**M 1: Thesis / Project (O: 1, 2, 3)**
All thesis-based master's students will successfully defend a thesis, and all other master's students must write a non-thesis paper.

**Source of Evidence:** Senior thesis or culminating major project

**Target for O1: Communication**
All Master's students are required to write and defend a thesis of original cutting edge research which they have performed under the direction of a faculty member or if they are in the non-thesis master's program, they are required to write a non-thesis paper under the direction of a faculty member.

**Findings 2011-2012 - Target: Met**
100% write and defend a thesis successfully or write a non-thesis paper successfully before receiving degree.

**Target for O2: Critical Thinking**
All Master's students are required to write and defend a thesis of original cutting edge research which they have performed under the direction of a faculty member or if they are in the non-thesis master's program, they are required to write a non-thesis paper under the direction of a faculty member.

**Findings 2011-2012 - Target: Met**
100% write and defend a thesis successfully or write a non-thesis paper successfully before receiving degree.

**Target for O3: Technology**
100% will successfully write thesis and upload using the internet to digital archive following specific college guidelines and will use overhead projectors, computers, and other equipment during presentation or write and submit a non-thesis paper.

**Findings 2011-2012 - Target: Met**
100% of master's students defended thesis and uploaded thesis to digital archives or wrote a non-thesis paper.
### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Action Plan**
The masters plan meets all our objectives. Our plan is to continue this excellence with continued growth.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High
- **Responsible Person/Group:** Giovanni Gadda, Ph.D. (Graduate Director) Donald Hamelberg, Ph.D.

### Analysis Questions and Analysis Answers

**CTW Reflection 1:** Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

Students continue to demonstrate critical thinking and writing skills through end of semester research reports that follow specific format guidelines that require an abstract, introduction, scientific question, methodology, results, conclusions, and references. Each semester shows improvement. Additionally, students are involved annually in poster presentations, group meetings, thesis and dissertation proposals and presentations, and conferences.

**ACADEMIC PROGRAM QUESTION 1:**
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We plan to review and revise the assessment plan for the Department in 2013.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

No revisions this year.

---

### Georgia State University

**Assessment Data by Section**

**2011-2012 Chemistry PhD**

As of: 12/12/2016 04:41 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

### Mission / Purpose

The Chemistry Department has long supported the University's mission. Our goals are to deliver a high quality instructional program at the graduate level to prepare our students for productive careers in academia, industry and government.

### Goals

**G 1: Knowledge of Chemistry**
The goal of our program is to train research scientists. The core of the doctorate program in chemistry is to train students to employ the scientific method to solve real problems at the frontier of our understanding of matter, and to create new knowledge in their careers as leaders in academe, industry or government.

### Student Learning Outcomes/Objectives

**SLO 1: Communication Skill (M: 1, 2)**

Students will demonstrate the ability to 1. Communicate effectively in written and oral forms. 2. Read and demonstrate an understanding of scientific literature for content 3. Critically analyze claims made in the scientific literature 4. Demonstrate an understanding of scientific terminology. 5. Work effectively in group situations. 6. Students must perform and analyze and be able to relate experiments which address a current problem in the chemical sciences. This is demonstrated in a number of ways and includes oral presentations given during group meetings, poster presentations, and end of semester reports which summarizes research progress using the ACS style research paper guidelines. These guidelines are consistent with the following format: Title:Abstract:Introduction:Experimental Details or Theoretical Analysis:Results:Discussion:Conclusion:References. Our students are also encouraged to attend local, regional, national, and international conferences to present their research through poster and oral presentations.

### Other Outcomes/Objectives

**O/O 2: Critical Thinking (M: 1, 2)**

Students will demonstrate the ability to 1. Construct reasonable hypotheses while asking scientific questions. 2. Design and conduct investigations about a variety of chemical problems. 3. Understand and analyze experimental results Formulate and defend explanations of theory in chemistry 4. Solve unique problems based on learned factual matter. 5. Effectively perform laboratory experiments. Additionally, students are required to submit an end of semester report on their research which requires the student to formally go through the critical thinking process by providing a detail analysis of their research (each semester) using the ACS research format. All Ph.D. students are required to submit a dissertation proposal where they provide background and significance of
their research, present preliminary data, and propose and develop future experiments to test several hypothesis they propose in their dissertation proposal.

**O/O 3: Technology (M: 2)**
Students will demonstrate the ability to 1. Plan and conduct experiments using top of the line research instrumentation. 2. Use computer and computer graphics for data analysis. 3. Use computers and online resources to access chemical databases 4. Access chemical literature. 5. Use computer-based software to conduct molecular modeling of chemical structures 6. Use word processing software applications. 7. Use the internet and online resources. 8. Use state of the art instrumentation in order to solve problems in chemistry.

**O/O 4: Quantitative Skills (M: 1, 2)**

1. Use complex and advanced mathematical models and equations to solve complex problems to understand theory in chemistry, such as, for example, fitting of pH profiles of kinetic isotope effects and quantum mechanical tunneling of hydride ions in enzymatic and chemical reactions. 2. Understand error analysis to validate experimental results. 3. Translate problem situations into symbolic representations for the purpose of solving problems.

**O/O 5: Contemporary Issues (M: 1, 2)**
Students will demonstrate the ability to 1. Know how chemistry can help solve problems in society, for example, how the study of chemical structures and interactions create or solve disease states such as cancer and other diseases. 2. Understand chemical safety and waste control - and there impact on society. 3. Students must perform and analyze experiments which address a current problem in the chemical sciences.

### Measures, Targets, and Findings

**M 1: Qualifying Exam (O: 1, 2, 4, 5)**
All Ph.D. students must take both a written and an oral qualifying exam within the first two years of enrollment in the program. The written exam is administered using the ACS national exam in the student’s concentration or an equivalent exam. The Department of Chemistry specializes in research in the following chemistry areas: analytical, biochemistry, chemical education, organic/medicinal and computational/physical chemistry. The exam is graded by the faculty on a pass fail basis. Once the written exam is complete a committee is formed to administer the oral portion of the exam. The oral committee consists of two faculty members from the student’s concentration and one from outside the concentration. The student must give a presentation of his/her research and the committee evaluates the student’s expertise and knowledge by asking questions which maybe general in nature or related to the student’s research.

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O1: Communication Skill**
The target would be 87% of all PhD students will achieve a score of 80% or better.

**Findings 2011-2012 - Target: Met**
15 students took the written qualifying exam in December 2011 and June 2012 and of this group 13 passed the exam with a score of 80% or above.

**Target for O2: Critical Thinking**
The target would be 87% of all PhD students will achieve a score of 80% or better.

**Findings 2011-2012 - Target: Met**
15 students took the written qualifying exam in December 2011 and June 2012 and of this group 13 passed the exam with a score of 80% or above.

**Target for O4: Quantitative Skills**
The target would be 87% of all PhD students will achieve a score of 80% or better.

**Findings 2011-2012 - Target: Met**
15 students took the written qualifying exam in December 2011 and June 2012 and of this group 13 passed the exam with a score of 80% or above.

**Target for O5: Contemporary Issues**
The target would be 87% of all PhD students will achieve a score of 80% or better.

**Findings 2011-2012 - Target: Met**
15 students took the written qualifying exam in December 2011 and June 2012 and of this group 14 passed the exam with a score of 80% or above.

**M 2: Dissertation Defense (O: 1, 2, 3, 4, 5)**
All Ph.D. students are required to write and defend a dissertation of original cutting edge research which they have performed under the direction of a faculty member.

Source of Evidence: Senior thesis or culminating major project

**Target for O1: Communication Skill**
90% will write and defend a dissertation successfully.
Findings 2011-2012 - Target: Met
9 of 10 students successfully defended dissertation. The 10 student has made revisions and will graduate in the Fall, 2012.

Target for O2: Critical Thinking
90% will write and defend a dissertation successfully.

Findings 2011-2012 - Target: Met
9 of 10 students successfully defended dissertation. The 10 student has made revisions and will graduate in the Fall, 2012.

Target for O3: Technology
90% will successfully write their dissertation following specific college guidelines and will use overhead projectors, computers, and other equipment during presentation.

Findings 2011-2012 - Target: Met
9 out of 10 students successfully wrote dissertation and have graduated. One student has completed all written requirements and will graduate in Fall, 2012.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Continued Quality
Our goal is to continue excellence with our program’s growth.

Established in Cycle: 2005-2006
Implementation Status: Planned
Priority: High
Implementation Description: Fall 12
Responsible Person/Group: Giovanni Gadda, Ph.D.

continued quality and growth
The department has met all its goals and will continue to grow while keeping the quality of the program.

Established in Cycle: 2006-2007
Implementation Status: Planned
Priority: High
Responsible Person/Group: Giovanni Gadda, Ph.D.

Action Plan
The PhD program meets all our objectives. Our plan is to continue this excellence with continued growth.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
Students continue to demonstrate critical thinking and writing skills through end of semester reports, poster presentations, conferences, group meetings, thesis and dissertation proposals, and thesis and dissertation defenses.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
Students continue to be successful in presentations at poster sessions, thesis and dissertation defenses, group meetings, conferences, and end of semester reports.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
We plan to review and revise the assessment plan for the Department in 2013.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.
No revisions this year.

Georgia State University
Assessment Data by Section
2011-2012 Communication Assessment of Core
**Mission / Purpose**
The Department of Communication is firmly committed to the goals of academic excellence, strong research programs and international relevance set forth in the Georgia State University's Strategic Plan. The Department encompasses multiple professional, creative and research traditions, all of which are organized around the idea that central to the human experience is the use of symbols for the purposes of making and understanding meaning. As an academic unit, the Department is committed to cultivating a deeper appreciation of the creative and intellectual traditions of communication by providing students with critical thinking and media literacy skills, enhancing students' oral, written and visual communication processes through participation in cutting edge scholarly and artistic programs and collaborating with and enhancing the local, state, regional, national and global communities related to communication. Note: The Department has about 1,400 undergraduate majors; 108 major in Speech Communication.

**Student Learning Outcomes/Objectives**

SLO 1: Course Objectives for Speech 1000 (M: 1, 2, 3)
Students will demonstrate the ability to: 1. Choose and narrow a topic appropriately for the audience and occasion. 2. Communicate the thesis/specific purpose in a manner appropriate for audience and occasion. 3. Provide appropriate supporting material based on the audience and occasion. 4. Use an organizational pattern appropriate to the topic, audience, occasion and purpose. 5. Use language that is appropriate to the audience, occasion and purpose. 6. Use vocal variety in rate, pitch, and intensity to heighten and maintain interest. 7. Use pronunciation, grammar, and articulation appropriate to the designated audience. 8. Use physical behaviors that support the verbal message.

**Measures, Targets, and Findings**

M 1: Competent Speaker Measure (O: 1)
Competent Speaker evaluations were completed across all Speech 1000 sections, yielding data for 949 students in fall 2010 and 728 students in spring 2011. The eight performance competencies measured correspond to a universal grading form used in all Speech 1000 sections. Each performance competency was measured on a three-point scale, with 1 = unsatisfactory, 2 = satisfactory, and 3 = outstanding. The Competent Speaker scores range higher than one might intuitively expect due to the way in which the speech assignment operates within the Speech 1000 curriculum. Students are only provided a single opportunity to hone their public speaking skills; and instructors' evaluations often reflect an acknowledgement of the assignment's limited ability to improve the performance competencies targeted. Generally speaking, however, we might conclude that the assignment does improve oral competency among GSU undergraduates and reduce speech apprehension to some degree.

**Target for O1: Course Objectives for Speech 1000**
The Competent Speaker measure is used to grade the public speaking assignment in Speech 1000. Its criteria measure a wide range of oral communication skills, and students' scores have consistently ranged between 2 [satisfactory] and 3 [outstanding].

M 2: Personal Report of Communication Apprehension (O: 1)
In fall 2010 and spring 2011, all sections of Speech 1000 were selected for data interpretation using the PRCA-24 measure, producing 949 scores in fall 2010 and 728 scores in spring 2011. As indicated in the four tables above, the overall mean score showed an slight decrease in students' communication apprehension: from 60.19389 to 58.56832 in fall 2010; and from 61.68956 to 59.60308 in spring 2011. More specifically, these sections demonstrated a slight decrease in apprehension for the public communication scale: dropping from 18.451 to 17.43366 in fall 2010; and from 18.56593 to 17.38536 in spring 2011. The PRCA-24 measurement also showed a statistically smaller, but notable decrease in student communication apprehension in group, meeting and dyad situations. The results from the assessment measurement indicate stronger support for the hypothesis that Speech 1000 strengthens students' oral competency by enhancing their confidence in a variety of communication situations.

**Target for O1: Course Objectives for Speech 1000**
For the PRCA measure, collected data over the past six years has fallen consistently between the following scores: Group = 12-14; Meeting = 12-15; Dyad = 12-14; Public = 15-20; Overall (total) = 55-62. Using these ranges as the target for this year's assessment is reasonable because the data has consistently replicated and provided the necessary information to draw conclusions regarding the effectiveness of Speech 1000 in meeting the university, department, and course curriculum learning outcomes.

M 3: Willingness to Communicate (O: 1)
In fall 2010 and spring 2011, all sections of Speech 1000 were selected for data interpretation using the WTC measure, producing 949 scores in fall 2010 and 728 scores in spring 2011. As shown in the above tables, the fall 2010 mean score indicated an overall increase in students' willingness to communicate in the various situations, from 181.4056 pre-test to 196.3284 post-test. In fall 2010, the public communication score and communication with a stranger score both increased (from 21.66178 to 23.36701 and from 52.25136 to 57.24465 respectively) and logic suggests that the public speaking assignment in Speech 1000 is partly (but not wholly) responsible for these results. In fall 2010, all other situations showed an increase in students' willingness to communicate. As the data above indicates, the spring 2011 results showed an increase in students' willingness to communicate, from 181.2584 in the pre-test to 197.2571 in the post-test, as well as slight increases in all other measures.

**Target for O1: Course Objectives for Speech 1000**
For the WTC measure, collected data over the past five years has fallen consistently between the following scores: Public = 20-25; Meeting = 52-64; Group = 70-78; Dyad = 49-57; Stranger = 52-64; Acquaintance = 68-75; Friend = 63-71; Overall (total) = 188-205. Using these ranges as the target for this year's assessment is reasonable because the data has consistently replicated and provided the necessary information to draw conclusions regarding the effectiveness of Speech 1000 in meeting the university, department, and course curriculum learning outcomes.
Georgia State University
Assessment Data by Section
2011-2012 Communication Disorders MEd
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The Communication Disorders (CD) Program is a unit of the Educational Psychology & Special Education Department. The mission of the CD Program is to offer a high quality master’s degree program which educates students to implement evidence-based services across the scope of practice in speech-language pathology. The program will achieve this goal through the continual pursuit of excellence in academic and clinical education and by infusion of research and scholarly experiences appropriate to a master’s degree program. We will utilize the unique strengths of our community’s diverse population and our numerous affiliated sites to prepare fully-certified speech-language pathologists who are exceptionally well-qualified to work in schools, hospitals, private clinics, and rehabilitation programs throughout the state.

Goals
G 1: Meet Certification Requirements
CD Program graduates will meet national certification and state licensure requirements to be fully-certified.

G 2: Evidence Based Practice
CD Program graduates will be able to implement evidence-based services across the scope of practice in speech-language pathology.

Student Learning Outcomes/Objectives
SLO 1: Apply Prerequisite Knowledge (G: 1, 2) (M: 1, 9)
The student can apply the basic principles of biological science, physical science, and the behavioral/social sciences to communication sciences and disorders.

SLO 2: Describe Communication & Swallowing Processes (G: 1, 2) (M: 2, 10)
The student can describe normal communication and swallowing processes and behaviors including their biological, neurological, acoustic, psychological, developmental, and linguistic and cultural bases.

SLO 3: Discuss Communication & Swallowing Disorders (G: 1, 2) (M: 3, 4, 5, 6, 11)
The student can discuss the etiologies and characteristics of speech, language, hearing, and communication disorders and differences and swallowing disorders including anatomical/physiological, acoustic, psychological, developmental, and linguistic and cultural correlates.

SLO 4: Discuss Principles of Assessment and Intervention (G: 1, 2) (M: 3, 4, 5, 6, 7, 12)
The student can discuss the principles and methods of prevention, assessment, and intervention for people with communication and swallowing disorders including consideration of anatomic/physiological, acoustic, psychological, developmental, and linguistic and cultural correlates.

SLO 5: Apply Standards of Ethical Conduct (G: 1, 2) (M: 8, 13)
The student can discuss and apply the standards of ethical conduct.

SLO 6: Evaluate Research Relevance (G: 1, 2) (M: 8, 14)
The student can critically evaluate published theory and research to determine its relevance and application to clinical practice in communication disorders.

SLO 7: Discuss Contemporary Professional Issues (G: 1) (M: 8, 15)
The student can describe and discuss contemporary professional issues related to clinical standards and practice guidelines, federal and state regulations, site-specific rules, service delivery models, and practice management.

SLO 8: Outline Professional Credentials (G: 1) (M: 16)
The student can outline the requirements for state and national certification, specialty recognition, and licensure.

SLO 9: Demonstrate Appropriate Communication Skills (G: 1) (M: 17)
The student demonstrates oral and written communication skills appropriate to professional practice in communication disorders.
### SLO 10: Demonstrate Clinical Skills - Assessment (G: 1, 2) (M: 18)
The student accurately assesses clients with communication disorders and differences and swallowing disorders using formal and informal assessment procedures (including screening, prevention, and evaluation).

### SLO 11: Demonstrate Clinical Skills - Intervention (G: 1, 2) (M: 19)
The student develops and implements intervention programs that are functional, logical in sequence, and effective in changing client behavior.

### SLO 12: Demonstrate Appropriate Interpersonal Qualities (G: 1) (M: 20)
The student demonstrates appropriate collaborative and interpersonal skills and ethical behavior with clients, family members, and other professionals and is able to self-evaluate clinical performance.

### SLO 13: Apply Technology (G: 1, 2) (M: 6, 7, 21)
The student uses appropriate technology for clinical assessment and intervention and for professional productivity.

### SLO 14: Understand Linguistic & Cultural Diversity (G: 1, 2) (M: 2, 22)
The student demonstrates knowledge of linguistic and cultural issues related to communication and swallowing disorders and adapts assessment, treatment, and prevention plans and procedures to meet the individual needs as well as the linguistic and cultural differences of each client.

90% of students will score within the national average range or above.

Findings 2011-2012 - Target: Not Met
88% of students scored above or within the national average on this section of the Praxis II exam. 13 students scored within the average range; 2 scored above; 2 scored below.

Target for O7: Discuss Contemporary Professional Issues
90% of students will score within the national average range or above.

M 9: Portfolio Section 1 (Prereq Knowledge) (O: 1)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they have met the prerequisite requirements of the program.
Source of Evidence: Portfolio, showing skill development or best work

Target for O1: Apply Prerequisite Knowledge
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

Findings 2011-2012 - Target: Met
Students achieved 3.24 on this section of the portfolio.

M 10: Portfolio Section 2 (Comm & Swallow Process) (O: 2)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they can describe the normal communication and swallowing processes.
Source of Evidence: Portfolio, showing skill development or best work

Target for O2: Describe Communication & Swallowing Processes
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

Findings 2011-2012 - Target: Met
Students achieved a 3.94 on this section of the portfolio.

M 11: Portfolio Section 3 (Comm & Swallow Disord) (O: 3)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they can discuss the etiologies and characteristics of communication and swallowing disorders.
Source of Evidence: Portfolio, showing skill development or best work

Target for O3: Discuss Communication & Swallowing Disorders
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

Findings 2011-2012 - Target: Met
Students achieved a 3.94 on this section of the portfolio.
M 12: Portfolio Section 4 (Prin Assess & Interv) (O: 4)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they can discuss the principles and methods of prevention, assessment, and intervention.
Source of Evidence: Portfolio, showing skill development or best work

**Target for O4: Discuss Principles of Assessment and Intervention**
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2011-2012 - Target: Met**
Students achieved a 4.0 on this section of the portfolio.

M 13: Portfolio Section 5 (Stds Ethical Conduct) (O: 5)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they can discuss and apply the standards of ethical conduct.
Source of Evidence: Portfolio, showing skill development or best work

**Target for O5: Apply Standards of Ethical Conduct**
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2011-2012 - Target: Met**
Students achieved a 3.82 on this section of the portfolio.

M 14: Portfolio Section 6 (Eval Research) (O: 6)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they can critically evaluate published theory and research.
Source of Evidence: Portfolio, showing skill development or best work

**Target for O6: Evaluate Research Relevance**
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2011-2012 - Target: Met**
Students achieved a 3.88 on this section of the portfolio.

M 15: Portfolio Section 7 (Prof Issues) (O: 7)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must demonstrate that they can describe and discuss contemporary professional issues related to clinical standards, practice guidelines, and practice management.
Source of Evidence: Portfolio, showing skill development or best work

**Target for O7: Discuss Contemporary Professional Issues**
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2011-2012 - Target: Met**
Student achieved a 3.82 on this section of the portfolio.

M 16: Portfolio Section 8 (Prof Credentials) (O: 8)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must outline the requirements for national and state certification and licensure.
Source of Evidence: Portfolio, showing skill development or best work

**Target for O8: Outline Professional Credentials**
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2011-2012 - Target: Met**
Students achieved a 4.0 on this section of the portfolio.

M 17: Portfolio Section 9 (Comm Skills) (O: 9)
All master's degree students complete a portfolio to document their acquisition of knowledge and skills specified in the student learning outcomes for the CD Program. Each section aligns with one outcome and is rated on a scale of 1-4. For this section of the portfolio students must document that they have appropriate oral and written communication skills.
Source of Evidence: Portfolio, showing skill development or best work

**Target for O9: Demonstrate Appropriate Communication Skills**
Average rating of 3.0 or higher (on a rating scale of 1-4) for this section of the portfolio.

**Findings 2011-2012 - Target: Met**
Students achieved a 4.0 on this section of the portfolio.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Monitor student performance**

Two students scored below the national average on the Clinical Management subtest of the Praxis II exam. This was surprising for two
reasons; both students performed well in their clinical experiences, and the program graduates have met or exceeded the national average on this subtest every year since 2006-2007. The program faculty do not believe any action is needed at this time; however, the scores for this subtest will be monitored during the next two years for potential trends in student performance.

Reduction of Outcomes & Measures
Assessment process will be streamlined in 2012-2013.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

No changes this academic year.

ACADEMIC PROGRAM QUESTION 2:  What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Because our results were only 2% below our target, we will not be changing anything at this time.

Georgia State University
Assessment Data by Section
2011-2012 Communication MA
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The MA Program in Communication trains students to be innovative actors in the communications sectors--whether journalism, film and media making, public relations, international communication--while at the same time providing theoretical and methodological grounding for students wishing to pursue the doctorate.

Goals
G 1: Scholarly or creative excellence
Our highly diverse cohort of MA students can nonetheless be divided into two broad categories: those whose work is centered on scholarship and research, and those whose work is centered on the creative production of media work (films, videos, images, etc.). Students in the creative tracks are expected to develop a strong personal aesthetic vision as evidenced in their work, as well as a solid mastery of the technical demands of media production. Students in the research tracks are expected to produce a methodologically sound and theoretically rigorous scholarly exploration of a question central to the sub-field of communication which they are working in.

G 2: Broad understanding of communications fields
The MA in Communication trains students in a number of different sub-fields in our discipline, ranging from rhetorical studies to quantitative studies of media messages, from humanistic approaches to film and media to digital moving image production. Nevertheless, all students receiving the MA in Communication are expected to have a broad understanding of the various disciplines and interdisciplinary traditions that comprise the field of communication.

Student Learning Outcomes/Objectives
SLO 1: Understanding of scholarly and creative traditions (G: 2) (M: 1, 5, 6)
Students should demonstrate a command of the key texts in their area of specialization. These include theoretical and scholarly literature in the area; additionally, for the Film/Video specialization, it includes a breadth of knowledge of the important artistic works,
Strategic Plan Associations

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

**M 1: Assessment in Core Seminars: Literature and Theory (O: 1)**

Background: In the academic year 2010-11, we piloted an online system of end-of-course assessment for all graduate courses in the department. While some important information was gathered with this system, the data parsing and analysis proved to be an extreme burden on the limited number of faculty able to do it, and at the same time, we were getting lots of extraneous or irrelevant information. In light of this, last year's action plan included a complete rethinking of the graduate assessment in the department. In the Fall, the graduate director (Restivo) met with Marti Singer to discuss ways to implement a new assessment for a very complex graduate program with many areas of specialization. The grad director then mapped out some preliminary sets of rubrics and measures. Early in the Spring of 2012, the grad director met with each area of the doctoral and MA faculties, and worked with them to devise clear and relevant learning outcomes, rubrics, and measures for each of the tracks of the MA and PhD programs. We decided to designate key core courses in each area of the MA and PhD programs as those in which student performance would be measured. We developed learning outcomes which, while parallel throughout the various tracks, nevertheless are able to measure learning outcomes specific to the tracks, as well as learning outcomes which are expected across all the tracks. (See associated appended documents.) For the Mass Comm and Human Comm MA tracks, the core courses for assessment will be Issues and Perspectives in Communication, and Research Methods in Communication. New rubrics are being designed for both these courses, to more accurately pinpoint student performance across a variety of areas. For the Film-Media Studies area, the core courses for assessment will be Advanced Film Theory and Media History. The rubrics have been developed for Advanced Film Theory and are in the process of being developed for Media History. For the Film Production area, the core courses for assessment will be Advanced Film Theory and Media Expression. These rubrics have been developed.

Source of Evidence: Academic direct measure of learning - other

**Target for O1: Understanding of scholarly and creative traditions**

Because the new assessment forms for the MA are still in development, targets in some areas cannot be set yet. In the film MA, we would like to see students performing at level 3.0 in Advanced Film Theory. We have not yet devised the assessment form for Media History, the other core Film MA course. In the other MA tracks, we have not yet developed the assessment form for Issues and Perspectives in Communication, which measures competence in literature and theory.

**Findings 2011-2012 - Target: Not Met**

In the Film-Video track, assessment of this item was done in Advanced Film Theory. Findings: Knowledge of the aesthetic traditions of cinema/tv: 21% scored at 4; 29% scored at 3; 50% scored 2 or below. Thus half the students are scoring below expectations in this area. Knowledge of theoretical formations in the field: Again, we are seeing 50% to 64% scoring at 2 or below, ie, below our expected target. In the other MA tracks, this item could not be assessed last year because the relevant core course was not offered in the semester when the new system was adopted. No data yet.

**M 2: Assessment in Core Seminars: Research and Method (O: 3)**

For background narrative, see Description of Measure #1. For the Mass Comm and Human Comm MA tracks, the core courses for assessment will be Issues and Perspectives in Communication, and Research Methods in Communication. New rubrics are being designed for both these courses, to more accurately pinpoint student performance across a variety of areas. For the Film-Media Studies area, the core courses for assessment will be Advanced Film Theory and Media History. The rubrics have been developed for Advanced Film Theory and are in the process of being developed for Media History. For the Film Production area, the core courses for assessment will be Advanced Film Theory and Media Expression. These rubrics have been developed.

Source of Evidence: Academic direct measure of learning - other

**Target for O3: Understanding of research methods**

Because the new assessment forms for the MA are still in development, targets in some areas cannot be set yet. For two of the MA tracks, the assessment form has been developed (for the core course Research Methods in Communication). We still need to calibrate the rubrics so as to achieve meaningful assessments in this area. For the MA Film track, one question in the core
### M 6: Quality of creative or research thesis (O: 1, 2, 3)

Earlier versions of the thesis assessments were too vague, so we have developed new assessment forms which will measure competencies that correspond to those being measure in the core-seminar assessments. See appended documents.

Source of Evidence: Senior thesis or culminating major project

Target for O1: Understanding of scholarly and creative traditions

All students should score a 3 or higher; 40% of the students should score 4 or higher.

Target for O2: Written, oral, and media-making competencies

All students should score at least a 3 at level 3 or level 4.

**Findings 2011-2012 - Target: Not Met**

Here, the target should be 100% of theses at level 3 or level 4.

Not Reported This Cycle

### M 5: Quality of thesis prospectus and defense (O: 1, 2, 3)

Earlier versions of the thesis prospectus assessments were too vague, so we have developed new assessment forms which will measure competencies that correspond to those being measure in the core-seminar assessments. See appended documents.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Understanding of scholarly and creative traditions

All students should score a 3 or higher; 40% of the students should score 4 or higher.

Target for O2: Written, oral, and media-making competencies

Ideally, all students should score a 3 (good) or higher score on this measure.

**Findings 2011-2012 - Target: Not Met**

The discrepancy between the findings in the two areas needs to be addressed via alignment of rubrics across the department.

Not Met

### M 3: Assessment in Core Seminars: Writing (O: 2)

For Background Narrative, see the description in Measure #1. Rubrics for writing are incorporated into both the core seminar assessments and the assessments of prospectus and thesis. The rubrics are as follows: 5 - the final paper would be an effective writing sample for admission to a distinguished doctoral program; 4 - the final paper is quite effective, and could be used as a writing sample for doctoral admission; 3 - the paper is good, but requires a significant reconceptualization of the thesis, or a major reorganization of the argument, and/or a reconceptualization of the theoretical groundwork; 2 - the paper is weak in more than one of the areas in (3) above; 1 - the paper is not of graduate-seminar quality.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O2: Written, oral, and media-making competencies

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O2: Written, oral, and media-making competencies

Given that core seminars are generally taken in the first year of the MA program, we expect the outcomes to be lower than we would see for the thesis prospectus and thesis. The target is 80% of the students performing at 3 or higher, with 25% of the students performing at 4 or higher.

**Findings 2011-2012 - Target: Not Met**

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Develop Assessment Form for Creative Thesis**
- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High

**Develop Assessment form for Research Thesis**
- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High

**Develop Assessment Form for Thesis Prospectus**
Initially, our plan was to develop a simple form which will measure the student's level of competence in the various criteria outlined in the "Objectives" section of this report. At the end of a prospectus defense, the members of the committee would fill out these forms, and they would be filed and would exist solely for assessment purposes. We are still working on this form, as Thesis Prospectuses present unique challenges in terms of measurement. The Prospectus is necessarily an "imperfect" document: we expect there to be theoretical and/or methodological issues which it is the purpose of the Prospectus defense to help the student to resolve. Thus, the prospectus assessment form will need to take this into consideration. One way to do this would be to ask the examiners to assess how adept the student was, during oral defense, at thinking through the issues raised by committee members during the defense.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High
- **Projected Completion Date:** 10/2009
- **Responsible Person/Group:** Angelo Restivo. Graduate Committee.

**Incorporate more opportunities for revisions in core courses**
In the core theory-oriented courses (6010 and 6020) we should incorporate more opportunities for revisions of written work. These can be connected to shorter written assignment which focus on specific analytic or research skills.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** In-Progress
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Assessment in Core Seminars: Writing | Outcome/Objective: Written, oral, and media-making competencies
  - Measure: Quality of creative or research thesis | Outcome/Objective: Written, oral, and media-making competencies
  - Measure: Quality of thesis prospectus and defense | Outcome/Objective: Written, oral, and media-making competencies
- **Projected Completion Date:** 03/2010
- **Responsible Person/Group:** Graduate Committee, Graduate Faculty

**Measure student engagement with new media**
On hold. Once we implement the end-of-year reporting system for all MA students, then we can set measures and targets for this.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** On-Hold
- **Priority:** High
- **Implementation Description:** This would be done by required submission of end-of-year cv (or other list) detailing activities in this area, delivered to the graduate directors.
- **Responsible Person/Group:** Restivo

**Post-defense writing assignment for prospectuses rated "fair"**
Since a prospectus which passes, even with fair evaluations by the committee, does not need to be rewritten, we should begin to encourage chairs of committees, in cases where the committee evaluation of the prospectus was 'fair' in any category, to assign the student the task of writing a several page summary of the issues raised by the committee and the steps the student will take to address those issues.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Quality of creative or research thesis | Outcome/Objective: Written, oral, and media-making competencies
  - Measure: Quality of thesis prospectus and defense | Outcome/Objective: Written, oral, and media-making competencies
- **Responsible Person/Group:** Graduate Faculty
Annual reports submitted by all grad students

While our MA students are highly active in their participation in film festivals, engagement with new media, and in other creative and scholarly activities, we do not consistently gather information here. Typically, we only see the cv's of MA students if they have a teaching assignment. Thus, beginning this year, we will require all MA students to complete a questionnaire in which they describe in detail the various outside activities, recognitions, and so forth that they have been involved in. These can include film festival participation; new media work; conferences or publications; etc. After this is in place, we can develop a measure and a target for these activities.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Projected Completion Date: 03/2012
Responsible Person/Group: Graduate Committee.

Begin new assessment system based on data collected 2010-11

Background: Last year, the department implemented an online evaluation system with six rubrics, for all MA and doctoral students in the program, for every course that they took. The results were aggregated by year-in-program, program of study, and were averaged for each student across all the seminars the student took. The results have been reported throughout this WEAVE report as finding; in addition, the raw data and the interpretation of that data has been deposited in the document repository. The amount of data collected has given us valuable information with which to move forward in assessment (see below); while at the same time, it would be overkill to collect all this data every semester. (For one thing, it required that two tenure-track faculty spend over 50 hours of work during summer research time crunching data; this is clearly not something we can do on a regular basis.) Thus, we plan to redo this assessment in 7 years; in the meantime we plan to use the results to focus on targeted areas for assessment, in order to come up with more concrete revisions of curriculum, assignments, and so on. To this end, a subcommittee of the Graduate Committee will devise a system of rubrics that begins at the thesis and prospectus. Then we will target two courses during coursework which will serve as assessment courses, so that we can measure student progress at every stage of the program. Because there are several very different tracks in the Communications MA program, we have not decided yet whether we will develop separate rubrics for each track, or whether we can have common rubrics. (However, we definitely will need a separate set of rubrics for the creative work done in the film production area.) The data gathered from last year should help us determine this. Once the grad committee has drafted the new integrated set of rubrics, then they will be given to the faculty in each area, where further revisions will be done. We expect the entire set of rubrics to be ready by the end of Spring semester 2012.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Assessment in Core Seminars: Literature and Theory | Outcome/Objective: Understanding of scholarly and creative traditions
- Measure: Assessment in Core Seminars: Research and Method | Outcome/Objective: Understanding of research methods
- Measure: Assessment in Core Seminars: Writing | Outcome/Objective: Written, oral, and media-making competencies

Projected Completion Date: 03/2012
Responsible Person/Group: Graduate committee; all graduate faculty

Review the content of the Advanced Film Theory course

Because the Film-Video program mixes students who are doing production with students who are doing critical studies, and because we accept students into the program with varied undergraduate majors and backgrounds, it is expected that there would be unevenness in knowledge of the canon. However, it would make sense to call an area meeting of production and film theory faculty to address how the course might more effectively get students up to speed.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Assessment in Core Seminars: Literature and Theory | Outcome/Objective: Understanding of scholarly and creative traditions
- Measure: Assessment in Core Seminars: Research and Method | Outcome/Objective: Understanding of research methods
- Measure: Assessment in Core Seminars: Writing | Outcome/Objective: Written, oral, and media-making competencies

Implementation Description: Series of area meetings of those faculty who teach film theory, and the production faculty.
Projected Completion Date: 12/2012
Responsible Person/Group: Angelo Restivo

Revise new rubrics for the Research Methods course

The findings for student performance in the Research Methods course were unusually high, and were not in sync with either previous years' findings or with the findings from this year's film-video track assessments. Thus, the area faculty who teach this course need to develop a set of measures and rubrics that will give more nuanced results of student performance here.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Assessment in Core Seminars: Research and Method | Outcome/Objective: Understanding of research methods
- Measure: Assessment in Core Seminars: Writing | Outcome/Objective: Written, oral, and media-making competencies

Implementation Description: Meetings with relevant area faculty.
Projected Completion Date: 12/2012
Responsible Person/Group: Angelo Restivo; graduate committee.
**Student Learning Outcomes/Objectives**

**SLO 1: Knowledge of Literatures (G: 1) (M: 1, 6, 7, 8)**

Because all three of our doctoral tracks are highly interdisciplinary, the students in each track are expected to have solid mastery of the diverse literatures informing their particular area of study. Background: In the academic year 2010-11, we piloted an online system of end-of-course assessment for all graduate courses in the department. While some important information was gathered with this system, the data parsing and analysis proved to be an extreme burden on the limited number of faculty able to do it, and at the same time, we were getting lots of extraneous or irrelevant information. In light of this, last year’s action plan included a complete rethinking of the graduate assessment in the department. In the Fall, the graduate director (Restivo) met with Marti Singer to discuss ways to implement a new assessment for a very complex graduate program with many areas of specialization. The grad director then mapped out some preliminary sets of rubrics and measures. Early in the Spring of 2012, the grad director met with each area of the doctoral and MA faculties, and worked with them to devise clear and relevant learning outcomes, rubrics, and measures for each of the tracks of the MA and PhD programs. We decided to designate key core courses in each area of the MA and PhD programs as those in which student performance would be measured. We developed learning outcomes which, while parallel throughout the various tracks, nevertheless are able to measure learning outcomes specific to the tracks, as well as learning outcomes which are expected across all the tracks. (See uploaded documents.) For the doctoral programs, we developed new, and much more nuanced, rubrics for measuring performance on the comprehensive exams, specific to each area. Thus, measurements of outcomes on the comprehensive exams are now directly tied to measurements of learning outcomes of specific core seminars. (See uploaded documents.) In this way, we will be able to track over time how students are performing from coursework to comprehensive exams. If, for example, we identify an area of consistently weak performance in one of the area core courses, we can then add this area as a measure in the comprehensive exams, and thus be able to ascertain what kinds of curricular change would be warranted, given the particularities of the area.

**SLO 2: Research and Method (G: 1) (M: 3, 6, 7, 8)**

Research and Method: Students are expected to be able to formulate a research problem which poses a significant and original intervention in the field. They are able to select both the appropriate objects of study and the appropriate theoretical tools pertinent to addressing this problem. Background: In the academic year 2010-11, we piloted an online system of end-of-course assessment for all graduate courses in the department. While some important information was gathered with this system, the data parsing and analysis proved to be an extreme burden on the limited number of faculty able to do it, and at the same time, we were getting lots of extraneous or irrelevant information. In light of this, last year’s action plan included a complete rethinking of the graduate assessment in the department. In the Fall, the graduate director (Restivo) met with Marti Singer to discuss ways to implement a new assessment for a very complex graduate program with many areas of specialization. The grad director then mapped out some preliminary sets of rubrics and measures. Early in the Spring of 2012, the grad director met with each area of the doctoral and MA faculties, and worked with them to devise clear and relevant learning outcomes, rubrics, and measures for each of the tracks of the MA and PhD programs. We decided to designate key core courses in each area of the MA and PhD programs as those in which student performance would be measured. We developed learning outcomes which, while parallel throughout the various tracks, nevertheless are able to measure learning outcomes specific to the tracks, as well as learning outcomes which are expected across all the tracks. (See uploaded documents.) For the doctoral programs, we developed new, and much more nuanced, rubrics for measuring performance on the comprehensive exams, specific to each area. Thus, measurements of outcomes on the comprehensive exams are now directly tied to measurements of learning outcomes of specific core seminars. (See uploaded documents.) In this way, we will be able to track over time how students are performing from coursework to comprehensive exams. If, for example, we identify an area of consistently weak performance in one of the area core courses, we can then add this area as a measure in the comprehensive exams, and thus...
be able to ascertain what kinds of curricular change would be warranted, given the particularities of the area. At the doctoral level, after the comprehensive exam assessment, we will use common forms for assessing dissertation prospectuses and dissertations. These will lie in to the learning outcomes which are common throughout all the tracks of the PhD program. (Assessment forms uploaded in documents.)

Strategic Plan Associations

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

3.6 Other efforts in support of Goal 3 (Leading Public Research University).

SLO 3: Proficiency in communication theory (G: 1) (M: 2, 6, 7, 8)

Demonstrated ability to comprehend and engage the full range of communication theories in the student’s area (Rhetoric/Politics, Media/Society, or Moving Image Studies), including an understanding of the intellectual contexts in which these theories evolved, and the specific problems they attempt to address.

SLO 4: Proficiency in writing (G: 1) (M: 4, 7, 8, 9, 10)

Writing: the student is able to effectively present research in writing, mobilizing the skills assessed in items 1, 2, and 3 above: that is, once an appropriate research problem is identified, the student is able to cogently and effectively orchestrate his/her knowledge of the literature and theory to present a well-organized, clearly written, and effective argument.

Strategic Plan Associations

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

SLO 5: Strong oral presentation and advocacy skills (G: 3) (M: 5)

The doctoral student is expected to be able to present orally both analytical summaries of the work of others in the field, and their own research. They are also expected to be able to make pointed interventions in discussions and question/answer sessions, both in relation to their own work and the work of colleagues.

Strategic Plan Associations

3.1 Enhance a research culture.

3.6 Other efforts in support of Goal 3 (Leading Public Research University).

SLO 6: Teaching excellence (G: 2)

Demonstrated excellence in teaching courses in both the introductory courses in the field and in the student’s areas of specialization.

Other Outcomes/Objectives

O/O 7: Professional development (G: 3) (M: 9, 10)

Students are expected to regularly present their work at the professional conferences in the field, and to regularly submit written work for publication. Students are also encouraged to take an active role in the graduate student caucuses of the professional organization in their area.

O/O 8: Increase student engagement with new media

Now that the Communication Department has taken over editorship of the online journal In Media Res (under the editorship of Alisa Perren), the opportunities for doctoral student involvement in new media work has increased. [In Media Res is not simply an online journal which follows the template of conventional journals; rather, it is a site for curated interventions in the mediascape, incorporating moving images and text. As such, it exemplifies a different type of scholarship that is emerging, one more fully connected to the idea of “trans-media” that is currently gaining conceptual currency.]

Measures, Targets, and Findings

M 1: Assessment in Core Seminars: knowledge of the literature (O: 1)

Several rubrics on our new assessment forms measure knowledge of the literature in core courses. The standards set forth are as follows: Course content: overall literature: 5 – student has read and mastered a good deal of the literature in the field over and above the material on the course reading list. Student fully understands the intellectual contexts within or against which the various developments within the field have positioned themselves. You could comfortably recommend that the student would be able to teach this material in a graduate seminar. 4 – student demonstrates a clear mastery of the literature in the field, largely from the course readings but with significant areas of reading outside the required material. The student likely received an ‘A’ in the course. The student is not yet an expert in the area covered in the seminar; or the student—given her/his research interests—may not need to become an expert in the area. 3 – student has a good mastery of the literature of the area, with few if any major gaps. Much of the student’s knowledge of the area comes from the readings required in the course. 2 – there are some significant gaps in the student’s knowledge of the literature of the area. 1 – there are wide gaps in the student’s knowledge of the literature of the area.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Knowledge of Literatures

Target: 25% perform at level 4 or 5; 75% perform at level 3.

Findings 2011-2012 - Target: Not Met

Note: MIS = Moving Image Studies; MS = Media & Society; RP = Rhetoric & Politics In MIS, Historiography was the core seminar assessed. Findings: All students scored 3 in awareness of and engagement with historiographic theory. Our target is partially met, insofar as we expect 80% to measure at 3 or higher. We would like to see a percentage of students performing at level 4. But given the newness of the system, we should collect more data on this area before making curricular
adjustments. In RP, two students (or 22%) scored an average 3 in knowledge of the background literature, while the remainder of the class (88%) exhibited below average background knowledge. In MS, 50% of the core-class students scored 4, and 50% scored 5. (Given the disparity between the results in the Media & Society area vs the results in other areas, it is suspected that the rubrics in MS were not in alignment with those of other areas.)

M 2: Assessment in Core Seminars: Theory (O: 3)
Several rubrics on our new assessment forms measure knowledge of the literature in core courses. The standards set forth are as follows: Course content: theory - 5 - sophisticated knowledge of theoretical issues pertaining to the course, going well beyond the required readings, with an understanding of the historical and intellectual contexts of all major theoretical positions, and most importantly, evidence that the student can make theoretical interventions of some degree of originality. 4 - excellent knowledge of theoretical issues pertaining to the course, going somewhat beyond the required readings, and evidencing some degree of historical and intellectual contexts of debates. The student feels comfortable making theoretical interventions, though there might be some awkwardness of execution. 3 - student evidences a good command of theoretical groundings of the course, and can accurately summarize them, but is insecure in making theoretical interventions, and needs to understand the intellectual contexts of theoretical developments more clearly. 2 – the student has shown some difficulty in accurately summarizing theoretical arguments, in commanding theoretical vocabulary, and in making theoretical interventions. 1 – the student’s knowledge of theory is inadequate to do doctoral-level research.

Source of Evidence: Academic direct measure of learning - other

Target for O2: Research and Method
Target: 80% perform at level 3 or higher; 40% perform at levels 4 or 5.

Findings 2011-2012 - Target: Partially Met
Note: MIS = Moving Image Studies; MS = Media & Society; RP = Rhetoric & Politics MIS: 60% scored 4 or higher on soundness of project design (with only 1 student falling below the target 3). Similarly 70% scored 4 or higher on search for and use of historical data; with again only one student falling below the target. RP: Significantly, 100% of the students were able to perform textual analysis at above-average levels (all scoring 4). In the area of formulating a significant research question, 88% scored at level 3, while 22% scored below average at 2. Awareness of historical positioning of discourses; here we see 22% scoring at level 3, while 88% are scoring at level 2. Finally, in terms of ability to select objects of study and theoretical literature so as to produce productive conversation: 22% level 3; 77% level 2; 1 student at level 1. MS: Four questions covered methods (incl research design, data interp, evaluation); All students scored 4 or above. The wide variation in the results in the 3 tracks suggests that the results might be idiosyncratic to the instructors, and/or due to differences in interpretation of the rubrics of measurement. Thus, before doing more sweeping changes, we need to fine tune the measures and rubrics so that they yield relatively consistent results across the areas.

M 3: Assessment in Core Seminars: Research and Method (O: 2)
Two questions assess in this area: one question assesses ability to formulate a significant research question, and the second assesses the ability to select appropriate objects of study and theoretical discourses suitable to the research question.

Source of Evidence: Academic direct measure of learning - other

Target for O2: Research and Method
Target: 80% perform at level 3 or higher; 40% perform at levels 4 or 5.

Findings 2011-2012 - Target: Partially Met
Note: MIS = Moving Image Studies; MS = Media & Society; RP = Rhetoric & Politics MIS: 60% scored 4 or higher on soundness of project design (with only 1 student falling below the target 3). Similarly 70% scored 4 or higher on search for and use of historical data; with again only one student falling below the target. RP: Significantly, 100% of the students were able to perform textual analysis at above-average levels (all scoring 4). In the area of formulating a significant research question, 88% scored at level 3, while 22% scored below average at 2. Awareness of historical positioning of discourses; here we see 22% scoring at level 3, while 88% are scoring at level 2. Finally, in terms of ability to select objects of study and theoretical literature so as to produce productive conversation: 22% level 3; 77% level 2; 1 student at level 1. MS: Four questions covered methods (incl research design, data interp, evaluation); All students scored 4 or above. The wide variation in the results in the 3 tracks suggests that the results might be idiosyncratic to the instructors, and/or due to differences in interpretation of the rubrics of measurement. Thus, before doing more sweeping changes, we need to fine tune the measures and rubrics so that they yield relatively consistent results across the areas.

M 4: Assessment in Core Seminars: Writing (O: 4)
Two questions in the assessment measure writing skills, with the rubrics as follows: Overall writing effectiveness: 5 - the final paper can with very minor revisions be submitted to a journal 4 - the final paper is quite effective, but would require some substantial revision(s) before submission to a journal 3 - the paper is good, but requires a significant reconceptualization of the thesis, or a major reorganization of the argument, and/or a reconceptualization of the theoretical groundwork 2 - the paper is weak in more than one of the areas in (3) above 1 - the paper is not of graduate-seminar quality

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O4: Proficiency in writing
Target: 80% perform at level 3 or higher, 40% perform at levels 4 or 5.

Findings 2011-2012 - Target: Partially Met
Note: MIS = Moving Image Studies; MS = Media & Society; RP = Rhetoric & Politics MIS: 60% evaluated at 4 or higher on soundness of project design (with only 1 student falling below the target 3). Similarly 70% scored 4 or higher on search for and use of historical data; with again only one student falling below the target. RP: Significantly, 100% of the students were able to perform textual analysis at above-average levels (all scoring 4). In the area of formulating a significant research question, 88% scored at level 3, while 22% scored below average at 2. Awareness of historical positioning of discourses; here we see 22% scoring at level 3, while 88% are scoring at level 2. Finally, in terms of ability to select objects of study and theoretical literature so as to produce productive conversation: 22% level 3; 77% level 2; 1 student at level 1. MS: Four questions covered methods (incl research design, data interp, evaluation); All students scored 4 or above. The wide variation in the results in the 3 tracks suggests that the results might be idiosyncratic to the instructors, and/or due to differences in interpretation of the rubrics of measurement. Thus, before doing more sweeping changes, we need to fine tune the measures and rubrics so that they yield relatively consistent results across the areas.

M 5: Assessment in Core Seminars: Oral advocacy (O: 5)
Two questions in the core course assessment will assess student skills in presenting material orally. Because previous WEAVE reports have indicated to us that oral presentation and advocacy skills are strongly developed among our doctoral students, we will temporarily put this measure on hold, as we focus on other areas more in need of monitoring.

Source of Evidence: Presentation, either individual or group
### Target for O5: Strong oral presentation and advocacy skills

These rubrics were set deliberately high, and the "1"s are designed to represent the standards of the profession. Since the assessments will be done at the end of every seminar, every semester, we will be able to track how aggregate performance moves during the years of coursework. By the end of coursework, we expect all students to be performing at the level of 2 or better; students in the first year of coursework might be expected to fall between 2 and 3, with a small percentage falling below 3.

**Findings 2011-2012 - Target: Not Reported This Cycle**

Because, in the last several reporting cycles, our students have consistently met or exceeded targets in the oral advocacy area, we are not going to be measuring this in the next few cycles.

### M 6: Comprehensive doctoral examinations (O: 1, 2, 3)

The new Comprehensive Exam assessment form was designed specifically to integrate with the assessment forms developed for course work above. The assessment of comprehensive exams will be specific to each doctoral track, and will provide summarizing information which will connect back to assessment information gathered from the seminars. We have designed the comprehensive exam assessment to allow us to add specific rubrics for each doctoral track, depending upon what we discover as we assess performance in seminars. Thus, if we find that students in one of the tracks are consistently scoring low in one specific area of the field, we can then add that as an area of assessment in the comprehensive exams, with the intention that if the weakness has not been ameliorated by the time of comprehensive exams, then a revision of the curriculum in relation to that area would be advisable.

*Source of Evidence: Comprehensive/end-of-program subject matter exam*

### Target for O1: Knowledge of Literatures

By the time of comprehensive exams, students should be performing at a higher aggregate level than in the seminars. 75% should perform at level 4 or 5, while all should perform at level 3 or higher, in all areas measured.

**Findings 2011-2012 - Target: Not Reported This Cycle**

Because only a small number of comprehensive exams were taken in the period after the adoption of the new assessment system, these findings will be aggregated with those of the current academic year and reported in the next cycle.

### Target for O2: Research and Method

By the time of comprehensive exams, students should be performing at a higher aggregate level than in the seminars. 75% should perform at level 4 or 5, while all should perform at level 3 or higher, in all areas measured.

**Findings 2011-2012 - Target: Not Reported This Cycle**

Because only a small number of comprehensive exams were taken in the period after the adoption of the new assessment system, these findings will be aggregated with those of the current academic year and reported in the next cycle.

### Target for O3: Proficiency in communication theory

By the time of comprehensive exams, students should be performing at a higher aggregate level than in the seminars. 75% should perform at level 4 or 5, while all should perform at level 3 or higher, in all areas measured.

**Findings 2011-2012 - Target: Not Reported This Cycle**

Because only a small number of comprehensive exams were taken in the period after the adoption of the new assessment system, these findings will be aggregated with those of the current academic year and reported in the next cycle.

### M 7: Assessment of Dissertation Prospectus (O: 1, 2, 3, 4)

In the newly adopted assessment plan put in place in Spring of 2012, we decided to begin assessing doctoral dissertation prospectuses and dissertations, which in the past had not been assessed. Because only a very small number of prospectuses were defended in the period between the development of the measure and the end of the cycle, it is too early to develop targets or report findings here. Prospectuses will be aggregated with those defended in the current academic year, and results will be reported in next cycle.

*Source of Evidence: Senior thesis or culminating major project*

### M 8: Assessment of Dissertation (O: 1, 2, 3, 4)

In the newly adopted assessment plan put in place in Spring of 2012, we decided to begin assessing doctoral dissertation prospectuses and dissertations, which in the past had not been assessed. Because only a very small number of dissertations were defended in the period between the development of the measure and the end of the cycle, it is too early to develop targets or report findings here. Dissertation assessments will be aggregated with those defended in the current academic year, and results will be reported in next cycle.

*Source of Evidence: Senior thesis or culminating major project*

### M 9: Presentation at conferences (O: 4, 7)

Students are expected regularly to present conference papers at both the international professional organizational conferences in their area, and at smaller, boutique conference related to their specific line of research. In our annual review meetings we now do an annual credential check, requiring CV submission, and those are carefully discussed so that ongoing plans of study are matching actual accomplishment. (Note: we are splitting a current measure, "Conferences and Publications," into two separate measures, as achievements are significantly different in the two areas.)

*Source of Evidence: Presentation, either individual or group*

### Target for O7: Professional development

All doctoral students are expected to present, minimally, one conference paper per year (after the first year in the program), and to publish at least one article before defending the dissertation.
Conference Presentations: Overall our doctoral students perform well in getting work presented at conferences. This year, the total number of conferences presentations was 76. The breakdown: Local 10, Regional 18, National 44, International 4.

M 10: Publication in peer reviewed journals (O: 4, 7)
While this is an indirect measure, we feel that it is very important that we measure and report the number and types of publications and conference presentations of the doctoral students. Several years ago, we instituted the doctoral writing proseminar expressly to allow students to turn seminar papers into papers ready to send out for journal review. We want to track over time whether or not this results in increased publication among the doctoral students.

Source of Evidence: Academic indirect indicator of learning - other

Target for O4: Proficiency in writing
The aggregate number of publications among the doctoral students should increase to reflect a 50% annual publication rate: ie, the number of publications accepted in any given year should rise to 50% of the doctoral cohort.

Findings 2011-2012 - Target: Partially Met
Publication: This year, 2 chapters and 1 journal article appeared in print, while 8 chapters and 10 journal articles were in press in April 2012. Eight articles were under review at journals, and we saw a total of 7 books reviews, encyclopedia entries, and conference proceedings. Comparing this to last year’s data: in 2010-11, 2 book chapters appeared in print, with 10 forthcoming; 3 journal articles appeared, with 3 forthcoming; and 3 book reviews were published. Thus, if we assume that of the 13 forthcoming 2011 articles, 3 appeared in print, this means that 10 of the 18 articles in press in 2012 were submitted in 2011. We can thus conclude that 8 of the articles in press in 2012 were accepted, revised, and in press during the year. This tells us that our students have increased their activity in successfully getting their work out to publication, which was what the Writing Proseminar was intended to achieve as its result. Again, while this is an indirect measure, we will continue to monitor this to see whether students maintain and increase this higher level of publication activity; the results can be used to decide how to structure the important Writing Proseminar for the highest effectiveness.

Target for O7: Professional development
We will not adopt a rigid target percentage on this, except that all students should have at least one article accepted in a peer-reviewed journal or collection by the final year of dissertation writing (as they prepare to go on the job market). The reasons for this flexibility are that, first, there is legitimate disagreement among graduate educators whether doctoral students should take time away from dissertation writing to produce journal articles; and second, the time-frames of academic journal publishing (ie, from the time of submission, to ‘revise-resubmit,’ to final acceptance) vary so widely that one cannot set expectations that are tied to academic years.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Increased opportunity to revise written work
Currently, slightly over 50% of our doctoral seminars incorporate paper revision into the seminar. We would like to encourage faculty to adopt this practice more widely. One of the systems we would advocate is to have the students present short versions of the final paper orally to the seminar as a conference presentation, and then use the resulting feedback to revise the paper for final submission. This is already done in some seminars; we would like to see it more widely adopted in doctoral syllabi.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):

- Measure: Assessment in Core Seminars: Writing | Outcome/Objective: Proficiency in writing
- Measure: Comprehensive doctoral examinations | Outcome/Objective: Proficiency in communication theory
- Measure: Publication in peer reviewed journals | Outcome/Objective: Professional development

Institute prospectus writing workshop
In Fall 2009, we began to offer a prospectus writing workshop for all students who had completed coursework (whether or not they had taken comps yet). We believe that this workshop will not only help doctoral students avoid the post-comprehensive-exams "doldrums," which often drains out the period during which the prospectus is written; but that it will also help the student in the publication process, as the completed prospectus can serve as a kind of template for planning which areas of the dissertation would be best suitable for sending out for publication during the writing process.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Presentation of work at conferences | Outcome/Objective: Professional development

Integrate Center for Teaching/Learning feedback into grad teaching
Beginning this semester, our two undergraduate Film core courses (which are the entry-level courses for new graduate GTAs to teach) have incorporated Center for Teaching and Learning feedback sessions early in the semester. We should adopt this in all of our large undergraduate core courses (those which have course directors), so as to provide new GTAs with feedback early. We should also encourage more of our experienced GTAs teaching stand-alone courses to utilize this resource.

Established in Cycle: 2008-2009
Implementation Status: On-Hold
Priority: High
Projected Completion Date: 04/2010

Findings 2011-2012 - Target: Met

Publication: This year, 2 chapters and 1 journal article appeared in print, while 8 chapters and 10 journal articles were in press in April 2012. Projected Completion Date: 04/2010
More faculty observation of student teaching
We are planning to have all GTAs be observed at least once per academic year by a faculty mentor.

- Established in Cycle: 2008-2009
- Implementation Status: On-Hold
- Priority: High
- Projected Completion Date: 04/2010

Revised doctoral proseein curriculum
At the initiative of the Graduate Committee, and with the approval of the entire faculty, we have initiated a new proseminar format which is focused on faculty and student presentation of research in progress. Students will now be required to present work in prosemin at least twice during their doctoral residence, once before comprehensive exams, and once in the dissertation-writing period. We believe that this shift in focus in the proseminar will help bring the students more quickly up to speed in the theoretical foundations of the field, and in their oral and written proficiency.

- Established in Cycle: 2008-2009
- Implementation Status: Finished
- Priority: High
- Relationships (Measure | Outcome/Objective):
  - Measure: Presentation of work at conferences
  - Outcome/Objective: Professional development
- Implementation Description: We have already begun the new proseminar format; we will monitor its effectiveness during the year.
- Projected Completion Date: 08/2009

Bring top doctoral applicants to department in mid February
Now that we have moved the application deadlines up to December 1, we are planning to bring to the department our top doctoral applicants in mid February; we believe that we can significantly improve our yield in doctoral student recruitment by exposing them to the faculty and grad students in the department.

- Established in Cycle: 2009-2010
- Implementation Status: In-Progress
- Priority: High
- Implementation Description: Has been in place now for the past 2 years.
- Responsible Person/Group: Cheshier, Graduate Committee, all area faculty

Continue annual manuscript workshops with senior scholars
The first workshop with Dudley Andrew from Yale was a great success, and the upcoming workshop with Ernesto Laclau promises to be the same. By continuing the bring the highest-level scholars to our department, we expect to increase departmental visibility both nationally and internationally, and thus increase the quality of our doctoral applicant pool.

- Established in Cycle: 2009-2010
- Implementation Status: Finished
- Priority: High
- Responsible Person/Group: Cheshier; departmental faculty

Continue the Moving Image Studies conference
Currently, the Moving Image Studies conference set for Feb 2011 promises to bring a highly visible group of scholars together under the theme of “Rendering the Visible.” The area should consider continuing this conference, perhaps biennially given the vast time commitments a conference like this requires, rotating themes and principal faculty.

- Established in Cycle: 2009-2010
- Implementation Status: Finished
- Priority: High
- Responsible Person/Group: Restivo; MIS area faculty

Institute earlier application deadlines for graduate application
Because the Grad Committee discovered that we were losing our best applicants to other programs in part because our application deadlines were so late in the cycle, we moved the doctoral application deadlines to Dec 1 (Feb 1 for no GTA consideration); and the MA deadlines to Feb 1/ Mar 15. This is in keeping with other, competitive departments’ deadlines.

- Established in Cycle: 2009-2010
- Implementation Status: Finished
- Priority: High
- Responsible Person/Group: Graduate Committee, in consultation with Graduate Admissions (Amber Amari, Chad Van Gorden)

Investigate option for non-thesis MA
The Graduate Committee has charged a subcommittee with investigating the possibility of a non-thesis MA, for those students coming out of a BA program who want to move quickly into the PhD track. We may be losing some of the best applicants to doctoral programs in our areas because of we cannot provide a faster track toward the doctorate. This policy (which is currently only under consideration, and would need to be approved by the Executive Committee and eventually the entire faculty) is in keeping with the practices of many graduate departments in our field (especially in the moving image studies area).

- Established in Cycle: 2009-2010
- Implementation Status: Finished
- Priority: High
- Implementation Description: Non-thesis option adopted 2011.
- Responsible Person/Group: Graduate Committee

Revamp end-of-semester online assessment of doctoral students
Given the described problems in the current set of data generated by the pilot assessment year, the following recommendations have been presented to the Graduate Committee: 1. Aggregate data by student for each semester; 2. Assign semester-in-program numbers to each student and generate data spreads under that variable. 3. Revise the evaluation questionnaire both to a/ eliminate redundancies; and b/ eliminate categories that will not lead to identification of actionable issues; and most important, c/ revise...
assess the rubrics to produce a wider spread in the results, to be accomplished by adopting standards of the profession and not expectations of a graduate student. 4. Establish coherent methods of reporting and presenting data, as well as a deadline for each semester’s data.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Responsible Person/Group: Graduate Committee; Fujioka and Wilkin for statistical design; Restivo, Stuckey, and committee members for assessment questions.

Add writing requirement to Prosem
Beginning Fall 2011, the department is requiring that all students who present papers at proseminar (and they are required to present at minimum two papers during their doctoral studies) distribute beforehand the written version of the paper to the faculty and doctoral students. This is designed not only to produce better discussion in the proseminar after the paper is delivered, but also to serve as another opportunity for doctoral students to revise and polish written work for an audience.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High
Relationships (Measure | Outcome/Objective):
- Measure: Assessment in Core Seminars: Theory | Outcome/Objective: Research and Method

Implementation Description: Already implement in Prosem syllabus.
Responsible Person/Group: Cheshier

Annual reports submitted by all grad students
We already track doctoral student publications and conference presentations during the academic year in the course of our year-end meetings with each doctoral student. However, we want to institute a form for them to fill out (as opposed to the current CV), so that we can gather more information on other activities that we want to track, such as extent and types of engagement with New Media, creative work in film production (for the MA students), and other information.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Responsible Person/Group: Graduate committee; graduate directors

Begin new assessment system based on data collected 2010-11
Background: Last year, the department implemented an online evaluation system with six rubrics, for all MA and doctoral students in the program, for every course that they took. The results were aggregated by year-in-program, program of study, and were averaged for each student across all the seminars the student took. The results have been reported throughout this WEAVE report as finding, in addition, the raw data and the interpretation of that data has been deposited in the document repository. The amount of data collected has given us valuable information with which to move forward in assessment (see below); while at the same time, it would be overkill to collect all this data every semester. (For one thing, it required that two tenure-track faculty spend over 50 hours of work during summer research time crunching data; this is clearly not something we can do on a regular basis.) Thus, we plan to redo this assessment in 7 years; in the meantime we plan to use the results to focus on targeted areas for assessment, in order to come up with more concrete revisions of curriculum, assignments, and so on. To this end, a subcommittee of the Graduate Committee will devise a system of rubrics that begins at the dissertation and moves backward through the prospectus and comprehensive exams. Then we will target two courses duringcoursework which will serve as assessment courses, so that we can measure student progress at every stage of the program. Because there are three very different tracks in the Communications doctoral program, we have not decided yet whether we will develop separate rubrics for each track, or whether we can have common rubrics. The data gathered from last year should help us determine this. Once the grad committee has drafted the new integrated set of rubrics, then they will be given to the faculty in each area, where further revisions will be done. We expect the entire set of rubrics to be ready by the end of Spring semester 2012.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High
Relationships (Measure | Outcome/Objective):
- Measure: Assessment in Core Seminars: knowledge of the literature | Outcome/Objective: Knowledge of Literatures
- Measure: Assessment in Core Seminars: Theory | Outcome/Objective: Proficiency in communication theory
- Measure: Comprehensive doctoral examinations | Outcome/Objective: Proficiency in communication theory

Projected Completion Date: 03/2012

Fine tune the new assessment system begun Spr2012
Because the new assessment of core courses in the PhD tracks is much more nuanced than previous assessment systems, it is going to take a while before all 3 doctoral tracks are being assessed consistently in relation to one another. Thus, when we see large discrepancies in performance from one doctoral track to another, we first need to determine whether the rubrics and measures are consistent across the areas, before taking further action.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
- Measure: Assessment in Core Seminars: knowledge of the literature | Outcome/Objective: Knowledge of Literatures
- Measure: Assessment in Core Seminars: Theory | Outcome/Objective: Proficiency in communication theory
- Measure: Assessment in Core Seminars: Writing | Outcome/Objective: Proficiency in writing

Implementation Description: Ongoing meetings with area faculty.
Projected Completion Date: 04/2013
Responsible Person/Group: Angelo Restivo; Mary Stuckey; graduate committee
Mission / Purpose

In today's highly competitive global environment, the effective deployment of information technology has become the key to organizational success. There is a continuing shortage of individuals with the combination of business and technology skills needed to develop and manage information systems that provide competitive advantage in the global marketplace. New applications of information technology strike at the heart of what management does and how organizations are structured and compete. In many respects these applications are redefining the nature of work and its organization. The mission of the M.B.A. concentration and major in information systems is to produce graduates able to fill this need. Students will learn how to combine their general business knowledge with contemporary and emerging information systems concepts to enable organizations to compete strongly in the global marketplace.

The courses to constitute a concentration (12 semester hours) in information systems are chosen from the 8000-level offerings of the Department of Computer Information Systems or IB 8680. This flexibility enables students to select courses that provide the best foundation for their career advancement. The M.B.A. IS enrollment over the 2008-2009 academic year was used to identify the specific courses for this assessment. Based on highest registration, the selected courses were CIS 8000 IT Project Management, CIS 8010 Business Process Innovation & Organizational Change Management, CIS 8020 Systems Integration, and CIS 8080 Security and Privacy. Indeed, these are logical extensions of the overall MBA program. Businesses need to continually innovate. This typically requires employing IT enabled business process reengineering and careful management of organizational change and of the overall innovation project. Finally, security and privacy are evermore important to maintain integrity and trust in this highly connected business environment.

Outcomes/Objectives

O/O 1: Build and renew business via technology and process (M: 1)

Students will be able to identify and diagnose problems in business process, to design improved configurations enabled by information technology, and to manage the organizational changes required to implement the new processes.

O/O 2: Manage projects and balance resources (M: 2)

Students will be able to translate a set of project requirements and resources into a workable plan. Students will be able to work with intellectual tools for selecting among competing projects and to choose appropriate solutions to meet project objectives.

O/O 3: Identify security and privacy circumstances and required controls (M: 3)

Students will be able to articulate security and privacy circumstances and to propose appropriate controls.

O/O 4: Employ strategies and methods to blend interdependent systems into a unified whole to accomplish business goals (M: 4)

The student will be able to employ strategies and methods to blend interdependent systems into a unified whole to accomplish business goals. This includes: Define the objectives of and issues associated integration of information systems applications. Explain alternative strategies for systems integration. Identify commonly used tools for integrating information systems, describing the benefits of using each. Explain how Web services can aid in systems integration, identifying the underlying tools and technologies that facilitate the creation of such services. Discuss the characteristics of systems integration projects, emphasizing the management issues and practices associated with them. Identify information systems application and organization characteristics that are most likely to cause an organization to employ a systems integration company to carry out the project work.

Measures, Targets, and Findings

M 1: Identify and diagnose problems in business process, design improved configurations enabled by IT, and manage the required change (O: 1)
Students will be able to accurately identify and diagnose problems in business process, design improved configurations enabled by information technology, and manage the required organizational changes.

Source of Evidence: Writing exam to assure certain proficiency level

### Target for O1: Build and renew business via technology and process

75% of students will be rated at or above 2.0. Measurement will be done by applying the following Rubric to the midterm and final exams in CIS 8010. Learning Objective: Identify and diagnose problems in business process, design improved configurations enabled by information technology, and manage the organizational changes required to implement the new processes. Students were not able to accurately identify and diagnose problems in business process, design improved configurations enabled by information technology, and manage the organizational changes required to implement the new processes. Students were able to accurately identify and diagnose problems in business process, design improved configurations enabled by information technology, and manage the organizational changes required to implement the new processes.

#### Findings 2011-2012 - Target: Not Reported This Cycle

Only 4 MBA IS/CIS student took CIS 8010 during fall 2011-2012. This is not sufficient for assessment measurement. Will review during 2012-2013.

### M 2: Manage projects and balance resources (O: 2)

Manage projects and balance resources

Source of Evidence: Written assignment(s), usually scored by a rubric

#### Target for O2: Manage projects and balance resources

75% of students will be rated at or above 2.0. Measurement will be done by applying the following Rubric to the written assignments in CIS 8000. Learning Objective: translate a set of project requirements and resources into a workable plan; work with intellectual tools for selecting among competing projects and to choose appropriate solutions to meet project objectives. Students were not able to accurately translate a set of project requirements and resources into a workable plan; work with intellectual tools for selecting among competing projects and to choose appropriate solutions to meet project objectives. Students were able to accurately translate a set of project requirements and resources into a workable plan; work with intellectual tools for selecting among competing projects and to choose appropriate solutions to meet project objectives. Students were able to accurately translate a set of project requirements and resources into a workable plan; work with intellectual tools for selecting among competing projects and to choose appropriate solutions to meet project objectives. Students were able to accurately translate a set of project requirements and resources into a workable plan; work with intellectual tools for selecting among competing projects and to choose appropriate solutions to meet project objectives.

#### Findings 2011-2012 - Target: Not Reported This Cycle

Only 1 MBA IS/CIS student took CIS 8000 during fall 2011-2012. This is not sufficient for assessment measurement. Will review during 2012-2013.

### M 3: Understand and analyze security and privacy circumstances and propose appropriate control decisions. (O: 3)

Students will understand and analyze security and privacy circumstances and will propose appropriate control decisions.

Source of Evidence: Written assignment(s), usually scored by a rubric

#### Target for O3: Identify security and privacy circumstances and required controls

75% of students will be rated at or above 2.0. Measurement will be done by applying the Rubric below to the midterm or final paper in CIS 8080. Learning Objective: Identify security and privacy circumstances and required controls Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure: Accurately analyze security and privacy circumstances and propose appropriate control decisions. Students were not able to accurately articulate security and privacy circumstances and to propose appropriate control decisions. Students were able to accurately articulate security and privacy circumstances and to propose appropriate control decisions. Students were able to accurately articulate security and privacy circumstances and to propose appropriate control decisions.

#### Findings 2011-2012 - Target: Not Reported This Cycle

Only 1 MBA IS/CIS student took CIS 8080 during fall 2011-2012. This is not sufficient for assessment measurement. Will review during 2012-2013.

### M 4: Employ strategies and methods to blend interdependent systems into a unified whole to accomplish business goals (O: 4)

Employ strategies and methods to blend interdependent systems into a unified whole to accomplish business goals

Source of Evidence: Written assignment(s), usually scored by a rubric

#### Target for O4: Employ strategies and methods to blend interdependent systems into a unified whole to accomplish business goals

75% of students will be rated at or above 2.0. Measurement will be done by applying the Rubric below to the midterm or final paper in CIS 8020. Learning Objective: Identify strategies and methods to blend interdependent systems into a unified whole to accomplish business goals. Students were not able to accurately identify strategies and methods to blend interdependent systems into a unified whole to accomplish business goals. Students were able to accurately identify strategies and methods to blend interdependent systems into a unified whole to accomplish business goals. Students were able to accurately identify strategies and methods to blend interdependent systems into a unified whole to accomplish business goals.
Georgia State University
Assessment Data by Section

2011-2012 Computer Information Systems BBA
(As of 12/12/2016 04:41 PM EST)
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The application of information technology to organizational functions has shifted from supplanting basic operational tasks to the evolution of an intelligent information infrastructure which supports knowledge-workers within the organization as well as customers of the organization. Underlying these changes is an ever more rapidly developing technology with dramatically changing economics, pushing the envelope of what is possible and desirable. In this environment of dynamic and pervasive technology development and diffusion, the mission of the BBA-CIS program is to produce graduates who are able to combine their general business and technical knowledge with the latest software development tools and techniques to create information systems that will meet the needs of tomorrow's organizations. Number of graduates from this BBA CIS degree program this academic year: Summer 2011 37 Fall 2011 57 Spring 2012 59 The number of students in this program major: Summer 2011 347 Fall 2011 659 Spring 2012 673 Previous academic year graduates: Summer 2010 21 Fall 2010 37 Spring 2011 48 The number of students in this program major during previous academic year: Summer 2010 297 Fall 2010 562 Spring 2011 586 General approach As part of the ongoing assessment of our CIS BBA program, the CIS department has leveraged the CIS 4980 "Capstone" course project. Students in this required course are assigned to real world organizations for the purpose of exercising the full range of topics from the CIS undergraduate core courses. Since these are real world environments, the needs of specific organizations may not cover all topics. See the CIS assessment plan at http://education.gsu.edu/cbi/oucomes/RCB/CIS_BBA_Assessment_Plan-8-04.htm. CIS has developed a survey to gain structured and free form feedback from individuals involved with CIS 4980 “Capstone” projects. Use of this survey began in Spring 2005 (although we have project materials from several earlier semesters as well as informal feedback and observations from students and faculty). The form used in this Capstone survey is attached. At the end of each semester, the CIS 4980 teams present their projects to fellow students, faculty, and clients. Each of these viewers (excluding students) is asked to complete a survey for each team's presentation. Students' are asked to complete the survey to comment on their own performance and on their level of preparation to perform within each of the areas on the survey. And, there are areas for "open" comments. Clients may complete the survey based on their observations of the team's work and their presentation at the client's site. The survey's areas cover the full range of primary objectives of the courses within the CIS undergraduate core (and also within most electives). In particular, we can map the areas back to the CIS courses and measure whether scores are increasing (hopefully reflecting continuing improvement in the conduct of the associated courses and the resulting student learning).

Goals
G 1: CIS BBA Program Goals
Students will become better problem-solvers; students will demonstrate clearer critical-thinking; students will gain broad knowledge of the discipline; students will be well prepared for positions in the discipline.

Student Learning Outcomes/Objectives
SLO 1: Students will be proficient in systems analysis (G: 1) (M: 1, 2, 3, 4, 11)
Students will be able to investigate, define, document and analyze an existing information system including the capability to solve complex organizational problems. Within the context of a capstone course, the ability of students to analyze real-world organizational needs will be evaluated by the client organizations. The ability of students to analyze real-world organizational needs will be evaluated by a faculty panel. Students will be able to specify the requirements for a replacement system. Within the context of a capstone course, the quality of specifications developed by students will be evaluated by the client organizations. The quality of specifications developed by students will be evaluated by a faculty panel.

SLO 2: Students will be proficient in systems design (M: 5, 6, 9)
Students will be able to read a system specification and analyze user data requirements within the context of a three-tier architecture. Within the context of a capstone course, the ability of students to analyze user requirements for real-world applications will be evaluated by the client organizations. The ability of students to read and analyze user requirements specifications within the context of a three-tier architecture will be evaluated by a faculty panel. Students will be able to present the specification, presentation tier, business tier, and data tier abstractions. Within the context of a capstone course, the ability of students to design current system architectures will be evaluated by the client organizations. The ability of students to design current systems architectures will be evaluated by a faculty panel. Students will be able to develop program specifications, procedures, test plans and implementation plans. Within the context of a capstone course, the ability of students to develop program specifications, procedures, test plans and implementation plans for real-world applications will be evaluated by the client organizations. The ability of students to develop program specifications, procedures, test plans and implementation plans for real-world applications will be evaluated by a faculty panel. Student will be able to model and develop a design for a web-based application. Within the context of a capstone course, the ability of students to make effective and efficient use of Internet applications will be evaluated by the client organizations. The ability of students to design and develop effective, graphically pleasing web sites will be evaluated by a faculty panel.

SLO 3: Object Oriented Programming Proficiency (M: 7, 8, 10)

Findings 2011-2012 - Target: Not Reported This Cycle
Only 1 MBA IS/CIS student took CIS 8020 during fall 2011-2012. This is not sufficient for assessment measurement. Will review during 2012-2013.
Students will be able to read a program specification using unified modeling language. Within the context of a capstone course, the ability of students to develop object-oriented software that conforms to specifications will be evaluated by the client organizations. The ability of students to develop object-oriented software that conforms to specifications will be evaluated by a faculty panel. Students will be able to design, code, test and document an object-oriented program in an object-oriented programming language. Within the context of a capstone course, the ability of students to write object-oriented programs will be evaluated by the client organizations. The ability of students to write object-oriented programs will be evaluated by a faculty panel.

### Measures, Targets, and Findings

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Object-Oriented Concept Use**
Need to assess whether this miss is a result of programming not being required or the result of projects not requiring Object-Orientation.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** Medium
Relationships (Measure | Outcome/Objective):
Measure: Used object-oriented concepts and notation | Outcome/Objective: Students will be proficient in systems analysis
Implementation Description: The CIS UPC will assess whether this miss is a result of programming not being required or the result of projects not requiring Object-Orientation. Student interpretation of questions seems to be an ongoing problem.
Projected Completion Date: 01/2012
Responsible Person/Group: CIS UPC Chair

Use of database concepts
Teams did not use database concepts well enough to meet goal.
Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Appropriately used database concepts | Outcome/Objective: Object Oriented Programming Proficiency
Implementation Description: Assess change in assessment rating of database concept use. Take appropriate action to correct or to clarify.
Projected Completion Date: 01/2012
Responsible Person/Group: CIS UPC

Recommend self-paced programming course
Students are not able to program are now strongly advised to complete an e-training self-paced Java programming course. The survey will also emphasize that responses to this question should be N/A if no programming is required by the student’s project.
Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Appropriately used an object-oriented programming | Outcome/Objective: Object Oriented Programming Proficiency
Implementation Description: Students are not able to program are now strongly advised to complete an e-training self-paced Java programming course. The survey will also emphasize that responses to this question should be N/A if no programming is required by the student’s project.
Projected Completion Date: 01/2013
Responsible Person/Group: CIS 4980 instructor

Recommend self-paced programming course
Students who have not taken programming will be (and are now) strongly advised to complete an e-training self-paced Java programming course if they have not taken a CIS programming course.
Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Coded and Developed | Outcome/Objective: Object Oriented Programming Proficiency
Implementation Description: Strongly recommend self-paced programming course when programming not an existing knowledge
Projected Completion Date: 01/2013
Responsible Person/Group: CIS 4980 instructor

Require self-paced programming course
While students are not required to take a programming course, many projects include some programming. Even when the student does not have to program, they seem to feel inadequate. Students who have not taken programming are now strongly advised to complete an e-training self-paced Java programming course.
Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Used object-oriented concepts and notation | Outcome/Objective: Students will be proficient in systems analysis
Projected Completion Date: 01/2013
Responsible Person/Group: CIS 4980 capstone instructor

Mission / Purpose
The effective deployment of information technology is one of the keys to business success. New applications of information technology strike at the heart of what management does and how organizations are structured and compete in an increasingly interconnected global economy. In many respects these applications and technologies are redefining the nature of work and its organization. The CIS Graduate Program aims to develop specialists and managers with the combination of business and technology
skills needed to continue competitive advancement of American industry. The mission of the CIS major in the Master of Science program is to produce graduates who are able to combine their general business knowledge with the latest software engineering tools and techniques to create and manage information systems that allow organizations to compete in the global marketplace. Number of graduates in the MS CIS/IS degree program Summer 2008 Fall 2008 Spring 2009 3 5 5 Summer 2007 Fall 2007 Spring 2008 3 4 3 Summer 2006 Fall 2006 Spring 2007 8 8 Summer 2005 Fall 2005 Spring 2006 5 13 7 Number of students in the MS CIS/IS degree Summer 2008 Fall 2008 Spring 2009 10 38 39 Summer 2007 Fall 2007 Spring 2008 10 27 22 Summer 2006 Fall 2006 Spring 2007 31 34 27 Summer 2005 Fall 2005 Spring 2006 38 57 46 The 2004-2005 assessment report for this program may be found at http://www2.cis.gsu.edu/cis/program/assessment/graduate/CIS_MS_Assessment_Report_9_16_2005.htm. While this document primarily addresses specific course-level assessment of our departmental programs, it is but part of a larger assessment and curricular improvement activities engaging the energy of CIS faculty for two very compelling reasons. The first arises from the core nature of our discipline and the second arises from purely economic realities. 1) The disciplinary core. Our discipline is at the nexus of Information and Communications Technology (ICT) and Social Organizations. The modern business, governmental and Nonprofit organization is increasingly dependent upon these technologies to compete in a globally interconnected and interdependent world. Both these technologies and the organizational settings in which they are embedded are highly dynamic, and emergent settings. As such our discipline, and our curricula, must necessarily address those principles and skills that are stable over time, but also to anticipate where changing technical and social/political realties may lead. 2) Economic necessity. The triple-whammy of the dot com implosion, the economic downturn of post 9/11 economy and the accelerated global sourcing of digital work have conspired to reverse a 15 year trend of enrollment growth to a period of contraction and rebuilding. The net result of these continuous and dramatic underlying technological and social changes is that the content of virtually all CIS courses and the curriculum itself is in constant flux. Thus, by technical and economic necessity, the CIS faculty are confronted with compelling reasons for continuous improvement of our programs, course offerings and course content. We offer three examples as evidence of this attention to continuous curricular improvement. The first is that in the past 5 years the curriculum has undergone two major revisions at each the undergraduate and graduate programs and is in the stages of yet another substantial revamping. Secondly, three times in the past five years faculty have engaged Chief Information Officers and other leaders from major Atlanta Metropolitan business and service industry organizations in group discussion covering the nature and content of our programs and course offerings. A fourth such process is in the offering for early 2007. And thirdly, CIS faculty hold leadership positions in the Association of Computing Machinery (ACM) special interest group on computer personnel research (SIG CPR) and make a specific study of the changing technical skill sets required of our graduates in the workforce. Our faculty are represented on Microsoft's academic advisory board and routinely engage with CIO and CTO level personnel in other industry and academic venues, which coupled with an active field research agenda provides a view of the changing skill-sets needed by our students. Thus, at both holistic and detailed levels of analysis, CIS faculty attempt to keep abreast of societal and technical changes requiring curricular adjustment. This document is, however, largely concerned with course-level assessment. It depends on direct measures of curricular competence, i.e., student exams, projects and presentations. Because it is an analysis of the artifacts of the curriculum and instructional activity, it is also an indirect assessment exercise. This assessment exercise addresses the fidelity by which the core course set in our CIS major meets a set of stated learning objectives. Those objectives and the mapping of those objectives to specific courses in our core are represented below, Figure 1 (Napier, Johnson, Stucke, 2006) Course-level Assessment method As is typical student performance was measured by sets of direct and indirect measures of exams, homework, projects and presentations, adjudicated by the principal instructor, and in many cases, with the participation of other faculty and industry representatives as outside adjudicators. The course level assessment provided herein was arrived at by indirect means; that is, via the evaluation of static artifacts. Those assessments were based on the learning objectives as stated in the course syllabus and according to the departments overall learning objectives. For each of the core courses the departmental evaluation committee developed a survey instrument (c.f., http://www2.cis.gsu.edu/cis/program/assessment/graduate/index.asp). The draft instrument was created from published course documents reviewed by instructors and then minimal staffed to provide a sampling representing the student’s work, with the provision that there should be a minimal sub-set of work representing all the stated learning objectives. These materials were made available to the assessment team of faculty, and PhD students. Those evaluating review all documents and the course syllabi and relevant assignment materials then completed the assessment questionnaire. The summary results are reported herein and the overall summary of the graduate assessment may be found at: (To Be Completed for 2006-2007). A fuller description of the assessment process is represented by the diagram above (except figure 1 here) and may be found in Napier, Johnson, Stucke, 2006 from which we excerpted this diagram.  

### Student Learning Outcomes/Objectives

**SLO 1: Identify business needs and challenges that may be facilitated through information technology (M: 1)**

Students will be able to specify the requirements for an information system that meets user needs. This objective is not met in the core courses. In lieu of this, a surrogate objective will be used: Students will be able to select appropriate contemporary and leading-edge tools and techniques to correctly use these tools and techniques to specify the requirements for an information system. The student should be able to analyze an organization's performance by assessing its resources, capabilities, and competitive environment.

**SLO 2: Create environments for programs and systems (M: 2)**

Students will be proficient in design and implementation of information infrastructure.

**SLO 3: Manage an information technology project (M: 3, 4)**

Students will be able to translate a set of project requirements and resources into a workable plan. Students will be able to work with intellectual tools for selecting among competing projects and to choose appropriate solutions to meet project objectives.

**SLO 4: Build and renew business via technology & process (M: 5, 6, 7)**

Students will be able to identify business opportunities associated with an emerging technology. Students will be able to identify and diagnose problems in business process, to design improved configurations enabled by information technology, and to manage the organizational changes required to implement the new processes.

### Measures, Targets, and Findings

**M 1: L1: Specify the requirements for an information system (O: 1)**

Students will be able to specify the requirements for an information system that meets user needs.

Source of Evidence: Written assignment(s), usually scored by a rubric
Target for O1: Identify business needs and challenges that may be facilitated through information technology

Three facets of assessing achievement: 1) the average score for all students assessed will be 2.0 or above on a 3-point scale 2) 80% of students will achieve “level 2” (“meets the standard”), according to the evaluation rubric. 3) 25% of students will achieve “level 3” (“exceeds the standard”), according to the evaluation rubric.

M 2: II: Design and implementation of information infrastructure (O: 2)

Students will be proficient in design and implementation of information infrastructure.

Source of Evidence: Writing exam to assure certain proficiency level

Target for O2: Create environments for programs and systems

Three facets of assessing achievement: 1) the average score for all students assessed will be 2.0 or above on a 3-point scale 2) 80% of students will achieve “level 2” (“meets the standard”), according to the evaluation rubric. 3) 25% of students will achieve “level 3” (“exceeds the standard”), according to the evaluation rubric.

M 3: III.1: Translate project requirements and resources into a workable plan (O: 3)

Students will be able to translate a set of project requirements and resources into a workable plan.

Source of Evidence: Writing exam to assure certain proficiency level

Target for O3: Manage an information technology project

Three facets of assessing achievement: 1) the average score for all students assessed will be 2.0 or above on a 3-point scale 2) 80% of students will achieve “level 2” (“meets the standard”), according to the evaluation rubric. 3) 25% of students will achieve “level 3” (“exceeds the standard”), according to the evaluation rubric.

M 4: III.2: Manage an ongoing project using project control tools and techniques (O: 3)

Students will be able to manage an ongoing project using project control tools and techniques.

Source of Evidence: Writing exam to assure certain proficiency level

Target for O3: Manage an information technology project

Three facets of assessing achievement: 1) the average score for all students assessed will be 2.0 or above on a 3-point scale 2) 80% of students will achieve “level 2” (“meets the standard”), according to the evaluation rubric. 3) 25% of students will achieve “level 3” (“exceeds the standard”), according to the evaluation rubric.

M 5: IV.1: Identify business opportunities associated with available information technologies (O: 4)

Students will be able to identify business opportunities associated with available information technologies.

Source of Evidence: Writing exam to assure certain proficiency level

Target for O4: Build and renew business via technology & process

Three facets of assessing achievement: 1) the average score for all students assessed will be 2.0 or above on a 3-point scale 2) 80% of students will achieve “level 2” (“meets the standard”), according to the evaluation rubric. 3) 25% of students will achieve “level 3” (“exceeds the standard”), according to the evaluation rubric.

M 6: IV.2: Diagnose problems in business processes to design improved configurations (O: 4)

Students will be able to identify and diagnose problems in business processes to design improved configurations enabled by information technology.

Source of Evidence: Writing exam to assure certain proficiency level

Target for O4: Build and renew business via technology & process

Three facets of assessing achievement: 1) the average score for all students assessed will be 2.0 or above on a 3-point scale 2) 80% of students will achieve “level 2” (“meets the target”), according to the evaluation rubric. 3) 25% of students will achieve “level 3” (“exceeds the target”), according to the evaluation rubric.

M 7: IV.3: Formulate an implementation plan to manage organizational changes associated with introduction of new technology (O: 4)

Students should be able to formulate an implementation plan to manage organizational changes associated with introduction of new technology.

Source of Evidence: Writing exam to assure certain proficiency level

Target for O4: Build and renew business via technology & process

Three facets of assessing achievement: 1) the average score for all students assessed will be 2.0 or above on a 3-point scale 2) 80% of students will achieve “level 2” (“meets the standard”), according to the evaluation rubric. 3) 25% of students will achieve “level 3” (“exceeds the standard”), according to the evaluation rubric.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Course instructor should follow assessment procedures

Course instructor responsible for teaching CIS 8030 must assign individual-level projects that reflect the course objectives. In addition, the course instructor must save copies of all M.S. individual student deliverables and make them available to the assessment coordinator.

Established in Cycle: 2008-2009
Mission / Purpose
It is critical for all students to master a basic understanding of computing due to its pervasiveness. Also, due to its rapidly changing nature it is imperative students learn the concepts that underlie this discipline. One of the missions of the Department of Computer Science is to provide high quality instruction in the CSC 1010 course that incorporates computing fundamentals and the latest technologies.

Goals
G 1: Student productivity
- Students will be comfortable and competent in a setting which requires the use of computers.
- Students will be productive using various computer applications, for example, they will be able to produce reports, graphs, spreadsheets, charts, and slide shows.

Student Learning Outcomes/Objectives
SLO 1: Computer Components -- Hardware and Software (M: 4)
Students will learn about the various components that make up a computer

Strategic Plan Associations
1.5 Other efforts in support of Goal 1 (Undergraduate Education).

SLO 2: Word Processing Application Software (M: 3)
Students will learn the necessary components of word processing that will enable them to write term papers, reports, and research papers.

**SLO 3: Spreadsheet Application Software (M: 1, 3)**
Students will learn the necessary components of spreadsheet applications that will enable them to enter, calculate, manipulate, and analyze data.

**SLO 5: Web Development (M: 5)**
Students will learn how to use the language of the Internet (HTML) in order to create web pages. This includes creating links so that users can navigate from one page to another.

**Other Outcomes/Objectives**

**O/O 4: Presentation Application Software (M: 2)**
Students will learn the necessary components of presentation applications and presentation techniques that will enable them to effectively deliver information, findings, and projects to others.

**Measures, Targets, and Findings**

**M 1: Chart drawing (O: 3)**
Students are to extract data from a spreadsheet and use this to draw charts for various functions. This includes formatting the charts as well.

Source of Evidence: Academic direct measure of learning - other

**Target for O3: Spreadsheet Application Software**
Proper curves should be generated for charts with appropriate labels

**Findings 2011-2012 - Target: Met**
About 88.1% of the students were able to do this correctly.

**M 2: Formatting slides (O: 4)**
Students should create slides to demonstrate some functions. This includes labeling the slides appropriately

Source of Evidence: Presentation, either individual or group

**Target for O4: Presentation Application Software**
The presentation should include multiple number of slides with appropriate titles. Each slide importing figures or text accordingly.

**Findings 2011-2012 - Target: Met**
A majority of students could generate the slides accordingly but imported figures were not always formatted as well as expected.

**M 3: Generate documents (O: 2, 3)**
Students should generate a document that imports charts from a spreadsheet. The document should include comparisons as well as a variation in formats for headers and the text body.

Source of Evidence: Academic direct measure of learning - other

**Target for O2: Word Processing Application Software**
The documents would not only include text, but also charts from a spreadsheet. The charts should be easy to read and the description/comparisons should be detailed and formatted nicely.

**Findings 2011-2012 - Target: Met**
Most often the charts were imported properly. However, the comparisons were not detailed enough. About 85% performed well with this.

**Target for O3: Spreadsheet Application Software**
The documents would not only include text, but also charts from a spreadsheet. The charts should be easy to read and the description/comparisons should be detailed and formatted nicely.

**Findings 2011-2012 - Target: Met**
Usually the charts were imported properly. However, the comparisons were not detailed enough. About 85.1% performed well with this.

**M 4: Comparison shopping for computer systems (O: 1)**
Students are asked to shop for computer systems for four different purposes. Each task has different requirements for the hardware and software components. Students should be able to justify why each system they chose meets the demand of the corresponding tasks.

Source of Evidence: Academic direct measure of learning - other
### Target for O1: Computer Components – Hardware and Software

For each environment described, the students should be able to select the appropriate components that follow:
1) motherboard/cpu; 2) memory/hard disk space/ram; 3) adapter cards; 4) video/sound; 5) application software

#### Findings 2011-2012 - Target: Met

90.1% of the students did well with this objective. Occasionally, they were not able to justify their choices clearly. This could be tied back to critical thinking or writing objectives.

### M 5: Website design (O: 5)

Students are to design a website using HTML as the programming language. Their design has certain specifications required, such as linking pages, format, and headers.

Source of Evidence: Academic direct measure of learning - other

#### Target for O5: Web Development

Students should be able to follow a flowchart for a website design. There should be multiple pages linked together including tags. The formats should adhere to specifications and include headers.

#### Findings 2011-2012 - Target: Met

Less than 8% of the students have difficulty with the syntax of HTML. Tags were not always included properly. Linking pages tended to cause problems for some students so that the intended flow was not achieved.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Additional examples and quizzes

With additional examples being provided during the lectures, students will see how to create charts and then import them into other software for presentations and documents. Additional quizzes will require students to work more closely with the material to gain better understanding. For more information, see the Action Plan Details section of this report.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** In-Progress
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Generate documents | Outcome/Objective: Spreadsheet Application Software

#### Additional examples and quizzes

With additional examples being provided during the lectures, students will see how to create charts and then import them into other software for presentations and documents. Additional quizzes will require students to work more closely with the material to gain better understanding. For more information, see the Action Plan Details section of this report.

### Coordinate 1010 sections

Establish a coordinator for the CSC 1010 course. They will be responsible for meeting with all instructors teaching sections of the CSC 1010 course in order to ensure that there is consistency among each of the sections offered.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
### Mission / Purpose

MISSION Within the Georgia State mission of research, education, and public service, the mission of the Department of Computer Science encompasses the following areas:
- **Research:** To make leading contributions to basic and applied science by conducting broadly based research in both theoretical and applied areas of computer science and collaborating on interdisciplinary efforts with other departments in the institution.
- **Educational Programs:** To provide the next generation of leaders and capable lifelong learners in computer science.
- **Service:** To support other programs at Georgia State by offering rigorous training in basic computer science to non-majors and to support collaboration with colleagues in other disciplines. The Department of Computer Science B.S. Program provides students with the underpinnings of computation and the basic computer science for today's applications in industry, science, government, and business and prepares the foundation for tomorrow's applications in ubiquitous computing, medical cures for diseases, and instant access to information by every one.

### Goals

**G 1: Computer Science BS goals**

Students will become better problem-solvers; students will demonstrate clearer critical thinking, students will gain knowledge of the discipline; students will gain skills necessary to be successful in the discipline

### Outcomes/Objectives

### Measures, Targets, and Findings

| M 1: Alumni Surveys |
An alumni survey will be mailed to alumni via the departmental newsletter on an annual basis. Survey will solicit input from alumni on job promotions, success in graduate schools, job satisfaction, etc. Results will be provided to the Assessment Committee for review.

Source of Evidence: Alumni survey or tracking of alumni achievements

M 2: Senior Level Course Surveys and Exit Interviews

A senior level course survey and exit interview will be conducted each term to solicit input from graduating seniors on a self-assessment of their education, on their concerns with the department, and their ideas for possible curricular improvements. The undergraduate coordinator will administer the survey in conjunction with the graduation audit check out.

Source of Evidence: Exit interviews with grads/program completers

M 3: Senior Oral and Written Presentations (O: 1, 5)

Copies of selected presentations and oral reviews will be collected from individual faculty for future inspection by Assessment Committee. (each semester) Students are encouraged to participate in external design competitions where they are judged relative to their peers from other institutions. (ongoing)

Source of Evidence: Presentation, either individual or group

Target for O1: Computer Systems Development

The average samples should demonstrate mastery of the subject domains as well as competent presentation skills sufficient for them to be successful in the work force. The best samples should demonstrate excellent mastery and a thorough understanding of subject domain as well as excellent presentation skills. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results

Findings 2011-2012 - Target: Met

The best samples demonstrated excellent mastery and a thorough understanding and overall the samples showed that the students demonstrated mastery of the subject domain basics. Compared to last year, on average, the writing skills of our seniors were slightly improved.

Target for O5: Hardware Systems

The average samples should demonstrate mastery of the subject domains as well as competent presentation skills sufficient for them to be successful in the work force. The best samples should demonstrate excellent mastery and a thorough understanding of subject domain as well as excellent presentation skills. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results

Findings 2011-2012 - Target: Met

The best samples demonstrated excellent mastery and a thorough understanding and overall the samples showed that the students demonstrated mastery of the subject domain basics. Compared to last year, on average, the programming skills of our seniors were slightly improved.

M 4: Written Assignments and Reports (O: 2, 3, 4)

Each outcome can be mapped to a particular required course in our curriculum: 1-CSc 4520, 2-CSc 2510, 3-CSc 4530, 4-CSc 2310, and 5-CSc 4210. In each of the courses listed above, instructors include questions on assignments and projects targeting specific components of the corresponding outcome. Each outcome will be measured via the quality of the students’ answers to selected questions on the assignments and projects in the corresponding courses. Copies of selected written class assignments, lab reports, and research reports will be collected from individual faculty members for future inspection by the Assessment Committee. (each semester)

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O2: Programming Skills

Students should demonstrate the ability to work independently on relevant problems, assignments and projects. The average samples should demonstrate mastery of basic skills and the best samples should demonstrate excellent mastery of the skills as well as presentation. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results

Findings 2011-2012 - Target: Met

The best samples demonstrated excellent mastery and a thorough understanding and overall the samples showed that the students demonstrated mastery of the subject domain basics. Compared to last year, on average, the programming skills of our seniors were slightly improved.

Target for O3: Algorithm Design and Analysis

Students should demonstrate the ability to work independently on relevant problems, assignments and projects. The average samples should demonstrate mastery of basic skills and the best samples should demonstrate excellent mastery of the skills as well as presentation. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results

Findings 2011-2012 - Target: Met

The best samples demonstrated excellent mastery and a thorough understanding and overall the samples showed that the students demonstrated mastery of the subject domain basics. Compared to last year, on average, the programming skills of our seniors were slightly improved.

Target for O4: Discrete Mathematics

Students should demonstrate the ability to work independently on relevant problems, assignments and projects. The average samples should demonstrate mastery of basic skills and the best samples should demonstrate excellent mastery of the skills as well as presentation. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results
Outcomes and Assessment Committee will evaluate the results

Findings 2011-2012 - Target: Met

The best samples demonstrated excellent mastery and a thorough understanding and overall the samples showed that the students demonstrated mastery of the subject domain basics. Compared to last year, on average, the programming skills of our seniors were slightly improved.

M 5: Examinations (O: 1, 2, 3, 4)

Each outcome can be mapped to a particular required course in our curriculum: 1-CSc 4520, 2-CSc 2510, 3-CSc 4530, 4-CSc 2310, and 5-CSc 4210. In each of the courses listed above, instructors include questions on exams targeting specific components of the corresponding outcome. Each outcome will be measured via the quality of the students’ answers to selected questions on exams in the corresponding courses.

Source of Evidence: Writing exam to assure certain proficiency level

Target for O1: Computer Systems Development

The average samples should demonstrate mastery of the subject domain basics and the best samples should demonstrate excellent mastery and a thorough understanding of subject domain. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results.

Findings 2011-2012 - Target: Met

The best samples demonstrated excellent mastery and a thorough understanding and overall the samples showed that the students demonstrated mastery of the subject domain basics.

Program provides students with the underpinnings of computation and the basic computer science for today's applications in industry, science, government, and business and prepares the foundation for tomorrow's applications in ubiquitous computing, medical cures for diseases, and instant access to information by every one.

Goals

G 1: Computer Science MS Goals
Students will become better solvers of advanced computational problems; Students will improve abilities to develop advanced computational models of real world problems; Students will gain advanced knowledge of computer science; Students will gain skills necessary for a successful career applying advanced computer science methods.

Outcomes/Objectives

O/O 1: Computer Science Foundations (G: 1) (M: 2, 3, 4, 5, 6)
Students should be able to; 1. Describe the principles and methods of (a) discrete mathematics, (b) best-practices programming paradigms, (c) algorithm analysis, (d) computer & hardware systems development, and (e) advanced network-oriented software engineering. 2. Develop models and corresponding optimization problem formulations. 3. Apply (a) discrete structures for solving problems in computer science, (b) algorithmic techniques to optimization problems, (c) high-level programming languages to implement the programming paradigms, and (d) advanced software engineering and modeling techniques for specification of computer systems and implementing the phases of hardware development.

Strategic Plan Associations
2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

O/O 2: Research and Critical Thinking (G: 1) (M: 1, 3, 4, 6)
Students should be able to: 1) study related work and approaches; 2) formulate relevant questions for research; 3) justify and evaluate claims, arguments, evidence and hypotheses; and 4) provide a theoretical and/or practical (hardware or software) solution to their research problem

O/O 3: Collaboration (G: 1) (M: 4)
Students participate effectively in collaborative activities

O/O 4: Communication (G: 1) (M: 1, 4, 6)
Students communicate effectively using appropriate writing and oral conventions and formats.

O/O 5: Bioinformatics (for students with concentration) (G: 1) (M: 2, 3, 4, 5, 6)
Students should be able to: (a) analyze, correlate and extract information from biological and chemical databases with emphasis on the sequence and structure of proteins and nucleic acids, and (b) apply computational tools, techniques and models to analysis of protein and nucleic acid sequences.

Strategic Plan Associations
2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

Measures, Targets, and Findings

M 1: Research Publications (O: 2, 4)
Research publications in journals and conference proceedings produced by M.S. graduate students will be catalogued and made available to the Assessment Committee (on going).
Source of Evidence: External report

Target for O2: Research and Critical Thinking

Findings 2011-2012 - Target: Met
M.S. students have co-authored many publications that have appeared in peer reviewed conferences and journals during the reporting period. A number of these were published in conferences with acceptance rates below 33%.

Target for O4: Communication

Findings 2011-2012 - Target: Met
Research publications should appear in highly selective journals and/or conferences, preferably supported by renowned professional societies (ACM, IEEE).
M.S. students have co-authored many publications that have appeared in peer reviewed conferences and journals during the reporting period. A number of these were published in conferences with acceptance rates below 33%.

Students demonstrated mastery of presentation skills as well as subject domains. Students presented posters and talks at international refereed conferences.

M 6: Thesis/Project Reports and Defenses (O: 1, 2, 4, 5)

Copies of M.S. theses and project reports and defense presentation slides will be available for inspection by the Defense Committee and the Assessment Committee (ongoing).
Source of Evidence: Benchmarking of learning outcomes against peers

### Target for O1: Computer Science Foundations

The average samples should demonstrate mastery and a thorough understanding of the advanced subject domains as well as competent presentation skills sufficient for professional meetings. The best samples should demonstrate excellent mastery of subject domain, excellent presentation skills suitable for Ph.D. student candidates, and sufficient quality for acceptance at leading conferences. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results.

**Findings 2011-2012 - Target: Met**

M. S. students defended their master theses/projects during the reporting period. Several of the M.S. students have continued studies as Ph.D. students at Georgia State University and other institutions.

### Target for O2: Research and Critical Thinking

The average samples should demonstrate mastery and a thorough understanding of the advanced subject domains as well as competent presentation skills sufficient for professional meetings. The best samples should demonstrate excellent mastery of subject domain, excellent presentation skills suitable for Ph.D. student candidates, and sufficient quality for acceptance at leading conferences. The assessment of mastery will be completed by course instructors and the Department’s Learning Outcomes and Assessment Committee will evaluate the results.

**Findings 2011-2012 - Target: Met**

M. S. students defended their master theses/projects during the reporting period. Several of the M.S. students have continued studies as Ph.D. students at Georgia State University and other institutions.

### Target for O4: Communication

The average samples should demonstrate basic research skills, mastery and a thorough understanding of the advanced subject domains, and competent presentation skills sufficient for professional meetings. The best samples should demonstrate advanced research skills, excellent mastery of subject domain, excellent presentation skills suitable for M.S. students, and sufficient quality for acceptance at leading conferences. The assessment of mastery will be completed by Defense Committees and the Department’s Learning Outcomes and Assessment Committee will evaluate the results.

**Findings 2011-2012 - Target: Met**

M. S. students defended their master theses/projects during the reporting period. Several of the M.S. students have continued studies as Ph.D. students at Georgia State University and other institutions.

### Target for O5: Bioinformatics (for students with concentration)

The average samples should demonstrate mastery and a thorough understanding of the advanced subject domains as well as competent presentation skills sufficient for professional meetings. **Findings 2011-2012 - Target: Met**

M. S. students defended their master theses/projects during the reporting period. Several of the M.S. students have continued studies as Ph.D. students at Georgia State University and other institutions.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Consider Course Only Master's Degree Option

Consider offering a third option for obtaining the Master's Degree. Specifically, a course only option instead of a thesis or project option.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Projected Completion Date:** 07/2010
- **Responsible Person/Group:** Director of Graduate Studies and Graduate Faculty

#### Consider Course Only Master's Degree Option

Consider offering a third option for obtaining the Master's Degree. Specifically, a course only option instead of a thesis or project option.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Projected Completion Date:** 07/2010
- **Responsible Person/Group:** Director of Graduate Studies and Graduate Faculty

#### Consider foundation courses for graduate program

We plan to present the results to the computer science curriculum committee and show the areas (discrete mathematics and computer organization) that may need improvement. For more information, see the Action Plan Details section of this report.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**
### Mission / Purpose

MISSION Within the Georgia State mission of research, education, and public service, the mission of the Department of Computer Science encompasses the following areas:  
- **Research:** To make leading contributions to basic and applied science by conducting broadly based research in both theoretical and applied areas of computer science and collaborating on interdisciplinary efforts with other departments in the institution.  
- **Educational Programs:** To provide the next generation of leaders, educators and capable lifelong learners in computer science.  
- **Service:** To support other programs at Georgia State by offering rigorous training in basic computer science to non-majors and to support collaboration with colleagues in other disciplines.  

The Department of Computer Science Ph.D. Program provides students with the underpinnings and advanced topics of computation and computer science for today's applications in industry, science, education, government, and business and prepares the foundation for tomorrow's applications in ubiquitous computing, medical cures for diseases, and instant access to information by every one.

### Goals

**G 1: Computer Science PhD Goals**  
Students will become better solvers of open computational problems; Students will improve abilities to develop novel computational models of real world problems; Students will gain advanced knowledge of computer science; Students will gain skills necessary for a successful career as computer scientists.

### Outcomes/Objectives

**O/O 1: Computer Science Foundations (G: 1) (M: 2, 3, 4, 5)**  
Students should be able to:  
1. Describe the principles and methods of (a) discrete mathematics, (b) best-practices programming paradigms, parallel and distributed computing, algorithm analysis, theory of computation, and complexity analysis, (d) computer & hardware systems development, (e) advanced network-oriented software engineering, and (d) deductive databases and logic programming.  
2. Develop models and corresponding optimization problem formulations, analyze computational complexity of problem formulations and applicable algorithmic approaches.  
3. Apply (a) discrete structures for solving problems in computer science, (b) algorithmic techniques to optimization problems, (c) high-level programming languages, parallel and distributed computing to implement the programming paradigms, and (d) advanced software engineering and modeling techniques for specification of computer systems and implementing the phases of hardware development.

**Strategic Plan Associations**  
2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

**O/O 2: Teaching (G: 1) (M: 1)**  
Students should be able to teach and/or assist in undergraduate/beginning graduate courses.

**O/O 3: Communication (G: 1) (M: 3, 4, 5)**  
Students communicate effectively using writing and oral conventions and formats appropriate to the research area in computer science.

**O/O 4: Research and Critical Thinking (G: 1) (M: 3, 4, 5)**  
Students should be able to:  
1) Achieve understanding of the frontier research literature, emerging technologies, and current research approaches and methods in computer science;  
2) Formulate questions for research that are recognized by the broad community computer scientists as advancing knowledge;  
3) Justify and evaluate claims, arguments, evidence and hypotheses to the standards of computer science scholarship;  
4) Construct new arguments and formulate new relevant questions based on the results of analysis; and  
5) Provide novel theoretical and practical (hardware or software) solutions to formulated problems.

**O/O 5: Collaboration (G: 1) (M: 4)**
Students participate effectively in collaborative activities appropriate to the research area in computer science.

**O/O 6: Bioinformatics (for students with concentration) (G: 1) (M: 2, 3, 4, 5)**

Students should be able to: (a) analyze, correlate and extract information from biological and chemical databases with emphasis on the sequence and structure of proteins and nucleic acids, (b) apply computational tools, techniques and models to analysis of protein and nucleic acid sequences, and (c) develop new bioinformatics tools, techniques and models.

### Measures, Targets, and Findings

#### M 1: Student evaluations (O: 2)

Student evaluations will be assessed to monitor the quality of teaching by our Ph.D. students.

**Target for O2: Teaching**

Ph.D. students should receive positive written comments for a majority of the responses. Additionally, we expect that the average of the answers for Question #17 on the evaluation to be above a 4.0.

**Findings 2011-2012 - Target: Met**

This year for Honors Day, when selecting the recipient(s) for the Outstanding Teaching by a Graduate Student Award, the Honors Committee has found that most students receive high marks and comments on their evaluations.

#### M 2: Qualifying exam (O: 1, 6)

The Ph.D. qualifying exam covers a breadth of the foundation material for the Computer Science curriculum. All Ph.D. students are required to pass this exam within the first three semesters of entry into the program.

**Target for O1: Computer Science Foundations**

The average samples should demonstrate mastery of advanced topics of the subject domain and the best samples should demonstrate excellent mastery and a thorough understanding of advanced topics within the subject domain. The assessment of mastery will be completed by Qualifying Examination Committee.

**Findings 2011-2012 - Target: Met**

The students demonstrated appropriate mastery of the subject domains. The best students showed excellent mastery.

**Target for O6: Bioinformatics (for students with concentration)**

The average samples should demonstrate mastery of advanced topics of the subject domain and the best samples should demonstrate excellent mastery and a thorough understanding of advanced topics within the subject domain. The assessment of mastery will be completed by Qualifying Examination Committee.

**Findings 2011-2012 - Target: Met**

The students demonstrated appropriate mastery of the subject domains. The best students showed excellent mastery.

#### M 3: Dissertation Manuscripts and Defenses (O: 1, 3, 4, 6)

Copies of Ph.D. manuscripts and defense presentation slides will be available for inspection by the Defense Committee and the Assessment Committee (on going).

**Target for O1: Computer Science Foundations**

The average samples should demonstrate basic research skills, mastery and a thorough understanding of the advanced subject domains, and competent presentation skills sufficient for professional meetings. The best samples should demonstrate advanced research skills, excellent mastery of subject domain, excellent presentation skills suitable for faculty candidates, and sufficient quality for acceptance at leading conferences. The assessment of mastery will be completed by Defense Committees and the Department’s Learning Outcomes and Assessment Committee will evaluate the results.

**Findings 2011-2012 - Target: Met**

A total of 9 Ph.D. students defended their dissertations during the reporting period. Each student has a high publication record in international refereed conferences and journals.

**Target for O3: Communication**

The average samples should demonstrate basic research skills, mastery and a thorough understanding of the advanced subject domains, and competent presentation skills sufficient for professional meetings. The best samples should demonstrate advanced research skills, excellent mastery of subject domain, excellent presentation skills suitable for faculty candidates, and sufficient quality for acceptance at leading conferences. The assessment of mastery will be completed by Defense Committees and the Department’s Learning Outcomes and Assessment Committee will evaluate the results.

**Findings 2011-2012 - Target: Met**

A total of 9 Ph.D. students defended their dissertations during the reporting period. Each student has a high publication record in international refereed conferences and journals.

**Target for O4: Research and Critical Thinking**
The average samples should demonstrate basic research skills, mastery and a thorough understanding of the advanced subject domains, and competent presentation skills sufficient for professional meetings. The best samples should demonstrate advanced research skills, excellent mastery of subject domain, excellent presentation skills suitable for faculty candidates, and sufficient quality for acceptance at leading conferences. The assessment of mastery will be completed by Defense Committees and the Department’s Learning Outcomes and Assessment Committee will evaluate the results.

### Findings 2011-2012 - Target: Met

A total of 9 Ph.D. students defended their dissertations during the reporting period. Each student has a high publication record in international refereed conferences and journals.

### Target for O6: Bioinformatics (for students with concentration)

The average samples should demonstrate basic research skills, mastery and a thorough understanding of the advanced subject domains, and competent presentation skills sufficient for professional meetings. The best samples should demonstrate advanced research skills, excellent mastery of subject domain, excellent presentation skills suitable for faculty candidates, and sufficient quality for acceptance at leading conferences. The assessment of mastery will be completed by Defense Committees and the Department’s Learning Outcomes and Assessment Committee will evaluate the results.

### Findings 2011-2012 - Target: Met

A total of 9 Ph.D. students defended their dissertations during the reporting period. Each student has a high publication record in international refereed conferences and journals.

### M 4: Alumni Surveys (O: 1, 3, 4, 5, 6)

An alumni survey will be mailed to alumni via the departmental newsletter on an annual basis. Survey will solicit input from alumni on job promotions, success in graduate schools, job satisfaction, etc. Results will be provided to the Assessment Committee for review.

Source of Evidence: Alumni survey or tracking of alumni achievements

### Target for O1: Computer Science Foundations

The surveys will reveal that the majority of the students found the coursework, projects, and dissertation research useful and relevant to their careers.

### Findings 2011-2012 - Target: Met

At this current time we do not have enough data to provide reliable findings

### Target for O3: Communication

The surveys will reveal that the majority of the students found the coursework, projects, and dissertation research useful and relevant to their careers.

### Findings 2011-2012 - Target: Met

At this current time we do not have enough data to provide reliable findings

### Target for O4: Research and Critical Thinking

The surveys will reveal that the majority of the students found the coursework, projects, and dissertation research useful and relevant to their careers.

### Target for O5: Collaboration

The surveys will reveal that the majority of the students found the coursework, projects, and dissertation research useful and relevant to their careers.

### Findings 2011-2012 - Target: Met

At this current time we do not have enough data to provide reliable findings

### Target for O6: Bioinformatics (for students with concentration)

The surveys will reveal that the majority of the students found the coursework, projects, and dissertation research useful and relevant to their careers.

### Findings 2011-2012 - Target: Met

At this current time we do not have enough data to provide reliable findings

### M 5: Research Publications (O: 1, 3, 4, 6)

Research publications in journals and conference proceedings produced by Ph.D. graduate students will be catalogued and made available to the Assessment Committee (on going).

Source of Evidence: External report

### Target for O1: Computer Science Foundations

Research publications should appear in highly selective journals and/or conferences, preferably supported by renowned professional societies (ACM, IEEE).

### Findings 2011-2012 - Target: Met

Ph.D. students have co-authored many publications that have appeared in peer reviewed conferences and journals during the reporting period. A number of these were published in conferences with acceptance rates below 30%.
**Target for O3: Communication**

Research publications should appear in highly selective journals and/or conferences, preferably supported by renowned professional societies (ACM, IEEE).

**Findings 2011-2012 - Target: Met**

Ph.D. students have co-authored many publications that have appeared in peer reviewed conferences and journals during the reporting period. A number of these were published in conferences with acceptance rates below 30%.

**Target for O4: Research and Critical Thinking**

Research publications should appear in highly selective journals and/or conferences, preferably supported by renowned professional societies (ACM, IEEE).

**Findings 2011-2012 - Target: Met**

Ph.D. students have co-authored many publications that have appeared in peer reviewed conferences and journals during the reporting period. A number of these were published in conferences with acceptance rates below 30%.

**Target for O6: Bioinformatics (for students with concentration)**

Research publications should appear in highly selective journals and/or conferences, preferably supported by renowned professional societies (ACM, IEEE).

**Findings 2011-2012 - Target: Met**

Ph.D. students have co-authored many publications that have appeared in peer reviewed conferences and journals during the reporting period. A number of these were published in conferences with acceptance rates below 30%.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Consider foundation material for graduate courses**

The curriculum committee is currently evaluating the coursework at the graduate level in order to assess its relevance and currency to the state of the art in computer science. For more information, see the Action Plan Details section of this report.

**Georgia State University**

**Assessment Data by Section**

**2011-2012 Concentration in Accounting MBA**

As of: 12/12/2016 04:41 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

**Mission / Purpose**

For students to develop and integrate: (1) skills for analyzing organizational performance that incorporate global and ethical dimensions, (2) skills in developing financial reporting systems, (3) skills in interpreting and predicting choices in financial reporting systems, (4) assurance skills, (5) skills for collaborative work in teams, (6) and communication skills.

**Goals**
**G 1: Develop financial reporting systems**
Develop financial reporting systems.

**G 2: Interpret and predict choices in financial reporting systems**
Interpret and predict choices in financial reporting systems.

**G 3: Interpersonal skills**
Work effectively with team members to achieve common goals.

### Student Learning Outcomes/Objectives

| SLO 1: Financial reporting skills: Develop (G: 1) (M: 2) |
|---|---|
| That students apply professional standards, financial information tools, and professional judgment to develop financial reporting systems for decision making. |

| SLO 2: Financial reporting skills: Interpret and Predict (G: 2) (M: 1) |
|---|---|
| That students apply economic, financial, and psychological theories to interpret and predict choices in financial reporting systems. |

| SLO 3: Assurance Skills (G: 2) (M: 6) |
|---|---|
| Assurance skills. That students provide assurance services in a variety of organizational contexts |

| SLO 4: Analytical Skills (G: 2) (M: 5) |
|---|---|
| That students present sound analyses of financial performance that incorporate global and ethical dimensions. |

| SLO 5: Collaboration Skills (G: 3) (M: 3) |
|---|---|
| That students contribute to collaborative efforts to achieve team goals. |

| SLO 6: Communication Skills (M: 4) |
|---|---|
| That students demonstrate the communication skills needed for thriving as a professional accountant |

### Measures, Targets, and Findings

| M 1: Financial reporting skills: Interpret and Predict (O: 2) |
|---|---|
| Performance on assignments in Acct 8130 |
| Source of Evidence: Academic direct measure of learning - other |

**Target for O2: Financial reporting skills: Interpret and Predict**

| Findings 2011-2012 - Target: Met |
|---|---|
| NCI exam questions for the previous year had only 48% correct responses. For the current year, NCI exam questions reached 86.6% for correct responses. |

| M 2: Financial Reporting Skills - Develop (O: 1) |
|---|---|
| Performance on exam questions in 8410. |
| Source of Evidence: Academic direct measure of learning - other |

| M 3: Collaboration Skills (O: 5) |
|---|---|
| Evaluation by student peers of contributions to team projects in Acct 8030 and Acct 8410 |
| Source of Evidence: Academic direct measure of learning - other |

**Target for O5: Collaboration Skills**

| Findings 2011-2012 - Target: Not Reported This Cycle |
|---|---|
| Target was met in previous cycle. Not reported in this cycle. See action plan. |

| M 4: Communication Skills (O: 6) |
|---|---|
| At least 90% of students exited course with a B-level grade |
| Source of Evidence: Academic direct measure of learning - other |

| M 5: Analytical Skills (O: 4) |
|---|---|
| Performance on assignments in Acct 8700 |
| Source of Evidence: Academic direct measure of learning - other |

**Target for O4: Analytical Skills**
Mean of 75% on relevant quiz questions.

**Findings  2011-2012  - Target: Partially Met**

Target was met on 4 of the 6 relevant questions in spring 2012, except for: (1) Interpreting the valuation implications from asset impairment (73%), and (2) analyzing profit margins and asset turnover (73%)

**M 6: Assurance Skills (O: 3)**

Performance on assignments in Acct 8610

Source of Evidence: Academic direct measure of learning - other

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Apply concepts to financial statements in class teams**

Use financial statements of Fortune 500 companies to illustrate, explain, and demonstrate the concepts of financial analysis.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Analytical Skills | Outcome/Objective: Analytical Skills

**Implement team project in Acct. 8700**

Organize class into five teams to apply the concepts of financial statement analysis (acct 8700) to the 2011 financial statements of Fortune 100 companies in Georgia: Coca-Cola, UPS, Home Depot, Delta Airlines, Time Warner (CNN). Students analyze financial statements for buy/sell/hold investor decisions. Collaboration will be tested by team member evaluation of other team members.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Collaboration Skills | Outcome/Objective: Collaboration Skills

---

**Georgia State University**

**Assessment Data by Section**

**2011-2012 Concentration in Business Analysis MBA**

(*Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)*

**Mission / Purpose**

To enable students to identify the need for and effectively use analytical techniques - with an emphasis on quantitative techniques - for improved decision making in business.

**Goals**

**G 1: Goal of the MBA Concentration in Business Analysis**

The goal of the Concentration in Business Analysis for students in the MBA program is to provide students seeking a degree a broader MBA education with a meaningful exposure to an array of tools, techniques and frameworks used in business analysis and with techniques for using those tools, techniques and frameworks effectively with other functional information to improve decision making in both profit and not-for-profit organizations.

**Student Learning Outcomes/Objectives**

**SLO 1: Qualitative Analysis of Business Situation (M: 1)**

Students should be able to qualitatively state the key issues clearly and accurately the issues in a business problem.

**Strategic Plan Associations**

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

**SLO 2: Model Building Ability (M: 2)**

Students will be able to clearly identify the dependent variable(s) and the appropriate metrics in a given business problem.

**SLO 3: Understanding of Techniques (M: 3)**

Students will understand when and how to perform problem solving techniques for business problems and how to interpret the results.

**SLO 4: Software Skills (M: 4)**
Students will acquire expertise in the selection and use of key decision making software packages.

**Measures, Targets, and Findings**

**M 1: Qualitative Analysis of Business Situation (O: 1)**

Students will be measured on their ability to a) understand the business goals, b) identify the key variables that need to be analyzed, c) analyze the potential relationships among the variables and d) interpret the results of their analysis.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Qualitative Analysis of Business Situation**

Achievement Target: 80% of students will receive a score of 3.0 or higher on the 4.0 scale. Rubric 1 is to be used in scoring on assignments and projects from across the curriculum. Because of the small number of students in the MS Business Analysis program each student in the program will be evaluated on this rubric in every course where it is applicable during the academic year. Learning Outcome 1. Rubric Qualitative Analysis of Business Situation Excellent (4) Competent (3) Less than competent (2) Ineffective (1) i. Understanding of the business goal / issues is able to state the key issues clearly and accurately. Either clarity or accuracy can be improved. Both clarity and accuracy are below expectation. It is clear that the student does not understand the issues ii. Identifying Key variables that need to be analyzed. Knows clearly what variables must be used to represent the key issue(s). Some lack of clarity in expressing the key variables. Unsure or incomplete understanding of what needs to be analyzed. Does not understand the key variable that relate to the issues. iii. Analysis potential relationships among variables. Accurate and thorough qualitative analysis of the situation. Some lack of clarity in expressing the relationships. Weak understanding of relationships among concepts/variables. Very little understanding of how variables/concepts are related. iv. Interpretation of results. Can clearly relate the results of model building and quantitative analysis back to the main issue. Can make the connection of model results to situation most of the time. Some errors in interpretation of results in the context of the situation. Inability to connect the results of model with the situation at hand.

**Findings 2011-2012 - Target: Met**

The average score for this measure was 3.375, indicating good performance on this measure. The target was met.

**M 2: Model Building Ability (O: 2)**

In developing a model students will be measured on their ability to a) identify the dependent variable(s) and the appropriate metrics, b) identify key independent variables and their metrics, c) manage data collection, cleaning and transformation, and d) develop and validate a model.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Model Building Ability**

80% of students will receive a score of 3.0 or higher on the 4.0 scale. Rubric 2 is to be used in scoring on assignments and projects from across the curriculum. Because of the small number of students in the MS Business Analysis program each student in the program will be evaluated on this rubric in every course where it is applicable during the academic year. Learning Outcome 2 Model Building Ability. Excellent (4) Competent (3) Less than competent (2) Ineffective (1) i. Identifying the dependent variables and appropriate metrics. Can clearly identify the dependent variable(s) and the appropriate metrics. Can identify the variables, but unsure about measurement uncertainty about the dependent variable. Does not understand the connection between the issue at hand and the dependent variable. ii. Identifying Key independent variables and their metrics. Can clearly identify the independent variable(s) and the appropriate metrics. Can identify the variables, but unsure about measurement uncertainty about the dependent and the independent variables. iii. Dealing with Data – collection, cleaning, transformations. Accurate and thorough preliminary analysis of the data. Most parts of preliminary analysis done well. Skipped or misunderstood some aspects of data preparation. Poor understanding of the need to examine data carefully before modeling. iv. Model Development and validation. Can clearly demonstrate a viable model and results from a validation. Possibly accurate model, not validated sufficiently. Some errors in model building. Model inappropriate or has too many errors.

**Findings 2011-2012 - Target: Met**

The average score for this measure was 3.625 out of 4.00, indicating continued strong performance in this area. The target was met.

**M 3: Understanding of Techniques (O: 3)**

Students will understand when and how to perform problem solving techniques for business problems and how to interpret the results.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Understanding of Techniques**

Achievement Target: 80% of students will receive a score of 3.0 or higher on the 4.0 scale. Rubric 3 is to be used in scoring on assignments and projects from across the curriculum. Because of the small number of students in the MS Business Analysis program each student in the program will be evaluated on this rubric in every course where it is applicable during the academic year. Learning Outcome 3 Rubric Understanding of Techniques. Excellent (4) Competent (3) Less than competent (2) Ineffective (1) i. Regression Analysis. Clear understanding of when and how to perform the technique and interpret the results. Occasional uncertainty about the application of the technique or interpretation of results. Makes some errors in applying the technique, or in the way the results are interpreted. Poor understanding of why, when and how the technique is applied. ii. Time Series Forecasting. Clear understanding of when and how to perform the technique and interpret the results. Occasional uncertainty about the application of the technique or interpretation of results. Makes some errors in applying the technique, or in the way the results are interpreted. Poor understanding of why, when and how the technique is applied. iii. Factor/Cluster Analysis. Clear understanding of when and how to perform the technique and interpret the results. Occasional uncertainty about the application of the technique or interpretation of results. Makes some errors in applying the technique, or in the way the results are interpreted. Poor understanding of why, when and how the technique is applied. iv. Discriminant Analysis or Logistic Regression. Clear understanding of when and how to perform the technique and interpret the results. Occasional uncertainty about the application of the technique or interpretation of results. Makes some errors in applying the technique, or in the way the results are interpreted. Poor understanding of why, when and how the technique is applied.
**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1:** What changes in the assessment process have your degree program made since last year's assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The assessment process remains the same as last year.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to...
The program as it stands for MBA students seems to meet their needs well in the marketplace. Our main weakness was our inability to offer courses as needed, due to insufficient faculty. We have hired one new faculty member who will start in Fall 2012, and a search will be on to hire another next year. This will enable us to offer electives that have not been offered at all for a few years, or have not been offered often enough for students.

---

### Georgia State University

**Assessment Data by Section**

**2011-2012 Concentration in Entrepreneurship MBA**

*As of 12/12/2016 04:41 PM EST*

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

#### Mission / Purpose

Students will be able to integrate the functional knowledge and skills gained in the core subjects that include finance, accounting, marketing, etc. along with entrepreneurship to understand and work effectively within the dynamics and challenges of the new venture arena and the management of entrepreneurial ventures. Upon successfully completing the concentration, students will 1) create business ideas, 2) evaluate whether an idea is a good business opportunity, 3) understand how to gather resources to move a business opportunity to the marketplace, 4) be made aware of various options to exit the business 5) prepare verbal presentations and 6) be prepared to participate with a team in an entrepreneurial context.

#### Outcomes/Objectives

**O/O 1: Create Business Ideas**

Students will be able to use sound knowledge of business and economics in order to develop new business ideas that could be viable new ventures.

**O/O 2: Evaluation Skills**

Students will be able to evaluate business opportunities and accurately judge the situations likelihood of being developed into a viable business. Students will be able to support their conclusions as to the opportunities viability by applying material from the Entrepreneurship courses and other functional core classes of the MBA program.

**O/O 3: Resource Acquisition Skills**

Students understand how to gather resources to move a business opportunity to the marketplace.

**O/O 4: Business Exit Plans**

Students have to show the ability to develop both the content and implementation aspects of a business exit strategy for a business. Students need to understand when a business is failing, when failing business can or cannot be saved and why, and what actions should be taken to maximize the investors recovery of capital in each context.

**O/O 5: Verbal Business Plan Presentation Skills**

Students will be able to prepare and present an oral business plan in a logical and precise fashion consistent with what is common practice in practice.

---

### Georgia State University

**Assessment Data by Section**

**2011-2012 Concentration in Finance MBA**

*As of 12/12/2016 04:41 PM EST*

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

#### Mission / Purpose

The MBA degree program with a concentration in Finance is designed for individuals seeking a professional business management degree with advanced knowledge oriented towards finance. Within the finance curriculum, students may gain expertise in various specialized areas including corporation finance, investments, financial institutions and markets, and international finance. The goal of the program is to provide students with the skills necessary to become strong general and functional managers and understand issues in the context of the rapidly evolving business environment particularly as relates to finance. The program provides graduates with the technical skills needed to support a thorough understanding of advanced issues in finance as well as with the analytical, conceptual and integrative skills needed to achieve a high degree of success in their careers in finance.

#### Goals

**G 1: Knowledge of finance and general management practices**

Students will develop specific knowledge of the discipline of finance as well as general knowledge of the core management areas of business practice.

**G 2: Conceptual and technical skill development**
Students will develop conceptual and technical skills necessary for financial model building and analysis.

**G 3: Problem-solving skills for real world application**
Students will developing problem-solving skills used in the analysis of commonly encountered issues in the practice of finance.

**G 4: Development of critical thinking skills**
Students will develop critical thinking skills for analyzing complex financial issues.

**G 5: Managerial leadership preparation**
Students will be prepared to join senior management levels in financial and non-financial organizations.

### Student Learning Outcomes/Objectives

**SLO 1: Development and application of foundation knowledge (M: 1, 2)**
MBA-Finance students will be able to: (i) Apply principles of macro-financial theory and policy. (ii) Apply principles of microfinancial theory of the firm. (iii) Acquire a general knowledge of business and management practices outside of the area of finance.

**SLO 2: Development and application of technical skills (M: 1, 2, 3)**
Technical skills that MBA-Finance students will develop and apply include: (i) Proficiency in capabilities in information technology as they relate to finance. (ii) Technical capabilities for analyzing the financial condition and performance of a corporation, investment portfolio or other financial entity. (iii) The necessary conceptual and technical skills to be proficient in financial model building. (iv) Computer and technology skills, including (but not limited to) spreadsheet capabilities, familiarity with those software packages employed in analyzing financial issues, and general operating procedure capabilities.

**SLO 3: Development and application of analytical and conceptual skills (M: 1, 2, 3)**
MBA-Finance students will: (i) Possess knowledge and capability in various subareas of finance such as corporate finance, investments, financial institutions and markets, and international finance. (ii) Be proficient in assessing the impact of financial transactions on a corporation, investment portfolio or other financial entity. (iii) Be able to identify and assess the valuation and risk of real and financial assets. (iv) Be capable of applying models for analyzing financial strategies and alternatives for purposes of solving real world financial problems. (v) Be exposed to educational and career development opportunities resulting from the globalization of finance.

### Measures, Targets, and Findings

#### M 1: Representative questions from courses (O: 1, 2, 3)
To examine student performance in select courses from various subareas of finance (FI 8020, FI 8200, and FI 8310), the course instructors selectively chose five representative questions from various assessment instruments for their courses during the semester that together represent core learning in these courses. The questions are briefly described indicating how the questions fulfill learning objectives of the course. Each instructor has also indicated student performance on these five selected, representative questions using the median and maximum score attainable. In the Document Repository see "Exhibit 1a-2012: Direct Assessment of Course Performance-I (Fall 2011)" for findings from Fall 2011 and "Exhibit 1b-2012: Direct Assessment of Course Performance-II (Spring 2012)" for findings from Spring 2012. This measure has 3 related learning outcome objectives as indicated in "Exhibit 2-2012: MBA-Finance Assessment Plan and Alignment" (in which course level questions Q1 through Q5 are cross-referenced to learning outcomes), also included in the Document Repository.

Source of Evidence: Administrative measure - other

#### Target for O1: Development and application of foundation knowledge
Median scores shall be at or above 70 percent, which we believe indicates a sufficient level of proficiency to effectively engage in financial decision-making.

**Findings 2011-2012 - Target: Met**
Findings are reported in the attached documents on performance on direct measures in courses. These findings indicate that our MBA-Finance students are continuing to learn at or above the expected level of performance and that their foundation knowledge meets our targets.

#### Target for O2: Development and application of technical skills
Median scores shall be at or above 70 percent, which we believe indicates a sufficient level of proficiency to effectively engage in financial decision-making.

**Findings 2011-2012 - Target: Met**
Findings are reported in the attached documents on performance on direct measures in courses. These findings indicate that our MBA-Finance students are continuing to learn at or above the expected level of performance and that their technical skills meet our targets.

#### Target for O3: Development and application of analytical and conceptual skills
Median scores shall be at or above 70 percent, which we believe indicates a sufficient level of proficiency to effectively engage in financial decision-making.

**Findings 2011-2012 - Target: Met**
Findings are reported in the attached documents on performance on direct measures in courses. These findings indicate that our MBA-Finance students are continuing to learn at or above the expected level of performance and that their analytical and
Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1: What changes in the assessment process have your degree program made since last year’s assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The 2011-2012 academic year was the first year for the MBA-Finance assessment, thus there were no changes made in the assessment process from the prior year. As a result, these new faculty are trained to enable their participation in the assessment process. Finally, the Department recently completed is Academic Program Review and has begun implementation of the Action Plan that may yield potential changes in our assessment process.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

First, even though there was no assessment in the prior year (this was the first year of us conducting an assessment for the MBA-Finance program), in the spirit of continuous improvement we have introduced over the last couple of years two new courses in the changing marketplace. In response, we have most recently added two courses: FI 8350 “Corporate restructuring and workouts” and FI 8260 “Hedge funds and their trading strategies.” These two courses have been successfully taught now for 2 cycles and are among our most popular courses. Looking forward to the 2012-2013 academic year, we will continue to review the curriculum and identify potential new courses that will provide students with important skill sets relevant to their professional development.

FINANCE PROGRAM QUESTION 1: What changes did you make as a result of what you discovered in the assessment process? What actions did you take this past year based on the results from the previous cycle?

Second, in response to earlier feedback from students, we will continue to seek participation from leading industry executives in our MBA courses to enhance student learning in the classroom. We will seek to continue this practice.
Since this is the first year of assessment in the MBA-Finance program, we will be in a better position to address these questions during the next assessment cycle.

**ADMINISTRATIVE DEPT QUESTION 2:**
What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department's effectiveness?

Overall targets were met indicating that the Department is a college leader in terms of the quality of the instruction and the knowledge base of students. We will continue to be diligent in ensuring a high quality program for students. Our findings provide us with valuable information for improving the curriculum. To facilitate continual improvement we are also actively involving our industry advisory board to provide input on program design and curriculum and to enhance student interaction with senior executives in industry.

**ADMINISTRATIVE DEPT QUESTION 3:**
How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

We will continue to pursue strategies similar to those used in the MS-Finance program assessment that have been successful using for several years including the use of faculty review committees along with input from our industry advisory committee members. Our main strategy for improvement during the coming year will be to use the findings of the recently conducted Academic Program Review (APR) and the resulting action plan for improving the effectiveness of our program.

---

**Georgia State University**

**Assessment Data by Section**

**2011-2012 Concentration in Human Resource Management MBA**

*As of: 12/12/2016 04:41 PM EST*

*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)*

### Mission / Purpose

The Master of Business Administration in Human Resource Management program prepares students for general business management careers with an emphasis on using Human Resources practices and procedures to increase workforce efficiency and effectiveness. Students receive detailed knowledge of selected functional areas of Human Resources to aid them in formulating legal, motivational, and cost-effective Human Resources policies or to prepare them for Human Resources generalist practices.

This Mission was established in 2006-07. It was not moved forward when the WEAVE version was updated.

### Goals

**G 1: Basic functions of HRM**
To graduate students from the MBA program in HRM with an understanding of the role of the basic functions of Human Resources Management in a variety of organizations.

**G 2: Ability to solve HR problems**
To graduate students from the MBA in HRM program with the ability to solve Human Resources Management problems.

**G 3: Linkage of HR actions and corporate strategy**
To graduate students from the MBA in HRM program with an understanding of the importance of the role and interface of the HR functions with organizational strategies.

**G 4: Understanding of employment legal issues**
To graduate students from the MBA in HRM program with an understanding of the basic employee-related legal issues in organizations.

### Student Learning Outcomes/Objectives

**SLO 1: The Role of HR in Organizations (G: 1, 2) (M: 1, 2)**
The MBA-HRM graduate will be able to understand and effectively apply the appropriate job analysis, job description, job evaluation, performance appraisal, dispute resolution, and HR policy formulation techniques in a variety of settings.

**Standard Associations**
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 2: Problem Solving (G: 1, 2) (M: 3, 4)**
The MBA-HRM graduate will be able to identify, evaluate, and effectively react to issues in the areas of employee relations and performance management.

**SLO 3: Links with Business Strategy (G: 2, 3) (M: 5)**
The MBA-HRM student will be able to define, select, and defend specific business strategies and the appropriate HR policies for each of those strategies.

**Standard Associations**
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)
**SLO 4: HR Law (G: 1, 4) (M: 6, 7)**
The MBA-HRM graduate will be able to identify and address potential legal issues, relevant laws, and appropriate policies to address.

**Standard Associations**
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Measures, Targets, and Findings**

**M 1: General Understanding of HR in Organizations (O: 1)**
Students will understand the role and usage of job analysis, job description, job evaluation, and performance appraisal techniques and can apply the appropriate method in a variety of settings.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: The Role of HR in Organizations**
80% of HR students will meet or exceed a 2.0 average on all criteria. Measurement will be done by applying the MBA Concentration in HR Measure 1 Rubric to randomly selected project reports.

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target: Not Met</th>
</tr>
</thead>
<tbody>
<tr>
<td>Faculty rating of 1.84/3.0. 74% of HR students met or exceeded 2.0 on all criteria.</td>
</tr>
</tbody>
</table>

**M 2: HR Formulation Techniques (O: 1)**
The MBA-HRM graduate will be able to identify, evaluate, and effectively react to issues in the areas of employee relations and performance management.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: The Role of HR in Organizations**
80% of students will be rated at or above 2.0. Measurement will be done by applying Measure 2 Rubric to randomly selected exam questions in MGS 8300, 8360, and 8390. Learning Outcome 1: Understand and apply job analysis, description, evaluation, and performance appraisal. Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure 2: Accurate description and usage guides for dispute resolution and HR policy formulation techniques. Student cannot accurately describe and explain usage of dispute resolution and HR policy formulation techniques. Student can accurately describe and explain usage of dispute resolution and HR policy formulation techniques. Student can accurately and in detail describe and explain usage of dispute resolution and HR policy formulation techniques.

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target: Not Met</th>
</tr>
</thead>
<tbody>
<tr>
<td>Faculty rating of 1.96/3.00. 78% of HR students met or exceeded 2.0 on all criteria.</td>
</tr>
</tbody>
</table>

**M 3: Identify and evaluate critical HR problem issues. (O: 2)**
Students can identify and evaluate critical HR problem issues.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Problem Solving**
80% of HR students will meet or exceed a 2.0 average on all criteria. Measurement will be done by applying Measure 3 Rubric to randomly selected project reports.

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target: Partially Met</th>
</tr>
</thead>
<tbody>
<tr>
<td>Faculty rating of 1.92/3.00. 76% of HR students met or exceeded 2.0 on all criteria.</td>
</tr>
</tbody>
</table>

**M 4: Resource Identification in HR (O: 2)**
Students can find and apply appropriate resources to address critical HR issues and solve HR problems.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Problem Solving**
80% of HR students will meet or exceed a 2.0 average on all criteria. Measurement will be done by applying Measure 4 Rubric to randomly selected project reports.

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target: Met</th>
</tr>
</thead>
<tbody>
<tr>
<td>Faculty rating of 2.11/3.0. 84% of HR students met or exceeded 2.0 on all criteria.</td>
</tr>
</tbody>
</table>

**M 5: Links with Business Strategy (O: 3)**
Students will show the ability to select appropriate business strategies and accompanying HR strategies and policies in case analyses in MGS 8300, MGS 8390, and MGS 8395.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Links with Business Strategy**
80% of HR students will meet or exceed a 2.0 average on all criteria. Measurement will be done by applying Measure 5 Rubric to randomly selected case analyses.

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target: Not Met</th>
</tr>
</thead>
<tbody>
<tr>
<td>Faculty rating of 1.86/3.0 77% of HR students met or exceeded 2.0 on all criteria.</td>
</tr>
</tbody>
</table>
### M 6: Law and Issue Identification (O: 4)
This measure will capture the students’ ability to identify and address legal issues and relevant laws and policies to address legal issues in compensation, selection, and other HR areas.

Source of Evidence: Written assignment(s), usually scored by a rubric

### M 7: Understanding and Interpreting case Law (O: 4)
This measure will capture the students’ ability to understand and translate into appropriate HR policies case law concerning HR issues.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O4: HR Law**

80% of students will be rated at or above 2.0. Measurement will be done by applying Measure 7 Rubric to randomly selected case analyses. Learning Outcome 4: Understand the role of legal constraints on HR activities and policies. Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure 7: Understand and translate into appropriate HR policies case law concerning HR issues. Can discuss some implications of HR case law and can apply to some HR legal issues. Can discuss most implications of HR case law and can apply to most HR legal issues. Can discuss all implications of HR case law and can apply to all HR legal issues.

**Findings 2011-2012 - Target: Partially Met**

Faculty rating of 1.77/3.0. 66% of MBA HR students met or exceeded 2.0 on all criteria.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Graduation Requirement Change and Multi-Course Law Additions

Require MBA students to take MGS 8390. Add an additional 30-minute lecture in each class (MGS 8320, MGS 8360, MGS 8390). Reevaluate after next offering.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - Measure: Law and Issue Identification | Outcome/Objective: HR Law

  **Implementation Description:** Action needed through Graduate Program Council

  **Projected Completion Date:** 12/2010
  **Responsible Person/Group:** Lucy McClurg
  **Additional Resources:** None
  **Budget Amount Requested:** $0.00 (no request)

#### HR Strategy and Communication

With respect to the third learning outcome, the student's ability to understand and effectively communicate how HR strategies support employer business strategies, two actions will be taken:  

- Add a short reading about problem statement to the MGS 8300 class. Reevaluate after next offering.

- Spend an additional 30 minutes in MGS 8390 on business strategies and appropriate HR strategies for each. Reevaluate after next offering.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** High

  **Projected Completion Date:** 11/2009
  **Responsible Person/Group:** HR Faculty
  **Additional Resources:** None
  **Budget Amount Requested:** $0.00 (no request)

#### Lecture Changes Integrating Law and Policy

Review in more detail written assignments in MGS 8320 and MGS 8300 concerning the linkages between HR law and policies. Discuss in class and compare student products, giving feedback and analysis. Reevaluate after next offering.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - Measure: Understanding and Interpreting case Law | Outcome/Objective: HR Law

  **Projected Completion Date:** 12/2010
  **Responsible Person/Group:** Lucy McClurg
  **Additional Resources:** None
  **Budget Amount Requested:** $0.00 (no request)

#### Lecture Modifications on Concepts

Add a 30 minutes to the lecture on differences among, importance of, and usage of job descriptions, analysis, and performance measures. Reevaluate after next offering.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - Measure: General Understanding of HR in Organizations | Outcome/Objective: The Role of HR in Organizations
Reading Changes in MGS 8360
Assign readings to MGS 8360 and require students to explain conclusions and implications in their own words. Discuss in class. Reevaluate after next offering.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
  Measure: Resource Identification in HR | Outcome/Objective: Problem Solving

Reading Changes in MGS 8390
Add additional in-class activity on job analysis
Continue to use 30 additional minutes of class time on job analysis, job descriptions, and performance measures. Add an in-class activity in MGS 8390.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Implementation Description: Instructor will write and administer in-class activity and give feedback in class.

Add additional time for strategy in MGS 8300
Add 30 minutes to the presentation in MGS 8300 devoted to linkage between corporate strategy and HR strategy.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Implementation Description: Develop a concise lecture and handouts on corporate strategies and appropriate HR strategies for each.

Add in-class activities on performance measures and job analysis
Add to both MGS 8360 and MGS 8390 classes in-class activities on job analysis, job descriptions, and performance measurement, and the linkages among them. Spend additional class time reviewing and critiquing.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Implementation Description: Instructors will write short hands-on cases to illustrate appropriate usage of job methods and performance measures.

Add in-class activity and lecture
Continue to use 30 minutes of class time on differences among, importance of, and usage of job descriptions, analysis, and performance measures. Add an in-class activity in MGS 8390 with student practice on topics. Reevaluate after next offering.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium
Implementation Description: Add in-class activities to supplement additional lectures on topics.

Add in-class activity to MGS 8300
A short in-class activity in MGS 8300 will be designed to illustrate the linkage between case law and HR policy. Feedback for improvement will be given in class.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Implementation Description: A short in-class activity using a case that will then be used to have students practice writing rules and regulations.
Additional feedback on homework re policy formulation
15 additional minutes of class time will be spent helping students edit and rewrite HR policy statements, and more detailed feedback on homework will be given.
   Established in Cycle: 2010-2011
   Implementation Status: Planned
   Priority: High
   Implementation Description: Students will be coached to rewrite policy statements.
   Projected Completion Date: 12/2012
   Responsible Person/Group: Dr. Kay Bunch
   Additional Resources: None
   Budget Amount Requested: $0.00 (no request)

Assign readings to MGS 8360
Assign one additional set of readings to MGS 8360 concerning resource allocation in HR.
   Established in Cycle: 2010-2011
   Implementation Status: Planned
   Priority: High
   Implementation Description: Add readings to MGS 8360
   Projected Completion Date: 12/2012
   Responsible Person/Group: Instructor of MGS 8360
   Additional Resources: None
   Budget Amount Requested: $0.00 (no request)

Assign rewrites of 2 legal papers in MGS 8320
Students in MGS 8320 will write legal interpretations (including implications for policy). For two of those assignments, students will be required to use instructor feedback to rewrite the papers and make improvements.
   Established in Cycle: 2010-2011
   Implementation Status: Finished
   Priority: High
   Implementation Description: Assign rewrites of 2 papers in MGS 8320
   Responsible Person/Group: Dr. Kay Bunch
   Additional Resources: None

Coordinate terminology and usage across all HR instructors
Continue to use extra class time to go into more detail on the differences among job analysis, job descriptions, and job specifications and how they are related. Coordinate among all HR instructors to be sure they are all using the terms consistently.
   Established in Cycle: 2011-2012
   Implementation Status: Planned
   Priority: Medium
   Relationships (Measure | Outcome/Objective):
   Measure: General Understanding of HR in Organizations | Outcome/Objective: The Role of HR in Organizations
   Implementation Description: Coordinate with instructors over terminology and usage.
   Responsible Person/Group: All HR instructors
   Additional Resources: None
   Budget Amount Requested: $0.00 (no request)

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We began to include more PMBA/HR students in our analysis and data collection and to focus more on how those students are faring in our programs. We especially looked at how PMBA students differ from our MBA students and how we will need to adjust delivery of materials to enhance their learning and accommodate any special needs. We involved new faculty and PTIs more in assessment and in discussions of how we need to change courses and the relative weight of topics in class times.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

We shifted the amount of class time spent on straight delivery of facts and knowledge with the amount of time spent on application and advanced knowledge of material. Specifically, we decreased the class time spent on lower level learning and increased class time on case discussion, writing assignments and feedback, in-class activities, and group discussions. We added several cases and set up grading to make students more accountable to assignments that involve application and expression of opinions and policies.
Mission / Purpose
The mission of the MBA Concentration in Operations Management is to provide students pursuing a the broader MBA degree (vs. the MS in Operations Management) with a moderate level of breadth and depth of understanding with respect to the major operations management issues confronting organizations of all types today.

Goals
G 1: Most Up-to-date Courses and Materials
Our focus for the MBA Concentration in Operations Management program is to offer students the most contemporary offering of any Concentration in the MBA program through continual revision and improvement of the curriculum. In the Fall 2011 and again Fall 2012, the faculty reworked the syllabus, course content and project for MGS 8710 Operations Planning making it more relevant regarding national and global supply chain planning. Curriculum for the 2012-2013 includes Operations Planning (focus on logistics & supply chain management; working capital deployment), Operations Strategy, Project Management, Quality Management, Service Operations Management, and Operations Management.

G 2: Attract Top Talent Students
The MBA Concentration in Operations Management program is meant to attract students from the upper half of the MBA program who appreciate and understand the importance of operations, logistics and supply chain managemnt for both manufacturing and service operations. In so doing, the operations management faculty is able to facilitate better learning through increased quality of classroom discussions and provide the best quality projects for the students.

Student Learning Outcomes/Objectives
SLO 1: A Strategic view of OM (G: 1, 2) (M: 1, 2, 3)
The courses in this concentration will develop in the student a strategic view of Operations Management. That means that students will not only know the particulars of a topic in Operations Management, but will also be able to understand how they integrates with other perspectives in an organizational setting. Analysis conducted and recommendations made by a student completing this concentration will include Operations Management insights, frameworks, and tools, along with those from other functional disciplines, in order to formulate and implement effective strategic actions.

SLO 2: Develop Decision Making Abilities (M: 4)
The student should be able to identify critical success factors in operations management activities of an organization. This includes the ability to correctly identify, analyze and select the appropriate decision in terms of the operations management function and incorporate the operations management function into the decision process of the organization. This objective is accomplished through the use of group projects and independent writings on various operations management topics.

SLO 3: Develop an Environmental Sustainability Viewpoint (M: 5)
The student should become aware of the impact that OM and Supply Chain decisions have on the environment and industrial sustainability. They should be able to select the appropriate solutions to OM problems in the environmental/sustainability framework. Outside speakers are engaged to bring this perspective to life and create a desire to better understand the implications going forward.

Other Outcomes/Objectives
O/O 4: Become a Strong Team Member (M: 6)
The students should develop and enhance their team skills in the completion of completing project work in the Operations Management area. This includes positive participation in group activities and the completion of work that is needed for the group's progress. Focus is placed on identifying a specific OM problem, defining the problem, setting criteria for measuring alternatives/solutions, selecting alternatives, measuring the alternatives against the selected criteria, implementation of the alternative, KPIs for measuring the success/failure of the alternative, and risk assessment of the selected alternative.

Measures, Targets, and Findings
M 1: Reasoned Analysis (O: 1)
Evaluation of individual MS student's case and/or homework analyses will be completed. Individual readings and the students write-up on the reading will be reviewed and turned back to the student with comments on the relevancy of the write-up.

Target for M1: A Strategic view of OM
80% of students should pass each outcome/objective with a faculty evaluation of 2.5 on the Rubric for Measure One Learning Objective 1: Strategic View of OM Fail Fails to meet standards=1 Meet Meets standards=2 Exceeds exceeds standards=3 Measure 1: Reasoned Analysis The student is not able to complete a reasoned analysis by identifying and studying a firm's OM application both within the firm or industry. The student cannot determine the effect that firm specific dimensions have on a selected topic. The student is able to complete a reasoned analysis by identifying and studying a firm's OM application both within the firm or industry. The student can determine the effect that firm specific dimensions have on a selected topic. The student exceeds at...
### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### M 2: Integration of Recommendations (O: 1)

Students should be able to determine the effect that the OM dimensions have on a selected topic and integrate recommendations on a firm's OM applications both within the firm or industry.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

**Target for O1: A Strategic View of OM**

80% of students should pass each outcome/objective with a faculty evaluation of 2 on the Rubric. Rubric for Measurements of Learning Outcome 1: Strategic View of OM - Fail Fails to meet standards=1 Meet Meets standards=2 Exceed Exceeds standards=3 Measure 2 Integration of recommendations The student is not able to integrate recommendations on a firm's OM applications both within the firm or industry. The student determines the effect that the OM dimensions have on a selected topic. The student easily integrates recommendations on a firm's OM applications both within the firm or industry.

#### M 3: Performance (O: 1)

This item measures the students' ability to analyze or understand how the firm's operations process performance is affected by the competitive environment through their ability to identify the critical success factors of an OM application and the assessment of available resources and capabilities.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

**Target for O1: A Strategic View of OM**

80% of students should pass each outcome/objective with a faculty evaluation of 2 on the Rubric. Rubric for Measurements of Learning Outcome 1: Strategic View of OM - Fail Fails to meet standards=1 Meet Meets standards=2 Exceed Exceeds standards=3 Measure 3 Performance The student is not able to identify critical success factors of an OM application. The students are not able to assess performance through an assessment of available resources and capabilities. Students are not able to analyze or understand how the firm's operations process performance is affected by the competitive environment.

#### M 4: Critical Thinking (O: 2)

Evaluation of individual MS student's work as completed in the required OM course. The accumulation of this type of knowledge will be received through the application of exam questions that will be measured overtime.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

**Target for O2: Develop Decision Making Abilities**

Not yet set - this is a new measure being added in this cycle.

#### M 5: Environmental Impact Evaluation Skills (O: 3)

Will develop a focus and will highlight the effects that OM decisions have on the environmental and aspects of industry.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

**Target for O3: Develop an Environmental Sustainability Viewpoint**

80% of students should pass each outcome/objective with a faculty evaluation of 2 on the Rubric. Learning Objective 3: Develop a Environmental/Sustainability Viewpoint - Fail Fails to meet standards=1 Meet Meets standards=2 Exceed Exceeds standards=3 Measure 5 Environmental Impact Evaluation The student is not able to complete and deliver a project that shows an understanding of the environment impact of OM decisions or are able to contribute their functional expertise to the solution. The student is able to complete and deliver a project that shows an understanding of the environment impact of OM decisions or are able to contribute their functional expertise to the solution. The student excels at determining the effect that a firm's specific dimensions have on a selected topic.

#### M 6: Team Skills (O: 4)

The students should develop and enhance their team skills in the completion of completing project work in the Operations Management area. This includes positive participation in group activities and the completion of work that is needed for the group’s progress.

**Source of Evidence:** Student course evaluations on learning gains made

**Target for O4: Become a Strong Team Member**

80% of students should pass each outcome/objective with a faculty evaluation of 2 on the Rubric. Objective 4: Become a Strong Team Member - Fail Fails to meet standards=1 Meet Meets standards=2 Exceed Exceeds standards=3 Measure 6 Team Skills The student did not develop team skills by indicated by poor returns on peer evaluations. The student develops team skills by indicated by average returns on peer evaluations. The student develops strong team skills by indicated by very positive returns on peer evaluations.
A strategic view of OM

With respect to the first learning outcome, to develop a strategic view of OM, two actions will be taken: ∙ Add several readings from Business Week, New York Times or Wall Street Journal about aspects in which companies use operations management knowledge from a strategic perspective. Evaluate after next offering. ∙ Add an in-class exercise based on a case about operations making significant difference for a company’ long term shareholder value. The case can be either a Harvard case or one that is created by the OM faculty members in the department. Evaluate after next offering.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High
Implementation Description: The implementation will be continued to have enough results for further analysis
Projected Completion Date: 12/2011
Responsible Person/Group: Operations Management Faculty Members
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

An Environment Sustainability Viewpoint

With respect to the third learning outcome, develop an environment/sustainability viewpoint, two actions will be taken: ∙ Add a class project that connects OM theory and applications. Evaluate after next offering. ∙ Add an in-class exercise to let students discuss the impact of OM and supply chain decisions on the environment and industrial sustainability. Evaluate after next offering.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High
Implementation Description: OM faculty will continue to implement these actions. We have seen more and more companies aware of the initiative.
Projected Completion Date: 12/2011
Responsible Person/Group: Operations Management Faculty Members
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Decision Making Abilities

With respect to the second learning outcome, to develop decision-making abilities, three actions will be taken: ∙ Require students to add more analysis in students’ group project and include numbers in their report. Evaluate after next offering. ∙ Add an in-class exercise to let students discuss various measures in supply chain and revenue management analysis in accordance with the current globalizing business environment. Evaluate after next offering. ∙ Add a couple of quiz to make students to make better preparations and improve learning outcomes. Evaluate after next offering.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High
Implementation Description: The actions have been implemented and initial good results have been shown. OM faculty members will continue to implement for more results
Projected Completion Date: 12/2011
Responsible Person/Group: Operations Management Faculty Members
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Team Membership

With respect to the fourth learning outcome, to become a strong team member, three actions will be taken: ∙ Incorporate lessons on effective teams into teaching material. ∙ Require team members in the group project to create a team charter indicating an emphasis on the importance of cooperation and fairly distributed individual contributions. Evaluate after next offering. ∙ Ask each team to evaluate other teams’ performance to emphasize the importance of team work. Evaluate after next offering.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High
Implementation Description: Implementation has taken in MBA 8155 and results show actions are effective.
Projected Completion Date: 12/2011
Responsible Person/Group: Operations Management Faculty Members
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Critical Thinking

The Operations Management faculty members will develop a measurement mechanism, including targeted assignments and exams, as well as a measuring rubric, for the assessment of the use of critical thinking skills in the solving of problems in operations management.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Critical Thinking | Outcome/Objective: Develop Decision Making Abilities
Projected Completion Date: 12/2010
Responsible Person/Group: Operations Management Faculty Members
Additional Resources: None
Budget Amount Requested: $0.00 (no request)
**Mission / Purpose**

The manager in today's business environment deals with a variety of complex concerns including structural and organizational design, people issues and managing people, power and politics, and cultural dimensions. The Master of Business Administration in Organization Management prepares managers to analyze issues, events, problems, resource constraints, and change from the vantage point of each of these concerns and to consider each as they make decisions to chart the organization's future. Organizations are composed of people, and people bring unique challenges to the workplace. These challenges include working with people as individuals, people in work groups, and people collectively in organizations.

**Goals**

- **G 1: Diagnose Organizational Events and Problems**
  Goal 1: To graduate students from the MBA in Organizational Management with the ability to diagnose the basic causes of organizational events, issues, and problems.

- **G 2: Recommendations for Org. Events & Problems**
  Goal 2: To graduate students from the MBA in Organizational Management with the ability to recommend appropriate responses to organizational events, issues, and problems.

- **G 3: Understand Impact of Power & Politics**
  Goal 3: To graduate students of the MBA program in Organization Management with an understanding of the impact that power, influence, and political behavior have on general organizational success and upon the success of specific initiatives in organizations.

**Student Learning Outcomes/Objectives**

- **SLO 1: Analyze Organizational Situations (G: 1) (M: 1)**
  Outcome/Objective 1: Analyze a variety of organizational situations and identify the causes of effective and ineffective movement toward meeting the organization's agenda. Full Description: Organizational issues, events, and problems have causes that simultaneously emanate from structural, human, political, and cultural roots. Therefore, most significant issues, events, and problems must be viewed from multiple perspectives to obtain a reasonably complete understanding. Graduate should be able to simultaneously see issues, events, and problems from multiple perspectives. Related Measures Case assignments and exam questions in MBA 8165, MGS 8435, and MGS 8440.

- **SLO 2: Specify Courses of Action (G: 2) (M: 2)**
  Outcome/Objective 2: Review a variety of organizational events, issues, and problems and specify appropriate courses of action the organization should take as a response. Full Description: Organizational issues, events, and problems have causes that simultaneously emanate from structural, human, political, and cultural roots. Graduate should be able to simultaneously see issues, events, and problems from multiple perspectives and to formulate responses that reflect an understanding of these multiple roots. Related Measures Case assignments and exam questions in MBA 8165, MGS 8435, and MGS 8440.

- **SLO 3: Analyze Political Realities (G: 3) (M: 3)**
  Outcome/Objective 3: Effectively analyze political realities in organizational situations. Full Description: The MBA graduate will be able to identify the effect of power and politics on resource allocations, personnel decisions, and other decisions that organizations make. Related Measures Exam questions, cases, and projects in MGS 8435.

**Strategic Plan Associations**

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

**Measures, Targets, and Findings**

- **M 1: Find Four-Perspective Causes of Events /Problems (O: 1)**
  M1: Students can examine organizational events, issues, and problems and identify structural, human, political, and cultural elements in the cause of situation. Source of Evidence: Written assignment(s), usually scored by a rubric

  **Target for O1: Analyze Organizational Situations**
  A 2.0 average on all criteria. Measurement will be done by applying the Measure 1 Rubric to randomly selected case assignment and exam questions.

  **Findings 2011-2012 - Target: Partially Met**
  Average faculty rating 1.80 on a 3.0 scale. 80% of MBA students met or exceeded 2.0 on all criteria.

- **M 2: Recommend Responses Incorporating Four-Perspective Analysis (O: 2)**
  M2: Students can recommend organizational responses to problems that are cognizant of structural, human, political, and cultural dimensions to the situation. Source of Evidence: Written assignment(s), usually scored by a rubric
**Target for O2: Specify Courses of Action**
A 2.0 average on all criteria. Measurement will be done by applying the Measure 2 Rubric to randomly selected case assignments and exam questions.

**Findings 2011-2012 - Target: Not Met**
Average faculty rating 1.50 on a 3.0 scale. 40% of MBA students met or exceeded 2.0 on all criteria.

**M3: Identify Political Dimensions of Decisions (O: 3)**
M3: Students can identify political dimensions of organizational decisions.
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Analyze Political Realities**
A 2.0 average on all criteria. Measurement will be done by applying Measure 3 Rubric to randomly selected exams, cases, and projects.

**Findings 2011-2012 - Target: Not Met**
Average faculty rating 1.40 on a 3.0 scale. 20% of MBA students met or exceeded 2.0 on all criteria.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Add case for recommendations
Add an in-class case discussion just before mid-term that requires students to analyze organizational situations and provide recommendations for action.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - Measure: Recommend Responses Incorporating Four-Perspective Analysis | **Outcome/Objective:** Specify Courses of Action

  **Projected Completion Date:** 06/2013
  **Responsible Person/Group:** MBA 8165 instructors

#### Additional Case for Analysis of Causes
Add an in-class case discussion just before mid-term that requires students to provide analysis of organizational causes of events, issues and problems.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - Measure: Find Four-Perspective Causes of Events /Problems | **Outcome/Objective:** Analyze Organizational Situations

  **Projected Completion Date:** 06/2013
  **Responsible Person/Group:** MBA 8165 instructors

#### Additional feedback on political aspects of decisions
Change the in-class activity to provide more feedback for students concerning their decision making regarding the political aspects of those decisions.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - Measure: Identify Political Dimensions of Decisions | **Outcome/Objective:** Analyze Political Realities

  **Projected Completion Date:** 06/2013
  **Responsible Person/Group:** MGS 8435 instructors

### Analysis Questions and Analysis Answers

**ACADEMIC PROGRAM QUESTION 1:**
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The current outcomes, measures, and targets were written at the end of the 2010-2011 year. Therefore, we have been collecting data for the first cycle in 2011-2012. No changes have been made because we were waiting to see the results from this cycle. We are discussing the possibility of making adjustments in the way we state our targets in the coming year.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

This is the first year we have completed a cycle of the assessment process for this program. Therefore, our focus on changes has been on specific adjustments to individual courses. These are shown in the section, “Action Plan.” As we now move to a second year
of assessment in this program, we anticipate that curriculum-level changes next year. As always, incremental change to courses occurs in order to incorporate current events into classroom examples and to incorporate new cases when available and appropriate.

---

Assessment Data by Section

2011-2012 Concentration in Real Estate MBA

As of: 12/12/2016 04:41 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

### Student Learning Outcomes/Objectives

**SLO 1: Apply theoretical principles and skills to the analysis and solution of a range of real estate problems (M: 1)**

Apply theoretical principles and skills to the analysis and solution of a range of real estate problems

### Strategic Plan Associations

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

**SLO 2: Understand how real estate can contribute to achieving the overall goals of the firm (M: 2, 3, 4)**

Understand how real estate can contribute to achieving the overall goals of the firm

### Measures, Targets, and Findings

**M 1: Evaluate corporate real estate organizational and operational structures using material from both real estate & MBA core classes (O: 1)**

Evaluate corporate real estate organizational and operational structures using material from both real estate and MBA core classes. Criterion: Identify key criteria and evaluate alternative structures. (RE8100)

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O1: Apply theoretical principles and skills to the analysis and solution of a range of real estate problems**

2.0

**Findings 2011-2012 - Target: Met**

Average on Criteria 1: 2.40. 76% students met standard.

**M 2: Understand real estate as a contributor to achieving human resources goals (O: 2)**

Understand real estate as a contributor to achieving human resources goals Criterion 1: Understand the process for estimating workplace demand. (RE8100) Criterion 2: Understand the changing intersection of workers, space, and technology in designing workplaces. (RE8100)

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O2: Understand how real estate can contribute to achieving the overall goals of the firm**

2.0

**Findings 2011-2012 - Target: Met**

Average on Criteria 1: 2.5. 87% students met standard. Average on Criteria 2: 2.7. 93% students met standard.

**M 3: Evaluate corporate real estate strategies in relation to core business strategies (O: 2)**

Evaluate corporate real estate strategies in relation to core business strategies using material from both real estate and MBA core classes. Criterion: Identify key criteria and evaluate alternative real estate strategies to support common business strategies (RE8100)

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O2: Understand how real estate can contribute to achieving the overall goals of the firm**

2.0

**Findings 2011-2012 - Target: Partially Met**

Average on Criteria 1: 0.7. 13% students met standard.

**M 4: Evaluate alternative locations and sites (O: 2)**

Evaluate alternative locations and sites Criterion: Identify key criteria and evaluate alternative locations and sites to support core business strategies. (RE8100)

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O2: Understand how real estate can contribute to achieving the overall goals of the firm**
Findings 2011-2012 - Target: Partially Met
Average on Criteria 1: 1.7. 40% students met standard.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

New Action Plan
Review achievement targets. At present target is expressed as an average. The Department will review whether this should be modified to encompass a minimum percentage of students attaining target. Although the average target is met on all measures, a not insignificant percentage of students fail to meet the target on some measures. This is considered due to student weakness in readings to support their understanding of organizational structure and general strategic management. Attempts will therefore be made to identify which courses (outside of Real Estate) best prepare students in these areas and to refer students to the materials in those courses.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Implementation Description: We are now reporting both averages and percentages and will monitor going forward.
Projected Completion Date: 05/2011

Review assessment task for O2.M2.C1
Review assessment task for O2.M2.C1

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Understand real estate as a contributor to achieving human resources goals | Outcome/Objective: Understand how real estate can contribute to achieving the overall goals of the firm

Implementation Description: Reviewed and revised.
Projected Completion Date: 05/2012
Responsible Person/Group: Course Instructor

Review course materials and exercises
Review course materials and exercises on related topics to examine why target not met this year, but has been met in previous years.

Established in Cycle: 2011-2012
Implementation Status: In-Progress
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Evaluate alternative locations and sites | Outcome/Objective: Understand how real estate can contribute to achieving the overall goals of the firm
Measure: Evaluate corporate real estate strategies in relation to core business strategies | Outcome/Objective: Understand how real estate can contribute to achieving the overall goals of the firm

Responsible Person/Group: Instructor

The instructor changed the required readings, replacing some articles with chapters from a book. Students seemed to have difficulty incorporating theoretical materials from the new reading in situations designed to test their ability to apply theoretical concepts in specific situations.

Established in Cycle: 2011-2012
Implementation Status: In-Progress
Priority: Medium

Implementation Description: The instructor will re-evaluate the readings to ensure they are providing the content in a way that students can transfer theory to practice.
Projected Completion Date: 05/2013
Responsible Person/Group: Instructor
## Goals

**G 1: Clinical Competence**  
Develop competence in understanding and applying theoretical knowledge in ethical practice, sensitive to multicultural issues.

**G 2: Research Competence**  
Develop competence in understanding and applying research methods.

### Student Learning Outcomes/Objectives

**SLO 1: Effectiveness with diverse groups of clients (M: 1, 2)**  
Students are prepared to work with clients who are culturally and individually different.  
Relevant Associations: American Psychological Association Accreditation Domain D.

**SLO 2: Knowledgeable about the tenets of ethical practice (M: 3, 4, 5)**  
Students are knowledgeable about the tenets of ethical practice  
Relevant Associations: American Psychological Association Accreditation Domain B

**SLO 3: Is proficient in key areas of the profession (M: 6, 7)**  
Students are proficient in psycho-educational interventions, diagnosis, prevention, remedial interventions, psychotherapy, consultation, and supervision.  
Relevant Associations: American Psychological Association Accreditation Domain B

**SLO 4: Understands relevant theories (M: 8, 9)**  
Students understand theories of human development, psychopathology, counseling process, and behavior change.  
Relevant Associations: American Psychological Association Accreditation Domain B

**SLO 5: Use and conduct research (M: 10)**  
Students can use and conduct research  
Relevant Associations: American Psychological Association Accreditation Domain B

### Measures, Targets, and Findings

**M 1: Evaluation by practicum supervisor (O: 1)**  
Evaluation by practicum supervisor. Supervisors complete formal written evaluations of students using quantitative and qualitative items. On a 5-point scale, students must score a 3 or above on all quantitative items to be satisfactory.  
Source of Evidence: Field work, internship, or teaching evaluation

**Target for O1: Effectiveness with diverse groups of clients**  
90% of students meet evaluation target on evaluation.

**Findings 2011-2012 - Target: Met**  
100% of students met target.

**M 2: Performance in Advanced Multicultural Course (O: 1)**  
Performance in Advanced Multicultural Counseling Course (i.e., CPS 8340)  
Source of Evidence: Academic direct measure of learning - other

**Target for O1: Effectiveness with diverse groups of clients**  
100% of students receive grade of B or better in the course.

**Findings 2011-2012 - Target: Met**  
100% of students received grade of B or better.

**M 3: Evaluation by practicum supervisor (O: 2)**  
Evaluation by practicum supervisor. Supervisors complete formal written evaluations of students using quantitative and qualitative items. On a 5-point scale, students must score a 3 or above on all quantitative items to be satisfactory.  
Source of Evidence: Field work, internship, or teaching evaluation

**Target for O2: Knowledgeable about the tenets of ethical practice**  
90% of students score a 3 or above on practicum evaluation items.

**Findings 2011-2012 - Target: Met**
### M 4: Performance in ethics course (O: 2)
Performance in Advanced Ethics course (i.e., CPS 8530)
Source of Evidence: Academic direct measure of learning - other

**Target for O2: Knowledgeable about the tenets of ethical practice**
90% of students receive grade of B or better in the course.

**Findings 2011-2012 - Target: Met**
100% of students met target.

### M 5: Comprehensive examination question on ethics (O: 2)
Ethics comprehensive examination question evaluation. Students write a 12-page answer to this question to demonstrate their knowledge of professional ethics and their application. Answers are evaluated by a three-person faculty committee who determine whether the student receives a grade of pass or fail.
Source of Evidence: Comprehensive/end-of-program subject matter exam

**Target for O2: Knowledgeable about the tenets of ethical practice**
80% of students receive passing grade on ethics comprehensive area question.

**Findings 2011-2012 - Target: Met**
100% of students met target.

### M 6: Performance in didactic courses (e.g., Assessment) (O: 3)
Performance in assessment didactic courses (e.g., PSY 8020, PSY 8030, CPS 9420)
Source of Evidence: Academic direct measure of learning - other

**Target for O3: Is proficient in key areas of the profession**
90% of students receive grades of B or better in didactic courses related to key areas of the profession (e.g., Assessment).

**Findings 2011-2012 - Target: Met**
100% of students received grade of B or better.

### M 7: Written practicum evaluation from supervisors (O: 3)
Written practicum evaluation from supervisors. Supervisors complete formal written evaluations of students using quantitative and qualitative items. On a 5-point scale, students must receive a score of 3 or higher on all quantitative items to be satisfactory.
Source of Evidence: Field work, internship, or teaching evaluation

**Target for O3: Is proficient in key areas of the profession**
90% of students will receive a score of 3 or higher on related practicum evaluation items.

**Findings 2011-2012 - Target: Met**
100% of students met target goal of scores 3 or higher.

### M 8: Performance in theories courses (O: 4)
Performance in theories related courses (e.g., CPS 8450, CPS 8650, CPS 8370, PSYC 8660)
Source of Evidence: Academic direct measure of learning - other

**Target for O4: Understands relevant theories**
90% of students will receive grade of B or higher in theory related courses.

**Findings 2011-2012 - Target: Met**
100% of students received grades of B or higher.

### M 9: Comprehensive examination question on theory (O: 4)
Theory comprehensive examination question evaluation. Students write a 12-page answer to the question to demonstrate their knowledge of counseling theories and applications. Answers are evaluated by a two-person faculty committee who determine whether the students receives a grade of pass or fail.
Source of Evidence: Comprehensive/end-of-program subject matter exam

**Target for O4: Understands relevant theories**
80% of students will receive passing grade on theory area comprehensive question.

**Findings 2011-2012 - Target: Met**
100% of students received passing grades.

### M 10: Performance in research courses (O: 5)
Performance in courses about research methods and their application (e.g., EPRS 8530, EPRS 8540, EPRS 9820, CPS 9920)
Target for O5: Use and conduct research
90% of students will receive grade of B or better in research related courses.

Findings 2011-2012 - Target: Met
100% of students received grades of B or better.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Comprehensive Examination Orientation
Present an orientation to the comprehensive examination to enhance students' preparation for the theories portion of the comprehensive examination.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Comprehensive examination question on theory
  - Outcome/Objective: Understands relevant theories

Projected Completion Date: 05/2011
Responsible Person/Group: Program Director

Comprehensive Examination Orientation
To offer an orientation to the comprehensive examination process so that students can focus their preparation for the examination more effectively.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Comprehensive examination question on ethics
  - Outcome/Objective: Knowledgeable about the tenets of ethical practice

Projected Completion Date: 07/2009
Responsible Person/Group: Director of the program

Georgia State University
Assessment Data by Section
2011-2012 Counselor Education PhD
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The Counselor Education and Practice Ph.D. program is designed to prepare students to work as counselor educators, supervisors, and advanced practitioners in academic, public schools, and clinical settings. The program accepts as a primary obligation extending the knowledge base of the counseling profession in a climate of scholarly inquiry. The doctoral program subscribes to a scientist-practitioner model and as such is designed to prepare students to be both consumer and producer of research.

Goals
G 1: Teaching
Students will gain knowledge and skills in teaching at the university level.

G 2: Research
Students will become proficient in critiquing and conducting research related to the counseling profession.

G 3: Clinical Skills
Students will enhance their clinical skills.

G 4: Supervision
Students will gain knowledge and develop skills in the area of counseling supervision.

Student Learning Outcomes/Objectives
SLO 1: Teaching (M: 1, 2, 3)
1. Students will demonstrate the ability to develop course syllabi.
2. Students will be able to provide formative and summative feedback to their students.
3. Students will demonstrate the ability to effectively teach a course.
4. Students will articulate a personal philosophy of teaching.
Strategic Plan Associations

2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).

**SLO 2: Research (M: 4, 5)**

1. Students will demonstrate the ability to critique a research manuscript. 2. Students will demonstrate the ability to design and implement a research project.

**SLO 3: Clinical Skills (M: 6)**

1. Students will demonstrate knowledge of counseling theory and concepts. 2. Students will demonstrate professional and ethical behavior in clinical practice. 3. Students will demonstrate knowledge, skills, and attitudes appropriate for working in diverse settings with clients from various cultural backgrounds. 4. Students will demonstrate the ability to integrate social advocacy/social justice in the treatment of clients.

**SLO 4: Supervision (M: 7)**

1. Students will demonstrate knowledge of supervision and counseling theories and concepts. 2. Students will demonstrate professional and ethical behavior in the practice of clinical supervision. 3. Students will demonstrate knowledge, skills, and attitudes appropriate for working in diverse settings with supervisees from various cultural backgrounds.

### Measures, Targets, and Findings

**M 1: Teaching (O: 1)**

Students will receive a passing on the teaching section of their professional portfolio which is one of the assignments in their CPS 9963 course. In order to pass the teaching section of the portfolio, the students must submit a copy of a sample course syllabi that they developed for a course they have taught or are currently teaching. The syllabi will be assessed based on the following criteria: 1) does the syllabi clearly state the purpose of the course; 2) does the syllabi contact the mission of the CPS program; 3) does the syllabi contact criteria for evaluation; and 4) does the syllabi contact a tentative outline of the course.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O1: Teaching**

Target is passing the teaching section of the portfolio. Students must receive 2 out of 3 points.

**Findings 2011-2012 - Target: Met**

All students (N=6) engaged in teaching during the academic year 2011-2012 received at least a 2 out of 3 on the teaching section of their portfolio.

**M 2: Teaching (O: 1)**

On the question "the instructor was well prepared" of the teaching evaluation form, students will receive at least a 3 (5 point scale; 1 is low and 5 is the highest) with 80% receiving a 4 or 5.

Source of Evidence: Student course evaluations on learning gains made

**Target for O1: Teaching**

On the question "the instructor was well prepared" of the teaching evaluation form, students will receive at least a 3 (5 point scale; 1 is low and 5 is the highest) with 80% receiving a 4 or 5.

**Findings 2011-2012 - Target: Met**

The range of scores on the question "the instructor was well prepared" on the teaching evaluation form was 4.5 to 5.0 with the mean of 4.84. 100% of the students (N=10) met this target.

**M 3: Teaching (O: 1)**

On the teaching effectiveness question of the teaching evaluation form (please note depending on the version this question is a different number), students will receive at least a 3 (5 point scale; 1 is low and 5 is the highest) with 80% receiving a 4 or 5.

Source of Evidence: Student course evaluations on learning gains made

**Target for O1: Teaching**

On the teaching effectiveness question of the Teaching Evaluation Form students will receive at least a 3 out of 5 with 80% receiving either a 4 or 5.

**Findings 2011-2012 - Target: Met**

On the question related to teaching effectiveness the range of scores was 4.5 to 5.0 with the mean of 4.84. Thus, 100% of the students (N=10) received either 4 or 5 on this question.

**M 4: Research (O: 2)**

Students will complete and submit their predissertation project.

Source of Evidence: Project, either individual or group

**Target for O2: Research**

Students will complete and submit their predissertation study.

**Findings 2011-2012 - Target: Met**

During the 2011-2012 academic year, two students successfully completed their predissertation study.
M 5: Research (O: 2)
Students will receive a passing on the research portion of their comprehensive examination.
Source of Evidence: Comprehensive/end-of-program subject matter exam

Target for O2: Research
Students will receive a pass on the research portion of their written comprehensive examination.

Findings 2011-2012 - Target: Met
All students (N=6) who took the comprehensive examination received a pass on the research portion of the examination.

M 6: Clinical Skills (O: 3)
Students will receive at least a 3 (5 point scale; 1-needs considerable improvement; 5-demonstrates exceptional ability) with 80% receiving 4 or 5 on the following questions of the supervisee evaluation form: 1. demonstrates knowledge of counseling theory and concepts. 2. demonstrates knowledge, skills, and attitudes appropriate for working in diverse settings with clients from various cultural backgrounds. 3. understands the role of social advocacy in the treatment of clients. 4. demonstrates awareness of professional, legal, and ethical issues in the counseling profession.
Source of Evidence: Field work, internship, or teaching evaluation

Target for O3: Clinical Skills
Students will receive at least 3 out of 5 on the relevant questions on the Supervisee Evaluation Form.

Findings 2011-2012 - Target: Not Reported This Cycle
Applied Practice II (CPS 8660) and Applied Practice III (9660) were not offered during the 2011-2012 year. Therefore, no data was collected for these target areas.

M 7: Supervision (O: 4)
Students will receive at least a 3 (5 point scale; 1-needs considerable improvement; 5-demonstrates exceptional ability) with 80% receiving 4 or 5 on the following questions of the supervisee evaluation form: 1. demonstrates knowledge of supervision and counseling theory and concepts. 2. demonstrates knowledge, skills, and attitudes appropriate for working in diverse settings with supervisees from various cultural backgrounds. 3. demonstrates awareness of professional, legal, and ethical issues in the counseling/supervision profession and utilizes supervision to clarify ethical challenges faced with supervisees.
Source of Evidence: Field work, internship, or teaching evaluation

Target for O4: Supervision
Students will receive at least a 3 on the relevant questions of Supervisor in Training Evaluation Forms, with 80% receiving at least a 4 or 5.

Findings 2011-2012 - Target: Met
1. The range of scores for the theory question was 4 with a mean of 4.1; 100% (N=9) passing this criteria. 2. The range of scores for the diversity question was 4 to 5 with a mean of 4.6; 100% (N=9) passing on this criteria. 3. The range of scores for the ethics question was 4 to 5 with a mean of 4.7; 100% (N=9) passing on this criteria.

Georgia State University
Assessment Data by Section
2011-2012 Criminal Justice and Criminology PhD
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The mission of the Ph.D. in Criminal Justice and Criminology is to prepare students for careers in research and teaching in Criminal Justice and Criminology, and related fields.

Goals
G 1: Researchers
Students will be capable of producing high quality research in Criminal Justice & Criminology.

G 2: Teachers
Students will be high quality instructors in undergraduate courses in Criminal Justice & Criminology.

G 3: Critical Thinkers
Students will be able to think critically about crime and justice issues.

Student Learning Outcomes/Objectives
SLO 5: Critical Thinkers (G: 3) (M: 5)
Students will be able to critically analyze crime and justice issues and/or information utilizing theoretical, methodological, and statistical skill bases, in written form.

Other Outcomes/Objectives
O/O 1: Presentations (G: 1) (M: 1)
Students will present research at regional and national conferences in Criminal Justice and Criminology.

Strategic Plan Associations
2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).
3.6 Other efforts in support of Goal 3 (Leading Public Research University).

O/O 2: Publications (G: 1) (M: 2)
Students will publish research in peer-reviewed journals in Criminal Justice and Criminology.

Strategic Plan Associations
2.3 Other efforts in support of Goal 2 (Graduate and Professional Programs).
3.6 Other efforts in support of Goal 3 (Leading Public Research University).

O/O 3: Student Evals (G: 2) (M: 3)
Undergraduate evaluations of graduate student instructors will suggest excellence in teaching effectiveness.

Strategic Plan Associations
### Measures, Targets, and Findings

#### M 1: Presentations (O: 1)

We will count the number of presentations given by Ph.D. students at regional and national conferences in Criminal Justice and Criminology, based on a review of the student's Curriculum Vita.

**Source of Evidence:** Activity volume

**Target for O1: Presentations**

100% of students will have presented at least once at a regional or national conference by the time they graduate. 60% of students will have presented at least twice at a regional or national conference by the time they graduate. 20% of students will have presented 3 or more times (at least 2 national presentations) by the time they graduate.

**Findings 2011-2012 - Target:** Not Reported This Cycle

Since the program is new, no students have completed the Ph.D. program and we do not have any data yet. We will begin reporting findings once students begin to complete the program.

#### M 2: Publications (O: 2)

We will count the number of peer-reviewed publications by Ph.D. students in Criminal Justice and Criminology based on a review of the student's curriculum vita.

**Source of Evidence:** Academic direct measure of learning - other

**Target for O2: Publications**

100% of students will have submitted an article to a peer-reviewed journal by the time they graduate. 60% of students will have published a peer-reviewed journal article by the time they graduate. 20% of students will have published two or more peer-reviewed articles by the time they graduate.

**Findings 2011-2012 - Target:** Not Reported This Cycle

Since the program is new, no students have completed the Ph.D. program and we do not have any data yet. We will begin reporting findings once students begin to complete the program.

#### M 3: Student Evals (O: 3)

End of course evaluations will be used to measure undergraduate perceptions of teacher effectiveness based on the item “Considering both the limitations and possibilities of the subject matter, how would you rate the overall teaching effectiveness of this instructor?”

**Source of Evidence:** Student course evaluations on learning gains made

**Target for O3: Student Evals**

100% of students will score a 3.5 or higher (out of 5) on this item. 60% of students will score 4.0 or higher (out of 5) on this item. 20% of students will score a 4.5 or higher (out of 5) on this item.

**Findings 2011-2012 - Target:** Not Reported This Cycle

Since the program is new, no students have completed the Ph.D. program and we do not have any data yet. We will begin reporting findings once students begin to complete the program.

#### M 4: Faculty Evals

A summary score of the 12 items on the Classroom Observation Form, filled out by faculty will be used to measure the faculty evaluation of teaching effectiveness by Ph.D. students in CJ&C.

**Source of Evidence:** Evaluations

#### M 5: Comps Rubric (O: 5)

We will develop a rubric to assess critical thinking as displayed in written form on the Comprehensive Examinations that all students must take in order to advance to the dissertation stage of the program.

**Source of Evidence:** Comprehensive/end-of-program subject matter exam

**Target for O5: Critical Thinkers**

Target to be developed after the rubric is developed.

**Findings 2011-2012 - Target:** Not Reported This Cycle

Since the program is new, no students have completed the Ph.D. program and we do not have any data yet. We will begin reporting findings once students begin to complete the program.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Develop Rubric**

We will develop a rubric to assess critical thinking on the written comprehensive examination.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High
Annual Report Section Responses

Most Important Accomplishments for Year—Briefly describe the major things you accomplished over the past year. Be sure to note previous Action Plans that were executed this year, plus any accomplishments that are not otherwise mentioned in your outcomes reporting.

Since the Ph.D. program is new, we developed our goals, objectives, and measures. We plan to collect original data and report findings in the next assessment period, when students will have completed the Ph.D. program.

Georgia State University
Assessment Data by Section
2011-2012 Criminal Justice Assessment of Core
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The Department of Criminal Justice emphasizes issues of crime and justice occurring in urban environments from a multicultural, interdisciplinary perspective to inform science, policy, and practice. The mission of the Department is to produce students who are critical and ethical thinkers, knowledgeable about the issues of crime and justice, and prepared for criminal justice leadership positions in public and private agencies. This report provides an assessment of student learning for the 2010-2011 academic year.

Goals
G 1: Students will demonstrate critical thinking
Students will develop, enhance, and demonstrate critical thinking skills in the context of contemporary issues in crime and criminal justice.

G 2: Analysis of crime/criminal justice
Students will effectively analyze the complexity of crime and criminal justice systems considering historical trends, social and/or spatial relationships, and how these relationships develop, persist and/or change.

Student Learning Outcomes/Objectives

SLO 1: Analyze Contemporary Crime/Criminal Justice Issues (G: 1) (M: 1)
Students will effectively analyze a wide range of contemporary crime and justice issues to which they are exposed using a social science perspective.

General Education/Core Curriculum Associations
6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Strategic Plan Associations
1.5 Other efforts in support of Goal 1 (Undergraduate Education).

SLO 2: Analyze Contemporary Multicultural Issues (G: 1) (M: 1)
Students will effectively analyze a wide range of contemporary multicultural issues, including race, class, age, and gender, and their relationship to crime and justice in America.

General Education/Core Curriculum Associations
6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 3: Analyze Contemporary Global & International Issues (G: 1) (M: 1)
Students will effectively analyze contemporary global and international crime and criminal justice issues, including comparing crime rates in a number of countries (such as Europe, the Middle East, Asia, Japan, and America).

General Education/Core Curriculum Associations
6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.
8.0 Students demonstrate understanding of political, social, economic, and/or institutional developments across the globe.

**Standard Associations**
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Measures, Targets, and Findings**

**M 1: Embedded examination questions (O: 1, 2, 3)**
Multiple sections (N=6) of CRJU 2200 were offered during both the Fall, 2011 (n=3) and Spring, 2012 (n=3) semesters. Of the six sections offered, two were taught by graduate assistants and one was taught at a branch campus with a very small class size. The examinations in the course sections included in this assessment covered approximately one-third (1/3) of the course, for a total of three exams in each of these sections. Objective multiple choice or true/false questions per objective were embedded on each of the three exams in each of the sections included in this assessment. All students in these sections were required to answer each assessment question. Instructors had the discretion of what questions to include; some of the questions included were similar across sections, other questions differed. Reporting this period focuses on two of these 6 sections, both taught in the Fall, 2011 semester by full-time faculty.

Source of Evidence: Standardized test of subject matter knowledge

**Target for O1: Analyze Contemporary Crime/Criminal Justice Issues**
Each instructor included questions assessing students' knowledge of contemporary crime/criminal justice issues on one exam in each section taught. The target achievement goal was an 80% pass rate for each question. The questions by instructor are provided in the attached document entitled Assessment Measures by Instructor by Semester_2010_2011.

**Findings 2011-2012 - Target: Partially Met**
A total of 76 students (N=9 for Instructor B; N=67 for Instructor C) were enrolled in the two CRJU 2200 sections assessed during the evaluation period. The percentages of students correctly answering the embedded examination questions by instructor and section are reported below: Instructor B: Q1 Pass Rate: 78%; Q2 Pass Rate: 67%. (Overall: Did not meet target) Instructor C: Q1 Pass Rate: 79%; Q2 Pass Rate: 75%, Q3 Pass Rate: 98%, Q4 Pass Rate: 98%. (Overall: Partially met target). Overall: Partially met target.

**Target for O2: Analyze Contemporary Multicultural Issues**
Each instructor included questions assessing students' knowledge of contemporary multicultural issues on an exam in each section taught. The target achievement goal was an 80% pass rate for each question. The questions by instructor are provided in the attached document entitled Assessment Measures by Instructor by Semester_2011_2012.

**Findings 2011-2012 - Target: Partially Met**
A total of 76 students (N=9 for Instructor B; N=67 for Instructor C) were enrolled in the two CRJU 2200 sections assessed during the evaluation period. The percentages of students correctly answering the embedded examination questions by instructor and section are reported below: Instructor B: Q1 Pass Rate: 78%; Q2 Pass Rate: 78%. (Overall: Did not meet target) Instructor C: Q1 Pass Rate: 95%; Q2 Pass Rate: 92%; Q3 Pass Rate: 95%; Q4a Pass Rate: 60%; Q4b Pass Rate: 83%. (Overall: Partially met target).

**Target for O3: Analyze Contemporary Global & International Issues**
Each instructor included two questions assessing students' knowledge of contemporary global and international issues on an exam in each section taught. The target achievement goal was an 80% pass rate for each question. The questions by instructor are provided in the attached document entitled Assessment Measures by Instructor by Semester_2010_2011.

**Findings 2011-2012 - Target: Partially Met**
A total of 76 students (N=9 for Instructor B; N=67 for Instructor C) were enrolled in the two CRJU 2200 sections assessed during the evaluation period. The percentages of students correctly answering the embedded examination questions by instructor and section are reported below: Instructor B: Q1 Pass Rate: 56%; Q2 Pass Rate: 100%. (Overall: Partially met target) Instructor C: Q1 Pass Rate: 86%; Q2 Pass Rate: 82%; Q3 Pass Rate: 55. (Overall: Partially met target).

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Review of course content and assessment measures**
See plan for contemporary criminal justice issues.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** Low
- **Implementation Description:** Fall 2010
- **Projected Completion Date:** 08/2010
- **Responsible Person/Group:** Undergraduate Committee and CrJu 2200 teaching faculty.
- **Additional Resources:** None
- **Budget Amount Requested:** $0.00 (no request)

**Review of course content and assessment measures**
See plan for contemporary criminal justice issues.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** In-Progress
- **Priority:** Low
- **Projected Completion Date:** 08/2009
Responsible Person/Group: Undergraduate Committee and CrJu 2200 teaching faculty
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Review of course content and assessment measures
Consistent with last year’s action plan, the Undergraduate Committee (UC) will meet with teaching faculty at the beginning of Fall semester 2009 to discuss course content and evaluate the effectiveness of current assessment measures used in CrJu 2200. The UC will assist faculty to implement such changes as they deem necessary.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: Low
Implementation Description: Fall 2010
Projected Completion Date: 08/2009
Responsible Person/Group: Criminal Justice Undergraduate Committee and CrJu 2200 teaching faculty
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Review new core and course requirements
Review course learning outcomes and measure to ensure that new core outcome is appropriately reflected and assessed and to streamline reporting in the coming year.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Projected Completion Date: 11/2010
Responsible Person/Group: instructors and undergraduate committee

Review new core and course requirements
Review course learning outcomes and measure to ensure that new core outcome is appropriately reflected and assessed and to streamline reporting in the coming year.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High
Projected Completion Date: 11/2010
Responsible Person/Group: instructors and undergraduate committee

Training on assessment for PhD Instructors
With implementation of Ph.D. Program the department has added a number of Teaching Assistants and as a part of this implementation, the department has developed a teaching seminar. As part of this seminar, students will be subjected to assessment issues and questions as a part of this conference. With this implementation, a section of the seminar will be consistently oriented to ensure that curriculum of the department and assessment issues are considered in course development. As well, required data collection elements will be discussed and collected as a part of this course.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High
Relationships (Measure | Outcome/Objective):
  Measure: Embedded examination questions | Outcome/Objective: Analyze Contemporary Crime/Criminal Justice Issues
  Analyze Contemporary Global & International Issues | Analyze Contemporary Multicultural Issues
Implementation Description: On-going
Responsible Person/Group: Brenda Blackwell

Assessment of course materials
Instructors will be queried regarding their teaching of materials related to questions to determine links between material coverage, how material is covered, and reinforcement strategies related to outcomes not or partially met.

Established in Cycle: 2011-2012
Implementation Status: In-Progress
Priority: Medium
Relationships (Measure | Outcome/Objective):
  Measure: Embedded examination questions | Outcome/Objective: Analyze Contemporary Crime/Criminal Justice Issues
  Analyze Contemporary Global & International Issues | Analyze Contemporary Multicultural Issues
Projected Completion Date: 12/2012
Responsible Person/Group: Undergraduate Committee

Evaluation of assessment items considering goal
Continued evaluation of assessment items utilized to ensure applicability of goal will occur.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: Medium
Relationships (Measure | Outcome/Objective):
  Measure: Embedded examination questions | Outcome/Objective: Analyze Contemporary Crime/Criminal Justice Issues
  Analyze Contemporary Global & International Issues | Analyze Contemporary Multicultural Issues
Responsible Person/Group: Undergraduate Committee
**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

With implementation of the PhD program, new instructors have been cycled in to teaching this course. The PhD teaching seminar includes discussion of assessment methods and the need to link assessments to learning outcomes. Students are assisted in making these links for real world assessment purposes when teaching in this program, ensuring better instruction for our students. In addition, we reviewed the old assessment strategies and measures in consideration of the new Core goals implemented by the Regents and GSU to ensure that we are in compliance with requirements. This review ensured that our assessment process is evolving and continues to consider the needs of students and improves teaching.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

We continue to evaluate our program to ensure that the materials are timely and relevant to the world today and to students in our classrooms. This year’s assessment results indicate a need to ask faculty to review their course materials in conjunction with outcomes for learning assessments. Faculty will be informed of assessment outcomes and will discuss strategies to improve outcomes at the course level. The undergraduate committee will review outcomes and goals to determine if goals are reasonable give the student body linked to this course. Adjustments will be made if warranted.

---

**Georgia State University**

**Assessment Data by Section**

**2011-2012 Criminal Justice BS**

As of: 12/12/2016 04:41 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

**Mission / Purpose**

The Department of Criminal Justice emphasizes the development of understanding about issues of crime and justice, particularly within urban environments using multicultural, interdisciplinary perspectives that inform science, policy, and practice. The educational mission of the Department of Criminal Justice is to disseminate knowledge and encourage critical analysis of information that is theoretically driven and policy relevant within the fields of criminal justice and criminology. We aim to produce students who are critical and ethical thinkers, knowledgeable about the issues of crime and justice, and prepared for criminal justice positions in public and private agencies through education, training and research experiences.

**Goals**

G 1: Demonstrate understanding of the justice system

Students will develop knowledge about the functions and structures of the criminal justice system and issues related to crime and justice responses.

G 2: Develop/enhance critical thinking skills

Students will develop and enhance critical thinking skills, specifically concerning crime and justice issues.

G 4: Develop/Enhance Written Communication Skills

Students will develop and/or enhance their written communication skills, with a specific focus on communication about issues of crime and justice, necessary to excel in public and private sector criminal justice positions.

G 3: Apply ethical frameworks

Students will develop knowledge about and learn to utilize ethical frameworks when considering issues in criminal justice decision-making.

G 5: Develop/enhance oral communication skills

Students will develop and enhance their oral communication skills, with a specific focus on their ability to orally communicate about issues in crime and justice, in order to excel in in professional positions.

**Student Learning Outcomes/Objectives**

SLO 1: Identify and state topical issues or hypotheses (G: 2, 4) (M: 1, 3)

Students will demonstrate their ability to generate a thesis/hypothesis/statement of the problem in the generation of a critical analysis paper on a salient issue in the field of criminal justice.

**Strategic Plan Associations**

1.5 Other efforts in support of Goal 1 (Undergraduate Education).

SLO 2: Demonstrate knowledge and ability to synthesize information (G: 1, 2, 4) (M: 1)

Students will demonstrate their retention of knowledge about the criminal justice system and salient topical issues in the field in written form. Students will effectively communicate facts about an issue and apply theoretical frameworks to demonstrate the depth of both their knowledge and their ability to critically synthesize relevant information about that specific topic in this paper.
Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 3: Application and analysis (G: 1, 2, 4) (M: 1, 2, 3)**

Students will develop and/or enhance skills in applying theoretical frameworks to contemporary issues in criminal justice. Students will be able to not only synthesize and interpret extant information, but also identify patterns within extant information, be able to compare and contrast different sides of a problem, and/or generate new predictions through their presentation in a written form.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 4: Generation of conclusions (G: 1, 2, 4) (M: 1, 3)**

Students will be able to develop meaningful conclusions from literature reviews and/or data analyses and/or be able to identify policy implication given the evidence available.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 5: Written communication skills (G: 4, 5) (M: 1, 3)**

Students will be able to effectively communicate their knowledge and analytical skills in written form (paper). Students will demonstrate the ability to effectively identify issues, develop and organize subtopics, and generate streamlined presentations of information. In addition, students will utilize appropriate grammar and syntax, as well as the ability to adhere to APA style guidelines.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 6: Oral communication skills (G: 4, 5) (M: 2)**

Students will demonstrate the ability to communicate effectively through oral presentations about criminal justice issues and processes using the spoken word. Students should be able to orally develop and present material that is organized, flows smoothly, and is engaging in a manner that is smooth and uses good grammar.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 7: Identification of ethical frameworks (G: 1, 2, 3, 4) (M: 3)**

Students should be able to identify and evaluate ethical issues that arise within the criminal justice system.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Measures, Targets, and Findings**

**M 1: Capstone Seminar: Analysis of Criminological/Criminal Justice (CJ) Issue Essay (O: 1, 2, 3, 4, 5)**

CRJU 4930: Seminar in Criminal Justice is a key assessment course for the department. It is a capstone and the second of a two bookend courses designated as CTW. The CTW assignment, referenced as the Analysis of Criminological/Criminal Justice (CJ) Issue Essay, is designed to test student’s ability to critically evaluate an issue in criminology or criminal justice. The assignment, included as an attached document, requires students to identify a single issue from the internship experience, identify a relevant theory (criminological, sociological, psychological, organizational, or legal) that can be utilized to enhance understanding of the issue, and prepare a position paper that addresses policy implications and recommendations. The assessment rubric is attached, and includes the different sections for the separate learning outcomes.

Source of Evidence: Capstone course assignments measuring mastery

**Target for O1: Identify and state topical issues or hypotheses**

Our goal is that 80% of student papers will be rated as a 4 or 3 in their ability to comprehend and synthesize information by the end of the senior seminar. In addition, we aim for 50% of students to be rated as a 4 on this rubric dimension. Finally, we expect 50% of students to achieve increased scores, as possible, between first and final draft submissions. The provided assessment rubric identifies dimensions represented by scores.

**Findings 2011-2012 - Target: Partially Met**

A total of three (3) sections of CRJU 4930/35: Capstone Seminar were offered during the Fall 2011 and Spring 2012 semesters. The fall semester yielded one section (N(A)=41), while two sections provided data in the spring (N(B)=34; N(C)=13); thus, data were provided for a total of 88 students. Rubric scores on the final draft of the essay yielded an overall average of 2.7 on the 1-4 scale. Separate sections yielded the following outcomes: Section A average = 2.5; Section B average = 3.1; and Section C average = 2.3. Overall, 89% of the students enrolled in this academic year (N=78) earned either a 3 or 4 on the rubric scale for ID/Summarize, and 47% of these students eared a score of 4. All reports above reference the final paper draft. Finally, recall students submitted multiple drafts of the paper; rubric scores over time indicate that 73% (N=64) improved in their performance or remained at the highest score across the two submissions. Only 1% decreased over the two drafts, and 26% demonstrated no improvement where improvement was possible.

**Target for O2: Demonstrate knowledge and ability to synthesize information**

Our goal is that 80% of student papers will be rated as a 4 or 3 in their ability to comprehend and synthesize information by the
end of the senior seminar. In addition, we aim for 50% of students to be rated as a 4 on this rubric dimension. Finally, we expect 50% of students to achieve increased scores, as possible, between first and final draft submissions. The provided assessment rubric identifies dimensions represented by scores.

**Findings 2011-2012 - Target: Partially Met**

A total of three (3) sections of CRJU 4930/35: Capstone Seminar were offered during the Fall 2011 and Spring 2012 semesters. The fall semester yielded one section (N(A)=41), while two sections provided data in the spring (N(B)=34; N(C)=13); thus, data were provided for a total of 88 students.Rubric scores on the final draft of the essay yielded an overall average score of 2.8 on the 1-4 scale. Specific sections yielded the following outcomes: Section A average = 3.1, and Section C average = 3.0. Overall, 78% (N=68) were rated as a 4 or 4, and 45% of these (N=40) were rated as a 4 on the rubric for Comprehend and Synthesis of Information. The scores reported above reference the final paper draft. Recall that students submitted multiple drafts of the paper. Rubric scores over time indicated that 38% of the students improved in their performance on this outcome or remained at the highest score. Meanwhile, 49% demonstrated no improvement where improvement was possible and 3% decreased. Overall, the scores consistently show significant improvement over the first draft. 59% (N=52) maintained the best possible score or improved scores across the two submissions. Only 1% decreased their outcomes while 37% showed no improvement (when improvement was possible). Collectively while these enrollees did not meet our goals, they did approach goal achievement; 78% scored 3-4 and 59% demonstrated improved over time. Our goal that 50% would meet a rating of 4 on the rubric was approached (45%) but not met.

**Target for O3: Application and analysis**

Our goal is that 80% of student papers will be rated as a 4, 3, or 2 in their ability to apply knowledge and tools and analyze criminal justice subject matter at the end of the senior seminar. In addition, we aim for 50% of students to be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4. Finally, we desire that 50% of students will achieve increased scores (where possible) on the application and analysis dimension of the rubric between first and final draft submissions.

**Findings 2011-2012 - Target: Met**

A total of three (3) sections of CRJU 4930/35: Capstone Seminar were offered during the Fall 2011 and Spring 2012 semesters. The fall semester yielded one section (N(A)=41), while two sections provided data in the spring (N(B)=34; N(C)=13); thus, data were provided for a total of 88 students. Rubric scores on the final draft of the essay yielded an overall average score of 2.9 on the 1-4 scale. Specific sections yielded the following outcomes: Section A average = 2.9, Section B average = 3.1 and Section C average = 2.8. Overall, 84% (N=74) were rated as a 3 or 4, and 50% of these (N=44) were rated as a 4 on the assessment rubric for the application and analysis dimension. The scores reported above reference the final paper draft. Recall that students submitted multiple drafts of the paper. Rubric scores over time indicated that 70% (N=58) of the students improved in their performance on this outcome or remained at the highest score across the two submissions. Meanwhile, 27% demonstrated no improvement where improvement was possible and only 2% decreased on the application and analysis rubric dimension. Collectively these enrollees met our goals; 84% scored 3-4, 50% scored 4, and 70% demonstrated improved performance or maintained the highest score between draft submissions.

**Findings 2011-2012 - Target: Partially Met**

A total of three (3) sections of CRJU 4930/35: Capstone Seminar were offered during the Fall 2011 and Spring 2012 semesters. The fall semester yielded one section (N(A)=41), while two sections provided data in the spring (N(B)=34; N(C)=13); thus, data were provided for a total of 88 students. Rubric scores on the final draft of the essay yielded an overall average score of 2.7 on the 1-4 scale for the generation of conclusions dimension. Specific sections yielded the following outcomes: Section A average = 2.4; Section B average = 3.1 and Section C average = 3.0. Overall, 81% (N=69) were rated as a 4 or 4, and 45% of these (N=32) were rated as a 4 as a 3 on the generation of conclusions dimension of the rubric between first and final draft submissions. Recall that students submitted multiple drafts of the paper. Rubric scores over time indicated that 64% (N=58) of the students improved in their performance on this outcome or remained at the highest score. Meanwhile, 31% demonstrated no improvement where improvement was possible and only 5% decreased. Collectively these enrollees partially met our goals; 83% scored 3-4, and 64% demonstrated improved scores across draft submissions, yet only 41% scored a 4.

Our goal is that 80% of student papers will be rated as a 4, 3, or 2 in their ability to apply knowledge and tools and analyze criminal justice subject matter at the end of the senior seminar. In addition, we aim for 50% of students to be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4. Finally, we desire that 50% of students will achieve increased scores (where possible) on the generation of conclusions dimension of the rubric between first and final draft submissions.

**Findings 2011-2012 - Target: Partially Met**

A total of three (3) sections of CRJU 4930/35: Capstone Seminar were offered during the Fall 2011 and Spring 2012 semesters. The fall semester yielded one section (N(A)=41), while two sections provided data in the spring (N(B)=34; N(C)=13); thus, data were provided for a total of 88 students. Rubric scores on the final draft of the essay yielded an overall average score of 3.3 on the 1-4 scale. Specific sections yielded the following outcomes: Section A average = 3.1, and Section C average = 3.0. Overall, 83% (N=73) were rated as a 4 or 4 on the written communication dimension of the rubric, while 41% of these (N=36) were rated as a 4 on this dimension. The scores reported above reference the final paper draft. Recall that students submitted multiple drafts of the paper. Rubric scores over time indicated that 64% (N=58) of the students improved in their performance on this outcome or remained at the highest score. Meanwhile, 31% demonstrated no improvement where improvement was possible and only 5% decreased. Collectively these enrollees partially met our goals; 83% scored 3-4, and 64% demonstrated improved scores across draft submissions, yet only 41% scored a 4.

**Target for O5: Written communication skills**

Our goal is that 80% of student papers will be rated as a 4 or 3 in their ability to use excellent written communication skills to convey ideas about criminal justice subject matter by the end of the senior seminar. In addition, we aim for 50% of students to be rated as a 4 in this rubric dimension. Finally, we desire that 50% of students will achieve increased scores (where possible) on the written communication dimension of the rubric between first and final draft submissions.

**Findings 2011-2012 - Target: Partially Met**

A total of three (3) sections of CRJU 4930/35: Capstone Seminar were offered during the Fall 2011 and Spring 2012 semesters. The fall semester yielded one section (N(A)=41), while two sections provided data in the spring (N(B)=34; N(C)=13); thus, data were provided for a total of 88 students. Rubric scores on the final draft of the essay yielded an overall average score of 3.3 on the 1-4 scale. Specific sections yielded the following outcomes: Section A average = 3.3, and Section C average = 3.3. Collectively these enrollees partially met our goals; 83% scored 3-4, and 64% demonstrated improved scores across draft submissions, yet only 41% scored a 4.
CRJU 4930: Seminar in Criminal Justice is a key assessment course for the department. In this course, students are required to provide an oral presentation, utilizing PowerPoint based on their Analysis of Criminological/Criminal Justice (CJ) Issue Essay, which evaluates an issue in criminology or criminal justice. The assignment, included in the syllabus, requires students to identify a single issue from the internship experience, identify a relevant theory (criminological, sociological, psychological, organizational, or legal) that can be utilized to enhance understanding of the issue, and prepare a presentation based on their position paper that addresses policy implications and recommendations.

Source of Evidence: Presentation, either individual or group

**Target for O3: Application and analysis**

80% of student presentations will be rated as a 4 or 5 on a five point assessment scale utilized on a rubric (with 1 representing a poorly identified topic, lack of linkage between course/program content and internship experiences and 5 representing an achievement of excellence, with a timely and important topic relevant to internship agency functioning identified and analyzed using appropriate course and program materials and information.

**Target for O6: Oral communication skills**

80% of student presentations will be rated as a between a 10 and 15 on a fifteen point assessment scale (with 1 representing a poorly developed and organized presentation, without a logical flow, that is not engaging and uses poor grammar and a 15 representing excellence – well organized, logical flow, engaging with excellent grammatical skills).

M 3: Ethical Issues in Criminal Justice Assignment (O: 1, 3, 4, 5, 7)

CRJU 4060: Ethics in Criminal Justice was moved into the position of an early bookend CTW course for the department. In this course, students are presented with a variety of ethical frameworks and strategies and in a series of assignments are expected to select and apply these frameworks. In this course, students are presented with a variety of ethical frameworks and strategies and in a series of assignments are expected to select and apply these frameworks. This writing assignment occurs in two parts, and students are expected to identify an ethical issue that occurs in the criminal justice system, then to locate extant literature and evaluate research findings concerning the issue. The same assignment was used across all sections of Ethics taught int eh fall 2011, spring 2012 and summer 2012 semesters. Assignment 1 occurs at the beginning of the term. This assignment requires students to identify and select an ethical issue for study. Second, they must identify three scholarly resources that examine the issue. Students must then create and justify criteria that they will apply to assess the quality of their sources. They then apply these criteria. At the end of the term, after exposure to ethical frameworks and assessments critically steeped in different ethical approaches, students revisit this assignment, thinking critically about the criteria they applied and their success and application of these criteria to the issue. This set of assignments measures not only students’ ability to assess and apply ethical frameworks, but also their written communication skills.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Identify and state topical issues or hypotheses**

80% of a random sample of student papers will be rated as a 3 (Acceptable) or 4 (Outstanding) on this, the third assignment.

**Target for O3: Application and analysis**

Our goal is that 80% of student papers will be rated as a 4, 3, or 2 in their ability to identify and state topical issues/hypotheses at the end of the senior seminar. In addition, we aim for 50% of students to be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4.

**Target for O4: Generation of conclusions**

80% of student papers will be rated as a 3 (Acceptable) or 4 (Outstanding) on the third assignment.

**Target for O5: Written communication skills**

Our goal is that 80% of student papers will be rated as a 4, 3, or 2 in their ability to identify and state topical issues/hypotheses at the end of the senior seminar. In addition, we aim for 50% of students to be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4.

**Target for O7: Identification of ethical frameworks**

Our goal is that 50% of student papers will yield increased overall scores, as possible, in for the total rubric score across the initial assignment (Assignment 1) and the revision of this assignment after content coverage in the course (Assignment 4).

**Findings 2011-2012 - Target: Not Met**

A total of five (5) sections of the Ethical Issues in Criminal Justice class were offered during the course of the 2011-2012 academic year. Two sections were offered in the fall and three sections were offered in the spring. An adjunct faculty member taught on section of the course (N=10 students) in the spring and, for a variety of reasons, usable assessment data were not available for this section. Moreover, a GTA new to teaching was the instructor for two sections of the course, one in the fall (N=24) and one in the spring (N=36); assessment data were not requested from this instructor during this time frame. Hence, assessment data for this period are derived from two sections of the course taught by a full time faculty member; Section A was taught in the fall (N=32) and Section B was taught in the spring (N=35). Data for assessment purposes are provided on these 67 students in the attached Ethics Rubric Data file. Overall, the average total rubric score for Assignment four, the final submission, was 9.6 of 15 total points; this is compared to an average total rubric score of 12 on the first, or draft, submission of the assignment (e.g., assignment 1). It is concluded that the overall student body did not meet the instructor’s expectations. Moreover, when examining improvement data, it is reported that only 7 of the 59 students who submitted both assignments (12%) yielded improved scores between the draft submissions. Overall, 8% of student papers yielded no change, and the majority (80%) actually produced lower scoring papers at the second stage compared to the first stage of paper submission.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

Review all learning outcomes

Review syllabi and curriculums to ensure that all basic learning outcomes are relevant, measurable and achievable.
Established in Cycle: 2005-2006
Implementation Status: Planned
Priority: Medium
Implementation Description: Fall 2006
Responsible Person/Group: Undergraduate Committee

**Improve data collection efforts**
The Department will make a concerted effort to collect and analyze appropriate data for academic assessment purposes.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Capstone Seminar: Analysis of Criminological/Criminal Justice (CJ) Issue Essay
- Outcome/Objective: Written communication skills

Projected Completion Date: 07/2009
Responsible Person/Group: Undergraduate Committee and CTW teaching faculty

**Improve data collection efforts**
The Department will make a concerted to improve data collection efforts.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High

Implementation Description: The department has reviewed all syllabi in the undergraduate curriculum with a focus on determining alignment of course learning outcomes with departmental learning outcomes. The next step will be to review the assessment approaches within courses to determine usefulness for departmental assessment across sections.

Projected Completion Date: 07/2014
Responsible Person/Group: Undergraduate Committee and CTW teaching faculty

**Objective assessment measures**
The CTW Ambassador will meet with faculty to discuss the need to use objective assessment measures that are independent of grades.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High

Projected Completion Date: 08/2009
Responsible Person/Group: CTW Ambassador

**Continued data collection**
As a discipline, we believe that cross sectional data may yield findings that are not accurate, particularly given that contextual factors may enter into any particular course during any particular semester. Because we value examining a greater breadth of data, we will continue to monitor results over the next two years to determine whether our goals are being consistently met before we move on to address another question.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Capstone Seminar: Analysis of Criminological/Criminal Justice (CJ) Issue Essay
- Outcome/Objective: Identify and state topical issues or hypotheses

Implementation Description: Continued data collection
Projected Completion Date: 06/2012
Responsible Person/Group: UG committee and program faculty.

**Expanded gathering of data**
We will work to expand collection of data across sections of the capstone seminar next semester to collect a wider range of data relevant to assessment of oral presentation requirements and outcomes in the coming two years.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Capstone Seminar: Oral Presentation Assignment
- Outcome/Objective: Application and analysis

Implementation Description: This year the committee reviewed departmental syllabi to determine the degree to which oral presentations are required in the curriculum. The coming year the committee will assess the viability of inclusion of this as a learning outcome seen as important by the faculty. If the outcome is continued, then the committee will work to ensure that curriculum structure leads in a linear manner to ensure that students develop requisite skills for success.
Responsible Person/Group: Undergraduate coordinator/committee.

**Continued Monitoring**
The department will continue monitoring outcomes annually to ensure that new cohorts continue to demonstrate success in achieving this learning outcome.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: Medium

Relationships (Measure | Outcome/Objective):
- Measure: Capstone Seminar: Analysis of Criminological/Criminal Justice (CJ) Issue Essay
- Outcome/Objective: Application and analysis
**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1:**
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Last year a new CTW Ambassador was put into place and this individual worked to improve, in particular, communication across section instructors. This, in conjunction with this year's CTW findings, yielded the creation of an ad hoc committee, working in conjunction with the undergraduate committee to address the student learning outcomes currently in place, the outcomes for students, and obstacles and needs to be addressed to ensure that students can master the material that is put before them, particularly in the ethical issues course. Momentum continues to increase in addressing student learning outcomes under the guidance of this ambassador. Moreover, it should be noted that a new undergraduate coordinator took over in August; this will promote further evaluation of assessment strategies and focuses on student learning outcomes. Conversations between outgoing and incoming coordinators highlight the need to address learning outcomes that have not been evaluated in the last two cycles (namely oral communication), and the consideration of adding and evaluating new student learning outcomes not currently addressed.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Currently assessment practices for the undergraduate program are inherently tied to assessment conducted within the CTW courses, largely because the capstone course allows the department to capture all students at and endpoint and is structured in such a way that the department can determine the impact of the overall curriculum in generating overall student learning outcomes that are derived from the cumulative effects of courses' contents. Discussions regarding assessment practices within the undergraduate committee in the prior year, and between the outgoing and incoming undergraduate coordinators have pointed to the possibility of extending examination of student learning outcomes into additional required courses. While not all targets were met, specifically in terms of the ethical issues course, strategies are in place through CTW to address shortcomings and these outcomes will remain under scrutiny. The new committee and coordinator will at this point re-assess the student learning outcomes that have been in place over the past three years to determine the necessity of broadening or refocusing attention on different outcomes to further extend student learning. Decisions concerning approach will be made in the coming year.
Mission / Purpose

The mission of the M.S. in Criminal Justice is to engage students in generating and applying knowledge and information that is theoretically driven and policy relevant for the fields of criminal justice and criminology. This is accomplished by (1) engaging in research and scholarly activities to address issues of crime and justice affecting diverse populations in urban settings with M.S. students; (2) producing students who are critical and ethical thinkers, knowledgeable about the issues of crime and justice, and prepared for leadership positions in public and private sector agencies that address crime and justice problems; and (3) collaborating with public and private agencies through education, training, and research ventures that enhance our understanding of, and response to, issues associated with crime and the administration of justice. Through these activities, the Department strives to promote basic principles of justice that enhance the criminal justice profession and benefit the community at large.

Goals

G 1: Develop knowledge
Students will be knowledgeable about crime and criminal justice systems and processes

G 0: Critical thinking
Students will be able to think critically about issues related to crime and criminal justice policies

G 2: Preparation for leadership positions
Students will be prepared for leadership positions in public and private sector agencies that address crime and justice issues.

Student Learning Outcomes/Objectives

SLO 1: Critically analyze crime & justice issues/data (G: 0) (M: 1, 2)
Students will be able to critically analyze crime and justice issues and/or information, utilizing theoretical, methodological, and statistical skill bases.

SLO 2: Apply research and statistical skills (G: 0) (M: 1, 2)
Students will be able to apply acquired research and statistical skill bases to evaluate the quality of scholarly products and their contribution to the field of criminology and criminal justice.

SLO 3: Understand theory (G: 1) (M: 1, 2)
Students will demonstrate an understanding of the theoretical knowledge base in criminology and criminal justice.

SLO 5: Understand how systems & processes interact (G: 1) (M: 1, 2)
Students will be able to provide an integrated view of crime and criminal justice systems and processes and how the components interact and intersect to provide coordinated justice administration.

SLO 6: Apply theory and terminology (G: 2) (M: 1, 2)
Students will be able to apply learned terminology and theory to real-world situations that both relate to and expand outside the fields of criminology and criminal justice.

SLO 7: Communicate effectively (G: 2) (M: 1, 2)
Students will be able to effectively communicate, in oral and written form, their understanding and analyses of crime and justice issues as they apply their knowledge to real-world problems and questions.

Measures, Targets, and Findings

M 1: Assessment Survey of Non-thesis students (O: 1, 2, 3, 5, 6, 7)
This is a 16 item faculty-rated assessment instrument used to evaluate non-thesis students. The items are rated on a 4 point scale, ranging from poor to excellent. The instrument is to be completed by members of the graduate committee shortly after the end of the course.

Source of Evidence: Capstone course assignments measuring mastery

Target for O1: Critically analyze crime & justice issues/data
The desired performance is to have 100% of students with an average score of 2 or better (on a 4 point scale) across the three items that measure this objective on the Assessment Survey of Non-thesis Students. 60% of students will score a 3 or better across the three items. 20% of students will score a 4 (out of 4) across the three items.

Findings 2011-2012 - Target: Met
Of the four students completing the capstone course in the spring of 2012, all 4 (100%) averaged a 3 or better on the three items that measure this outcome. Two of the students (50%) averaged a 4 out of 4 on these three items.
**Target for O2: Apply research and statistical skills**

The desired performance is to have 100% of students with an average score of 2 or better (on a 4 point scale) across the two items that measure this objective on the Assessment Survey of Non-thesis Students. 60% of students will score a 3 or better across the two items. 20% of students will score a 4 (out of 4) across the two items.

**Findings 2011-2012 - Target: Met**

Of the four students who completed the capstone, 4 (100%) averaged a 2 or better. Three (75%) averaged a 3 or better and 1 (25%) averaged 4 out of 4 on the two items.

**Target for O3: Understand theory**

The desired performance is to have 100% of students with a score of 2 or better (on a 4 point scale) on the two items that measure this objective on the Assessment Survey of Non-thesis Students. 60% of students will score a 3 or better on the items. 20% of students will score a 4 (out of 4) on the items.

**Findings 2011-2012 - Target: Partially Met**

Of the four students who completed the capstone, all four averaged a 2 or better. Three of the four (75%) averaged a 3 or better on the two items measuring this outcome. None of the students (0%) averaged a 4 on the two items.

**Target for O5: Understand how systems & processes interact**

The desired performance is to have 100% of students with a score of 2 or better (on a 4 point scale) across the two items that measure this objective on the Assessment Survey of Non-thesis Students. 60% of students will score a 3 or better across the two items. 20% of students will score a 4 (out of 4) across the two items.

**Findings 2011-2012 - Target: Met**

Of the four students who completed the capstone, all four (100%) averaged a three or better on the two items. Two of the students (50%) averaged a 4 on the two items.

**Target for O6: Apply theory and terminology**

The desired performance is to have 100% of students with a score of 2 or better (on a 4 point scale) across the three items that measure this objective on the Assessment Survey of Non-thesis Students. 60% of students will score a 3 or better across the three items. 20% of students will score a 4 (out of 4) across the three items.

**Findings 2011-2012 - Target: Partially Met**

Of the four students who completed the capstone, all (100%) of the students averaged a 2 or better on the three items measuring this outcome. Three of the students (75%) averaged a 3 or better on the three items that measure this outcome. None of the students averaged a four.

**Target for O7: Communicate effectively**

The desired performance is to have 100% of students with a score of 2 or better (on a 4 point scale) across the four items that measure this objective on the Assessment Survey of Non-thesis Students. 60% of students will score a 3 or better across the four items. 20% of students will score a 4 (out of 4) across the four items.

**Findings 2011-2012 - Target: Partially Met**

Of the four students who completed the capstone, all four (100%) averaged a 3 or better on the four items on our rubric assessing these outcomes. None of the students averaged a 4 across the four items on the rubric assessing these outcomes.

**M 2: Knowledge assessment survey of thesis students (O: 1, 2, 3, 5, 6, 7)**

The Thesis knowledge assessment survey is a 21-item faculty rated questionnaire that measures the degree to which students who defended their thesis successfully have met the student learning outcomes. The questionnaire is completed by the student's thesis supervisor. Items are based on a 4 point scale.

Source of Evidence: Senior thesis or culminating major project

**Target for O1: Critically analyze crime & justice issues/data**

The desired performance is to have at least 100% of students with an average rating score of 2 or higher, 60% of students with an average rating of 3 or higher and 20% of students with an average score of 4 (on a 4 point scale) across the items measuring this outcome.

**Findings 2011-2012 - Target: Met**

Four students completed a Master's thesis during the 2011-2012 academic year. All four students (100%) averaged a 3 or higher on the items measuring this outcome. One student averaged a 4.0 (25%). All three targets were met.

**Target for O2: Apply research and statistical skills**

The desired performance is to have at least 100% of students with an average rating score of 2 or higher, 60% of students with an average rating of 3 or higher and 20% of students with an average score of 4 (on a 4 point scale) across the items measuring this outcome.

**Findings 2011-2012 - Target: Partially Met**

Four students completed theses during the 2011-2012 academic year. All four students (100%) averaged a 2 or better on the items measuring this outcome. Two students (50%) averaged a 3 or better on the items measuring this outcome. No students (0%) averaged a 4 on the items measuring this outcome. One of the three targets for this outcome were met.
Target for O3: Understand theory
The desired performance is to have at least 100% of students with an average rating score of 2 or higher, 60% of students with an average rating of 3 or higher and 20% of students with an average score of 4 (on a 4 point scale) across the items measuring this outcome.

Findings 2011-2012 - Target: Met
Four students completed theses during the 2011-2012 academic year. Of those three students had theses relevant to this outcome. Of the three students, all (100%) scored a 3 or better on the item measuring this objective. Two (66.6%) scored 4 on the item measuring this objective. All targets were met.

Target for O5: Understand how systems & processes interact
The desired performance is to have at least 80% of students with an average rating score of 4.5 or higher (on a 5 point scale) across the items measuring this learning outcome.

Findings 2011-2012 - Target: Met
Four students completed theses during the 2011-2012 academic year. Two students had theses relevant to this objective. Both (100%) scored 4 out of 4 on the item measuring this objective.

Target for O6: Apply theory and terminology
The desired performance is to have at least 100% of students with an average rating score of 2 or higher, 60% of students with an average rating of 3 or higher and 20% of students with an average score of 4 (on a 4 point scale) across the items measuring this outcome.

Findings 2011-2012 - Target: Met
Four students completed theses during the 2011-2012 academic year. Two students had theses relevant to this objective. Both (100%) scored 4 on the item measuring this objective.

Target for O7: Communicate effectively
The desired performance is to have at least 100% of students with an average rating score of 2 or higher, 60% of students with an average rating of 3 or higher and 20% of students with an average score of 4 (on a 4 point scale) across the items measuring this outcome.

Findings 2011-2012 - Target: Partially Met
Four students completed the thesis during the 2011-2012 academic year. All four (100%) scored a 2 or better on the item that measures this objective. 50% scored a 3 or better. 50% scored a 4 on the item measuring this objective. Two of the three targets were met.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Develop Embedded Measures in Core Courses
The current assessment of non-thesis students in the Masters program is based solely on indicators derived from the capstone course. Later this year, we will begin to work with faculty who teach core courses to develop measures that can be embedded in at least three of these courses and ways in which these measures can be retrieved, stored and analyzed by the graduate coordinator. Data on thesis students will be collected as well.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: Medium
Implementation Description: end of Fall semester 2010
Projected Completion Date: 11/2010
Responsible Person/Group: Graduate committee and faculty who teach statistics, methods and theory

Develop Rubric for assessing non-thesis students
While our students continue to meet or exceed our target levels for learning outcomes, assessment of outcomes based on the revised capstone course suggested the need for a more reliable assessment tool than what is currently being used. The rubric will focus on the same learning outcomes as have already been established, but will provide more detail for assigning numerical scores. Once the rubric has been developed multiple members of the graduate committee can assess final papers in the capstone course in order to provide increased reliability.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Implementation Description: end of Spring semester 2010
Projected Completion Date: 04/2010
Responsible Person/Group: Graduate committee

Re-design the instrument used for assessing thesis students
Faculty have noted that the current instrument used to evaluate the thesis students does not seem to work well, leading to several items that cannot be rated (resulting in missing data for some items), and consequently low reliabilities for outcome measures. Further, the low numbers of students that we have completing theses and the low number of items that are being answered by faculty (missing data) make it difficult to reach our very high performance targets. As suggested by the GAC we have set up a tiered target and our targets are being partially met, but some of the higher targets are not being met. This may be the result of small sample sizes (low reliability and missing data). We plan to revise the thesis instrument this year, with those limitations in mind.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Knowledge assessment survey of thesis students | Outcome/Objective: Apply research and statistical skills
Students are now writing a literature review in their first year in the program
This is the first time in several years that we have not met our achievement target for this outcome. The analysis shows that the students were weakest on the item "The student is comfortable with his or her ability to write about crime and justice issues. Last year our required course "Crime and the Criminal Justice System" was re-vamped to require students to work extensively on writing a literature review on a criminal justice topic and I believe that this will strengthen their writing skills in this area. The two students that did not perform well on this outcome took the course before the changes were made.

Course changes
Both CRJU 7010 and CRJU 8980 will have increased focus on problem identification, problem solving, identifying stakeholders, and mapping and planning CJ processes. This will help students be better prepared for the capstone experience.

Edit Capstone Rubric
Add a not applicable option, since not all of the items are assessed for each student’s project. Add an assessment of problem solving, identifying stakeholders, and planning to assess leadership.

Annual Report Section Responses
Most Important Accomplishments for Year—Briefly describe the major things you accomplished over the past year. Be sure to note previous Action Plans that were executed this year, plus any accomplishments that are not otherwise mentioned in your outcomes reporting.
We created a rubric to assess capstone experiences for students in our non-thesis track. We applied that rubric for the first time this year to assess non-thesis students.

Challenges for Next Year—Briefly describe any special challenges (related to budget, personnel, increased standards, new projects, new expectations, etc.) that you will be facing during the next reporting cycle that might affect your department’s outcomes.
We will be implementing enhanced recruiting, possibly yielding a greater number of students, with no change in faculty. This will produce an increased burden on existing faculty. In addition, we need to complete our revisions to the rubric for assessing thesis students and engage in assessment of the PhD program for the very first time— all of which will require faculty resources.

Modifications in Intended Outcomes—If you modified any of your intended outcomes since the previous reporting cycle, please note those here.
None

Modifications in Measurement Methods—If you modified any of the measures or methods you use in the measurement process, please note those here.
We created a new rubric for assessing capstone students. This replaced our previous assessment instrument for students in the non-thesis track.

University-wide Committee Participation—Use this space to document any staff participation on University-wide committees (e.g., University Senate).
Mary Finn - University Senate Volkan Topalli - University Senate

Publications and Presentations—Note in this section any articles published or presentations made at professional conferences...
**Goals**

**Mission / Purpose**

**G 1: Auditing issues**

The School of Accountancy would like graduates in accounting to demonstrate mastery in critical thinking through writing. Our Critical Thinking through Writing in Accounting is the ability to identify and solve unstructured problems in unfamiliar accounting domains and effectively communicate the thinking, solution process and conclusions. Students demonstrating critical thinking skills must be able to locate, organize, and analyze. Feedback responses will be given based on completion of a set of facts and available evidence. They must be able to present, discuss and defend their views through written and spoken language. Their conclusions and recommendations must be complete, plausible, and compelling, and demonstrate an understanding the accounting problem. All accounting students take a core business course (BUS3000) that serves as the first CTW course an introduction to critical thinking through writing. Students take BUSA3000 in their sophomore or junior year. The second CTW course for accounting majors is Auditing (AC4610). Students enroll in the Auditing class during their senior year. Usually, students are enrolled in the course during the last semester of their undergraduate studies. CTW is applied in two quizzes and two written assignments: a written case analysis that includes an oral presentation and a report based on a review of operations and internal controls at a simulated audit client.

**International Activities**

Students will demonstrate the ability to communicate their knowledge of auditing directly to their peers.

**Assessment Data by Section**

**2011-2012 CTW Accounting**

As of: 12/12/2016 04:41 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

**Goal**

**G 1: Auditing issues**

The School of Accountancy would like graduates in accounting to demonstrate mastery in critical thinking through writing. The goal of the CTW component of the course is to familiarize students with the types of higher order level thinking and analytical skills that will be expected of them in a professional career in accounting. The ability to demonstrate critical thinking skills in a time-pressure environment is an important attribute to achieve a successful career in accounting. Therefore, we would like students to be able to solve problems and communicate the results of their analysis under restricted time constraints. Analysis: Students will demonstrate an ability to analyze cases which detail actual audit failures. They will use auditing standards and knowledge of auditing procedures to identify effective audit planning, risk analysis and error detection. They will identify strong vs. weak audit approaches, develop alternative audit procedures, and make recommendations to improve governance and control conditions at audit clients. Communication: Students will demonstrate the ability to communicate their knowledge of auditing directly to their peers. They prepare oral presentations and written reports that demonstrate their analysis. They will provide theoretical support and corroborating data to support their conclusions. Research Skills: Students will learn to research the appropriate audit standards and regulatory requirements to support their analysis. They will receive feedback responses at least twice before the submission of the final product. They will learn how to address critical comments to improve their writing.

**Books**

**International Activities**

Note here any international activities of the department or its staff.

Dr. Lisa Mulfic was awarded a J. William Fulbright to teach and research in Bosnia. Professor Cynthia Johnson has arranged a Travel Abroad program for spring in Trinidad and Tobago. Dr. Dean Dabney edits the International Criminal Justice Review, published by the Department of Criminal Justice and Criminology.
Student Learning Outcomes/Objectives

SLO 1: Internal Control and Fraud Risk Assignment (G: 1) (M: 1)
Auditing Alchemy Inc. is the long CTW assignment. It is worth approximately 16% of the semester grade. The objective of the assignment is have students adopt the role of an independent auditor who is responsible for reviewing the client's production and revenue recognition process. Students must identify fraud risks and internal control weaknesses based on a simulated "walkthrough" under Section 404 of the Sarbanes Oxley Act of 2002. They identify and analyze fraud risks, identify and analyze internal control weaknesses and then prepare a memo documenting the critical issues at the client and recommendations to correct the problems that they detected. This task is similar to tasks that junior public accountants will perform at real audit clients. We use a simulated production system and video interviews between auditors and representatives of the simulated client. Students must review background materials and client prepared documents before they begin the simulation.

General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.
2.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view where appropriate.
3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view where appropriate.

Institutional Priority Associations

1 Student retention
2 Student promotion and progression

SLO 2: Audit Objectives
Objectives of the course are as follows: Differentiate among the various types of auditing and the procedures applied on financial statements audits and audits of Internal Controls over Financial Reporting. Evaluate the components of audit risk and the appropriate audit approach to address the risks identified. Apply the opinion formulation process to specific attestation engagements and clearly communicate the results of procedures performed as part of the opinion formulation process. Understand and evaluate the auditors' responsibility on the audit engagement and determine whether that responsibility was adequately fulfilled. Evaluate, integrate, and apply different types of audit information and knowledge to form independent judgments. Present, discuss and defend their views through written and spoken language. Conclusions and critical points of view must be complete and demonstrate an understanding of the audit problem.

Measures, Targets, and Findings

M 1: CTW Evaluations (O: 1)
The CTW program conducted a survey of the students enrolled in AC 4610 during the 2010-11 AY. There was a very low response rate (less than 5% of the students enrolled). The low response rate requires that any responses be interpreted with caution. Nonetheless, the following observations are made. The accounting respondents had lower ratings (.4 points or lower) than the summary CTW responses (for all CTW courses) in four areas: CT is important in my discipline, CT is important in the field I plan to pursue, helps me ask relevant questions, formulate a testable hypothesis. Accounting respondents indicated more favorable responses than the summary CTW responses in four key areas: helps me make accurate inferences, evaluate the validity of evidence, CTW rubric helped me understand the expectations for the CTW assignment, CTW assignments helped me learn the material for this course. It is not surprising that the respondents had low ratings on the formulation of testable hypotheses metric because the audit course is not designed to emphasize this attribute. However, it was surprising that students did not recognize how important CT is to a career in accounting. It was pleasing to note that the students found the rubric to be helpful. During 2010-11 AY, we had revised the rubric and had students peer review each other using the rubric. It seems that this contributed to their satisfaction with the metric.

Source of Evidence: Student course evaluations on learning gains made

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Add Action Plan
Your action plan should relate to the measure/outcome. Or, you can add a a general action plan for all of your measures/outcomes under "action plans" above in the "assessment" link.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Future plans
Improve communication with students emphasizing the importance of CT in an accounting career. Obtain baseline writing samples from each student to make an early assessment of which students should be referred to GSU's Writing Lab. to improve their written communication. Invite CTW faculty to attend seminars and workshops offered by the CTW Program. Supplement or replace one-on-one training of faculty with at least one group training session.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Implementation Description: During course introduction faculty will emphasize the importance of CT to the students enrolled in the course. All students will be asked to submit a writing sample to the professor. The professor and the CTW consultants will identify students who are likely to benefit from the help of the Writing Lab. CTW Program indicated that workshops for non-ambassadors will
**Mission / Purpose**

AAS CTW courses will require students to engage, through writing, a "wide range of cognitive skills and intellectual dispositions
needed to effectively identify, analyze, and evaluate arguments and truth claims; to discover and overcome personal prejudices; to
formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about what to
believe and what to do.” (Bassham, Irwin, Nardone & Wallace, Critical Thinking: A Student's Introduction (McGraw-Hill, 2005, page 1.)
While critical thinking will be valued throughout the course of the semester, specific assignments will most directly fulfill the CTW
designation. CTW-designated assignments will be assessed using the rubric included in the appendix (50%) and the grading rubric
included in the syllabus (50%).

**Goals**

**G 1: AAS CTW Goal 1 (Annotations)**
In comparing initial submissions to subsequent submissions, students in AAS will demonstrate improved CTW (as determined by
the assignment rubric). Further, CTW strengths in the following domains will be apparent: Analyzing information: data, ideas, or concepts
(Interprets information (data, ideas, or concepts) accurately, appropriately and in-depth in new contexts); Assessing strengths and
weaknesses of novel material; and Assessing relevance of novel material to research interests.

**G 2: AAS CTW GOAL 2 (Research Paper)**
At minimum, the final research paper will exhibit, on average, CTW in the high "developing” range (as determined by the assignment
rubric). Further, students in AAS will demonstrate CTW strengths in the following domains: Analyzing information: data, ideas, or
concepts (Interprets information (data, ideas, or concepts) accurately, appropriately and in-depth in new contexts); Drawing well-
supported conclusions (Creates a detailed conclusion or complex solution that is well-supported, logically consistent, complete and
often unique); Synthesizing ideas into a coherent whole (Integrates ideas or develops solutions that are exceptionally clear, coherent,
and cohesive)

**Student Learning Outcomes/Objectives**

**SLO 2: CTW Objective 1 (G: 1) (M: 1)**

**ASSIGNMENT TWO Article Annotation and Critique (20%, CTW Component) Each student will submit an annotation and critique of
six peer-reviewed journal articles. Each article will be identified by the instructor as important to the discipline and/or identified by the
student as particularly pertinent to their research project. These submissions will provide entry into the more extensive literature
review of your research paper. The grading criteria for your annotation and critique are as follows: Annotation (20%) 1. Is the
bibliographic information provided in APA format (5%) 2. Is the purpose of the work identified (thesis/research question, (4%) 3. Is
the methodology clearly described? (3%) 4. Are the results adequately described? (3%) 5. Was a hardcopy of article submitted? (5%)
Critique (80%). 1. Does the author assess the strength and weakness of the degree to which the article’s a. literature review, b.
analysis; and c. discussion support the conclusions offered by each author (30%); 2. Does the author provide specific support from
the article for a decision to include or exclude each article from the literature review (30%); 3. Is there evidence of critical thinking
(see rubric) (10%) 4. Is the article free of written errors? (10%) Initial critiques will not be assigned a grade although I will provide you
with feedback. You will have the option of submitting one revision of each critique. It is my expectation that each revised submission
will more completely meet the criteria.

**SLO 3: CTW Objective 2 (G: 2) (M: 2)**

AAS 4980 Seminar and Practicum in African American Studies Completion of the research paper (50%) The primary products of this
class are (1) completion of a coherent research project and (2) a well-written research paper that describes this project fully. During
the course of the semester, the students will submit a series of revisions in response to instructor comments toward the completion of
their research papers. As with the assignments for 3980, this assignment will require students to *evaluate arguments and truth
claims; to discover and overcome personal prejudices; to formulate and present convincing reasons in support of conclusions; and to
make reasonable, intelligent decisions about what to believe and what to do* as it relates to the specific requirements of each
specifically, this activity will center the students’ own truth claims in critical thinking. While the assignments for 3980 encourage
students to critically engage (1) the general biases they bring to the class and (2) pre-existing research that is relevant to their
chosen area of interest, 4980 will require them to critically reflect on THEIR OWN truth claims about THEIR research as they pursue a
final paper that is accurate, coherent, thoughtful and critical. Further, resubmissions provide students with additional opportunities to
more fully reflect on and engage their research.

**Measures, Targets, and Findings**
To assess and demonstrate CTW performance on the article annotations, initial submissions were compared to the final submission. In comparing the performance of twelve students across 34 submissions, the average increase on the CTW portions of the assignment (1. the author assess the strength and weakness of the degree to which the article’s conclusions are supported; 2. Does the author assess the strength and weakness of the degree to which the article’s conclusions are supported) was 18.99/60 (see rubric). Without exception, each student demonstrated improved CTW on this assignment.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: CTW Objective 1**

Moving forward, we expect that a minimum of 75% of the students will earn a grade of 75% or above on the CTW portion of this assignment.

**M 2: Research Paper CTW Assessment (O: 3)**

In reviewing the research papers of nine students, it is apparent that students demonstrate strengths in CTW. Specifically, the overall average rating on AAS’ CTW rubric is 4.87 (across all five criteria) with no criterion falling below 4.3 (criterion 5). In comparing the ratings (2010-2011/2009-2010), CTW has increased in each criterion with the exception of criterion 5. Identifies, summarizes (and appropriately reformulates) the problem, question, or issue (5/4.5) Identifies and considers the influence of the researcher (4.3/4.09) Develops, presents, and communicates OWN perspective, hypothesis or position. (4.8/4.68) Presents, assesses, and analyzes appropriate supporting data/evidence. (4.8/4.64) Identifies and assesses conclusions, implications, and consequences. (4.3/4.45)

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: CTW Objective 2**

Moving forward, we expect that the minimum average score on each criterion of the rubric will be 4 (high developing), with a minimum overall average CTW rating of 4 (high developing) as well.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Revise Research Paper Rubric**

I will revise the CTW research paper rubric for the 2010-2011 academic year. This rubric will be inclusive of both general and CTW-specific assignment requirements.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** High

  - **Relationships (Measure | Outcome/Objective):**
    - Measure: Research Paper CTW Assessment | Outcome/Objective: CTW Objective 2

  - **Projected Completion Date:** 07/2010
  - **Responsible Person/Group:** Jonathan Gayles

**CTW Sessions**

To maintain the CTW progress evidenced during the past year, AAS will devote one class session to CTW in each of our CTW courses. The purpose this action is to provide students with specific examples of CTW in AAS using previously-submitted CTW assignments that best demonstrate CTW. If possible, these sessions will be conducted with the assistance of CTW staff.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** High

  - **Implementation Description:** 1. Identify and make anonymous outstanding/poor CTW assignments (sum’ 2011); 2. Discuss collaboration w/CTW staff (sum’ 2011); 3. Develop instructional activities for students that will elucidate evidence of CTW in the selected assignments as well as provide them with opportunities to identify and discuss the CTW strengths/weaknesses of each assignment (late sum’ 2011); and 4. Identify specific date and location for fall/spring term CTW sessions (late sum’/fall 2011).

- **Projected Completion Date:** 04/2012
- **Responsible Person/Group:** Jonathan Gayles

**Additional Resources:** Possible collaboration with CTW staff

**Budget Amount Requested:** $0.00 (no request)

**Mission / Purpose**

In anthropology, critical thinking entails examining and contextualizing the multiple perspectives that inform complex social, cultural, and biological realities pertaining to the human condition in its past and present dimensions.

**Goals**

**G 1: Goals for Anthropology majors CTW**

Students will demonstrate an ability to analyze complex social, cultural, and biological realities; they will demonstrate an ability to draw
Student Learning Outcomes/Objectives

SLO 1: Critical thinking in Anthropology (M: 1)

In Anth 3033, students were asked to submit 3 versions of each of 4 papers—one for each course module. The third version of the fourth paper was selected for CTW score measuring. Papers were evaluated on a rubric which measured the outcome on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding. Our target was for all students to receive at least a 3, and for 75% to receive at least a 4. In ANTH 4970, students were assigned 6 papers, 3 of which required multiple revisions. Papers were evaluated on a rubric which measured the outcome on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding. Our target was for all students to receive at least a 3, and for 75% to receive at least a 4. In ANTH 4970, students had 6 assignments, 3 of which required multiple revisions. Papers were evaluated on a rubric which measured the outcome on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding. Our target was for all students to receive at least a 3, and for 75% to receive at least a 4. For the Monday section, 76% of the students scored a 4 or 5, 12% scored a 3, 8% scored a 2. For the Wednesday section, 68.4% scored a 4 or a 5, 31.5% scored a 3. Analysis: students will demonstrate an ability to analyze complex social, cultural, and biological realities. b. Draw Conclusions: students will demonstrate an ability to draw conclusions that engage current perspectives in the discipline. c. Contextualize: students will demonstrate an ability to contextualize relevant anthropological theories on the issues at hand. d. Critique: students will demonstrate an ability to critique relevant anthropological theories on the issues at hand.

SLO 2: Critical thinking

In Anth 3033, students were asked to submit 3 versions of papers—one on each course module. The third version of the fourth paper was selected for CTW score measuring. Papers were evaluated on a rubric which measured the outcome on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding. Our target was for all students to receive at least a 3, and for 75% to receive at least a 4. All of the students received at least a 3, and 80% received a 4. In our two sections of ANTH 4970, students had 6 assignments, 3 of which required multiple revisions. Papers were evaluated on a rubric which measured the outcome on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding. Our target was for all students to receive at least a 3, and for 75% to receive at least a 4. For the Monday section, 76% of the students scored a 4 or 5, 12% scored a 3, 8% scored a 2. For the Wednesday section, 68.4% scored a 4 or a 5, 31.5% scored a 3. Analysis: students will demonstrate an ability to analyze complex social, cultural, and biological realities. b. Draw Conclusions: students will demonstrate an ability to draw conclusions that engage current perspectives in the discipline. c. Contextualize: students will demonstrate an ability to contextualize relevant anthropological theories on the issues at hand. d. Critique: students will demonstrate an ability to critique relevant anthropological theories on the issues at hand.

SLO 3: 2010/2011 outcomes

In Anth 3033, 95.5% of students received 3 or higher, and 27.3 of students received 4 or higher. One student received a 2. In ANTH 4970, 20% of students received between 3 and 4, 80% of students received 4 or higher.

Relevant Associations: n/a

Measures, Targets, and Findings

M 1: Course projects (O: 1)

In Anth 3033, students were asked to write papers where they reflected critically on course readings and discussions. The measure chosen for this assessment was paper # 4, in which they reflected on a variety of topics drawing on discussions conducted during the whole semester. Papers were evaluated on a rubric which measured the outcome on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding. Our target was for all students to receive at least a 3, and for 75% to receive at least a 4. In Dr. Catey's ANTH 4970, the measure was a critical and self-reflexive paper about students' experiences as anthropology majors, for which students were required to critically draw on relevant literature in the discipline. Papers were evaluated on a rubric which measured the outcome on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding. Our target was for all students to receive at least a 3, and for 75% to receive at least a 4. In Dr. White's ANTH 4970, the measure was a critical and self-reflexive paper about students' experiences as anthropology majors, for which students were required to draw on relevant literature in the discipline. Papers were evaluated on a rubric which measured the outcome on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding. Our target was for all students to receive at least a 3, and for 75% to receive at least a 4. In ANTH 4980 (Special Topics: Methods in Sociocultural Anthropology) students were assessed based on a semester-long assignment, which required them to conceive, design, develop, implement and present an original small-scale ethnographic research project. Assignments were evaluated according to a rubric which measured outcomes on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding. The target was for all students to receive at least a 3, and for 75% to receive at least a 4.

Source of Evidence: Senior thesis or culminating major project

Target for O1: Critical thinking in Anthropology
In Anth 3033, papers were evaluated on a rubric which measured the outcome on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding. Our target was for all students to receive at least a 3, and for 75% to receive at least a 4. In ANTH 4970 (Dr. White's Senior Seminar), papers were evaluated on a rubric which measured the outcome on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding. Our target was for all students to receive at least a 3, and for 75% to receive at least a 4. In ANTH 4980 (Special Topics: Methods in Sociocultural Anthropology) all students were expected to score "Satisfactory" or above all an rubric items. 75% of students were expected to score "Excellent" or above in their individual work. In ANTH 4970 (Dr. Catey's Senior Seminar), papers were evaluated according to a rubric which measured outcomes on a scale from 1 to 5: 1 = poor, 2 = fair, 3 = good, 4 = excellent, and 5 = outstanding. The target was for all students to receive at least a 3, and for 75% to receive a 4 or better. In ANTH 4980 (Race and Racism), papers were evaluated according to a rubric which measured outcomes on a scale from 1 to 5: 1 = poor, 2 = fair, 3 = good, 4 = excellent, and 5 = outstanding. The target was for all students to receive at least a 3, and for 75% to receive at least a 4. In ANTH 4980 (Anthropology of Self and Emotion), papers were evaluated on a rubric which measured the outcome on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding. Our target was for all students to receive at least a 3, and for 75% to receive at least a 4.

**M 2: 2011-2012 measure**

In all ANTH classes, assignments were evaluated on a rubric which measured the outcome on a scale from 1 to 5, whereby 1 was poor, 2 was fair, 3 was good, 4 was excellent, and 5 was outstanding.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Improvement plans

In ANTH 3033, requiring students to write a critical paragraph in response to the instructor's feedback turned out to be extremely productive. This requirement will continue to be implemented in the 2012-2013 cycle. The course has been fine-tuned over the last several years and no further changes are required at this time. ANTH 4980 Anthropology of Self and Emotion: Existing structure of the course seems to be effective for most students. Over the course of the semester, all students revised initial drafts based on instructor and peer feedback and received improved scores on their second drafts, suggesting that the writing workshops implemented were successful. While it is difficult, based on the small sample size, to determine whether student performance slightly below the target for paper #3 can be related to specific aspects of instruction, in the future students who score in the “3” range or below on the final draft of paper #1 will be required to meet with the professor outside of class to discuss specific challenges each faces in his/her writing, with a follow-up meeting to be scheduled if improvement is not seen on paper #2.

In ANTH 4980 Methods in Sociocultural Anthropology, the class will focus on data collection and analysis even further and emphasize connecting and contextualizing research in grounded processes. ANTH 4970 Dr. White's Senior Seminar This semester, a “no late grade deductions” policy for assignments was implemented that did not require revision. Students were responsible for setting their own schedule to complete most writing assignments. The idea was that if students were less pressured to complete some assignments and could set their own time and work management schedules, they might focus more on the writing and less on the deadlines. This policy did work well for most students, however, many students postponed turning in assignments until the last two weeks of class. Some commented that they appreciated this as a lesson in responsibility and time management, but in the fall, a different policy of positive incentives will be attempted for assignments turned in by a given deadline. ANTH 4980 Race and Racism, ANTH 4980 Anthropology and Public Health and Dr. Catey’s ANTH 4970 will no longer be offered, in that Dr. Catey is leaving our department.

**Established in Cycle:** 2009-2010
**Implementation Status:** Planned
**Priority:** High

#### planned course improvements

**Priority:** High
and contextualizing research in grounded processes. ANTH 4970 Dr. White’s Senior Seminar This semester, a “no late grade deductions” policy for assignments was implemented that did not require revision. Students were responsible for setting their own schedule to complete most writing assignments. The idea was that if students were less pressured to complete some assignments and could set their own time and work management schedules, they might focus more on the writing and less on the deadlines. This policy did not work well for most students, however; many students postponed turning in assignments until the last two weeks of class. Some commented that they appreciated this as a lesson in responsibility and time management, but in the fall, a different policy of positive incentives will be attempted for assignments turned in by a given deadline. ANTH 4980 Race and Racism, ANTH 4980 Anthropology and Public Health and Dr. Catey’s ANTH 4970 will no longer be offered, in that Dr. Catey is leaving our department.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

### Analysis Questions and Analysis Answers

**CTW Reflection 1: Achievements** - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

The ANTH program added small CTW sections to several regular courses. This experimental approach was effective in moderately increasing our CTW offerings. Also, hiring a Visiting Lecturer made a positive contribution to our CTW program. The drawback in having a VL teach CTW courses, however, is the lack of continuity in the program.

**CTW Reflection 2: Assessment** - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

The consensus in the anthropology department is that the quality of our majors has considerably improved, both in terms of their writing and for their critical thinking skills. Ideally all students should take ANTH 3033 early in their career, and then register for ANTH 4970 before graduating. Unfortunately, this is not always the case. However, offering several small sections of CTW courses increases students’ exposure to critical thinking through writing throughout their careers as anthropology majors.

**CTW Reflection 3: Needs** - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address these areas?

The anthropology department is still strapped for resources. Increasing CTW course offerings inevitably takes a toll on graduate course offerings. Furthermore, adding on a CTW section to a 4000/6000 course further complicates the instructor’s position vis-a-vis a composite student population with different requirements.

**CTW Reflection 4: Overall Reflection** - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

This year, several small CTW sections were added to regular 4000 courses for the sake of expanding our CTW course offerings. The ANTH program added small CTW sections to several regular courses. This experimental approach was effective in moderately increasing our CTW offerings. Also, hiring a Visiting Lecturer made a positive contribution to our CTW program. The drawback in having a VL teach CTW courses, however, is the lack of continuity in the program.

### Academic Program Question 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Since the assessment process is satisfactory, no changes were made.

### Academic Program Question 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

This year’s assessment will determine whether we continue to offer small CTW sections along with a number of regular 4000/6000 level courses.

**Administrative Dept Question 1:** Explain how your department used the results from the previous cycle’s (2010-2011) assessment. What actions did you take this past year based on the results from the previous cycle? What changes did you make as a result?

Given the increased need for CTW courses in anthropology and given that we cannot offer more than 2 to 3 dedicated CTW courses a year, we decided to offer several small CTW sections along with 4000 level courses.

**Administrative Dept Question 2:** What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department’s effectiveness?

Assessments for this year reveal the importance of thinking existentially in order to cover our CTW needs; however, having small CTW sections added to 4000/6000 level courses is less than ideal. An additional Permanent Lecturer position would go a long way in helping us support the CTW course offerings that our major requires.

**Administrative Department Question 3:** How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

Findings from this year will determine whether we are going to continue offering small CTW sections along with 4000 level courses. The department will also make every effort to secure additional resources to expand our CTW offerings. If we hire a Lecturer, we will be able to create a continuity within several of our CTW offerings.

### Annual Report Section Responses

**Most Important Accomplishments for Year**—Briefly describe the major things you accomplished over the past year. Be sure
In 2011-2012, we added small CTW "special topic" sections to several courses at the 4000/6000 level. This allowed us to expand our CTW offerings. Three more anthropology faculty (Dr. Jennifer Patico, Dr. Faidra Papavasiliou, and Visiting Lecturer Dr. Scott Catey) received CTW training. Challenges for Next Year—Briefly describe any special challenges (related to budget, personnel, increased standards, new projects, new expectations, etc.) that you will be facing during the next reporting cycle that might affect your department's outcomes.

Adding small CTW sections to 4000/6000 courses is effective in increasing CTW offerings, but it further complicates the task of teaching a 4000/6000 level course. Having visiting faculty teach CTW is also problematic, in that no action plan can be implemented for their course offerings. Our goal for next year is to hire a lecturer to increase our course offerings while guaranteeing pedagogical and methodological continuity.

Georgia State University
Assessment Data by Section
2011-2012 CTW Applied Linguistics
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

**Mission / Purpose**
Critical thinking in Applied Linguistics always involves evaluating arguments and presenting the rationale behind the conclusions drawn. The CTW-specific courses additionally address personal prejudices, for example as relating to language-trait-focused discrimination, and making reasonable, intelligent decisions about how to address real-world language-oriented controversies.

**Goals**
G 1: evaluate arguments
Students will learn to evaluate arguments and present the rationale behind the conclusions drawn.

G 2: address personal prejudices
Students will learn to address personal prejudices, for example as relating to language-trait-focused discrimination.

G 3: write clearly
Students will learn to present an argument clearly in writing.

**Student Learning Outcomes/Objectives**

**SLO 1: language in society final paper (G: 1, 2, 3) (M: 1, 3, 4, 5, 6)**
Students will write a final paper on a sociolinguistic topic of their choice, drawing on both popular sources and academic sources, or on academic sources presenting more than one viewpoint. They will demonstrate their critical thinking through writing skills in this assignment, including their ability to identify values and assumptions that underlie different perspectives, show awareness of prejudicial aspects of the problem, present convincing arguments based on linguistic principles, draw reasonable conclusions, and present ideas clearly and in a well-organized fashion.

**SLO 2: communication across cultures final paper (G: 1, 2, 3) (M: 2, 3, 4, 5, 6)**
Students will write a 17-22 page final paper on a microculture (e.g., dog breeders, massage therapists, yoga instructors, faculty members, graduate students, 1st graders). They will identify a microculture that interests them, observe members of the microculture interacting, identify an informant, take field notes, develop ethnographic interviewing skills, and collect and analyze ethnographic interview data. Finally, they will complete the written presentation of your project. All writing assignments in this course relate to and build toward this final paper. They will demonstrate their critical thinking through writing skills in this assignment, including their ability to demonstrates an honest awareness of their feelings/ thoughts about cultural difference, show awareness that they are cultural beings, present convincing arguments based on data, draw reasonable conclusions, and present ideas clearly and in a well-organized fashion.

**Measures, Targets, and Findings**

**M 1: identify values and assumptions that underlie different perspectives (O: 1)**
Students will write a final paper on a sociolinguistic topic of their choice, drawing on both popular sources and academic sources, or on academic sources presenting more than one viewpoint. They will demonstrate their critical thinking through writing skills in this assignment, including their ability to identify values and assumptions that underlie different perspectives, show awareness of prejudicial aspects of the problem, present convincing arguments based on linguistic principles, draw reasonable conclusions, and present ideas clearly and in a well-organized fashion.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: language in society final paper**
The papers were evaluated on a rubric which measured this outcome on a scale from 1-4, where 1 is "fails to identify underlying values and assumptions of different perspectives", 2 is "Does not identify many underlying values and assumptions of different perspectives or addresses only one perspective", 3 is "Identifies many underlying values and assumptions of more than one perspective" and 4 is "Clearly identifies most underlying values and assumptions of more than one perspective". Our target is for...
85% of students to receive at least a 3 and for at least 40% to receive a 4.

M 2: demonstrates self-awareness about cultural difference (O: 2)
Students will demonstrate their critical thinking through writing skills on their final papers for Communication across Cultures, including their ability to demonstrate an honest awareness of their feelings/thoughts about cultural difference.
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O2: communication across cultures final paper
The papers were evaluated on a rubric which measured this outcome on a scale from 1-4, where 1 is "Fails to demonstrate awareness of one's feelings/thoughts about cultural difference", 2 is "Does not demonstrate much awareness of one's feelings/thoughts about cultural difference", 3 is "Demonstrates much awareness of one's feelings/thoughts about cultural difference" and 4 is "Clearly demonstrates a lot of self awareness about one's feelings and thoughts about cultural difference". Our target is for 85% of students to receive at least a 3 and for at least 40% to receive a 4.

Findings 2011-2012 - Target: Met
In terms of this outcome, 97% of students received at least a 3 and 78% received a 4.

M 3: shows awareness of bias (O: 1, 2)
Students will demonstrate their critical thinking through writing skills on their final papers, including their ability to show awareness of bias.
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: language in society final paper
The papers were evaluated on a rubric which measured this outcome on a scale from 1-4, where 1 is "Fails to show awareness that oneself is a cultural being", 2 is "Partially shows awareness that oneself is a cultural being", 3 is "Fully shows awareness that oneself is a cultural being" and 4 is "Fully shows awareness that oneself is a cultural being and demonstrates ability to mediate one's cultural behavior as necessary". Our target is for 85% of students to receive at least a 3 and for at least 40% to receive a 4.

Findings 2011-2012 - Target: Met
In terms of this outcome, 89% of students received at least a 3 and 59% received a 4.

Target for O2: communication across cultures final paper
The papers were evaluated on a rubric which measured this outcome on a scale from 1-4, where 1 is "Fails to show awareness that oneself is a cultural being", 2 is "Partially shows awareness that oneself is a cultural being", 3 is "Fully shows awareness that oneself is a cultural being" and 4 is "Fully shows awareness that oneself is a cultural being and demonstrates ability to mediate one's cultural behavior as necessary". Our target is for 85% of students to receive at least a 3 and for at least 40% to receive a 4.

Findings 2011-2012 - Target: Met
In terms of this outcome, 100% of students received at least a 3 and 74% received a 4.

M 4: presents convincing arguments based on appropriate evidence (O: 1, 2)
Students will demonstrate their critical thinking through writing skills in their final papers, including their ability to present convincing arguments based on appropriate evidence.
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: language in society final paper
The papers were evaluated on a rubric which measured this outcome on a scale from 1-4, where 1 is "Arguments are not based on linguistic principles", 2 is "Arguments are loosely based on linguistic principles", 3 is "Arguments are mostly based on linguistic principles" and 4 is "Arguments are clearly and consistently based on linguistic principles". Our target is for 85% of students to receive at least a 3 and for at least 40% to receive a 4.

Findings 2011-2012 - Target: Met
In terms of this outcome, 92% of students received at least a 3 and 76% received a 4.

Target for O2: communication across cultures final paper
The papers were evaluated on a rubric which measured this outcome on a scale from 1-4, where 1 is "Arguments are not based on data", 2 is "Arguments are loosely based on data", 3 is "Arguments are mostly based on data" and 4 is "Arguments are clearly and consistently based on data". Our target is for 85% of students to receive at least a 3 and for at least 40% to receive a 4.

Findings 2011-2012 - Target: Met
In terms of this outcome, 87% of students received at least a 3 and 70% received a 4.

M 5: draws reasonable conclusions (O: 1, 2)
Students will demonstrate their critical thinking on their final papers through writing skills in this assignment, including their ability to draw reasonable conclusions.
Source of Evidence: Written assignment(s), usually scored by a rubric
Details of Action Plans for This Cycle (by Established cycle, then alpha)

change to course requirements for Communication across Cultures

Students had difficulty identifying cultural difference (and thus, becoming aware of their feelings and thoughts regarding such differences) and recognizing themselves as cultural beings if they were investigating a micro-culture with which they were already too familiar (e.g. Starbucks, gaming). In future offerings of Communication Across Cultures, students will be required to do their final paper on a micro-culture with which they are not at all familiar, which should help them to become more aware of cultural differences.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: demonstrates self-awareness about cultural difference | Outcome/Objective: communication across cultures final paper
Measure: shows awareness of bias | Outcome/Objective: communication across cultures final paper

Responsible Person/Group: Instructors for communication across cultures
Additional Resources: none
Budget Amount Requested: $0.00 (no request)

discuss advising students/ setting possible prerequisites with faculty

Many students who signed up for the "senior-level" CTW course were not seniors and had not taken the junior-level course. The AL faculty will need to consider whether it is feasible to have the junior-level course (or senior status) as a prerequisite to the senior-level course. (Since the courses were only offered once per year in the past, such a requirement has made graduating in a timely fashion difficult for students.) Another possibility is just to work with advising so that students know to sign up for the junior-level course before the senior-level one if at all possible.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: demonstrates self-awareness about cultural difference | Outcome/Objective: communication across cultures final paper

Target for O1: language in society final paper

The papers were evaluated on a rubric which measured this outcome on a scale from 1-4, where 1 is "Writing is incoherent and ideas are illogically arranged", 2 is "Few ideas are logically arranged. Writing is often unclear", 3 is "Most ideas are logically arranged. Writing is generally clear" and 4 is "Ideas are logically arranged. Writing is clear and precise". Our target is for 85% of students to receive at least a 3 and for at least 40% to receive a 4.

Findings 2011-2012 - Target: Met
In terms of this outcome, 92% of students received at least a 3 and 76% received a 4.

Target for O2: communication across cultures final paper

The papers were evaluated on a rubric which measured this outcome on a scale from 1-4, where 1 is "Conclusions are based on misconceptions of linguistic principles, personal opinion, or are unrelated to arguments presented", 2 is "Conclusions are somewhat or vaguely based on misconceptions of data, personal opinion, or are unrelated to arguments presented or on bias", 3 is "Conclusions are largely supported by data and not personal opinion or bias" and 4 is "Conclusions are clearly supported by data-informed arguments and not personal opinion or bias". Our target is for 85% of students to receive at least a 3 and for at least 40% to receive a 4.

Findings 2011-2012 - Target: Met
In terms of this outcome, 97% of students received at least a 3 and 57% received a 4.
**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

Last year's Action Plan proposed 1) changing a requirement for the CTW paper in Communication across Cultures in order to improve student outcomes, 2) advising students so that they take the courses in the correct order, and 3) collecting CTW data more promptly to ensure full data availability. All of these plans were accomplished this year. 1) Students in the Communication across Cultures class were required to do their ethnography on a microculture with which they were completely unfamiliar. This helped them to identify cultural difference (and thus become aware of their feelings and thoughts regarding such differences) and recognize themselves as cultural beings. This year, we met (and surpassed) our targets for these measures, whereas last year we did not. 2) Advising of students has been improved, including providing clear information online and in the new program brochure about the ordering of the two CTW courses. We are also planning to add a note as to the preferred ordering of these courses in the catalogue in the next curriculum change cycle. While a few students have still taken the senior-level course before the junior-level course or taken the courses simultaneously, most students are now taking them in the correct order, so they are better able to build on what they learned in the junior-level course when taking the senior-level course. Because the junior-level course is limited to majors & minors and the senior-level course is usually taken by a few students in other departments, we have decided not to make the junior-level course a prerequisite for the senior-level course at this time. 3) We collected full data on all CTW courses this year, which has allowed for analysis of how our students are doing.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

Overall, we see improvement over the course of the junior-level course, which has parallel assignments that allow for comparison. Data within the senior-level course and between the two courses are more difficult to compare because of the differences in what students are asked to do. However, we see students performing at a high level from the end of the junior-level course onwards, even when they are asked to do different types of tasks. Two sections of each course were offered this year; data provided are averages from both sections of a course. In the junior-level course, students had three assignments that all required them to compare and contrast public opinion with a sociolinguistic perspective, and in Table 1 we can see improvement in their rubric scores from the first assignment to the third for four of the five measures. The measure on which students did not show improvement, “draws reasonable conclusions,” was one on which they were already performing on a high level. The final paper departed from this structure and was a much more open-ended literature review assignment. In spite of the difference in assignment type, similar percentages of students scored at least "competent" on all measures as on the third assignment. The percentage of students with a “sophisticated” score increased from the third assignment on “identifies values and assumptions that underlie different perspectives” and “presents convincing arguments based on linguistic principles,” but stayed steady on “draws reasonable conclusions” and fell on “shows awareness of prejudicial aspects of the problem” and “presents ideas clearly and in a well-organized fashion.” The lower number of students scoring “sophisticated” on these two measures is not very surprising, given that the paper was much longer without instructor questions that might have been helpful in suggesting a structure and focusing on prejudicial aspects. However, the strong scores on this final paper overall do suggest that students were able to apply what they had learned on the previous assignments to a different and more complex task at the end. There are also a series of CTW assignments in the senior-level class, but as they each have very different foci (justification of proposed project, literature review, and analysis), it is not very meaningful to compare scores
CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

Although our recent hire of a lecturer who teaches CTW courses has been an enormous help, in the absence of additional changes we are likely to continue to have problems offering enough sections of our CTW courses while still keeping manageable course loads. Since we recently changed our senior-level course, and the new one was not previously a required course, not all students have needed the new course. This has allowed all those who need the senior-level course to be able to get in. However, the junior-level course was offered both terms this year and filled each time with additional students wanting in. Once all students need the new senior-level course, both courses will be filled to capacity, possibly creating bottlenecks for graduation. This is especially likely to be an issue if our major continues to grow, in which case we will need to offer multiple sections of each course per semester. We are interested in offering another senior-level “capstone” course which might be taught by a wider range of faculty, which could help lessen the stress on the current senior-level course, but the junior-level course will likely need to be offered more often in any case.

A related issue is that this year all CTW courses (two per semester) were taught by a single lecturer, who also had an additional course in addition to teaching CTW, which made up her fourth unit (the additional work involved in a CTW course should be taken into account when assigning workloads, as the courses involve intensive working with students on their writing, including grading of multiple drafts. Although discussion among CTW faculty in the department has suggested that we can partially address this problem internally, by giving feedback without always grading drafts, it would be helpful to have more faculty involved in teaching the CTW courses. To this end, and to help with the issue of sufficient course offerings noted above, we are likely to need an additional hire to teach CTW courses in the near future. A final issue that has been particularly apparent this past spring was the relatively high number of students who missed a large number (7 or more) class sessions. Many of these students do not finish the courses at all, including students who were doing well until they stopped showing up for class. While in some cases this behavior can be due to individual student issues and problems, there is often a situation in which a student is taking more classes than they can reasonably expect to finish, usually for financial reasons (they are working, sometimes full time, and/or they cannot afford to attend classes for more than a few more semesters and so try to take a too-heavy load each semester). This suggests a need for more student support, probably both in terms of finances and advisement. While I am unsure what we can do about students’ financial situation in this forum, I thought it nevertheless important to mention. Perhaps better advising of the students would at least help them to make decisions based on more accurate information about the courses they hope to take.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

The large amount of work with student writing is clearly helping students throughout both classes, as we can see in the improved rubric scores, and as has been noted by both instructor and students. Students frequently comment that they are being better communicators, better researchers, and more critical thinkers. Clearly, while students may complain about the workload, they do appreciate its effects! In addition, we now have two CTW courses required for the major that fit particularly well with Georgia State’s global education initiative, allowing students to learn about and develop skills, knowledge, and awareness of bias in both courses. The additional work involved in a CTW course should be taken into account when assigning workloads, as the courses involve intensive working with students on their writing, including grading of multiple drafts. Although discussion among CTW faculty in the department has suggested that we can partially address this problem internally, by giving feedback without always grading drafts, it would be helpful to have more faculty involved in teaching the CTW courses. To this end, and to help with the issue of sufficient course offerings noted above, we are likely to need an additional hire to teach CTW courses in the near future. A final issue that has been particularly apparent this past spring was the relatively high number of students who missed a large number (7 or more) class sessions. Many of these students do not finish the courses at all, including students who were doing well until they stopped showing up for class. While in some cases this behavior can be due to individual student issues and problems, there is often a situation in which a student is taking more classes than they can reasonably expect to finish, usually for financial reasons (they are working, sometimes full time, and/or they cannot afford to attend classes for more than a few more semesters and so try to take a too-heavy load each semester). This suggests a need for more student support, probably both in terms of finances and advisement. While I am unsure what we can do about students’ financial situation in this forum, I thought it nevertheless important to mention. Perhaps better advising of the students would at least help them to make decisions based on more accurate information about the courses they hope to take.

Georgia State University
Assessment Data by Section
2011-2012 CTW Art Education
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose

In conversations among the art education faculty since the initiation of CTW, we arrived at two operational definitions for critical thinking that are particularly relevant to students in our area. One centers upon the ability to critically analyze and interpret artworks, which is fundamental to teaching about art. The other promotes students’ capacities to think critically about pedagogy, relate educational theory to classroom practice, and become reflective practitioners. Students have opportunities to develop both aspects of critical thinking in our program. In AE 4200, the first course in the major, students conduct classroom observations and examine aspects of teaching such as: adapting curricula for students with special needs, managing space and materials, integrating technology and other subjects, utilizing diverse visual communication strategies, planning lesson content, and creating a productive learning environment. In their modules and final field experience reflection, students analyze, compare, and evaluate what they have observed and relate it both to course readings and to their own emerging teaching philosophies. They also critically analyze various popular resources available to art teachers in journal and digital formats in a second CTW assignment. In AE 4900, students engage in learning activities related to art history, art criticism, and aesthetics, and acquire familiarity with several different critical frameworks for discussing works from various eras and genres. They also explore strategies for engaging young learners in these disciplines. The CTW assignment in this course focuses upon analysis of artworks and visual culture toward the objective of developing relevant instructional plans.

As a national collaborator on the Arts Map for the Partnership for 21st Century Skills, and as a signatory to the Partnership for 21st Century Skills' National Action Agenda, NAEA recognizes the importance of having all students leave school prepared with the skills and knowledge to address the challenges that await them. To that end, we support the following PRINCIPLES:

• That the arts, including the visual arts, dance, music, and theatre, are recognized as core subjects in the framework of the Partnership for 21st Century Skills’ Framework for 21st Century Learning.

• That the visual arts provide opportunities for all students to build their skills and capacity in what the Partnership for 21st Century Skills calls “Learning and Innovation Skills,” specifically Creativity and Innovation; Critical Thinking and Problem Solving; and Communication and Collaboration.

• That the visual arts provide opportunities for all students to build their skills and capacity in what the Partnership for 21st Century Skills calls “Information, Media and Technology Skills,” specifically Information Literacy, Media Literacy, and ICT (Information, Communications, and Technology) Literacy.

Goals

G 1: Critical Reflection
Art Education majors are expected to become reflexive practitioners, demonstrated through personal evaluative and critical responses to course readings and activities and the ability to defend their responses.

G 2: Contextualize Information from Course Materials
Art Education majors should be able to demonstrate deep understanding of course materials and assignments and relate them to real teaching contexts through reflections, planning, and field work.

G 3: Application of Coursework
Art Education majors are expected to apply concepts and practices from course readings and activities to real-life classroom situations and demonstrate the ability to develop and defend their own ideas about appropriate strategies and content for teaching art.

Student Learning Outcomes/Objectives

SLO 1: Classroom Management (G: 1, 2, 3) (M: 1)
Art Education majors should demonstrate critical awareness of classroom management strategies, including effective communication as well as management of materials, behavior, and time. They should be able to analyze, compare, and critique strategies seen in field experiences, and develop and defend their own ideas about classroom management.

SLO 2: Art Criticism (G: 1, 2, 3) (M: 2)
Art Education majors should be able to 1) formulate pertinent questions and compose valid interpretations of works of art or art historical problems; 2) assess and synthesize interpretations of art and art historical claims made by others; 3) understand and evaluate the creative and cultural significance of art on both micro and macro levels. Art Education majors are expected to develop and defend interpretations of art works informed by analytical processes such as the Feldman method, and to incorporate art criticism and analysis of artworks into their lesson plans.

SLO 3: Resource Analysis (G: 1, 2) (M: 3)
Art Education majors are expected to demonstrate awareness of different sources of information about content and strategies for teaching art, and to demonstrate the ability to analyze and critique these sources (such as websites, journals, books) on the basis of how complete, appropriate, engaging, and relevant they are, to inform their decision-making in designing lesson plans based on available resources.

Measures, Targets, and Findings

M 1: Rubric for Field Experience Reflection (O: 1)
The associated Rubric provides descriptors of competent performance in addressing the CTW objectives of this assignment. I have streamlined the criteria and expanded upon the descriptors for different levels of performance based upon last year’s results. The lowest aggregated scores on the rubric were 77% for evaluation, and 84% for interpretation, indicating that these aspects need to be addressed more fully in our CTW assignments. See Action Plan for further details.

Target for O1: Classroom Management
For the Final field Experience review, we would like all students to earn 80% or better on all criteria in the rubric. The scores ranged from 84% to 98% on all items but one: the “Evaluation” criteria seemed to stymie students in this course as well, because they scored an average of 77% on this item. This will be addressed in our action plan.

Findings 2011-2012 - Target: Partially Met
Low score on the Evaluation criteria (77%) indicates additional emphasis is needed in this area.

M 2: Art Criticism assignment (O: 2)
On the various measures in the Art Criticism Rubric, students scored between 73% and 97% of expectations. The lowest areas of student competence were Analysis and Evaluation, which are addressed in our Action plan.

Target for O2: Art Criticism
Students must earn a B- or better for the course, and this assignment is an essential component. We would like for all students to achieve at least an 80% on all criteria listed for this assignment, but the average score on the “evaluation” criteria was only a 73.9%, which we will address in our action plan for next year.
### Findings 2011-2012 - Target: Partially Met

Target was mostly met, but the average score on the "evaluation" criteria was only a 73.9 %, which we will address in our action plan for next year.

### M 3: Resource Review (O: 3)

Students were asked to select an art educational resource from print or online source and answer questions through critical analysis. Graduate students in this course were given a more challenging version of this assignment.

Source of Evidence: Written assignment(s), usually scored by a rubric

<tr>
<th>Target for O3: Resource Analysis</th>
</tr>
</thead>
<tbody>
<tr>
<td>Of each objective stated in the rubric for this assignment, students scored between 80 - 98 %, meeting the goals earning a B- or better in all coursework. Evaluation proved once again to be the weakest criteria, with average score of 80%.</td>
</tr>
</tbody>
</table>

### Findings 2011-2012 - Target: Met

Target was met, but again, Evaluation proved to be most challenging aspect of critical thinking through writing assignment, so we will give this extra emphasis across the board.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Implement Rubrics and define definitions

Next fall we will be fully implementing rubrics for the CTW content in both courses, as well as refining our operational definitions of critical thinking in art education.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** High

#### Address weaknesses illustrated by scores

Data collection from all three CTW assignments in the Art Education undergraduate programs indicated that the weakest skill set among our students was in the ability to critically evaluate a resource, an artwork, or a field experience in terms of posing critical questions, suggesting improvements or opinions, and particularly, providing rationale or support for their ideas. We recognize the need to spend more time in class modeling this critical thinking skill, giving students more practice, and setting higher standards on assignments prior to the CTW assignment in order to have opportunities to give students more feedback about this skill and their efforts to achieve it.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High

- **Relationships (Measure | Outcome/Objective):**
  - Measure: Art Criticism assignment | Outcome/Objective: Art Criticism
  - Measure: Resource Review | Outcome/Objective: Resource Analysis
  - Measure: Rubric for Field Experience Reflection | Outcome/Objective: Classroom Management

- **Implementation Description:** In both CTW courses in Art Education, the instructors will spend more time going over the expectations of the assignments, explaining each criteria more fully, modelling how to meet the criteria of "Evaluation" and offering examples of successful student work as models.

- **Responsible Person/Group:** Dr. Melanie Davenport ( AE 4200 ) Dr. Melody Milbrandt ( AE 4900 )

- **Additional Resources:** examples of more successful assignments that address criteria of Evaluation well, to share with students.

#### Expand and enrich CTW assignments in Art Education

After piloting the Resource Review as a potential second CTW assignment for AE 4200, in Fall of 2010, I made the rubric more sophisticated and added it into the syllabus as a full-fledged CTW assignment prior to their Final Field Experience review, and I believe it helped raise the outcomes of the second assignment by giving students the opportunity to get feedback on their writing.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Finished
- **Priority:** High

- **Responsible Person/Group:** Dr. Melanie Davenport

### Analysis Questions and Analysis Answers

#### CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

During the past academic year, a second CTW assignment was added to AE 4200 syllabus, as planned, and the effect was positive. Students performed better on the existing CTW assignment from having another CTW experience prior, receiving feedback and the opportunity to revise. Collecting data about specific criteria on each CTW rubric was also very helpful in allowing us to identify areas of weakness to address in future.

#### CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

In AE 4200, the entry level course, having two CTW assignments has given student the opportunity to further develop their critical thinking skills and as the instructor, I definitely feel that the quality of student writing has improved. In the advanced course, AE 4900, there is currently only one CTW assignment, but we are discussing adding a second one to foster those skills further. Lesson planning continues to be uneven among advanced students, so we hope to develop a CTW assignment related to lesson planning for AE 4900 students.
CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

Communication among instructors remains problematic, just because of time and other obligations, but otherwise, the CTW initiative is working well. I think having a course release or a GA to assist with implementation and evaluation of CTW would be beneficial.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

Since last year, we have added an extra assignment in the entry level course, and are discussing ways to revise other existing assignments to focus more on CTW objectives. Student writing has improved overall, but lesson planning is still an area in need of improvement, and we feel that perhaps adding a CTW component to these assignments might be beneficial.

Georgia State University
Assessment Data by Section
2011-2012 CTW Art History

(Mission / Purpose)

It is the department's mission to provide Art History majors with the skills to be able to critically analyze and interpret artworks based on formal and historical knowledge, and to be able to convey that knowledge effectively through oral and written communication. Written assignments that require critical thinking in Art History may ask students to 1) formulate pertinent questions and compose valid interpretations of works of art or art historical problems; 2) assess and synthesize interpretations of art and art historical claims made by others; and 3) understand and evaluate the creative and cultural significance of art on both micro and macro levels. All of the above match the University's stated policy that CTW develops a student's ability "to identify, analyze, and evaluate arguments and truth claims; to discover and overcome personal prejudices; to formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about what to believe and what to do." In AH 3000, students are introduced to the historiography and methodologies commonly employed in the study of art and art history. They have an opportunity to apply this knowledge in a semester-long research paper on a topic of their choice. AH 4990 is designed as a summative course for students to reflect on their college careers and on the practices required of art historians in different job capacities. It students to submit a great deal of written documentation for assessment including an exhibition review assignment, interdisciplinary approach to teaching Art History assignment, conference paper abstract assignment, graduate study application statement of purpose assignment, and a revised research paper.

Goals

G 1: Inquiry
Students will be able to formulate pertinent questions about works of art or art historical problems.

G 2: Synthesis
Students will be able to synthesize interpretations of art and art historical claims made by others.

G 3: Evaluation
Students will be able to evaluate the creative and cultural significance of art and/or evaluate claims made by others about art.

G 4: Interpretation
Students will be able to compose valid interpretations of works of art or art historical problems.

G 5: Reflection
Students will be able to reflect on the validity of their own assumptions.

Student Learning Outcomes/Objectives

SLO 1: AH4990 interdisciplinary assignment (G: 1, 2, 3, 4, 5) (M: 1)
Students were asked to prepare a short lecture (with a written write-up) in which they presented on an art historical topic using material from another discipline to broaden comprehension of the social and historical context of the art. Examples could include a novel, a piece of music, a film, or a scientific discovery. Evidence of critical thinking was restricted to the written portion of this assignment.

SLO 2: AH3000 research paper (G: 1, 2, 3, 4, 5) (M: 2)
The primary document for assessing CTW in AH 3000 is a 10-page research paper on an art historical topic. In general, this project is designed to develop student's skills in conducting art historical research and in analyzing and applying different methodologies used by art historians in the study of art or art historical problems. However, the paper requires many elements of critical thinking to occur simultaneously in order for the assignment to be a success. Therefore, we have switched to a holistic rubric to measure overall evidence of critical thinking (G1 through G5) in the paper.

Measures, Targets, and Findings

M 1: AH 4990 interdisciplinary assignment (O: 1)

As with AH 3000, we have implemented a holistic rubric for use in this AH 4990 assignment.
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: AH4990 interdisciplinary assignment**
80% of students will score a 4 or better (out of 6) on the critical thinking component of the assignment. We feel that the percentage here should be higher than the 70% identified for AH 3000, as AH 4990 is a more advanced CTW class.

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target: Met</th>
</tr>
</thead>
<tbody>
<tr>
<td>83% of students (or 15 out 18 students) achieved a score of 4 or higher.</td>
</tr>
</tbody>
</table>

**M 2: AH 3000 research paper (O: 2)**

We developed a new holistic rubric, using a scale from 0 to 6 (insufficient to excellent) to measure the five goals for critical thinking in this assignment: · Provides a clear thesis (G1-5) · Identifies the salient issues/questions/debates (G1 inquiry) · Make effective use of supporting evidence (G2 synthesis) · Thoughtfully analyzes evidence (G3 evaluation)Posits valid interpretations and justifies assumptions (G 4& 5 interpretation and reflection)

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: AH3000 research paper**

Ideally we would like all students to meet or exceed the "acceptable" range (a score of 4 or better out of 6 on the rubric); however, a goal of 70% seems more realistic, and in line with other year-end assessment goals and outcomes for the major.

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target: Met</th>
</tr>
</thead>
<tbody>
<tr>
<td>This year saw an improvement, with almost 80% of the students in AH 3000 scoring a 4 or better on the research paper rubric, compared to 68% from last year. This is great news for us; we felt that this was a strong class overall.</td>
</tr>
</tbody>
</table>

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Course sequence**

One issue we continue to run up against is that many of our students end up taking the CTW courses simultaneously.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** Medium
- **Implementation Description:** We have decided to offer the courses in different semesters next year to address this problem. This is a short term solution, however. We need to determine how we can catch our majors earlier on in their academic career. Most do not seek proper advisement, nor do they read through the college catalogue.
- **Projected Completion Date:** 05/2011
- **Responsible Person/Group:** AH faculty

**AH 3000 assignment**

We plan to change the research paper assignment to allow students to choose from a broader range of paper topics. The focus on a canonical work of art proved too difficult for many of them, as they were a) unable to track down a sufficient amount of research that was accessible to them as undergraduates and/or b) make the subtler distinctions between different author's arguments about the same work of art.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Finished
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - **Measure:** AH 3000 research paper
  - **Outcome/Objective:** AH3000 research paper
- **Implementation Description:** Consult with AH faculty to rewrite research paper assignment for AH 3000.
- **Projected Completion Date:** 11/2011
- **Responsible Person/Group:** CTW ambassador (Susan Richmond) in consultation with AH faculty

**AH 4990 assignment**

AH faculty decided in spring to change the AH 4990 assignment used in the reporting of CTW. The original assignment (a personal reflection paper) didn't seem to meet as many of the CTW goals we have established for our majors. The new assignment (an interdisciplinary project) has several components to it, all of which add up to a more efficient demonstration of evidence of CTW in the major.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** In-Progress
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - **Measure:** AH 4990 interdisciplinary assignment
  - **Outcome/Objective:** AH4990 interdisciplinary assignment
- **Implementation Description:** We implemented a new assignment this past spring, and will continue to use it next year. I've listed this as in-progress because we would like to gauge its usefulness/success over several cycles. We would also like several faculty to have the opportunity to teach this particular assignment so that we can gather more feedback at that level. Right now, only 1 professor has assigned the new project.
- **Responsible Person/Group:** Susan Richmond and AH faculty

**Rubrics**

Although this was not a part of our action plan from last year, we gone ahead and revised the rubrics for both courses in response to the committee report that our rubrics measurements were unclear and/or insufficient. We believe that the holistic rubrics that we are now using provide the best measurement of CTW in our assignments.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Finished
Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
We met our targets this year. It's difficult to say if this achievement is related to the implementation of our action plans (streamlining the course sequence and changing the AH 3000 research assignment), so the reasons for the success can only be anecdotal. However, we feel that the plans that we've implemented and have in progress will allow us to continue to meet our targets.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
We feel that the students who completed the two courses did demonstrate better CTW skills overall, and will leave GSU with a good skill set. Again it's unclear if this is a result of a greater emphasis on CTW in the major, or whether this year's group of students entered with a higher level of critical thinking skills. Anecdotally, the presence of more students with higher skills seems to raise the overall level of CTW in the classes as a whole. This can be seen in the quality of student work and in the perception among the students that CTW is important and worthy of their time.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
We still encounter problems with students failing to take the CTW courses in a timely fashion. This is especially true with transfer students. One problem lies in the designation of our major. Art history is currently designated as a concentration (a B.A. in art with a concentration in art history). It appears on Gosolar only as a "B.A. art" and does not distinguish the art history concentration from the studio art concentration. We are working to change this designation and establish a actual major. Though this is a non-CTW issue, we hope that it will help us identify and advise our students earlier on in their coursework, and allow us to get them into CTW courses before their senior year. This is the only problem area for us at this time. However, we will continue to discuss the success of the designated assignments and rubrics, especially as more faculty come on board to teach the CTW courses.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
We implemented changes to assignments that we feel will better reflect CTW in AH 4990. We've also improved our rubrics to measure more effectively the CTW components of both course assignments. Last year's committee report recommended measuring separate CTW outcomes, however we feel that a holistic approach is more appropriate for the assignments on which we are reporting.

2011-2012 CTW Art Studio
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The Ernest G. Welch School of Art and Design defines critical thinking through writing as: "wide range of cognitive skills and intellectual dispositions needed to effectively identify, analyze, and evaluate arguments and truth claims; to discover and overcome personal prejudices; to formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about what to believe and what to do." (Bassham, Irwin, Nardone & Wallace, Critical Thinking: A Student's Introduction (McGraw-Hill, 2005, page 1.)

Goals
G 1: Technical Skills
Students will demonstrate competent technical and formal skills.

G 3: Professional Portfolio
Graduating BFA students will have professional quality portfolio that includes digital documentation of artwork, video documentation of artwork (if appropriate), current resume/cv, and artist statement.

G 2: Unified Body of Artwork
Students will complete the BFA program with a mature studio practice that includes a unified body of artwork.

G 4: Critical Writing Skills
Students completing the BFA program will have the critical writing skills necessary for a career in the fine arts.

Student Learning Outcomes/Objectives
SLO 2: Portfolio II: Textiles Assignment (G: 1) (M: 2)
Paste Assignment Description here.

SLO 3: ART 3910 Critical Issues in Contemp Art (M: 8)
SLO 4: ART 3910 Critical Issues in Contemp Art
Pam Longobardi/ Critical Thinking Through Writing ART 3910 Fall 2010 Writing Assignment #4: DUE Tues Sept 28 Belief Systems: Go to beliefnet.com and do theBelief-O-matic test: http://www.beliefnet.com/Entertainment/Quizzes/BeliefOMatic.aspx Based on your results, Write up a description of your own work as it represents some aspect of your belief system. Do you depict these beliefs narratively? Illustrationally? Metaphorically? Symbolically? Is it didactic? Or layered, allowing for discovery and persuasion? In Class: group together according to highest belief percentage (at least 90% or higher) -Find out what each of you have in common and present to class Next class- view film 'Religious'-Bill Maher and discuss

SLO 5: DP Portfolio II
Studio Project Proposal Your proposal must: * outline the concept for your project by discussing the ideas behind it. Where did your idea originate? What motivates you to explore this idea through this project? Is this idea connected to your past work and, if so, how are you pushing the idea further in this project? What kind of thoughts do you want to provoke with this project? What kind of questions do you want to pose? What kind of discussion do you hope to elicit? Why is it important for you to do this work? And why do it now? * provide an art historical context for your project. What kind of work has been done in the past on the subject of your project? How does your project relate to this historical work? If you don’t know, then do some research so you can address this intelligently. How does your project relate to contemporary art practice and the issues being addressed in contemporary art today? If you don’t know, again, do some research so you can be informed and can address this thoughtfully. Include some discussion of current artists or projects that will influence the development of your project. Whose work are you looking at? Whose work do you want to learn more about? What is it about their work that inspires you? * briefly detail any equipment, materials and technical processes you intend to utilize to produce the work. * provide a projected timeline over the course of a semester for the production of the project. * state a goal for the completion of the project in terms of final presentation, such as the number pieces, the potential scale of the work, installation considerations, presentation needs, etc.

SLO 6: 3DS 4945 & 4955, Ceramics Portfolio I & II (M: 6)
Assignment: ARTIST STATEMENT 15% of final grade An artist statement will be due at mid-term and at the final critique. It will be assessed according to the CTW rubric (see below). Your artist statement must use clear language with proper grammar, spelling and punctuation. It should convey the essential ideas of your work and how those ideas are embodied in the work. A good artist statement will provide insight into the work and further the viewers’ understanding of the artist’s connection to the work. There is a collection of sample artist statements in the Ceramic Department Office (aka, Mark’s office). You may be required to visit the writing center prior to turning in your artist statement.

SLO 7: GRD 3910 History of Graphic Design
Assignment description exactly as the students received it: Read Chapter 6 “Modernism” from Graphic Design as Communication by Malcolm Barnard and answer study questions in the worksheet as directed. Post three possible thesis statements for your paper by Tuesday, September 21. Your topic will be whether a piece of graphic design is, or isn’t, a modernist work. Write about design created 1900 or later which is not discussed by Barnard. It should be an example of graphic design (as opposed to fine art, architecture, etc.) If it is mass produced and communicates with text, it is probably graphic design. Examples of good thesis statements go beyond simple, obvious arguments: – Jan Tschichold’s flyer for Die Neue Typographie is an excellent example of modernism although it has justifies paragraph and capital letters. – Bruce Rogers’ page from The Centaur of 1913 shows that book design continued classical forms well into the twentieth century, despite the popularity of modernism in other areas of graphic design. – Bradbury Thompson’s Westvaco Inspirations used victorian-era engravings, but in a style consistent with modernism. Imagine another student asked you whether a design were modern or not, and you had the opportunity to share what you had just learned from Barnard: write a 1000-word essay describing why your piece is, or isn’t, a modernist work. Turn in a hard copy of your paper Tuesday October 21. Your example will probably conform to Barnard’s descriptions in some ways but not all ways – and this will form your most of your discussion. Remember that even Barnard does not have a simple, single formula that applies to all modernist work. You may need to research the designer or the client for your piece, in order to infer the creator’s intent. You don’t have to defend the piece you write about. Visual description (the lettering is blue, the figure is wearing a brown suit, etc.) is only necessary if it explains how the piece is, or isn’t, a modernist work. Guidelines Be sure that all quoted text and all images are attributed. Quotes must be in quotation marks and sources must be cited as footnotes or endnotes. Otherwise you may be committing plagiarism, a serious offense. Plagiarism will be reported to the university and can result in remarks on your permanent record and expulsion from GSU. Attribute all ideas and information not your own, including information from the internet. Provide full information about where the image came from. Format Turn in a color reproduction of the piece you write about with your paper. Papers should be typed, double-spaced, with footnotes or endnotes. Sheets should be numbered and stapled together. Grading Criteria: + thesis is clearly stated and selected design is appropriate for the paper, allowing you to make observations about when and why it was made and how it communicates. ~ Complexity: your defenses are in a way that takes into account the complexity of cultural and aesthetic issues. Modernism is not a simple checklist of criteria but evolved authentically in response to very complex forces. ~Research goes beyond merely stating general knowledge. Research may involve consulting other design critics besides Barnard or reading historical accounts of design. ~Writing craft. Graphic design gives form to the written word, and you will be expected to honor the conventions of writing. Get a trusted peer to proofread your paper before you turn it in. Run spellcheck. Edit. ~Synthesis: conclusions leave the reader feeling that you have said something interesting and important. Spend time working out your conclusions and make sure they are clear and well supported. Grading rubric used to assess the assignment, as it appeared on syllabus: Projects are scored using a rubric, with 17 - 20 points = A; 13 - 16 points = B; 8 - 12 points = C; 5 - 7 points = D, 0 - 4 points = F. Criteria for evaluation are thesis, complexity, research, writing craft, and synthesis.

SLO 8: ART 4950 / Portfolio II (3D) (M: 7)
Assignment Description: Write an artist statement that summarizes the work, ideas, and interests you have discovered so far in your art- making process this year. Usually an artist’s most recent work is most important to the artist, but your statement should reflect upon the many experiences you’ve had in general, so you may refer to your strongest works from previous semesters as well. Your

2011-2012 CTW Biology
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
Critical thinking is the human mental process of developing conclusions that proceed logically from the study of evidence. Specifically in the biological sciences, critical thinkers analyze the quality and relevance of experimental results to determine whether they meet the goals of scientific studies on life processes. Critical thinkers in biology also use conclusions drawn from empirical evidence to formulate new scientific questions and ultimately, they design and implement new experiments to answer such questions. Thus, biologists with critical thinking skills apply various forms of the scientific method appropriately. To enable students to communicate their analysis of original data in written form. Writing about scientific analysis forces students to organize their thoughts into a logical argument.

Goals

G 1: Improve writing skills
Students will become better writers by organizing complex biological concepts into written form

G 2: Improve reading skills
Students will become better critical readers as a result of improving their writing skills

Student Learning Outcomes/Objectives
SLO 1: Lab Report (M: 1, 2)

Students will organize a written report communicating their experimental findings. The reports parallel the structure that is conventionally used in professional journals.

Measures, Targets, and Findings

M 1: Written lab report rubric (O: 1)

The following rubric will be used to grade reports. For every concept that is not included in the report, 0.1-0.5 points will be deducted (for a 10 point report).

I. Introduction (2 points)
   a. _____Includes background
   b. _____Citations were appropriate
   c. _____Is not a summary of methods
   d. _____Does not read like a protocol introduction
   e. _____Moves from a broad to specific
   f. _____Includes a hypothesis
   g. _____Does not read like a protocol intro

II. Methods (2 points)
   a. _____Passive past tense
   b. _____Appropriate detail
   c. _____Only mentions own experiments
   d. _____Does not read like a protocol or recipe
   e. _____No numbered lists
   f. _____Organized into sections

III. Results (2 points)
   a. _____Should include text which highlight important trends/observations and are NOT a part of the captions or legends!
   b. _____Figures/Tables are cited (i.e. Table 1)
   c. _____Considers all data sets
   d. _____No interpretations or conclusions

IV. Discussion (2 points)
   a. _____Uses data to draw conclusions
   b. _____Each analysis states expected results
   c. _____Includes work cited at the end with appropriate literature
   d. _____All interpretations are merged into a set of overall conclusions
   e. _____Scientific premise to all conclusions

V. Figures/Tables
   a. ____Appropriate labeling (axes, descriptive titles, column headings, gel lanes)
   b. ____Should include original captions (communicates methodology used to generate data. Concise, not as detailed as methods)
   c. ____Size should be big enough to read, but not awkwardly large
   d. ____Should function to simplify interpretation of data
   e. ____Contains number, title and caption
   f. ____Shows only relevant data that is discussed in discussion

VI. General
   a. _____Grammatical issues

Source of Evidence: Written assignment(s), usually scored by a rubric

M 2: Scientific Report (O: 1)

Students were asked to organize a report communicating their experiments. The structure paralleled that of professional manuscripts.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Lab Report

85% of the class improved by 15% points over the course of the semester

Findings 2011-2012 - Target: Met

90% of the class improved by 10% over the course of the semester.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Standardize Rubric for all CTW faculty according to feedback
All of the CTW instructors for Cell & Mol biology are due to meet in August to discuss restructuring the rubric for the reports so that the students are more closely aligned to the course objectives (with less emphasis on grammatical corrections).

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
   Measure: Scientific Report | Outcome/Objective: Lab Report

Projected Completion Date: 09/2011
Responsible Person/Group: Frank Cruz

Mandated CTW faculty help
To help nurture a communicative relationship between CTW faculty and students, 2% of the course grade will be dependent upon meeting with the CTW instructor to help with improvements on reports.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
   Measure: Scientific Report | Outcome/Objective: Lab Report

Mandatory student meetings
Students are going to be required to see their CTW faculty instructor at least once during the semester to receive counsel on their report.

Established in Cycle: 2011-2012
Implementation Status: In-Progress
Priority: High

Implementation Description: To prevent students from slipping through CTW courses without establishing a working relationship with their CTW instructor, 2% of their grade will be contingent upon their attendance during office hours to receive help on their report.

Projected Completion Date: 08/2012
Responsible Person/Group: 3810 CTW faculty
Additional Resources: None

Analysis Questions and Analysis Answers
CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

Requiring all sections to follow a rubric that was constructed by CTW faculty helped to standardize the various sections. This ensured that all students were assessed similarly and were demanded the same learning objectives.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

We have not systematically compared the exit classes to the entry classes.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

Having different faculty members with different philosophies has made standardizing the quality of the CTW component of the labs challenging. Since I am only a peer faculty member confronting individuals about this has been difficult and awkward.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

No big changes have been made besides adding sections of CTW courses. The impact on the students seems obvious from the improvements made during the semester. Not only are they better at analyzing data, they are better at organizing thoughts and ideas in general.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process have your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Assessing the students is something that we are still trying to perfect. Our department has just formed an assessment committee this summer to address issues like this.

ACADEMIC PROGRAM QUESTION 2:  What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

As mentioned above, assessment of our curricula is under construction and we have formed a committee to help direct assessment in our department.

ADMINISTRATIVE DEPT QUESTION 1:  Explain how your department used the results from the previous cycle's (2010-2011) assessment. What actions did you take this past year based on the results from the previous cycle? What changes did you make as a result?

My department has not changed the curricula in response to the data, although we are brainstorming ways to use the data to improve our curricula.

ADMINISTRATIVE DEPT QUESTION 2:  What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department's effectiveness?

The assessment this year let me know that most sections assess reports comparably and that students from different sections are still learning the same skills about writing and scientific analysis.

ADMINISTRATIVE DEPARTMENT QUESTION 3:  How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

I anticipate that the assessment committee will find ways to make obtaining data easier. In addition to obtaining more data, we will discuss how to use the data to inform us about the status of the curricula as it relates to our program objectives. This year we used our findings to restructure the rubric once it was used last fall. The Spring rubric seemed to work better and no changes to the rubric are anticipated.
You must make reference to the outside text (video or article) and explain its point.

**Goals**

**G 3: Analysis**

Students in BIS courses will analyze theories, concepts, facts or other information from the perspective of multiple disciplines. Students completing the CTW courses in theatre will be able to: Analyze and evaluate literary, historical and theoretical source materials in terms of the reliability of evidence and assumptions of the authors. Synthesize materials from a variety of disciplines to determine their relevance to theatrical theory, history and practice. Formulate research questions related to the production, history and theory. Develop a personal aesthetic with which to approach their work as theatre artists. Apply critical thinking skills in reporting research findings in oral and written form.

**G 4: Application and Evaluation**

Students in BIS courses will apply the ideas presented in their courses to new contexts in two ways: (a) by experiencing and judging how applicable and/or relevant the concepts, theories, and data from one discipline are in or for another discipline (i.e., seeing the compatibility, or lack thereof, of concepts across such fields as history, cultural anthropology, sociology, cultural geography, environmental studies, political science and law); (b) by observing or testing the "fit" between the explanations, accounts, theories, and information gained in their classes and reading assignments and what they experience in their lives or in the research projects they engage in as part of their class.

**Student Learning Outcomes/Objectives**

**SLO 1: THEA 4070 Research Paper (M: 1, 11)**

Students will demonstrate effective communication through a paper based on their research into a specific literary or historical topic. The paper will be organized around a clear thesis statement or question, support this statement or address this question in a logical manner and with an appropriate level of detail and draw logical conclusions based on the synthesis of materials from a variety of sources and disciplines. Students will demonstrate organizational skills of presentation without distracting grammatical errors or lapses in academic language or citation mechanics.

**SLO 7: THEA 3100 Research Paper (G: 3) (M: 7, 12)**

Students will demonstrate their abilities to analyze and evaluate critical source materials by creating a concise summary of the interpretations underlying two different academic articles analyzing a specific play and then synthesize their research to create a comparison of those two interpretations. Students will demonstrate organizational skills of presentation without distracting grammatical errors or lapses in academic language or citation mechanics. Students first submit a list of the two journal articles to be used in the paper, then submit a draft for instructor review before turning in the final paper.

**SLO 8: Entry Paper for BIS Program (G: 3, 4) (M: 9)**

Students applying for acceptance to the BIS program are required to submit a writing sample in the form of a piece of expository writing submitted for a class previously taken at the college level. Papers will be reviewed by a subcommittee of the BIS Council using rubrics developed by the Council in consultation with Jennifer Lawrence. We will begin collecting papers in Fall 2012, with the first evaluations to be completed in Summer 2013.

**SLO 9: Exit Paper for BIS Program (G: 3, 4) (M: 10)**

Students applying to graduate with the BIS degree are required to submit a writing sample in the form of a piece of expository writing submitted for one of their CTW classes. Papers will be reviewed by a subcommittee of the BIS Council using rubrics developed by the Council in consultation with Jennifer Lawrence. We will begin collecting papers in Fall 2012, with the first evaluations to be completed in Summer 2013.

**Other Outcomes/Objectives**

**O/O 3: Museum Exhibit Critique (M: 5)**

In Geog 4768-Hist 4320-Soci 4279 (Metropolitan Atlanta) students demonstrate ability to analyze, apply, and evaluate in museum exhibit critique assignments: Go to Atlanta History Center and view the "Metropolitan Frontiers" exhibit. Then write a 4-5 page paper in which you discuss and critique the content, design, and effectiveness of this exhibit, being sure to view it in light of class discussions and the book "Atlanta: An Illustrated History."

**O/O 4: Demographic Assignment**

Students in Metropolitan Atlanta class demonstrate ability to analyze data by completing a demographic assignment. The assignment requires them to obtain population, social, and economic data on Atlanta and several other metropolitan areas, and/or several counties in metropolitan Atlanta to compare/contrast them, to see how they compare to data from 20 or 30 years ago, and to draw conclusions about these changes and contrasts.

**O/O 5: Analytical Reaction Essay (M: 4)**

In Speech 3250, BIS students demonstrate analysis by completing an analytical reaction essay. Analytical Essay assignment description: Write an essay in which you demonstrate what you have learned from the textbook and apply those things elsewhere. You must make reference to the outside text (video or article) and explain its point. You must incorporate an issue or concept from
the course (i.e., show how is it related to Persuasion). You must show how it connects to other things (examples from your world, something you’ve seen, studied, etc.). Questions to ask yourself: a. What is the author trying to say? b. What is the main idea? c. Why do you think that the article or video was assigned? d. What is the connection to the course? e. What other connections can I make? f. Do I agree or disagree with the argument? g. Is this generalizable? A strong paper will include solid analysis, will go beyond simple summary to demonstrate learning, and express a real ownership of the ideas.

O/O 6: Oral Presentation
In Political Science 3800, students demonstrated application in a paper and oral presentations. Assignment description: Students will demonstrate effective communication through a paper and oral presentation of conclusions of research by providing clearly stated conclusions with examination of implications or consequences of conclusions. Students will also integrate other perspectives thoughtfully and respectfully.

Measures, Targets, and Findings

M 1: THEA 4070 Research Paper (O: 1)
Students complete a research paper of 10-12 pages, proving a thesis focused down from a broad research topic in theatre. The assignment requires four different submissions: 1) A one-page report (20 points) that including focused topic and proposed thesis statement, stating what the student will look for (evidence) to support his or her claim. 2) An annotated bibliography, in MLA style, with 15 sources. No more than 5 of these sources may be available exclusively as electronic media. 3) A complete first draft with a works cited page. 4) The final draft of the paper.
Source of Evidence: Writing exam to assure certain proficiency level

M 3: Rubric
History Rubric
Source of Evidence: Written assignment(s), usually scored by a rubric

M 4: CTW for BIS students: Speech 3250 (O: 5)
BIS students’ progress in this CTW class was assessed through their written analytical essays and application of the evaluation rubric shown here: Speech's Definition of Critical Thinking In Speech, “critical thinking” is the art of actively producing and analyzing arguments for particular audiences in specific cultural and historical contexts. Critical thinkers are able to construct and assess arguments in their cultural situatedness; evaluate stated or unstated claims and their supporting forms; recognize the creation of knowledge through symbol systems; and converse and pose questions about the production of knowledge through the communicative process. Rubric to Use for CTW Assessment: Not at All Extremely Recognizes the cultural context 1 2 3 4 5 Arguments clearly constructed 1 2 3 4 5 Arguments adapted to that cultural context 1 2 3 4 5 Evaluates data/supporting materials effectively 1 2 3 4 5 Evaluates claims/conclusions effectively 1 2 3 4 5
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O5: Analytical Reaction Essay
The expected achievement target for BIS students is that at least 80% of the students in a CTW class will obtain a grade in the two highest evaluation levels used in the course’s last CTW written (and/or oral, in some cases) project. Given the way many CTW rubrics are designed, this means, quite often, scoring a 4 or 5 on the evaluation rubric used for a particular project or assignment. The rubric used in Speech 3250's analytical reaction essay is shown here:

M 5: CTW for BIS Students: Geog4768/His4320/Soci4279 (O: 3)
Students in this course were evaluated in CTW via several written assignments (e.g., museum exhibit critique, essay exams, demographic project, and term paper). A rubric used in CTW evaluation is shown below. CRITICAL THINKING THROUGH LEARNING Outcomes Assessment Form Metropolitan Atlanta (Geog 4768, Hist 4320, Soci 4279) Undergraduates COURSE NAME: ___________________________ Faculty Name: ___________________________
COURSE # ___________________________

HOW MANY STUDENTS IN THIS COURSE FIT INTO EACH CATEGORY? Poor Good Very Good Excellent
The demonstration of their understanding of course research reports/articles/books/theories was: Their analyses, interpretations, or syntheses of these research reports/articles/books/theories was: Their ability to articulate coherent and logical arguments on course material was: Their ability to use results of their analyses to formulate new research questions and/or to extend analyses in new directions was:
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: Museum Exhibit Critique
The expected achievement target for BIS students is that at least 80% of the students in a CTW class will obtain a grade in the two highest evaluation levels used in the course’s last CTW written (and/or oral, in some cases) project. Given the way many CTW rubrics are designed, this means, quite often, scoring a 4 or 5 (or a “very good” or “excellent”) on the evaluation rubric used for a particular project or assignment.

M 6: CTW for BIS students in Hist 3000 & PolS 3800
BIS students in these courses were few in number and were evaluated for CTW along with all non-BIS students (the vast majority) via written assignments. For a description of these assignments and the rubrics or other measures used to assess student progress please refer to the CTW reports prepared by the CTW Ambassadors from the departments that offer these courses.
Source of Evidence: Written assignment(s), usually scored by a rubric

M 7: THEA 3100 Research Paper (O: 7)
Students will choose a play from the list supplied and write a five page research paper comparing two interpretations of the play found in academic articles located in journals in the GSU Library or through an on-line journal search using Galileo. These are not to be reviewed, but rather critical analyses of the works as theatrical art. The list of plays on which you may write is: David Henry Hwang--Golden Child Tony Kushner--Angels in America: Part One--Millennium Approaches Eduardo Machado--Broken Eggs Paula Vogel--
How I Learned to Drive Oscar Wilde--The Importance of Being Earnest Tennessee Williams--The Glass Menagerie August Wilson--Fences

Source of Evidence: Written assignment(s), usually scored by a rubric

**M 9: BIS Entry Paper (O: 8)**

Students applying for acceptance to the BIS program are required to submit a writing sample in the form of a piece of expository writing submitted for a class previously taken at the college level. Papers will be reviewed by a subcommittee of the BIS Council using rubrics developed by the Council in consultation with Jennifer Lawrence. We will begin collecting papers in Fall 2012, with the first evaluations to be completed in Summer 2013.

Source of Evidence: Writing exam to assure certain proficiency level

**M 10: Exit Paper for BIS (O: 9)**

Students applying to graduate with the BIS degree are required to submit a writing sample in the form of a piece of expository writing submitted for one of their CTW classes. Papers will be reviewed by a subcommittee of the BIS Council using rubrics developed by the Council in consultation with Jennifer Lawrence. We will begin collecting papers in Fall 2012, with the first evaluations to be completed in Summer 2013.

Source of Evidence: Writing exam to assure certain proficiency level

**M 11: Findings for THEA 4070 2012 (O: 1)**

We would consider four of the eight rubrics the most relevant to critical thinking through writing: Argumentation/Critical Thinking, Development, Knowledge and Structure. Of those Knowledge was consistently the strong point in the research papers, with an average of 4.18 for the draft and 4.73 for the final draft. Development and Argumentation/Critical Thinking did almost equally well, with students averaging 4.12 on the draft of the former, 3.94 on the draft of the latter and 4.27 for both on the final paper. Structure came in the lowest, with a 4.18 average on the draft and 3.86 on the final version (this reflects five students who did not submit drafts and one whose draft was much shorter than the required submission of 2/3 of the paper). On the positive side, nine students scored a perfect 5 on this rubric, as compared to only 1 in 2010-2011. In the four key areas, the overall average for this assignment is 4.25 for the draft and 4.28 for the final submission, with 9 students scoring an average of 5, 6 scoring 4 to 4.75, 6 in the 3-3.75 range and 1 scoring less than 3. The target set after last years report was an average of 4.1 in the four key rubrics, 4 in Argumentation/Critical Thinking, 4.2 in Development, 4.75 in Knowledge and 3.5 in Structure. The only area in which this was not exceeded was Knowledge.

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O1: THEA 4070 Research Paper**

The target set after last years report was an average of 4.1 in the four key rubrics, 4 in Argumentation/Critical Thinking, 4.2 in Development, 4.75 in Knowledge and 3.5 in Structure.

**M 12: Findings for THEA 3100 2012 (O: 7)**

We would consider four of the eight rubrics the most relevant to critical thinking through writing: Argumentation/Critical Thinking, Development, Knowledge and Structure. Of those Knowledge was consistently the strong point in the research papers, with an average of 5 for both the draft and the final paper. Development came in second with 4.5 on the draft and 4.68 on the final. Argumentation/Critical Thinking came in third, with students averaging 4.19 on the draft of the former, 3.94 on the draft and 4.46 on the final paper. Structure came in the lowest, with a 4.38 average on the draft and 4.27 on the final version (this reflects six students who did not submit drafts and four whose revisions of the draft resulted in a weaker paper). On the positive side, 15 students scored a perfect 5 on this rubric, in the four key areas, the overall average for this assignment is 4.52 for the draft and 4.6 for the final submission, with 9 students scoring an average of 5, 12 scoring 4 to 4.75, 1 in the 3-3.75 range and none scoring less than 3.5. The target set after last years report was an average of 4.75 in the four key rubrics, 4.5 in Argumentation/Critical Thinking, 5 in Development, 5 in Knowledge and 4.75 in Structure. The only area in which this was met was knowledge, suggesting a need to work more exercises in critical thinking into the classroom work.

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O7: THEA 3100 Research Paper**

The target set after last years report was an average of 4.75 in the four key rubrics, 4.5 in Argumentation/Critical Thinking, 5 in Development, 5 in Knowledge and 4.75 in Structure.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Add Metropolitan Atlanta course**

We will work to add the Metropolitan Atlanta course to the list of BIS available courses. This class has been piloted as BIS for the last year, and we will add it officially starting in the fall.

Established in Cycle: 2009-2010
Implementation Status: In Progress
Priority: High

**Action Plan for BIS Major**

Since the BIS consists of a wide variety of programs, including 10 university-planned BIS programs in addition to numerous student-planned programs, and only one of these programs, theatre, offers its own CTW classes, we have had to develop a CTW tracking plan that meets the unique nature of the degree program. The first stage of this was the creation of rubrics specific to the BIS program but general enough to accommodate everything from environmental science to classics. To measure student work against these rubrics, starting in Fall 2012 we will require all students applying for entry into the BIS program to submit a sample of expository writing at the college level. At the same time, students applying to graduate will be required to submit a paper from one of their CTW classes. This will be assessed, using the BIS rubrics, by a subcommittee of the BIS Council, with the first findings available in Fall 2013.

Established in Cycle: 2011-2012
Implementation Status: Planned
Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
The major CTW accomplishment for the theatre program in 2011-12 was the training of a second full-time faculty member to teach CTW courses. This lecturer will take over THEA 4070 in Fall 2012, offering a new perspective on critical thinking in that part of the field. This is a partial fulfillment of Acting Plan Item 2, calling for the training of all full-time faculty in theatre to teach CTW courses. For the BIS program as a whole, we have set up an action plan for CTW assessment. We have created rubrics for BIS students, with two rubrics specifically addressing the interdisciplinarity of student writing. We have also created a mechanism for assessing student work in the 10 university created and various student created programs falling under the BIS umbrella.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
In THEA 3100, the average for the four key CTW rubrics, Argumentation/Critical Thinking, Development, Knowledge and Structure, rose from 4.52 on draft of the final paper to 4.6 on the final submission. This represents a growth of .08 on all papers and .15 on those for which drafts were submitted. Given the high average on the drafts, this is acceptable growth. In THEA 4070, the CTW average on the draft was 4.25, which rose to 4.28 on the final paper. This represents an improvement of .03 on all papers and .23 on papers for which drafts were submitted. This could be improved, although it should be noted that this is a much more complex paper than the one assigned in THEA 3100.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
In the theatre program, the greatest need remains for training of all faculty in CTW procedures. We have helped this to a significant extent by training another full-time faculty member to do CTW courses, but we have not been able to schedule training for the entire faculty. His taking over one of our CTW courses will provide much needed back up (should the current CTW ambassador leave for any reason, we would have nobody capable of overseeing the program in theatre or filing reports) and new perspectives on how to incorporate CTW within THEA 4070 without losing course content. The BIS program as a whole simply needs time and student cooperation. Assembling the papers we require for assessment will be the biggest challenge in the upcoming year, given the need to balance the requirement for receiving papers from students applying to enter the program and to graduate and the need to maintain numbers in enrollment and graduation.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?
The primary change in theatre has been the creation of grades for drafts in the final assignments for both THEA 3100 and THEA 4070, thereby encouraging more students to hand in drafts so they can learn more about critical thinking in writing through the direct experience of revising papers to meet the demands of critical thinking. The BIS program as a whole has had the biggest change with the adoption of CTW rubrics focusing on interdisciplinarity and a mechanism for assessing student work between entering the program and graduation.

Georgia State University
Assessment Data by Section
2011-2012 CTW Business Analysis
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The purpose of the CTW component of Business Analysis is to help students develop the "wide range of cognitive skills and intellectual dispositions needed to effectively identify, analyze, and evaluate arguments and truth claims; to discover and overcome ill-founded presuppositions["personal prejudices" in the original]; to formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about what to believe and what to do." (Bassham, Irwin, Nardone & Wallace, Critical Thinking: A Student's Introduction (McGraw-Hill, 2005) page 1.) "Personal prejudices" in the original document has been changed to "ill-founded presuppositions" since I doubt many of the students have "personal prejudices" in the usual sense of the phrase about the subject matter of this course, but there will be times that initial guesses about things may need to be discarded as students delve deeper.

Goals
G 1: Critical Thinking Skills and Processes
Students graduating with a major in Managerial Sciences in the Business Analysis concentration will be able to apply critical thing skills and processes with addressing problems in the field.

G 2: Effective Writing Skills
Students graduating with a major in Managerial Sciences and a concentration in Business Analysis will be able to apply critical thinking skills and processes with addressing problems in the field.

Student Learning Outcomes/Objectives
SLO 1: Problem Identification (G: 1) (M: 1)
Students will be able to identify correctly the nature of a problem that an organization is facing that is amenable to a business analysis recommendation. 
Relevant Associations:

**SLO 2: Choice of Analytical "Tools" (G: 1) (M: 1)**
Students will be able to identify the proper, established business analysis tools and skills for addressing the identified problem. 
Relevant Associations:

**SLO 3: Application for Analysis (G: 1) (M: 1)**
Students will be able to apply the proper, established business analysis tools and skills to the identified problem. 
Relevant Associations:

**SLO 4: Drawing Conclusions from Analysis (G: 1) (M: 1)**
Students will be able to draw a conclusion from among the identified viable alternatives that best addresses the identified problem. 
Relevant Associations:

**SLO 5: Written Process Communication (G: 2) (M: 1)**
Students will be able to communicate, in writing, the process of critical thinking that they used in arriving at the recommendation made for the identified problem. 
Relevant Associations:

**SLO 6: Written Communication of Conclusions (G: 2) (M: 1)**
Students will be able to communicate, in writing, the basis for their conclusion relative to the other alternatives reasonable presented for the identified problem. 
Relevant Associations:

**Measures, Targets, and Findings**

**M 1: Problem Solving Memos (O: 1, 2, 3, 4, 5, 6)**
In this course students will be asked to write effective business memoranda addressing a problem that requires the systematic application of the tools of analysis developed in this course. Students will do an initial analysis early in the semester. Following a review on both the merits and the effective communication of the student's critical thinking and writing skills in the memorandum, the student will be asked to re-write the memorandum addressing the issues raised. The second memorandum will then be resubmitted and again, in addition to being graded on the merit of the assignment, the student will be required to attend a feedback session with an CTW ambassador or writing consultant on how to further improve the paper. The syllabus in which these assignments are set out, the actual assignments used, and the rubric used in assessing the assignments are set out in the Document Repository.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Problem Identification**
Students will achieve a class average that exceeds a 3.0/4.0 on the second criterion in the rubric for problem. With respect to the distribution of scores, there will be no more than 5% of student that will be below 2.0 and no more than 30% of students will be below 3.0 on this measure.

**Target for O2: Choice of Analytical "Tools"**
Students will achieve a class average that exceeds a 3.0/4.0 on the third criterion in the rubric for problem. With respect to the distribution of scores, there will be no more than 5% of student that will be below 2.0 and no more than 30% of students will be below 3.0 on this measure.

**Target for O3: Application for Analysis**
Students will achieve a class average that exceeds a 3.0/4.0 on the fourth criterion in the rubric for problem. With respect to the distribution of scores, there will be no more than 5% of student that will be below 2.0 and no more than 30% of students will be below 3.0 on this measure.

**Target for O4: Drawing Conclusions from Analysis**
Students will achieve a class average that exceeds a 3.0/4.0 on the fifth criterion in the rubric for problem. With respect to the distribution of scores, there will be no more than 5% of student that will be below 2.0 and no more than 30% of students will be below 3.0 on this measure.

**Target for O5: Written Process Communication**
Students will achieve a class average that exceeds a 3.0/4.0 on the first criterion in the rubric for problem. With respect to the distribution of scores, there will be no more than 5% of student that will be below 2.0 and no more than 30% of students will be below 3.0 on this measure.

**Target for O6: Written Communication of Conclusions**
Students will achieve a class average that exceeds a 3.0/4.0 on the fifth criterion in the rubric for problem. With respect to the
distribution of scores, there will be no more than 5% of student that will be below 2.0 and no more than 30% of students will be below 3.0 on this measure.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Assignment Revision
The assignments in the CTW exercises rely heavily on the student's use of software programs that run on the Excel spreadsheet. While Excel is an important tool in business analysis, there is very little in terms of choices that the students have to make, explain and defend in the problem solving process. This hurts both the assessment of the depth of the student's critical thinking skill and the degree to which their writing is challenged. Revisiting this assignment so that these skills are more student-dependent and less software-dependent will help enrich the assessment of both CT and W skill sets.

- Established in Cycle: 2010-2011
- Implementation Status: Planned
- Priority: High
- Relationships (Measure | Outcome/Objective):
  - Measure: Problem Solving Memos | Outcome/Objective: Choice of Analytical "Tools"
  - Measure: Written Communication of Conclusions
- Implementation Description: Re-wording of the CTW assignments
- Projected Completion Date: 12/2011
- Responsible Person/Group: Jim Shi and Bill Bogner
- Additional Resources: None
- Budget Amount Requested: $0.00 (no request)

Review and Improvement of New CTW Processes in BA
In the 2010-1011 cycle new assignments, and a revised rubric were put in place for this course. At the end of the year these will be reviewed for how effectively they are linking the skills of a successful Business Analysis student with the skills of Critical Thinking and Writing. This review is in addition to the analysis of findings on individual learning outcomes. It is a meta-level analysis of the CTW approach in the BA concentration more oriented toward the goals set out for BA student.

- Established in Cycle: 2010-2011
- Implementation Status: In-Progress
- Priority: High
- Implementation Description: Review meetings will be held in the early fall to discuss the effectiveness of the overall program in helping students on the two dimensions of CTW. These will be different than a review of the specific learning outcomes set out in the assessment plan.
- Responsible Person/Group: William Bogner, Jim Shi, members of the BA faculty.
- Budget Amount Requested: $0.00 (no request)

Rubric Update and Alignment
In the process of recasting the Goals and Objectives the Rubric needed to align findings with the new objectives did not translate well. Other items fit but are poorly stated. This revision will be put in place for the 2011-2012 cycle.

- Established in Cycle: 2010-2011
- Implementation Status: Planned
- Priority: High
- Relationships (Measure | Outcome/Objective):
  - Measure: Problem Solving Memos | Outcome/Objective: Written Process Communication
- Implementation Description: Revise rubric.
- Responsible Person/Group: Jim Shi and Bill Bogner
- Additional Resources: None
- Budget Amount Requested: $0.00 (no request)
Critical thinking skills center on applying, analyzing, synthesizing, and evaluating information and methods. Students need thorough practical training in research techniques. These must include not only mastery of instrumentation and the calibration of same, but the design of the relevant control experiments. Overall, they need to gain mastery with the techniques that chemists use to measure data, and the conventions that chemists use to express data. Students must learn to evaluate their data, looking in detail for statistical significance. Students not only have to know facts, they should also be able to design experiments to ascertain if these facts are true. It is vital that the skills learned in one situation be transferable to related situations. One of the key aspects of teaching critical thinking is developing the higher order cognitive skills of decision making and problem solving. It is vital to create an atmosphere where students grow in their ability to reason.

Upon Graduation students will be able to take and analyze real world data to develop a knowledge base and the ability to draw conclusions from this knowledge base. Thought processes should be rational, logical and consequential. Conclusions should grow directly from the data and accepted fundamental chemical principles. In addition, students should not only arrive at conclusions, but be aware that they are expected to defend these conclusions. It is also important to realize that data may be interpreted in more than one way, and that science moves forward as these difference data interpretations clash with one another, and are then resolved. Students must therefore learn to deal with open ended questions, deciding which data and variables are important, and which can safely be ignored in creating a picture of the system under study. The ability to think critically about scientific content and processes is key to these students’ futures. Critical thinking over time should become an internal skill, transferable to the rest of the student’s life and career.

### Goals

**G 1: Students who pass the introductory course (C or better) should score adequate on critical thinking skills by semester end**
Using the established rubric for critical thinking. Students who progress to the next course in the analytical sequence should receive a score of adequate on all sections of report 3 by the final rewrite. On papers one and two students should demonstrate an emergence of critical thinking skills as they rewrite and resubmit papers.

**G 2: Capstone Course**
Using the established rubric for critical thinking. Students who finish the capstone course a score of adequate on all sections of report 3 by the final rewrite.

### Student Learning Outcomes/Objectives

**SLO 5: Appropriate Discussion/Conclusion (M: 1, 2)**
The paper contains a Discussion/Conclusion section which demonstrates the connection between the laboratory experiment and the theory. Based on Rubric Below. Discussion/Conclusions. Excellent: In depth analysis of data including any error analysis which cumulates in the answer to the question or problem stated in the introduction. Adequate: Error analysis not complete, minor questions about interpretation of data, improper, but minor problems applying theory. Not yet adequate: No error analysis or many errors in interpretation of data or theory. Poor: No understanding of theory, major errors in data interpretation.

### Other Outcomes/Objectives

**O/O 1: Appropriate Title that represents actual work done in lab (G: 1) (M: 1, 2)**
Students must demonstrate the ability to think critically by choosing a title which reflects the actual experiment performed in lab based on the following from the rubric. Title. Excellent. The title should accurately, clearly, and concisely reflect the emphasis and content of the paper. The title must be brief and grammatically correct. Adequate: Missing one key component. Not yet adequate: Title misses more than one of the key components. Poor: Not descriptive of the experiment. N/A is not an option all papers must have titles.

**O/O 2: Appropriate Introduction (M: 1, 2)**
The introduction should be judged adequate based on the rubric section below. Introduction: Excellent: Includes a full statement of the problem, any background theory that will be used to answer the problem and the basic experimental design that will be used to answer the problem. Adequate: Minor errors in either experimental design, theory or unclear statement of the problem. Not yet adequate: A major error in one of the above categories or several minor errors. Poor: Major errors the experimental design, or a lack of understanding of the theory or misstatement of the problem. N/A is not an option.

**O/O 3: Appropriate Materials and methods (M: 1, 2)**
The paper contains a materials and methods section which would allow a competent chemist to repeat the experiment. Based on the rubric section below. Experimental: Excellent: Includes the details of the experimental procedure (section titled Materials and Methods). A competent chemist should be able to reproduce the experiment using this section of the paper. Adequate: Minor details
omitted that would hamper reproduction of the experiment. Not yet adequate: A competent chemist would have difficulty reproducing the experiment. Major components of experiment not described or omitted. Poor: Lack of experimental detail

<table>
<thead>
<tr>
<th>O/O 4: Appropriate Results section (M: 1, 2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>The paper contains a results section which is logical and incorporates all data in a readable format. Based on Rubric section below. Results: To think critically about data, it must be presented accurately, clearly and in a logical order. Excellent: Data presented fully including appropriate significant figures. Data are presented in logical order. Data format is readily available (in appropriate Tables, Figures and text) for facile assessment by the authors and readers. Adequate: One of significant figures, logical order, and efforts to make data readily accessible missing. Not yet adequate: Two of the above missing. Poor: Confusing organization of the data and/or major errors in presenting significant figures.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>O/O 6: Figures and Tables (M: 1, 2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Figures and tables are added at logical places that enhance the readability of the paper and summarize data in a logical manner. Excellent: Use tables and figures when the data cannot be presented clearly as narrative, when many precise numbers must be presented, or when more meaningful interrelationships can be conveyed by the tabular format. Tables should supplement, not duplicate, text and figures. Tables should be simple and concise. It is preferable to use the Table Tool in your word-processing package, placing one entry per cell, to generate tables. Adequate: Most tables or figures have descriptive narrative (captions or titles) with minor errors which either have a lack of clarity or are not needed. Not yet adequate: Tables and figures do not add to the clarity of the paper. Poor: Tables and figures take away from the readability or clarity of the paper.</td>
</tr>
</tbody>
</table>

**Measures, Targets, and Findings**

**M 1: Reports 1 through 3 in Chemistry 4000 (O: 1, 2, 3, 4, 5, 6)**

There were a total of 53 students which were enrolled in chemistry 4000 in the academic year 2010-2011. 52 of these students went on to the next analytical course. Title: Many students had difficulty on paper one determining an appropriate title on the first submission of paper 1. (Aver = 3.25/4.0). All 52 completers were judged as adequate or higher by the final submission of the final paper. (3.9/4.0) Introduction: Most students had difficulty with the introduction on the first submission of paper 1. (1.2/4.0). All 52 completers were judged as adequate or higher along with 1 by the final submission of paper 3. (3.5/4.0) Results: Many students had difficulty with the results section of the first paper. (1.2/4.0). All 52 completers were judged as adequate or higher along with 1 by the final submission of paper 3. (3.5/4.0) Figures and Tables were not required for paper 1. Many students had difficulty with tables and Figures (usually trying to place too much information or illogical information in tables) on the first submission of paper 2. (2.2/5.0). All 52 completers were judged as adequate or better on the last submission of the final paper. (3.8/4.0) Discussion and Conclusion: Most students had trouble on the Discussion/Conclusion portion of paper 1 (1.2/4.0). 50 of the 52 completers were judged as adequate or better on the last submission of paper 3. (3.5/5.0)

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Appropriate Title that represents actual work done in lab**

90 % of students score 3 or above by the final submission

**Findings 2011-2012 - Target: Met**

Target was met by the 3rd submission. Most students did not meet target on first or 2nd submission.

**Target for O2: Appropriate Introduction**

Target was not met at first submission but was met by all students by final submission.

**Target for O3: Appropriate Materials and methods**

90% of students score a 3 or better by the final submission

**Target for O4: Appropriate Results section**

90% of students score a 3 or above by the final submission

**Findings 2011-2012 - Target: Met**

Target was met by 3rd submission by all but one student.

**Target for O5: Appropriate Discussion/Conclusion**

90% of students score a 3 or above on the final submission

**Findings 2011-2012 - Target: Met**

Target was met by all completers by 3rd submission.

**Target for O6: Figures and Tables**

90% of students score a 3 or above on the final submission

**Findings 2011-2012 - Target: Met**

Target was met by all completers

**M 2: Final Paper of Capstone Course (O: 1, 2, 3, 4, 5, 6)**

44 students took Chem 4160 in 2010-2011. Of these students 32 have received passing grades (the others are in progress). The 44 completers received adequate or better in every category by the final submission. The average number of submissions was 3.1.
Source of Evidence: Capstone course assignments measuring mastery

**Target for O1: Appropriate Title that represents actual work done in lab**
All students receive a 3 or better by their final submission

**Findings 2011-2012 - Target: Met**
Target was met by 3rd submission.

**Target for O2: Appropriate Introduction**
All students receive a 3 or better by the final submission

**Findings 2011-2012 - Target: Met**
Target was met by 3rd submission.

**Target for O3: Appropriate Materials and methods**
All students receive a 3 or better by the final submission

**Findings 2011-2012 - Target: Met**
Target was met by 3rd submission

**Target for O4: Appropriate Results section**
All students receive a 3 or better by the final submission

**Findings 2011-2012 - Target: Met**
Target was met by 3rd submission

**Target for O5: Appropriate Discussion/Conclusion**
All students receive a 3 or better by their final submission

**Findings 2011-2012 - Target: Met**
Target was met by 3rd submission

**Target for O6: Figures and Tables**
All students receive a 3 or better by their final submission

**Findings 2011-2012 - Target: Met**
Target was met by 3rd submission

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Decrease average submission numbers in Chem 4000**
We will attempt to decrease submission numbers in Chem 4000 by adding reviews of papers as part of the course. Students will have to critically evaluate a series of papers in order to determine if the paper shows the critical thinking skills set forward by the rubric.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** Medium
- **Implementation Description:** Instructors will write papers that illustrate various degrees of critical thinking skills in the areas of the rubric.
- **Responsible Person/Group:** Barrow

**Annual Report Section Responses**

**Most Important Accomplishments for Year**—Briefly describe the major things you accomplished over the past year. Be sure to note previous Action Plans that were executed this year, plus any accomplishments that are not otherwise mentioned in your outcomes reporting.

Reduction in the number of overall submissions by students

**Challenges for Next Year**—Briefly describe any special challenges (related to budget, personnel, increased standards, new projects, new expectations, etc.) that you will be facing during the next reporting cycle that might affect your department’s outcomes.

It looks like there may be an increase in enrollment so new sections may be opened.

**Modifications in Intended Outcomes**—If you modified any of your intended outcomes since the previous reporting cycle, please note those here.

None

**Modifications in Measurement Methods**—If you modified any of the measures or methods you use in the measurement process, please note those here.

None

2011-2012 CTW Computer Information Systems  
(As of: 12/12/2016 04:41 PM EST)

### Mission / Purpose

Critical thinking through writing is defined in Computer Information Systems by behavioral (typically written), or other evidence, of certain skills and/or traits. These skills and/or traits include the abilities to: Identify problems (and in some cases, opportunities) before they become critically important or demanding of immediate attention to ameliorate and address; typically these problems relate to organizational work processes and workflows that could best be addressed through computer-based solutions; Identify multiple, innovative, and creative solutions to these problems; typically these solutions are formulated as multiple alternative designs for computer-based solutions to the problem(s); Evaluate the possible solutions to these problems in such a way to rank order them, from best to worst, in terms of their relative efficacies and inherent costs in brokering the "best" solution; Exhibit a concern for, and appreciation of, pursuing solutions that are characterized by ethical and social responsibility; Propose an effective approach to implement the "best" solution. The CIS definition of CTW in consistent with the University's definition for the following reasons: A wide range of cognitive skills are required to perform the CIS behaviors. This includes identifying, analyzing, and evaluating arguments and truth claims (points 1-3); The need to recognize ethical and social responsibilities is addressed in point 4; Identifying problems, solutions, and evaluating solutions requires the formulation and expression of convincing reasons in support of conclusions; and The exhibition of reasonable, intelligent decisions is also embedded in points 1-2 and point 5 of the CIS definition.

### Goals

**G 1: Improve Critical Thinking with a focus on Information Systems**

Improve Critical Thinking with a focus on Information Systems

### Measures, Targets, and Findings

**M 1: CIS 4980 System Development Project Capstone (O: 1, 2, 3, 4)**

The CTW assignment captures either as a Wiki or, if non-disclosure is required, a Word document the student's analysis of the project's goal, potential solutions, ethical and social issue issues, and the selection of the best solution. Students also analyze and give suggested improvements to at least one team member on their draft of this assignment. The Spring 2011 instructions document is linked below. Sample solutions from previous semesters are provided.

#### Source of Evidence: Capstone course assignments measuring mastery

**Target for O1: Articulate Requirements and Constraints**

The CIS CTW Rubric Version 2 provides a 0 to 4 score for student work. The targets set for 2010-2011 are an overall average of 3.4 with fewer than 20% making less than 3.2.

### Findings 2011-2012 - Target: Met

The average was 3.9 with no one making less than 3.2.

**Target for O2: Identify and Evaluate Potential Solutions**

The CIS CTW Rubric Version 2 provides a 0 to 4 score for student work. The targets set for 2010-2011 are an overall average of 3.4 with fewer than 20% making less than 3.2.

### Findings 2011-2012 - Target: Met

The average was 3.8 with 11% less than 3.2

**Target for O3: Consider Ethical and Social Issues**

The CIS CTW Rubric Version 2 provides a 0 to 4 score for student work. The targets set for 2010-2011 are an overall average of...
### Findings 2011-2012 - Target: Met
The average was 3.75 with 6.5% less than 3.2.

### Target for O4: Select Best Solution with Justification
The CIS CTW Rubric Version 2 provides a 0 to 4 score for student work. The targets set for 2010-2011 are an overall average of 3.4 with fewer than 20% making less than 3.2.

### Findings 2011-2012 - Target: Met
The average was 3.9 with 2.2% less than 3.2.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Split CTW assignment assessment into objective components
The assessment of the CTW assignment submissions needs to be broken into objective components rather than a single overall assessment value.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Finished
- **Priority:** Medium
- **Implementation Description:** Preserve the objective component scores when assessing student submissions.
- **Projected Completion Date:** 12/2011
- **Responsible Person/Group:** CTW Instructor

#### Guage CIS Progress From Entry to Exit CTW Courses
CIS needs to coordinate with BUSA 3000 to gather the information needed to evaluate progress from the entry level CTW BUSA 3000 to the CIS exit level CIS 4980 / CIS 4970.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** Medium
- **Implementation Description:** As stated above, coordinate with BUSA 3000 to gather the information needed to evaluate progress from the entry level CTW BUSA 3000 to the CIS exit level CIS 4980 / CIS 4970.
- **Projected Completion Date:** 04/2013
- **Responsible Person/Group:** CIS CTW ambassador (working with the MGS CTW ambassador).

### Analysis Questions and Analysis Answers

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

Computer Information Systems completed the integration of CTW into our CIS 4970 Field Study course. Our CIS majors must take either CIS 4980 System Development Projects (where CTW was initially integrated) or CIS 4970 Field Study (with CTW now fully integrated). The second accomplishment was to capture individual finding scores for the CIS measures rather than the scores being the aggregation of all findings.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

CIS does not yet have sufficient coordination with and information from the entry level course BUSA 3000 to analyze progress. Gaining this coordination and information acquisition will be an action item for 2012-2013.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**

CIS is making good progress with all findings meeting the established measures. Being able to guage progress from entry level CTW course to final CTW course is a next goal. At this point, no additional resource needs are anticipated.

**CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?**

Integration of CTW into our program has raised the awareness of the benefits of more structured critical thinking. Students and faculty more formally consider and articulate analysis of circumstances, consideration of potential resolution paths including ethical aspects, and the justified selection of a final set of actions. CIS now has individual findings for each measure and can track progress for each as we move forward. This will enable us to focus more on objectives needing additional work.

---

### Georgia State University

**Assessment Data by Section**

**2011-2012 CTW Computer Science**

As of: 12/12/2016 04:41 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

**Mission / Purpose**
The mission of the computer science department is to educate students in fundamental topics like programming languages, data structures, algorithms, data base systems, computer architecture, communications, and software engineering. For Computer Science, critical thinking is defined as documentation, clearly stating assumptions, explaining logic for the chosen solution (through in-code comments), and testing solutions for correctness.

The computer science CTW plans are to have students evaluate and choose between alternate solution strategies. In this major, there are multiple ways to solve a given assignment. Often, there are several equally correct methods, however, there will also be methods that are not as good due to inefficiencies (in time, space, cost, or other resource), over-complexity, fragility (non-robustness), scalability, etc. Thus, for our majors, we interpret the statement "identify, analyze, and evaluate arguments and truth claims" to mean our students should clearly state their assumptions, explain (through in-code comments) their logic, and test their solutions for correctness. Testing (debugging) will allow them to "formulate and present convincing reasons in support of conclusions", i.e., they present a series of test cases and demonstrate that their solution (most likely computer code) functions as expected. Grading can include different test cases, defined by the instructor, that reveal faults in the students' assumptions. In other words, the test cases will allow the students to "discover and overcome personal prejudices" in the sense of their preconceived assumptions.

### Goals

**G 2: For Computer Science, critical thinking is defined as documentation, clearly stating assumptions, explaining logic with regards to the chosen solution (through in-code comments), and testing solutions for correctness.**

### Student Learning Outcomes/Objectives

**SLO 1: Assignments to introduce CTW to our students (M: 1, 2)**

We use assignments to educate our students about writing and critical thinking. Included are a couple of example student project reports. From these reports we see the level of documentation expected for students in a capstone class. Two of the attachments are project directions, and the other two are examples of students' work. The computer science CTW plans are to have students evaluate and choose between alternate solution strategies. In this major, there are multiple ways to solve a given assignment. Often, there are several equally correct methods, however, there will also be methods that are not as good due to inefficiencies (in time, space, cost, or other resource), over-complexity, fragility (non-robustness), scalability, etc. Thus, for our majors, we interpret the statement "identify, analyze, and evaluate arguments and truth claims" to mean our students should clearly state their assumptions, explain (through in-code comments) their logic, and test their solutions for correctness. Testing (debugging) will allow them to "formulate and present convincing reasons in support of conclusions", i.e., they present a series of test cases and demonstrate that their solution (most likely computer code) functions as expected. Grading can include different test cases, defined by the instructor, that reveal faults in the students' assumptions. In other words, the test cases will allow the students to "discover and overcome personal prejudices" in the sense of their preconceived assumptions.

### Measures, Targets, and Findings

**M 1: Example projects, both assignments as well as students' work, are provided in the attached files. (O: 1)**

In the first computer science CTW class, students work on assignments throughout the semester. In the second class, they must prepare a project over the course of the semester. Example homeworks and final projects are attached. We surveyed the students both at the beginning and ending of the semester to get their opinions on CTW. We looked for progression in their comments showing increased understanding about CTW. In general, the students in the first class initially gave us responses indicating that they did not understand CTW. But the second survey indicated that they understood it better at the end of the semester. The second class was similar in that their end-of-semester understanding of CTW was better than in the beginning, however, their understanding in the beginning was much better than the first CTW class. There are however, a few (very few) students who think that the CTW with all of the documentation for a program is a waste of time. We also looked at students' success in class.

Source of Evidence: Capstone course assignments measuring mastery

### Target for O1: Assignments to introduce CTW to our students

Getting students to be able to think through a problem and thereafter come up with a most suitable algorithm/solution. Then be able to document the process through which they came up with the solution/algorithm so that it can enhance future maintenance.

**M 2: Projects for Software Engineering (O: 1)**

This is the grading criteria used in the CSc 4350 class. The achievement target is as follows. We expect a large number (around 50%) to perform excellently, while then another 40% to meet these criteria better than average, though below excellent. Some (about 15%) will do an adequate job, while the remaining 5% will not participate fully in the project and not do well in exams (because this is a class whereby the students do a group project that is worth 50% of the total grade and questions in the exams have a direct bearing to work completed in the project as well as overall knowledge acquired over the semester). Student deficiencies included the not participating fully in projects and hence not being able to do as well in exams early. Our findings were somewhat consistent with this prediction, and are reflected in the grades for this class. 16 out of 25 (64%) completed the course with an excellent grade, 7 out of 25 (28%) received a very good grade, and only 1 student (i.e., 4%) received an average grade and only 1 student (i.e 4%) received a failing grade (this student stopped attending classes after 3 weeks and never withdrew). The projects attempted are at par with real-world situations - in fact these projects can be used in the real world with just a few adjustments to their database implementation and maintenance and upgrading during its lifetime. An actual software engineering project is not going to have everything spelled out initially, it is likely to change to have feature-creep (management requiring more features), bloat (features added to features), understand-estimation of the time-line and budget, poor testing, and finally staff are required to cut corners to complete the project within a marketing-imposed deadline. For example, Microsoft's Windows Vista had many of these problems. Allowing the students a greater degree of freedom to determine their own project specifications would be a good way to teach them about what they can expect on the job. Grading Criteria Each team member will be required to submit a confidential evaluation on all other members of the project team on the day the final report is due. (Failure to turn in an evaluation can result in a loss of up to 10 points from your own individual project grade.) This evaluation will be accomplished only by the submitter and will assign the level of effort that every other team member contributed to each deliverable. These evaluations will be used to determine the number of points (out of 50) each team member receives. The following will contribute to project grading: 1. Timeliness (and quality) of first six documents. Failure to submit a deliverable on time will result in heavy point penalty. This is done to help you keep a pace that will result in a successful project.
Details of Action Plans for This Cycle (by Established cycle, then alpha)

Continue having students doing documentation for programs
Explaining algorithms used to solve the problem, then implement that algorithm. Have all pre and post conditions listed for all (or at least) most of the functions used in a program. Also, attach a user guide for executing the program. Overall, continue on the same path we have been doing over the past year.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Surveys and student specifications
Next year, we plan to achieve the same level of excellence that we have accomplished this year. The classes are working very well, so we plan to continue as is. I think that from reading the documentation submitted by the students, they are able to explain in detail what they are doing and how they are achieving their solutions to the problems. However, a few students did complain that they that the CTW is a waste of time and that they should not be graded for the documentation but just the program.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
Implementation Description: Adjust the software engineering instructions to allow students more room to make the type of decisions that project managers make.
Responsible Person/Group: The CSc 4350 instructor(s).

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
I think that our department has been doing well in implementing the CTW. It is more a situation of documentation for projects/programs being done by the students. As the example project and assignment shows, I think that we have fairly comprehensive documentation that explains in detail how a solution for the particular problem was achieved. In relation to the Action Plans from last year - I think that most of the projects are realistic enough considering the time constraints pertaining to development and implementation.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
Once they start incorporating the documentation, then it follows through more or less naturally. So, after the first assignment where I would comment where they need improvements, then the students are generally able to explain their solutions thoroughly.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
None. So far, no assistance needed.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?
I don't think that there has been much changes or impact. Yes, it is true that the students have been encouraged to do documentation more, especially in the lower level CTW class. But, they have always been doing well in the upper level CTW class with lots of documentation for their projects. Based upon this, I don't think there are any changes that will be considered. And if any are considered, it would likely be very very minor. No changes were made from last year's report.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

No changes in educational program are projected nor any changes in curriculum.

ADMINISTRATIVE DEPT QUESTION 1: Explain how your department used the results from the previous cycle’s (2010-2011) assessment. What actions did you take this past year based on the results from the previous cycle? What changes did you make as a result?

Just continue to impress upon the students the importance of critically analyzing a problem to be able to come up with the best solution. And t1 record such analysis via documentation.

ADMINISTRATIVE DEPT QUESTION 2: What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department's effectiveness?

The students have continued to apply critical thinking to problem solving i.e. critically thinking through the solution to a computer programming problem and thus get the best solution possible.

ADMINISTRATIVE DEPARTMENT QUESTION 3: How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

There is not a whole lot of rooms for improvements - because they have to generate a program for a problem and implement that program so that it can execute on a computer. Maybe some students can come up with even more clever ways for solving the problem and implementing it on the computer.

**Annual Report Section Responses**

**Most Important Accomplishments for Year**—Briefly describe the major things you accomplished over the past year. Be sure to note previous Action Plans that were executed this year, plus any accomplishments that are not otherwise mentioned in your outcomes reporting.

I think that the students are better able to analyze a problem so that they can come up with a solution. Also, I think that their ability to express themselves are improving.

**Challenges for Next Year**—Briefly describe any special challenges (related to budget, personnel, increased standards, new projects, new expectations, etc.) that you will be facing during the next reporting cycle that might affect your department’s outcomes.

We would like the limit to one of our CTW classes to be increased. We are experiencing bottleneck whereby the students must finish CSc 3410 before they can take many of our 4000 level classes. Owing to the small size of the class, we are experiencing quite a few request for overflows which we cannot grant. Unfortunately, if we open a third section of the class, we are afraid that we may not get more than 14 students (which I think is required by the university to be a minimum size). If only we could have increased the class size from 25 to 32, this may take care of our problem. Also, if the CSc 4350 could have been increased to about 30, it will also help.

**Modifications in Intended Outcomes**—If you modified any of your intended outcomes since the previous reporting cycle, please note those here.

None

**Modifications in Measurement Methods**—If you modified any of the measures or methods you use in the measurement process, please note those here.

None

**Georgia State University**

**Assessment Data by Section**

**2011-2012 CTW Criminal Justice**

As of: 12/12/2016 04:41 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

**Goals**

**G 2: Generate coherent descriptions of extant knowledge**

Students will explore, synthesize, and evaluate extant knowledge and scientific literatures on topics of interest to the field of criminal justice.

**G 4: Identify ethical dilemmas in criminal justice decision making and processing**

Students will become better at identifying moral dilemmas faced by criminal justice personnel and offenders.

**G 3: Critically evaluate current issues in criminal justice**

Students will become familiar with research processes, and will improve their evaluation skills.

**G 6: Communicate effectively**

Students will enhance their abilities to communicate their knowledge, analyses, evaluations, and decisions through writing.
## Student Learning Outcomes/Objectives

<table>
<thead>
<tr>
<th>SLO 1: Identify and state topical issues or hypotheses (G: 3, 6) (M: 1)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will demonstrate their ability to generate a thesis/hypothesis/statement of the problem in the generation of a critical analysis paper on a salient issue in the field of criminal justice.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>SLO 2: Demonstrate knowledge and ability to synthesize information (G: 2, 3, 6) (M: 1, 2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will demonstrate their retention of knowledge about the criminal justice system and salient topical issues in the field in written form. Students will effectively communicate facts about an issue and apply theoretical frameworks to demonstrate the depth of both their knowledge and their ability to critically synthesize relevant information about that specific topic in this paper.</td>
</tr>
</tbody>
</table>

### Standard Associations

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

<table>
<thead>
<tr>
<th>SLO 3: Application and analysis (G: 3, 6) (M: 1)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will develop and/or enhance skills in applying theoretical frameworks to contemporary issues in criminal justice. Students will be able to not only synthesize and interpret extant information, but also identify patterns within extant information, be able to compare and contrast different sides of a problem, and/or generate new predictions through their presentation in a written form.</td>
</tr>
</tbody>
</table>

### Standard Associations

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

<table>
<thead>
<tr>
<th>SLO 4: Generation of conclusions (G: 3, 4, 6) (M: 1)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will be able to develop meaningful conclusions from literature reviews and/or data analyses and/or be able to identify policy implication given the evidence available.</td>
</tr>
</tbody>
</table>

### Standard Associations

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

<table>
<thead>
<tr>
<th>SLO 5: Written communication (G: 6) (M: 1, 2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will be able to effectively communicate their knowledge and analytical skills in written form (paper). Students will demonstrate the ability to effectively identify issues, develop and organize subtopics, and generate streamlined presentations of information. In addition, students will utilize appropriate grammar and syntax, as well as the ability to adhere to APA style guidelines.</td>
</tr>
</tbody>
</table>

### Standard Associations

---

## Measures, Targets, and Findings

### M 1: Analysis of Criminological/Criminal Justice (CJ) Issue Essay (O: 1, 2, 3, 4, 5)

This essay is designed to test students' ability to critically evaluate an issue in criminology and/or criminal justice. Students will identify a single issue from the internship experience that involves crime or the criminal justice system and discuss why it is of interest. Students must define and clarify the issue and provide background information describing its significance. Students also must apply a relevant theoretical framework to demonstrate their ability to more formally analyze the issue. Finally, students must assess the impact/potential impacts of the issues on the criminal justice system and/or personnel working within it and/or offenders and/or victims of crime and present potential responses/solutions.

Source of Evidence: Written assignment(s), usually scored by a rubric

### Target for O1: Identify and state topical issues or hypotheses

A goal is that by the end of their senior year (e.g., for the capstone seminar), 80% of students should be rated as an 4 or 3 in their ability identify and state topic issues or hypotheses. Additionally, 50% of students should be rated as a 4. Please reference the assessment rubric to identify the specific skill level denoted by these numeric levels. A separate goal is for 50% of the students to achieve increased scores (where possible) on the ID/Summarize Issue rubric dimension from the first to the final draft submission.

### Findings 2011-2012 - Target: Partially Met

There were 3 sections of capstone class (CRJU 4930) during fall 2011 and spring 2012: 1 in Fall 2011 (N=41) and two in Spring 2012 (N=34 and 13). The attached file named Capstone Rubric Data 2011-2012 contains data for these 88 students. At the end of the year, the average score on the 1-4 rubric scale was 2.7 (2.5 in fall section and 3.1 and 2.3 in the spring sections). 89% of the students enrolled in CRJU 4930 in Fall 2011 and Spring 2012 (N=78 of 88) earned a score of 3 or 4 on a 1-4 scale for the ID/Summarize Issue rubric dimension. 47% of these students (N=41 of 88) earned a score of 4 on a 1-4 scale for the ID/Summarize Issue rubric dimension. These scores correspond to the final draft of the paper and consistently show significant improvement over the first draft numbers in that 73% (64 of 88) either maintained the best possible score of 4 or showed improvement in their scores across the two submissions of the paper. Only 1% exhibited a decrease and 26% showed no improvement in the ID/Summarize Issue rubric dimension score where improvement was possible. (see attached
rubric for skill levels associated with each rubric point).

Target for O2: Demonstrate knowledge and ability to synthesize information
The goal is that by the end of their senior year (e.g., for the capstone seminar), 80% of students should be rated as a 4 or 3 in their ability to comprehend and synthesize information. Additionally, 50% of students should be rated as a 4 in this rubric dimension. Please reference the assessment rubric to identify the specific skill level denoted by these numeric levels. A separate goal is for 50% of the students to achieve increased scores (where possible) on the Comprehend & Synthesize Information rubric dimension from the first to the final draft submission.

Findings 2011-2012 - Target: Not Met
There were 3 sections of capstone class (CRJU 4930) during fall 2011 and spring 2012; 1 in Fall 2011 (N=41) and two in Spring 2012 (N=34 and 13). The attached file named Capstone Rubric Data 2011-2012 contains data for these 88 students. At the end of the year, the average score on the 1-4 rubric scale was 2.6 (2.4 in fall section and 3.0 in the spring sections). 78% of the students enrolled in CRJU 4930 in Fall 2011 and Spring 2012 (N=68 of 88) earned a score of 3 or 4 on a 1-4 scale for the Comprehend & Synthesis of Information rubric dimension. 45% of these students (N=40 of 88) earned a score of 4 on a 1-4 scale for the Comprehend & Synthesis of Information rubric dimension. These scores correspond to the final draft of the paper and consistently show significant improvement over the first draft numbers in that 38% exhibited an increase in the Comprehend & Synthesis of Information rubric score or remained at the highest possible point between the first and final submission, 3% exhibited a decrease, and 49% showed no improvement in the rubric score where improvement was possible. (see attached rubric for skill levels associated with each rubric point). These scores correspond to the final draft of the paper and consistently show significant improvement over the first draft numbers in that 59% (52 of 88) either maintained the best possible score of 4 or showed improvement in their scores across the two submissions of the paper. Only 1% exhibited a decrease and 37% showed no improvement in the Comprehend & Synthesis of Information rubric dimension score where improvement was possible.

Target for O3: Application and analysis
The goal is that by the end of their senior year (e.g., for the capstone seminar), 80% of students should be rated as a 4, 3, or 2 in their ability conduct application and analysis of criminal justice subject matter. Additionally, 50% of students should be rated as a 4 or 3 in this rubric dimension and at least 25% should rate as a 4. Please reference the assessment rubric to identify the specific skill level denoted by these numeric levels. A separate goal is for 50% of the students to achieve increased scores (where possible) on the Application & Analysis rubric dimension from the first to the final draft submission.

Findings 2011-2012 - Target: Met
There were 3 sections of capstone class (CRJU 4930) during fall 2011 and spring 2012; 1 in Fall 2011 (N=41) and two in Spring 2012 (N=34 and 13). The attached file named Capstone Rubric Data 2011-2012 contains data for these 88 students. At the end of the year, the average score on the 1-4 rubric scale was 2.9 (2.3 in fall section and 3.2 in Spring sections). 84% of the students enrolled in CRJU 4930 in Fall 2011 and Spring 2012 (N=74 of 88) earned a score of 3 or 4 on a 1-4 scale for the Application and Analysis rubric dimension. 50% of these students (N=44 of 88) earned a score of 4 on a 1-4 scale for the Application and Analysis rubric dimension. These scores correspond to the final draft of the paper and consistently show significant improvement over the first draft numbers in that 70% (58 of 88) either maintained the best possible score of 4 or showed improvement in their scores across the two submissions of the paper. Only 2% exhibited a decrease and 27% showed no improvement in the Application & Analysis rubric dimension score where improvement was possible. (see attached rubric for skill levels associated with each rubric point).

Target for O4: Generation of conclusions
The goal is that by the end of their senior year (e.g., for the capstone seminar), 80% of students should be rated as a 4 or 3 in their ability to generate conclusions and implications pertaining to criminal justice subject matter. Additionally, 50% of students should be rated as a 4 in this rubric dimension. Please reference the assessment rubric to identify the specific skill level denoted by these numeric levels. A separate goal is for 50% of the students to achieve increased scores (where possible) on the Conclusions & Implications rubric dimension from the first to the final draft submission.

Findings 2011-2012 - Target: Partially Met
There were 3 sections of capstone class (CRJU 4930) during fall 2011 and spring 2012; 1 in Fall 2011 (N=41) and two in Spring 2012 (N=34 and 13). The attached file named Capstone Rubric Data 2011-2012 contains data for these 88 students. At the end of the year, the average score on the 1-4 rubric scale was 2.7 (2.4 in fall section and 2.9 and 2.6 in the spring sections) on the Conclusions & Implications dimension of the rubric. 80% of the students enrolled in CRJU 4930 in Fall 2011 and Spring 2012 (N=70 of 88) earned a score of 3 or 4 on a 1-4 scale for the Conclusions & Implications rubric dimension. 44% of these students (N=39 of 88) earned a score of 4 on a 1-4 scale for the Conclusions & Implications rubric dimension. These scores correspond to the final draft of the paper and consistently show significant improvement over the first draft numbers in that 59% (52 of 88) either maintained the best possible score of 4 or showed improvement in their scores across the two submissions of the paper. Only 1% exhibited a decrease and 40% showed no improvement in the Conclusions & Implications rubric dimension score where improvement was possible. (see attached rubric for skill levels associated with each rubric point).

Target for O5: Written communication
The goal is that by the end of their senior year (e.g., for the capstone seminar), 80% of students should be rated as a 4 or 3 in their ability to use high quality written communication to convey ideas about criminal justice subject matter. Additionally, 50% of students should be rated as a 4 in this rubric dimension. Please reference the assessment rubric to identify the specific skill level denoted by these numeric levels. A separate goal is for 50% of the students to achieve increased scores (where possible) on the Writing Quality & Style rubric dimension from the first to the final draft submission.

Findings 2011-2012 - Target: Partially Met
There were 3 sections of capstone class (CRJU 4930) during fall 2011 and spring 2012; 1 in Fall 2011 (N=41) and two in Spring 2012 (N=34 and 13). The attached file named Capstone Rubric Data 2011-2012 contains data for these 88 students. At the end of the year, the average score on the 1-4 rubric scale was 3.3 (3.1 in fall section and 3.3 and 3.5 in the spring sections) on the Writing Quality & Style rubric dimension of the rubric. 83% of the students enrolled in CRJU 4930 in Fall 2011 and Spring 2012 (N=73 of 88) earned a score of 3 or 4 on a 1-4 scale for the Writing Quality & Style rubric dimension. 41% of
these students (N=36 of 88) earned a score of 4 on a 1-4 scale for the Writing Quality & Style rubric dimension. These scores correspond to the final draft of the paper and consistently show significant improvement over the first draft numbers in that 64% (56 of 88) either maintained the best possible score of 4 or showed improvement in their scores across the two submissions of the paper. Only 5% exhibited a decrease and 31% showed no improvement in the Writing Quality & Style rubric dimension score where improvement was possible.(see attached rubric for skill levels associated with each rubric point).

**M 2: Critically Assess Ethical Issues in Criminal Justice (O: 2, 5, 6)**

This two-part writing assignment is designed to assess students’ ability to identify an ethical issue facing the criminal justice system and then engage the extant literature to both locate and evaluate existing research on the topic. The same assignment was used in all 5 of the sections taught by the department in fall 2001, spring 2012 and summer 2012. Assignment #1 comes at the outset of the term. Students must identify an ethical issue of their choosing. Next, they must identify at least 3 scholarly sources that critically analyze the issue. They must create and justify criteria upon which they will assess the quality of each source and then apply these criteria toward the end of the term, after being exposed to various ethical thinking frameworks and critical assessments steeped in these approaches, the students revisit this assignment. They are required to think critically about the criteria and application of these criteria as applied to the same 3 sources and re-visit their assessments (see attached file named Ethical Issue Assignment). This assignment is also intended as an assessment of students’ ability to express ideas in writing.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Demonstrate knowledge and ability to synthesize information**

Our initial goal is for 50% of the students to achieve increased overall scores (where possible) in the Total Rubric Score across the initial (Assignment #1) and revised (Assignment #4) submissions for the Learning to Think Critically about Ethical Issues assignment (see attached Ethics in CJ Revision Assignment file for text of the two assignments).

**Target for O5: Written communication**

This is the third assignment of 3 in a junior level class, although it was only this year that the department was able to enact a policy that assures all 3000 level courses will be completed before they can proceed to register for 24 hours of 4000 level required or elective course work. The target is that 80% of student papers will be rated as a 3 (Acceptable) or 4 (Outstanding) on the Mechanics rubric dimension for the third assignment. Additionally, at least 25% should rate as a 4. Please reference the assessment rubric to identify the specific skill level denoted by these numeric levels.

**Target for O6: Identification of ethical issues**

Our initial goal is for 50% of the students to achieve increased overall scores (where possible) in the Total Rubric Score across the initial (Assignment #1) and revised (Assignment #4) submissions for the Learning to Think Critically about Ethical Issues assignment (see attached Ethics in CJ Revision Assignment file for text of the two assignments).

**Findings 2011-2012 - Target: Not Met**

There were 5 sections of the Ethics class (CRJU 3060) offered for the period of fall 2011 and spring 2012 (2 courses in the fall and 3 in the spring). Due to miscommunication of reporting expectations, the adjunct faculty member who taught the section of 10 students in the spring did not amass usable assessment data. A GTA taught a section of 24 in the fall and 36 in the spring; we did not ask this individual to participate in assessment activities, as she was new to teaching. As such, the fall section of 32 and spring section of 35 students taught by Dr. Mary Finn are the only source of our assessment data for this reporting cycle. The attached file named Ethics Rubric Data contains data for these 67 students. For the final submission (Assignment #4), the average total rubric score was 9.6 out of 15. This compares to an average total rubric score of 12 on the draft submission. Clearly, the students did not meet the instructor’s expectations. Turning to the issue of individual-level improvement, only 7 of the 59 (12%) who turned in both assignments exhibited improvement from the first submission to the second. 8% showed no change while the vast majority (80% scored lower on the final submission than they did on the draft submission (See attached Ethics in CJ Rubrics for the dimensions of the assignment rubric).

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Continued data collection**

We will continue to collect data on this component of critical thinking through the capstone seminar across instructors. We will increase our collection of data in different semesters to see if we have variance in assessment techniques across instructors. We want to determine if our overall rates are meeting our overall goals and to identify where discrepancies occur.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

**Relationships (Measure | Outcome/Objective):**
- **Measure:** Analysis of Criminological/Criminal Justice (CJ) Issue Essay | **Outcome/Objective:** Application and analysis
- **Measure:** Demonstrate knowledge and ability to synthesize information | **Outcome/Objective:** Generation of conclusions
- **Measure:** Identify and state topical issues or hypotheses | **Outcome/Objective:** Written communication
- **Measure:** Critically Assess Ethical Issues in Criminal Justice | **Outcome/Objective:** Identification of ethical issues

Projected Completion Date: 05/2011
Responsible Person/Group: Faculty involved with Capstone seminar in conjunction with CTW Ambassador.

**Emphasis on student improvement over time**

Graduation was added to achievement outcomes to enhance standards. Second, a recent policy change mandating that CJ majors complete the Ethical Issues in CJ (CRJU 3060) before they are eligible to enroll in 4000 level electives raises the opportunity for linked assignments across CRJU 3060 and 4930. The department’s undergraduate committee will consider ways to introduce into CRJU 3060 an assignment that taps the Application and Analysis measure in order to allow for within and across student comparisons over a broader time frame.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High
**Relationships (Measure | Outcome/Objective):**

- **Measure:** Analysis of Criminological/Criminal Justice (CJ) Issue Essay | **Outcome/Objective:** Application and analysis | Demonstrate knowledge and ability to synthesize information | Generation of conclusions | Identify and state topical issues or hypotheses | Written communication
- **Measure:** Critically Assess Ethical Issues in Criminal Justice | **Outcome/Objective:** Identification of ethical issues | Written communication

**Responsible Person/Group:** CTW Ambassador and CJ faculty

---

**Oral presentation assignments**

CTW ambassador will encourage instructors to use rubric assessed oral presentation assignments to further enhance the medium through which students engage in critical thinking on topics related to ethical issues in criminal justice. The data for these rubrics will be reported for assessment purposes.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**

- **Measure:** Critically Assess Ethical Issues in Criminal Justice | **Outcome/Objective:** Identification of ethical issues

**Responsible Person/Group:** CTW ambassador

---

**Revision feedback in CRJU 3060**

Instructors of CRJU 3060 will be encouraged by the CTW ambassador to include a dimension of revision and resubmission for at least one of the 3 ethical issue assignments during the term.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**

- **Measure:** Critically Assess Ethical Issues in Criminal Justice | **Outcome/Objective:** Identification of ethical issues

**Responsible Person/Group:** CTW ambassador

---

**Develop set rubric for CRJU 3060 use**

The adhoc CTW committee will develop and present to the faculty a set array of rubrics to be used by all instructors teaching CRJU 3060. This will allow for more consistent feedback across all assignments but also allow for a book end assignment in CRJU 3060 and CRJU 4930.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**

- **Measure:** Critically Assess Ethical Issues in Criminal Justice | **Outcome/Objective:** Identification of ethical issues

**Implementation Description:** The committee will solicit feedback from existing instructors and develop a series of rubrics for faculty consideration.

**Responsible Person/Group:** CTW Ambassador, ad-hoc CTW committee, section instructors

**Additional Resources:** none

---

**Implement Book End Assignment across CRJU 3060 and 4930**

The ad-hoc CTW committee will propose a critical thinking writing assignment to be completed by students in CRJU 3060 and then again in CRJU 4930. Such an assignment will allow for improved within and across student tracking of progress.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**

- **Measure:** Analysis of Criminological/Criminal Justice (CJ) Issue Essay | **Outcome/Objective:** Application and analysis | Demonstrate knowledge and ability to synthesize information | Generation of conclusions | Identify and state topical issues or hypotheses | Written communication
- **Measure:** Critically Assess Ethical Issues in Criminal Justice | **Outcome/Objective:** Identification of ethical issues

**Implementation Description:** Ad-hoc CTW committee will seek to adapt the existing Ethics in CJ revision assignment to allow for it to be replicated in both CRJU 3060 and 4930. Corresponding rubrics will be proposed to the faculty to allow for uniform within and across student assessment over time.

**Responsible Person/Group:** CTW Ambassador, ad-hoc CTW Committee and section instructors

**Additional Resources:** none

---

**Revisit CRJU 4930 Rubric**

An ad-hoc CTW committee has been formed within the department to consider revisions to the rubric used for the Critical Issue Essay in CRJU 4930. We anticipate proposing to the faculty a series of more flexible rubrics that allow the assignment to be built and submitted in pieces over the course of the term as opposed to using a single complete draft submission process. This should allow for more nuanced feedback to students and make better use of CTW writing consultants.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High

**Relationships (Measure | Outcome/Objective):**

- **Measure:** Analysis of Criminological/Criminal Justice (CJ) Issue Essay | **Outcome/Objective:** Application and analysis | Demonstrate knowledge and ability to synthesize information | Generation of conclusions | Identify and state topical issues or hypotheses | Written communication

---
**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

The CTW Ambassador, section faculty, and CTW writing consultants worked to improve communication, training, and better use of the rubric for CRJU 4930. CRJU 4930 showed improvement in both their rubric scores on the inital submission and the majority consistently showed within student improvements across the two submissions of the paper.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

Students in CRJU 4930 showed within student improvement across all sections, rubric scores improved from 2010-2011 to 2011-2012. Tracking of improvements over the two paper submissions in CRJU 4930 suggest consistent advances in the quality of thinking and writing.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**

We are moving to revise our use of rubrics in CRJU 4930 to provide instructors with more flexibility on the Critical Issue Essay. This approach will also encourage use of rubrics in the other assignments in the class. We are also moving to develop a set of rubrics for use in CRJU 3060. These combined efforts will improve student feedback and allow for the implementation of a book end assessment of the students' critical thinking through writing. Clearly, we need to work to generate better results in the assignments within the CRJU 3060 course. We will expand the assessment next year to include multiple instructors.

**CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?**

The creation of an ad-hoc committee signaled increased attention to the department's CTW efforts. We have achieved a level of proficiency in adding faculty and writing consultants to the CTW initiative and now need to work on tracking student improvement across semesters not just within semesters. Added momentum is clearly present heading into this year.

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We managed to institute uniform assessment efforts in CRJU 3060. While the results of the data analysis were not positive, we were able to collect data and identify the need for more systematic efforts in the class.

**ACADEMIC PROGRAM QUESTION 2:**

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

We have formed an ad-hoc committee to assess the rubrics and assignments offered in CRJU 3060 and CRJU 4930. This will allow a close look at how we approach CTW locally and globally and surely produce well crafted changes.

**ADMINISTRATIVE DEPT QUESTION 1:** Explain how your department used the results from the previous cycle’s (2010-2011) assessment. What actions did you take this past year based on the results from the previous cycle? What changes did you make as a result?

Upon reflecting on the poor outcomes in CRJU 3060 and our continued lack of within student assessment across semesters we have formed an ad-hoc committee to fully review the CTW and assessment efforts of the department.

**ADMINISTRATIVE DEPT QUESTION 2:**

What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department’s effectiveness?

We seem to be achieving solid outcomes in CRJU 4930 due to the standardized approach and consistent delivery of the assignments across instructors. That said, we do not effectively engage students in CTW efforts early in their degree and need to craft means of doing so. We hope that a book-end assignment and the creation of rubrics for CRJU 3060 will significantly aid in this regard.

**ADMINISTRATIVE DEPARTMENT QUESTION 3:**

How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

They will be reviewed by the ad-hoc CTW committee to craft potential improvements moving forward.

**Annual Report Section Responses**

**Most Important Accomplishments for Year:** Briefly describe the major things you accomplished over the past year. Be sure to note previous Action Plans that were executed this year, plus any accomplishments that are not otherwise mentioned in your outcomes reporting.

Implementing systematic data collection for CRJU 3060 and forming an ad-hoc CTW committee

**Challenges for Next Year:** Briefly describe any special challenges (related to budget, personnel, increased standards, new projects, new expectations, etc.) that you will be facing during the next reporting cycle that might affect your department's outcomes.
Developing revised CTW rubrics and assignments for CRJU 4930. Creating user-friendly assignments and rubrics for CRJU 3060. Selling the faculty on the use of new/revised rubrics and a book-end assignment across 3060 and 4930.

**Modifications in Intended Outcomes**—If you modified any of your intended outcomes since the previous reporting cycle, please note those here.
We increased our goals for the CRJU 4930 Critical Issue Essay and while not fully reaching them, did see improvements over last year's performance.

**Modifications in Measurement Methods**—If you modified any of the measures or methods you use in the measurement process, please note those here.
Same as above question

**University-wide Committee Participation**—Use this space to document any staff participation on University-wide committees (e.g., University Senate).
none

**Publications and Presentations**—Note in this section any articles published or presentations made at professional conferences by staff.
none

**Academic Teaching Activities**—If the staff participated in teaching (or assisted in the teaching of) academic courses as part of their responsibilities to the department, please note that here.
N/A

**International Activities**—Note here any international activities of the department or its staff.
none

**Contributions to Student Retention**—Please discuss here any direct or indirect contributions your department has made to the retention, progression, or graduation of students.
see report from undergraduate coordinator on full department efforts

**Service to the External Community**—Note here any initiatives or activities of your department that impact the external community (e.g., providing assistance to needy populations).

**Assessment Data by Section**

**2011-2012 CTW Early Childhood Education**

*As of: 12/12/2016 04:41 PM EST*

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

**Mission / Purpose**

In Early Childhood and Elementary teaching, critical thinking is essential for evaluating teaching methods, advocating for "best practices," considering student assessment data, and expanding theory and practice to account for a variety of socio-cultural influences on children's development and learning. In addition to meeting the requirements of the University’s CTW policy, we have aligned our CTW courses with specific American Psychological Association (APA) recommendations related to the development of critical thinking skills in the undergraduate Bachelor of Science in education (hereafter referred to as BSE) program. We operationally define and assess critical thinking as outlined by the APA, such as students' ability to "evaluate the quality of information, including differentiating empirical evidence from speculation," "use reasoning to recognize, develop, defend, and criticize arguments and other persuasive appeals," and "demonstrate an attitude... of persistence, open-mindedness, tolerance for ambiguity, and intellectual engagement" (APA, 2007, p. 15).

**Goals**

**G 1: Informed teachers who evaluate information**

1. Our graduates will be informed teachers who “evaluate the quality of information, including differentiating empirical evidence from speculation” (APA, 2007, p. 15).

**G 2: Informed teachers who use reasoning to recognize, develop, defend, and criticize**

1. Our graduates will be informed teachers who “use reasoning to recognize, develop, defend, and criticize arguments and other persuasive appeals” (APA, 2007, p. 15).

**G 3: Informed teachers who demonstrate attitude of persistence, open-mindedness, tolerance for ambiguity and intellectual engagement**

1. Our graduates will be informed teachers who “demonstrate an attitude of persistence, open-mindedness, tolerance for ambiguity and intellectual engagement” (APA, 2007, p. 15).

**Student Learning Outcomes/Objectives**

**SLO 1: Demonstrate developing awareness and use of evaluation methods to think critically in hybrid learning environments (G: 1) (M: 1)**

Our graduates will be able to demonstrate developing awareness and use of evaluation methods to think critically in hybrid learning environments
General Education/Core Curriculum Associations

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 2: Recognize, develop, defend, and criticize arguments based on experiences, readings, and conversations (G: 2) (M: 1)

Our graduates will be able to recognize, develop, defend, and criticize arguments based on experiences, readings, and conversations.

General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 3: Demonstrate an attitude of persistence, open-mindedness, tolerance for ambiguity and intellectual engagement (G: 3) (M: 1)

Our graduates will be able to demonstrate an attitude of persistence, open-mindedness, tolerance for ambiguity and intellectual engagement through writing, revision, and collaborative experiences that support the exploration of their literacy pedagogy, practice, and current trends and issues impacting education.

General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Measures, Targets, and Findings

M 1: Measure for Early Childhood Education BSE CTW Assignments (O: 1, 2, 3)

Aligning our measure with our goals and objectives, critical thinking indicators are presented in rubric format. The rubric is broken down by objective to allow for greater instructor understanding of evidence of critical thinking. Each CTW assignment was assessed for evidence of critical thinking using this measurement scale. Please see Measurement Scale for Early Childhood Education BSE Program attached.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Demonstrate developing awareness and use of evaluation methods to think critically in hybrid learning environments

At least 50% of students will score a 5 on the Measurement Scale for Early Childhood education BSE CTW Assignments.

Findings 2011-2012 - Target: Met

For each CTW assignment we exceeded our target of 50% of students scoring a 5 on the measurement scale demonstrating developing awareness and use of evaluation methods to think critically in hybrid learning environments. Assignment 1: Exploring Children's Literature (see Slide #5 & 6 of attachment Exploring Children's Literature - Measurements and Findings for delineated information and growth over time). Seventy-four percent of students mastered indicator 1, aligned specifically with Outcome 1. Additionally, 80% of students mastered indicator 2, aligned specifically with Outcome 1. Assignment 2: Literacy Autobiography (see slide #5 & 6 of attachment Literacy Autobiography - Measurements and Findings for delineated information and growth over time). Seventy-one percent of students mastered indicator 1, aligned specifically with Outcome 1. Additionally, 79% of students mastered indicator 2, aligned specifically with Outcome 1. Assignment 3: Literacy Outreach (see slide #5 & 6 of attachment Literacy Outreach - Measurements and Findings for delineated information and growth over time). Seventy-four percent of students mastered indicator 1, aligned specifically with Outcome 1. Additionally, 80% of students mastered indicator 2, aligned specifically with Outcome 1.

Target for O2: Recognize, develop, defend, and criticize arguments based on experiences, readings, and conversations
At least 50% of students will score a 5 on the Measurement Scale for Early Childhood education BSE CTW Assignments.

**Findings 2011-2012 - Target: Met**

For each CTW assignment we exceeded our target of 50% of students scoring a 5 on the measurement scale recognizing, developing, defending, and critiquing arguments based on experiences, readings and conversations. Assignment 1: Exploring Children's Literature (see Slide # 7 of attachment Exploring Children's Literature - Measurements and Findings for delineated information and growth over time), sixty-one percent of students mastered indicator 3, aligned specifically with Outcome 2. Assignment 2: Literacy Autobiography (see slide # 7 of attachment Literacy Autobiography - Measurements and Findings for delineated information and growth over time), fifty-nine percent of students mastered indicator 3, aligned specifically with Outcome 2. Assignment 3: Literacy Outreach (see slide # 7 of attachment Literacy Outreach - Measurements and Findings for delineated information and growth over time), sixty percent of students mastered indicator 1, aligned specifically with Outcome 2.

**Target for O3: Demonstrate an attitude of persistence, open-mindedness, tolerance for ambiguity and intellectual engagement**

At least 50% of students will score a 5 on the Measurement Scale for Early Childhood education BSE CTW Assignments.

**Findings 2011-2012 - Target: Met**

For each CTW assignment we exceeded our target of 50% of students scoring a 5 on the measurement scale demonstrating an attitude of persistence, open-mindedness, tolerance for ambiguity and intellectual engagement. Assignment 1: Exploring Children's Literature (see slide # 8 of attachment Exploring Children's Literature - Measurements and Findings for delineated information and growth over time), sixty percent of students mastered indicator 4, aligned specifically with Outcome 3. Assignment 2: Literacy Autobiography (see slide # 8 of attachment Literacy Autobiography - Measurements and Findings for delineated information and growth over time), fifty-one percent of students mastered indicator 3, aligned specifically with Outcome 2. Assignment 3: Literacy Outreach (see slide # 7 of attachment Literacy Outreach - Measurements and Findings for delineated information and growth over time), sixty percent of students mastered indicator 1, aligned specifically with Outcome 2.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Change rubric to reflect two critical thinking categories.**

In looking at the scores, we realize that they may skew high because two critical thinking criteria were collapsed into one rubric category. By dividing the criteria into two categories, we feel that next year’s scores will be a more accurate depiction of student critical thinking development.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Finished
- **Priority:** High
- **Implementation Description:** Beginning in Fall 2010, we will create 2 categories of rubric descriptors to better capture critical thinking in our students.
- **Projected Completion Date:** 05/2011
- **Responsible Person/Group:** CTW ambassadors in consult with faculty
- **Additional Resources:** none
- **Budget Amount Requested:** $0.00 (no request)

**Encourage instructors to design CTW assignments that best fit their curriculum, including multimodal and digital products.**

In 2010, the BSE adopted the NET Standards to improve teacher and student use of technology as meaning-making tools. To meet these standards, preservice teachers will need more experience working with a variety of technology and software to develop and express critical thinking. In 2010-2011, we used online sites for students to explore and evaluate children’s literature and to engage in ongoing discussions about teaching practices and education policy. To help students understand multimodal composition, we created the Compass Rose assignment, which asked them to work in image and words to express their critical thinking about literacy and literacy instruction. This multimodal composition work will translate directly into digital multimodal compositions that they will create later in their teacher preparation program.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Finished
- **Priority:** High
- **Implementation Description:** CTW ambassadors and faculty will work together to integrate technology into CTW assignments.
- **Projected Completion Date:** 05/2011
- **Responsible Person/Group:** CTW ambassadors and faculty
- **Additional Resources:** none
- **Budget Amount Requested:** $0.00 (no request)

**Implement formal workshops at the start of each semester for new CTW faculty and consultants.**

As our BSE program expands, faculty and ambassadors recognize we cannot rely on prior knowledge of our faculty and consultants. We need a formal structure to assure the continued quality of our CTW component.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** In-Progress
- **Priority:** High
- **Implementation Description:** Starting Fall 2010, we will implement a more formal workshop that will allow faculty and consultants to practice and review writing pedagogy-informed techniques as well as conceptualizations of critical thinking. This action plan was initiated during the 2010-2011 year; however, since we had returning CTW instructors and consultants, there was no need for formal workshops. Instead, we held informal meetings to gauge the progress of the initiative.
- **Projected Completion Date:** 05/2013
- **Responsible Person/Group:** CTW ambassadors
- **Additional Resources:** none
- **Budget Amount Requested:** $0.00 (no request)
Structure CTW consultant training by requiring prior experiences

We continue to see the consultant role as paramount to the success of the CTW initiative in ECE. The intense, one-on-one feedback students receive from the consultant, coupled with the writing relationship established between student and consultant, is not only crucial for critical thinking development but also models for pre-service teachers effective pedagogical practice. We have seen a marked difference in the quality of the CTW experience for students who had a working relationship with a CTW consultant well versed in course content versus students who did not have a working relationship with the consultant fostered through in-class mentoring. Because of the difference in the quality of experience for students, we are introducing pre-requisites for our CTW consultants. CTW consultants will need to demonstrate experience in either teacher development or writing pedagogy. Qualifying experience may be WAC and/or National Writing Project participation or their equivalent, or enrollment in or completion of ECE 8400-Teacher Development or ECE 9400-Academic Writing or their equivalent. By requiring these pre-requisites, we hope to mentor CTW consultants to provide on-going and effective support to our undergraduate students while also improving their own teacher development skills. We implemented this plan during the 2010-2011 year but did not need to attend to it because our CTW consultants had been working with us for two years. However, since they either graduated in 2011 or will graduate in 2012, we will need to fully implement this action plan during the 2012-2013 year.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the CTW were problematic? What assistance might you need to address those areas?

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Because our CTW assignments are longitudinal across the semester, we are able to use our critical thinking measure (attached), embolded in assignment rubrics, to better understand growth over time. As indicated in the data attached for each assignment, evidence of critical thinking in each outcome improved throughout the school year.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

Because CTW consultants roles are seminal in our ECE 3601 courses, we need strong CTW consultants who are both familiar with our program and philosophy as well as how to support BSE students image of self-as-writer and teacher-of-writer. Rotating CTW consultants has proven to be problematic when not fully prepared for the responsibility. A pipeline of strong CTW consultant recommendations would be beneficial.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your
department made to the CTW initiative since last year’s CTW Assessment Report?

As mentioned in CTW Reflection Question #3, the CTW program has helped us reconceptualize the types of writing support we offer students enrolled in our BSE Program. Over the past year we designed, researched and piloted a Writing Support Program for students who may benefit from receiving extra support in the form of a Writing Mentor. The BSE Writing Mentor provides one-on-one writing support for applying and referred pre-service teachers. The Writing Mentor focuses on all aspects of written composition, including content, organization, vocabulary, sentence structure, and mechanics. To support students’ writing development over the course of their certification program, the Writing Mentor is available to students across multiple semesters. The Writing Mentor serves two purposes – to help students develop their own writing abilities and, through the process of teaching and learning, to provide a model for strong writing pedagogy. The Writing Support Program received anecdotal reports that the experience increased students’ self-confidence related to writing, increased academic success in courses, and empowered students to see themselves as writers and teachers of writers. Given this success, and continued need to support our BSE students through writing development, we have expanded the Writing Support Project to include a Grammar, Usage, and Mechanics (GUMs) seminar to be unveiled in the Fall of 2012. These seminars will be specifically tailored to the unique strengths and needs of students enrolled in the BSE program. It is critical for pre-service teachers who will be facilitating literacy learning in elementary classrooms to be fluent in grammar usage and mechanics, as well as effective written expression. As an extension of CTW, we see the Writing Support Program impacting our students throughout their time in our Program in addition to their CTW coursework. We plan to implement the GUMs seminar in a Pilot program this Fall and continual expand upon the strengths of the program. The Writing Mentor is a skilled writer, and served as a CTW consultant for years while obtaining her PhD. Having worked closely with students in the BSE Program as a CTW Consultant our Writing Mentor is poised to help our students become strong writers and teachers of writers. As we believe this support is seminal, we have collected data over the past year, and continue to do so to secure funding for a full-time Writing Mentor position and permanent Writing Support Program. We hope to feature this unique program on our website soon.

Georgia State University

Assessment Data by Section

2011-2012 CTW Early Childhood Education (Birth through Five)

As of: 12/12/2016 04:41 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose

The Birth to Five program in the Department of Early Childhood Education considers critical thinking to be an important aspect of teacher education. We define critical thinking as a disposition toward thoughtful consideration of detail, evaluation of evidence, analysis of broad perspectives, and synthesis determined by a careful mix of cited and subjective conclusions. In teaching young children (birth to kindergarten), critical thinking is essential for understanding children’s development and learning, evaluating teaching methods, advocating for “best practices,” considering student assessment data, and expanding theory and practice to account for a variety of socio-cultural influences on children’s development and learning. It is only through critical thinking processes that the teacher understands the impact of his or her behavior in relation to a child’s behavior and development.

Goals

G 1: Analysis

Students will accurately analyze their literacy and language experiences and beliefs as they relate to their personal language and literacy philosophies.

G 2: Application of Academic Knowledge

Application Students will utilize critical thinking skills to apply information gleaned from in-class experiences and course readings to professional and ethical situations that require thoughtful analysis, evaluation, and application.

G 3: Develop a Personal Philosophy

Students will utilize their personal experiences and beliefs, course lectures and readings, and previous research to generate a personal philosophy about children’s early language and literacy development. Students’ emergent literacy and language philosophies will focus on both (1) how children develop these skills as well as (2) the best ways to promote such learning. Specifically, students are encouraged to detail pedagogical approaches to assist children in achieving strong language and literacy achievement.

Student Learning Outcomes/Objectives

SLO 2: Language and Literacy Philosophy (G: 3) (M: 3)

Students will critically reflect on their beliefs and experiences surrounding literacy and language development and pedagogy. They will utilize course material (i.e., readings, lectures, practicum experiences and in class experiences) to develop an insightful language and literacy philosophy. Full Description In order to teach literacy, teachers must be readers and writers. We need to have opportunities as professionals to examine our own lives, our own literacy practices, and to do so in a context that helps connect these experiences to our roles as teachers and learners. To help you begin making these connections, you will be observing structured learning environments in the community, reading scholarly books and articles, and adding to your understand through course lectures and discussions. Your emergent literacy and language philosophy is a 2-5 page essay describing your philosophy about literacy and language instruction for children from birth to age five. As you write your philosophy, think about your own educational experiences, beliefs, and understanding related to the way literacy and language should be taught and the way literacy and language are best learned. Think about your beliefs related to how children become literate and support your thinking with examples and research.

General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.
Measures, Targets, and Findings

O/O 1: Critical Thinking and Application of Material (G: 2) (M: 2)

Students will critically reflect on course material (i.e., readings, lectures, and in class experiences) and apply this knowledge to scenarios and situations that require thoughtful analysis, evaluation and application. Short Description: Professional Reflection/Quick Writes provide the opportunity to use critical thinking and apply the readings and in-class experiences to new situations that require thoughtful analysis, evaluation and application. Each Quick Write will ask you to take informed and supported stance on a current issue, professional dilemma or new situation that you will encounter as an early care and education professional. You will receive a "writing prompt or scenario" for each Quick Write. For example, a prompt may ask you to write a letter to your legislator supporting a childcare funding bill. The first draft of each Quick Write will be completed in class over 20-30 minutes. You may use a laptop computer to create a word processed document in class or you may submit a neatly handwritten draft. The draft will be turned in to the instructor who will use the rubric below to provide feedback and suggestions for improvement directly on the draft with the aim of deepening your thinking about the topic. Feedback may include suggestions about how/where to add examples, use citations, more directly address the prompt, evaluate and acknowledge your biases and subjectivities, as well as edits for spelling, grammar, etc. You will resubmit the second draft to the instructor by an assigned due date (see syllabus). A final grade will be awarded to the second, resubmitted draft. Each Final resubmitted draft of the original Quick Write should be a minimum of 1 double-spaced page (12 font) and will be worth 10 points.

General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Institutional Priority Associations

2 Student promotion and progression

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Strategic Plan Associations

1.3 Implement an Undergraduate Signature Experience.

Other Outcomes/Objectives

M 2: Professional/Ethical Quick Write Rubric (O: 1)

Criteria Excellent (2 points) Satisfactory (1 points) Unsatisfactory (0-.5 points) Purpose Fully reflects on the issue/critically discusses the dilemma posed Reasonsably reflects on the issue/generally discusses the dilemma posed Surface treatment of the issue at hand and/or failure to address dilemma/problems posed Support & Citations Strong use of course-related texts to support stance; uses citations appropriately Statements drawn from readings are over generalized or under analyzed; uses citations haphazardly Unjustified assumptions and/or opinions; little evidence that class topics/texts are understood; lack of citations or incorrect citations Evidence Uses specific examples and/or strategies to support stance An example or strategy was provided in support stance No examples or strategies used to support stance Communication & Reader Engagement Easy to read; avoids meaningless jargon; writer clearly wants to engage reader Some errors make it harder to read; writer sometimes shows awareness of reader Errors make reading difficult; writer shows no awareness of reader and makes no attempt to engage reader’s interest Inquiry & Flexibility Considers complex alternatives; creatively applies ideas to new situations Differing views are considered; some evidence ideas are applied to new situations Other views are not understood or considered; does not apply ideas to new situations Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Critical Thinking and Application of Material

Students will apply their in class knowledge in generating a convincing argument. By the end of the semester, students will consistently perform in the excellent range on assignments, achieving a score of 8/10 (80%) or higher.

M 3: Emergent Literacy and Language Philosophy (O: 2)

To teach literacy, teachers must be readers and writers. We need to have opportunities as professionals to examine our own lives, our own literacy practices, and to do so in a context that helps connect these experiences to our roles as teachers and learners. To help preservice teachers begin making these connections, they observe structured learning environments in the community, read scholarly books and articles, and participate in course lectures and discussions about literacy and language learning. The emergent literacy and language philosophy is a 2.5-page essay describing preservice teachers’ language and literacy instructional philosophy for children from birth to age five. As students write their philosophy, they are encouraged to think about their own educational experiences, beliefs, and understanding related to the way literacy and language should be taught and the way literacy and language are best learned. Specifically, teachers are encouraged to think about their beliefs related to how children become literate and are
asked to support their thinking by citing relevant research and personal, classroom experiences. Criteria Strong (5-6 points) Satisfactory (2-4 points) Unsatisfactory (0-1 points) Purpose The purpose of the paper is clear. The author effectively captures and reflects on constrained and unconstrained skills argument. Clear purpose. Reflects on the constrained and unconstrained skills generally. Surface treatment of constrained and unconstrained issue. Fails to adequately identify purpose of argument. Support & Citations Strong use of course-related articles and texts to support argument; uses citations appropriately Statements drawn from readings are either under or over generalized. Citations are not consistently used Unjustified assumptions and/or opinions; little evidence that class topics/texts are understood; lack or incorrect use of citations Evidence Examines the evidence and questions/probes its accuracy and relevance. Identifies not only the basics of the issue, but recognizes nuances of the issue or author's viewpoint. Examines the evidence in general terms but without substantial referent to research support or connection with other readings. Little understanding of the issues demonstrated. Fails to distinguish between fact, opinion, and value judgments. Communication & Reader Engagement Paper is easy to read and intent is clearly understood; avoids meaningless jargon Some errors make it harder to read; writer sometimes shows awareness of reader Errors make reading difficult; writer shows little awareness of reader and little attempt to appropriately engage reader's interest Inquiry & Flexibility Considers complex alternatives to problems posed. Creatively applies ideas to new situations or examples. Differing views are considered; some evidence of these ideas are applied to new situations Other views are not understood or considered; does not apply ideas to new situations Total Score: /30

Source of Evidence: Written assignment(s), usually scored by a rubric

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Constrained/Unconstrained Action Plan
Students performing on this objective was high. The utilization of class time and the opportunity to receive feedback on drafts assisted students in demonstrating strong analysis skills. For future assignments, the opportunities to receive feedback on their drafts will be continued. However, as currently implemented, the provision of faculty feedback on multiple drafts presents a significant time and resource challenge to the course instructor. To help alleviate some of these challenges, opportunities for peer feedback and discussion will be offered to allow students opportunities to interact with and learn from peers through the writing process.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Implementation Description: Professional Development opportunities will be offered to the course instructor around the use of collaborative feedback groups to supply comments and critical analysis of student drafts.
Responsible Person/Group: B-5 CTW consultant
Additional Resources: None

Emergent Language and Literacy Philosophy Evaluation
Student performance on this objective was high for the first semester of implementation. The utilization of class time and the opportunity to receive feedback on drafts assisted students in thinking about their emergent literacy and language development philosophies. In addition, students' practicum experiences and work placements allowed them to make clear connections between theory and practice. Although students did rather well on this assignment, we will be studying students' writing as part of the emergent literacy and language philosophy assignment. We will look at first, second and third drafts to determine the amount of support, feedback and length of time required to meet our performance objectives. In addition, we wonder if more time to reflect might improve the quality of student work.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High
Relationships (Measure | Outcome/Objective): Measure: Emergent Literacy and Language Philosophy | Outcome/Objective: Language and Literacy Philosophy
Implementation Description: We plan to study this assignment in order to determine whether more time to revise drafts produces significantly higher CTW gains (i.e., given a shortened semester is summer the best time to implement this assignment?). We will continue to offer students' significant feedback on their drafts and will also build in opportunities to have them give and receive peer feedback through in class discussions and small group work.
Responsible Person/Group: Gary Bingham & Laura Meyers
Additional Resources: None

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
We made considerable progress toward improving clarity and impact of our CTW goals during 2011-2012. We continued our re-envisioning process by fine-tuning our assignments to clearly align with course outcomes and professional standards for the Language, Literacy, and Cognition course (BTFV 4370) and the Professional Development and Ethics (BFRV 3250) course. Slight changes were made to assignments to make expectations and grading criteria more clear. In addition, we adopted an electronic submission system (e.g., LiveText) that made submitting and grading students work more efficient and which provided students with timely and specific feedback on drafts. In addition, based upon student performance and feedback from the previous year, we deleted the research article review assignment from the B-5, Language, Literacy and Cognition course (BTFV 4370) and the Professional Development and Ethics (BFRV 3250) course. Slight changes were made to assignments to make expectations and grading criteria more clear. In addition, we adopted an electronic submission system (e.g., LiveText) that made submitting and grading students work more efficient and which provided students with timely and specific feedback on drafts. In addition, based upon student performance and feedback from the previous year, we deleted the research article review assignment from the B-5, Language, Literacy and Cognition course (BTFV 4370) and the Professional Development and Ethics (BFRV 3250) course.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
Student learning was evidenced by student improvement from first drafts to final drafts on the Emergent Literacy and Language Philosophy paper and Professional and Ethical Practice Quick Writings. Students significantly improved their Emergent Literacy and Language Philosophies during the redrafting process. Specifically, students, on average, improved their scores roughly 45% points. This increase was slightly higher than last year's increase. Learning was also evident in students' responses to the Professional and Ethical Practice Quick Write assignments. Students made significant progress from first drafts to final drafts. This was evidenced by 90% of students achieving assessment targets (a 9 out of 10) on the quick write assignments on their final drafts. In addition to
Student Learning Outcomes/Objectives

Goals

G 1: relate economic theory to policy
Students will recognize how economic theory relates to policy.

G 2: relevance of classical assumptions in economics
Students will recognize the relevance of classical assumptions in economics, and how they may not apply in reality yet can still be a useful point of departure.

Student Learning Outcomes/Objectives

SLO 1: ECON 4999: Book Review (G: 1, 2) (M: 1)
Students will demonstrate the ability to recognize and apply economic concepts by reviewing a book that is not primarily an economics book. Examples of such books include 1984, Confessions of an Economic Hitman, and The Firm. The individual book review will require the student to explore topics in economics that he or she is interested in and choose a book to read (with instructor approval) and thoroughly review. The review should be done in 5-6 pages, incorporating 2-3 economic concepts and provide a detailed, thoughtful analysis of the book, not simply a summary. There will be multiple drafts where the instructors will provide feedback. Students will be required to address any concerns the instructor has in subsequent draft. In particular, the student will be graded on the following components of the book review: the introduction, explanation of the book, application of at least two economic concepts to the book, structure of the review, valid opinion and conclusion, and references (graded also through citing sources accurately and not plagiarizing). The assignment is the book review in Econ 4999. Students submit the two drafts and a final
book report. We give them feedback on each draft. Our fairly detailed comments (feedback) are issues we expect them to fix before the next submission cycle. The grading is based on a rubric (the same one we have used for the past several years). We maintain a copy of the comments we give on each draft. We use these comments to assign ratings on each of the seven criteria (introduction, explanation of the book, economic concepts, etc.) of the assignment. We rated the drafts and the final report based on the rubric (on a scale of 1 – 4)

### SLO 2: ECON 3900: Short Assignment 1 (G: 1, 2) (M: 2)

Respond to prompts about applications of macroeconomic theory. See attachments for an example of such an assignment.

### Relevant Associations:

### Measures, Targets, and Findings

#### M 1: ECON 4999 Book Review Rubric (O: 1)
See attached document for the rubric for the ECON 4999 book review. Each of the first 2 book review drafts is rated based on the criteria outlined on the rubric (i.e. Introduction, Book explanation, Economic Concepts, Structure of the book review, and valid opinion/conclusion). The Critical Thinking components of the assignment are mainly embedded in the "economic concepts" and "valid opinion" parts of the assignment. So we pay closer attention to these components. Our measures are based on the ratings on each of these components. A "1" is assigned for "missing information", a "2" for "incomplete or lack of clarity", a "3" for "complete but needs minor revision" and a "4" for "complete, appropriate, no changes needed". We measure progress in critical thinking (between drafts) by the changes in ratings on the Critical thinking components of the assignment (economic concepts and valid opinion) as well as overall book review grade.

Source of Evidence: Capstone course assignments measuring mastery

#### Target for O1: ECON 4999: Book Review

We measure progress in critical thinking (between drafts) by the changes in ratings on the Critical Thinking components of the assignment (economic concepts and valid opinion) as well as overall book review grade. We set the following specific targets:
1. On the first draft of the book review, at least 75 percent of students should make an average rating of 2.5 (on a scale of 1-4) or higher.
2. On the second draft of the book review, at least 75 percent of students should make an average rating of 2.5 (on a scale of 1-4) or higher.
3. On the final book review, at least 75 percent of students should make an average rating of 3.0 (on a scale of 1-4) or higher.
4. On the first draft, at least 60 percent of students should make a rating of 2 (on a scale of 1-4) or higher.

#### Findings 2011-2012 - Target: Partially Met

We did not meet Target 1 (52 percent meet the threshold rating of 2.5). We met Target 2 (about 85 percent of students meet the threshold rating of 2.5). We met Target 3 (about 98 percent of students meet the threshold rating of 3.0 on the final book review). We met Target 4 (76 percent and 97 percent made the 2.0 rating threshold on "economic concepts" and "valid opinion" parts of the book review in the first draft). We met Target 5 (about 64 percent and 85 percent made the 3.0 rating threshold on "economic concepts" and "valid opinion" parts of the book review in the first draft).

On the final paper, 100 percent of students made a rating of 3 or higher on "economic concepts" and 98 percent of students made a rating of 3 or higher on "valid opinion". We are pleased with these results.

#### M 2: ECON 3900 Short Assignment 1 Rubric (O: 2)
See attached rubric.

Source of Evidence: Written assignment(s), usually scored by a rubric

#### Target for O2: ECON 3900: Short Assignment 1

We would like to see students earn an average of at least 3 on the 5 point scale of the various components of the rubric. We would like to see improvement as students progress through the course.

#### Findings 2011-2012 - Target: Met

The average rubric scores were generally at least a 3 or better. Many students showed improvement as they progressed through the course. See the attachment for more details.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**incorporate Critical Thinking Through Writing (CTW) elements into two required major courses**

The economics department plans to incorporate Critical Thinking Through Writing (CTW) elements into the following two required major courses: ECON 3900 (Macroeconomics) and ECON 4999 (Senior Capstone in Economic Policy). The CTW components, embedded in problem sets for ECON 3900 and a book review and quizzes in ECON 4999, require the students to assess and evaluate concepts in economics as they relate to the real world and to be able to recognize (1) how economic theory relates to policy and (2) how many classical assumptions in economics do not apply in reality yet can still be a useful point of departure. All CTW assignments will be redone after students incorporate the feedback they have been given by the instructor.

Established in Cycle: 2009-2010  
Implementation Status: Finished  
Priority: High

**Set more specific targets and establish more formal assessment reporting procedures**

Formal targets were not set this year. There were many different instructors for ECON 3900, and each of them had slightly different approaches to working CTW into their course, although all of them were appropriately working it into their course in some way. The ECON 4999 has more consistency across sections in terms of which specific assignments are done and how they are reported. More discussion needs to take place to set specific targets and more formal assessment reporting procedures for the ECON 3900 course.
working with CTW consultants

Several CTW instructors have expressed concern about the ability of CTW consultants to provide good and clear feedback to students on CTW assignments. Often times their comments on assignments are not clear or are written in a way that does not encourage students' critical thinking. But even more concerning for Economics CTW instructors is that they don't get to keep the same CTW consultant for more than a few semesters (at best). Most of our CTW consultants are Masters students (often in their second year). So going forward, we need to think about the most effective ways to train consultants so that instructors do not have to train a new consultant every semester.

get more assessment data for ECON 3900

This year, we only got assessment data from one ECON 3900 instructor. In the future, we want to get more instructors actively involved in the assessment of ECON 3900.

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - How do these relate to the Action Plans that you specified last year?

We have less turnover with the ECON 3900 course as in previous years, so this is an improvement and was part of previous years’ action plans. There are still several different instructors for the course, but at least all of them have taught it as a CTW course in the past already. The ECON 4999 course still has more consistency across sections because that course is team taught by the same two instructors every semester. We still have an issue with turnover of CTW consultants, and will continue to monitor that issue.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

We can see improvement in the ECON 4999 course on the average scores overall and on the 2 components of critical thinking we focus on in the book review (the "economic concepts" and "valid opinion" parts of the rubric) as students move from earlier drafts to the final drafts. We have not tried to match up student performance in the ECON 3900 course and the ECON 4999 course. We may be able to do that in the future. We will discuss it with the Undergraduate Program Committee.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

We still have issues with turnover of CTW consultants. It would probably be nice to have more similarity across sections of ECON 3900, but that is more difficult to achieve than in the ECON 4999 course, where the course is team taught by the same instructors every semester.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

In general, it is nice to see our faculty discussing topics related to teaching and student learning. More of them are warming up to the ideas behind the CTW initiative. More students are aware of it as well. Feedback from students has been quite good - they seem to recognize that we are trying to teach them important skills. We have not made changes to the CTW initiative since last year's CTW Assessment Report.
**Mission / Purpose**

The Department of English teaches students to read and write critically and creatively. Our Department also prepares students to pursue professional training in areas of English language studies, global and multi-ethnic literary and cultural studies, pedagogy, critical theory, creative writing, rhetoric and composition, professional and technical writing, and secondary education. Our practice of critical thinking fosters development in all of these areas. For English majors, critical thinking means reading texts from many perspectives and working towards the expression of an informed, valid, and persuasive understanding of the text.

**Goals**

**G 1: Critical Reading**
Undergraduate English majors are curious and critical readers who question what they read and test their ideas against textual evidence.

**G 2: Literary and Rhetorical Knowledge**
English majors understand and use a wide range of literary and rhetorical forms and conventions. They develop their own points of view within relevant literary, historical, and theoretical frameworks.

**G 3: Effective Writing**
English majors write clearly and persuasively and work towards judging the writing practices of other while developing their own individual voice or style.

**Student Learning Outcomes/Objectives**

**SLO 1: Comprehends a complex literary or rhetorical text (G: 1, 2) (M: 1, 2)**
Students successfully engage with the main ideas and arguments in a text and begin to think critically about the text. In the introductory CTW courses, English 3040 and 3050, students practice identifying genres, online personas, and elements of critical theory and rhetoric. This process of thinking through how writers use language and ideas in their discipline prepares students for more complex assignments, such as applying theory to literary texts or using rhetorical techniques in their own writing or podcasts.

**SLO 2: Questions ideas in a text (G: 1) (M: 3)**
Critical thinking means not just understanding the ideas in a text but questioning them as well. Students use evidence to test the ideas and critique the positions of other writers.

**SLO 3: Demonstrates literary or rhetorical knowledge (G: 2) (M: 2)**
Students demonstrate working knowledge of literary or rhetorical language and theory. Once students have practiced taking apart a text and identifying its central ideas or arguments, they work through assignments that ask them to evaluate or apply these ideas. The introductory classes ask students to identify elements of a genre or convention; in the Senior Seminars, students apply this knowledge to develop their own research projects or to produce their own creative work.

**SLO 4: Writes clearly, with an awareness of style and audience (G: 2, 3) (M: 4)**
Students write clearly and effectively, using language appropriate to the form or discipline. While all of the CTW assignments emphasize the process of thinking through how texts create meaning, they also require students to develop mastery in their own writing. The short assignments assessed through CTW, such as as the 1-2 page reading summaries or 2-3 page analyses of a pedagogical theory or poem, are especially designed for students to practice their writing. More advanced students should also demonstrate an awareness of how and why writers choose a particular style and approach. Students work towards this objective specifically in assignments that ask them either to defend the rhetorical elements in a piece of writing that they find compelling (English 3050 and 4320), to develop their own arguments in response to those of other writers (English 4300), or to write critiques of pieces of published poetry and fiction (English 4310a and b).

**Measures, Targets, and Findings**

**M 1: Engagement with ideas (O: 1)**
This measure is one of the key elements of our rubric. We measure engagement with ideas when students respond to a published book or on-line text, such as a blog or podcast.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Comprehends a complex literary or rhetorical text**

We expect all students to show competency with textual engagement; minimal competency means they will score a 2 or higher on our rubric scale. In both our introductory courses and our senior seminars, we expect 75% of students to score a 3 or higher, showing strong competency and some mastery of this skill. In the senior seminars, we are working towards a greater percentage of students who score a 4 and thus prove mastery of critical thinking skills.

**Findings 2011-2012 - Target: Met**

In the 3040 course, 62% scored a 4; 31% scored a 3. In the 3050 course, 47% scored a 4; 33% scored a 3. In 4310a courses, 53% scored a 4; 47% scored a 3. In 4310b courses, 38% scored a 4; 40% scored a 3. In 4300 courses, 38% scored a 4; 40% scored a 3. In the 4320 course, 65% scored a 4; 35% a 3. In the 4330 courses, 50% scored a 4; 50% scored a 3.

**M 2: Engagement with literary and rhetorical conventions (O: 1, 3)**

We measure critical thinking about the forms and genres of our discipline using one of the key categories of our rubric: engagement with conventions. Assignments through which we measure engagement with conventions include the analysis of the generic elements of literary or rhetorical work (English 3040 and 3050); the production of an annotated bibliography (English 4330); and the review of a book of poems (English 4310a).
Target for O1: Comprehends a complex literary or rhetorical text

We expect all students to show competency in understanding literary and rhetorical conventions; minimal competency means they will score a 2 or higher on our rubric scale. In both our introductory courses and our senior seminars, we expect 75% of students to score a 3 or higher, showing strong competency and some mastery of this skill. In the senior seminars, we are working towards a greater percentage of students who score a 4 and thus show mastery of critical thinking skills.

Findings 2011-2012 - Target: Met

Score 4: 3040 58% 41% 3050 21% 59% 4310a 35% 59% 4310b 46% 23% 4300 30% 60% 4320 47% 47% 4330 40% 55%

Overall, a percentage of our students scored lower than in the other categories. While we've still met our target, we'd like to see a greater percentage of students score 4s.

Target for O3: Demonstrates literary or rhetorical knowledge

We expect all students to show knowledge of and competency in using literary and rhetorical conventions; minimal competency means they will score a 2 or higher on our rubric scale. In both our introductory courses and our senior seminars, we expect 75% of students to score a 3 or higher, showing strong competency and some mastery of this skill. In the senior seminars, we are working towards a greater percentage of students who score a 4 and thus show mastery of critical thinking skills.

Findings 2011-2012 - Target: Met

In the 3040 courses, 47% scored a 4; 38% scored a 3. In the 3050 course, 8% scored a 4; 61% a 3. In the 4310a course, 47% scored a 4; 47% scored a 3. In the 4310b course, 60% scored a 4; 33% scored a 3. In the 4300 courses, 49% scored a 4; 32% scored a 3. In the 4320 course, 60% scored a 4; 33% scored a 3. In the 4330 courses, 70% scored a 4; 25% scored a 3. Overall, a percentage of our students scored lower than in the other categories. While we've still met our target, we'd like to see a greater percentage of students score 4s.

M 3: Judgement of ideas (O: 2)

We measure students' capacity to evaluate another writer's ideas and modes of expression through one of the key categories of our rubric: judgement. Assignments through which we measure this critical thinking skill include reviews and reading responses that take account of genre, audience, and style.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O2: Questions ideas in a text

We expect all students to demonstrate good judgement by questioning ideas presented in a text; minimal competency means they will score a 2 or higher on our rubric scale. In both our introductory courses and our senior seminars, we expect 75% of students to score a 3 or higher, showing strong competency and some mastery of this skill. In the senior seminars, we are working towards a greater percentage of students who score a 4 and thus show mastery of critical thinking skills.

Findings 2011-2012 - Target: Met

In the 3040 courses, 70% scored a 4; 21% scored a 3. In the 3050 course, 31% scored a 4; 43% scored a 3. In the 4310a course, 53% scored a 4; 29% scored a 3. In the 4310b course, 43% scored a 4; 43% scored a 3. In the 4300 courses, 41% scored a 4; 39% scored a 3. In the 4320 course, 60% scored a 4; 40% scored a 3. In the 4330 courses, 55%; 45% scored a 3. We consider this target met, even though the score for 3050 falls under 75% by one point. However, we had only one course for the year to collect data from; we believe that a larger data set would yield higher scores, ones that are more in line with our other introductory course (3040). In this category, we would like to see a greater portion of students to score 4s.

M 4: Effective Writing (O: 4)

Students communicate their ideas clearly in writing, showing an awareness of style and convention.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O4: Writes clearly, with an awareness of style and audience

We expect all students to write effectively and demonstrate an awareness of style and audience in their writing. Minimal competency means they will score a 2 or higher on our rubric scale. In both our introductory courses and our senior seminars, we expect 75% of students to score a 3 or higher, showing strong competency and some mastery of this skill. In the senior seminars, we are working towards a greater percentage of students who score a 4 and thus show mastery of critical thinking skills.

Findings 2011-2012 - Target: Partially Met

In the 3040 courses, 47% scored a 4; 38% scored a 3. In the 3050 course, 8% scored a 4; 61% scored a 3. In the 4310a course, 47% scored a 4; 47% scored a 3. In the 4310b course, 60% scored a 4; 33% scored a 3. In the 4300 courses, 49% scored a 4; 32% scored a 3. In the 4320, 60% scored a 4; 33% scored a 3. In the 4330 courses, 70% scored a 4; 25% scored a 3. We consider this category partially met because the 3050 course percentage falls below the target of 75% by 6 points, coming in at 69%. Again, however, we believe that a larger data set will yield higher scores next year.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Design Useful CTW Workshops

In the first few years of CTW, we held workshops for all CTW faculty twice each semester, once to introduce the program and answer questions for new faculty and then to discuss problems and share ideas about how to improve the program. Last year we focused on the faculty actively teaching each semester and worked to break down their training by concentration. For 2011-12, we built on our instructors' familiarity with the CTW initiative and used our workshops to address more substantive questions regarding teaching and the values connected with critical thinking that we hope to communicate to students. We plan to continue regular workshops for CTW instructors and will adapt their structure as needed. We will use these workshops to develop a common pool of CTW assignments that will allow us to establish a common data set for assessment.

Established in Cycle: 2009-2010
Focus on engagement with literary and rhetorical conventions

Many faculty who taught CTW courses during the past year did not find the rubric we had developed to be entirely satisfactory. Some of the categories in our rubric focused more on the outcome than the process of critical thinking, while others did not serve students in all four concentrations. Two years ago the CTW faculty proposed several alternative rubrics, and we revised our rubric to clarify the essential activities all students in the major should practice: thoughtful engagement with the ideas in a text; thorough reflection on their own position in relation to those of other readers and writers; and clear communication. While we like the structure of our current rubric, we plan to streamline it so that it serves instructors in all concentrations better and conveys our goals more clearly.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Responsible Person/Group: Elizabeth Lopez and Melissa McLeod

Revise Rubric

Many faculty who taught CTW courses during the past year did not find the rubric we had developed to be entirely satisfactory. Some of the categories in our rubric focused more on the outcome than the process of critical thinking, while others did not serve students in all four concentrations. Two years ago the CTW faculty proposed several alternative rubrics, and we revised our rubric to clarify the essential activities all students in the major should practice: thoughtful engagement with the ideas in a text; thorough reflection on their own position in relation to those of other readers and writers; and clear communication. While we like the structure of our current rubric, we plan to streamline it so that it serves instructors in all concentrations better and conveys our goals more clearly.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Implementation Description: We will revise and streamline the departmental rubric before Fall 2012 and distribute it to all CTW instructors before the semester begins.
Projected Completion Date: 08/2012
Responsible Person/Group: Elizabeth Lopez and Melissa McLeod

Focus on clarity of writing

As the inclusion of "expression" in our rubric indicates, clear expression in writing demonstrates critical thinking in English. We have focused on writing as a key element of thinking in our discipline through encouraging CTW instructors to develop assignments with several cycles of revision; we also coordinated our assessment of these activities by applying consistently the rubric category of expression. In many CTW courses this cycle, students demonstrated outstanding writing skills, especially in 4300 and 4320. We will continue to focus on this skill, however, in the courses in which students fell short of our targets in this area: 3050 and 4310b.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High
Relationships (Measure | Outcome/Objective):
  Measure: Effective Writing | Outcome/Objective: Writes clearly, with an awareness of style and audience
Implementation Description: In this cycle, we emphasized revision and the process of expressing critical ideas in writing in workshops for CTW instructors. This emphasis helped us to clarify the importance of implementing such a revision process in all the CTW courses, including Introduction to Rhetoric and Composition and the Senior Seminar in Fiction.
Projected Completion Date: 05/2012
Responsible Person/Group: Elizabeth Lopez and Melissa McLeod

Focus on engagement with ideas in a text

In our workshops for the next cycle, we will continue to encourage CTW instructors to develop compatible assignments that use four key categories in the rubric as they design their courses. By focusing on particular CTW activities such as analyzing the essential concepts in a literary or rhetorical text, the instructors have directed students to engage effectively with ideas and convey their understanding in writing. While we will continue this aspect of the action plan by working to distinguish between understanding the formal and intellectual elements of a text and questioning those ideas, we have substantially met our target in this area in 3040, 4310a, 4320, 4330. We will work to improve student engagement with ideas in text in 3050 and 4310b.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High
Relationships (Measure | Outcome/Objective):
  Measure: Engagement with ideas | Outcome/Objective: Comprehends a complex literary or rhetorical text
Implementation Description: Co-ordinate CTW assignments and use of rubric through instructor workshops.
Projected Completion Date: 05/2013
Responsible Person/Group: Melissa McLeod and Elizabeth Lopez

Focus on engagement with literary and rhetorical conventions

In our workshops for the next cycle, we will continue to encourage CTW instructors to develop compatible assignments that use four key categories in the rubric as they design their courses. By focusing on particular CTW activities such as engaging with literary or rhetorical conventions, the instructors have successfully directed students to identify and use the tools essential to their work in the discipline. We have met our target for this skill and will work to sustain our success in teaching it.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High
Relationships (Measure | Outcome/Objective):
  Measure: Engagement with literary and rhetorical conventions | Outcome/Objective: Comprehends a complex literary or rhetorical
Focus on process of reflection
In our workshops for the next cycle, we will continue to encourage CTW instructors to develop compatible assignments that use four key categories in the rubric as they design their courses, especially for instructors teaching 4310b and 4300, courses in which students scored lower on this rubric category than the others. By focusing on particular CTW activities such as cultivating awareness of the thinking process or individual biases, instructors can guide students to reflect more fully on their own positions and help them to articulate and defend their own point of view.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Judgement of ideas | Outcome/Objective: Questions ideas in a text

Implementation Description: Coordinate workshops to help instructors design assignments that cultivate the process of reflection in each CTW course. Focus on specific assignments that structure the process of questioning a text or a writing project. Establish model assignments and develop variations for each CTW course.

Projected Completion Date: 05/2013
Responsible Person/Group: Melissa McLeod and Elizabeth Lopez

Establish expectations
We will establish expectations for standards of comprehension, literary or rhetorical knowledge, and process-oriented assignments in each CTW course. We will also work towards communicating these expectations clearly to students and helping them to meet targets set this cycle. Importantly, we will develop with faculty a pool of common assignments for each concentration to use for CTW assessment. Use of a standard assignment will help us to establish a more reliable data set.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Implementation Description: Continue to coordinate CTW instructors via workshops; emphasize communication with students; coordinate CTW assignments within the concentrations.

Projected Completion Date: 05/2013
Responsible Person/Group: Melissa McLeod

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
This year we succeeded in continuing conversations among faculty teaching CTW courses and developed concrete strategies for creating and coordinating assignments for each CTW course. The best assignments integrated the course’s CTW elements into processes of either critiquing or creating complex works central to each course; these sequential assignments will be models for future CTW assignments. Our second major accomplishment, a streamlining of the rubric we use to measure critical thinking in our discipline, developed from the first. While we had already narrowed the number of categories we would use to measure progress in critical thinking across our program, when we looked more closely at how the best assignments worked we found that they all concentrated on several key skills. We are continuing to revise the rubric accordingly and hope that it will work better for all concentrations next year.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit level?
Our Critical Thinking faculty report that students developed greater confidence and sophistication in their ability to read texts and began to apply their knowledge better to their own writing. Many noted that students in the Senior Seminars learned from each other; those who may not have been so advanced in their thinking could see how other students solved problems with research and analysis and then could follow their lead. Students also learned that their initial assumptions or topics might need to be discarded in favor of better ideas or topics; as one professor explained their improvement, "Critical thinking at its most basic allows one to say, 'I've changed my mind.'"

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
Because the WOW online system became unreliable, it was difficult for instructors to gather assignments and measure students' progress using the rubric that was part of the WOW system. We had to devise our own spreadsheet and gather data from each instructor. Our four different concentrations in the department also pose a challenge for coordinating our implementation of a single rubric. We are working to revise our rubric for a second time to address omissions noted by Creative Writing faculty.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
We have not made major changes to our CTW design since last year. Our CTW courses continue to foster debate about how to design courses and assignments. Through the workshops we hold twice each semester, instructors have an opportunity to share experiences and ideas about teaching. All of us involved with the initiative have become more aware of our common challenges and accomplishments and our common values.
Assessment Data by Section
2011-2012 CTW Entrepreneurship

As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The mission of the Critical Thinking through Writing course Entrepreneurship is to develop in the student an understanding of the key roles that the use of critical thinking skills and effective written communication skills play in the implementation of any entrepreneurial effort, and to enhance the student’s ability to use those skills in practice.

This Mission Statement was revised in May of 2013 to better focus on the mission of the course with respect to the CTW initiative.

Goals

G 1: Writing Skills
Students graduating with a major in managerial sciences and a concentration in Entrepreneurship will be effective writers in their field.

G 2: Critical Thinking Skills
Students graduating with a major in managerial sciences and a concentration in Entrepreneurship will be effective critical thinkers with respect to the problems they will confront in entrepreneurial activities.

Student Learning Outcomes/Objectives

SLO 1: Effective Writing (G: 1) (M: 1)
Normal 0 false false false EN-US X-NONE X-NONE MicrosoftInternetExplorer4 student can effectively write a complete analysis of an entrepreneurship case.

**Measures, Targets, and Findings**

### M 1: The Case Analysis

The student will re-write the CTW case following feedback and work with the writing consultant. This subsequent case write up will be analyzed with the same MGS 4560 CTW rubric as the initial case write-up. Based on this, further feedback will be given to the student and comparative measures will be drawn on the CTW outcomes set out in the rubric.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

**Target for O1: Effective Writing**

The targets for the first item in the rubric are to have 80% of the students scoring at "Competent" or "Excellent" with no more than 5% at the "Ineffective" level. Critical Thinking through Writing Rubric for MGS 4560 Students Can: Excellent (4) Competent (3) Less than competent (2) Ineffective (1) i The ability to effectively write a complete analysis of the case. The student always applies proper grammar and sentence structure. Meaning of sentences is clear throughout. The composition flows logically from start to finish. The student largely applies proper grammar and sentence structure. There is little difficulty in discerning meaning throughout and the composition has a rational if not ideal structure. Student shows difficulty with proper grammar and sentence structure. Meaning of sentences occasionally difficult to infer. The structure of the composition is not tight and integrated. Student exhibits poor skills in grammar and sentence structure. Meaning of sentences is often difficult to infer. Haphazard organization of the composition

**Findings 2011-2012 - Target: Not Met**

The data for the 2011 - 2012 cycle show that of the 34 enrolled students, 3 (8.8%) of the students were rated "Effective," 22 (64.5%) were rated "Competent," 8 (23.5%) were rated "Less Than Effective," and 1 (2.9%) were rated as "Ineffective."

**Target for O2: Gathering and Generating Data**

The targets for the second item in the rubric are to have 80% of the students scoring at "Competent" or "Excellent" with no more than 5% at the "Ineffective" level. Critical Thinking through Writing Rubric for MGS 4560 Students Can: Excellent (4) Competent (3) Less than competent (2) Ineffective (1) ii The ability to gather and generate data. The student presents the ability to identify almost all of the relevant data within the case and generates a significant amount of additional meaningful data that is called for (e.g. ratios and similar metrics) Student presents a weak ability to separate relevant data from superfluous data and often omits important relevant data. No or very little meaningful additional metrics are generated. Student shows very limited or no ability to separate relevant data from superfluous data and often omits important relevant data. No meaningful additional metrics are generated.

**Findings 2011-2012 - Target: Not Met**

The data for the 2011 - 2012 cycle show that of the 34 enrolled students, 1 (2.9%) of the students was rated "Effective," 9 (26.5%) were rated "Competent," 19 (55.9%) were rated "Less Than Effective," and 5 (14.7%) were rated as "Ineffective."

**Target for O3: Analysis and Interpretation**

The targets for the third item in the rubric are to have 80% of the students scoring at "Competent" or "Excellent" with no more than 5% at the "Ineffective" level. Critical Thinking through Writing Rubric for MGS 4560 Students Can: Excellent (4) Competent (3) Less than competent (2) Ineffective (1) iii The ability to systematically and logically analyze and interpret the data collected and produced. Student analyzes and interprets data with a high degree of accuracy and clarity exhibiting systematic and logical thinking processes. Student analyzes and interprets data with a moderate degree of accuracy and clarity exhibiting acceptable systematic and logical thinking processes. Student presents a weak ability to analyze and interpret data with accuracy and clarity exhibiting limited systematic and logical thinking processes. Student presents a no or very limited ability to analyze and interpret data with accuracy and clarity exhibiting very limited systematic and logical thinking processes.

**Findings 2011-2012 - Target: Not Met**

The data for the 2011 - 2012 cycle show that of the 34 enrolled students, 1 (2.9%) of the students was rated "Effective," 5 (14.7%) were rated "Competent," 21 (61.8%) were rated "Less Than Effective," and 7 (20.6%) were rated as "Ineffective."

**Target for O4: Recommendations for Action**

The targets for the fourth item in the rubric are to have 80% of the students scoring at "Competent" or "Excellent" with no more than 5% at the "Ineffective" level. Critical Thinking through Writing Rubric for MGS 4560 Students Can: Excellent (4) Competent (3) Less than competent (2) Ineffective (1) iv The ability to reach conclusions and make recommendations. The student presents the ability to use critical thinking skills and data analysis to reach clearly supportable conclusions and to make a well argued recommendation. Student presents the ability to use critical thinking skills and data to effectively to reach generally supportable conclusions and to make a consistent recommendation. Student presents the weak ability to use critical thinking skills and data to effectively to reach generally supportable conclusions and to make a consistent recommendation. Student shows very limited or no ability to use critical thinking skills and data to effectively to reach generally supportable conclusions and to make a consistent recommendation.

**Findings 2011-2012 - Target: Met**

The data for the 2011 - 2012 cycle show that of the 34 enrolled students, 8 (23.5%) of the students was rated "Effective," 24 (70.6%) were rated "Competent," 2 (5.9%) were rated "Less Than Effective," and 0 (0.0%) were rated as "Ineffective."

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Development of Critical Thinking Skills**
In reviewing the initial and subsequent case write-ups, and in talking with the students individually when reviewing the initial write-ups it was clear that students had little idea as to what critical thinking exercises entailed. Although this course is situated as the senior-level CTW class, these students did not have the junior-level CTW class and did not have the core CTW exercises that have been added recently (many did not complete their freshman and sophomore course work at GSU). Thus, unlike students who we hope will matriculate through the entire undergraduate CTW sequence, these students were encountering an explicit CTW approach for the first time in their semester of graduation. Action Plan: Following the 2010-2011 assessment using a more rigorous measure of Critical Thinking skills it is clear that we need to work harder at developing these skills in the course and in the assignment feedback on the case draft.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Projected Completion Date: 04/2012
Responsible Person/Group: William Bogner
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Increased Preparation for Initial Assignment

Student composition skills were disappointing in the initial draft. Students do have a course that emphasizes business writing in their junior year so the writing style needed for effective business communication should not be difficult. In talking with students when reviewing their performance on the initial case write-ups most indicated that they had not done structured writing assignments since their business communication course. Many had reverted to writing in bullet lists and simplistic outline formats. Action Plan: In the 2010-2011 offering of the course a review module will be added prior to the first case write up that will emphasize effective business writing points with particular emphasis on the importance of this skill in the Entrepreneurship context.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Implementation Description: In the Spring 2012 offering of the class the new course instructor, Kelly Robinson, added a new assignment at the front end of the course to provide an initial exercise in the use of critical thinking and effective writing. This exercise will be done prior to the first draft of the case analysis that will be done the same as in prior years.
Projected Completion Date: 04/2011
Responsible Person/Group: Kelly Robinson
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Increased Revision Performance

Students were generally found not to be highly engaged in the revision process in spite of the relationship between the revision performance and their final grade. Action Plan: For the 2010-2011 academic year two modules will be added prior to the initial paper being written. If the logic of both effective writing and critical thinking for effective entrepreneurship can be effectively increased by those modules, then the opportunity to have a better follow-up, one-on-one meeting with the students should emerge. At those meetings the opportunity to further develop critical skills will be stressed. The ability to achieve the 0.5 level improvement will be re-measured.

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

Two initiatives in the action plan were to increase the students’ critical thinking skills and to do so prior to the first draft of the major case that students would be assigned to measure and develop CTW skills. Mr. Kelly Robinson, assignment the new instructor in the course, added the new. The instructor’s comments after making the changes were: I believe the practice round assignments are invaluable. It helps level set and smooth out instructor nuances over the years. By the time they have had a chance to be evaluated on official cases, they are not “cold”. Yes, this is more work on instructors who have to give “feedback” on the practice rounds but it is ungraded yet according to the measurement criteria. Still the performance of the students did not meet expectations. Therefore the focus on the CT skills of the CTW, remains a Action Plan item.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

This questions difficult to answer because of the nature off the first class on RCB. However, these results on two of the dimensions were quite disappointing by any measure.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

Student skills remain disappointingly weak in the "Ability to Generate Data" and "The Ability to Systematically and Logically Analyze and Interpret the Data Collected”. Although this course is situated as the senior-level CTW class, these students did not have the junior-level CTW class and did not have the core CTW exercises that have been added recently (many did not complete their freshman and sophomore course work at GSU). Thus, unlike students who we hope will matriculate through the entire undergraduate CTW sequence, these students were encountering an explicit CTW approach for the first time in their semester of graduation. Action Plan: Following the 2010-2011 assessment using a more rigorous measure of Critical Thinking skills it is clear that we need to work harder at developing these skills in the course and in the assignment feedback on the case draft.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Projected Completion Date: 04/2012
Responsible Person/Group: William Bogner
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

Our largest challenge has been to find a person who is both experienced in entrepreneurship as an instructor and who can serve as the ambassador for the class. Prior instructors have strongly embraced the CTW concepts and emphasized them appropriately in the
classroom. However, until now they have not been able to connect the program objectives of the CTW initiative with the course work and to integrate their efforts with what has been evolving in this major. In the Fall Semester of 2011 the ambassador for this class began to work with Mr. Kelly Robinson on developing this course more fully following the resignation of Mr. Stan Little. Spring 2012 Mr. Kelly Robinson began to teach this course. He has also taken over the role as ambassador for the course. Part of the score inconsistencies from the 2010-2011 cycle to this current cycle may well be a replication of this change in instructor. Now that Mr. Robinson has the feedback from the first iteration off the course he should be able to fine tune the class material to address the areas that are still disappointingly weak.

Georgia State University
Assessment Data by Section
2011-2012 CTW Film
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
Students who graduate with an undergraduate degree in film should be able to participate fully in our media-intensive society as both critical consumers and informed creators of film and television. Critical thinking is crucial for this purpose. In film, “critical thinking” is defined as identifying, analyzing, and evaluating arguments and truth claims; and formulating and presenting convincing reasons in support of conclusions.

Goals
G 5: Theoretical understanding of media
Students are able to apply media theory insightfully to contemporary and historical media.

G 6: Writing effectively about media
Students are able to write clear, persuasive English prose about media.

Student Learning Outcomes/Objectives
SLO 3: Evaluating theoretical arguments about media (G: 5) (M: 2)
At the end of this program, students can identify, analyze, and evaluate theoretical arguments about media.

SLO 4: Supporting theoretical arguments about media (G: 5) (M: 2)
At the end of this program, students can formulate and present convincing reasons in support of their own theoretical arguments about media.

SLO 5: Writing about media (G: 6) (M: 2)
At the end of this program, students can write clear, well-organized, and grammatically correct English prose to make a persuasive argument about media.

Other Outcomes/Objectives
O/O 6: Development of Film Criticism Assignment Rubric (G: 5, 6) (M: 1)
The primary CTW assignment in Film Theory and Criticism asks students to research an appropriate area in film theory and to investigate how a specific theoretical construct functions in a particular film. The skills involved in this assignment include: generating a clear, appropriate research question in film theory; finding and interpreting the relevant critical literature; applying theoretical material to a specific film text to produce critical insight into the film; supporting the student’s argument with well-chosen examples; organizing the criticism into a persuasive whole; and writing the paper in clear, concise, grammatically correct prose. The CTW faculty will develop a rubric for the assignment that lays out clear grading parameters and that allows the faculty to set measurable targets for student performance.

Measures, Targets, and Findings
M 1: CTW Faculty Discussion (O: 6)
At the end of each semester, the CTW faculty in Film meet to evaluate the CTW procedures both in Film Theory and Criticism and in Senior Seminar in Film. Instructors read A, B, and C papers from each class section to determine if grading procedures are comparable across instructors. Faculty discuss their experiences that semester in implementing CTW assignments, evaluating what the best practices are. Faculty will arrive at a consensus about which will be the core CTW practices for each class in the future, and they will also set student performance goals for future semesters (by consensus). The CTW Ambassador will update the assignments, rubrics, and syllabi in the Weave system.

Target for O6: Development of Film Criticism Assignment Rubric
100% of the CTW faculty will agree on a standard grading rubric for Film Theory and Criticism and on achievement targets for that rubric.
Findings 2011-2012 - Target: Not Met
The CTW faculty unanimously agreed that the current pilot rubric does not give us a nuanced picture of our student achievement, since 86% of the student assignments in the pilot were evaluated at either "competent" or "exceptional."

M 2: Project proposal: Senior Seminar in Film (O: 3, 4, 5)
In this assignment, students will detail a structure for their final project (either a research paper, a video production, or a website) and justify why this structure will accomplish their rhetorical goals. The skills involved in this assignment will include: generating a clear, appropriate research question/argument dealing with some aspect of authorship/reception; situating the project's approach within the critical debate about authorship and/or audiences; organizing the materials into a persuasive whole; and either writing the paper in clear, concise, grammatically correct prose or creating video that is proficient and clear.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: Evaluating theoretical arguments about media
The integration of theoretical perspectives in the project proposal assignment in Senior Seminar in Film should be at the "competent" or "sophisticated" level for at least 50% of the students.

Findings 2011-2012 - Target: Partially Met
42% of student assignments were at the "competent" or "sophisticated" level.

Target for O4: Supporting theoretical arguments about media
The supporting evidence in the project proposal assignment in Senior Seminar in Film should be at the "competent" or "sophisticated" level for at least 50% of the students.

Findings 2011-2012 - Target: Met
53% of student assignments were at the "competent" or "sophisticated" level.

Target for O5: Writing about media
The written expression in the project proposal assignment in Senior Seminar in Film should be at the "competent" or "sophisticated" level for at least 50% of the students.

Findings 2011-2012 - Target: Met
62% of student assignments were at the "competent" or "sophisticated" level.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Grading Rubric Targets for Film Theory and Criticism
The CTW faculty will: revise the Film Theory and Criticism assignment rubric for the 2012-2013 year; implement that assessment rubric across all sections of Film Theory and Criticism; and agree on achievement targets for that new rubric in the coming year.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: CTW Faculty Discussion | Outcome/Objective: Development of Film Criticism Assignment Rubric

Responsible Person/Group: CTW Film Ambassador in coordination with CTW Film faculty.

Curriculum Revision
The CTW faculty will revise the structure of the capstone course (Senior Seminar in Film) to enable it to be taught with a broader variety of approaches and foci. The faculty will also create a theory-based course that is intended to serve as an alternative to Film Theory and Criticism in the CTW curriculum.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: CTW Faculty Discussion | Outcome/Objective: Development of Film Criticism Assignment Rubric

Implementation Description: Syllabi will be developed by subcommittees of the Film faculty. Courses will be submitted for approval by the appropriate curriculum committees. Assessment procedures and assignment structures will be developed for these courses. Student performance targets will be set.

Responsible Person/Group: CTW Film faculty

Analysis Questions and Analysis Answers
CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
The academic year 2011-2012 was the period in which the Critical Thinking through Writing initiative became the centerpiece of discussion for the whole undergraduate Film faculty as more faculty members became involved in teaching CTW classes. As more faculty began to teach the capstone course (Senior Seminar in Film: The Auteur vs. The Audience), we realized that we needed to confront some foundational issues in our CTW curriculum. A core group of five faculty (with expertise in film theory) teach the Film Theory and Criticism course, and the capstone course was designed so that it could be taught by any permanent member of the film faculty. As we began to offer more CTW classes, we realized that this curricular structure meant that either the film theory faculty
would become overburdened (teaching both CTW classes) or would never be able to teach the capstone course (essentially ceding that course to faculty more interested in television, industry, and cultural studies). Neither outcome was intended when we initially established the CTW curriculum. This situation created a great deal of discussion about possible alternative restructurings of the CTW curriculum. The primary possibilities were: to change the capstone course so that it can be taught with a variety of specific foci, or to change the requirement to create two theory options (one taught by those emphasizing film theory and another by those emphasizing television/industry/cultural studies), or both. The faculty voted to alter the structure of the capstone course, and we will be preparing curriculum course change forms to gain approval for this structure and will hopefully be teaching the more flexible, revised version soon. A subcommittee of the faculty are preparing a television/industry/cultural theory course syllabus for the faculty to consider, and early in the 2012-2013 academic year the faculty will vote on adding this to the CTW curriculum as an alternative to Film Theory and Criticism. The primary activity in developing the CTW component of the Film Theory and Criticism class during the 2011-2012 academic year was to pilot an assessment rubric. The film faculty do not have a long tradition of using rubrics, and so the progress in implementing such rubrics has been slow. Using a rubric in Film Theory and Criticism is a particularly sensitive matter, since that course is a well-established component of our curriculum, with various faculty members having developed distinctive approaches to teaching, assignment structures, and evaluation. However, Jennifer Barker created a pilot assessment rubric for the course, and Barker and Alessandra Raengo used that rubric in their classes. Though both faculty though the rubric was useful in communicating feedback to students, we believe that the pilot rubric needs to be a bit more nuanced. The interactive nature of the assignment means that the vast majority of the students' final papers ended up in either the “Competent” or “Exceptional” categories, and so the current rubric is not fine grained enough to allow us to gain insight into our students’ performance on this assignment. The rubric is under revision, and the new version of the rubric will be used in all Film Theory and Criticism classes in the 2012-2013 year. We will develop assessment targets for that rubric in the coming year. In many ways, developing a rubric for the capstone course has been an easier process, since it is a course without a long history in our department. We implemented a rubric across the various sections of Senior Seminar in Film, and student performance met our targets for the use of supporting evidence in argumentation and for written expression. Student performance did not meet the target for the incorporation of theoretical perspectives. Discussion among the faculty who taught the Senior Seminar in Film focused on the fact that the CTW assignment for that class is unlike any other assignment in the film major. The assignment is to write a paper articulating the structure of their final project (the final project may be a paper, a video, or a website) and justifying their choices in structuring the project’s overall argument. In essence, they write a short paper (or making a video or website), and students seem to have difficulty doing this, since they don’t do it for other classes. Those who choose to make videos often do so without having taken our department’s production courses (which currently are limited to a few students), and so few of them have learned how to write a proposal for a video. We feel that this problem will decrease once more of our students are given production experience in our proposed new curriculum. However, it is still awkward that the CTW assignment in Senior Seminar in Film is a very different kind of paper from the writing done in other classes. The faculty who taught this class felt that student papers often left out an overt engagement with theory, partly because of the multiple components of the distinctive assignment and partly because they didn’t perceive Senior Seminar to be a “theory” class (as in Film Theory and Criticism). The assessment for this year allowed us to see this problem, and faculty teaching in the following year will more overtly focus on the need to incorporate theory into the written assignment. Once the changes to the structure of Senior Seminar in Film are approved, we will revisit the assignment structure to determine if there is a better way to promote and assess student learning of theoretical perspectives in this class.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

In Film there are no entry/exit CTW classes; both classes are at the 4000 level and may be taken in any order. The pilot period for the rubric in Film Theory and Criticism confirmed what we already suspected through anecdotal experience with this long-running class: given feedback from instructors, our majors produce at least competent written papers applying theory to media texts. As we further refine our assessment rubric in this class, we hope to be able to measure our student development in this class with more nuance. Students in Senior Seminar in Film met two of our three assessment targets, and the assessment process allowed to focus our future instructional efforts on the theoretical component of the CTW assignment in that class.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

We need further refinement of the Film Theory and Criticism rubric to allow us to do more insightful assessment. Acceptance of assessment rubrics overall within the Film program has been slow in coming, since our area does not have a tradition of using such measures, but we have made strides in that area this year, and we will use a revised version of that rubric in all Film Theory and Criticism classes next year. Because of unexpected inequities in the way the CTW curriculum affected faculty staffing of courses, we have discovered that we need to make significant changes in the CTW courses we offer. The next year will be devoted to making and implementing these changes (a fundamental restructuring of Senior Seminar in Film) and additions (a new theory course) to the CTW curriculum.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

This year has been an important one for CTW in Film. We have broadened the number of faculty teaching CTW classes, which has led to a re-evaluation of our CTW curriculum structures. This in turn led to a variety of proposals to alter that curriculum in coming years. In addition, we used assessment rubrics in our CTW courses for the first time. In one class, we discovered an area that needs more focus; in the other class, we determined that the rubric itself needs revision. In both classes, however, we now have a much broader acceptance of assessment rubrics, which is an important gain.
To effectively write in finance, students must learn the difference between business writing and academic writing. Business writing is a unique form of writing with a specific style and focus. Business writers write to transact business and/or to recommend a specific action. Good business writing is often described as “writing to do” as opposed to writing to learn or to describe. Business writers design their documents to be visually attractive, effectively utilizing ‘white space’ in their documents by incorporating powerful heading and subheadings, listing information with bullet points, and effectively using properly constructed graphs and charts. Business writing is concise and conclusion oriented; conclusions or recommendations are directly stated first followed by convincingly structured supporting data. Finally, good business writing uses the active voice, uses ordinary words, and is concrete, personal, and informal.

**Goals**

**G 1: Students will learn how to use financial tools to identify relevant strengths and weaknesses**

Critical thinkers must be able to evaluate financial and economic data in order to identify a firm’s relevant strengths and weaknesses. To accomplish this task, students must first learn financial analysis tools and processes. They must then learn which tools and/or processes to apply to different problems. Finally, they must learn to focus on a few specific strengths and weaknesses to make sure that proposed solutions will address specific weaknesses without negatively impacting business strengths.

**G 2: Students will develop the skills needed to ask pertinent questions**

Critical thinking involves questioning in order to discover the “what” and the “why” behind every assumption and every proposition. We want to teach our students to always seek out proof and evidence, from simply verifying the source of information to determining the difference between speculation and testing to establishing and properly presenting verifiable facts. We also want to teach our students to determine when to seek additional information and how to properly find or request additional information.

**G 3: Students will be taught to gather and assess relevant information**

Critical thinking requires gathering as much information as available and then separating relevant from superfluous information in order to form effective solutions. We want to teach our students to reduce information sets to the minimal amount necessary so that presentation of the problem and proposed solutions are simple and tenable.

**G 4: Students will make well-reasoned conclusions and derive effective solutions**

All conclusions must be supported by facts. Critical thinkers must be able to demonstrate the basis for a conclusion and must be able to show how a proposed solution can solve an identified problem and/or weakness.

**G 5: Students will be encouraged to think open-mindedly and to adopt different perspectives**

Critical thinking requires that problems must be approached with an open mind and makes every attempt to reduce biases in evaluation, assessment and proposed solutions. Critical thinking must also consider the diverse nature of today’s business and management landscape. Problems must be approached from the point of view of the participants. For example, an Asian manager may not view a given problem in the same way as will an American manager. We want to teach our students to consider that although different parties may use the same problem-solving processes, techniques and tools, their different experiences and perspectives can provide valuable insights into the nature of business problems and/or opportunities.

**G 6: Students will use appropriate business writing techniques and processes to communicate effectively**

Students must be able to effectively communicate their assessment of a situation and their proposed solution(s) to a problem. They must know how to communicate to the audience they are addressing, whether that be financial managers, general business managers or individuals with no or very limited understanding of business or finance. The primary CTW vehicle for this class is a series of business analyses. The design criteria are that the business analyses should be relevant to business practice, written in prose, require opinions that are factually based, be integrative of a broad array of subject matter, and provide opportunity for feedback and improvement. The format that has evolved from the design criteria and several years of experience using this approach is a series of three business analyses, one for each of three cases. All business analyses are strictly limited to two pages of prose with additional financial exhibits, such as a cash flow statement. Each business analysis is designed to parallel the work of a loan analyst. A normal part of the commercial loan approval process is for an analyst to write a credit memorandum about the subject company and loan facility. This document typically includes a financial statement spread, institutional and legal detail, business analysis, financial projections, recommendations, proposed loan structure, and required conditions and covenants. Even for small business loans, a credit memorandum can be lengthy. To keep things manageable, only the analysis portion of the credit memorandum is included in the CTW business analysis. The decision to limit the prose part of the business analysis was driven by three factors. First, the two page length forces students to organize, prioritize, and synthesize—all characteristics of good business writing. Learning is significantly enhanced when, because of the strict page limitation, students are forced to go through this process. Shorter analyses require more thought. Second, two pages put a reasonable limit on the amount of student time that is spent on the business analysis. Third, and last, the length requirement facilitates fast turnaround on grading, as essential element to reinforced learning.

**Student Learning Outcomes/Objectives**

**SLO 1: CTW Assignment 1 - Writing for Business (G: 2, 3, 4, 5, 6) (M: 1)**

The purpose of this assignment is to encourage students to contemplate the similarities and differences between business writing and academic writing. Students read a collection of articles concerning business writing techniques and then they must draft a memo summarizing what they learned. The memo must be addressed to the instructor who taught their basic English composition course at GSU (or at the school where they took a similar class).

**SLO 2: CTW Assignment 2 - "Case Name" Business Analysis (G: 1, 2, 3, 4, 5, 6) (M: 2)**

Assignments 2, 3 and 4 are the same assignment applied to 3 different cases. Because this is a case based course, each individual instructor can pick the cases that he/she wants to use for these assignments. A key piece of the commercial loan process for any bank is a credit memorandum. After a potential business customer requests a loan, a credit professional will do an extensive analysis of the request. The output of the evaluation is a credit memorandum. Each bank has its own format but the basic idea is always the same. The memorandum critically evaluates the business, analyzes the funding need, recommends a proposed structure for approval, and provides a lot of technical details about the company. As you might expect, this memorandum can be lengthy and include many exhibits. Rather than do an entire memorandum, we are going to focus on one part—the business analysis.
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: CTW Assignment 1 - Writing for Business

The target grade for this assignment was 3.0.

Target for O2: CTW Assignment 2 - "Case Name" Business Analysis

Based on the rubric used to evaluate the papers submitted for this assignment, the maximum possible score was 20. The expected average score for this assignment was 13.5, which related to an evaluation of "fair." We expected a low score for two reasons. First, this was the first assignment in the course that used this specific set of guidelines. An assignment learning curve was expected. Second, because this assignment occurred early in the semester, we did not expect students to have yet mastered the art of business and financial analysis. Learning how to properly analyze a case is part of the instruction that takes place in the course. It is difficult for students to demonstrate critical thinking skills related to financial analysis before they learn how to properly do financial analysis.

Findings 2011-2012 - Target: Not Met
We were unable to access the effectiveness of this assignment because instructors did not use the same case for analysis at a similar time during the semester and/or did not use the assignment rubric for evaluation.

Target for O3: CTW Assignment 3 - "Case Name" Business Analysis

Based on the rubric used to evaluate the papers submitted for this assignment, the maximum possible score was 20. The expected average score for this assignment was 15, which related to an evaluation of "good."

Findings 2011-2012 - Target: Not Met
We were unable to access the effectiveness of this assignment because instructors did not use the same case for analysis at a similar time during the semester and/or did not use the assignment rubric for evaluation.
Details of Action Plans for This Cycle (by Established cycle, then alpha)

Future Action Plan for All Writing Assignments

Since all of the writing assignments that we used this past year were new, we consider this past year as a learning experience for both our students as well as us. We recognize that it is possible that our target grades were overly optimistic and possibly unrealistic. In the future we will use the average grades from this year as the base standard for future years. We also recognize that perhaps our assignments need improvement. We will work together this summer to clarify the goals in our assignments and make changes as needed. As noted in CTW Reflection 2, we believe that the results from this year show that our students tend to: Struggle when faced with complex issues and "messy" data Experience difficulty when asked to critically assess their arguments or policy decisions Tend to approach every problem believing that it can be solved with a formula Answer case questions using data in the case only - that is, they do not seem to make the connection between academic cases and real world events or effects Often make biased decisions and seldom develop robust conclusions Our major action plan for the future is to determine the best way to help our students improve these critical thinking skills. One issue that we must address is how to best incorporate critical thinking exercises into this already very full and challenging class. Most of us who teach this required class for all finance majors, do not believe there is enough time in the semester to teach the skills, tools, processes and techniques needed to do good financial analysis while at the same time teaching and evaluating critical thinking through writing. Although most students write well (we do have a significant number of students in our classes for whom English is a second language - these students need help outside of what we can do to assist them with basic writing skills, specifically spelling and grammar), since business writing is different from writing literature in an English class, we are forced to spend a significant amount of time teaching business writing skills. To also teach critical thinking through writing skills is challenging for all who teach this course. In addition, adding CTW to this course makes it very difficult to find faculty willing and able to teach the course. Nonetheless, we will continue to work as best we can to make FI 4020 an effective CTW course. We believe that we have made a good start in finding articles in our field that address some of the issues related to critical thinking in finance. Indeed, the student critical thinking struggles that we identified above are similar to those reported in these articles. We now better understand the challenge that we face and that allows us to focus on effective solutions. Finally, to increase the effectiveness of course delivery, class sizes have been reduced to 30 students.

Challenges and Plan for 2011-12

The finance department has supported the CTW initiative from the beginning. We are committed to make the CTW aspect of our designated course, FI 4020, which all finance students are required to take for the major, as effective as possible. As a case based course that focuses on the analysis of financial statements and financial based decisions within a firm and/or with regards to a firm, FI 4020 is a natural choice in our department for CTW. Even before CTW, one of the most significant learning objectives of the course was that students would develop the ability to critically analyze a firm's financial position and be able to develop solutions to address identified weaknesses. Although applying CTW to FI 4020 seems natural, in fact, implementing the program presents significant challenges. Prior to CTW, most instructors evaluated student progress in critical thinking through evaluation of student preparation, in-class case discussion (we cover nearly one new case per week), financial analysis problem sets and frequent exams. None who teach the class believe that CTW assignments are a substitute for our traditional manner of evaluating student critical thinking. Thus, CTW has added an additional burden to instructors, specifically grading and providing significant feedback on nearly 200 student papers per semester. FI 4020 is a very full and challenging course to teach without this extra burden. The classes used in the class and case assignments are constantly being changed to remain current to shifting economic and market conditions. Thus, getting faculty to implement CTW in their courses is difficult. It also complicates recruitment of faculty to teach the course. Nonetheless, we will continue to work as best we can to make FI 4020 an effective CTW course. Our chairman is supportive of the program and he continues to work with me to address the issues noted above. We are confident that the writing assignments now developed for the course are sufficiently detailed and effective. Our major challenge moving forward is to rally new faculty to support the approach that we have developed, to develop consistent scoring guidelines and to collect and efficiently evaluate assessment data. Hopefully the data and evaluation we do next year will continue to strengthen the CTW aspect of FI 4020 as well as the overall program within our department.

CTW Assignment 2

I am developing replacement assignments and grading rubrics for CTW Assignments 2, 3 and 4 this summer. The assignments will be related to readings that students will be asked to complete instead of cases that can be determined by individual instructors. We have discovered that allowing instructors to pick and choose which cases they use for a given assignment and then during the course they assign the task makes evaluation of the assignment across different classes essentially impossible. I plan to have all

Relationships (Measure | Outcome/Objective):

Measure: CTW Assignment 2 - "Case Name" Business Analysis | Outcome/Objective: CTW Assignment 2 - "Case Name" Business Analysis

CTW Assignment 3

I am developing replacement assignments and grading rubrics for CTW Assignments 2, 3 and 4 this summer. The assignments will be related to readings that students will be asked to complete instead of cases that can be determined by individual instructors. We have discovered that allowing instructors to pick and choose which cases they use for a given assignment and then during the course they assign the task makes evaluation of the assignment across different classes essentially impossible. I plan to have all
I believe that CTW is beginning to have a significant impact on the students in the finance department. The first CTW assignment

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

The 2011-12 academic year was a difficult year for CTW in the finance department for three reasons: (1) The CTW ambassador (i.e., me) did not teach any sections of FI 4020 this year, (2) the most experienced instructor in this course who has worked with the CTW program for the past many years (Pete Eisemann) did not teach any sections of FI 4020 this year due to his retirement, and (3) four of the six instructors who taught FI 4020 this past year had never taught the course previously and these four instructors are also Ph.D. candidates with limited overall teaching experience. In addition, five of the instructors who taught the class this year, only taught it for one semester. As I have explained numerous times over the past several years of doing these reports, FI 4020 is a very difficult course to teach for those who are not accustomed to the material and/or the cases used in the class. Most new teachers spend all of their time preparing lectures and figuring out how to teach the cases. Consequently, many of these instructors struggled with assigning and grading the course CTW assignments. As such, 2011-12 was somewhat of a “lost year” for the CTW program in the finance department. We learned a lot through the process that will help us to do better in the future, but identifying and measuring our direct student achievements for this year is limited at best. We did not fulfill our goals from last year as specified in our action plan. In hindsight, we now view last year’s action plan as being overly ambitious. Our goal for this year is to redefine many of our assignments to make our goals more practical, particularly in light of the fact that we will most likely have new instructors teaching this class every semester in the future.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Due to large and last minute instructor turnover this year (5 of 6 instructors who taught the course in 2011-12 were teaching it for the first time, the 5 new instructors only taught the course one semester, and 4 of the 5 new instructors were PhD candidates), few instructors used the course CTW writing assignments and fewer reported rubric grades for the assignments they did use. All did require some writing assignments in their courses to promote critical thinking through writing, but because all used different assignments with their own unique grading patterns, the data I received is of little use. Accordingly, our ability to discern improvement in critical thinking among students from the beginning to the end of the semester was limited at best.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

Although the finance department is fully committed to the mission of CTW, our most immediate focus is to make sure that all students who take FI 4020 learn the course material. As I have noted many times in reports for prior years, FI 4020 is a challenging course that covers a substantial amount of material in a format (many case teaching and learning) that is new and challenging to most students. Much of what is learned in FI 4020 (both course material and case based learning) is reinforced in upper level elective courses. Consequently, students who lack a solid foundation in the principles covered in FI 4020, struggle in the finance elective courses. In addition, as a case based course, FI 4020 is a very challenging course for first time instructors to teach and it is natural for CTW assignments to be considered by many new faculty as an “add on” to an already full course. Indeed, I continue to struggle with transitioning from thinking of CTW assignments as being additional to viewing them as integral to the course. And I have been the department's CTW ambassador, who has considered this concept for several years while attending annual CTW seminars and reflecting on this topic while writing these annual reports. Unfortunately, we will probably encounter a similar situation next year because most of the Ph.D. candidates who taught in 2011-12, will not be teaching the course in 2012-13. Accordingly, I am planning many changes to the program for next year, including rewriting nearly all of the course CTW assignments and associated rubrics to make them more standardized as well as easier to use and grade for first time instructors. I also plan to schedule regular meetings with the course faculty group before and during each semester to more effectively guide faculty along in the transition process. I do not believe that I need any specific assistance to address these issues. The chairman of the department is fully supportive of my plans and efforts. We are committed to figuring out the best way to make CTW an integral part of the course.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

I believe that CTW is beginning to have a significant impact on the students in the finance department. The first CTW assignment forces students to consider the similarities and differences between business writing and academic writing. From my experience with this assignment, students are amazed that there is a difference between these two types of writing. And, because most students will end up working in the business world, they appreciate learning how to properly write a business memo that accurately demonstrates their ability to express and defend a business recommendation. Faculty members in the finance department are generally supportive

Analysis Questions and Analysis Answers

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

I believe that CTW is beginning to have a significant impact on the students in the finance department. The first CTW assignment forces students to consider the similarities and differences between business writing and academic writing. From my experience with this assignment, students are amazed that there is a difference between these two types of writing. And, because most students will end up working in the business world, they appreciate learning how to properly write a business memo that accurately demonstrates their ability to express and defend a business recommendation. Faculty members in the finance department are generally supportive
of CTW, but they tend to resist grading writing assignments for critical thinking. Most grade on the basis of content and accuracy. A wrong and/or unsupported recommendation is wrong no matter how well the argument is thought out or written. Considering the proper way to encourage and evaluate critical thinking in a subject matter where there are definite right and wrong answers remains a challenge.

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process have your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We did not make any changes to the assessment process in 2011-12, but we plan significant changes for 2012-13. Significant turnover of instructors assigned to teach this course resulted in little data being collected and thus little assessment for the year. For 2012-13, we are working on revising some of the course learning objectives (specifically adding a global component to the course), creating new assignments and associated measures, and developing new achievement targets.

---

**Georgia State University**

**Assessment Data by Section**

**2011-2012 CTW French**

(As of: 12/12/2016 04:41 PM EST)

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

---

**Mission / Purpose**

The mission of the Department of Modern and Classical Languages is to give students the opportunity to develop appropriate proficiencies in the modern and classical languages, to acquaint students with the literary and cultural productions of other countries, and to provide them the opportunity to acquire critical skills through literary and cultural analysis as they prepare for their future careers. In accordance with the University's regulations regarding the Critical Thinking through Writing component of courses, the French section of the MCL department has defined critical thinking in French as follows: students who demonstrate their commitment to critical thinking through writing analyses, and who improve the quality of their work through the rewriting of successive drafts, gain a better understanding of the intellectual production that has taken place among French-language writers over the past several hundred years. They learn more about French thinking processes and are better equipped to find and express their own voices in the target language. In so doing, they participate in fulfilling the mission of the MCL department, by developing language proficiency, becoming acquainted with literature and culture of France and francophone countries and by acquiring analytical skills.

**Goals**

G 1: Goal for French

A large majority of French majors must be at least good critical thinkers when writing in the target language.

---

**Student Learning Outcomes/Objectives**

**SLO 1: Objective (G: 1) (M: 1, 2)**

French majors in CTW courses are able to apply their critical judgment by writing commentaries on literary texts and answering critical questions on literary and civilization topics. More specifically, the objectives when rating students who think critically about French culture and literature are related to a CTW skill: 1. They can interpret: categorize, decide significance, clarify meaning.

**SLO 2: Objective**

French majors in CTW courses are able to apply their critical judgment by writing commentaries on literary texts and answering critical questions on literary and civilization topics. More specifically, the objectives when rating students who think critically about French culture and literature are related to a CTW skill: 2. They can analyze: examine ideas, identify arguments, analyze arguments.

**SLO 3: Objective**

French majors in CTW courses are able to apply their critical judgment by writing commentaries on literary texts and answering critical questions on literary and civilization topics. More specifically, the objectives when rating students who think critically about French culture and literature are related to a CTW skill: 3. They can evaluate: assess claims, assess arguments.

**SLO 4: Objective**

French majors in CTW courses are able to apply their critical judgment by writing commentaries on literary texts and answering critical questions on literary and civilization topics. More specifically, the objectives when rating students who think critically about French culture and literature are related to a CTW skill: 4. They can infer: query evidence, conjecture alternatives, draw conclusions.

**SLO 5: Objective**

French majors in CTW courses are able to apply their critical judgment by writing commentaries on literary texts and answering critical questions on literary and civilization topics. More specifically, the objectives when rating students who think critically about French culture and literature are related to a CTW skill: 5. They can explain: state results, justify procedures, present arguments.

**SLO 6: Objective**

French majors in CTW courses are able to apply their critical judgment by writing commentaries on literary texts and answering critical questions on literary and civilization topics. More specifically, the objectives when rating students who think critically about French culture and literature are related to a CTW skill: 6. They can self-reflect: self-examine, self-correct according to the advice and comments that were given for the first phase of the assignment and then for the second phase.
Measures, Targets, and Findings

M 1: Assignments descriptions (O: 1)
In each CTW French course, two written assignments are rated. In the FREN3033 course (Introduction to the Analysis of Literary Texts), one assignment is a literary essay (usually on a text in prose), the second is a text analysis (usually a poem). In the civilization courses (FREN4103 and FREN4123), the two assignments are essays related to civilization topics; in the FREN4103 course the topics are more historical than in the FREN4123 course, where they are more related to contemporary civilization issues.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Objective
The target is a rating of 4 (on a scale going from 1 to 6) for 80% of the students enrolled in the course.

Findings 2011-2012 - Target: Partially Met
In 2011-2012, the target was once again partially met; two courses reached the target, two did not. These results are difficult to interpret yet as they differ from the previous years in two respects: 1) students who failed to write all assignments are no longer counted in the figures and 2) the contemporary civilization course made the target for the first time since the implementation of the CTW initiative, and made it with excellent results: 94% of the students who did all assignments reached the target. Therefore, more years are needed to find out if: 1) students who do not want to cooperate are a new trend or simply a question of chance for this year and 2) if the FREN 4123 will continue to obtain such results. The other, quite interesting finding, is that students cooperate much more if they have only one assignment during the semester, although it is a longer one; they tend to think that they have too much work when they have two assignments (although shorter!) to rewrite during the semester; one must explain to them that this is simply an illusion to stimulate their cooperation.

M 2: Written papers (O: 1)
In civilisation courses (FREN 4123 and FREN 4013): two papers, two phases for each paper. In the literature course (FREN 3033): one essay, one text commentary.

Source of Evidence: Written assignment(s), usually scored by a rubric

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Increase the courses meeting the target
Need to determine if the high figures for the two courses reaching the target are because of too generous ratings; on the other hand, the ratings for FREN4123 need to be improved. Will have to analyze if the average result is due to the student body or to the way the assignments are being rated. That should not be the case as they are being rated according to the rubric.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Assignments descriptions | Outcome/Objective: Objective

Implementation Description: Will reflect on the issue in Fall 2011 when the course is given again.

FREN 3033: discrepancies between the two assignments
In FREN3033, students have for their assignments two types of exercises allowing us to rate their CTW skills: 1) an essay; 2) a text commentary (which is usually a poem). There are strange discrepancies between the ratings that some students obtain, for instance a very high one for the essay question and a poor one for the commentary. Although the CTW skills are rated the same way and with the same rubric, this may stem from the fact that the commentary question requires far more analytical qualities. As one of the instructors of FREN 3033 states: students find the poem analysis more difficult, few have ever read a poem closely in any language, and most think they hate poetry. We must reflect on that in the coming semesters if the same figures are repeated.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: Medium

Implementation Description: Definition of the source of the discrepancies

Train New Faculty Member
Train the new faculty member who will teach CTW courses

Implementation Description: Training of the new faculty member, fall 2012

Projected Completion Date: 11/2012

Responsible Person/Group: Eric Le Calvez

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

1) The ambassador managed to convince instructors teaching CTW courses to use the same rubric for the first time (last year, we had managed to simplify the rubric so that it would fit on one page); this will be easier to compare the results from one course to the
CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entrance level to the exit class?

It depends on the course but also on the student participation. As one of the instructors of the FREN 3033 course states: writing papers in drafts is an excellent way to help students improve their French if they will cooperate, as several on my list did, by thinking critically and reflecting on the corrections to take into account on the final draft. I am so convinced of the value of the approach that I have made certain we have maintained the same approach in our French 3023 course, Composition and Conversation. In the FREN 4123 course, the improvement in critical thinking is clearly related to the improvement of the organization of the thought (reflected in the structure of the paper, the phase one being a detailed outline of a minimum of two pages, which helps to analyze students’ thoughts and train of thoughts).

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

We do not need any assistance but we need to focus on the students’ response, which is becoming more and more problematic. This year, we have decided to take into account for the report only students who did all of the assessments, because otherwise the results are deformed; we must find a way to stimulate their participation in their exercise (for instance, in the FREN 4123 course, 43% of students did not do all of the assessments, which is a far too high number). Students feel in general that this gives them too much work (although it is not the case, in practice, because they need to build up a detailed outline before beginning to write anyway). This has consequences on the instructor also: in FREN 4123, most of the deadlines were not respected so the instructor felt like he was grading papers all the time throughout the semester.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

No change from the department as no changes are needed so far. The faculty members involved in this initiative think in general that this is an additional workload (and it is). However, since most students definitely improve their CTW skills in the target language, they continue to believe that it is overall a very positive initiative.

Annual Report Section Responses

Most Important Accomplishments for Year—Briefly describe the major things you accomplished over the past year. Be sure to note previous Action Plans that were executed this year, plus any accomplishments that are not otherwise mentioned in your outcomes reporting.

1) The ambassador managed to convince instructors teaching CTW courses to use the same rubric for the first time (last year, we had managed to simplify the rubric so that it would fit on one page); this will be easier to compare the results from one course to the other. 2) For the first time since the implementation of the CTW courses, FREN 4123 (see last year’s action plan) met the goal of having over 80% of the students. Actually, for the second assignment there were 100% of the rated students who obtained a rating equal or superior to 4.

Challenges for Next Year—Briefly describe any special challenges (related to budget, personnel, increased standards, new projects, new expectations, etc.) that you will be facing during the next reporting cycle that might affect your department’s outcomes.

Deal with students participation for all assignments. There were four CTW courses in French this year. FREN 3033, fall 2011: 22% of students did not do all the assignments (four only); FREN 4123, fall 2011: 43% of students did not do all the assignments (four only); FREN 3033, spring 2012: 9% of students did not do all the assignments (four only); FREN 4103, spring 2012: all students did all of the assignments (two only). The discrepancy between FREN 4103 and the other courses in terms of student participation leads us to believe that students have a tendency to participate more in the exercise if they have fewer assignments, which corresponds with the feeling they have to have too much work (especially for students who take several CTW courses during one single semester).

We must reflect on this situation.

Modifications in Intended Outcomes—If you modified any of your intended outcomes since the previous reporting cycle, please note those here.

No modifications of intended outcomes.

Modifications in Measurement Methods—If you modified any of the measures or methods you use in the measurement process, please note those here.

The new rubric was modified last year; no changes this year.
Goals

G 1: Analysis
Students should be able to engage with scholarly literature in their respective fields and analyze arguments, validity, and findings.

G 2: Communication
Students should develop communication skills to appropriately convey their analysis of texts and data.

Student Learning Outcomes/Objectives

SLO 1: Reflection paper (G: 1, 2) (M: 1)
In Urban Geography, students will complete weekly reflection papers. In at least one paragraph and not more than one page, students reflect on the readings by exploring the connections of the authors’ arguments. Students' reflection papers may be guided by the questions posed each week in the syllabus. The purpose of reflection papers is to encourage students to read carefully, and consider critically, the literature being explored and to articulate critical thinking in a brief, organized essay. Students will complete ten response papers over the course of the semester. Two papers, one from the beginning of the semester and one from the end, will be evaluated with a rubric.

SLO 2: Synthesizing Paragraphs (G: 1, 2) (M: 1)
In Climatic Change, students are expected to summarize the topic of a day's lecture and to include outside research to support the claims and observations made in the paragraphs. Students will turn in three paragraphs during the semester and will receive detailed feedback on each submission. Rubric assessment scores will be recorded for the first and third paragraph submissions.

SLO 3: Research Project (G: 1, 2) (M: 2, 3)
The term paper will be an opportunity for students to develop an original research paper. The student will identify a topic and submit a research proposal. The instructor will give feedback to the students, and the students will develop a research project, complete with explicitly identified methods and data. The student will submit a rough draft of the paper, and the instructor will provide detailed feedback. The student will incorporate the feedback and develop a final paper, which will also be orally presented to his or her peers.

SLO 4: Group Research Project (G: 1, 2) (M: 2)
Geology of Georgia project. The purpose of this project is to analyze, synthesize, interpret, and communicate the state of knowledge regarding the sedimentary environments and stratigraphy represented by the rocks and sediment of Georgia. Each student will go through a semester-long process of building an individual paper, and then synthesizing his or her paper with those of his or her classmates.

Measures, Targets, and Findings

M 1: Paper Rubric (O: 1, 2)
Please see Rubric in attached documents.
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Reflection paper
80% of our students should average 4 or better on each element of the rubric, with a total of 24 or greater on the seven elements combined. Importantly, we are looking for improvement from our students through the course of a semester. As such, we would like to see 80% of our students improve from the first response paper to the final one that is collected.

Findings 2011-2012 - Target: Met
For the reflection paper number 1, 55% of students did not meet the 4 average score on each element of the rubric, and only 1 student did not meet the score for the final reflection paper. Importantly, however, 89% of students improved from reflection paper 1 to the final reflection paper.

Target for O2: Synthesizing Paragraphs
80% of students should achieve a 26 or better in the seven combined elements. 80% of students should demonstrate improvement from draft 1 to draft 2.

Findings 2011-2012 - Target: Partially Met
For the synthesizing paragraph turned in at the beginning of the semester, 26% received an average score of 4 or better on the seven elements. On the final paragraph, 68% of students received a score of 4 or better. 84% of student either stayed the same or improved from the first paragraph to the final paragraph.

M 2: Term Paper Rubric (O: 3, 4)
Please see the attached Term Paper Rubric for Geology of Georgia
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: Research Project
80% of students would achieve at least a total rubric score of 20 (an average of 4 or better for each of the five elements) for draft 1 and draft 2. Ideally 80% of students would improve from draft 1 to draft 2.

Findings 2011-2012 - Target: Partially Met
Students turned in at least two drafts of a final research paper. The first draft and the final draft were evaluated based on the
rubric. For the first draft, 16% of students achieved an average score of 4 for the rubric elements. For the final draft, 76% received an average score of 4 or better. 100% of students improved in their rubric scores from draft 1 to the final draft.

**Target for O4: Group Research Project**

80% of students' assessment scores should equal or exceed 20, which represents working understanding of the rubric elements. 80% of students should improve from the first draft to the assignment to the final draft.

**Findings 2011-2012 - Target: Met**

40% of students achieved scores that equalled or exceeded 20 for the first draft of the assignment, whereas 96% of students achieved scores of 20 or better for the final draft. 96% of students improved from the first draft to the final draft.

**M 3: Final Paper Rubric (O: 3)**

Geog/Geol 4830: Senior Seminar rubric attached.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Research Project**

All students should improve from draft 1 to the final draft. 80% of students should achieve a score of 20 or better on the final assessment score.

**Findings 2011-2012 - Target: Partially Met**

76% of students achieved a score of 20 or better on the final assessment score. 100% of students improved from draft 1 to the final draft.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Refine rubric**

For the literature review assignment, the instructor will refine the rubric to capture integral elements of the assignment and will include more explicit discussion of critical thinking and writing skills in the course of the class.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** High

**Strengthen curriculum for Urban Geography**

In order to facilitate meeting the CTW goals for the urban geography course, the instructor will strengthen her curriculum to include more explicit teaching on various components of writing, providing more examples to students. She will make a more demonstrated effort to articulate clearly the strengths and weaknesses of the reflection papers that the students turn in so that they may learn from their own writing experiences. Throughout the semester, she will schedule one-on-one conferences with students to discuss their writing strengths and weaknesses.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** High

**Strengthen focus on structure of research paper**

The instructor will focus her efforts on improving students' understanding of the component parts of a research paper, which include identifying a problem, articulating an argument, identifying (and justifying) methods and data, and analyzing data and drawing conclusions.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** High

**Writing skills course**

The instructor plans to devote several class periods to focus on critical thinking skills with less emphasis on technical writing skills.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Terminated
- **Priority:** High

**Action plan for Urban Geography**

The instructor plans to include an hour-long active learning exercise in which together the students and instructor work through a reflection paper assignment.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** In-Progress
Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

The major accomplishment for this year was that the CTW instructors in the department had a clear sense of what was expected of the CTW process. The collection, assessment, and reporting among faculty members went exceptionally smoothly. Likewise, for the most part, students met the anticipated objectives by performing well on critical thinking through writing assignments.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Improvement in critical thinking skills is evident within classroom performance—that is from one initial assignment to the next. On the whole, we have not discerned trends in improvement between the first CTW course and the final capstone class.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

The Department of Geosciences anticipates B.A./B.S. degrees in Geosciences and faculty members will carefully scrutinize the curriculum during the 2012-2013 school year. The department anticipates identifying specific critical thinking goals in multiple classes—not just in CTW—and carrying that throughout the curriculum.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

The major change in the operation of CTW in Geosciences is that it is no longer a new concept but instead it is much more accepted and a B.S. in Geology.

Curriculum evaluation with the merger of geology and geography degrees

Over 2012-2013, the Department of Geosciences anticipates B.A./B.S. degrees in Geosciences (rather than a B.A. in Geography and a B.S. in Geology). This process, along with the expressed intention as outlined by the department in its active Strategic Plan, will entail a careful curriculum analysis. This analysis may result in the creation of new CTW courses and the deactivation of existing ones.

In-class demonstration of paragraph construction

In order to facilitate greater achievement, the CTW instructor will conduct an in-class session with the students to demonstrate, through active learning, how a paragraph demonstrating critical thinking skills could be constructed.

Curriculum evaluation with the merger of geology and geography degrees

Overall, I think this year's findings reveal that we have a relatively effective set of assignments and assessments in place for CTW.
Mission / Purpose
The mission of the Department is to give students majoring in German the opportunity to develop appropriate proficiencies in the German language, to acquaint them with the literature and culture of German speakers, to promote their interest and involvement in international exchanges through study abroad programs, and to provide them the opportunity to acquire critical skills through linguistic, literary and cultural analysis as they prepare for careers in teaching, business, translation and interpretation and other areas. Critical thinking goes hand in hand with analytical thinking. For Cottrell (1999:188) analytical thinking involves following additional processes: • Standing back from the information given • Examining it in detail from many angles • Checking closely whether it is completely accurate • Checking whether a statement follows logically from what went before • Looking for possible flaws in the reasoning, the evidence, or the way that conclusions are drawn • Comparing the same issue from the point of view of other theorists or writers • Being able to see and explain why different people arrived at different conclusions • Being able to argue why one set of opinions, results or conclusions is preferable to another • Being on guard for literary or statistical devices that encourage the reader to take questionable statements at face value • Checking for hidden assumptions. * German for critical thinking = Auseinandersetzungsmögen (Discussion/Debate/Looking into a subject + capacity/ability/assets/means). In terms more specific to the German major, the assignments in our CTW courses will enable students to gain a better understanding of literary and -- more broadly -- cultural and historical trends in the German-speaking world, and equip students with the tools necessary to query their intellectual and personal positions with respect to the long and complex tradition of Germanic cultural production, which at times intersects with other traditions with which students may be familiar, and at times diverges from them. Ultimately, students in our CTW courses will be able to comprehend German texts within their cultural, intellectual, and historical contexts, and engage these texts in ways that are both intellectually rigorous and personally meaningful. The challenge unique to CTW in a foreign language is the rigorous task of interpretation and evaluation in a non-native context of imperfectly mastered grammar and syntax and a lexis with sub textual subtleties. Our mission includes providing the tools necessary to use language effectively to present the line of reasoning that follows from the students’ identification and evaluation of their argument.

Goals
G1: Student Goals BA German
1. Students are competent in the language and culture of German speaking countries. 2. Students have advanced knowledge in their concentration: pedagogy, international business or literature. 3. Students acquire though course work, exchange programs and study abroad the critical skills needed for success in their chosen career, whether it be teaching, business, translation and interpretation or other supranational opportunities. 4. Students should develop the skills requisite for critical thinking, thereby enabling them to query their own intellectual and personal positions and to contextualize them in the broader scope of cultural understanding, adaptability in global settings and an aptitude in navigating diversity.
SLO 5: Critique/Analysis of a Cultural Ideology (M: 3)

Essay of 350-400 words on the morality of neutrality, the case of Switzerland. The objective was to track development of CTW skills from the entry-level course to the capstone course in a year where there was an overlap of students taking both in the same reporting year. This was the only assignment that was not lost in the improper handling of student samples documented elsewhere. From the current rubric, where a goal of 4 is preferred, the skills set focus was whether the student could fair-mindedly follow where evidence and reason lead and make judgments based on an evaluation of all the evidence. The assignment only required secondary sources where the student wanted to integrate more historical data on Switzerland’s perceived culpability (through inaction or furtiveness) in World War II and after. The moral implications of neutrality could also be presented independent of research as long as the student’s views were justified drawing support from experience (personal and from the lectures), yet also integrating contrary interpretations.

General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

8.0 Students demonstrate understanding of political, social, economic, and/or institutional developments across the globe.

Measures, Targets, and Findings

M 4: Student Portfolio (O: 6)

Student portfolio to collect and reflect on all assignments. The central feature of portfolios is that these samples of evidence demonstrate the progress the student makes toward self-defined objectives whose attainment requires creativity, self-discipline and inter-disciplinarity. At the end of the semester the portfolio should contain:

- 2 essays
- 1 oral presentation
- 1–2 poems or song texts
- an outline of the final project
- individual vocabulary lists (20–30 entries per topic)
- a self evaluation

Source of Evidence: Portfolio, showing skill development or best work

Target for O6: Undergraduate Learning Outcome Objectives

This measure is a repository for student work and not a measure in the sense that there are individual findings for a specific assignment measured here. It is listed here to document how the graphs were created for the tracking of findings.

Findings 2011-2012 - Target: Partially Met

Based on the review of the portfolio for German 3301 from the first week to the last week of the semester, only 60% of the students met MCL standard. 100% of students showed improvement.

M 5: Speed Essay German 3301 Entry Level Course (O: 6)

Student shall write a 350-400 word essay in German and in English which focuses on a moral concept based on a German speaking country's political and cultural philosophy of neutrality (Switzerland). Assessment of the assignment (how it is measured) is based on the ability of the student to distinguish between fact and opinion, explore relevant historical and cultural contexts and achieve a clear organization of ideas with concrete conclusions in the limited framework of a shorter essay.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O5: Critique/Analysis of a Cultural Ideology

To meet departmental standards on the MCL rubric, all students should score at least a 4.

Findings 2011-2012 - Target: Partially Met

Of the four student essays reviewed by the assigning faculty, 100% showed an improvement in critical thinking skills of at least one point on the 1-6 scale (see graph in repository). Student 1: a growth from a superficial and terse statement on war and taking sides to a more focused essay on the assigned topic of Switzerland, albeit with flaws in structure in integration of ideas. 2 to 3 on Rubric Student 2: a growth from a single somewhat ego-centric perspective to a more thorough examination of historical evidence and global implications. 2 to 4 on Rubric Student 3: a growth from a limited expose that failed to recognize context and ethical implications to an essay that at least succinctly addresses the ethical dimensions of the issue. 4 to 5 on Rubric Student 4: a growth from a rather unfocused essay on the advantages of neutrality with no clear definition of the moral issue to one with historical perspective and a respectful analysis of other positions. 2 to 5 on Rubric 75% of students met MCL standard. 100% of students showed improvement.
M 7: CTW Average Score Entry Level to Capstone (O: 6)

Source of Evidence: Written assignment(s), usually scored by a rubric

Findings 2011-2012 - Target: Partially Met

Results: 3 out of 5 students showed improved critical thinking skills as related to the rubric averaged over all assignments which were culture based. Only 1 student remained at level below expectations and actually showed diminished skill development.

Source of Evidence: Benchmarking of learning outcomes against peers

Findings 2011-2012 - Target: Partially Met

Results (see graph): 3 out of 5 students reached the departmental average of 4 by the end of the semester. 4 out of 5 students showed improved critical thinking skills as related to the rubric averaged over all assignments which were culture based. Only 1 student remained at level below expectations and actually showed diminished skill development.

Findings: Only 20% of the students achieved the target goal of 4 on the essay, although only 20% of the students were below the lowest score of 3. The objective of examining a particular cultural trend in the German-speaking world was measured in a speed essay format after a class discussion and reading on the topic of Germany’s "free body culture." Despite the lower scores, the exercise was considered a success and provided a good springboard for a class discussion on how to formulate a relevant argument and formulate a structured intellectual and/or personal position less focused on biased preconceptions. I made the decision after this first essay to track 5 students (roughly 18% of the class) throughout the semester to track CTW writing skills in the domain of cultural understanding and the ability to contextualize a personal position. This type of assessment and discussion will be added to the action plan.

Findings: 75% of the students reached the departmental goal of 4 on the capstone assignment and even those who scored below showed notable research skills, thoughtful inferences from research sites and the ability to contextualize a controversial topic in the broad scope of international cultural trends and historical precedence. There was also substantial evidence of below showed notable research skills, thoughtful inferences from research sites and the ability to contextualize a controversial topic in the broad scope of international cultural trends and historical precedence. There was also substantial evidence of across the board fair-mindedness in evaluating the statistical evidence and making sound judgments based on that evaluation. No samples were documented as they were in German.

Findings 2011-2012 - Target: Partially Met

Results (see graph): 4 out of 5 students showed improvement in the measures for CTW writing skills over the average of all CTW assignments. Only 3 students were shown to attain the departmental goal of 4. 1 student had a marked decline in overall CTW rating from 3.5 to 2. This may perhaps be attributed to the student taking the entry level and capstone course in the same year and the difficulties resulting from the exponentially higher expectations.

M 8: Capstone Assignment German 4402 (O: 6)

Capstone CTW assignment on Death Penalty. Goal 4 Objective 2

Source of Evidence: Capstone course assignments measuring mastery

Findings 2011-2012 - Target: Partially Met

Findings: 75% of the students reached the departmental goal of 4 on the capstone assignment and even those who scored below showed notable research skills, thoughtful inferences from research sites and the ability to contextualize a controversial topic in the broad scope of international cultural trends and historical precedence. There was also substantial evidence of across the board fair-mindedness in evaluating the statistical evidence and making sound judgments based on that evaluation. No samples were documented as they were in German.
limited (traditional essays with “controversial topics”). We plan to implement more “speed” paragraphs in which comprehension of and/or reaction to a class discussion point is “tested” immediately and then used to further enlighten the topic being examined. It is hoped that from these spontaneous reactions the students can develop a greater sense of what a longer critical thinking assignment entails. A curriculum change throughout the entire major has been drafted and will focus on German Studies rather than on traditional language and literature. This should facilitate communicating expectations to students as the courses will be designed around a theme or cultural focus rather than a historically delimited body of work.

### Action Plan for 2011-2012

Our major goals are revision of the rubric, a central repository for CTW assignments and CTW graded assignments used for measures and the switching of the CTW required course to a more appropriate one based on content. · The revision of the rubric is intended to effect improved student response to the CTW component of the course by making the rating scale more user friendly and the rating criteria more explicit as to what is needed for improvement. · The central repository will make it easier for faculty (continuing and new) to standardize assignments deemed to be most conducive to the goals of CTW and not be continually forced to draft new ideas for each semester syllabus. The other faculty will also be aware of what is happening in that course and because many students are shared among courses, support can be given in non CTW courses in a subtle interdisciplinary way if core topics are mirrored in multiple courses. This will also prevent loss of data and student samples as occurred this past year. · The grammar capstone course has proven to be a stumbling block to CTW assignments which are perceived as onerous and contrary to the goals of mastering German grammar and syntax. The goal is to change the grammar course to a 3000 level course to ensure mastery at an earlier level, change the capstone course to a culture based interdisciplinary context course such as Literature and Film and add an advanced conversation and composition course to the entry level curriculum to facilitate the integration of CTW assignments into that more thematically based course. We anticipate a better student response to the CTW component, a clearer understanding of the goals of the initiative and subsequently better student performance. We plan to document the progress of the student for their and our edification in a portfolio format perhaps with "digication."

### Action Plan to Improve Student Performance 2012-2013

With the orientation of a new faculty member from Germany, we hope to brainstorm as a team to draw up an action plan for our learning outcomes as a whole, thereby addressing recurring and persistent problems that have hampered the realization of many of our goals: a) Competence in the language and how to assess that learning outcome objectively b) How to better “teach” critical thinking skills, perhaps through a peer tutoring program to ensure development over the junior/senior year c) Address the issue of CTW errors/inequities based on language competence and ability to express ideas in the target language d) Develop a list of skills and the corresponding best practice topics that would showcase those skills in writing assignments rather than randomly assigning topics each semester per instructor e) Revisiting the same skill sets throughout the program to better track progress

**Implementation Description:** Implementation for next academic year via planning committee - German section

**Projected Completion Date:** 12/2012
Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

I think the major accomplishment was the experimental student portfolio. Although we did not develop a central repository of assignments for the German section as per our Action Plan, we did provide the students with a clearer understanding of the goals of the CTW initiative and some structural tools to track their progress. Despite the failure of all students to reach the departmental standard of 4 in the CTW rubric, there was noticeable improvement in students’ attitude toward the assignments and a willingness to learn from their mistakes. The addition of self-evaluations after each assignment and reflections on errors insured that corrected essays and other assignments were not simply discarded or filed away unread. By requiring: “All these samples (in the portfolio) should be accompanied by a brief reflection on how and why you chose these documents to be in your portfolio, how they were created, and in what capacity they document your learning experience.” the students were made an equal partner in the CTW experience and empowered to be a witness to and a catalyst in their own development and improvement.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

We were able to track 5 students enrolled in both the entry level and capstone course over a full academic year. 4 out of 5 students showed improvement in the measures for CTW writing skills over the average of all CTW assignments. Only 3 students were shown to attain the departmental goal of 4. 1 student had a marked decline in overall CTW rating from 3.5 to 2. This may perhaps be attributed to the student taking the entry level and capstone course in the same year and the difficulties resulting from the exponentially higher expectations. However, 75% of the students reached the departmental goal of 4 on the capstone assignment and even those who scored below showed notable research skills, thoughtful inferences from research sites and the ability to contextualize a controversial topic in the broad scope of international cultural trends and historical precedence. There was also substantial evidence of across the board fair-mindedness in evaluating the statistical evidence and making sound judgments based on that evaluation.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

In reviewing our goals for 2011/2012, I am forced to admit that most were not realized in the past year. The rubric was considered for revision but the older rubric was determined to be more compatible with the scoring of the other languages within the department and with the learning outcomes rubric used for administrative reports. The central repository was never realized and document storage is still based on the aptitude and meticulousness of the individual CTW instructors. I taught both CTW courses this past year and did experiment with speed essays and portfolios with mixed results. Many students were not able to meet the departmental goals, despite the shorter format and opportunity to have one written assignment in English. We need a core set of assignments based on the cultural, literary and global topics of the texts (which are fairly standard in the major) so that we can objectively assess student performance across the junior/senior year and have a measure that is developed by the whole section and consistent with the learning outcomes of the department. I will need the assistance of faculty from the College of Education or other departments with on line portfolios to implement this type of tracking system for student work and performance.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

I think the primary impact on the German degree is the need to overhaul the curriculum. This has been a challenge because we have only one entry level course (and one section of that) offered every year and only one 4000 level (capstone) course offered every year. We have renamed some courses plan to extend the CTW initiative to other courses in order to maximize efficiency and reduce the burden on one instructor who has often had back to back CTW courses.

Annual Report Section Responses

Most Important Accomplishments for Year—Briefly describe the major things you accomplished over the past year. Be sure to note previous Action Plans that were executed this year, plus any accomplishments that are not otherwise mentioned in your outcomes reporting.
N/A

Challenges for Next Year—Briefly describe any special challenges (related to budget, personnel, increased standards, new projects, new expectations, etc.) that you will be facing during the next reporting cycle that might affect your department’s outcomes.
N/A

Modifications in Intended Outcomes—If you modified any of your intended outcomes since the previous reporting cycle, please note those here.
N/A

Modifications in Measurement Methods—If you modified any of the measures or methods you use in the measurement process, please note those here.
N/A

University-wide Committee Participation—Use this space to document any staff participation on University-wide committees (e.g., University Senate).

Academic Teaching Activities—If the staff participated in teaching (or assisted in the teaching of) academic courses as part of
**Mission / Purpose**

The history department subscribes to the definition of Critical Thinking as it was proposed to the Faculty Senate: our courses will help students develop the ‘wide range of cognitive skills and intellectual dispositions needed to effectively identify, analyze, and evaluate arguments and truth claims; to discover and overcome personal prejudices; to formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about what to believe and what to do.’ When students graduate we expect that they will be able to demonstrate historical mindedness, multidimensional analysis, knowledge of historical context, ability to analyze texts, and how to present their findings. They will also demonstrate a range of professional skills, a knowledge of historiography, an awareness of interdisciplinary methods and larger (trans-national, -regional, or global) perspectives, as well as a set of professional values. Please see the "history standards" in the document repository for further details.

**Goals**

**G 1: Historical Thinking**
Students will understand how to differentiate between different historical periods and different perspectives within history.

**G 2: Historical Interpretation**
Students will be able to ask relevant questions of primary and secondary texts.

**G 3: Communication and Presentation**
Students will be able to communicate their findings clearly and concisely.

**Student Learning Outcomes/Objectives**

**SLO 2: Historical Context (G: 2) (M: 2, 5)**
Students will be asked to place primary sources within their proper temporal, geographical, political, and cultural contexts and analyze them appropriately. Students will likewise be able to judge historical arguments by their sensitivity to context.

**Other Outcomes/Objectives**

**O/O 1: Historical Thinking (G: 1) (M: 1, 5)**
Students will be given assignments that require them to understand the multiple perspectives within history and the relationships over time between causes and consequences, change and continuity, and structure and agency.

**O/O 3: Interpretive Skills (G: 2) (M: 3, 5)**
Students will be asked to differentiate between primary and secondary sources and identify the major points of disagreement in historical interpretation.

**O/O 4: Historical Communication (G: 3) (M: 4, 5)**
Students will be able to communicate findings in essay form effectively, elegantly, and concisely.

**Measures, Targets, and Findings**

**M 1: HIST 3000 Historical Thinking Rubric (O: 1)**
This rubric tracks students’ ability to comprehend historical change through various levels on a zero to five point scale, from absent to advanced: Absent (0): Unable to distinguish between past, present, and future Developing (1-2): Understands history from multiple
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Historical Thinking**
Students in the gateway course (HIST 3000) should display competency, scoring between 3 and 4 on the rubric.

**Findings 2011-2012 - Target: Met**
Students met expectations in the realm of historical thinking, demonstrating consistently the ability to identify multiple perspectives and identify change over time. According to a representative sample, 95% of undergraduates in the gateway course met these expectations and nearly 30% exceeded them. Less than 5% are not meeting expectations. The distribution by term and instructor indicates that the performance of students is stable over time and in different classes. The attached graph shows the distribution of assignments from Summer 2011 through Spring 2012 and ends with the mean score of 4.13 on the rubric.

**Target for O2: Historical Context**
Students in the gateway course (HIST 3000) should display competency, scoring between 3 and 4 on the rubric.

**Findings 2011-2012 - Target: Met**
Students demonstrated competency in assessing historical context, scoring on average a 4.1. 91% met expectations and 36% exceeded expectations. Distribution over time Students met expectations in the realm of historical context, demonstrating consistently the ability to temporally and spatially locate evidence and interpret it appropriately. According to a representative sample, 90% of students in the gateway course met these expectations and 36% of those exceeded them. 10% are not meeting expectations. The distribution by term and instructor indicates that the performance of students is stable over time and in different classes. The distribution does indicate that Summer and Spring students tend to perform better. This may be due to the more advanced nature of students taking courses in these terms relative to the Fall term. The summer classes are also typically smaller, likely resulting in closer instruction and better results. The attached graph shows the distribution of assignments from Summer 2011 through Spring 2012 and ends with the mean score of 4.1 on the rubric.

**Target for O3: Interpretive Skills**
Students in the gateway course (HIST 3000) should display competency, scoring between 3 and 4 on the rubric.

**Findings 2011-2012 - Target: Partially Met**
Students demonstrated some competency in interpretive skills, scoring on average a 3.85. More telling is the distribution. While 80% of the students met expectations and 15% of those exceeded them, 20% of students did not meet expectations. These students did demonstrate developing skills, which is acceptable for the gateway course, but this demonstrates a deficiency compared to the same students’ ability to think historically and work within historical context. It appears that students may be stronger at thinking about the big picture of historical analysis while not refining individual analytical skills. The attached graph shows the distribution of assignments from Summer 2011 through Spring 2012 and ends with the mean score of 3.85 on the rubric.

**Target for O4: Communication and Presentation**
Students in the gateway course (HIST 3000) should display competency, scoring between 3 and 4 on the rubric.

**Findings 2011-2012 - Target: Met**
This rubric tracks students’ ability to document sources, and communicate stylistically on a five point scale, from absent (0) to advanced (5). Absent (0): Unable to identify and document sources; cannot understand concepts such as plagiarism or unable to properly attribute information and ideas. Developing (1-2): Able to communicate findings, but with serious structural or stylistic deficiencies. Competent (3-4): A clear ability to differentiate his/her work from others and the scholarly apparatus needed to make this evident; Able to communicate findings with minimal structural or stylistic deficiencies. Advanced (5): A superior ability to communicate findings through mellifluous prose and a flawless documentation system.

Source of Evidence: Written assignment(s), usually scored by a rubric.
Students demonstrated core competency in communication skills, while the results were not as impressive as those associated with the objectives of Historical Thinking and Historical Context. On average, students scored 3.85 on their communicative abilities. 90% met expectations, and of these 14% exceeded them. The attached graph shows the distribution of assignments from Summer 2011 through Spring 2012 and ends with the mean score of 3.85 on the rubric.

**M 5: HIST 4990 Capstone Assignment (O: 1, 2, 3, 4)**

In History 4990, students produce a capstone project, a research paper of 15-25 pages in length. The papers are assessed according to the CTW rubric.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Historical Thinking**

Students should demonstrate competency to mastery of the subject, scoring between 4 and 5 on the rubric.

**Findings 2011-2012 - Target: Met**

Students largely demonstrated mastery of the subject, demonstrating a sophisticated understanding of multiple perspectives within history, and to identify change over time. According to a representative sample, 83% of students demonstrated mastery of this subject, and only one paper clearly did not meet expectations. The attached graph shows the distribution of assignments from Summer 2011 through Spring 2012 and ends with the mean score of 4.24 on the rubric.

**Target for O2: Historical Context**

Students should demonstrate competency to mastery of the subject, scoring between 4 and 5 on the rubric.

**Findings 2011-2012 - Target: Met**

Students largely demonstrated mastery of the subject, demonstrating a sophisticated understanding of the contextual nature of evidence. According to a representative sample, 83% of students demonstrated mastery of this subject, and only one paper clearly did not meet expectations. The attached graph shows the distribution of assignments from Summer 2011 through Spring 2012 and ends with the mean score of 4.29 on the rubric.

**Target for O3: Interpretive Skills**

Students should demonstrate competency to mastery of the subject, scoring between 4 and 5 on the rubric.

**Findings 2011-2012 - Target: Partially Met**

Students largely demonstrated mastery of the subject, although this was the weakest of the assessed students kills. According to a representative sample, 77% of students demonstrated mastery of this subject, and only two papers clearly did not meet expectations. The attached graph shows the distribution of assignments from Summer 2011 through Spring 2012 and ends with the mean score of 4.00 on the rubric.

**Target for O4: Historical Communication**

Students should demonstrate competency to mastery of the subject, scoring between 4 and 5 on the rubric.

**Findings 2011-2012 - Target: Met**

Students largely demonstrated mastery of the subject, being able to present their findings clearly, concisely, and elegantly. According to a representative sample, 89% of students demonstrated mastery of this subject, and only one paper clearly did not meet expectations. The attached graph shows the distribution of assignments from Summer 2011 through Spring 2012 and ends with the mean score of 4.32 on the rubric.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**assignment workshop**

Hold assignment workshops for instructors of history 3000 and 4990.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** High
- **Implementation Description:** Launch a series of brown bags to discuss critical thinking and its relationship to various critical thinking outcomes.
- **Projected Completion Date:** 12/2010
- **Responsible Person/Group:** Jared Poley

**Refine document collection strategies**

Refine document collection strategies. I asked instructors to submit examples of student work that they felt demonstrated poor, adequate, and advanced critical thinking skills. In the future I plan to modify this strategy, asking instead for "representative" or "random" samples of work from instructors.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** High
- **Implementation Description:** Refine document collection strategies.
- **Projected Completion Date:** 05/2011
- **Responsible Person/Group:** Jared Poley

**rubric evaluation**

Self-evaluation of the rubric to see if it continues to hold meaning as an assessment instrument.
Refine Capstone Course Data Collection
At present, History faculty turn in assessments from HIST 4990 to both the undergraduate studies committee and to the CTW ambassador for separate assessment. This double assessment might be combined not only to increase efficiency, but to add a level of observation. At present, for instance, the undergraduate studies committee provides an individual assessment of the 4990 capstone project. If we refine the CTW assessment instrument and add this to the list of duties of the undergraduate studies committee, we would have another level of independent assessment.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: HIST 4990 Capstone Assignment | Outcome/Objective: Historical Communication
| Historical Context | Historical Thinking | Interpretive Skills

Implementation Description: I will meet with the director of undergraduate studies to determine if we can combine assessment, and then present a plan to the undergraduate studies committee.
Projected Completion Date: 06/2013

Refine Students' Analytical Skills
Students in both the gateway (HIST 3000) and capstone (HIST 4990) showed slightly less aptitude in the area of applying direct interpretive skills than in other measured areas. This indicates that students might need to participate in more focused assignments that develop individual interpretive skills. At present, instructors use more general assignments (essays and essay exams) that test a multitude of skills rather than isolating them.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: HIST 3000 Interpretive Skills Rubric | Outcome/Objective: Interpretive Skills
Measure: HIST 4990 Capstone Assignment | Outcome/Objective: Interpretive Skills

Implementation Description: During training sessions with faculty about the gateway CTW course, faculty will be encouraged to use a multitude of writing assignments that allow students to isolate particular interpretive skills and develop them.
Projected Completion Date: 06/2013

Analysis Questions and Analysis Answers
CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
This year we refined data collection, asking teachers to send representative samples of assessed work to the CTW ambassador. In addition, we opened a dialogue between the faculty working on core and major reporting to further refine and improve our rubric.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
Our samples still do not permit for a direct analysis of students from entry to exit class, as this is only our second year of data collection. Data collected this year measured the skills of our students in both the entry and exit courses, and found them generally strong or developing. Exiting students demonstrate particularly stronger presentation and communication skills, as well as a greater understanding of historical context than those in the entry course. The refinement of these skills in 3000 and 4000 level courses, which involve multiple writing assignments (both written tests and formal essays) are clearly impacting students’ critical thinking skills. Students have proven much better at crafting essays, clearly communicating findings, and thinking historically. They have shown improvement, albeit marginally, in the development of specific interpretive skills. Students also showed marginal improvement in historical thinking skills, but this was due more to exceptionally strong scores at the entry level than weak scores at the exit level.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
It would be helpful to have more coordination between the CTW instructors, especially in the gateway (entry) course. Our gateway courses are successful, and the students are performing better in these courses than they have in years past. It would be helpful to know at this stage how observations gleaned from the CTW instructors at the gateway courses could help our instructors plan more effective assignments at the 3000 and 4000 level to develop specific interpretive skills.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes have your department made to the CTW initiative since last year’s CTW Assessment Report?
The primary impact has been to get our majors into the CTW gateway course early on in their academic careers. This has had the beneficial effect of directing students in the development of their research, writing, and critical thinking skills. As such, the CTW initiative has worked well with a timeline of how we want students to progress through the major in order to develop strong critical thinking skills. This has been my first year as CTW ambassador, and as such I made no changes this past year to the initiative.
Mission / Purpose
Students in Hospitality Strategic Management will be expected to apply the principles of strategic management in the identification and analysis of real-life business issues and problems. Students will be able to comprehensively evaluate available options and resources that would be appropriate for the involved stakeholders including guests/customers, owners/stockholders, employees and involved communities. Students will be expected to formulate and clearly communicate recommendations and implementation plans keeping in mind that the form of communication and content of the communication can vary with the involved audience/stakeholders involved. Differentiation will be made between short-term and long-term planning. Ethical considerations including social responsibility and environmental sustainability will be emphasized in the process of managing strategically.

Goals
G 1: Analytical Decision-Making
Students will demonstrate analytical skills in identifying problem situations, options in maximizing business results, and the ability to delineate possible results depending on identified factors.

G 2: Clear Communication
Students will demonstrate the ability to clearly explain, in written form and in verbal presentations, the analyses of business problems and challenges, business operational options, anticipated results and action plans for implementation.

G 3: Multi-functional Perspectives
Students will demonstrate an understanding of multi-functional areas (financial, human resources, marketing, operations, legal, physical facilities, environmental) in analyzing business situations and will demonstrate an understanding of how the functional areas impact one another and do not operate in isolation.

G 4: Understanding of internal/external business environment
The application of analytical skills will reflect understanding of current relevant economic issues, business cycles, political/governmental issues and societal trends and issues as well as internal organizational behavior.

Student Learning Outcomes/Objectives
SLO 1: Effective identification and prioritization of business factors (G: 1, 2, 3) (M: 2)
Through case study analysis, students will demonstrate the effective identification of business factors that can impact the achievement of the organization's goals. The identification of these factors will entail prioritizing which factors are most important to the business' success. This analysis will incorporate a comprehensive view of the internal and external environment of the organization.

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Strategic Plan Associations
5.4 Enhance the global competency of students, faculty and staff.

SLO 2: Prioritization of recommended operational practices (M: 2)
The case studies assigned in HADM 4800 incorporate realistic business situations including operational decision-making and the prioritization of operational practices.

SLO 3: Knowledge of what factors support high-level team performance (G: 2, 3, 4)
The strategic models incorporated in the case analyses include employees considered as resources as well as stakeholders critical to the success in meeting organizational goals. Group functioning within organizations is discussed in class. Application of group dynamics is experienced by the students in this course as they work to modify their individual case analyses into an oral group presentation based on a consensus of recommendations for the companies being studied.

Measures, Targets, and Findings
M 2: Case Studies (O: 1, 2)
Students were assigned two case studies each semester in addition to other course assignments/requirements. For fall semester, students were assigned cases based on two articles: "Exporting a North American Concept to Asia - Starbucks in China" and "Strategic Analysis for the Hospitality Industry." These were done on an individual basis with group work involving the comparison of opinions and modifying strategies based on group input. For spring semester, students were assigned the case, "Strategic Analysis for the Hospitality Industry." The second case was based on an in-class presentation on the food truck industry segment. Students applied the strategic planning model to a food truck business. As in the fall, the case work was done individually but did involve group interaction in the final stages involving discussion of individual recommendations and development of group recommendations.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Effective identification and prioritization of business factors
The target is for all students in HADM 4800 to achieve competency in delineating and prioritizing at least 80% of the relevant business factors featured in each assigned case.
Findings 2011-2012 - Target: Met
The target was achieved for all students in both semesters.

Target for O2: Prioritization of recommended operational practices
The target was for every student to appropriately prioritize the top three to five recommendations for business strategies for the case involved.

Findings 2011-2012 - Target: Met
The target was met with all students being able to appropriately prioritize at least three of their recommendations. Prioritization was defined in terms of what recommendations required action to be taken most immediately in the organization or with a group/business impacting the organization.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Interview Outline
An outline with suggested topics to cover will be provided. I do not want to require these topics because the students need to be empowered to ask the questions most important to them. I do expect, however, that students cover current business challenges and the realities of today's business environment.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: Medium
Implementation Description: This outline will be tested summer semester 2010.
Projected Completion Date: 06/2010

Written communication tools
Students in HADM 4800 will be provided, on the syllabus, a list of writing resources. Some of these will be on-line and others will be on-campus. These resources will be developed prior to the start of fall semester 2010.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: Medium
Implementation Description: A list of resources will be provided for summer semester to see which ones will be most useful to the students. Based on this feedback, a revised list will be used for fall 2010.
Projected Completion Date: 08/2010
Responsible Person/Group: Debby Cannon

Hospitality business cases
Locate additional up-to-date hospitality business cases

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High
Implementation Description: Will explore with publishers at annual hospitality education conference in early August
Projected Completion Date: 08/2012

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
Our CTW course, HADM 4800 - Hospitality Human Resources, was more focused in 2011-2012 on the case method of teaching and case study assignments. Although the course still incorporates tests and an industry leader interview, for CTW purposes, we selected to focus on the cases for assessment. The cases, in that they provide realistic business scenarios, provide effective indicators of essential strategic planning factors.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
In talking with the instructor for this course over the past year, he felt that the students did demonstrate critical thinking abilities with appropriate applications to real-life business situations. This particular instructor was new to Georgia State and had been at a more residential university. He felt that GSU students were functioning at a higher level in terms of critical thinking skills than at his former university.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
We constantly have to look for up-to-date cases reflecting the current business environment not only for the United States but globally. This will expand and improve the tools used in CTW development. Cases with more detailed financial information are also being sought. This process of looking for better teaching tools is ongoing. The annual conference of hospitality educators often includes sessions related to this topic and it will be attended by three faculty this summer.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
All faculty have become more aware of CTW initiatives even if not teaching our CTW course. One driving factor that keeps CTW very alive for this department is that our recruiters and employers are desiring the same outcomes as the CTW courses. They want students who can think "on their feet," and express their opinions effectively in both written and oral form.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The School of Hospitality will go through re-accreditation in 2014 and assessment is very key to that process. We have started discussions this past year of our plans for a comprehensive review of our courses and course content. This fall, we will begin surveying and interviewing (sometimes through focus groups) our alumni and industry employers to gain their opinions on our offered courses and content. We will also benchmark several top programs to review curricular issues. Since our program is in the “Top 20” of hospitality programs nationwide, our focus will be on about five on the same list.

**ACADEMIC PROGRAM QUESTION 2**: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

We need to evaluate the difficulty level of the cases and confirm that the cases are sufficiently challenging as well as being comprehensive and up-to-date. The prior question discussed our plans for a curriculum review process in the department and the CTW data will be incorporated into that review process.

**ADMINISTRATIVE DEPT QUESTION 1**: Explain how your department used the results from the previous cycle’s (2010-2011) assessment. What actions did you take this past year based on the results from the previous cycle? What changes did you make as a result?

In past years, the feedback received from the CTW assessment was that we did not have to include data on all assignments or even for all students. For this year (2011-2012), the attempt was to focus on the key assignment of the case studies. These were selected because case studies do reflect realistic business situations that require critical thinking abilities. The case studies incorporated both written and oral presentation assignments.

**ADMINISTRATIVE DEPT QUESTION 2**: What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department’s effectiveness?

As we have found in past years, the critical thinking abilities are often present with our students. The written communication skills are often lacking. Many of these problems reflect basic grammatical mistakes. Some of the communication problems reflect speaking English as a second language. While most faculty address the need for correct grammar in written assignments, the consistency in the degree that they provide needed remedial work varies.

**ADMINISTRATIVE DEPARTMENT QUESTION 3**: How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

Starting fall 2012, we are considering content changes for HADM 4800, Hospitality Strategic Management, that would include an industry certification reflecting many of the CTW objectives. A decision will be made early this summer. The advantage would be a clear metric of how students apply their knowledge through a vehicle developed by the hospitality industry.

---

**Annual Report Section Responses**

**Most Important Accomplishments for Year**—Briefly describe the major things you accomplished over the past year. Be sure to note previous Action Plans that were executed this year, plus any accomplishments that are not otherwise mentioned in your outcomes reporting.

New cases were used with more attention placed on the case analysis assignments.

**Challenges for Next Year**—Briefly describe any special challenges (related to budget, personnel, increased standards, new projects, new expectations, etc.) that you will be facing during the next reporting cycle that might affect your department’s outcomes.

There will probably be a new faculty member teaching this course - if not fall 2012, it will be spring 2013.

**Modifications in Measurement Methods**—If you modified any of the measures or methods you use in the measurement process, please note those here.

Measures were limited to the case study analyses.

**International Activities**—Note here any international activities of the department or its staff.

One international student exchange agreement was added this past academic year with our first student arriving in spring 2012. She was from the Institute for Tourism Studies in Macao, China. We also had a student from our partnership at the Universite de Savoie in France at GSU this spring.

**Service to the External Community**—Note here any initiatives or activities of your department that impact the external community (e.g., providing assistance to needy populations).

We are academic partners with the Club Managers Association of America and the National Association of Convenience Stores.

---

**Georgia State University**

**Assessment Data by Section**

**2011-2012 CTW Human Resources**

(As of: 12/12/2016 04:41 PM EST)

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)
Critical thinking has four components: identifying consequential issues, generating alternatives, anticipating outcomes, and drawing correct conclusions. When making HR decisions that have a legal component, managers need knowledge of the law, HR practices, and strategy. Furthermore, it is important to consider all forms of risk, not just legal ones. Effective decision-makers generate of several views of a problem and alternative solutions that account for various advantages and disadvantages. This includes sensitivity to the organization’s mission, values, strategies, goals, HRM practices, performance, and reputation. The ability to conceptualize and articulate solutions is essential for convincing various stakeholders to adopt a strategic rather than legalistic view.

**Goals**

**G 1: Knowledge of HR Law and Practices**  
Students will be knowledgeable about the legal implications of HR policies and programs.

**G 2: Critical Thinking Skills**  
Students will be good critical thinkers.

**G 3: Organizationally-sensible Decision-Making**  
Students will be aware of considerations beyond just the legal when making decisions related to human resources.

**Student Learning Outcomes/Objectives**

<table>
<thead>
<tr>
<th>SLO 1: Specify Relevant Facts (G: 1, 2, 3) (M: 1, 2)</th>
</tr>
</thead>
<tbody>
<tr>

2 Student promotion and progression
3 Timely graduation

**Standard Associations**
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**
2.2 Leverage our national reputation in professional degree programs for the development of societal leaders.

**Measures, Targets, and Findings**

**M 1: Vignette (O: 1, 2, 3, 4, 5)**
Students analyze "in-class" and on-line critical incident vignettes. These "minicases" are based on actual legal findings, but written from the perspective of the management professional rather than an attorney. Vignettes often describe situations that have ambiguous legal implications. To draw reasonable conclusion and write persuasively, student must identify consequential issues, generate alternatives, and anticipate outcomes. Students learn to distinguish what is illegal from what is unethical, invalid, or pragmatic. Realistic situations improve retention and motivate interest in learning. This reduces resistance (Smith, 2003. Beyond CT and decision making: Teaching business students how to think. Journal of Management Education) and enhances transfer of learning by depicting situations that are similar to the actual work environment, providing a variety of situations, inculcating theory and concepts, and facilitating practice (Baldwin & Ford, 1988. Transfer of training: A review and directions for future research. Personnel Psychology). Students gain experience so that once they are working in organizations, their "past experiences and solution activities comes quick to mind when new situations are encountered (Smith, 2003)."

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Specify Relevant Facts**
100% of students will score at the "Marginal" level or higher; 70% will score at the "Satisfactory" level or higher; 50% will score at the "Outstanding" level or higher.

**Findings 2011-2012 - Target: Met**
I taught five sections of this course during the current cycle, but the distribution was consistent across the sections. By the end of the semester, all students scored at the "Marginal" level or higher. Depending on the section, between 70% and 75% scored at the "Satisfactory" level or higher and between 45% and 55% scored at the "Outstanding" level or higher. Early in the semester, I place considerable emphasis on the first three criteria of the rubric including the ability to "specify relevant facts" because it is impossible to draw reasonable conclusions (criteria four) and write persuasively (criteria five) without
I added several situational judgment test items. I used these early in the semester to "ease" students into writing critically. Writing short (50 to 100 words) justifications still required critical thinking and knowledge of employment law but less writing. Because SJTs demand less grading time, I could offer more student assessments early in the semester. Generally, I returned assignments by the next class allowing the students to quickly build CTW abilities. Students perceived SJTs as the typical multiple-choice test. Students perceived SJTs are the typical multiple-choice test. This reduced their anxiety about writing, although justifying a response required complex thinking. Based on student comments, I found SJTs fostered more positive attitudes toward performing meaningful CTW tasks and improved self-efficacy about CTW performance. Because it was possible to have more than one right answer based on the student's reasonable interpretation, it was relatively easy to evaluate students' ability to apply domain knowledge to realistic situations. Memorizing a few key cases and reciting regulations may have enabled students to more quickly (usually by the next class) and provide detailed feedback. I use the rubric to discuss the vignette in class.

**Target for O2: Identify Pertinent Legal Issues**

100% of students will score at the "Marginal" level or higher; 70% will score at the "Satisfactory" level or higher; 50% will score at the "Outstanding" level or higher.

**Findings 2011-2012 - Target: Met**

I taught five sections of this course during the current cycle, but the distribution was consistent across the sections. By the end to the semester, all students scored at the "Marginal" level or higher. Depending on the section, between 70% and 75% scored at the "Satisfactory" level or higher and between 45% and 55% scored at the "Outstanding" level or higher. Early in the semester, I place considerable emphasis on the first three criteria of the rubric including the ability to "specify legal issues" because it is impossible to draw reasonable conclusions (criteria four) and write persuasively (criteria five) without specifying pertinent legal issues. Students have their first vignette by the second class. Some students do well immediately but most require several measures before they learn to specify the legal issues. I return assignments quickly (usually by the next class) and provide detailed feedback. I use the rubric to discuss the vignette in class.

**Target for O3: Explain Underlying Legal Principles.**

100% of students will score at the "Marginal" level or higher; 70% will score at the "Satisfactory" level or higher; 30% will score at the "Outstanding" level or higher.

**Findings 2011-2012 - Target: Partially Met**

I taught five sections of this course during the current cycle, but the distribution was fairly consistent across the sections. By the end to the semester, all students scored at the "Marginal" level or higher. Depending on the section, between 55% and 70% scored at the "Satisfactory" level or higher and between 35% and 50% scored at the "Outstanding" level or higher. Early in the semester, I place considerable emphasis on the first three criteria of the rubric including the ability to "explain underlying legal principles" because it is impossible to draw reasonable conclusions (criteria four) and write persuasively (criteria five) without explaining legal principles. Students have their first vignette by the second class. Some students do well immediately but most require several measures before they learn to discuss all legal principles. For example, in a sexual harassment complaint, does the student explain the difference between qui pro quo and hostile work environment. I return assignments quickly (usually by the next class) and provide detailed feedback. I use the rubric to discuss the vignette in class.

**Target for O4: Draw Reasonable Conclusions**

100% of students will score at the "Marginal" level or higher; 60% will score at the "Satisfactory" level or higher; 30% will score at the "Outstanding" level or higher.

**Findings 2011-2012 - Target: Partially Met**

I taught five sections of this course during the current cycle, but the distribution was fairly consistent across the sections. By the end to the semester, all students scored at the "Marginal" level or higher. Depending on the section, between 40% and 60% scored at the "Satisfactory" level or higher and between 20% and 25% scored at the "Outstanding" level or higher. Many students successfully perform the first three objectives (specify relevant facts, identify pertinent legal issues, explain underlying legal principles) but draw the wrong conclusions. For example, when analyzing a vignette depicting coworker bullying, a student may do an "outstanding" job of explaining the difference between qui pro quo and hostile work environment, but incorrectly conclude that the targeted employee was sexually harassed. The tendency to draw conclusions contrary to the evidence may be the result of cognitive biases (Roehling & Wright, 2006. Organizational sensibility versus legal-centric approaches to employment decisions. Human Resource Management).

**Target for O5: Write Persuasively**

100% of students will score at the "Marginal" level or higher; 40% will score at the "Satisfactory" level or higher; 20% will score at the "Outstanding" level or higher.

**Findings 2011-2012 - Target: Partially Met**

I taught five sections of this course during the current cycle, but the distribution was consistent across the sections. By the end to the semester, 90% of students scored at the "Marginal" level or higher. Depending on the section, between 25% and 35% scored at the "Satisfactory" level or higher and between 15% and 25% scored at the "Outstanding" level or higher. Students perceived SJTs as the typical multiple-choice test. This reduced their anxiety about writing, although justifying a response required complex thinking. Based on student comments, I found SJTs fostered more positive attitudes toward performing meaningful CTW tasks and improved self-efficacy about CTW performance. Because it was possible to have more than one right answer based on the student's reasonable interpretation, it was relatively easy to evaluate students' ability to apply domain knowledge to realistic situations. Memorizing a few key cases and reciting regulations may have enabled students to more quickly (usually by the next class) and provide detailed feedback. I use the rubric to discuss the vignette in class.

**Target for O1: Specify Relevant Facts**

100% of students will score at the "Marginal" level or higher; 80% will score at the "Satisfactory" level or higher; 60% will score at the "Outstanding" level or higher.

**Findings 2011-2012 - Target: Met**

I added several situational judgment test items. I used these early in the semester to "ease" students into writing critically. Writing short (50 to 100 words) justifications still required critical thinking and knowledge of employment law but less writing. Because SJTs demand less grading time, I could offer more student assessments early in the semester. Generally, I returned assignments by the next class allowing the students to quickly build CTW abilities. Students perceived SJTs are the typical multiple-choice test. This reduced their anxiety about writing, although justifying a response required complex thinking. Based on student comments, I found SJTs fostered more positive attitudes toward performing meaningful CTW tasks and improved self-efficacy about CTW performance. Because it was possible to have more than one right answer based on the student's reasonable interpretation, it was relatively easy to evaluate students' ability to apply domain knowledge to realistic situations. Memorizing a few key cases and reciting regulations and statutes have little value in the real world where HR situations are intricate and context-bound. For instance, context is a key factor in sexual harassment cases. An identical behavior could be illegal in a law office but legal in automobile repair shop.
I taught five sections of this course during the current cycle, but the distribution was consistent across the sections. By the end to the semester, all students scored at the "Marginal" level or higher. Depending on the section, between 70% and 85% scored at the "Satisfactory" level or higher and between 55% and 65% scored at the "Outstanding" level or higher.

**Target for O2: Identify Pertinent Legal Issues**

100% of students will score at the "Marginal" level or higher; 80% will score at the "Satisfactory" level or higher; 60% will score at the "Outstanding" level or higher.

**Findings 2011-2012 - Target: Met**

I taught five sections of this course during the current cycle, but the distribution was consistent across the sections. By the end to the semester, all students scored at the "Marginal" level or higher. Depending on the section, between 70% and 85% scored at the "Satisfactory" level or higher and between 55% and 65% scored at the "Outstanding" level or higher.

**Target for O3: Explain Underlying Legal Principles.**

100% of students will score at the "Marginal" level or higher; 70% will score at the "Satisfactory" level or higher; 30% will score at the "Outstanding" level or higher.

**Findings 2011-2012 - Target: Partially Met**

I taught five sections of this course during the current cycle, but the distribution was consistent across the sections. By the end to the semester, all students scored at the "Marginal" level or higher. Depending on the section, between 55% and 70% scored at the "Satisfactory" level or higher and between 25% and 35% scored at the "Outstanding" level or higher.

**Target for O4: Draw Reasonable Conclusions**

100% of students will score at the "Marginal" level or higher; 60% will score at the "Satisfactory" level or higher; 30% will score at the "Outstanding" level or higher.

**Findings 2011-2012 - Target: Partially Met**

I taught five sections of this course during the current cycle, but the distribution was consistent across the sections. By the end to the semester, all students scored at the "Marginal" level or higher. Depending on the section, between 45% and 55% scored at the "Satisfactory" level or higher and between 20% and 35% scored at the "Outstanding" level or higher.

---

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Develop New Assignments Based on Situational Judgment Test Methodology**

Over the past year, I experimented with various forms of SJT items. The items are based on actual legal findings but written from the perspective of the management professional rather than an attorney. This is the same process I use to develop the in-class and online vignettes. I asked students to provide a written justification for their answers. A review of the literature indicates this format can be effective in assessing domain knowledge (Bailin, S., Case, R., Coombs, J. R., & Daniels, L. B. 1999. Common misconceptions of CT. Journal of Curriculum Studies, 31: 269-283) as well as critical thinking (Ennis, R. H. 1993. Critical thinking assessment. Theory into Practice, 32, 179-186).

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Finished
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Vignette
  - **Outcome/Objective:** Specify Relevant Facts

**Improve Persuasive Writing Skills**

This is an area where students show the greatest weakness. A review of the literature shows that persuasive writing is an essential skill for business professions. The typical role of a student may be to merely demonstrate their decision-making abilities. However, managers must be informed consumers of HR information in order to evaluate the recommendations of others or persuasively challenge dubious advice. The ability to conceptualize and articulate solutions is essential for convincing various stakeholders to adopt a strategic rather than legalistic view.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Vignette
  - **Outcome/Objective:** Write Persuasively

**Implementation Description:** Clark and Fischback (2008. Writing and learning in the health sciences: Rhetoric, identity, genre, and performance. The WAC Journal) described a role-playing approach to teaching Public Health students "the performance nature of writing." I plan to develop several role-playing activities.

**Projected Completion Date:** 05/2013

**Promote Metacognitive Awareness**

Metacognition is essential for CTW because it helps students better manage their cognitive skills, and to recognize their weaknesses. Schraw (1993) recommends that teachers start with making students aware of metacognition. The next step is to teach strategies for improving metacognition.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - **Measure:** Situational Judgment Test
  - **Outcome/Objective:** Draw Reasonable Conclusions
Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
A review of the literature suggests that many students have negative perceptions of writing assignments which undermine their performance. This research reinforces my own experience. During the first few weeks of class, many students respond negatively to writing assignments. Some students exhibit various nagging behaviors (Dunleavy, K. N., Martin, M. M., Brann, M., Booth-Butterfield, M., Myers, S. A., & Weber, K. 2008. Student nagging behavior in the college classroom. Communication Education) while others passively "fail" the first couple of assignments. However, after reviewing the comments on my 2010-2011 assessment report and attending several assessment workshops, I realize that I failed to make a clear link to assessment findings. My action plan focused on the moderating variable of resistance, but I not measuring resistance directly. Consequently, for the purposes of this assessment process, I am terminating this action plan and adding a plan more directly linked to assessment findings. Because written assignments are returned to students with feedback, vignettes cannot be "recycled." Consequently, I created dozens of new vignettes and SJT items based on legal rulings. I taught eleven courses including five CTW sections. Providing quick turnaround and student feedback is a challenge but the addition of SJT items was beneficial. Because SJTs demand less grading time, I could offer more student assessments early in the semester. Generally, I returned assignments by the next class allowing the students to build CTW abilities quickly. Students perceived SJTs are the typical multiple-choice test. This reduced their anxiety to writing, although justifying a response required complex thinking. My concern that students required to take a CTW course would be more resistant was not apparent. If anything, there were fewer negative behaviors this cycle. Perhaps, this is the result of two years of piloting and the excellent CTW training the University provides. Also, much to my surprise, my received higher evaluations for my CTW sections than my other courses.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
As in previous cycles, over the course of the semester, by comparing their first few and last few assignments, I found substantial improvement using the five rubric criteria (outcomes). Moreover, most students gained confidence in their reasoning skills and ability to write clearly and organize logically. As they were exposed to more "real-world" situations, students became more mentally agile. As the semester progressed (Dunleavy, K. N., Martin, M. M., Brann, M., Booth-Butterfield, M., Myers, S. A., & Weber, K. 2008. Student nagging behavior in the college classroom. Communication Education, 57, 1-19). For a few students, I think this course changes self-conceptions beyond reasoning and writing. They leave this class feeling a sense of accomplishment. A typical comment from a "late-bloomer" was "I'm smarter than I thought."

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
I continue to enjoy teaching this course despite the grading demands. I know that I am a better teacher, and I believe that my students are better prepared for the "real world" where critical thinking is essential. The intrinsic rewards are enormous, especially when I encounter a student who begins the semester virtually despondent over the prospect of CTW and ends the semester wanting to "show off" his or her CTW skills.
as described below: Analysis: students will demonstrate an ability to analyze basic international business processes, operations, and the challenges of globalization. Communication: students will demonstrate the ability to communicate their knowledge of international business processes directly to business leaders. They will put their analysis in written form appropriate for presenting a business proposition based on their understanding of the fundamentals of the field and their research. Research Skills: students will develop research skills and an awareness of the limitations of on-line material related to international business, including the use of foreign media sources.

### Measures, Targets, and Findings

#### M 1: Rubric for International Business (O: 1)

Rubrics Applied to BUSA 3000 "Globalization and Business Practices." To date, rubric scores have not been compared either over time or across the many sections of the course. Using the combination of full-time and part-time instructors continues to complicated comparisons across sections. Nevertheless, we continue to use the rubrics as modified for 2010-2011 as a guide for both GRA/writing consultants and for the professors to better capture the nature of the writing assignment and to maintain consistency across sections as much as possible. For example, we realized that the assignment as indicated in the Syllabus and on the rubrics referred to "thesis and proposition." Further discussion among the faculty lead to the conclusion that "thesis" does not capture our purpose well. Since we are focusing on business writing, it was decided that "business proposition" best captures our intent. GRAs and professors were surveyed obtain their feedback on the progress of the course. The full results have these surveys are posted as "Documents." Most of the responded in both categories supported the current outline of the writing assignment. Most of the dissatisfaction involved the use of WAC. Since some instructors opted out of WAC all together it remains difficult to compare results across sections. It was clear from the surveys and the consultations of the ambassadors with CTW authorities that the goals and objectives needed to be reviewed. Our conclusion was that the "Goals" should be put in a more general format and could be better linked to the new GSU goals under the Global Education Initiative. This was done and can be demonstrated by the Goals and Objectives document. In turn, review of the objectives specified on the course syllabus indicated that the existing CTW goals should be more appropriately classified as the CTW "Objectives."

Source of Evidence: Written assignment(s), usually scored by a rubric

#### M 2: Rubric application (O: 1)

Faculty approved the change in rubrics. The new definitions of the categories now better reflect the substance of the assignment. However, it remains difficult to apply the rubric scoring to comparative analysis across sections. This is especially true due to the large number of instructors, including several PTIs, which results in a lack of consensus on using the scoring in a uniform way. Therefore, in 2011-2012 the focus will be more on the substantive aspects of the assignment rather than the scoring by rubrics. These conclusions continue to apply in 2012.

Source of Evidence: Written assignment(s), usually scored by a rubric

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Action Plan 2010-2011, International Business

Action Plan: 2010-2011 BUSA 3000 The student response rates to the official CTW evaluations have been uneven. Thus, we intend to conduct in-class evaluations in all the sections of BUSA 3000 Evaluation across the multiple sections of the course has been difficult. Efforts will be made to ensure that all instructors use the rubric scoring system to provide more comparable data. The instructors need to reach consensus on the proposed changes to the rubrics. We will continue to urge instructors to use standard headings for the written assignment. Each semester training session will be conducted for faculty and GRAs (both continuing and new). Training sessions will include a focus faculty and GRA use of the WAC on-line evaluation system.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High
- **Projected Completion Date:** 04/2011

#### Action Plan 2011-2012

1. As in the past, we will conduct workshops at the beginning of each semester involving faculty and CTW GRAs, including training on the use of on-line WAC. 2. Response rates to the on-line evaluations have been low. We believe that an In-class evaluation process should be used a couple of weeks before the end of the term. 3. Rubric scoring has not been embraced by the faculty. Therefore, we propose an evaluation session with faculty/GRAs after the end of each term. Faculty will be asked to bring in examples of poor, average, and outstanding papers. Then, the faculty will be engaged in a discussion to better define the problem areas and the characteristics of excellent work. 4. The sample papers will be merged into test case papers to be made available to faculty to share with students in discussions of “best practices.” 5. We will continue to stress the role of standard headings on the papers.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Planned
- **Priority:** High

#### Action Plan 2012-2013

Action Plan: 2012-2013 BUSA 3000 1. Review the surveys conducted with the faculty and CTW GRAs (posted in “Documents”). 2. Evaluate the possibility of using partial grades to motivate students to post drafts (given recommendations of faculty and GRAs) 3. Press for improvements in the performance of WAC 4. Recruit and train a new set of CTW GRAs (see “Documents” for selection process) 5. Orient new full-time professors (New positions in the department have been filled. Some of these professors will probably replace some of our PTIs.) 6. Review the appropriateness of the new course goals adjusted to relate to the GSU Global Education Initiative

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High

### Analysis Questions and Analysis Answers
CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

We have continued to successfully manage a course with 16 to 18 sections each semester plus 4 in the summer. This means 600 to 700 students per semester. To accomplish this we need to train regularly on the use of CTW not only a number of writing consultants but also new professors. Given these numbers, we have not been able to pre-test the writing capabilities of the students. We have refined our assignment based on obtaining more focus in the writing technique of the students to reflect the nature of business communications.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Given our large number of students and the turnover of faculty and consultants, comparison over time has been particularly difficult. There are too many students to permit pre-testing.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

The biggest single problem has been the lack of reliability and consistency in using the WAC, Several professor opting out and only use hard-copy or set up their own website.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

The BUSA 3000 course was selected as the core Business School CTW course, in part, because it already had a writing assignment. CTW has helped to provide greater definition to that assignment and has provided the GRA assistance that makes the use of drafts possible. The Institute of International Business has recently hired several new full time professors. Some of these will most likely replace some of the current PTIs. Over time, this will help to provide more consistency across sections and across semesters.

---

Georgia State University
Assessment Data by Section
2011-2012 CTW Journalism

Missions / Purpose

The Journalism faculty members view the process of critical thinking as part of the routine of professional journalists/PR practitioners who use journalistic norms, standards and conventions of objectively assessing information and then decide what portions of synthesized information their audiences will receive.

Goals

G 1: Evaluation
find and evaluate credible sources of information

G 2: Interpreting information
to analyze and interpret information for bias and objectivity

G 3: Creating appropriate materials
to apply ethical standards and conventions of journalism and related to the mass communication industries when creating original content, e.g. news stories, press releases, newsletters, etc.,

G 4: Producing original materials
to understand the professional standards and apply them to produce materials in a variety of different media appropriate to diverse audiences.

Student Learning Outcomes/Objectives

SLO 1: •Think critically, creatively and independently (G: 1, 2, 3, 4) (M: 1, 2)
operation(alized: rubric item Critical Thinking

SLO 2: •Critically evaluate their own work and that of others (G: 1, 2, 4) (M: 1)
Critically evaluate their own work and that of others for accuracy and fairness, clarity, appropriate style and grammatically correctness (operationalized: rubric item Writing Competency)

SLO 3: •Demonstrate an understanding of professional ethical principles (G: 3, 4) (M: 5)
Demonstrate an understanding of professional ethical principles and work ethically in pursuit of truth, accuracy, fairness and diversity (operationalized: rubric item Logic/reasoning)

SLO 4: •Write correctly and clearly in forms and styles appropriate (G: 3, 4) (M: 3, 6)
Write correctly and clearly in forms and styles appropriate for the communication professions, audiences and purposes they serve (operationalized: rubric items: Audience Awareness + Content)
# SLO 5: Apply appropriate tools and technologies (G: 4) (M: 6)
Apply tools and technologies appropriate for the communications professions in which they work (operationalized: rubric item Content + Logic/reasoning)

# SLO 6: Understand concepts and apply theories (G: 4) (M: 1, 4)
Understand concepts and apply theories in the use of and presentation of images and information (operationalized: rubric item Writing Competency + Research Competency)

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O6: Understand concepts and apply theories**
average score of 16 out of 20 points or 80%

**Findings 2011-2012 - Target: Not Met**
The average score for the sample of students in Jour 3010 on the Research Competency rubric is 14.7. The average score for the sample of students in Jour 4800 on the Research Competency rubric is 13.6. The average score for the sample of students in Jour 4040 on the Research Competency rubric is 14.8.

**M 5: Logic/reasoning (O: 3)**
Factual information and opinions presented in a logically consistent manner

**Target for O3: •Demonstrate an understanding of professional ethical principles**
average score of 8 out of 10 or 80%

**Findings 2011-2012 - Target: Not Met**
The average score for the sample of students in Jour 3010 on the Logic/reasoning rubric was 7.7. The average score for the sample of students in Jour 4800 on the Logic/reasoning rubric was 7.7. The average score for the sample of students in Jour 4040 on the Logic/reasoning rubric was 7.3.

**M 6: Content (O: 4, 5)**
Report contains facts and opinions that meet the requirements of the assignment

**Target for O4: •Write correctly and clearly in forms and styles appropriate**
average score of 16 out of 20 points or 80%

**Findings 2011-2012 - Target: Not Met**
The average score for the sample of students in Jour 3010 on the Content rubric is 15.8. The average score for the sample of students in Jour 4800 on the Content rubric is 14.7. The average score for the sample of students in Jour 4040 on the Content rubric is 10.2.

**Target for O5: Apply appropriate tools and technologies**
average combined score of Content + Logic/reasoning of 24 out of 30 or 80%

**Findings 2011-2012 - Target: Not Met**
The sample of students in Jour 3010 scored 15.8 Content + 7.7 Logic/reasoning to total 23.5. The sample of students in Jour 4800 scored 14.7 Content + 7.7 Logic/reasoning to total 22.4. The sample of students in Jour 4040 scored 10.2 Content + 7.3 Logic/reasoning to total 17.5.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**content for Jour 3010**
The average score for the content of Jour 3010 was 71.1%, below the target score of 80%. This low score can be partially explained by the low score for the learning outcome of research competency because not enough sources with varied perspectives were found or used by the students in their stories. A meeting with the Jour 3010 instructors will help strategize how to improve the quality of the story content, including earlier interventions by the instructors before the final stories are written. One reason why the score is so low is that the stories were not randomly chosen for the assessment process. The instructor provided several in each of the categories of "superior," "average" and "below average," and clearly the submissions in the latter two categories resulted in such poor content quality to drive down the overall learning outcome average. More on this in the analysis section.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
  - Measure: Content | Outcome/Objective: •Write correctly and clearly in forms and styles appropriate

Implementation Description: meeting with Jour 3010 instructors
Projected Completion Date: 08/2010
Responsible Person/Group: CTW Ambassador and Jour 3010 instructors
Additional Resources: none
Budget Amount Requested: $0.00 (no request)

**Critical Thinking**
The average score for Jour 4800 was below the target of 16 out 20 points or 80% on the rubric item: 15.3 or 76.5%. The average score for Jour 4040 met the minimum of 80%, and so the combined average score for the two senior capstone courses in Journalism was below the target of 80%; 15.7 or 78.5%. There can be several explanations for the underperformance to be detailed in the analysis section. A few items to consider for next year to improve the critical thinking component: - improved instruction on finding, evaluating and interpreting credible sources of information; - a detailed rubric for critical thinking to help determine if there is one or more specific components of the critical thinking process that is lacking so better instruction can be targeted to help students improve; - a random selection of students' reports to have better representation of Jour 4800 student performance; - an assessment of the students' annotated bibliography to determine at an earlier stage in the course if their critical thinking skills need to be...
improved prior to the start of the final research report.

**Established in Cycle:** 2009-2010

Measure: Critical Thinking | Outcome/Objective: Think critically, creatively and independently

**Implementation Description:** meeting with Jour 4800 instructors  
**Projected Completion Date:** 08/2010  
**Responsible Person/Group:** CTW Ambassador and Jour 4800 instructors  
**Additional Resources:** none  
**Budget Amount Requested:** $0.00 (no request)

### logic/reasoning for Jour 3010

The average score for logic/reasoning was 73%, below the target of 80%. This score was low because most of the stories written by the students did not have a logical structure and poorly transitions within the stories. The CTW Ambassador will meet with the instructors of Jour 3010 to determine if more emphasis should be given to improving the outline of stories before they are written to allow greater input from the instructors before the first draft of the story is submitted.

**Established in Cycle:** 2009-2010  
**Implementation Status:** Planned  
**Priority:** High

**Relationships (Measure | Outcome/Objective):**  
Measure: Logic/reasoning | Outcome/Objective: Demonstrate an understanding of professional ethical principles

**Implementation Description:** meeting with Jour 3010 instructors  
**Projected Completion Date:** 08/2010  
**Responsible Person/Group:** CTW Ambassador and Jour 3010 instructors  
**Additional Resources:** none  
**Budget Amount Requested:** $0.00 (no request)

### logical content for Jour 3010

The average combined score of Normal 0 false false false MicrosoftInternetExplorer4 71.7% for content and logic/reasoning was below the target of 80%. This demonstrates that the stories were not well constructed and should have had more diverse sources included in the stories. A meeting with the Jour 3010 instructors will help strategize how to improve the students’ writing to emphasize more perspectives and better transitions among the different viewpoints that should be included in their stories before writing the final draft.

**Established in Cycle:** 2009-2010  
**Implementation Status:** Planned  
**Priority:** High

**Relationships (Measure | Outcome/Objective):**  
Measure: Content | Outcome/Objective: Apply appropriate tools and technologies

**Implementation Description:** meeting with Jour 3010 instructors  
**Projected Completion Date:** 08/2010  
**Responsible Person/Group:** CTW Ambassador and Jour 3010 instructors  
**Additional Resources:** none  
**Budget Amount Requested:** $0.00 (no request)

### Research Competency

The average score for Jour 4800 Research Competency measure of the learning outcome of “Understanding Concepts and Applying theory” was below the target of 80% at 15.7 out of 20 or 78.5%. There may be several explanations for the underperformance to be detailed in the analysis section. The CTW Ambassador will consult with the instructor and any other faculty assigned to Jour 4800 to strategize about how to improve the research competency of the students. Some suggestions may include: - more rigorous instruction in searching for more and varied sources to be included in the research report; - different measure for Research Competency; - random sampling of students’ final research paper; - a random sampling of students’ annotated bibliography submitted earlier in the semester to assess earlier research efforts.

**Established in Cycle:** 2009-2010  
**Implementation Status:** Planned  
**Priority:** High

**Relationships (Measure | Outcome/Objective):**  
Measure: Writing Competency | Outcome/Objective: Understand concepts and apply theories

**Responsible Person/Group:** CTW Ambassador and Jour 4800 instructors  
**Additional Resources:** none  
**Budget Amount Requested:** $0.00 (no request)

### research for Jour 3010

The average score for research competency for Jour 3010 was 77%, below the target of 80%. The CTW Ambassador will meet with the instructors of 3010 to determine if greater emphasis should be given in the instruction of 3010 assignments that require the students to obtain more sources with a variety of perspectives.

**Established in Cycle:** 2009-2010  
**Implementation Status:** Planned  
**Priority:** High

**Relationships (Measure | Outcome/Objective):**  
Measure: Research Competency | Outcome/Objective: Understand concepts and apply theories

**Implementation Description:** meeting with Jour 3010 instructors  
**Projected Completion Date:** 08/2010
Jour 3010 Content
Discuss how to improve the quality of information included in writing assignments and the journalistic standards to assess news worthy details.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
  - Measure: Content | Outcome/Objective: Write correctly and clearly in forms and styles appropriate

Implementation Description: Meet with Jour 3010 instructors.
Projected Completion Date: 08/2011
Responsible Person/Group: Jour 3010 instructors and CTW Ambassador
Budget Amount Requested: $0.00 (no request)

Jour 3010 Content
Discuss improving quality of information provided in written assignments and using journalistic standards to determine news worthy details.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
  - Measure: Content | Outcome/Objective: Apply appropriate tools and technologies

Implementation Description: Meet with Jour 3010 instructors.
Projected Completion Date: 08/2011
Responsible Person/Group: Jour 3010 instructors and CTW Ambassador
Budget Amount Requested: $0.00 (no request)

Jour 3010 Critical Thinking
Assess measure of critical thinking. Discuss how critical thinking is taught.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
  - Measure: Writing Competency | Outcome/Objective: Critically evaluate their own work and that of others

Implementation Description: Meet with Jour 3010 instructors.
Projected Completion Date: 08/2011
Responsible Person/Group: Jour 3010 instructors and CTW ambassador
Budget Amount Requested: $0.00 (no request)

Jour 3010 Critical Thinking
Assess measure. Discuss how critical thinking is taught.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
  - Measure: Critical Thinking | Outcome/Objective: Think critically, creatively and independently

Implementation Description: Meet with Jour 3010 instructors.
Projected Completion Date: 08/2011
Responsible Person/Group: Jour 3010 instructors and CTW Ambassador
Budget Amount Requested: $0.00 (no request)

Jour 3010 Writing Competency
Assess measure to determine if the rubric or other assessment measures can better detect problems with student writing.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
  - Measure: Writing Competency | Outcome/Objective: Understand concepts and apply theories

Implementation Description: Meet with Jour 3010 instructors.
Projected Completion Date: 08/2011
Responsible Person/Group: Jour 3010 instructors and CTW Ambassador
Budget Amount Requested: $0.00 (no request)

Jour 3010 Writing Competency
The writing competency of Jour 3010 was below the target. Improving the writing mechanics (grammar, spelling, punctuation, etc.) of students has been a long time struggle for instructors. The Dept. has a new ad hoc committee of Journalism faculty to improve students’ writing, and its recommendations will be implemented for the fall semester.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High
Applying appropriate tools

The samples from CTW courses did not meet the targets. The content component was worse in the samples from the capstone courses than in the sample from Jour 3010. The assignments in the lower-level course are practical writing, e.g., news stories, whereas the assignment in the capstone courses is a 20-25 page research report. It’s clear from this year’s performance that the sample of students performed worse on the lengthier report than the sample of students writing shorter news stories which didn’t require the collection of information from many sources. Applying appropriate research skills and evaluating information from a variety of sources is vital to students about to graduate from a Journalism program. The instructors and the CTW Ambassador will have to meet to discuss strategies to improve on the evaluation of information and how relevant information is included in the writing of stories and reports based on the best of the information.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Evaluation emphasis

The CTW Ambassador will meet with instructors of the Journalism capstone courses and Jour 3010 to devise ways to emphasize how information from a variety of sources can be evaluated for inclusion in research reports and news stories. This seems to be the component of critical thinking the sample of Journalism students lacking. Some of the information provided by the students should not have been included in the report and news stories. It may have been “filler” by the students to meet the rigorous course requirement of writing a 20-25 page report or lacking judgement of what is worthy information to include in a news story, but the evaluation of information is a vital aspect of journalism. It should be well developed by students about to graduate, yet this year’s performance was dramatically below the performance of students from previous years.

Evaluation emphasis
The CTW Ambassador will meet with instructors of the Journalism capstone courses to devise ways to emphasize how information from a variety of sources can be evaluated for inclusion in research reports. This seems to be the component of critical thinking the sample of Journalism students lacking. Some of the information provided by the students should not have been included in the report. It may have been "filler" by the students to meet the rigorous course requirement of writing a 20-25 page report, but the evaluation of information is a vital aspect of journalism. It should be well developed by students about to graduate, yet this year's performance was dramatically below the performance of students from previous years.

Organizing appropriate information
The targets for all three CTW courses were nearly met, and this does not appear to be as pressing of a problem as the critical evaluation of information described elsewhere. It does indicate that the information was not presented as well as it could have been. Several of the students in the Jour 3010 sample did not follow the standard of descending importance of information in the news stories. This is an indication of news judgement which is linked to the evaluation of information. In the sample of reports from the capstone courses several students should found redundant information by proofreading before submitting the final draft. The reports could have been more focused on the task if the students had better organization of the voluminous information they had collected.

Relevant Information
The sample of students in Jour 3010 nearly met the target which was a significant improvement from previous years. The worst performance was in the sample of Jour 4800 students as many did not complete the required task. The information provided in several of the reports was not about coverage of an historical event, but rather, information about the event itself collected from sources other than contemporary journalists. The evaluation of information was discussed in another action plan for this report as was staying on task to complete the requirements of an assignment. Students who are about to be graduates of a Journalism program must be able to assess source credibility and include only relevant information in their writings. Several of the sample in Jour 4800 did not present their skill to provide relevant information suitable for the assignment. The sample of students in Jour 4800 were better in relation to the other capstone course, but there should have been much better performance on what was included in those research reports. In both capstone courses it would be expected that there would be more scores indicating a mastery of evaluating and presenting relevant information rather than indications of developing that skill. That would be expected from students in the lower-level CTW course.

Staying on task
Several of the students in the Jour 4040 sample did not stay on task with the writing of the research report. The journalism coverage of events was not emphasized in the report, but the circumstances about the event were included. This was a flaw which may be detected by an earlier intervention by the instructor with the partial draft submission. The students may have ignored or misunderstood the feedback regarding the assignment. Staying on task to write a lengthy report can be a daunting exercise for some students, and the instructor's is to provide the necessary criticism and motivation to students to complete the assignment with all of its requirements fulfilled. The sample of students in the other CTW courses did stay on task and recognized the requirements of the assignments.
Writing Improvement

The writing by the sample of students in the Journalism capstone courses was below the target, and just above the target for the Jour 3010 sample of students. The ad hoc faculty committee has made recommendations on how to improve the writing of Journalism students. One of them is to have a Writing Center installed in the Dept. of Communication and staffed by GLAs to help undergrads improve their writing skills. The center would be located in new space the Dept. is obtaining when it moves into a different building in December 2012. The immediate improvement of Journalism students' writing is unlikely to be measured in AY 12-13, but the goal is to find measurable improvement in their writings in the future. This is a significant allocation by the Dept. to improve students' writing which may not have occurred without the assessment findings of the writing samples. The research competency component was below the target for the samples from all three CTW courses. This shortfall is likely linked to the poor performance in evaluating information which has an action plan discussed elsewhere in this report.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):
Measure: Writing Competency | Outcome/Objective: Understand concepts and apply theories
Implementation Description: Writing Center
Projected Completion Date: 08/2012
Responsible Person/Group: Ad Hoc Writing Committee of Journalism faculty
Additional Resources: Space for the center, GLA staffing
Budget Amount Requested: $18,000.00 (recurring)

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

The achievements are disheartening. The performance of the capstone course students was particularly disappointing in that the scores were often below those of the Jour 3010 sample. The results of the past action plans have not been realized except for the slight improvement by the Jour 3010 sample. The results may be explained in a number of ways. It's possible that the sample was skewed, and although random selection would diminish the chances of this occurring, it is possible that enough poor performing students were included in the sample that the results are not representative of all of the student performance in the capstone courses. It's more likely that the problems identified in the past by the Journalism faculty regarding the poor writing performance of undergrads has appeared in this year's assessment data. Because of this problem being recognized in the past, an ad hoc Writing Committee was formed and developed a strategy for addressing/solving the problem. In addition to the Committee's recommendations, immediate changes should be discussed about how instructors can more fully develop the critical thinking skill of evaluation of information. This would involve more instruction on newsworthiness in Jour 3010 while in the capstone courses an emphasis will have to be placed on critically analyzing information from a variety of sources. There also has to be greater emphasis on the organizing of relevant information in the lengthy reports required of the capstone courses.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

The expected improvement in critical thinking skills has not occurred among the sample of students in the capstone courses this year. The findings are disappointing, and they must be a motivator for the Journalism faculty in general—not only the CTW course instructors—to brainstorm how to improve on the critical analytical skills the Journalism program expects of its students. There must be more emphasis on the evaluation of information, source credibility and how only relevant information is used by student writer. Too many of the sample of students in the Jour 4040 course did not stay on task by providing information that was not satisfying the assignment of writing about the coverage of an historical event. The content of the writing was not proofread well and the assessor could only assume that the critical analytical skills expected of students in a capstone course were not employed or not developed regarding source information or the student's own writing. There will have to be a change in instruction of critical thinking skills at lower level courses, and that kind of instruction cannot be confined to the CTW courses.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

The poor performance of the sample of students in the capstone courses may be the result of an emphasis on rudimentary writing skills by instructors at the expense of critical thinking skills. More time taken on the basics of grammar and punctuation may have resulted in less time taken on how to evaluate sources and discerning relevant information. Poor writing is universal and not solely in CTW courses. Assistance in the form of a Writing Center will be started next academic year. But that does not address the vital instruction of critical thinking skills. Analysis of source credibility, information relevant for an audience and the organizing of the information in a logical manner. More and better training of CTW instructors is the responsibility of the CTW Ambassador who must devise initial strategies to talk with CTW instructors to determine their own improvements to teaching critical thinking skills.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes have your department made to the CTW initiative since last year's CTW Assessment Report?

The most significant impact has been the collection data to verify that Journalism instructors have talked for years about the poor writing and critical analytical skills of students. It's not anecdotal evidence but assessment data which confirms that students have poor skills, and additional assistance is necessary to improve those skills. The Dept. has committed to having a Writing Center with dedicated space in the building where the Dept. will be located in for spring semester. Although this is a significant allocation of resources by the Dept. for the improvement of writing by Journalism students, it does not address how to improve critical thinking skills. It's likely that the implementation of a revised curriculum, which has had its approval delayed for three years now, will improve the writing and critical thinking skills. However, those results are not likely to be realized in the next two years. The curriculum revision was spawned from the CTW requirement, and it's frustrating that more writing courses that are part of the curriculum have not been implemented. It is expected that the curriculum will be approved at the beginning of the next academic year, and the transition made concurrently with the initiation of the Writing Center. Combined these two items are expected to have a significant impact on Journalism students' writing and critical analytical skills.
### Mission / Purpose

“Critical thinking is a reflective process of acquisition, analysis, and evaluation of information and ideas that leads to the development and active implementation of reasonable and defensible solutions to problems, issues, and situations.”

### Goals

**G 1: Gather, organize, classify, analyze and evaluate**

Students should be able to gather, organize, classify, and analyze pertinent information, materials, and data and then evaluate assumptions, evidence, ideas, and information.

**G 3: Integrate information, develop conclusions**

Students should be able to consider and/or integrate new and disparate ideas, information, methods, systems, and beliefs and develop rational, reasonable, and informed conclusions.

**G 6: Present conclusions, apply to new problems**

Students should be able to present a clear expression of derived conclusions, judgments, and solutions and apply understanding and knowledge to new and different problems and situations.

### Student Learning Outcomes/Objectives

**SLO 1: Exercise physiology journal summaries (G: 1, 3, 6) (M: 3)**

Students will examine five original research papers in exercise physiology in scholarly journals and write a concise summary of the important aspects of each paper. The purpose of this assignment is to examine original research papers in exercise physiology in scholarly journals and to write a concise summary of the important aspects of each paper. There are a total of five (5) papers to be reviewed, one in each of the following general areas of exercise physiology: Exercise Metabolism, Neuromuscular, Cardiovascular, and Pulmonary. The journal articles will be provided to you in pdf format on uLearn. The article summaries will be due at various times throughout the semester – please see the course schedule.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)
2. Outcomes of research (3.3.1.4)

**SLO 2: Student Laboratory Assignments (G: 1, 3, 6) (M: 3, 4)**

Students will collect, analyze and synthesize data from the laboratory and use this information to solve complex problems.

**SLO 3: Structured academic controversy (G: 1, 3, 6) (M: 1)**

Students will present review relevant information and present written and oral arguments arguments for and against an academic controversy (Abstinence Education vs. Comprehensive Human Sexuality Education). Overview Structured academic controversy requires students to use high level reasoning and critical thinking. At the end of this experience students will experience the following benefits: • Increased understanding of both sides of the controversy • More insight into ways to formulate an argument • Greater mastery and retention of material • Ability to generalize concepts to a wider variety of situations and contexts • Opportunity to reach a consensus from different points of view • Higher academic self-esteem • Higher levels of reasoning and different levels of critical thinking skills

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)
2. Outcomes of research (3.3.1.4)

**SLO 4: Reflection papers (G: 1, 3, 6) (M: 1)**

Students will develop two reflection papers on school-based sexuality education. First Reflection: From class discussion, interviews, and assigned readings, reflect on the interaction among the parent, teacher, and child during the process of school-based sexuality education. Consider disparate values and needs that influence this process; discuss the influence of culture on this process; and develop rational, reasonable, and informed solutions for effective school-based sexuality education. The paper is limited to no fewer than three and no more than five pages single spaced. Second Reflection: From class discussion, interviews, and assigned readings, reflect on methods and materials you plan to integrate into your school-based sexuality education to effectively adapt information and activities for students with special needs. Present a clear expression of derived conclusions, judgements, and conclusions. The paper is limited to no fewer than three and no more than five pages single spaced.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 5: Fitness facility evaluation (G: 1, 3, 6) (M: 2)**

Students will visit one commercial, community, corporate, or clinical fitness facility and evaluate the facility against national standards.
Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Measures, Targets, and Findings

**M 1: Structured Academic Controversy (O: 3, 4)**
Total number of students who successfully completed the structured academic controversy assignment.
Source of Evidence: Capstone course assignments measuring mastery

**Target for O3: Structured academic controversy**
Achievement target was set at a minimum of 73%

**Target for O4: Reflection papers**
Achievement Target was set at 83%.

**M 2: Fitness Facility Evaluation (O: 5)**
Percentage of students who successfully complete the fitness facility evaluation assignment.
Source of Evidence: Project, either individual or group

**Target for O5: Fitness facility evaluation**
Achievement target was set at 73%.

**M 3: Exercise physiology Journal Assignments (O: 1, 2)**
Percentage of students who successfully complete the journal assignments.
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Exercise physiology journal summaries**
Achievement target was set at 73%.

**Findings 2011-2012 - Target: Met**
91.9% of students completed assignment with a grade of 80% or higher

**Target for O2: Student Laboratory Assignments**
Achievement target was set at 83%

**Findings 2011-2012 - Target: Not Met**
72.3% of students completed assignments with a score of 80% or better

**M 4: Laboratory assignments (O: 2)**
Students will collect, analyze, and synthesize data and apply this information to a laboratory problem.
Source of Evidence: Written assignment(s), usually scored by a rubric

Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Raise assessment target**
Based on student performance, it appears as if the assessment target is too low. Target will be raised to 83% for the next review cycle.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Fitness Facility Evaluation | Outcome/Objective: Fitness facility evaluation

Implementation Description: Fall faculty retreat
Projected Completion Date: 08/2011
Responsible Person/Group: CTW coordinator and course instructor

Structured Academic Controversy
Consider raising achievement target for next year.
Mission / Purpose

The mission of the Marketing Department, with respect to the undergraduate major, is to produce students who can analyze business situations, define problems accurately based on their analysis, evaluate the options, and make sound recommendations regarding the best decision for their organization. This will be accomplished through the use of pedagogies designed to give students hands-on experience with marketing decision-making that goes beyond a simple descriptive knowledge of marketing to build skills that will permit the student to apply their knowledge of marketing and related business concepts.

Goals

G 1: Making logical, coherent recommendations
Students need to be able to define a specific recommendation and logically defend it based on the qualitative and quantitative analysis they have conducted.

Student Learning Outcomes/Objectives

SLO 1: Situation Analysis (G: 1) (M: 1)
Students will be able to conduct a situation analysis which identifies facts related to the industry, company and trends.

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 2: Problem definition (M: 2)
Students will identify the central marketing problem in a case study accurately and define the problem clearly and concisely in writing

Relevant Associations: xxx

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Other Outcomes/Objectives

O/O 3: Alternative Evaluation (M: 3)
Students will first identify all relevant alternatives and then comprehensively examine the advantages and disadvantages of each alternative using both quantitative and qualitative arguments. The quantitative analysis is a basic skill required to comprehensively evaluate the various alternatives.

Relevant Associations: XXX

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

O/O 4: Recommended Action (M: 4)
Students must select a course of action from among the relevant alternatives that they have identified and evaluated and defend their choice. They must be able to explain their recommendation both orally and in writing. They must also be able to argue for their position and explain why they consider their recommendation to be the best course of action. They should be knowledgeable of all the relevant alternatives and be able to argue for their recommendation by identifying weaknesses and strengths of other options. They must be able to effectively incorporate quantitative arguments into their recommendation.

Relevant Associations: XXX

Standard Associations

1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)
Measures, Targets, and Findings

M 1: Rubric for Situation Analysis (O: 1)
The rubric for the situation analysis breaks the situation down into three dimensions: Industry, Company and Trends.
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Situation Analysis
The average student score as measured by the rubric for problem definition will be 75% or greater out of 100%.

Findings 2011-2012 - Target: Met
A total of 107 students in five sections were evaluated using the rubric in Academic Year 2011-2012. The average for all students on the situation analysis dimension was 83% thereby exceeding the target of 75%.

M 2: Problem Definition Scores from Rubric (O: 2)
The rubric for the problem definition assesses the student’s understanding of the problem in the case and their ability to completely and accurately define it.
Source of Evidence: Academic direct measure of learning - other

Target for O2: Problem definition
The average student score as measured by the rubric for problem definition will be 75% or greater out of 100%.

Findings 2011-2012 - Target: Met
The average score which is a measure of precision in accurately defining the problem in the case was 87%. The score is based on an average of 107 students individual scores and exceeds the target of 75%.

M 3: Alternative Identification and Evaluation (O: 3)
The rubric that measures students' knowledge of the alternatives in the case evaluates their understanding of the options available and their understanding of the advantages and disadvantages of each alternative.
Source of Evidence: Academic direct measure of learning - other

Target for O3: Alternative Evaluation
The average score on the rubric items related to alternative identification and evaluation shall be 75% or greater out of a total of 100%.

Findings 2011-2012 - Target: Met
For the 107 students evaluated using the rubric between summer semester 2011 and spring semester 2012, the average score for the evaluation of alternatives was 76% which is slightly greater than the target of 75%.

M 4: Recommendation (O: 4)
The rubric that assesses the students’ recommendation requires that the students select one of the alternatives and then produce a coherent and compelling set of arguments that support their recommended solution to the case problem.
Source of Evidence: Academic direct measure of learning - other

Target for O4: Recommended Action
The target mean for all students on the recommendation measure is 75% out of 100%.

Findings 2011-2012 - Target: Met
The average score on the recommendation measure was 79% during the academic year summer 2011 through spring semester 2012. This average score exceeds the target score of 75%.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Alternative Evaluation
Student scores averaged 72.5% which is below the 75% target. The problem is believed to reside in the depth of evaluation of the alternatives and not in the initial step of identifying the relevant alternatives. Greater attention to describing the evaluation process including enhanced examples of excellent evaluations will be provided.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Alternative Identification and Evaluation | Outcome/Objective: Alternative Evaluation

Implementation Description:
Starting Summer Semester 2011 more time will be devoted to describing the case analysis process with particular attention given to the alternative evaluation portion of that discussion.
Responsible Person/Group: Hiram Barksdale
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Recommendation Depth and Detail
Students scored 74.1% on the Recommendation which is below the target score of 75%. It is believed that the issue results from failing to provide sufficient detail and explanation to sufficiently justify their recommendation rather than recommending an irrelevant course of action. The case analysis pedagogy, may not be familiar to the students. To address inadequate depth and detail given to
CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

During the past year there was a clear improvement in the student scores on two dimensions and both the alternatives goal and the recommendation goal were raised above the targets. While the scores were not severely deficient in 2010-2011, both were a cause for concern. This year there was an improvement in all of the scores but there remains room for improvement and it appears that the focus should be more clearly placed on the evaluation of alternatives. To focus greater attention in discussions on the specific options available and doing more comprehensive development of as many advantageous and disadvantages as possible, which should lead to improvement in the recommendation goals scores.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Because of the Critical Thinking Through Writing initiative as well as a general sense that students were not as well prepared for the capstone course as they should be, we have initiated changes to the curriculum. Specifically we have added a new course in Marketing Metrics which should greatly help the situation where students were entering the capstone, Marketing Problems CTW course, feeling that they were not prepared for the types of quantitative analysis that they were asked to do. In addition, a new initiative that began only fall semester 2011, is to require at least one case analysis in every course in the undergraduate marketing curriculum. The case analysis pedagogy had become increasingly rare in our business school and students were largely unfamiliar with it. Adding this requirement, provided it is implemented using cases that include quantitative analysis should begin to pay some dividends as well. Finally, we have attempted to impose greater uniformity across all sections of a particular course to make certain that students that have taken a particular course, are familiar with the same concepts, tools and techniques. There is a growing concern about the implementation of the CTW gateway course in the business school. Many instructors feel that the course should not be a general business course required of all students in the college, but instead it should be a course in the major. The first CTW course that students take should have direct application to their major and help in socializing the student to the profession. At present, we do not have this and, as a result, it is difficult to discern improvement.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

The biggest obstacle to CTW is the failure of some instructors to implement it in their courses. There is no carrot and no stick. People pay lip service to it. Who wouldn't want better thinkers and writers in their classes? But there is no real oversight to assure that all instructors teaching the CTW class tow the mark and use the same measures, rubrics, etc. The administrators have no time to monitor compliance and the CTW ambassadors have no authority except moral suasion which doesn't work too well with morally bankrupt faculty. The bottom line some faculty members bask in their ability to beat the system. Other faculty that tow the mark are left feeling that they are getting ripped off.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

CTW was an important reason that we have overhauled our curriculum for the first time in many years. We have added a course and we have changed several courses in part as a result of CTW. Unfortunately, there are not many faculty in my department who would be willing to invest the time and energy in CTW grading and reporting. Good teaching is not rewarded. In my opinion, the CTW process has added a lot of administrivia to the process. It was sold as a way of reducing grading but the rubrics seem to have added a new layer of evaluation. It certainly has not reduced my time spent grading and it feels as though it has increased my grading time significantly. I am not saying that CTW is not a good thing. It is certainly the right thing to do fo students because it makes everyone more accountable. But it is a labor of love and it takes time away from other work-related tasks. CTW has not caused anything to happen in and of itself. But it is an important independent variable among several that have combined to result in an 18 month long process of curriculum evaluation and revision. I have mentioned elsewhere the actual things that have changed partly as a consequence of CTW: a new Marketing Metric class required of all majors, at least one significant case analysis required in every marketing undergraduate class, a system of course coordinators, etc.
Mission / Purpose
Critical thinking in math usually means (1) analyzing and evaluating mathematical arguments, (2) formulating and presenting a proof or a counterexample in support of conclusions, and, (3) deriving an abstract claim from examples and solving a problem by applying known results.

Goals
G 1: Analysis
Students will be able to analyze and evaluate mathematical arguments.

G 2: Deductive reasoning
Students will be able to formulate and present a proof or a counterexample in support of conclusions.

G 3: Problem solving
Students will be able to derive an abstract claim from examples and solve a problem by applying known results.

Student Learning Outcomes/Objectives
SLO 2: Writing proofs or disproofs (G: 2, 3) (M: 1)
Students will be able to write a proof or a disproof of a given mathematical claim.

SLO 3: Understanding math articles (G: 1, 2, 3) (M: 2)
Students will be able to understand the results and proofs in a mathematical article.

Other Outcomes/Objectives
O/O 1: Giving proofs (G: 1, 2, 3) (M: 1)
A proof is a complete explanation of why a claim is true. Most assignments in Math 3000 ask students to prove or disprove (i.e., give a counterexample) a mathematical claim. For example, Prove that the sum of any two odd integers is divisible by 2 but not divisible by 4. To prove this claim, students need to use a direct proof together with a proof by contradiction.

In math 4991 students need to give proofs to more complicated claims (e.g. Intermediate Value Theorem in Calculus). They also need to present proofs by LaTeX, a high-quality typesetting system designed for scientific documentation.

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

O/O 1: Solving problems by math softwares (G: 1, 3) (M: 3)
Students will be able to solve a computation problem by using a math software, e.g. Maple.

O/O 3: Reviewing papers (G: 1, 2, 3) (M: 2)
In math 4991, students choose an article from an undergraduate math journal (e.g. Rose-Hulman Institute of Technology Undergraduate Mathematics Journal), write a report (20 pts) including: • Section 1 (5 pts): Introduction. Minimum 1 page. It contains a brief introduction to the problem, background, and history. You should not simply copy from the paper; you should read related textbooks, references, or online materials. • Section 2 (5 pts): Main results. Minimum 1.5 pages. It contains the main result(s) in the paper with proofs. Similarly you should present the proof in your own words, instead of copying form the paper. • Section 3 (7 pts): Remarks. Minimum 1 page. Your mathematical comments, answers to open problems, and discussion on possible generalization of the results. This section usually differentiates an excellent report from other reports. • References (3 pts) should be given at the end (but not included in the page count) and be cited.

Measures, Targets, and Findings
M 1: Rubric for simple assignments (O: 1, 2)
Excellent: Student fully understands the logic required to do the proof. Flow of logic is correct (or very nearly so). Correct notation is used throughout. Satisfactory: Student understands the logic required to do the proof, but has one major flaw in the argument. Correct notation is used throughout the majority of the argument. Marginal: Student somewhat understands what is to be done. There are several flaws or a major hole in the argument. Notational errors may or may not occur. Poor: The argument is fundamentally incorrect and/or uses incorrect notation throughout.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Giving proofs
60% of students score at least satisfactory based on our rubric.

**Target for O2: Writing proofs or disproofs**

88% of students will score at least Marginal on the simple assignments rubric. 66% of students will score at least satisfactory on the simple assignments rubric. 33% of students will score excellent on the simple assignments rubric.

**Findings 2011-2012 - Target: Met**

**M 2: Rubric for projects on reviewing articles (O: 3, 3)**

Excellent: student understands the article under review very well and writes a review with the following content: 1) detailed introduction to the problem, 2) the result(s) with main proofs, and 3) detailed references. Satisfactory: student has a reasonable understanding to the article; her/his review contains necessary content but has some flaw. Marginal: student does not fully understand the article; her/his review has several flaws or a major hole. Poor: student does not understand the article; their reviews are not complete.

Source of Evidence: Project, either individual or group

**Target for O3: Reviewing papers**

At least 70% score satisfactory or excellent.

**Target for O3: Understanding math articles**

88% of students will score at least Marginal on the simple assignments rubric. 66% of students will score at least satisfactory on the simple assignments rubric. 33% of students will score excellent on the simple assignments rubric.

**Findings 2011-2012 - Target: Met**

Math 4991 2011-2012, total 20 Excellent 12, Satisfactory 7, Marginal 1, Poor 0

**M 3: Rubric for Math Software problem 4991 (O: 1)**

Excellent: Student is able to solve assigned problems correctly by applying required software. Satisfactory: Student essentially solve the problems but has some minor mistake. Marginal: Student somewhat understands what is to be done but can not obtain meaningful results. Poor: does not understand the assignment or does not know how to apply the software.

Source of Evidence: Project, either individual or group

**Target for O1: Solving problems by math softwares**

88% of students will score at least Marginal on the simple assignments rubric. 66% of students will score at least satisfactory on the simple assignments rubric. 33% of students will score excellent on the simple assignments rubric.

**Findings 2011-2012 - Target: Partially Met**

Math 4991 2011-2012 total 20 students Excellent 10, Satisfactory 4 Marginal 3 Poor 3 Excellent 50%, Satisfactory and above 70%, Marginal and above 85%

---

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Improve student scores on proofs**

First I will work with the instructors of Math 3000 to learn how to improve students’ scores on proof. Second the prerequisite of 3000 is Math 2420. The technique of giving proofs is mentioned but usually not emphasized in 2420. I plan to work with the department chair and 2420 instructors to make sure that this technique is covered well in 2420.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Rubric for simple assignments | Outcome/Objective: Giving proofs

**Redesign 4991 projects**

2009-2010 some 4991 students complained about the amount of writing. 2010-2011 we redesigned 4991 projects so that they require less writing. Student have not complained about this since then.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High

**Interest of writing proofs**

It is difficult but necessary for a math major to write a rigorous proof. In the recent years, we have seen the improvement from our Math 3000 students on writing proofs. We need to continue working with Math 3000 instructors such that they can help to build students' interests of writing proofs. For example, instead of proving simple but tedious algebra equalities, they may assign more interesting practical problems, e.g. those related to games and sports.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High
Improve students performance on projects using math software

In 2012 spring, students of Math 4991 did not perform well on the project using math software. The instructor admitted that the project was a bit challenging.

I will work with this instructor closely in the future to avoid this.

Established in Cycle: 2011-2012
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Rubric for Math Software problem 4991 | Outcome/Objective: Solving problems by math softwares

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
1) Students of Math 3000 performed better on writing proofs. This was listed as one of our action plans and it is the result of joint efforts of Math 3000 instructors, CTW ambassador, and the department administrators. 2) Students of Math 4991 performed better on writing projects. In the past students complained about writing projects. One of our action plans was to redesign these projects and as a result, students did better on these projects.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
In Math 4991, all students improve their analytical skills and writing skills. Before taking 4991, most of them have never read any journal paper and have little experience on conducting research in math. In the classes of 4991, they are required to read and review several journal papers and are taught how to conduct research.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
Computer support. At present university computer centers do not have Latex, a program for writing math articles, installed. Thus the students of Math 4991 have to download this program to their own computers.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
Critical thinking have always been a key skill for math majors (before the CTW initiative). The CTW initiative emphasizes the role of writing in critical thinking and fits the need of our program very well. Because of this initiative, students and faculty in two CTW classes have to pay extra attention to writing assignments, which ultimately require a deeper understanding of the topics, and a clearer and more organized logic.

Georgia State University
Assessment Data by Section
2011-2012 CTW Middle Level Education
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
MISSION: To engage preservice teachers in assignments, activities, and field experiences that enhance critical thinking skills. To create teachers who can apply critical thinking skills to their current and future practices. PURPOSE: The Middle Grades Education BSE program, in the Department of Middle-Secondary Education and Instructional Technology, considers the development critical thinking skills to be one of the most important goals of the program. For middle grades teachers, critical thinking skills are essential in the design of and reflection on selected teaching strategies, the analysis of student work and assessment data, and the adjustment of instruction based on local socio-cultural contexts. For the purposes of our program, and in conjunction with our Professional Education Faculty Conceptual Framework, we define critical thinking as "(1) the ability to identify and critically analyze various educational practices and strategies that affect learners in metropolitan contexts, and (2) the ability to formulate and present convincing arguments for or against major theories of teaching and learning."

Goals
G 2: Candidates are Experts at Critical Written Reflection
Candidates are able to identify and critically analyze various educational practices and strategies that affect learners in metropolitan contexts.

G 3: Candidates are Experts at Argument Development
Candidates are able to formulate and present convincing arguments for or against major theories of teaching and learning.

Student Learning Outcomes/Objectives
SLO 2: Students demonstrate the ability to think critically through written reflection (G: 2) (M: 2)
Students demonstrate critical thinking processes through written reflection. Student reflections include (1) discussions of how they make decisions about teaching and learning, (2) how they challenge assumptions and bias they come across with group members, fellow teachers or professional readings, (3) analysis of critical events that led to changes in thinking about teaching and learning.
(4) a description of what was learned (or yet to be learned) related to the teaching and how that effects their professional development.

General Education/Core Curriculum Associations
1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.
3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.
9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Standard Associations
1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 3: Students demonstrate the ability to formulate and present convincing arguments (G: 3) (M: 3, 4)

Students demonstrate the ability to formulate and present convincing arguments for or against major theories of teaching and learning. Students demonstrate the ability to communicate their opinions and uses of teaching and learning strategies presented in professional texts and journals. Students demonstrate the ability to use data to support or refute specific teaching and learning strategies for specific students, and write about those data findings with a critical lens. Students demonstrate an ability to analyze their own teaching as it relates to major theories of teaching and learning.

General Education/Core Curriculum Associations
1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.
3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.
9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Standard Associations
1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)
4. Outcomes of research (3.3.1.4)

Strategic Plan Associations
3.1 Enhance a research culture.

Measures (Key Assessments), Targets, and Findings

M 2: Critical Incident Video Rubric (O: 2)
Critical Incident Video Rubric from EDCI 4640
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O2: Students demonstrate the ability to think critically through written reflection
100% of students will score at the level of "3: proficient" or higher in all parts of the rubric; 75% of students will score at the level of "4: exemplary" in all parts of the rubric.

Findings 2011-2012 - Target: Partially Met
100% of the students did score at the level of "3: proficient" or higher. In three of the five rubric sections, at least 75% of the students scored at the "4: exemplary" level; however the remaining two sections of the rubric only "critical event analysis" and "action plan" only had 69% and 61% respectively at the exemplary level.

M 3: Professional Book Group Discussion Reflection Rubric (O: 3)
From EDRD 4600: Professional Book Group Discussion Reflection Rubric
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: Students demonstrate the ability to formulate and present convincing arguments
100% of students will score at the "2: partially proficient" level or higher. 90% of students will score at the level of "3: proficient" level.

Findings 2011-2012 - Target: Partially Met
100% of students will score at the "2: partially proficient" level or higher. However, there were no elements of the rubric in which at least 90% of students scored at the level of "3: proficient" or higher. This will be addressed in the action plan section.

M 4: Professional Book Group Discussion Paper Rubric (O: 3)
From EDRD 4600: Professional Book Group Discussion Paper Rubric
Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: Students demonstrate the ability to formulate and present convincing arguments
100% of students will score at the "proficient" level or higher. 70% of students will score at the level of "exemplary".
Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Assignment Outcomes**
During Fall 2010, Dr. Yarbrough and Dr. Cross will work on fleshing out rubric descriptions and determining appropriate assignment outcomes and target goals.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** High
- **Projected Completion Date:** 05/2011
- **Responsible Person/Group:** Stephanie Behm Cross (CTW Ambassador and Course 2 instructor)

**CTW Course Plan to Implement Fall 2010**
The B.S.E. in Middle Grades Education is a new program in the College of Education. The first cohort of students, who started in Spring 2010, will take their first CTW course this Fall 2010 and their second CTW course in Spring 2011. Because our program is new, this action plan relates to what we have done and will continue to do related to course development. Assignment Development: During Fall 2009 and Spring 2010, our BSE MLE faculty developed course assignments for the two CTW courses. Both courses include informal writing assignments (such as journals and weekly reflections) and formal writing assignments (such as research papers and text development). Rubric Development: During Spring 2010, we developed rubrics for specific writing assignments, in addition to an overall CTW assignment rubric included in this report. Faculty Development: The CTW coordinator has met with the other CTW instructor (a reading/writing specialist) three times over the past two semesters to refine our program CTW definitions, write program goals, and create course assignments. We will continue to meet in Fall 2010 and Spring 2011 to evaluate CTW course assignments and make adjustments for future courses. Collection/Analysis of Student Work: During Fall 2010 and Spring 2011, the CTW instructors will work to evaluate CTW assignments based on our included rubric. With student permission, we will share assignments across instructors in order to evaluate student work and the overall effectiveness of assignments.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Finished
- **Priority:** High
- **Implementation Description:** see above
- **Projected Completion Date:** 05/2011
- **Responsible Person/Group:** Stephanie Behm Cross (CTW Ambassador and CTW instructor for course 2) and Gladys Yarborough (CTW Instructor for course 1)

**Analyzing and taking action on teaching events**
Instructors will model for students how to analyze their own teaching episodes. Instructors will also model how to develop and write about action plans based on that analysis.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure (Key Assessment) | Outcome/Objective):**
  - Measure (Key Assessment): Critical Incident Video Rubric | Outcome/Objective: Students demonstrate the ability to think critically through written reflection
  - Implementation Description: Several students appeared to struggle with analyzing their critical teaching event (as reviewed on video) and developing appropriate action plans based on that analysis. Moving forward, we will suggest that instructors model what lesson plan analysis and action plan development might look like when using video (either through a whole class example of the instructors’ teaching, or through the analysis of some peer teaching work from a volunteer).
  - Responsible Person/Group: Stephanie Behm Cross

**Revise book group discussion reflection rubric**
We will revise the book group discussion reflection rubric for next year. Right now, the rubric only contains 3 levels for each element of the project (proficient, partially proficient, and incomplete). There needs to be more variability within the rubric for the student to really understand the areas that need improvement, and for the instructors to give usable feedback within the constraints of a rubric.

- **Established in Cycle:** 2011-2012
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure (Key Assessment) | Outcome/Objective):**
  - Measure (Key Assessment): Professional Book Group Discussion Reflection Rubric | Outcome/Objective: Students demonstrate the ability to formulate and present convincing arguments
  - Implementation Description: These revisions of the rubric will be completed before the start of Fall 2012 (when the rubric is to be used again).
  - Responsible Person/Group: Gladys Yarbrough and Stephanie Behm Cross

Analysis Questions and Analysis Answers

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**
In the 2011-2012 cycle, only 60% of the students were able to carefully articulate the reasons behind why certain aspects of a professional book were useful or not useful in their professional development as teachers. Because we feel that this critical thinking skill is necessary, given that teachers will be asked to defend, orally and in writing, their instructional decisions, we decided to focus...
more instructional time to this critical thinking skill. We increased opportunities for students to defend their thoughts on various instructional strategies in EDRD 4600 AND in EDCI 3200 (an earlier, required course in the program).

**CTW Reflection 2:** Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or time from the entry level to the exit class?

We finally discovered this year, during our analysis for the WEAVE report, that we have a hard time measuring students' growth within a class and between the two CTW courses because we have no common rubrics. Instead of having common rubrics, we have created specific rubrics that only relate to one assignment in a given class. This makes comparisons over time very difficult. One of our goals for this upcoming academic year is to develop a generic rubric that can be used for all CTW assignments within and between courses.

**CTW Reflection 3:** Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

We plan to develop a general CTW rubric that can be used for all assignments in both CTW classes. This will do two things: (1) improve our ability to identify areas of growth in our students, and (2) eliminate the need for faculty to use certain assignments (and they will instead only be required to use a generic CTW rubric to assess their own assignments.

**CTW Reflection 4:** Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

Our faculty have started to appreciate the importance of writing assignments that are both formal and informal. Faculty have also started to use writing as a way to engage students in critical thinking during class. This is an exciting new approach that we are excited about for the upcoming academic year.

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

N/A

**ACADEMIC PROGRAM QUESTION 2:**

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

N/A

**ADMINISTRATIVE DEPT QUESTION 1:**

Explain how your department used the results from the previous cycle’s (2010-2011) assessment. What actions did you take this past year based on the results from the previous cycle? What changes did you make as a result?

N/A

**ADMINISTRATIVE DEPT QUESTION 2:**

What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department's effectiveness?

N/A

**ADMINISTRATIVE DEPARTMENT QUESTION 3:**

How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

N/A

---

**Georgia State University**

**Assessment Data by Section**

**2011-2012 CTW Music**

As of: 12/12/2016 04:41 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

---

**Mission / Purpose**

The mission of Critical Thinking in the School of Music is to provide students the skills to identify, interpret, analyze and evaluate arguments and claims about music. Because the School of Music offers curricula in a variety of areas of concentration in music, critical thinking has been approved as the desired method of learning and writing in the following areas: 1) the theoretical understanding of music, 2) music in historical and cultural contexts, 3) the use of technology in creating, performing and listening to music, 4) the individual and collective performance of music, 5) the composition and improvisation of music, 6) the conducting of music, 7) the processes of educating others about music, and 8) the development of careers in music. Critical Thinking through Writing (CTW) in music can be defined as the written interpretation, analysis, and evaluation of the knowledge, the performance, and the creative, technical and instructional skills associated with music.

---

**Goals**

**G 1: Applicability of Music**

Using creative, interpretive, and analytical methods students of music will be able to demonstrate an understanding of the applicability of music relative to its professional, social, cultural and cognitive significance. The overall goal will be achieved through the implementation of a three part assignment: (1) a proposal for a research paper, an outline for the paper, and an annotated
bible (2) a draft of the research paper, and (3) the final paper (a revision of the draft and the additional of more critical thinking). Students are provided a rubric designed specifically to accompany the draft of the research paper and a rubric to designed to accompany the final revised paper with emphasis placed on critical thinking.

### Student Learning Outcomes/Objectives

**SLO 1: Analysis (G: 1) (M: 1)**  
Evidence of analysis of music and/or song text, or historical or cultural data, or comparative research

**SLO 1: Proposal for Research Paper Assignment (M: 1)**  
Course: World Music MUS 4820 This research paper should be based on fieldwork conducted on some aspect of music discussed in class or on the music of a culture of the student’s choice, with the instructor’s approval. The “Critical Thinking through Writing” component of the research paper will be graded on a rubric that will be provided to each student. The first part of this three-part assignment is to write a proposal for a research paper, an outline for the paper, and an annotated bibliography. Course: Music History - MUS 4810 Music History, MUS 4810 (1750 to the Present), has been designated a Critical Thinking through Writing (CTW) course by the School of Music in compliance with Georgia State University’s Quality Enhancement Plan (QEP). This means that specific writing assignments will be used to assess the progress and quality of critical thinking as demonstrated through writing. The required research paper should be based on some aspect (style, composer, composition, etc.) of Western European or American art music. The first part of the three-part assignment is to write a proposal for a research paper, an outline, and an annotated bibliography.

**SLO 2: Synthesis of Personal Findings (G: 1) (M: 1)**  
Students will demonstrate the ability to synthesize (1) data gathered from scholarly sources and (2) the results or concluding thoughts drawn from such data

**SLO 3: Central Position and Primary Objective (M: 1)**  
Evidence that the central position and primary objective can maintained throughout the research of a topic of music from a cultural or historical perspective.

**SLO 4: Methodology, Concept, and Theories of Inquiry (M: 1)**  
Evidence of the use of methods, concepts, or theories of inquiry appropriate research in music from a cultural or historical perspective

**SLO 5: Relevance of Research in Concluding Thoughts (M: 1)**  
Students will demonstrate the ability to express in written form the current relevance of their specific research on a cultural or historical perspective of music and raise related topics for future research on the subject.

### Measures, Targets, and Findings

**M 1: Rubric for Research Paper (O: 1, 1, 2, 3, 4, 5)**  
The revised research paper is the third and final component of a three-part critical thinking through writing assignment. The two parts that precede the revised paper are (1) the research proposal with an outline and an annotated bibliography and (2) the draft of the research paper. The instructor provides comments on the research proposal, outline, and annotated bibliography concerning the scope and applicability of the proposed topic and research objective(s). The instructor provides detailed comments on drafts of the paper concerning the use (or lack thereof) of adequate supporting scholarly research, the organization of the paper, how the use of citations in the body of the paper and the works cited section. The CTW component of the Revised (or final) Research Paper is graded on a rubric. The rubric is composed of eight components, five of which have been identified as significant to critical thinking for this assignment. These components are (1) Central Position and Primary Objective - CTW, (2) Methodology, Concepts, and Theories of Inquiry - CTW - (3) Organization of Data, (4) Context of Data and Scholarly Support, (5) Analysis of Data - CTW, (6) Personal Findings Supported by Scholarly Research - CTW, (7) Relevance and Implications in Concluding Thoughts - CTW, and (8) Writing Style and Quality of Communication. Up to twelve (12) points can be earned in each of the eight sections and up to four (4) points for an appropriate title for the paper. A maximum of one hundred points (100) can be earned for the revised critical thinking research paper. The findings listed below do not include target figures. However the list does include comparative numerical data to show the change in assessment scores from Summer 2010 to Fall 2011. Assessment data for each of the five CTW components listed on the rubric are provided in the corresponding target/findings section. The 2012-2013 CTW report will focus on target figures for two components of the rubric: “Analysis of the Data” and “Personal Findings Supported by Scholarly Research” (which will be renamed “Synthesis of Personal Findings Supported by Scholarly Research”). See the following attachments in the Document Management section for specific findings in each semester.: 1) Comparison of Composite Scores - Sum2010 and Fall 2011, 2) World Music MUS 4820 Findings Sum 2010, 3) World Music MUS 4820 Findings Fall 2011, Central Position and Primary Objective - Differential = +0.1; Methodology, Concepts and/or Theories of Inquiry - Differential = +1.8; Organization of Data - Differential = +1.2; Context of Data and Scholarly Support = Differential = 0.0; Analysis of Data - Differential = +1.3; Personal Findings Supported by Scholarly Research - Differential = +0.4; Relevance and Implications of Concluding Thoughts - Differential = +0.7; Writing Style and Quality of Communication - Differential = +0.8 Sum 2010 to Fall 2011 - Overall Differential = +0.8. In conclusion, findings show that a comparison of components identified on the rubric demonstrate an increase in all but one section of the rubric. The scores remained the same in this section. Findings show that the remaining seven sections reflected increases ranging from 0.1 to 1.8. I think this is substantial improvement on the part of the students in understanding the assignment and completing it. Since this the first music report that identifies specific outcomes/objectives, target figures will be deemed as "met" if there is an increase of the of at least 0.5 when comparing Sum 2010 to Fall 2011 findings.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Analysis**  
The target score for Analysis is 10.1, representing an increase of 0.5. (Target figures will be deemed as "met" if there is an increase of the of at least 0.5 when comparing Sum 2010 to Fall 2011 findings.)
Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Determining the Effectiveness and Value CTW Assignments in Music**

The School of Music believes that these CTW assignments will lead to improvements in the quality and depth of student critical thinking and writing. Professors for CTW courses will collect examples of research papers exhibiting effective, less effective, and ineffective critical thinking for students to view. (Of course the anonymity of student’s work will always be maintained.) The action plan for the School of Music is to determine the effectiveness and value of the assignments and rubrics in the two CTW courses currently taught. In World Music (MUS 4820), anonymous samples of student papers of each component of the three part assignment (1. the proposal, outline and annotated bibliography, 2. the draft of the research paper, and 3. final revised research paper) will be placed online through ULearn to serve as reference guides.

**Established in Cycle:** 2009-2010  
**Implementation Status:** Finished  
**Priority:** High  
**Implementation Description:** Plans are to review and compare student work in each component of the three part CTW project assignment. The purpose of this comparison is to determine if the objectives of each assignment were clear to the majority of students and if the student papers adequately reflected the use of critical thinking. A student survey will be administered to students concerning the value of the assignment and rubrics in music research. Students will be allowed to make suggestions for possible changes to both.

**Responsible Person/Group:** The departmental ambassador with the assistance of the additional faculty member who is teaching a CTW course will be responsible for gathering student responses and compiling the results.

**Continued Use or Rubrics and More Departmental CTW Meetings**

The plan for 2011-2012 will be to continue using the current rubrics (draft and final revised rubrics) for the course. As the ambassador, I will continue to monitor the progress of students from one semester of one year to a semester of the previous year. I think comparisons of classes of similar sizes during the regular academic year will yield the most usable data. Plans are also to continue to discuss the assignments and rubrics with instructors teaching the same CTW world music course as well as the other CTW course in music history.

**Established in Cycle:** 2010-2011  
**Implementation Status:** Finished  
**Priority:** High  
**Implementation Description:** Meetings with CTW instructors and rubric data tabulation  
**Responsible Person/Group:** Oliver Greene

### Findings 2011-2012 - Target: Met

**Summary**

*2011-2012 Target Figures*

- **O1: Proposal for Research Paper Assignment**
  - Target: Met
  - Sum 2010 Student Average = 9.6; Fall 2011 Student Average = 10.9; Differential = +1.3 (Improvement)

- **O2: Synthesis of Personal Findings**
  - Target: Partially Met
  - Synthesis is Personal Findings is identified on the current rubric at Personal Finding Supported by Scholarly Research

- **O3: Central Position and Primary Objective**
  - Target: Partially Met
  - Central Position and Primary Objective is identified on the current rubric.

- **O4: Methodology, Concept, and Theories of Inquiry**
  - Target: Met
  - Methodology, Concept, and Theories of Inquiry is identified on the current rubric.

- **O5: Relevance of Research in Concluding Thoughts**
  - Target: Met
  - Relevance of Research in Concluding Thoughts is identified on the current rubric.

**Notes**

- **O1: Proposal for Research Paper Assignment**
  - Plans are to review and compare student work in each component of the three part CTW project assignment. The purpose of this comparison is to determine if the objectives of each assignment were clear to the majority of students and if the student papers adequately reflected the use of critical thinking. A student survey will be administered to students concerning the value of the assignment and rubrics in music research. Students will be allowed to make suggestions for possible changes to both.

- **O2: Synthesis of Personal Findings**
  - The target score for "Synthesis of Personal Findings" is 10.5, representing an increase of 0.5. (Target figures will be deemed as "met" if there is an increase of the of at least 0.5 when comparing Sum 2010 to Fall 2011 findings.)

- **O3: Central Position and Primary Objective**
  - The target score for "Central Position and Primary Objective" is 10.7, representing an increase of 0.5. (Target figures will be deemed as "met" if there is an increase of the of at least 0.5 when comparing Sum 2010 to Fall 2011 findings.)

- **O4: Methodology, Concept, and Theories of Inquiry**
  - The target score for "Methodology, Concept, and Theories of Inquiry" is 9.0, representing an increase of 0.5. (Target figures will be deemed as "met" if there is an increase of the of at least 0.5 when comparing Sum 2010 to Fall 2011 findings.)

- **O5: Relevance of Research in Concluding Thoughts**
  - The target score for "Relevance of Research in Concluding Thoughts" is 9.9, representing an increase of 0.5. (Target figures will be deemed as "met" if there is an increase of the of at least 0.5 when comparing Sum 2010 to Fall 2011 findings.)
Action Plan for CTW Music Courses for 2012-2013

The action plan for ctw music courses for the 2012 - 2013 year is two fold: 1) To provide formal training for the three faculty members, in addition to myself, in the areas of music history and world music who will be teaching these two ctw courses offered at the School of Music. Currently, one instructor of the CTW music history course and two instructors of the CTW world music course have students do a research paper for the class. The music history instructor required that the students do the three part assignment (1. research proposal with an outline and annotated bibliography, 2. draft of the research paper, 3. final revised paper) and provided students with the rubrics for the draft and the final revised paper. The instructor in the second section of the world music course was approached shortly before the Fall semester 2011 to teach one of the two sections of the course and was provided copies of the syllabus for the existing ctw world music course and the two rubrics. However, there was not sufficient time for adequate ctw training and the instructor did not request student to complete the three part assignments. As in previous semesters, since the implementation of the ctw course, I required students to complete the three-part assignment, discussed the assignment in detail, and directed them to the requirements as well as both rubrics and supporting materials as listed online in ULearn. The music history instructor has retired and has been filled by another instructor. Based on conversations with the Associate Director of the School of Music plans are to have two sections of the CTW course in music history and two sections in the CTW course in world music. 2) To identify two specific CTW objectives for which numerical data will be provided from all courses for the 2012-2012 CTW report. Based on preliminary discussions with coordinators of the CTW program, two objectives currently listed or implied as research components on the draft of the Action Plan for the Action Plan for 2012 - 2013 in the areas as Analysis and Synthesis are as follows: 80% of students should exhibit at least a low level of competency (7) 40% of students should exhibit competency (8 to 9) 25% of students should exhibit a mastery (10 to 12 on rubric)

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High
Implementation Description: The training session will include discussion of the following: 1) the three-part assignment and its value relative to critical thinking in music, 2) the clarity of applicability of rubrics, 3) gathering numerical assessment data from rubrics for the CTW report. I would like to provided an honorarium of $500 to each of the three music instructors, because the training session may require several meetings and the collection of data for reporting is beyond the normal requirements of teaching.

Responsible Person/Group: Oliver Greene - CTW Ambassador - School of Music
Budget Amount Requested: $1,500.00 (one time)

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

The CTW accomplishments in the School of Music for 2011 - 2012 was two fold: 1) the improvement in the quality of critical thinking and writing as displayed in the rubrics comparing assessment scores from Sum 2010 to Sum Fall, the last two times the course was offered under my direction and 2) increase involvement in CTW initiative by other members of the department. This past year the instructor of the CTW course in music history utilized the rubrics for both the draft and final revised paper for the first and commented on the improvement in student writing and critical thinking.

Per the findings listed in a pervious section of this report the comparison of student CTW paper between Summer 2010 and Fall 2011 reveal the following concerning differentials in score: Central Position and Primary Objective - Differential = +0.1; Methodology, Concepts and/or Theories of Inquiry - Differential = +1.2; Context of Data and Scholarly Support = Differential = 0.0; Analysis of Data - Differential = +1.3; Personal Findings Supported by Scholarly Research - Differential = +0.4; Relevance and Implications of Concluding Thoughts - Differential = +0.7; Writing Style and Quality of Communication - Differential = +0.8 Fall 2011 - Overall Differential = +0.8 In conclusion, findings show that a comparison of components identified on the rubric demonstrate an increase in all but one section of the rubric. The scores remained the same in this section. Findings show that the remaining seven sections reflected increases ranging from 0.1 to 1.8. I have also noticed a general improvement in the understand of the three-part assignment, the quality of papers each semester, and in an underestimation of the value of the assignment for future study in music.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Per the rubrics used for the critical thinking component of the three-part assignment, the quality of papers each semester, and in an underestimation of the value of the assignment for future study in music.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

Greater instructor participation is needed in the School of Music on the part of the instructors. Thus far two instructors, including me, have taught the two CTW music courses. The other instructor improved his use of materials (rubrics and accompanying documents) in his class and informed me that he indeed noticed an improvement in student writing and critical thinking. Because there was substantial resistance from this instructor initially concerning the CTW initiative in general and the use of the rubrics, I did not attempt to have a training session with him. His resistance waned substantially after the first semester of requiring the CTW assignment. Though he did give me copies of the three contrasting students with his comments on each paper, per my request during the first semester of the CTW course offering, he never provided me with numerical assessment scores from the rubrics. Therefore I could not report on his class. He has retired and plans are to train two colleagues to teach this CTW course for future offerings. In the Action Plan for the coming year I have requested $1500 ($500 each) for the training of two instructors for the CTW music history course and one instructor for the CTW world music, since the CTW assignment and the proper gathering of data are beyond the normal requirements for teaching and because it will probably be necessary to have more than one training/advisement session with the instructors.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

There were few changes in the CTW program in music during the 2011-2012 year. However, as previously stated the quality of papers improved substantially. In general, students seem more receptive each semester to the CTW research assignment and more of them are understanding the value of the CTW initiative. I remind students that their CTW papers should be kept and revised for possible use with application for admission to graduate school. I also inform them that in past years I requested writing samples from students seeking graduate scholarships to serve as Writing Across the Curriculum assistants in the School of Music.
ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report?
(e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

No changes were made in the learning outcomes, measure, and targets during the 2011-2012 academic year. However, changes will be made for the 2012-2013 year. Plans are to (1) revise the draft and final rubrics, (2) conduct training sessions with each of the other three potential CTW instructors for 2012-2013, and (3) revise the School of Music curriculum so that both CTW courses will be offered twice during a calendar year and so that instructors will be required to teach the course no more than once during the academic year. This will help assure varying perspectives in the teaching of the course and provide adequate time for professional development endeavors.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

As previously stated, plans are to revise the School of Music curriculum so that both CTW courses will be offered twice during a calendar year and so that instructors will be required to teach the course no more than once during the academic year. This will help assure varying perspectives in the teaching of the course and provide adequate time for professional development endeavors. Plans are to offer two sections of World Music CTW during each fall semester and two sections of Music History CTW during each spring semester. Each section will have a different instructor and sections will be offered at different times each semester to minimize conflicts students may have in scheduling the course.

ADMINISTRATIVE DEPT QUESTION 1: Explain how your department used the results from the previous cycle’s (2010-2011) assessment. What actions did you take this past year based on the results from the previous cycle? What changes did you make as a result?

Each year I compile data from the annual CTW Weave report to complete a CTW report specifically for the School of Music. I keep the Director and Associate Director of the School of Music abreast of significant changes in the CTW initiative and in the reporting process. No significant changes were made as a result of last years report. However, the decision was made to offer two sections of the each CTW course in an academic year.

ADMINISTRATIVE DEPT QUESTION 2: What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department's effectiveness?

I have gained a better understanding of specifically how the students are improving be comparing composite in each section of the rubric from Fall Spring 2010 to Fall 2011. I think this reveals that in the world music course music students are gaining a better understanding of the value and relevance of critical thinking and writing in general. This is significant because the vast majority of our students are performance majors and have historically been more resistant to writing and research assignments than students in non-performance or non-arts oriented majors, who are accustomed to such assignments.

ADMINISTRATIVE DEPARTMENT QUESTION 3: How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

I will discuss the rubrics, the process of compiling numerical data, and comparative findings of recent semesters with the other music faculty members assigned to teach the CTW courses in the 2012-2013 academic year. We will discuss the three-part assignment and how the rubrics might be improved and which components of the rubric we will report on next year. If I have participation from each the other three individuals slated to teach the CTW courses, I anticipate that they will become vested in the initiative and in doing so stress its importance to the students and the department as a whole.

Georgia State University
Assessment Data by Section
2011-2012 CTW Neuroscience
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
To meet the requirements of the University's CTW policy, the neuroscience CTW courses are designed to develop critical thinking skills in undergraduate neuroscience majors. We define and assess critical thinking by the students' ability to evaluate the quality of information using available empirical evidence and to use logic and reasoning in recognizing, constructing, defending and critiquing scientific arguments.

Goals
G 1: Critical thinking skills in neuroscience
Use critical and creative thinking, skeptical inquiry, and the scientific approach to solve problems related to neural processes.

G 2: Integrative writing in neuroscience
Demonstrate effective writing skills in various formats (e.g., essays, position papers, technical papers, literature reviews) and for various purposes (e.g., informing, defending, explaining, persuading, arguing, teaching).

Student Learning Outcomes/Objectives
SLO 1: Uses critical thinking effectively (M: 1)
Measures, Targets, and Findings

M 1: NEUR 3020: First and last written products (O: 1, 2, 3, 4)

The Neuroscience undergraduate program has only been in existence for a very short time with the first neuroscience courses offered in the 2012 fall semester. Consequently, we have only taught one CTW class during this reporting period: one section of NEUR 3020: The Scientific Method in Neuroscience. The second CTW course, NEUR 4910: Topics in Neuroscience, will be taught beginning in the 2012 fall semester. NEUR 3020 provides neuroscience majors with experience in research design, data analysis, and scientific communication needed for higher-level understanding in 4000-level courses, the development of writing of senior-year theses, and graduate study. Topics include the structure and style of scientific writing in neuroscience, experimental design, statistical techniques, and preparation of a formal literature review in the appropriate discipline. Course assignments focused on developing students' abilities to effectively analyze and evaluate concepts, formulate and present persuasive arguments, and describe ideas clearly and thoughtfully in writing. Using the CTW Neuroscience Rubric, CTW assessment for this course compared the student's first written product and the last written product. The first writing product was a brief paper that analyzed and reviewed an empirical neuroscience paper using twelve analytical questions from the text (e.g., "What was the "big question" of the study? What were the specific research questions of this study?"). The last written product was a longer review paper, using several peer-reviewed papers that covered a particular topic in neuroscience; assessment was on the post-feedback product.

Target for O1: Uses critical thinking effectively

In the 2011 CTW Writing Assessment Rubric, the instructor rates the student's written product for Organization and Logic on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. For NEUR 3020, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Organization and Logic on this assignment. 1. Ideas are arranged in a chaotic way, with no logical connection between them (i.e., within sentences and/or paragraphs). 2. Ideas are arranged in an associative, digressive, elliptical, or circular manner; the logical connections between ideas are consistently unclear. 3. Ideas are arranged in a way that makes sense to the author, but is inappropriate for the purpose or audience of the assignment; the logical connections between ideas are frequently unclear. 3. Ideas are arranged with some consideration for the purpose and audience of the assignment; the logical connections between ideas are sometimes unclear. 4. Ideas are arranged in a manner appropriate to the purpose and audience of the assignment; the logical connections between ideas are almost always clear. 5. Ideas are thoughtfully and effectively arranged in a manner appropriate to the purpose and audience of the assignment; the logical connections between ideas are consistently clear. In the 2011 CTW Writing Assessment Rubric, instructors rate the student's submission for Use of Evidence on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. For NEUR 3020, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Use of Evidence on this assignment. 1. Is unquestioning of his/her acceptance of unproven or poorly supported claims. 2. Takes a consistent position on the issue. 3. Supports most claims with evidence that is appropriate, accurate, and relevant 4. Consistently supports claims with appropriate, accurate, and relevant evidence. However, some important evidence is missing. 5. Consistently and thoroughly supports claims with appropriate, accurate, and relevant evidence.

Findings 2011-2012 - Target: Met

The median score for Organization and Logic for both the first and last written product was 3, which is in the 'developing' range, and all of the students were rated a score of 2 (the lower end of the 'developing' range) or higher. The median score for Use of Evidence for the first written product was 3 and 3.5 for the last written product, which are both in the 'developing' range. 92% and 100% of the students were rated a score of 2 (the lower end of the 'developing' range) or higher for the first and last written assignments respectively. The proportions of students in each performance category for both the first and last written products are summarized in Figure 1.

Target for O2: Uses reasoning to recognize, develop, defend, and criticize arguments

In the 2011 CTW Writing Assessment Rubric, the instructor rates the student's written product for Position and Balance on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. For NEUR 3020, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Position and Balance on this assignment. 0. Does not take any position on the issue. 1. Does not take a consistent position on the issue. 2. Takes a consistent
position on the issue, but ignores relevant counter-evidence and alternate points of view. 3. Takes a consistent position on the issue and attempts to address some relevant counter-evidence and/or alternate points of view. 4. Takes a consistent position on the issue and addresses the relevant counter-evidence and/or alternate points of view. However, claims and/or evidence could be presented more clearly and/or objectively. 5. Takes a clear and balanced position on the issue, thoroughly addressing relevant counter-evidence and/or alternate points of view.

Findings 2011-2012 - Target: Met

The median score for Position and Balance for both the first and last written product was 3, which is in the ‘developing’ range, and all of the students were rated a score of 2 (the lower end of the ‘developing’ range) or higher. The proportions of students in each performance category for both the first and last written products are summarized in Figure 2.

Target for O3: Approaches scientific problems creatively and effectively

In the 2011 CTW Writing Assessment Rubric, the instructor rates the student's written product for Use of Evidence on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. For NEUR 3020, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Use of Evidence on this assignment. 0 is unquestioning of his/her acceptance of unproven or poorly supported claims 1. Is skeptical, but is unable to explain why or support claims with evidence 2. Supports claims with evidence, but this evidence is usually inappropriate, inaccurate, or irrelevant 3. Supports most claims with evidence that is appropriate, accurate, and relevant 4. Consistently supports claims with appropriate, accurate, and relevant evidence. However, some important evidence is missing. 5. Consistently and thoroughly supports claims with appropriate, accurate, and relevant evidence.

Findings 2011-2012 - Target: Met

The median score for Use of Evidence for the first written product was 3 and 3.5 for the last written product, which are both in the ‘developing’ range. 92% and 100% of the students were rated a score of 2 (the lower end of the ‘developing’ range) or higher for the first and last written assignments respectively. The proportions of students in each performance category for both the first and last written products are summarized in Figure 1 or 3.

Target for O4: Demonstrate effective writing skills in various formats and for various purposes

In the 2011-2012 CTW Writing Assessment Rubric, instructors rate the student's submission for Grammar and Mechanics on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. For NEUR 3020, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Grammar and Mechanics on this assignment. 0. The frequency and variety of errors obscures the writer's intentions completely. 1. The frequency and variety of errors is disruptive to the reader. 2. The frequency and/or variety of errors are somewhat disruptive to the reader. 3. Errors are few and generally not disruptive to the reader. 4. Errors are rare and inconsequential to the reader. 5. The reader's intentions are clearly expressed. In the 2011-2012 CTW Writing Assessment Rubric, instructors rate the student's submission for Content and Development on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. For NEUR 3020, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Content and Development on this assignment. 0. No details 1. Few details, and these are generally inaccurate or irrelevant 2. A variety of details, but some are inaccurate or irrelevant 3. A variety of relevant and accurate details, but some relevant details are missing 4. Thorough, relevant, and accurate details, but could be more concise 5. Complete, relevant, and accurate details in an appropriately concise manner. In the 2011-2012 CTW Writing Assessment Rubric, instructors rate the student's submission for Citation and Use of Sources on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. For NEUR 3020, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Citation and Use of Sources on this assignment. 0. Has committed unintentional plagiarism by inappropriately paraphrasing one or more sentences from a source 1. Has committed unintentional plagiarism by inappropriately paraphrasing one or more sentences from a source and does not use quotation marks or a citation to indicate the ideas are not his/her own 2. Has committed unintentional plagiarism by inappropriately paraphrasing one or more sentences from a source or has a citation that is incomplete or incorrect 3. Properly paraphrases some sources and provides citations for them, but has errors in citation mechanics 4. Properly paraphrases and cites all sources, but doesn’t consistently or skillfully integrate the cited material with his/her own ideas 5. Properly paraphrases and cites all sources, while consistently and skillfully integrating the cited material with his/her own ideas.

Findings 2011-2012 - Target: Met

The median score for Grammar and Mechanics for the first written product was 3, which is in the ‘developing’ range, and 92% of the students were rated a score of 2 (the lower end of the ‘developing’ range) or higher. The median score for Grammar and Mechanics for the last written product was 4, which is in the ‘mastering’ range, and all of the students were rated a score of 2 (the lower end of the ‘developing’ range) or higher. The median score for Content and Development for both the first and last written product was 4, which is in the ‘mastering’ range, and all of the students were rated a score of 2 (the lower end of the ‘developing’ range) or higher. The median score for Content and Development for both the first and last written product was 3 and 3.5 for the last written product, which are both in the ‘developing’ range. 58% and 100% of the students were rated a score of 2 (the lower end of the ‘developing’ range) or higher for the first and last written assignments respectively. The proportions of students in each performance category for both the first and last written products are summarized in Figure 4.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Grow course offerings

The CTW program in Neuroscience will be fully operational as we will offer, for the first time, both the junior/entry level course (NEUR 3020) and the senior/exit-level course (NEUR 4910). NEUR 3020 will be taught both in Fall 2012 and in Spring 2013 whereas we will offer one section of NEUR 4910 in Fall 2012 and two sections of this course for Spring 2013. Different faculty will teach each of the three sections of NEUR 4910, demonstrating significant faculty enthusiasm for teaching this seminar course. This number of sections will be sufficient to accommodate anticipated student demand from our small, but rapidly growing, major for 2012-2013. Nevertheless, a main goal will be to staff and train instructors for four sections of NEUR 4910 for the successive reporting year (2013-2014). To that end, the CTW Ambassador will continue to strongly encourage and work with faculty to develop new sections for the senior/exit-level CTW class.
Established in Cycle: 2011-2012  
Implementation Status: Planned  
Priority: High

Analysis Questions and Analysis Answers

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

The major accomplishment this year was to start the CTW program for our nascent Neuroscience major. We identified the CTW Ambassador (Dr. Aras Petrulis), developed our CTW rubric, taught one section of our junior/entry level course (NEUR 3020) and recruited three faculty members to teach the senior/exit level course (NEUR 4910) for the 2012-2013 year.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

As only one CTW course was taught, all assessment of student improvement for this reporting period comes from rubric scores of the first written assignment and the last written assignment from this course. Most students’ median scores on measures of critical thinking (i.e., Organization and Logic, Use of Evidence, and Position and Balance) were in the Developing range at the outset and all showed improvement throughout the course. Specifically, all students were within the Developing range for the final written product, with Use of Evidence showing the greatest improvement across assignments. Students’ writing skills (i.e., Grammar and Mechanics, Content and Development, and Citation and Use of Sources) improved considerably from the first to last assignment. Specifically, for Grammar and Mechanics the percentage of students in the Mastery range doubled from ~25% in the first assignment to 50% on the final product. Even more dramatic gains were made on Citation and Use of Sources: a large minority of students was in the Emerging category on this measure for the first assignment whereas none of the students were in this category on the last assignment and half of the students were in the Mastery range.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**

We will need more faculty to submit proposals for the senior/exit level CTW course (NEUR 4910) to accommodate the rapidly increasing number of students in the Neuroscience major. Currently, we have three versions/sections of this course proposed for the 2012-2013 reporting period; none have been taught. By 2013-2014, we plan on offering four sections of NEUR 4910 per year. This will likely require recruiting additional faculty in order to maintain a diversity of topic offerings. We plan to continue developing the CTW Writing Assessment Rubric and may modify it to assess a broader range of dimensions in writing assignments in the senior/exit level CTW course.

**CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?**

As noted, this reporting period is the first one for the CTW in Neuroscience and so we do not have much experience or data on the impact of CTW on our academic program. Nevertheless, the demonstration of substantial student improvement within the junior/entry level course suggests that most students in the senior/exit level will function at the Mastery level.

---

### Georgia State University

**Assessment Data by Section**

**2011-2012 CTW Nursing**

*As of 12/12/2016 04:41 PM EST*

*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)*

#### Mission / Purpose

Critical Thinking is defined by the School of Nursing as, “a process of reflective and cognitive thought that involves systematic, rational, and creative thinking. Critical thinking leads to the formation of accurate inferences, conclusions, appropriate alternatives and strategies in the process of clinical and non-clinical decision making”.

#### Goals

**G 1: Problem Solving**

The students will become better problem-solvers in the care of their patients and/or work environment.

#### Student Learning Outcomes/Objectives

**SLO 1: Critical Thinking (G: 1) (M: 3)**

The students will demonstrate critical thinking skills necessary to interpret patient data and formulate appropriate nursing interventions in the care of their clinical patients.

**SLO 2: Integration from research to practice (G: 1) (M: 4)**

The students will integrate research information pertaining to leadership, care delivery, and staff utilization from the literature into practice.

**SLO 3: Analysis and Evaluation (G: 1) (M: 4)**

The student will be able to analyze existing leadership styles and evaluate their effectiveness.
**Measures, Targets, and Findings**

**M 3: Rubric for 2080 (O: 1)**

The Critical Thinking in Patient Care: Rubric is used to assess a critical thinking paper in the 2080 course. The rubric examines completeness, critical thinking, and communication. It is constructed on a 6 point scale and utilizes the emerging, developing, and mastery terminology.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Critical Thinking**

By the third paper of the semester, 100% of students will reach the developing level on the rubric (at least a score of 3) on the critical thinking section of the Critical Thinking in Patient Care: Rubric 60% of students will reach the upper developing category or lower mastery level (between 4 and 5) on the critical thinking section of the Critical Thinking in Patient Care: Rubric 25% of students will reach the upper mastery level (between 5.5 and 6) on the critical thinking section of the Critical Thinking in Patient Care: Rubric

**Findings 2011-2012 - Target: Met**

100% of the students reached the developing level (at least a score of 3) on the critical thinking section of the Critical Thinking in Patient Care: Rubric 98.55% of students reached the upper developing category or lower mastery level (between 4 and 5) on the critical thinking section of the Critical Thinking in Patient Care: Rubric 43.47% of students reached the upper mastery level (between 5.5 and 6) on the critical thinking section of the Critical Thinking in Patient Care: Rubric

**M 4: Rubric for 4600 (O: 2, 3)**

The Critical & Integrative Thinking Rubric is used to assess a critical thinking paper in the 4600 course. The rubric assesses students' ability to integrate research into practice and their ability to analyze existing leadership styles and evaluate their effectiveness. The rubric is constructed on a 6 point scale and utilizes the emerging, developing, and mastery terminology.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: Integration from research to practice**

4600 is divided into two sections but they have the same assignment and utilize the same rubric. 4600 Section A & B: By the final paper 100% of the students will reach the developing level on the Critical and Integrative Thinking Rubric (at least a score of 3) on the rubric, 80% of the students will reach the upper mastery level on the Critical and Integrative Thinking Rubric (between 4 & 5) and 60% of the students will reach the upper mastery level between on the Critical and Integrative Thinking Rubric (5.5 and 6) for sections: 2, 3, 4, & 5 of the Critical & Integrative Thinking Rubric.

**Findings 2011-2012 - Target: Partially Met**

Findings for 4600 Section-A: The findings are measured by the critical thinking sections (2, 3, 4, & 5) of the Critical & Integrative Thinking Rubric and tabulated numbers of students that fell into each category. 100% of the students reached the developing levels (at least a score of 3) on the rubric. 94% of the students reached the upper mastery level (between 4 & 5) on the rubric. 53% reached the upper mastery level between (5.5 and 6) on the rubric. Findings for 4600 Section-B: The findings are measured by the critical thinking sections (2, 3, 4, & 5) of the Critical & Integrative Thinking Rubric and tabulated numbers of students that fell into each category. 100% of the students reached the developing level (at least a score of 3) on the rubric. 100% of the students reached the upper developing category or lower mastery level (between 4 and 5) on the rubric. 48% of the students reached the upper mastery level (between 5.5 and 6) on the rubric.

**Target for O3: Analysis and Evaluation**

4600 is divided into two sections but they have the same assignment and utilize the same rubric. 4600 Section A & B: By the final paper 100% of the students will reach the developing level on the Critical and Integrative Thinking Rubric (at least a score of 3) on the rubric, 80% of the students will reach the upper mastery level on the Critical and Integrative Thinking Rubric (between 4 & 5) and 60% of the students will reach the upper mastery level between on the Critical and Integrative Thinking Rubric (5.5 and 6) for sections: 2, 3, 4, & 5 of the Critical and Integrative Thinking Rubric.

**Findings 2011-2012 - Target: Partially Met**

Findings for 4600 Section-A: The findings are measured by the critical thinking sections (2, 3, 4, & 5) of the Critical & Integrative Thinking Rubric and tabulated numbers of students that fell into each category. 100% of the students reached the developing levels (at least a score of 3) on the rubric. 94% of the students reached the upper mastery level (between 4 & 5) on the rubric. 53% reached the upper mastery level between (5.5 and 6) on the rubric. Findings for 4600 Section-B: The findings are measured by the critical thinking sections (2, 3, 4, & 5) of the Critical & Integrative Thinking Rubric and tabulated numbers of students that fell into each category. 100% of the students reached the developing level (at least a score of 3) on the rubric. 100% of the students reached the upper developing category or lower mastery level (between 4 and 5) on the rubric. 48% of the students reached the upper mastery level (between 5.5 and 6) on the rubric.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**2080 Action Plan**

Meet with both consultants at the same time to ensure that the consultants are critiquing the papers consistently.

**Established in Cycle: 2011-2012**

**Implementation Status: Planned**

**Priority: High**

**Relationships (Measure | Outcome/Objective):**

- **Measure:** Rubric for 2080
- **Outcome/Objective:** Critical Thinking

**Implementation Description:** The course coordinator will call a meeting with the CTW consultants to discuss the assignment. This meeting will occur with both consultants present.

**Projected Completion Date: 08/2012**
**Mission / Purpose**

The Division of Nutrition defines critical thinking as the ability to identify a nutrition or dietetics-related question and to select, critique, analyze, synthesize and communicate information that address the question. To function effectively as future nutrition and dietetic professionals, dietetic students must be able to access and accurately interpret the scientific literature and make practice-related decisions based on strength of evidence and evidence-based guidelines.

**Goals**

**G 1: Interpretation**

Students will demonstrate the ability to translate information from the nutrition literature without altering the intended meaning.

**G 2: Analysis**

Students will demonstrate the ability to access and accurately analyze the scientific literature and make practice-related decisions based on strength of evidence and evidence-based guidelines.
G 3: Evaluation
Students will be able to integrate ideas, context, assumptions, and evidence when reaching conclusions.

Student Learning Outcomes/Objectives

SLO 1: Interpretation (M: 3)
Assignment: Research Papers for NUTR 3010 and 4950 Students write research papers for both CTW courses. Goal 1 is met through these assignments since each student translates information from research articles and writes a paper with the intent of interpreting the source without altering the intended meaning. The assignments vary in the depth of the written paper. For NUTR 3010, each student writes a "mini-review" of a stated problem using 10 peer reviewed journal articles. NUTR3010 is taken the first semester of the first year of the two-year program. For NUTR 4950, a course taken during the last semester of the program, each student writes either a position paper or review paper based on a research question. Each student selects at least 30 references to answer her/his research question. Seventy-five percent of the references must be evidence-based. Each student critically examines the evidence and sources of such evidence, questioning accuracy, relevance and completeness. The paper for NUTR 4950 evaluates the student's ability to translate information from the nutrition literature.

SLO 2: Analysis (M: 1)
Assignments: Research Paper (NUTR 3010) and Review or Position Paper (NUTR 4950) For NUTR 3010, students are expected to be able to distinguish causality from correlation, analyze evidence and question its accuracy, and to determine relevance and completeness. As the students advance through the program, they should strengthen their critical thinking skills. In NUTR 4950, papers should reflect their ability to synthesize the evidence and provide analytical discussions of the study results. The papers should be discursive prose not a listing of research studies. Analysis of articles should be a review that demonstrates sophisticated and integrated thought.

SLO 3: Evaluation (M: 3)
NUTR 3010 and NUTR 4950 Research Papers Students evaluate evidence (research articles) to reach conclusions and recommendations. Assignment: NUTR 3010: Each student writes a "mini-review" of a stated problem using 10 peer reviewed journal articles. Each student demonstrates ability to evaluate evidence-based references and to integrate information into a research paper. Students are expected to justify their views while respecting others. Paper should include connections to conclusions. The paper should examine evidence and its source NUTR 4950: Each student writes a position paper or review paper incorporating articles based on a research question. Each student selects at least 30 articles addressing her/his research question using evidence-based guidelines to reach logical and justifiable conclusions. The student critically examines the evidence and sources of such evidence, questioning accuracy, relevance and completeness. Paper should clearly and effectively communicate conclusions that are comprehensive and scholarly. Ambiguities are considered and conclusions are related to consequences.

Measures, Targets, and Findings

M 1: Annotated Bibliography (O: 2)
Grading Rubric for Annotations Identifies and summarizes the scope and main purpose Limited proficiency 0 - 1 Some proficiency 2 Proficiency 3 High proficiency 4 Fails to identify the main purpose of the articles Does not address the argument, and fails to differentiate the established position and own views Identifies the main purpose of the articles but summarizes it in an ambiguous fashion Addresses the argument but simplistically, and only basically differentiates position from own view Successfully identifies and summarizes the main purpose of the articles in a clear manner Presents own position or hypothesis, though inconsistent with differentiation/comparison The main purpose of the articles is summarized in a succinct manner; along with identifying other peripheral issues and their impact Appropriately addresses the argument and differentiates/compares established position and own view Points: _________________

M 3: Grading Rubric for Research Paper (O: 1, 3)

Target for O2: Analysis
We expect 85% of the students to receive at least 50 total points on the assignment.

NUTR 3010 and NUTR 4950 Research Papers Students evaluate evidence (research articles) to reach conclusions and recommendations. Assignment: NUTR 3010: Each student writes a "mini-review" of a stated problem using 10 peer reviewed journal articles. Each student demonstrates ability to evaluate evidence-based references and to integrate information into a research paper. Students are expected to justify their views while respecting others. Paper should include connections to conclusions. The paper should examine evidence and its source NUTR 4950: Each student writes a position paper or review paper incorporating articles based on a research question. Each student selects at least 30 articles addressing her/his research question using evidence-based guidelines to reach logical and justifiable conclusions. The student critically examines the evidence and sources of such evidence, questioning accuracy, relevance and completeness. Paper should clearly and effectively communicate conclusions that are comprehensive and scholarly. Ambiguities are considered and conclusions are related to consequences.
Details of Action Plans for This Cycle (by Established cycle, then alpha)

Revision of Rubrics for Grading Papers

The grading rubric for NUTR 4950 was revised to better evaluate student progress in CTW from the introductory course (NUTR 3010) to the capstone course (NUTR 4950). The grading rubric for 3010 has 3 levels of performance: Emerging, Developing, and Goal Oriented. The rubric for NUTR 4950 was changed to include performance levels: Developing, Goal-Oriented, and Mastery. Each student's performance in NUTR 4950 (paper) is compared to his/her performance in NUTR 3010 (mini-review paper). Students are expected to progress at least one performance level from NUTR 3010 to NUTR 4950.

**Established in Cycle:** 2010-2011

**Implementation Status:** Finished

**Priority:** High

**Implementation Description:** Rubric revised August 2010 and implemented Spring semester 2011.

**Projected Completion Date:** 08/2010

**Responsible Person/Group:** Instructors for NUTR 3010 and NUTR 4950.

CTW and Curriculum

Goal is to incorporate CTW strategies into other courses in the major. Currently, the first CTW course is taken the first semester in the undergraduate didactic program in dietetics (DPD) and the second course is taken during the final semester. Since the program is 4 semesters, we plan to include CTW strategies in one course the second semester and another course the third semester. Both of these courses have a heavy writing component. We (current CTW instructors and other faculty) are developing a tool to guide the instructors of the courses.

**Established in Cycle:** 2011-2012

**Implementation Status:** In Progress

**Priority:** High

**Implementation Description:** NJTR 4300 (juniors) and NJTR 4400 (seniors) are the courses where the CTW strategies will be implemented. Faculty are meeting monthly to establish learning activities and evaluations tools for implementation Spring 2013.

**Projected Completion Date:** 01/2013

**Responsible Person/Group:** CTW instructors and faculty who teach NJTR 4300 and NJTR 4400.

Rubric Update

Rubrics for NUTR 3010 and NUTR 4950 were updated: terminology, criteria for evaluation, and alignment of progression.

**Established in Cycle:** 2011-2012

**Implementation Status:** Finished

**Priority:** High

**Implementation Description:** Both rubrics were used for 2011-2012 courses and reported in CTW 2011-2012 report.

**Projected Completion Date:** 08/2011

---

**NUTR 4950 Grading Rubric for Paper (Final Copy)**

Developing 1 Goal-oriented 2 Mastery 3 Introduction Identifies the issue, though some aspects are incorrect, incomplete, or confusing. Clearly identifies the issue and key details are included in a comprehensive manner. Analyzes the issue and presents in a comprehensive and scholarly manner. Demonstrates adequate skill in searching, selecting, and evaluating sources to meet the information need. Evidence of search, selection, and source evaluation skills. Identifies and selects information directly related to paper topic. Organization Basic organization is apparent; evidence of logical organization of various topics within the paper. Organization is clear; consistent use of appropriate format; transitions between ideas are present. Content/Body of Paper Distinguishes causality from correlation, though presentation may be flawed. Appropriate data/evidence or sources provided. Relates alternative views to qualify analysis. Integrates multiple view points and comparison of ideas or perspectives. Ideas are investigated but in a limited way. Conclusions consider or provide evidence of consequences extending beyond a single issue. Examines evidence and its source; questions its accuracy, relevance, and completeness. Analysis of positions is thoughtful and mostly accurate. Clearly justifies own view while respecting others. Presents conclusions as relative and loosely related to consequences. Includes connections to conclusions. Content of the paper reflects originality, evidence of synthesis and analytical discussion of results with appropriate conclusions. Position or hypothesis (research question) demonstrates sophisticated, integrated thought. Clearly justifies own view while respecting others; qualifies or integrates contrary views or interpretations. Conclusions are qualified as the best available evidence; implications are developed and ambiguities are considered. Writing Mechanics In general, language does not interfere with communication. Errors are not distracting or frequent. Some problems with more difficult aspects of style and voice. Most sources are cited and used correctly. Language clearly and effectively communicates ideas. Errors are minimal. Style is appropriate for audience. Consistent use of sources with appropriate format. Language clearly and effectively communicates ideas, often eloquent. Errors are barely present. Consistent use of sources with appropriate format. All sources are cited and used correctly. Source of Evidence: Capstone course assignments measuring mastery

**Target for O1: Interpretation**

All of the students at the emerging and developing stages on the rubric in NUTR 3010 will progress to the goal-oriented level on the rubric for NUTR 4950. At least 50% of the class will advance one performance level from NUTR 3010 to NUTR 4950.

**Findings 2011-2012 - Target: Met**

All of the students in NUTR 4950 performed at or exceeded the goal-oriented level. Seventy percent of the students advanced one performance level.

**Target for O3: Evaluation**

All of the students at the emerging or developing stage on the rubric in NUTR 3010 will progress to the goal-oriented level on the rubric for NUTR 4950. At least 50% of the class will advance one performance level from NUTR 3010 to NUTR 4950.

**Findings 2011-2012 - Target: Met**

All of the students performed at or exceeded the goal-oriented level. Sixty percent of the students advanced one performance level.

---
**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

Faculty continue to meet to discuss how to incorporate critical thinking assignments at all levels of the curriculum. A rubric folder will be created on the division l-drive, whereby all faculty will have access to a variety of rubrics. Faculty also created "guiding principles" for all rubrics so students will see connections between course and assignment evaluations.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

Since the revision of the rubrics, we are able to evaluate how well students progress from the entry CTW course to the capstone course. Many students progress to the goal-oriented level; some attain some components of the mastery level. However, very few students reach the mastery level. We need to do a better job with students during the time between the two courses.

**CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**

We will continue to improve our rubrics and assignments. Faculty buy in and involvement is crucial. Working with faculty who do not teach CTW courses is an on-going process.

**CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?**

The CTW courses help the students improve their writing and critical thinking skills. End of year program evaluations reflect this sentiment. Division faculty support CTW and are committed to making it a component of other courses in the curriculum.

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

No changes have been made.

**ACADEMIC PROGRAM QUESTION 2:**

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Although targets were met, a lower percentage of students progressed to a higher performance level. CTW faculty will meet to review assignment and rubric grading to identify any discrepancies.

**ADMINISTRATIVE DEPT QUESTION 1:**

Explain how your department used the results from the previous cycle’s (2010-2011) assessment. What actions did you take this past year based on the results from the previous cycle? What changes did you make as a result?

The annotated bibliography was eliminated as an assessment measure and more weight was given to the research papers.

**ADMINISTRATIVE DEPT QUESTION 2:**

What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department's effectiveness?

CTW is complex, time-consuming, rewarding, and an on-going process. Rubrics are not perfect and require yearly evaluation.

**ADMINISTRATIVE DEPARTMENT QUESTION 3:**

How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

We will review the two rubrics and make necessary changes. Create guidelines for faculty on how to incorporate more CTW-like assignments in their courses. We expect to continue to meet/exceed our targets.

---

**Georgia State University**

**Assessment Data by Section**

**2011-2012 CTW Operations Management**

As of: 12/12/2016 04:41 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

**Mission / Purpose**

Managerial Sciences adapts 1987 definition of the National Council on Excellence in Critical Thinking for the Department's different foci: Critical thinking is an intellectually disciplined process that has three main components. First is skillfully and broadly gathering or generating data. Second is analyzing, synthesizing, and/or evaluating the information in that data through the use of systematic, logical reasoning processes and the applications of relevant decision assisting tools developed ex ante. And third is the ability to reach conclusions and make recommendations for action that are logical, supported by evidence, and devoid of pre-existing individual bias or preference. Operations Managers should be able to use rational problem solving techniques and be able to express in a cogent manner what the problem is, set criteria for evaluation of potential solutions, establish alternatives to the problem and analytically evaluate the alternatives based on the established criteria.
**Goals**

**G 1: Business Plan Vision**
We expect our students to demonstrate their ability to organize, develop and advance a service operation business plan vision for a start-up business using critical thinking through writing at a business level, as opposed to an academic level.

**Student Learning Outcomes/Objectives**

**SLO 1: Executive Summary (G: 1) (M: 1)**
Students will decide on a service company concept, value discipline, target market and develop an "Executive Summary". This component of the eight page paper consist of two pages, states the value discipline, service concept and target market and acts as the guide for the development of the paper.

**SLO 2: Execution of First Draft - Business Plan (G: 1) (M: 1)**
Contains portions of all 8 sections of the Business Plan. The Business Plan is scored based on the Syllabus Rubric and how well the student developed the eight sections of the paper with regard to appropriate facts and details, competency and sophistication.

**SLO 3: Development of Final Paper (Business Plan) (G: 1) (M: 1)**
Students will complete the eight point suggested Business Plan for the Final Paper. The final paper contains the completed Executive Summary, as well, a discussion of the other seven components of the paper. The Business Plan is scored based on the Syllabus Rubric and how well the student developed the eight sections of the paper with regard to appropriate facts and details, competency and sophistication. Additional language dealing with the "Process Analysis" was added to the CTW Business Plan to ensure a discussion of what the process chosen for the paper was attempting to achieve.

**Standard Associations**
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Measures, Targets, and Findings**

**M 1: Rubric for Service Operations Management (O: 1, 2, 3)**
This syllabus rubric is designed for the benefit of the student as a guide for the development of the CTW Final Paper with respect to relevant details, context, content, grammar competency and sophistication.

*Source of Evidence: Written assignment(s), usually scored by a rubric*

**Target for O1: Executive Summary**
60% of student population will score in a range of "2" or better out of a "4" point rubric. This scoring is based on the four categories of the rubric.

**Findings 2011-2012 - Target: Met**
The average score for the target was 1.83. Of the 23 students who fulfilled the assignment, 15 scored a "2" or better which is 65%.

**Target for O2: Execution of First Draft - Business Plan**
80% of student population will score in a "2" or better out of a "4" on the rubric. This scoring is based on the four categories of the syllabus rubric.

**Findings 2011-2012 - Target: Met**
The average for the 1st draft exercise was 2.43. For this assessment measurement, 21 out of 23 or 91% scored a "2" or better. 12 out of the 23 scored a "3" or better, representing a 52% of the population.

**Target for O3: Development of Final Paper (Business Plan)**
80% of student population will score a "3" or better out of a "4" on the rubric. Additionally, 20% will score a "4" out of a "4". The final paper scoring will use these two criteria to measure success on the CTW experience in this course. This scoring is based on the four categories of the syllabus rubric.

**Findings 2011-2012 - Target: Met**
The average for the Final Business Plan based on the 4 point rubric was a 3.44. 88% of the students who participated in the final business plan, scored a "3" or better. This was 8 percentage points above the goal. Secondarily, 13 students scored a "4" on the final business plan or 54% of the participating students. This was a significant achievement as it was 34 percentage points above the 20% target.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Executive Summary**
Ensure that the service company selected is practical and will be appropriate for the Service Company vision. Adding additional language to Section 8 of the business plan to include a discussion of the process analysis. Todate, students have not included a discussion on what the process is attempting to achieve, nor the cycle time analysis.

*Established in Cycle: 2009-2010*

*Implementation Status: In-Progress*
CTW Business Plan
On-going review of the Service Management, CTW Business Plan for MGS 4770 to ensure students understand the key components of the paper and instructions for developing the paper are clear and concise.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High
Implementation Description: Review continues after review and changes made during the Spring 2011 semester.
Projected Completion Date: 12/2011
Responsible Person/Group: Walter L. Wallace

CTW Paper Topics
Prior to the Spring semester, 2011, I completed a review of the required ten components of the CTW Business Plan and shortened the outline to eight components. I changed the length of the paper from ten pages to eight full pages. I changed the Achievement Targets for 1) Executive Summary 2) Execution of the First Draft and 3) Development of the Final Paper.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High
Implementation Description: The intent in making these changes was to allow for a better understanding of the objectives of the CTW Business Plan by the students and to ensure more practical measurement targets for the development of the paper by the students.
Projected Completion Date: 01/2011
Responsible Person/Group: Walter L. Wallace

One scheduled student/ instructor office visit during semester dealing with CTW assignment.
A student/ instructor scheduled office visit will be made mandatory to discuss the executive summary, body of the paper and process analysis to be developed in their assigned CTW paper. Students in some cases are reluctant to talk about the subject matter and content of their CTW paper, outside of class unless it is part of their grade. I plan to establish a schedule at the beginning of the semester for each student to spend a minimum of 30 minutes up to one hour with me discussing issues they are having and foresee with their development and writing of their paper. One on one gives me an opportunity to be quite specific to their needs and address issues before they become obstacles.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High
Implementation Description: Add new verbage to the syllabus requiring a one on one with each student regarding their CTW assignment.
Responsible Person/Group: Instructor
Additional Resources: None

Analysis Questions and Analysis Answers
CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
The achievement of the established learning objectives based on the rubric scores for the three separate components of the CTW Business Plan. All of the targets were exceeded.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
The improvement has come in getting off to a good start with the Executive Summary for a viable service oriented company vision. If the student can comprehend the importance of this initial document's importance, then the first draft and final paper come together more readily. Supporting their efforts at the beginning of the semester pays dividends well into the semester for the CTW assignment.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
The use and understanding of the syllabus rubric has taken some time to grasp. Scoring based on a rubric has taken some time to develop for the instructor as well the student. Getting off to a good start with the selection of a viable service company vision takes time for the student and then to translate into an "Executive Summary" limited to two pages has been a struggle for many students. Students want to write the complete eight page paper and call it the executive summary. Students struggle with the concept of an executive summary. More clarity on the instructor's part at the beginning of the semester is critical for developing this initial document.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
The realization by the student that writing in their discipline is vitally important to the success of their career going forward. From the instructor's perspective, the importance of the CTW assignment and how it is administered for the benefit of the class.

Georgia State University
Assessment Data by Section
2011-2012 CTW Philosophy
As of: 12/12/2016 04:41 PM EST
Philosophy has traditionally had a central role in the liberal arts. The writings of Aristotle, Descartes, Hume, and Kant are among the greatest products of the human mind. They are worth studying for their inherent value as well as for their impact on subsequent intellectual history. Much philosophical work is concerned with abstract and fundamental questions: What is real? Can we know anything about the external world? Are there objective moral truths? Is there a God? Although some of these issues are unlikely to have practical consequences, they are no less important. In fact, it is difficult to conceive of an educated person who has not systematically grappled with these questions. At the same time, philosophy is deeply involved with practical issues, such as the nature of the good life and what constitutes a just society. In the last two decades there has been an explosion of activity in applied philosophy with the result that philosophers now work in numerous cross-disciplinary fields such as business ethics, medical ethics, philosophy of law, philosophy of science, philosophy of language and philosophy of mind. Despite its wide range of applications, philosophy as currently practiced in this country has one overarching theme: it is fundamentally concerned with good reasoning. Clearly, critical thinking and writing are central here. In philosophy, critical thinking is the skill of correctly evaluating the arguments made by others and composing good arguments of one's own. We do this in writing and in conversation and our mission is to help students develop this skill.

Goals

G 1: Critical Thinking
Despite its wide range of applications, philosophy is fundamentally concerned with good reasoning. Although philosophers by no means have a monopoly on logical argumentation, the systematic study of what distinguishes good arguments from bad is central to the philosophical enterprise. Consequently, those who teach philosophy are as much concerned with fostering critical thinking skills and clear argumentative writing as with imparting information. We believe our major should and does do both. This first goal is to foster critical thinking.

G 2: Writing Skills
Despite its wide range of applications, philosophy is fundamentally concerned with good reasoning. Although philosophers by no means have a monopoly on logical argumentation, the systematic study of what distinguishes good arguments from bad is central to the philosophical enterprise. Of course, especially in the contemporary world, much of this reasoning is distributed in written form, whether in books, journals, or in some digital media. Consequently, those who teach philosophy are as much concerned with fostering critical thinking skills and clear argumentative writing as with imparting information. We believe our major should and does do both. This goal is to foster good writing skills.

Student Learning Outcomes/Objectives

SLO 1: Critical Thinking (G: 1) (M: 1)
Students in Phil 3000 and Phil 4990 write papers as part of the requirements for the course. These typically account for at least 30% of the course grade. The final papers of the semester, in particular, are likely to be a substantial portion of their grade. Students are allowed and encouraged to rewrite these papers in order to improve their critical thinking and writing skills. The instructors give detailed written feedback on the papers in order to facilitate such improvement. We assess this outcome by having our Assessment committee evaluate the final papers, scoring them for critical thinking ability. The scoring uses the following rubric: A: A paper scoring an A provides a complete and accurate explanation of the philosophical positions and distinctions that are relevant to its thesis. It presents an insightful and compelling argument for its thesis, and it considers and responds to viable objections to this argument. The instructor presents an original argument, one that goes beyond what was said in class and in the readings. B: A paper scoring an B provides a fair and accurate explanation of the philosophical positions and distinctions that are relevant to its thesis. It presents a compelling argument for its thesis and considers possible objections to its argument. However, the paper's argument is not original, in that it does not go much beyond what was said in class and in the readings, and/or the paper does not develop some important points fully enough. C: A paper scoring a C provides an explanation of the philosophical positions and distinctions that are relevant to its thesis, but this explanation is inadequate in some important ways. The paper presents an argument for its thesis, but the argument is not original or compelling. The paper fails to consider possible objections and/or leaves important points undeveloped. D: A paper scoring a D paper provides little or no explanation of the philosophical positions and distinctions that are relevant to its topic. It does not have a thesis even if it does have a unified topic. The paper asserts views but there is little or no attempt to use arguments to defend those views. E: A paper scoring an F paper provides no coherent explanation of the philosophical positions and distinctions that are relevant to its topic. It does not have a unified topic. Views are asserted but there is virtually no attempt to defend those views. It reflects a lack of understanding of the assignment.

Other Outcomes/Objectives

O/O 2: Writing Skills (G: 2) (M: 2)
Students in Phil 3000 and Phil 4990 write papers as part of the requirements for the course. These typically account for at least 30% of the course grade. The final papers of the semester, in particular, are likely to be a substantial portion of their grade. Students are allowed and encouraged to rewrite these papers in order to improve their critical thinking and writing skills. The instructors give detailed written feedback on the papers in order to facilitate such improvement. We assess this outcome by having our Assessment committee evaluate the final papers, scoring them for writing ability. The scoring uses the following rubric: A: A paper scoring an A has a well-organized structure that follows from a clear thesis. It has varied sentence structure and no significant grammar or spelling mistakes. It is a polished paper that reflects excellent self-editing through multiple drafts. The paper also displays a sense of personal writing style and is written in clear prose that is pleasurable to read. B: A paper scoring a B has a well-organized structure that follows from a clear thesis. It has varied sentence structure and very few grammar and spelling mistakes. It has been self-edited and does not read like a first draft. C: A paper scoring a C has a thesis statement and some organization of paragraphs, but overall the paper but does not flow. It contains a significant number of grammar or spelling errors. It reads like a first draft. D: A paper scoring a D is poorly organized, and its paragraphs do not have a coherent structure. It contains numerous grammar and/or spelling errors. It reads like a first draft that has not been proofread. F: A paper scoring an F is similar to a D paper, but contains so many grammar and/or spelling errors that the very meaning of some sentences becomes ambiguous and hard to understand.
Measures, Targets, and Findings

**M 1: Critical Thinking (O: 1)**

Three members of the Assessment Committee score student’s final papers on critical thinking. These scores are given on the A-F scales with +/- using the rubric below. These scores are not student grades (neither grades on particular assignments nor semester grades). The scores use the same scale as course grades in order to enhance inter-grader reliability. We expect to see lower scores in Phil 3000 that in Phil 4900 as those in 3000 will be in the beginning of their philosophy studies (and again, these are not student grades). We can compare the scores merited in Phil 4900 to those merited in Phil 3000 to assess how well the Department is teaching Critical Thinking and Writing. The scoring uses the following rubric: A: A paper scoring an A provides a charitable and accurate explanation of the philosophical positions and distinctions that are relevant to its thesis. It presents an insightful and compelling argument for its thesis, and it considers and responds to viable objections to this argument. The paper presents an original argument, one that goes a beyond what was said in class and in the readings. B: A paper scoring an B provides a fair and accurate explanation of the philosophical positions and distinctions that are relevant to its thesis. It presents a compelling argument for its thesis and considers possible objections to its argument. However, the paper’s argument is not original, in that it does not go much beyond what was said in class and in the readings, and/or the paper does not develop some important points fully enough. C: A paper scoring a C provides an explanation of the philosophical positions and distinctions that are relevant to its thesis, but this explanation is inaccurate in some important ways. The paper presents an argument for its thesis, but the argument is not original or compelling. The paper fails to consider possible objections and/or leaves important points undeveloped. D: A paper scoring a D paper provides little or no explanation of the philosophical positions and distinctions that are relevant to its topic. It does not have a thesis even if it does have a unified topic. The paper asserts views but there is little or no attempt to use arguments to defend those views. E: A paper scoring an F paper provides no coherent explanation of the philosophical positions and distinctions that are relevant to its topic. It does not have a unified topic. Views are asserted but there is virtually no attempt to defend those views. It reflects a lack of understanding of the assignment.

Source of Evidence: Academic direct measure of learning - other

**Target for O1: Critical Thinking**

Papers of 3000 students should, on average, be evaluated as 2.50 in critical thinking.

**Findings 2011-2012 - Target: Met**

In this 2011-2012 cycle, the average 3000 student's critical thinking ability was assessed a 2.75 and the average 4990 student's critical thinking ability was assessed a 3.21. In both cases, then, we are exceeding our targets. Given that the CTW classes are new, however, we do not think we should alter those targets at this point. It also noticeable that the scores here indicate a nice improvement, as one would expect, from a mid-level philosophy major to a senior philosophy major.

**M 2: Writing Skills (O: 2)**

Three members of the Assessment Committee score student’s final papers on writing skills. These scores are given on the A-F scales with +/- using the rubric below. These scores are not student grades (neither grades on particular assignments nor semester grades). The scores use the same scale as course grades in order to enhance inter-grader reliability. We expect to see lower scores in Phil 3000 that in Phil 4900 as those in 3000 will be in the beginning of their philosophy studies (and again, these are not student grades). We can compare the scores merited in Phil 4900 to those merited in Phil 3000 to assess how well the Department is teaching Writing. The scoring uses the following rubric: A: A paper scoring an A has a well-organized structure that follows from a clear thesis. It has varied sentence structure and no significant grammar or spelling mistakes. It is a polished paper that reflects excellent self-editing through multiple drafts. The paper also displays a sense of personal writing style and is written in clear prose that is pleasurable to read. B: A paper scoring a B has a well-organized structure that follows from a clear thesis. It has varied sentence structure and very few grammar and spelling mistakes. It has been self-edited and does not read like a first draft. C: A paper scoring a C has a thesis statement and some organization of paragraphs, but overall the paper but does not flow. It contains a significant number of grammar or spelling errors. It reads like a first draft. D: A paper scoring a D is poorly organized, and its paragraphs do not have a coherent structure. It contains numerous grammar and/or spelling errors. It reads like a first draft that has not been proofread. E: A paper scoring an F is similar to a D paper, but contains so many grammar and/or spelling errors that the very meaning of some sentences becomes ambiguous and hard to understand.

Source of Evidence: Academic direct measure of learning - other

**Target for O2: Writing Skills**

Papers of 3000 students should, on average, be evaluated as 2.50 in writing.

**Findings 2011-2012 - Target: Met**

In this 2011-2012 cycle, the average 3000 student's writing skills were assessed a 2.88 and the average 4990 student's critical thinking ability was assessed a 3.11. In both cases, then, we are exceeding our targets. Given that the CTW classes are new, however, we do not think we should alter those targets at this point. It also noticeable that the scores here indicate a nice improvement, as one would expect, from a mid-level philosophy major to a senior philosophy major.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Monitor, Discuss, Refine

The Department will continue to monitor the progress of the program. As teaching students to use critical thinking skills in writing is already central to the philosophy curriculum, we don’t anticipate problems, but if we are not happy with the progress of the students, we will make changes as necessary. The Department is and has long been committed to responding to empirical evidence regarding teaching methods.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** High
- **Implementation Description:** We will continue to discuss the program as needed.
- **Responsible Person/Group:** Andrew Jason Cohen
- **Additional Resources:** none

Improve Data Gathering Per Other Assessment Activity

This plan for 2011-2012, which was considered at the end of 2010-2011 was approved in February of 2012. We now use data from...
Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

We have met our goals for student learning in CTW classes. We also refined our methods of data collection.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

In this 2011-2012 cycle, the average 3000 student's critical thinking ability was assessed a 2.75 and the average 4990 student's critical thinking ability was assessed a 3.21. In this 2011-2012 cycle, the average 3000 student's writing skills were assessed a 2.88 and the average 4990 student's critical thinking ability was assessed a 3.11. In both cases, we see improvement in critical thinking among students from the entry level to the exit class.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

We take our program to be fully functioning and well-developed. The problems along the way include scheduling the courses and attracting faculty to teach the CTW courses instead of the other courses they ordinarily teach. No assistance is needed.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

No changes since last year have been made to our CTW program (though we instituted one change for the assessment of the program). The CTW program impact on the department is hard to assess, but its clear that it offers our students a selection of additional courses that they would not otherwise have had the opportunity to take (and it similarly allows faculty to teach classes they might not have been able to, though some are reluctant to do so). It may be that the greatest benefit to the department--both for students and for faculty--is the existence of a standard class all majors are expected to take after Phil 2010 (Intro to Philosophy) and before upper level classes. In the past, many students would make the large step from 2010 to 4000-level classes with some difficulty as they did not get enough instruction in writing philosophy papers in 2010; all get such instruction now in 3000.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process have your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We have refined our data collection for CTW to be in line with our assessment of our other programs. We now concentrate data collection in the Fall semester, which allows us a streamlined process without sacrificing any quality. We have also streamlined data collection for Phil 4990, recognizing that as fewer students we should reduce the number of papers from those classes used in the assessment process. We also altered the system so that the instructors teaching Phil 3000 and Phil 4990 provided the assessment scores for content knowledge. This vastly improves our reporting of student content knowledge.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

With our advising program, we now push harder to have all students take Phil 3000 immediately after Phil 2010 and before taking any 4000 level classes. We have also successfully added additional 3000 level classes as we find such classes aid students in their progression to 4000 level classes.

ADMINISTRATIVE DEPT QUESTION 1: Explain how your department used the results from the previous cycle's (2010-2011) assessment. What actions did you take this past year based on the results from the previous cycle? What changes did you make as a result?

We refined our data collection, as indicated above.

ADMINISTRATIVE DEPT QUESTION 2: What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department's effectiveness?

As the scores on the collected papers from 4990 are significantly better than those on the collected papers from 3000, we believe the Department is highly effective at teaching our majors how to critically think and write.

ADMINISTRATIVE DEPARTMENT QUESTION 3: How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

We will continue to monitor the program but plan no major changes at the moment.
The Department of Physics & Astronomy prepares students in the B.S. in Physics program for a wide variety of career paths including scientific research, high technology commercial, military, and education. In all these paths, physics majors are expected to exhibit scientific critical thinking and to be able to communicate in writing using appropriate formats. The department incorporates these expectations in its definition of critical thinking which follows the basic scientific method: a. Students develop research questions appropriate for research. b. Students appropriately collect experimental or theoretical data to address identified research questions. c. Students analyze and interpret data to evaluate research questions. d. Students use results of data analysis to formulate new research questions. In addition, since the ability to communicate this critical thinking in the forms appropriate in a scientific context, the department adds the following aspects of critical thinking that are important to successful scientific writing: e. Students choose appropriate ways to communicate information in words, graphs, and figures. f. Students communicate correct kinds of information in each section of scientific report. g. Students understand and reflect an understanding of the appropriate audience.

**Goals**

**G 1: Scientific Thinking**

Students will follow the scientific process in developing and testing hypotheses, drawing conclusions, and formulating future research questions.

**G 2: Scientific Writing**

Students make appropriate decisions to communicate scientific information effectively in the accepted format. This includes the particular requirements of scientific publications such as journals. In particular, students will decide when the most effective way to communicate technical or quantitative information involves words, graphs, table, or figures.

**Student Learning Outcomes/Objectives**

**SLO 1: Laboratory Experiment Reports (G: 1, 2) (M: 1)**

In Phys3300, Advanced Physics Laboratory, students write reports for three laboratory experiments. These reports follow the standard format of scientific journal articles and include a title, abstract, background, experimental methods, results, discussion, conclusion, and foot-noted references. Unlimited revisions are allowed until the end of the semester. Students are encouraged to revise one report multiple times in order to learn the scientific writing skills before working on the remaining reports.

**SLO 2: Research Project Report (G: 1, 2) (M: 2)**

In Phys4900, Research project, students write a long-form report for their research project. The report is written in sections over the course of the semester as their project proceeds. This report follows the standard format of scientific journal articles and include a title, abstract, background, experimental methods, results, discussion, conclusion, and foot-noted references. Unlimited revisions are allowed for each section until the end of the semester.

**Measures, Targets, and Findings**

**M 1: Phys3300 Physics Rubric (O: 1)**

The rubric used to evaluate laboratory reports is linked. It contains four elements of critical thinking and three elements of scientific writing skills necessary to write a high-quality report. Each element is evaluated on a four point scale indicating mastery, competency, developing competency, or lack of competency.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Laboratory Experiment Reports**

Students in Phys3300 write three lab reports. They are encouraged to revise the report for their first lab until it is scoring high marks in each area before writing their remaining two reports. Our first target is that at least 80% of students in Phys3300 will achieve 3 out of 4 (competency) on each criterion of the rubric for their first laboratory report after all revisions are completed. In addition, at least 50% of the final evaluations will be 4 out 4 (mastery) for each criterion.

**Findings, 2011-2012 - Target: Not Reported This Cycle**

In Fall 2011, 20 physics majors took Phys3300, Advanced Physics Laboratory. Each student in this course performed a number of advanced labs and wrote laboratory reports in the style of journal articles appropriate to physics research publications. Students were given comments and allowed to revise these reports before the final product for which they were graded. The laboratory reports were assessed using the Physics Rubric. At this time the assessment data has not been provided to the ambassador.

**M 2: Phys4900 Physics Rubric (O: 2)**

The rubric used to evaluate project reports is linked. It contains four elements of critical thinking and three elements of scientific writing skills necessary to write a high-quality report. Each element is evaluated on a four point scale indicating mastery, competency, developing competency, or lack of competency.

Source of Evidence: Senior thesis or culminating major project

**Target for O2: Research Project Report**

At least 80% of students will achieve 3 out of 4 (competency) on each criterion of the rubric after all revisions are completed. At least 50% of the final evaluations will be 4 out 4 (mastery) for each criterion.
Details of Action Plans for This Cycle (by Established cycle, then alpha)

Adapt course to allow for higher enrollments

The BS in Physics is undergoing a much-desired increase in enrollments after sustained efforts by the department over the last few years. This has brought about growing pains for the Advanced Laboratory CTW course (Phys3300). As many as 20 students may be enrolled in this course in the Fall of 2011 after previous two years' enrollments of 9 and 15. Since this is an advanced laboratory course, strict time and equipment limitations have created the need for changes in the course. The probable solution will be to divide the students into two sections. There are two instructors for this course who teach different aspects of the instruction. Dividing into two sections will mean that both instructors will be teaching at all times with one section in the lab with instructor A while the other section is in the computer lab with instructor B. This should allow the instructors to give individuals and small groups the attention needed.

The additional work load associated with lab reports may require some reduction in the number of lab reports scored and for which feedback is given. Possibly the number will be reduced from the 5 reports submitted in Fall 2010 back to the 3 reports submitted in Fall 2009. It was observed that the increased number of lab reports assigned in 2010 meant that the students performed fewer revisions on each report than in 2009 but about the same number of written reports overall. In Fall 2011 there were 20 students who took Phys3300, Advanced Physics Lab, which was difficult to handle. Additional computers were provided by the College of Arts & Sciences and by the Department of Physics & Astronomy to allow 20 students to be accommodated in one class. Enrollments for Fall 2012 may exceed 20 and so the class will be offered with two sections taught at the same time each meeting Mondays and Wednesdays from 2 to 4:30 PM. If total enrollment of the two sections exceeds 20, then the class will be divided in half with one group performing labs on Mondays with instructor 1 and performing computer and data analysis on Wednesdays with instructor 2. The other half of the class will do the reverse, requiring each of the two instructors to teach twice as much.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High
Responsible Person/Group: Brian Thoms, Xiaochun He, Ramesh Mani

Train new instructor in CTW

In Fall 2011 a new instructor will co-teach this course and take over the evaluation of writing assignments. This instructor will be trained through one-on-one meetings with the CTW ambassador in Summer 2011 and throughout the Fall 2011 term. One on one training was performed to prepare new instructor for teaching of critical thinking and assessing using the physics rubric. Additional training will continue when course is taught again in Fall 2012.

Established in Cycle: 2010-2011

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

In the 2011-2012 academic year two major CTW achievements for the B.S. in Physics program were accommodating the growth in the program and training a new CTW instructor. The first CTW course, Phys3300, is typically taken by physics majors at the beginning of their junior year. Since the BS in Physics program has nearly doubled in size in about 3 years, the demand for this course has also greatly increase. The enrollment was 9 in Fall 2009, 15 in Fall 2010, and 20 in Fall 2011. Since this is an advanced laboratory course, having access to appropriate equipment including computers, appropriate lab space, and enough individual attention from the instructors are all important to success of the students. Through hard work by the course instructors we have been able to handle the growth in the course. In addition, one of the instructors who created the course was replaced by a new instructor. This required training and coordination especially with the new demands created by increasing enrollment. One additional major achievement was being able to offer the second CTW course, Phys4900, Research Project, as a regular course with 7 students enrolled. This allowed the students to get and give feedback from other students in addition to the course coordinator. It also allowed for group discussions of issues related to research, scientific writing, and other topics.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

In the second CTW course, Phys4900, Research Project, students exhibited a very high level of critical thinking and scientific writing abilities. Before Phys4900 was created physics majors were required to complete only one credit hour of research and the structure of that research project was completely up to the research adviser. Also, students did not have a coherent preparation to their research project before the creation of the first CTW course, Phys3300, Advanced Physics Laboratory. Prior to that time physics
majors completed several one credit hour lab courses which did not provide a coherent preparation for research, scientific thinking or scientific writing. A common complaint from research advisers was that students doing projects with them were very unprepared and therefore often not very successful in their projects. In contrast, the 5 students who completed the Phys4900 course in Spring 2012 were extremely successful in these projects performing high quality research and producing very high quality research reports. Comparing scores on the physics rubric for these students with scores on the same rubric for Phys3300 (first CTW course) in Fall 2010 shows that final performance increased on average from about 3.5 to 3.75 out of 4.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

The major struggle is with the growth in enrollments. Future enrollments are hard to predict but the department has put into place a structure to offer the first CTW course in two sections to allow us to handle the demands and give the students the feedback they need. However, the extra demands on the instructors and the space demands are an important issue and may cause future difficulties.

Georgia State University
Assessment Data by Section
2011-2012 CTW Political Science
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The Department endorses the definition of Critical Thinking proposed to the Faculty Senate. Political Science courses will be designed to train students to “develop the wide range of cognitive skills and intellectual dispositions needed to effectively identify, analyze, and evaluate arguments and truth claims; to discover and overcome personal prejudices; to formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about what to believe and what to do.” The political science CTW courses will be designed to develop and practice the following specific critical thinking skills - identification of a question or issue, consideration of assumptions and/or context, formulation of a testable hypothesis, collection and presentation of facts/data, analysis of facts/data, integration and synthesis of other perspectives and presentation of conclusions.

Goals
G 1: Identifying the Issue
Students will be able to identify a question or issue to investigate

G 2: Consideration of assumptions and context
Students will be able to consider assumptions and/or context of the issue

G 3: Formulation of testable hypothesis or thesis
Students will be able to formulate a testable hypothesis or clear and compelling thesis

G 4: Collection and presentation of data
Students will be able to collect, organize and present of facts/data

G 5: Analysis of Data
Students will be able to analyse facts/data

G 6: Integration of perspectives
Students will be able to integrate and synthesize of other perspectives

G 7: Presentation of Conclusions
Students will be able to effectively present conclusions of their research

Outcomes/Objectives
O/O 1: Effective Formulation of Research Question (G: 1, 2, 3) (M: 1, 2)
Students will demonstrate through a paper or oral presentation the effective formulation of a research question. The central question, embedded and subsidiary issues, as well as relationships needed for effective analysis will be clearly identified, underlying assumptions will be identified and analyzed, and a clearly stated and testable hypothesis with a clear understanding of its drawback developed

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

O/O 2: Effective collection and use of data (G: 4, 5) (M: 1, 2)
Students will demonstrate effective collection and use of data through a paper in which they will identify most relevant facts, show evidence of search, selections and source evaluation and using appropriate methodology subject the data to complete analysis including an examination of possible shortcomings of the data

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)
**O/O 3: Effective Communication of results (G: 6, 7) (M: 1, 2)**

Students will demonstrate effective communication through a paper and/or oral presentation of conclusions by providing clearly stated conclusions with examination of implications or consequences of conclusions. Students will also integrate other perspectives thoughtfully and respectfully

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

---

**Measures, Targets, and Findings**

**M 1: Rubric for Political Science 3800 (O: 1, 2, 3)**

In Political Science 3800, we used a rubric which measured the following CT skills (see Rubric): 1. Identification of research question 2. Formulation of a Testable Hypothesis 3. Analysis of facts/data 4. Presentation of Conclusions Student achievement was scored on a three level scale - Absent (0), Developing (1), Competent (2) - on each of the four CT skills above. For descriptions of each level of scoring see rubric POLS 3800

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Effective Formulation of Research Question**

We expect that 80% of our students score a 1 or better out of 2 on the hypothesis portion of the rubric

**Findings 2011-2012 - Target: Met**

286 students completed POLS 3800 in the Fall and Spring Semesters of 2011-2012. 14 sections of the course were taught during the period. Two assessment scores were used to assess outcomes for this objective. On the Identification of Research Question assignment 69.0% of our students scored a 2 (competent), 33.2% scored a 1(Developing) 1.4% scored a 0 (Absent). On the Formulation of Testable Hypothesis assignment 62.7% of our students scored a 2 (competent), 35.3% scored a 1(Developing) 2.8% scored a 0 (Absent). Percentage figures are rounded off.

**Target for O2: Effective collection and use of data**

We expect that 80% of our students score a 1 or better out of 2 on the analysis portion of the rubric

**Findings 2011-2012 - Target: Met**

On the Analysis of Data/Facts assignment 58.7% of our students scored a 2 (competent), 38.5% scored a 1(Developing) 2.8% scored a 0 (Absent). Percentage figures are rounded off. [Preview Formatting] [Preview Formatting]

**Target for O3: Effective Communication of results**

We expect that 80% of our students score a 1 or better out of 2 on the presentation portion of the rubric

**Findings 2011-2012 - Target: Met**

On the Effective Presentation of Conclusions Skill 63.6% of our students scored 2 (Competent), 33.9% scored a 1(Developing) and 2.4% scored 0 (Absent)

---

**M 2: Rubric for Political Science 4900 (O: 1, 2, 3)**

In Political Science 4900, we used a rubric which measured the following CT skills (see Rubric): 1. Identification of research question 2. Consideration of assumptions and/or context 3. Formulation of a Testable Hypothesis 4. Collection and Presentation of facts/data 5. Analysis of facts/data 6. Integration and synthesis of other perspectives 7. Presentation of Conclusions Student achievement was scored on a four level scale - Absent (0), Developing (1-2), Competent (3-4), Sophisticated (5) - on each of the four CT skills above. For descriptions of each level of scoring see rubric POLS 4900 Items 1-3 above are related to the outcome of effectively formulating a research question Items 4-5 above are related to the outcome of effective collection and use of data Items 6-7 above are related to the outcome of effective communication of results

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Effective Formulation of Research Question**

We expect that 80% of our students score a 3 or better out of 5 on Items 1-3 of the rubric

**Findings 2011-2012 - Target: Met**

139 students completed POLS 4900 in the Fall and Spring Semesters of 2011-2012. 6 sections of the course were taught during the period. As of the deadline for this report assessment data was available on 115 students. The following sections are based on the available data. On the effective formulation of the research question portion of the rubric (items 1-3) the scores were as follows 1. Identification of question or issue - 29.3% of our students scored a 5 (Sophisticated), 59.8% scored 3-4 (Competent) 11% scored 1-2 (Developing). 2. Consideration of assumptions and/or context - 23.2% of our students scored a 5 (Sophisticated), 58.5% scored 3-4 (Competent), 18.3% scored 1-2 (Developing). 3. Formulation of a testable hypothesis - 18.3% of our students scored a 5 (Sophisticated), 64.6% scored 3-4 (Competent) 15.9% scored 1-2 (Developing). Percentage figures are rounded off.

**Target for O2: Effective collection and use of data**

We expect that 80% of our students score a 3 or better out of 5 on the effective collection and use of data portion of the rubric

**Findings 2011-2012 - Target: Met**

On the effective collection and use of data portion of the rubric (items 4-5) the scores were as follows 4. Collection and presentation of facts/data - 32.9% of our students scored a 5 (Sophisticated), 51.2% scored 3-4 (Competent) 15.9% scored 1-2 (Developing). 5. Analysis of facts/data - 26.8% of our students scored a 5 (Sophisticated), 59.8% scored 3-4 (Competent) 13.4% scored 1-2 (Developing). Percentage figures are rounded off.
**Target for O3: Effective Communication of results**

We expect that 80% of our students score a 3 or better out of 5 on the effective communication of the results portion of the rubric.

**Findings 2011-2012 - Target: Met**

On the Effective communication of results portion of the rubric (items 6-7) the scores were as follows: 6. Integration and synthesis of other perspectives - 26.6% of our students scored a 5 (Sophisticated), 54.7% scored 3-4 (Competent) 18.7% scored 1-2 (Developing). 7. Presentation of conclusions - 25.2% of our students scored a 5 (Sophisticated), 55.4% scored 3-4 (Competent) 19.4% scored 1-2 (Developing). Percentage figures are rounded off.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Improving CT skill in Formulation of testable hypothesis**

Though the learning outcome target for this item on the rubric was met in both POLS 3800 and POLS 4900 the assessment data shows some weakness in this CT skill. This was specially the case in POLS 4900 where students had to meet a much higher standard of sophistication to earn a score of 3 or more on this item on the rubric. In POLS 4900 student scores on the rubric were as follows - 34.4% scored 5 (Sophisticated), 40.6% scored 4 (higher end of Competent) and 21.9% scored 3 (lower end of Competent). The plan is to devote more time and learning to developing this skill in POLS 4900. In particular differences between a thesis, a hypothesis and a conclusion and developing a hypothesis that is testable and not leading to a single conclusion.

**Established in Cycle:** 2009-2010
**Implementation Status:** In-Progress
**Priority:** High

**Relationships (Measure | Outcome/Objective):**

<table>
<thead>
<tr>
<th>Measure: Rubric for Political Science 3800</th>
<th>Outcome/Objective: Effective Formulation of Research Question</th>
</tr>
</thead>
</table>

**Implementation Description:** The Plan requires the following enhancements to the teaching of POLS 4900: 1. A review session on developing a testable hypothesis early in the semester 2. An in-class or online peer review session devoted to discussion of research hypothesis development as part of the research paper requirement of the course. 3. A minimum of three iterations of the hypothesis development process as part of the research paper requirement of the course.

**Projected Completion Date:** 05/2013
**Responsible Person/Group:** CTW ambassador and faculty teaching POLS 4900 in Fall 2010 and Spring 2011

**Improving CT skill in integration of other perspectives**

While the assessment data shows that our first CTW course POLS 3800 is comfortably meeting the CT learning outcome targets, our second CTW course POLS 4900 while meeting its learning outcome target shows clear gaps in student CT skills in the area of integration of other perspectives into their work. Though students showed marked improvement in this area between pre-course and post-course performance and target of 80% of students scoring 3 or higher on this item on the rubric was met only 34.4% had a score of 5 (Sophisticated), whereas 37.5% scored 4 (higher end of Competency) and 21.9% scored 3 (lower end of Competency). Faculty teaching the course noted that this was a major weakness of students coming into the course. The plan is to give added stress to developing this skill in POLS 4900.

**Established in Cycle:** 2009-2010
**Implementation Status:** In-Progress
**Priority:** High

**Relationships (Measure | Outcome/Objective):**

<table>
<thead>
<tr>
<th>Measure: Rubric for Political Science 4900</th>
<th>Outcome/Objective: Effective Formulation of Research Question</th>
</tr>
</thead>
</table>

**Implementation Description:** Three actions will be implemented as part of the plan to improve CT skills in this area: 1. Students will be assigned readings reflecting a wide spectrum of viewpoints as part of the course. 2. The course will include one exercise devoted exclusively to the development of this CT skill 3. Greater weight will be given in grading to the ability to show competence in this area.

**Projected Completion Date:** 05/2013
**Responsible Person/Group:** CTW ambassador and faculty teaching POLS 4900

**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

The following are the main accomplishments of the CTW program in the Political Science Department: 1. The Department continued to meet its targets in all 7 goals and 3 outcomes/objectives of its CTW program. Assessment scores in both the CTW courses showed continued improvements. 2. The department also developed two additional rubrics to be used in the POLS 4900 courses starting next year. These reflect the methodological differences in various sections of POLS 4900 while still assessing similar CT skills. 3. An additional 7 faculty members were trained in and taught POLS 4900 and POLS 3800 the two CTW courses.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

Assessment standards were tightened for POLS 4900. Despite higher expectations and standards assessment scores saw improvement in the 2011-2012 year. These seem to indicate that the action plan in place for the CT areas where we are seeking improvement is working. In POLS 3800 the area of concern (formulation of testable hypothesis/thesis) identified in previous years saw an increase in assessment scores as shown below Rubric Item Assessment Score 2010-2011 Assessment Score 2011-2012 Identification of Research Question 65.9% - Competent 69.0% - Competent 28.5% - Developing 33.2% - Developing Formulation of Testable Hypothesis 57.7% - Competent 62.6% - Competent 33.7% - Developing 34.3% - Developing In POLS 4900 two areas of concern in previous years were (a) Formulation of Hypothesis and (b) incorporating other perspectives. The comparable scores reflecting stricter standards yet showing improved scores were as follows. However the scores on Integration and synthesis show that more attention needs to be paid to this CT skill Rubric Item Assessment Score 2010-2011 Assessment Score 2011-2012 Formulation of testable hypothesis-thesis 44.1% - Sophisticated 18.3% - Sophisticated 47.1% - Competent 64.8% - Competent Integration and synthesis of other perspectives 33.8% - Sophisticated 26.6% - Sophisticated 54.4% - Competent 54.7% - Competent
CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

This year faculty teaching POLS 4900 will pay special attention to improving the CT skill of integrating and synthesis of other perspectives.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

The main change has been the development and adoption of a two alternative rubrics for POLS 4900 in addition to the rubric already in use. These are designed to measure the same CT skills as reflected in courses in political theory and non-quantitative courses. These rubrics will make assessment more accurate and reflective of CT skills that students show.

ACADEMIC PROGRAM QUESTION 1: What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Please see answer to the previous section

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

As noted above several changes have been made to the course content of POLS 3800 and POLS 4900 to address areas showing room for improvement in CT skills. The department also increased the rigor in assessment of CT skills requiring higher levels of achievement to receive scores at the level of Sophisticated in POLS 4900 and Competent in POLS 3800. Even though all the goals on all elements of the rubrics were met areas with lower scores were targeted for special attention in class.

ADMINISTRATIVE DEPT QUESTION 1: Explain how your department used the results from the previous cycle’s (2010-2011) assessment. What actions did you take this past year based on the results from the previous cycle? What changes did you make as a result?

See above

ADMINISTRATIVE DEPT QUESTION 2: What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department’s effectiveness?

The department continues to meet its goals in the area of CT skills. No new findings have emerged and the department continues its efforts to improve performance on those areas where assessment shows room for improvement

ADMINISTRATIVE DEPARTMENT QUESTION 3: How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

See above

Georgia State University
Assessment Data by Section
2011-2012 CTW Psychology
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
In addition to meeting the requirements of the University’s CTW policy, the proposed CTW courses are designed to address recommendations by the American Psychological Association (APA) related specifically to the development of critical thinking skills in undergraduate psychology majors. For this reason, we shall operationally define and assess critical thinking in terms outlined by the APA, such as students’ ability to "evaluate the quality of information, including differentiating empirical evidence from speculation," "use reasoning to recognize, develop, defend, and criticize arguments and other persuasive appeals," "demonstrate an attitude... of persistence, open-mindedness, tolerance for ambiguity, and intellectual engagement," and "use scientific principles and evidence to resolve conflicting claims" (APA, 2007, p. 15).

Goals
G 1: Critical thinking skills in psychology (APA 3.1-3.4)
Respect and use critical and creative thinking, skeptical inquiry, and, when possible, the scientific approach to solve problems related to behavior and mental processes.

G 2: Integrative writing (APA 7.1)
Demonstrate effective writing skills in various formats (e.g., essays, correspondence, technical papers, note taking) and for various purposes (e.g., informing, defending, explaining, persuading, arguing, teaching).

Student Learning Outcomes/Objectives
SLO 1: Uses critical thinking effectively (APA 3.1) (G: 1) (M: 1, 2)
Measures, Targets, and Findings

O/O 3: Approaches problems creatively and effectively (APA 3.2 & 3.4) (G: 1) (M: 1, 2)
a. Intentionally pursue unusual approaches to problems b. Recognize and encourage creative thinking and behaviors in others c. Evaluate new ideas with an open but critical mind d. Recognize ill-defined and well-defined problems e. Articulate problems clearly f. Generate multiple possible goals and solutions g. Evaluate the quality of solutions and revise as needed h. Select and carry out the best solution

Target for O1: Uses critical thinking effectively (APA 3.1)
In the 2011 CTW Writing Assessment Rubric, instructors rate the student's submission for Organization and Logic on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. Is unquestioning of his/her acceptance of unproven or poorly supported claims 1. Is skeptical, but is unable to explain why or support claims with evidence 2. Supports claims with evidence, but this evidence is usually inappropriate, inaccurate, or irrelevant 3. Supports most claims with evidence that is appropriate, accurate, and relevant 4. Consistently supports claims with appropriate, accurate, and relevant evidence. However, some important evidence is missing. 5. Consistently and thoroughly supports claims with appropriate, accurate, and relevant evidence. For PSYC 3530, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Use of Evidence on this assignment. *** In the 2011 CTW Writing Assessment Rubric, instructors rate the student's submission for Use of Evidence on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. Is unquestioning of his/her acceptance of unproven or poorly supported claims 1. Is skeptical, but is unable to explain why or support claims with evidence 2. Supports claims with evidence, but this evidence is usually inappropriate, inaccurate, or irrelevant 3. Supports most claims with evidence that is appropriate, accurate, and relevant 4. Consistently supports claims with appropriate, accurate, and relevant evidence. However, some important evidence is missing. 5. Consistently and thoroughly supports claims with appropriate, accurate, and relevant evidence. For PSYC 3530, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Use of Evidence on this assignment.

Findings 2011-2012 - Target: Met
The median score for Organization and Logic was 3, which is in the 'developing' range, and 97% of the students were rated a score of 2 (the lower end of the 'developing' range) or higher. The median score for Use of Evidence was 3, which is in the 'developing' range, and 99% of the students were rated a score of 2 (the lower end of the 'developing' range) or higher. The proportions of students in each performance category are summarized in Figure 1.

Target for O2: Uses reasoning to recognize, develop, defend, and criticize arguments and other persuasive appeals (APA 3.3)
In the 2011 CTW Writing Assessment Rubric, instructors rate the student's submission for Position and Balance on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. Is unquestioning of his/her acceptance of unproven or poorly supported claims 1. Is skeptical, but is unable to explain why or support claims with evidence 2. Supports claims with evidence, but this evidence is usually inappropriate, inaccurate, or irrelevant 3. Supports most claims with evidence that is appropriate, accurate, and relevant 4. Consistently supports claims with appropriate, accurate, and relevant evidence. However, some important evidence is missing. 5. Consistently and thoroughly supports claims with appropriate, accurate, and relevant evidence. For PSYC 3530, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Use of Evidence on this assignment.

In the 2011 CTW Writing Assessment Rubric, instructors rate the student's submission for Position and Balance on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. Does not take any position on the issue 1. Does not take a consistent position on the issue 2. Takes a consistent position on the issue 3. Takes a consistent position on the issue and attempts to address some relevant counterevidence and/or alternate points of view 4. Takes a consistent position on the issue and addresses the relevant...
counterevidence and/or alternate points of view. However, claims and/or evidence could be presented more clearly and/or objectively. 5. Takes a clear and balanced position on the issue, thoroughly addressing relevant counterevidence and/or alternate points of view. For PSYC 3530, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Position and Balance on this assignment.

**Findings 2011-2012 - Target: Met**

The median score for Position and Balance was 3, which is in the 'developing' range, and 99% of the students were rated a score of 2 (the lower end of the 'developing' range) or higher. The proportions of students in each performance category are summarized in Figure 2.

**Target for O3: Approaches problems creatively and effectively (APA 3.2 & 3.4)**

In the 2011 CTW Writing Assessment Rubric, instructors rate the student's submission for Use of Evidence on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. The frequency and variety of errors obscures the writer's intentions completely. 1. The frequency and variety of errors is disruptive to the reader. 2. The frequency and/or variety of errors are somewhat disruptive to the reader. 3. Errors are few and generally not disruptive to the reader. 4. Errors are rare and inconsequential to the reader. 5. The reader's intentions are clearly expressed. For PSYC 3530, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Use of Evidence on this assignment. ***In the 2011 CTW Writing Assessment Rubric, instructors rate the student's submission for Content and Development on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. No details. 1. Few details, and these are generally inaccurate or irrelevant. 2. A variety of details, but some are inaccurate or irrelevant. 3. A variety of relevant and accurate details, but some relevant details are missing. 4. Thorough, relevant, and accurate details, but could be more concise. 5. Complete, relevant, and accurate details in an appropriately concise manner. For PSYC 3530, our junior/entry CTW course, the target is for the majority of students to be in the Developing (2-3) range for Citation and Use of Sources on this assignment. ***In the 2011 CTW Writing Assessment Rubric, instructors rate the student's submission for Citation and Use of Sources on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. **Findings 2011-2012 - Target: Met**

The median score for Grammar and Mechanics was 3, which is in the 'developing' range, and 94% of the students were rated a score of 2 (the lower end of the 'developing' range) or higher. The median score for Content and Development was 3, which is in the 'developing' range, and 99% of the students were rated a score of 2 (the lower end of the 'developing' range) or higher. The median score for Citation and Use of Sources was 4, which is in the 'mastering' range, and 96% of the students were rated a score of 2 (the lower end of the 'developing' range) or higher. The proportions of students in each performance category are summarized in Figure 4.

**M 2: 4800 Final Paper (O: 1, 2, 3, 4)**

PSYC 4800 is a senior seminar; each section focuses on a different topic. As such, the types and topics of the CTW posttest writing assignments vary across sections. Below is a brief description of the different assignments for which student examples have been provided, organized by section. PSYC 4800, Section 1 (4800-1) Each student will complete a weekly short reaction essay (approximately two well-formed paragraphs) on the article or chapter assigned for discussion. These essays should evaluate the theoretical arguments and evidence presented and/or compare and contrast the assigned article(s) with other points made in class. At the end of the essay, each student should list a question to discuss during class. Though brief, these submissions should use appropriate organization, style, and grammar. PSYC 4800, Section 2 (4800-2) The Case: In 1996 Oprah Winfrey had a guest on her show from the Human Society who discussed the practice of feeding cows ground-up meat from dead livestock. This practice, now banned by the Food and Drug Administration in the United States, is believed to have contributed to the spread of bovine spongiform encephalopathy, commonly known as “mad cow disease”. Oprah, after hearing of the risks associated with this practice, pronounced on her show that she would not eat another burger. The resultant “Oprah Crash” of 1996 led cattle beef prices and cattle futures tumbling downward by nearly 10%. Cattle ranchers were convinced that Oprah’s comments led to the decline in prices, the public’s concerns regarding the safety of beef, and the heightened fear of mad cow disease. Oprah Winfrey was sued in 1998 by the cattle industry for $12 million in damages and losses. The ranchers sued under a Texas law, the False Disparagement of Perishable Food Products Act of 1995. The Assignment: Act as a trial consultant for jury selection and (based on research) suggest two characteristics that should...
be used to determine who you would select for the jury or two characteristics that should be used to remove people from the jury. Remember to write scientifically and do not use the word “I”. You can take the side of the prosecuting attorney or the defense attorney. PSYC 4800, Section 3 (4800-3) As a final project, each student must prepare a synthesis paper in which he/she describes and evaluates the various theories of the psychology of war discussed in the course, reflecting on their similarities and differences and the connections the student sees between the various theories and the data about the psychology of war discussed over the semester. Note: We did not receive learning outcome assessment data and/or sample papers from two of the five PSYC 4800 instructors by the deadline for submitting the report.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Uses critical thinking effectively (APA 3.1)

In the 2011 CTW Writing Assessment Rubric, instructors rate the student’s submission for Organization and Logic on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. Ideas are arranged in a chaotic way, with no logical connection between them (i.e., within sentences and/or paragraphs). 1. Ideas are arranged in an associative, digressive, elliptical, or circular manner; the logical connections between ideas are consistently unclear. 2. Ideas are arranged in a way that makes sense to the author, but is inappropriate for the purpose or audience of the assignment; the logical connections between ideas are frequently unclear. 3. Ideas are arranged with some consideration for the purpose and audience of the assignment; the logical connections between ideas are sometimes unclear. 4. Ideas are arranged in a manner appropriate to the purpose and audience of the assignment; the logical connections between ideas are almost always clear. 5. Ideas are thoughtfully and effectively arranged in a manner appropriate to the purpose and audience of the assignment; the logical connections between ideas are consistently clear. For PSYC 4800, our senior/exit CTW course, the target is for the majority of students to be in the Mastering (4-5) range for Use of Evidence on this assignment. *** In the 2011 CTW Writing Assessment Rubric, instructors rate the student’s submission for Use of Evidence on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. Is unquessioning of his/her acceptance of unproven or poorly supported claims 1. Is skeptical, but is unable to explain why or support claims with evidence. 2. Supports claims with evidence, but this evidence is usually inappropriate, inaccurate, or irrelevant. 3. Supports most claims with evidence that is appropriate, accurate, and relevant. 4. Consistently supports claims with appropriate, accurate, and relevant evidence. However, some important evidence is missing. 5. Consistently and thoroughly supports claims with appropriate, accurate, and relevant evidence. For PSYC 4800, our senior/exit CTW course, the target is for the majority of students to be in the Mastering (4-5) range for Use of Evidence on this assignment.

Findings 2011-2012 - Target: Met

The median score for Use of Evidence was 4.5, which is in the 'mastering' range, and 73% of the students were rated a score of 4 (the lower end of the 'mastering' range) or higher. The median score for Use of Evidence was 4.5, which is in the 'mastering' range, and 73% of the students were rated a score of 4 (the lower end of the 'mastering' range) or higher. The proportions of students in each performance category are summarized in Figure 1.

Target for O2: Uses reasoning to recognize, develop, defend, and criticize arguments and other persuasive appeals (APA 3.3)

In the 2011 CTW Writing Assessment Rubric, instructors rate the student’s submission for Position and Balance on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. Does not take any position on the issue 1. Does not take a consistent position on the issue 2. Takes a consistent position on the issue, but ignores relevant counterevidence and alternate points of view. 3. Takes a consistent position on the issue and attempts to address some relevant counterevidence and/or alternate points of view. 4. Takes a consistent position on the issue and addresses the relevant counterevidence and/or alternate points of view. However, claims and/or evidence could be presented more clearly and/or objectively. 5. Takes a clear and balanced position on the issue, thoroughly addressing relevant counterevidence and/or alternate points of view. For PSYC 4800, our senior/exit CTW course, the target is for the majority of students to be in the Mastering (4-5) range for Position and Balance on this assignment.

Findings 2011-2012 - Target: Met

The median score for Position and Balance was 4, which is in the 'mastering' range, and 77% of the students were rated a score of 4 (the lower end of the 'mastering' range) or higher. The median score for Use of Evidence was 4.5, which is in the 'mastering' range, and 73% of the students were rated a score of 4 (the lower end of the 'mastering' range) or higher. The proportions of students in each performance category are summarized in Figure 2.

Target for O3: Approaches problems creatively and effectively (APA 3.2 & 3.4)

In the 2011 CTW Writing Assessment Rubric, instructors rate the student’s submission for Use of Evidence on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. Does not take any position on the issue 1. Does not take a consistent position on the issue 2. Takes a consistent position on the issue, but ignores relevant counterevidence and alternate points of view. 3. Takes a consistent position on the issue and attempts to address some relevant counterevidence and/or alternate points of view. 4. Takes a consistent position on the issue and addresses the relevant counterevidence and/or alternate points of view. However, claims and/or evidence could be presented more clearly and/or objectively. 5. Takes a clear and balanced position on the issue, thoroughly addressing relevant counterevidence and/or alternate points of view. For PSYC 4800, our senior/exit CTW course, the target is for the majority of students to be in the Mastering (4-5) range for Use of Evidence on this assignment.

Findings 2011-2012 - Target: Met

The median score for Use of Evidence was 4.5, which is in the 'mastering' range, and 73% of the students were rated a score of 4 (the lower end of the 'mastering' range) or higher. The median score for Use of Evidence was 4.5, which is in the 'mastering' range, and 73% of the students were rated a score of 4 (the lower end of the 'mastering' range) or higher. The proportions of students in each performance category are summarized in Figure 3.

Target for O4: Demonstrate effective writing skills in various formats and for various purposes (APA 7.1)

In the 2011 CTW Writing Assessment Rubric, instructors rate the student’s submission for Grammar and Mechanics on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. The frequency and variety of errors obscures the writer’s intentions completely. 1. The frequency and variety of errors is disruptive to the reader. 2. The frequency and/or variety of errors are somewhat disruptive to the reader. 3. Errors are rare and generally not disruptive to the reader. 4. Errors are rare and inconsequential to the reader. 5. The writer’s intentions are clearly expressed. For PSYC 4800, our
senior/exit CTW course, the target is for the majority of students to be in the Mastering (4-5) range for Grammar and Mechanics on this assignment. *** In the 2011 CTW Writing Assessment Rubric, instructors rate the student's submission for Content and Development on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. No details 1. Few details, and these are generally inaccurate or irrelevant 2. A variety of details, but some are inaccurate or irrelevant 3. A variety of relevant and accurate details, but some relevant details are missing 4. Thorough, relevant, and accurate details, but could be more concise 5. Complete, relevant, and accurate details in an appropriately concise manner For PSYC 4800, our senior/exit CTW course, the target is for the majority of students to be in the Mastering (4-5) range for Content and Development on this assignment. *** In the 2011 CTW Writing Assessment Rubric, instructors rate the student's submission for Citation and Use of Sources on the scale below. A score of 0-1 is considered Emerging and is below expectations. A score of 2-3 is considered Developing and meets basic expectations. A score of 4-5 is considered Mastering and meets advanced expectations. 0. Has committed intentional plagiarism by copying and/or paraphrasing one or more sentences from a sources and not using quotation marks or a citation to indicate the ideas are not his/her own 1. Has committed unintentional plagiarism by inappropriately paraphrasing one or more sentences from a source (e.g., by changing some of the original words and/or the original word order), although a citation is provided 2. Quotes rather than paraphrases a cited source 3. Properly paraphrases all sources and provides citations for them, but has errors in citation mechanics 4. Properly paraphrases and cites all sources, but does not consistently or skillfully integrate the cited material with his/her own ideas 5. Properly paraphrases and cites all sources, while consistently and skillfully integrating the cited material with his/her own ideas For PSYC 4800, our senior/exit CTW course, the target is for the majority of students to be in the Mastering (4-5) range for Citation and Use of Sources on this assignment.

Findings 2011-2012 - Target: Partially Met

The median score for Grammar and Mechanics was 3, which is in the ‘developing’ range, and 46% of the students were rated a score of 4 (the lower end of the ‘mastering’ range) or higher. The median score for Content and Development was 4.5, which is in the ‘mastering’ range, and 60% of the students were rated a score of 4 (the lower end of the ‘mastering’ range) or higher. The median score for Citation and Use of Sources was 4, which is in the ‘mastering’ range, and 73% of the students were rated a score of 4 (the lower end of the ‘mastering’ range) or higher. The proportions of students in each performance category are summarized in Figure 4.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

CTW Instructor Workshops

As the number of faculty who are teaching CTW courses within the Psychology department increases, it is becoming increasingly difficult for the CTW Ambassadors to provide one-on-one training to faculty regarding assignment design, feedback, and assessment. To address this concern, Dr. Darnell will be offering a CTW instructor training workshop before the beginning of the Fall and Spring terms, with a specific focus on the entry level CTW course, PSYC 3530. Dr. Tusher will conduct a needs assessment of faculty who have taught PSYC 4800 and work with Dr. Darnell to prepare the appropriate materials and training to respond to faculty requests regarding instructional support for the exit level CTW course.

Established in Cycle:2010-2011
Implementation Status: In-Progress
Priority: High
Implementation Description: Dr. Darnell conducted two workshops for new PSYC 3530 faculty prior to the Fall 2011 term. In addition, she and other veteran PSYC 3530 instructors gathered teaching materials on a GoogleDocs site that new instructors can easily reference and add to. Dr. Tusher is preparing a similar resource site for PSYC 4800 instructors. Drs. Darnell and Tusher will be leading a faculty orientation for all CTW instructors, new and experienced, before the Fall 2012 term.
Projected Completion Date: 08/2012
Responsible Person/Group: CTW Ambassadors

Plagiarism Materials and Policy

Faculty who teach CTW courses -- as well as other courses with substantive writing assignments -- report an increased number of students who are plagiarizing content in the work they submit. This form of academic dishonesty is occurring despite a specific focus in the entry level CTW course on how to recognize plagiarism, how to avoid it, and why plagiarism is unethical and inappropriate in an academic environment. To address this problem, beginning Fall 2011 a department approved policy will appear in all undergraduate course syllabi describing what constitutes plagiarism in APA style writing and the consequences of engaging in this sort of unethical conduct in any psychology course. The goal of this policy is to present a consistent message to students that plagiarism is never acceptable and that all cases of plagiarism will be reported to authorities at the Department, College, and University levels. In addition to the inclusion of the University of Kentucky’s current policies and procedures, the policy will also include the following materials that faculty may use to teach and assess plagiarism, as well as a detailed flow chart describing what to do when they identify plagiarism in students’ work.

Established in Cycle:2010-2011
Implementation Status: Finished
Priority: High
Implementation Description: As of Fall 2011, all Psychology instructors, including those who teach CTW courses, must include the official department policy on plagiarism and cheating in their syllabi. Also, PSYC 3530 instructors have a specific set of materials to teach and assess plagiarism, as well as a detailed flow chart describing what to do when they identify plagiarism in students’ work.
Projected Completion Date: 08/2011
Responsible Person/Group: CTW Ambassadors and the UPC Plagiarism Subcommittee

Additional Resources: Psychology faculty who report cases of plagiarism need better support from administrators at the College and University levels. Anecdotally, we know that some faculty do not report all cases of plagiarism they observe, because of past experiences where they have filed a report with the College and the case was not upheld upon appeal by the student. Specifically, cases where the student has clearly violated instructions regarding use of quotations, copying and pasting from sources, appropriate paraphrasing, and use of citations according to APA style have been rejected as plagiarism by faculty in other disciplines where quoting, simple substitution of key words, and other strategies for incorporating the ideas of others in one’s work are more commonly permitted. For example, when a student copied sentences from a source and provided a citation, but did not put the sentences in quotation marks, he/she was reported for plagiarism by a Psychology instructor. On appeal, however, the instructor was told that this was not plagiarism but a “punctuation error,” because the student had simply not put quotation marks around the copied material;
the fact that a citation had been provided meant the student was not plagiarizing. As defined by our discipline and explained in the assignment instructions, however, such word-for-word use of other's ideas, whether or not a citation is provided, is considered plagiarism in the absence of quotation marks. To effectively teach scientific writing according to our discipline specific style (i.e., APA style), Psychology faculty need the support of College and University administrators when we hold students responsible for writing without plagiarism. Preparing and presenting a case of academic dishonesty is a time consuming process for faculty, and Psychology faculty need to integrate this process into their courses without becoming discouraged. It is disheartening to be second-guessed by administrators who are not familiar with APA style and its requirements. Moreover, the lack of administrative support that Psychology faculty perceive decreases the frequency with which they incorporate writing assignments in their curriculum and reduces their enthusiasm for teaching courses where writing assignments are required (e.g., CTW courses).

**Revise Rubric (Again)**

Although the CTW Ambassadors in Psychology have historically conceptualized the ability to write well in a discipline-appropriate style as manifestation of students’ ability to think critically, we continue to receive feedback that this view is not in keeping with the intentions of the CTW initiative. Instead, we have been encouraged to treat writing simply as the medium instructors use to assess students’ critical thinking. Given that a writing-related goal was the only one not fully met by our students in this year’s assessment and that the resources necessary to adequately address students’ shortcomings in this area lie far beyond the scope of what we can provide as a department, we have elected to discontinue reporting writing-related data for CTW. In conjunction with this change in reporting practice, we are removing measures from our CTW Assessment Rubric that do not directly map onto constructs of critical thinking as defined by the American Psychological Association (APA). Specifically, we are removing measures used to assess students’ ability to communicate effectively in writing (i.e., Grammar and Mechanics, Content and Development, and Citation and Use of Sources). In addition, we are rewording the measures on the rubric to make them measure the critical thinking constructs defined by the APA more directly. We hope that these changes will streamline the data collection process for CTW instructors and reduce the burden of learning outcome assessment for all of us.

**Established in Cycle:** 2011-2012  
**Implementation Status:** Planned  
**Priority:** High

**Relationships (Measure | Outcome/Objective):**  
**Measure:** 4800 Final Paper  
**Outcome/Objective:** Demonstrate effective writing skills in various formats and for various purposes (APA 7.1)

**Implementation Description:** The revised CTW rubric will be ready for use in Summer 2012 courses and will be used throughout the 2012-2013 academic year.

**Projected Completion Date:** 06/2012  
**Responsible Person/Group:** CTW Ambassadors

---

**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?**

In keeping with the action plan on “Plagiarism Materials and Policy” described in our 2011 report, the Undergraduate Program subcommittee on plagiarism (Dr. Marika Lamoreaux, Chair), including the CTW Ambassadors for Psychology, wrote an official departmental policy on plagiarism and its requirements. This policy now appears in the syllabi for all courses in the department. In addition, the subcommittee prepared a comprehensive set of materials to help faculty teach students about plagiarism (e.g., what it is, how to recognize it, and how to avoid it) and assess their understanding of the relevant concepts. These materials include a detailed PowerPoint presentation, an in-class activity, an online training and assessment of plagiarism concepts, a contract for students to avoid plagiarism, and a flow chart detailing the steps to be followed in the event that plagiarism is identified in a student’s work. All of these materials are regularly used in sections of PSYC 3530, the entry level CTW course. In keeping with the action plan on “CTW Instructor Workshops,” Dr. Darnell conducted two workshops for new PSYC 3530 faculty prior to the Fall 2011 term. In addition, she and other veteran PSYC 3530 instructors gathered teaching materials on a GoogleDocs site that new instructors can easily reference and add to. Dr. Tusher is preparing a similar resource site for PSYC 4800 instructors. Drs. Darnell and Tusher will be leading a faculty orientation for all CTW instructors, new and experienced, before the Fall 2012 term. Following up on an Action Plan 2010-2011 Action Plan 2010-2011 Action Plan, the subcommittee is now offering 12-14 sections of PSYC 3530 each semester. Given our very large number of majors (2300+) and the limited class size for CTW courses (25 students/section), we have an extensive backlog of students who need to take this course and our offerings do not yet meet student demand. However, we plan to add 2-4 more sections per term in 2012-2013 and continue to offer 14-16 sections a semester until enrollments stabilize. Dr. Tusher chaired the Undergraduate Program subcommittee on improving PSYC 3530, our entry level CTW course. The subcommittee prepared and administered a comprehensive online survey about the quantitative core courses in the undergraduate program, including PSYC 3530, to all regular faculty. Based on the feedback the subcommittee received through the survey, the CTW assignments for PSYC 3530 were changed from an APA style literature review to a series of smaller assignments that focus on summarizing, synthesizing, and critiquing peer-reviewed empirical research articles; other data from the survey are being used to inform curriculum modifications in the department. Undergraduate Program subcommittee on improving PSYC 3530, our entry level CTW course.

**CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**

From the entry level CTW course to the exit level CTW course, students are improving in their critical thinking skills. Specifically, the vast majority of students’ median scores on all measures (i.e., Organization & Logic, Use of Evidence, and Position & Balance) were in the Developing category at the end of the entry level CTW course (PSYC 3530) and in the Mastering category at the end of the exit level CTW course (PSYC 4800). Students’ writing skills -- which we consider fundamental to their development and expression of critical thinking skills -- also improve to some extent from the entry level to the exit level CTW course. Students are showing improved attention to detail, thoughtfulness about organization of ideas, and awareness of stylistic issues as they advance through the CTW sequence. Specifically, the vast majority of students’ median scores on two measures (i.e., Content & Development, and Citation & Use of Sources) were in the Developing category at the end of the entry level CTW course (PSYC 3530) and in the Mastering...
category at the end of the exit level CTW course (PSYC 4800). Students' median scores on Grammar & Mechanics did not improve between the two courses and remained in the Developing range.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What assistance might you need to address those areas?

When plans for the CTW program were first announced at the University level, our program had approximately 1200 majors and 40+ regular faculty. Currently, we have almost the same number of majors (approximately 1000 majors) and about the same number of regular faculty. As such, implementing the program under the College of Arts and Sciences enrollment restriction of 25 students per section of a CTW course is effectively impossible if we adhere to original goals of staffing these courses exclusively with regular faculty. Although this might not seem to be the case if one looks at the numbers in a superficial way (i.e., to meet the basic demand of teaching 1/4 of our students per year, we would need to a minimum of 12 sections of an entry level course and 12 sections of an exit level course offered per semester, Fall and Spring), this does not take into account a number of factors: First, the backlog of Psychology students who need CTW courses in Academic Year 2010-2011 is enormous. As of Fall 2011, one third of our sophomores and over half of our seniors had not taken any CTW courses. If we add these students to the 300 juniors who should have been enrolling in our entry level CTW course this year, we needed to teach 42 sections of 3530 and 30 sections of 4800 during the 2011-2012 academic year just to catch up and be on track for Fall 2012. Even with the Chair compelling every available faculty member to teach at least one CTW course during the year, we were only able to offer 21 sections of 3530 -- including four hybrid sections, two of which were taught by visiting lecturer -- and 16 sections of 4800 -- 10 will be taught in Summer 2012, one of which is available for 10hp only if we use 10hp by a visiting lecturer. In short, we were able to address less than half of our student demand. We currently have 23 sections of 3530 and 11 sections of 4800 on the books for Fall 2012 and Spring 2013. At this rate, our backlog will only increase as time goes by. Second, the increased demands on tenure track (TT) faculty to secure external grants, publish in top-tier journals, and teach and mentor larger numbers of graduate students, have reduced their availability to teach undergraduate courses in general and their interest in teaching CTW courses in particular. Third, new requirements for non-tenure track faculty (NTT) require that they must teach at least 11 sections of 4800 on the books for Fall 2012 and Spring 2013. Therefore, this solution goes against one of the goals of the CTW initiative, which was to increase students' critical thinking in the discipline, which is the main goal of the CTW initiative. These increased demands on faculty could be mediated by the presence of graduate student writing consultants, but our department does not even have a sufficient number of graduate students to serve as teaching assistants or lab instructors as it is, so we would be unable to fill any writing assistant positions that this change might create unless we staffed them with temporary faculty (i.e., Visiting Lecturers or Part-time Instructors), requesting additional TT and NTT faculty lines -- this requires approval of the Dean and the availability of resources that we have no control over designing hybrid versions of our entry level course that would allow us to offer two sections in one classroom per timeslot (e.g., one section meets in person on Tuesday and a different section meets in person on Thursday at a given time in a given room) -- we have offered four sections like this in Spring 2012 hiring Visiting Lecturers (VLs) to cover CTW courses -- we had 2 teaching CTW courses in Spring 2012, one of whom will also teach a CTW course in Summer 2012; we are actively seeking to hire large number of NTT faculty lines for 2013 to address the demand for the required courses at the 3000- and 4000-levels to CTW courses -- these courses currently have enrollments of 48-75 students per section, so this would result in our needing a larger number of faculty to teach the same number of students and would have the potential to place a disproportionate burden on faculty from specific programs (i.e., cognitive science) modifying the major requirements to include our exit level course 4800 as a viable substitute for current advanced courses in the major (Area F) -- this would increase the commitments that the Undergraduate Committee must make in order to secure space for the required courses, that we are allocated by the College, so it is a viable but non-immediate solution copying models that are working in other large departments (e.g., Biology) -- structural differences in the types of courses we offer (i.e., lab courses vs. lecture courses) and the availability of graduate students to cover classes that cannot be taught by faculty who are covering CTW courses (i.e., we don't have any) prevent us from adopting these alternate approaches permitting students who could find and were qualified to enroll in ext-level CTW courses in related programs (e.g., Sociology) to meet their requirement for Psychology by completing that course and preparing a report detailing how the course content connected with Psychology as a discipline (cf. an Honors project) -- we were told by the relevant college administrators that this option did not conform to the requirements of the Senate resolution regarding CTW that specifies CTW courses must be in the students' major and cannot be replaced with courses in other programs making all stand-alone Honors sections of courses compliant with CTW requirements -- this will only help Honors students meet the CTW requirement, but we hope it will reduce some of the demand on non-Honors CTW sections. Basically, to meet the goals of the CTW initiative as it is currently structured without further delaying our students' progress toward graduation, we need the College to give us huge amounts of money to hire VLs to fill the instructional gaps that our current regular faculty cannot fill and to approve fund 10 or more new regular faculty lines (TT and NTT) so that we can eventually discontinue the use of VLs as CTW instructors. Related to the challenges our program is facing in meeting student demand for CTW courses during the regular school year, we continue to struggle with whether or not to offer CTW courses during the summer term. As mentioned in our previous report, we struggled with the idea of offering a week summer term course this year. We understand that logistical problems in many cases because of the limited amount of time that students have to absorb and reflect on material and that faculty have to provide sufficient, meaningful feedback on critical thinking assignments. This is particularly true in the case of our entry level course, PSYC 3530, which the full faculty agrees should not be taught in the summer under any circumstances. However, because so many Psychology students are unable to register for the CTW courses that they need in order to meet graduation requirements and have complained about this up the administrative chain, the Chair has been told that the department must find a way to supply at least one section of CTW this summer. The only way that we can do so in the summer only increases the likelihood that Psychology majors will complete their CTW sequence without ever having had a regular faculty instructor. This solution goes against one of the goals of the CTW initiative, which was to increase students' classroom interaction with regular faculty in their major program. The good news is that this conflict can be avoided altogether if our department receives sufficient support from the College and University to implement one or more of the solutions listed above,
CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

Although we strongly support the spirit and goals of the CTW initiative, our department's inability to field a sufficient number of CTW courses may be the number one force preventing Psychology majors from graduating in a timely fashion. Because the faculty want our students to progress through the major and graduate from GSU at a reasonable pace, addressing the problems raised by the CTW initiative has become one of the primary concerns of our undergraduate program. The Undergraduate Program Committee is actively trying to find workable solutions, but is not willing to compromise the program's academic standards in the process. As CTW Ambassadors, we continue to support our students and CTW faculty as much as possible. We have formal workshops to train faculty and regularly work on improving the materials and guidance we provide instructors to facilitate their success. Additionally, both ambassadors have an open-door policy that we hope encourages faculty to come to us anytime they have questions or concerns about CTW, including their courses specifically or the initiative more broadly. The department's Writing Center continues to offer one-on-one tutoring for Psychology students in CTW courses and the peer tutors have also started offering writing-related workshops that faculty schedule as part of the classroom experience. At an individual level, faculty report that they enjoy teaching CTW courses, particularly at the exit level. Even at the entry level, new instructors often comment that students are very responsive to the format and that they like working through the challenging topics in a smaller section. New faculty have had good success teaching CTW courses and two of our incoming faculty are already scheduled to teach the entry level course during their first semester on campus. Students enrolled often comment (in SEIs) that their critical thinking and scientific literacy skills are notably improved as a result of the CTW curriculum.

Georgia State University
Assessment Data by Section
2011-2012 CTW Public Management and Policy
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Goals

G 3: Understand links between theory and research
Students must demonstrate the ability to connect theoretical issues involving policy with empirical assessment techniques.

G 4: Select appropriate methods for assessment
Students must be able to select appropriate methods for a policy assessment design. Options might include interviews, experiments, survey research, qualitative research, and document reviews.

Outcomes/Objectives

O/O 2: Preparation of a research proposal (G: 3, 4)
PMAP 4051 Evaluating Public Policy O 3, 4: Discussion of Final Project Assignment Students will write an evaluation research proposal integrating research methods and evaluation theory into a real problem. Students will draw on information and analytical skills obtained during the course including knowledge on how to pose research questions, form hypotheses, measure concepts, and take appropriate samples and how to analyze various modes of observation: experiments, surveys, field research and unobtrusive research. Students will also draw on their learned ability to critically analyze evaluation designs and alternative approaches to evaluations.

Measures, Targets, and Findings

M 1: Rubric
Description of rubric. See repository.
Source of Evidence: Written assignment(s), usually scored by a rubric

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Designate new course as initial CTW course
Replace PMAP 3021, Citizenship, the Community and the Public Service as the initial designated CTW course. The new course will be PMAP 3311, Critical Policy Issues.
  Established in Cycle: 2009-2010
  Implementation Status: Finished
  Priority: High
  Implementation Description: The change in designation must be approved by the faculty of the PMAP Department and the AYSPS faculty as a whole during the fall semester 2010 and slowly phased in over the following years.
  Responsible Person/Group: Janelle Kerlin and Harvey Newman

Evaluation research proposal.
Improve student outcomes on evaluation research proposal.
  Established in Cycle: 2010-2011
  Implementation Status: Planned
Mission / Purpose
The BBA real estate major provides the student with the real estate knowledge and analytical skills necessary to support real property decisions in business environments as well as the requisite skills to effectively communicate them. Critical thinking through writing in Real Estate is defined as using writing to assist students in developing the ability to apply problem-solving skills to formulate and communicate convincing solutions to real estate business problems.

Goals
G 1: Problem solving
Students will become more adept at solving real estate business problems.

G 2: Clear communication of real problem solutions
Students will demonstrate their ability to communicate solutions to real estate business challenges clearly.

Student Learning Outcomes/Objectives

SLO 1: Data Evaluation (G: 1) (M: 1)
Students will demonstrate the ability to organize and evaluate data and information in a real estate business context by analyzing the Pilgram Assurance Case (attached) as evaluated by the corresponding item "Gather, organize, and classify data" in the grading rubric (attached).

SLO 2: Analytical skills (G: 1) (M: 1)
Students will become better analysts of verbal and mathematical data by analyzing the Pilgram Assurance case (attached) as evaluated by the corresponding item in the rubric "Analyze information."

SLO 3: Evaluation of evidence (G: 1) (M: 1)
Students will demonstrate the ability to critically evaluate assumptions, evidence, ideas, and information from a variety of sources by analyzing the Pilgram Assurance case (attached) as evaluated by the corresponding item in the rubric "Evaluate assumptions, evidence, ideas, & information".

SLO 4: Integration of materials (G: 1) (M: 1)
Students will demonstrate ability to compare and integrate conflicting and competing ideas and information by analyzing the Pilgram Assurance case (attached) as evaluated by the corresponding item in the rubric "Synthesize ideas & information."

SLO 5: Conclusions (G: 2) (M: 1)
Students will demonstrate ability to write rational, reasonable, and informed conclusions by analyzing the Pilgram Assurance case (attached) as evaluated by the corresponding item in the rubric "Develop rational, reasonable, logical conclusions."

SLO 6: Communication (G: 2) (M: 1)
Students will demonstrate ability to present a clear written expression of derived conclusions, judgments, and solutions by analyzing the Pilgram Assurance case (attached) as evaluated by the corresponding item in the rubric "Clearly communicate conclusions, judgments, and solutions."

Measures, Targets, and Findings

M 1: Rubric (O: 1, 2, 3, 4, 5, 6)
See connected rubric. Rubric will be used to score responses on questions to each case. A score on each objective will be recorded along with a total score for each student. Students can use the scores on each item to learn where they have performed well and where they can improve. Faculty can use the scores to assess how well students are performing on each facet of the assignments and make adjustments as necessary.
Target for **O1: Data Evaluation**
Students in class achieve average score of 2.0 out of 3.0 on corresponding element of the rubric.

| Findings 2011-2012 - Target: **Met** |
| Fall 2011 average: 2.50 Spring 2012 average: 2.69 |

Target for **O2: Analytical skills**
Students in class achieve average score of 2.0 out of 3.0 on corresponding element of the rubric.

| Findings 2011-2012 - Target: **Met** |
| Fall 2011 average: 2.25 Spring 2012 average: 2.38 |

Target for **O3: Evaluation of evidence**
Students in class achieve average score of 2.0 out of 3.0 on corresponding element of the rubric.

| Findings 2011-2012 - Target: **Met** |
| Fall 2011 average: 2.50 Spring 2012 average: 2.46 |

Target for **O4: Integration of materials**
Students in class achieve average score of 2.0 out of 3.0 on corresponding element of the rubric.

| Findings 2011-2012 - Target: **Met** |
| Fall 2011 average: 2.38 Spring 2012 average: 2.377 |

Target for **O5: Conclusions**
Students in class achieve average score of 2.0 out of 3.0 on corresponding element of the rubric.

| Findings 2011-2012 - Target: **Met** |
| Fall 2011 average: 2.63 Spring 2012 average: 2.54 |

Target for **O6: Communication**
Students in class achieve average score of 2.0 out of 3.0 on corresponding element of the rubric.

| Findings 2011-2012 - Target: **Met** |
| Fall 2011 average: 2.50 Spring 2012 average: 2.77 |

Details of Action Plans for This Cycle (by Established cycle, then alpha)

**CTW in Real Estate review and improvement**
Continue with development of RE4700 course and materials. Conduct workshop with current and future instructors of course to review CTW requirements and resources annually. Review offering of course and results. Report assessment.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** Medium
- **Projected Completion Date:** 06/2011

**Change Achievement Targets to similar criteria as program targets**
Currently the CTW Achievement Targets are a minimum percentage of students attaining a "Satisfactory" score of 2.0 on each element of the grading rubric. The faculty want to change the Achievement Targets to be similar to overall program Targets for next year, setting a minimum 2.0 overall class average as the target.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** Finished
- **Priority:** Medium

**Relationships (Measure | Outcome/Objective):**
- Measure: Rubric
- Outcome/Objective: Analytical skills | Communication | Conclusions | Data Evaluation | Evaluation of evidence | Integration of materials

**Implementation Description:** Ambassador provided instructors with new targets agreed upon in faculty meeting. Instructors implemented and reported results to Ambassador in new format.

- **Projected Completion Date:** 08/2011
- **Responsible Person/Group:** Ambassador and then instructors.

**Continued instructor training**
In order to ensure consistency and that the rubric scoring is consistent, the Ambassador will hold 1 workshop at end of each semester with the assigned instructor for the upcoming semester to review the previous semester's experience along with the planned syllabus, CTW assignment, grading, and assessment for the upcoming semester. This will be the time to review any questions and direct instructor to CTW materials.
Verify and clarify level of student performance

The instructor indicates that the only area in which any real estate majors were below a satisfactory level on their draft reports was in the area of clear communication. Then all the students achieved satisfactory level on their final report. It appears that in revising and resubmitting the paper that all students were able to meet a satisfactory level of problem solving and communication. The faculty want to ensure that this is a result of the process working and not using a rubric that sets standards too low.

Train new instructor in CTW

The previous CTW instructor is leaving GSU, so the Ambassador will share all previous reports and assignments with the newly assigned instructor and provide assistance with implementing and evaluating CTW in the course.

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

The instructor addressed this issue of clear communication by changing the structure of the class from a weekly case discussion led by the instructor to a weekly case discussion led by a student. All students were held responsible for reading the weekly case and participating in class discussions. An individual student was charged each week with preparing a PowerPoint presentation of the case and delivering a presentation to the class. A three (3) page written summary of the case was also submitted to the instructor. The faculty reviewed examples of unsatisfactory, satisfactory, and superior reports and examine the student performance relative to the scores. The ambassador met with the instructor to communicate the faculty’s findings and recommendations. In response, the instructor changed the course delivery to increase students’ practice of communication outside of the revision and resubmit CTW assignment.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit level?

We believe this weekly exercise helped the students in completing the revise and resubmit case exercises.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

Changes in instructors requires supervision and training by the Ambassador and concern about consistency in standards and grading.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

The primary impact of CTW on our academic program has been the modification of assignments in one course. The primary impact of CTW on our students is a problem with scheduling required prerequisite courses to take the CTW capstone course to graduate. The primary impact on faculty has been additional work for development of assignments, tracking of grades on individual objectives, reporting, and training. The specification of the targets were changed to align with assessment plans for the BBA major program.
Mission / Purpose

Critical thinking as applied to the field of religious studies consists of the valid and fact-based analysis, understanding and comparison of religious phenomena in their varied contemporary and historical contexts. It emphasizes the individual's ability to grasp, assess, and comment with scholarly insight on religious texts—both primary and secondary—theories, rituals, beliefs, and actions. Since all upper-level Religious Studies courses require significant writing and since many of our majors go off to top graduate programs, the mission of our CTW program will be to hone skills introduced in other courses, generate active discussions about critical thinking and writing and help students apply their skills directly to theories and questions central to the discipline.

Goals

G 1: Thinking
In Rels 3750 (Theories) students will demonstrate competency in critical thinking about religious phenomena. In Rels 4750 (capstone seminar) students will demonstrate clear critical thinking about religious phenomena and demonstrate the ability to evaluate arguments scholars have offered regarding those phenomena.

G 2: Writing
In Rels 3750 students will demonstrate competency in writing clearly and effectively about religious themes and topics. In Rels 4750 students will demonstrate the ability to write clearly and effectively about religious themes and topics and the ability to articulate original ideas pertaining to the themes and topics they have reviewed.

G 3: Evaluation
In Rels 3750 students will demonstrate the ability to understand and to compare and contrast religious claims and scholarly arguments about religious phenomena, drawing on textual evidence to support their claims. In Rels 4750 students will be able to understand and evaluate religious claims and scholarly arguments, identifying strengths, weaknesses, and implications of scholars’ arguments.

Student Learning Outcomes/Objectives

SLO 1: Written Communication (G: 1, 2, 3) (M: 1)

Through paper assignments, students will demonstrate clear communication and organizational skills and the ability to write without grammatical errors that detract from the clarity of the argument. In Rels 3750, students will organize a clear paper that analyzes a contemporary religious phenomenon in light of scholarly theories discussed in class. This paper will incorporate quoted material in an appropriate manner. In Rels 4750 students shall demonstrate the abilities to formulate a clear thesis statement, to support this thesis statement with appropriate facts or evidence, to consider the facts and evidence in a logical manner, and to draw appropriate conclusions from the findings. This paper will incorporate quoted material in an appropriate manner and a works cited or bibliography section. These assignments will require students to analyze religious phenomena (thinking), write clearly and effectively (writing), and assess scholarly arguments (evaluation).

Measures, Targets, and Findings

M 1: Writing for CTW (O: 1)

Rels 3750: In a final paper, students will analyze a contemporary religious phenomenon in light of scholarly theories discussed in class. Students' papers should utilize knowledge and materials assigned in the course and that require the formulation of critical judgments and assessment by the student. The assignment will include the presentation of a clear thesis statement, organization, support for claims, clear writing, and appropriate grammar and syntax. Rels 4750: In brief response essays as well as a final paper, students will write about topics that the instructor determines are relevant to the class. Students' writing should utilize knowledge and materials assigned in the course and that require the formulation of critical judgments and assessment by the student. The assignments will include the presentation of a focused point of view (presented in the form of a thesis in the final paper), organization, support for claims, clear writing, and appropriate grammar and syntax. The final paper in Rels 3750 and the final paper and final response essay in Rels 4750 will all be assessed based on the following rubric. Each ranking will be multiplied by 5, so that each section will have a possible 25 points, with a possible total score for each assignment of 100 points. FOCUS (measures goals in thinking and evaluation) 1. Does not have a thesis 2. Thesis is unclear 3. Thesis is stated but is not sustained over the course of the paper 4. Thesis is clear but focus on thesis could be stronger 5. Thesis is clear and is pursued throughout the paper (Possible 25 points) ORGANIZATION (measures goals in writing) 1. There is no discernible organization 2. The organization of the paper is unclear 3. The organization is at times clear/sections of the paper are organized 4. The paper is organized but in a way that is not optimal 5. The paper's organization is clear and logical and it helps the author make his/her claims (Possible 25 points) IDEAS AND CONTENT (measures goals in thinking and evaluation) 1. Ideas are largely incorrect 2. Ideas represent an adequate summary of other thinkers' views on the subject 3. Ideas represent a strong summary of other thinkers' views but evidence little original thought 4. Ideas evidence some sophisticated creative or new ideas 5. Ideas are consistently sophisticated and creative (Possible 25 points) WRITING (measures goals in writing) 1. A large number of grammar, punctuation and style errors are present 2. A fair number of grammar, punctuation and style errors are present 3. Some grammar, punctuation OR stylistic errors are present 4. Very few grammar, punctuation or style problems are present 5. No significant grammar, punctuation or style problems are present (Possible 25 points)

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Written Communication

In Rels 3750, students will analyze a contemporary religious phenomenon in light of scholarly theories discussed in class. This paper will incorporate quoted material in an appropriate manner. In Rels 4750 students shall demonstrate the abilities to formulate a clear thesis statement, to support this thesis statement with appropriate facts or evidence, to consider the facts and evidence in a logical manner, and to draw appropriate conclusions from the findings. This paper will incorporate quoted material in an
Details of Action Plans for This Cycle (by Established cycle, then alpha)

Implement scoring via rubric of assignments and collection of final papers

As explained above, the key players in the CTW program within Religious Studies have met and developed a plan for 2010-2011. We will continue to use the series of progressively more advanced assignments developed in the departments' CTW offering during Spring 2010 (described in detail above), and we will implement the other aspects of the existing CTW plan. Specifically: (1) the CTW instructor will use the departmental CTW rubric to assess all CTW assignments in the course and will collect and preserve these scores; (2) the CTW instructor will collect and preserve 10 randomly selected final papers from each section taught; and (3) the department assessment committee in conjunction with the CTW Ambassador and CTW Instructors will assess the collected final papers based on the rubric and will use these assessments as the basis for a departmental discussion of student learning in CTW during the Spring 2011 semester.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High
Implementation Description: (1) The CTW instructor will use the departmental CTW rubric to assess all CTW assignments in the course and will collect and preserve these scores; (2) the CTW instructor will collect and preserve 10 randomly selected final papers from each section taught; and (3) the department assessment committee in conjunction with the CTW Ambassador and CTW Instructors will assess the collected final papers based on the rubric and will use these assessments as the basis for a departmental discussion of student learning in CTW during the Spring 2011 semester.
Projected Completion Date: 05/2011
Responsible Person/Group: CTW Ambassador, and CTW Instructors
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Action plan in response to 2010-11 findings.

While some of the targets were met in Rels 3750, none of the achievement targets were met in Rels 4750. The syllabus for 4750 will be adjusted to spend less time on content material (readings) and more time on writing skills.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High
Implementation Description: The CTW ambassador will meet with the CTW course instructors for 2011-12 and review the findings. Together they will adjust the syllabus for Rels 4750 in order to increase the emphasis on writing skills.
Projected Completion Date: 05/2012
Responsible Person/Group: CTW ambassador for 2010-11 (McClymond), CTW ambassador for 2011-12 (Weiner), and CTW course instructor (Barzegar)
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Strategy for improving idea/content, writing mechanics achievements.

As noted in the findings, students completing Rels 3750 (the introductory Religious Studies CTW course) do not adequately exhibit mastery of content presented in the course readings, and they are not able to incorporate material from a primary or secondary source effectively. Finally, the findings indicate that they do not display competence in basic academic writing skills. The CTW ambassador will pass this information on to the Rels 3750 instructor, suggesting that more class time be spent discussing these writing issues when discussing the final paper. In addition, the Rels 4750 instructor will target these skills for special attention in the capstone seminar.

Findings 2011-2012 - Target: Partially Met

For Rels 3750: In spring '12 the CTW ambassador reviewed 10 final papers written for the Rels 3750 class using the rubric. 50% of the papers received a score of 18 or higher for focus; 80% of the papers received a score of 18 or higher for organization; 40% of the papers received a score of 18 or higher for ideas/content; and 40% of the papers received a score of 18 or higher for writing mechanics. Based on this finding, it appears that students completing the initial CTW course for Religious Studies majors are able to organize their papers effectively. However, they have difficulty maintaining a focus for their papers, demonstrating mastery of content, and incorporating material from a primary or secondary source effectively, and they do not display competence in basic academic writing skills. It seemed that several of the students did not fully understand the nature of the assignment, which also may account for these results. One possible strategy to implement is to pass this information on to the Rels 4750 instructor and target these skills for special attention in the capstone seminar. It also will be important for the Rels 3750 instructor to devote more class time to making sure the students understand the expectations for this final paper assignment. For 4750: In spring '12 the CTW ambassador reviewed 10 final response essays written for Rels 4750 using the rubric. 90% of the papers received a score of 18 or higher for focus; 80% of the papers received a score of 18 or higher for organization; 40% of the papers received a score of 18 or higher for ideas/content; and 40% of the papers received a score of 18 or higher for writing. The CTW ambassador also reviewed 10 final papers written for Rels 4750. 80% of the papers received a score of 18 or higher for focus; 70% of the papers received a score of 18 or higher for organization; 30% of the papers received a score of 18 or higher for ideas/content; and 60% of the papers received a score of 18 or higher for writing mechanics. Based on these findings, it appears that students are able to craft a thesis statement and organize their papers effectively. However, they have difficulty demonstrating mastery of content and incorporating material from a primary or secondary source effectively. These results suggest that students’ writing has tended to improve from taking Rels 3750 to finishing Rels 4750. This past semester, the Rels 4750 instructor made changes to the syllabus to focus more on writing skills, and these changes appear to have proven effective, but perhaps to the point that content material was neglected. The Rels 4750 instructor will make changes to the syllabus to try to establish greater balance between these objectives.
### Strategy for improving Ideas/Content and Writing/Mechanics

As noted in the findings, students completing Rels 3750 (the introductory Religious Studies CTW course) continue not to adequately exhibit mastery of content presented in the course readings, and they are not able to incorporate material from a primary or secondary source effectively. Finally, the findings indicate that they do not display competence in basic academic writing skills. The CTW ambassador will pass this information on to the Rels 3750 instructor, suggesting that more class time be spent discussing these writing issues when discussing the final paper. The Rels 3750 instructor will also be encouraged to spend more time making sure that students understand the nature of the assignment. Last year, the Rels 4750 instructor was encouraged to spend more time in class addressing these writing/mechanical issues. It appears that this strategy had some success, but to the detriment of ideas/content. The Rels 4750 instructor will be encouraged to maintain the focus on writing, but also revise syllabus to restore some time to content material.

- **CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year?** How do these relate to the Action Plans that you specified last year?
  - In Rels 4750, students demonstrated some progress in the areas of focus, organization, and writing -- both from 3750 to 4750, and from 2011 results in 4750 to 2012 results. Increased focus in Rels 4750 on writing, rather than content, seems to have achieved some degree of success. Last year's action plan specified that Rels 4750 instructor would revise syllabus to spend more time on writing. This appears to have been successfully implemented.

- **CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?**
  - This was more difficult to assess, especially because this is the first year that I am serving in the position of CTW ambassador. I hope to be able to reflect more on improvement in future years. There was no discernible improvement in critical thinking in my findings this year. Students in both Rels 3750 and 4750 struggled to integrate course content into their final papers. While many were able to adequately summarize arguments and materials with which they had been presented, there was less evidence of critical thought or evaluation.

- **CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?**
  - The greatest area for improvement that I saw was in students' ability to analyze/evaluate scholarly arguments and integrate this analysis into their final written papers. They could also work to develop more sophisticated thesis statements/arguments that reflect this higher level thinking and analysis. Perhaps the rubric could be revised to more adequately address some of these concerns. We could definitely benefit from increased communication among the CTW instructors and ambassador. I don't know if assistance is needed to make that happen. We probably just need to devote more time.

- **CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?**
  - This is difficult to assess. Most of our upper-level course already involved high degrees of writing and analysis. I think the CTW program has made there appear to be greater continuity from the 3750 course to the 4750 capstone course, however. There is greater emphasis on tracking our students' progress from the introductory course for majors to the capstone. This is important. The department did a better job this year of implementing the grading rubric that had been established last year.

### ACADEMIC PROGRAM QUESTION 1:

What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

- **n/a**

### ACADEMIC PROGRAM QUESTION 2:

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

- **n/a**
ADMINISTRATIVE DEPT QUESTION 1: Explain how your department used the results from the previous cycle’s (2010-2011) assessment. What actions did you take this past year based on the results from the previous cycle? What changes did you make as a result?

n/a

ADMINISTRATIVE DEPT QUESTION 2: What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department’s effectiveness?

n/a

ADMINISTRATIVE DEPARTMENT QUESTION 3: How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

n/a

Georgia State University
Assessment Data by Section
2011-2012 CTW Respiratory Therapy
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The Division of Respiratory Therapy will merge the principles of logical reasoning, problem solving, judgment, decision making, reflection, and lifelong learning in respiratory therapy.

Goals
G 1: Registered Respiratory Therapist
Each student will be able to make acceptable clinical decisions to become a Registered Respiratory Therapist (RRT).

Student Learning Outcomes/Objectives
SLO 1: NBRC (M: 1)
All students will: 1. 90% of students will pass the national certification exam on the first attempt offered by the National Board for Respiratory Care. 2. 90% of students will pass the written national registry exam on the first attempt offered by the National Board for Respiratory Care. 3. 90% of students will pass the clinical simulation national registry exam on the first attempt offered by the National Board for Respiratory Care.

Measures, Targets, and Findings
M 1: NBRC Results (O: 1)
The graduating class, May 2012 passed both national examinations provided by the National Board for Respiratory Care (NBRC) at Georgia State University. The first time pass rate for the certification examination was 100%, the national average is currently reported at 77%. Ninety-seven percent of the class passed the written registry on the first attempt. The national average for this exam is currently reported at 65%. Ninety-three percent of the class passed the clinical simulation exam on the first attempt. The national average for this exam is currently reported at 59%. The passage of these exams allow students to obtain a state medical practice license to practice respiratory therapy. We feel a correlation may exist with our CTW courses which stresses the need to critically evaluate material in order to correctly treat a patient successfully.

Source of Evidence: Certification or licensure exam, national or state

Details of Action Plans for This Cycle (by Established cycle, then alpha)
Action Plan
CTW courses will continue to develop the critical thinking ability of our students to correct complete the course and to pass the national examinations. The goal will be to have a 90% first-time pass rate for the certification exam. The written registry and clinical simulation examinations will have a goal of 90% first-time pass rate.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Respiratory Therapy CTW Action Plan
The Division of RT will continue to develop the critical thinking ability of our students to complete both CTW courses and to pass the national examinations. The goal will be to have a 90% first-time pass rate for the certification exam. The written registry and clinical simulation examinations will have a goal of 90% first-time pass rate.

Established in Cycle: 2011-2012
Implementation Status: Planned
**Priority:** High  
**Implementation Description:** Continue CTW courses, making changes if needed.  
**Projected Completion Date:** 05/2013  
**Responsible Person/Group:** All RT Faculty

---

**Analysis Questions and Analysis Answers**

**CTW Reflection 1: Achievements** - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

The highest overall percentage of students passed the national exams on the first try, compared to previous years. All students passed both national exams achieving the credential RRT.

**CTW Reflection 2: Assessment** - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

The major goal of the respiratory therapy program is to train and graduate respiratory therapists. To do this each student must become a better critical thinker in order to pass the national exams. Since the inception of the CTW program we have had gains in first time pass rates on the national registry exam each year. As a department we feel confident that we have the correct faculty teaching students critical evaluation that we are pressuring ourselves to have a 100% first time pass rate next year.

**CTW Reflection 3: Needs** - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

We are continuing to work on appropriate CTW exercises for RT 4085. Currently, we are working on a better assessment tool (rubric) that can be used for all writing assignments. The ambassador just returned from the Governor's Teaching Fellowship and will schedule a meeting with both CTW instructors to consider techniques learned as a Teaching Fellow may be integrated into courses. Plan will also be to meet with Center for Instructional Innovation to discuss ideas that may contribute strengthening our CTW offerings.

**CTW Reflection 4: Overall Reflection** - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

The impact of CTW, we feel is in our students' ability to critically evaluate a patient. The work done in RT 3027 (Pulmonary Disease) sets the standard for students to critically and appropriately make decisions that can be life saving. The capstone course, RT 4085 finalizes students' critical evaluation. This course integrates writing across the curriculum with CTW in an effort not only to evaluate students’ critical thinking, but also to express themselves creatively. The main difference in this reporting year is the students were not getting previously. The hope also is that the change will make improvements to the CTW curriculum in respiratory therapy.

---

**Georgia State University**

**Assessment Data by Section**

**2011-2012 CTW Risk Management**

*As of: 12/12/2016 04:41 PM EST*

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

---

**Mission / Purpose**

For the purposes of our courses, critical thinking is defined as the ability to evaluate a set of facts, use the facts in conjunction with a theory to develop a conclusion. Specifically, the structured assignments will be designed to train the student to: 1) identify relevant facts; 2) identify relevant issues; 3) identify which approaches are candidates to solve the problem; and 4) identify the appropriate approach and be able to explain why this approach dominates others.

**Goals**

**G 1: Critical Thinking in Risk Management**

Students will demonstrate how risk management adds value to an organization through the use of a case study.

**Student Learning Outcomes/Objectives**

**SLO 3: Goal 3 Demonstration of Thinking through Writing (G: 1) (M: 3)**

Students should be able to conduct simple analysis of risk using facts and theories to make conclusions. Students were given three writing opportunities (mini-cases) where they were asked to write a 3 page paper. Students were assessed on form (grammar and spelling), citation skills, use of risk management and their willingness to make a conclusion. An exemplar case was based upon the launch of the space shuttle Challenger. The students did not know if as the Challenger (as it was disguised as a Nascar race). The students were given some engineering data, some weather data, a model to use, They were then asked questions about their decision. They had to justify their decision to race/launch. While the cases were designed for the critical thinking component of the class, we decided to make a push for organization and describing conclusions.

**Other Outcomes/Objectives**

**O/O 1: Goal 1 Risk Assessment Process (G: 1) (M: 1)**
A number (3) of mini cases are assigned throughout the semester. These mini cases will ask the students to make an assessment of one part of the risk management process. A final case will ask them to use the skills form the entire semester to identify and manage risks in a game simulation based on a real firm.

**O/O 2: Goal 2 Value of Risk Management (M: 2)**

Students should be able to describe the theoretical basis for risk management and distinguish it from risk minimization.

### Measures, Targets, and Findings

#### M 1: Final Case (O: 1)

Each student will be given a case study company to analyze. The case study will have five main parts. Each part will be based upon exercises completed during the semester. First, the student will assess of the firm's risk tolerance. Second, the student will develop qualitative and quantitative assessments of the firm's risks. Third, the student will be able to describe the portfolio of risks held by the firm and its appropriateness given the firm's risk tolerance. Fourth will be an assessment of the firm's risk financing and its appropriateness given the firm's strategy and risk tolerance. Fifth, will be assessment of the firm's ability to manage risks.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Goal 1 Risk Assessment Process**

The Department of Risk Management expects that 90% students will be able to describe the risk management process appropriately for their case study firm.

**Findings 2011-2012 - Target: Met**

We used a new assignment again. This new assignment is a simulation of a tractor Manufacturer. The case questions sepically ask the students to undertake a risk management process. The students were then asked to describe what they did, explain their rationale, and make a conclusion. One the rubric question regarding the use of the risk management process. Some 95% of the students answered this question appropriately. Because the rubric is more complicated (than the one we employed in the past) we have changed our target to imply that 90 percent or more describe the risk management process appropriately for their case study firm.

#### M 2: Exam Question (O: 2)

Each student will be given a question on the first exam and on the final exam which assess their understanding of the risk management process. The question is not identical on each test, but should generate a similar answer. Here is a sample final question. You have been working for a company for a number of years. The director of enterprise risk management for your company was killed in a car accident. She was texting while driving, smoking, drinking coffee, and she was not wearing her seat belt when her car was struck by lightning. She was killed in the resulting accident. Unfortunately all the risk management documents for the company were also destroyed in the accident. The CEO asks that you take her job because you had a class in college on this topic. In a brief memo to your boss, J.P. Moneybags, explain what you will need to do get the risk management function operational once more. The first question was something like: Describe the elements of the risk management process. Results: On the final exam approximately 85% received a 8 out of 10 on the rubric. (updated June 2012)

Source of Evidence: Writing exam to assure certain proficiency level

**Target for O2: Goal 2 Value of Risk Management**

Target: 75 percent receive at least 8 out of 10 on the rubric.

**Findings 2011-2012 - Target: Met**

90 percent received at least an 8 out of 10 on the rubric. I view the target as being met, but I know that we are so focused on getting the students to understand this particular issue, that it is almost like teaching to the test. I think it is time we expand this goal and what it means to be met.

#### M 3: Thinking through Writing (O: 3)

We used a standard rubric to assess students performance on writing over three mini-cases. The average rubric score was 81 (out of an adjusted 100 points) on exercise 1 and 91 (out of and adjusted 100) on exercise 3.

Source of Evidence: Faculty pre-test / post-test of knowledge mastery

**Target for O3: Goal 3 Demonstration of Thinking through Writing**

Our target is to improve the initial rubric score over the course of the semester.

**Findings 2011-2012 - Target: Met**

The average rubric score was 81 (out of an adjusted 100 points) on exercise 1 and 91 (out of and adjusted 100) on exercise 3.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Rethink Assignments

We received a number of complaints about the mini case study assignments. One of the problems was that the students had no context in which to conduct a risk assessment. They wanted an example case. I wanted them to use their imagination to look at the materials and then come up with a rough draft of an assessment. I really didn't not want to provide them with an example (as we developed a detailed rubric). I believe they will just copy the example and not really think about the assignment. So, instead of making thing the students look at a number of different companies, we will make them choose one for the semester. Each of the assignments will related to a part of the risk management process (identification of risk tolerance, risk identification, risk quantification, etc) and we will develop a new rubric for each part of the assessment and link it to an example case. Because there are no books for this subject, I am conceding the need for some written material, and I am willing to develop a handbook on risk assessment for the class which in
its first draft will be an example case. We will also be using a new case with a risk management simulation model which should also tie these concepts together. I need to develop new assignments using this case too.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: Exam Question | Outcome/Objective: Goal 2 Value of Risk Management

Projected Completion Date: 08/2011

---

**Georgia State University**

**Assessment Data by Section**

**2011-2012 CTW Social Work**

*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)*

---

**Mission / Purpose**

The mission of the undergraduate social work program is to prepare students for generalist social work practice in a range of roles and services that deal with the existing and developing challenges that confront individuals, families, groups, and communities. A central feature of social work education is to support student’s recognition and use of critical thinking skills to support practice behaviors.

The critical thinking initiative in the School of Social Work supports the overall mission of the social work program by cultivating undergraduate students to conceptualize and write at a high level of ordered thinking in the context of social work generalist practice. Critical thinking, in a social work context, is viewed as a process to assess, critique, and evaluate theories and knowledge, varying modes of practice, beliefs and attitudes, and research. Social work practitioners always consider alternative or opposing viewpoints to reach well-reasoned solutions and conclusions. Undergraduate social work majors may demonstrate their critical thinking abilities by:

- raising important questions and problems, and articulating them concisely and precisely;
- gathering and assessing relevant information, and showing the ability to interpret it effectively;
- maintaining an open mind when considering alternative thinking/ideas, assessing and evaluating assumptions, implications and practical consequences;
- developing well-reasoned conclusions and solutions to problems, using relevant criteria and standards; and
- communicating effectively with others when articulating complex problems and possible solutions.

---

**Goals**

**G 1: SW3300: Use critical thinking skills applicable to human development**

Achieve a beginning to moderate level of using critical thinking skills to inform and communicate professional judgement on issues related to child and adolescent development within a social environment context. NOTE: The course numbering was changed from 3330 to 3300 beginning Fall, 2011.

**G 5: SW3600: Define and communicate social problems requiring legislative responses**

Develop skill sets to enhance public understanding about current social problems requiring public policy responses. NOTE: The course numbering was changed from 3930 to 3600 beginning Spring, 2012.

**G 3: SW3300: Recognize various forms of diversity in human development**

Acknowledge and communicate the effects of diversity in shaping experiences through the life span. NOTE: The course numbering was changed from 3330 to 3300 beginning Fall, 2011.

**G 4: SW3600: Demonstrate understanding of the legislative process**

Demonstrate an understanding of the legislative process while advocating for social change. NOTE: The course numbering was changed from 3930 to 3600 beginning Spring, 2012.

**G 6: Develop Advocacy Skills and Strategies**

As policy practitioners, students develop skills to actively advocate for legislative policy to promote the needs of various constituency groups.

---

**Student Learning Outcomes/Objectives**

**SLO 1: SW3300: Demonstrate proficiency in problem solving methods (G: 1) (M: 1)**

Define the biological, psychological and social aspects of human development relevant to client behavior and other outcomes.

**SLO 3: SW3300: Application of empirical research to social work practice (G: 1) (M: 3)**

Apply empirical studies on human development to guide social work intervention and practice behaviors.

**SLO 5: SW3600: Define social problem and its background (G: 4, 5) (M: 5)**
To become actively engaged in studying social problems through the use of multiple sources of public documents, peer-review articles, and conducting interviews with legislators and community stakeholders.

**SLO 6: SW3600: Synthesize legislative policy content (G: 5) (M: 5, 6)**

To communicate synthesized legislative content (including policy justification/intent, service benefit description, targeted recipients, and effect on Georgia residents) to defined community stakeholders.

**SLO 7: SW3600: Develop advocacy skills and strategies (M: 7)**

To inform targeted stakeholders about current legislative policies through the development of a legislative fact sheet.

### Measures, Targets, and Findings

#### M 1: SW3300: Problem Assessment (O: 1)

A measured component of the Wes Moor Letter Response: Problem Assessment (Please see the Document Repository for full assignment description and rubric). In this section of the assignment, the student was evaluated on 3 criteria: 1. Identify a problem or event that occurred in the early developmental years potentially leading to his ultimate incarceration. 2. Describe how the problem or event affects a young person’s biological, psychological and/or social development; 3. Construct an ecomap visually depicting the interrelationship among multiple environmental systems. (An example of an ecomap is included in the document repository.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

**Target for O1: SW3300: Demonstrate proficiency in problem solving methods**

The problem assessment section of the assignment is worth a total of 11/60 points. Sixty-five percent of the students enrolled in the course will achieve a sectional score of 8/11 points or higher. This represents a majority of the enrolled students achieving 70% of the assessed points on the the problem assessment section of the assignment.

**Findings 2011-2012 - Target: Met**

There was a total of 104 students enrolled in SW3300; complete data was available on 73 students(70%). Students completed two drafts of the assignment, supported by the writing consultants. Based on the rubric for the assignment, 56 students (76%) received a score of 8 or higher on the final submission of the assignment for the problem assessment section.

#### M 2: SW3300: Theoretical Perspectives

Two sections of the assignment relate to the application of one theoretical perspective (psychodynamic, cognitive, social learning) to explain Wes Moore's reaction to an identified problem or event. Three peer-reviewed articles were used to support the identified problem.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

**Target for O3: SW3300: Application of empirical research to social work practice**

The problem intervention section of the assignment is worth a total of 10 points. A majority (70%) of the students enrolled in the course will achieve a final score of 7 or higher on the problem intervention section of the assignment.

**Findings 2011-2012 - Target: Partially Met**

Based on a total of 71 students, 45 students (63%) met the target of achieving 7 or higher on the intervention section of the assignment.

#### M 3: SW3300: Problem Intervention (O: 3)

. The third section of the Wes Moore Letter assignment requires students to select one article that might propose a solution to an identified problem. Students must interpret the information from the article and explain its application to the Wes Moore case.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

**Target for O3: SW3300: Application of empirical research to social work practice**

The problem intervention section of the assignment is worth a total of 10 points. A majority (70%) of the students enrolled in the course will achieve a final score of 7 or higher on the problem intervention section of the assignment.

**Findings 2011-2012 - Target: Partially Met**

Based on a total of 71 students, 45 students (63%) met the target of achieving 7 or higher on the intervention section of the assignment.

#### M 4: SW3300: Recognition of diversity in practice applications

The final measured segment of the Wes Moore letter assignment relates to assessing how the proposed intervention effects, including ethical considerations involving he application of the intervention with diverse groups.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

#### M 5: SW3600: Social Problem Statement and Justification (O: 5, 6)

In developing the legislative fact sheet, two measured sections of the document consisted of a description of the issue (Issue Statement) and the justification of the social problem needing public action. A maximum of 6 points was attributed to the measured sections of the legislative fact sheet.

**Source of Evidence:** Written assignment(s), usually scored by a rubric

**Target for O5: SW3600: Define social problem and its background**

Sixty-five percent of the students will achieve a rubric score of 4 or higher, out of 6 possible points on the two summed items comprising the evaluative items for the issue statement. This represents a majority of students achieving 70% of the assessed points.

**Findings 2011-2012 - Target: Met**

There were a total of 79 students completing the course; 44 students (56%) had complete data that comprised the present findings. A total of 38/44 (86%) students achieved a score of 4 or higher on the two summed measured sections on issue statement and background justification, meeting the expected target. The average score for the issue section is 5.5.
Target for O6: SW3600: Synthesize legislative policy content

Scoring for the measured items are based on categorical data, ranging from a high of 3 (yes, the student met the requirement), 2 (Maybe the student met the requirement), (1 No, the student did not meet the requirement)A maximum score of 6 points is attributed to the Issue Statement/Description and Issue Background. A majority (70%) of the students will achieve a score of 2 or higher on the problem description.

M 6: SW3600: Legislative Content (O: 6)
The legislative fact sheet contains three criteria consisting of policy identifiers (e.g., sponsors, bill title, bill content summary), specific policy details, and association between the social problem and the policy response. The maximum summed measure for these criteria was a total of 9 points based on the assignment rubric.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O6: SW3600: Synthesize legislative policy content

A majority (65%) of the students completing the course will achieve a summed score of 6.3 or higher on the legislative content section of the fact sheet, representing 70% of the assessed points.

Findings 2011-2012 - Target: Met

Based on the 44 students with complete data, 39 students (87%) achieved a summed score of 6.3 or higher on the policy content section of the assignment, meeting the targeted goal. The average score for the legislative content section of the assignment is 7.8.

M 7: SW3600: Advocacy Skills and Strategies (O: 7)

Measuring advocacy strategies is based on 5 components: action request (clear and specific request for public action on the defined public problem), action tools directed to the targeted audience (sponsor contact information, other public action information), objectivity (bias free presentation), overall professional presentation (clarity, organization, general appearance), readiness to take action as requested.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O7: SW3600: Develop advocacy skills and strategies

A maximum score of 15 points is attributed to the advocacy section of the legislative fact sheet. A majority (70%) of the students will achieve a summed score of 11 or higher on the assessed advocacy section, representing 70% of the assessed score.

Findings 2011-2012 - Target: Met

Based on the scores obtained from 44 students with complete data, 33 students (75%) met the target of achieving a score of 11 or higher on the advocacy section of the legislative fact sheet. The average score for the advocacy section of the assignment is 12.3.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Intervention

The intervention section of the paper required students to review the literature to identify an intervention scheme to address the needs of the fictional client. The plan of action stated under the theoretical section aligns with this assessment, as well. During the faculty orientation, discussions and an action plan will be conducted during the fall orientation in August and continue throughout the semester.

Established in Cycle: 2011-2012
Implementation Status: In-Progress
Priority: High
Implementation Description: Literature Review Plan of Action II
Projected Completion Date: 12/2012
Responsible Person/Group: Social Work CTW Team

Literature Review

The finding of this section aligns with comments from the writing consultants about the necessity to provide necessary supports to help students how to conduct literature reviews. To address this issue, the school librarian serves on the CTW team for the School; the issue will be raised with her and faculty to determine what additional supports are required to help students enhance their skills to review and critique literature. Reading materials/reference guides will be explored as a possible resource provided to students. The process will begin in August, 2012 during the orientation session with the Schools CTW team.

Established in Cycle: 2011-2012
Implementation Status: Terminated
Priority: Low
Relationships (Measure | Outcome/Objective):
  Measure: SW3300: Problem Intervention | Outcome/Objective: SW3300: Application of empirical research to social work practice
  Implementation Description: Develop specific course-based resources to assist students in conducting literature reviews.
  Projected Completion Date: 12/2012
  Responsible Person/Group: Social Work CTW Team

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

In 2010-2011, decisions were made to modify the course offerings and CTW course assignments. Following several meetings with CTW faculty and consultation with CTW administrators, the following changes were implemented in the 2011-2012 academic year 1.
SW3340 - Human Behavior in the Social Environment was dropped as a CTW course requirement. This decision was made following faculty and student input specifying the burden of having students enroll in two CTW courses (SW3340 and 3930) during the spring semester. Course assignments and requirements in using the CTW writing consultants was not always distinct, creating confusion with students. It was also administratively difficult to acquire additional consultants to recruit and train for the additional course in the spring. As a result, SW3340 - Human Behavior and Social Environment II, was dropped, and 3930 (renumbered 3600) was maintained as a CTW course offering. During fall classes discussions about course assignments, there was much deliberation about how to design course assignments that highlighted certain critical thinking knowledge and writing skills, but also provide opportunities for students to be creative and innovative. Past efforts were to use the older version of a research term paper without many modifications. The assignments were too dense to serve as a critical thinking assignment. As such, the assignments in the two CTW courses (SW3300 and SW3600) were modified and implemented this academic year. ASSIGNMENT MODIFICATIONS SW3300 - Human Behavior and Social Environment is a course that reviews human development in a social context. The modified CTW assignment requires students to respond to the letter giving an assessment of his life challenges, the effect of those challenges on his life choices, and a potential intervention that has potential to influence negative outcomes. The assignment challenged students to synthesize a large amount of information, data, and articulate their perspective in a format understandable to a nonprofessional. Students were required to submit 2 drafts to the CTW writing consultants. The course instructors used one class session to hold independent consultations with students. In addition, there was one session APA formatting and forms of plagiarism prepared and presented by the writing assignments. As a result, there were 53 writing consultation sessions with students enrolled in the course. SW3600 - Social Welfare Policy is a course that requires students to track a bill through the state legislation session to their passions. This cohort, received a doctoral degree, the other faced difficult life challenges and was ultimately incarcerated with a life sentence. The assignment was based on a fictitious letter from Wes Moore held in prison who asks for explanations as to why his life turned out the way it did. Students had to respond to the letter giving an assessment of his life challenges, the effect of those challenges on his life choices, and a potential intervention that has potential to influence negative outcomes. The assignment challenged students to synthesize a large amount of information, data, and articulate their perspective in a format understandable to a nonprofessional. Students were required to submit 2 drafts to the CTW writing consultants. The course instructors used one class session to hold independent consultations with students. In addition, there was one session APA formatting and forms of plagiarism prepared and presented by the writing assignments. As a result, there were 53 writing consultation sessions with students enrolled in the course. Social work students recognize that social work practice involves critical thinking. It is not only in the CTW courses when critical thinking is introduced to them, but it is given much attention across the curriculum. The Council on Social Work Education embodies the need for critical thinking in the accreditation standards. Critical thinking is an essential component of the social work curriculum. In most courses, critical thinking is part of the criteria for evaluating student performance. Thus, any improvement in critical thinking cannot be attributed to the CTW courses only, but to the effects of the entire curriculum. There may be modifications in the implementation of the assignments, but the core content of the assignments will remain. Management of CTW:

Lead faculty had the general supervision of the CTW consultants. During the spring semester, the CTW coordinator taught the CTW policy course. General meetings were instituted on a monthly basis to review course assignments, address questions on student work, share information about assignment resources. The meetings were also attended by other faculty teaching the course. The meetings were especially helpful for part-time faculty assigned to teaching the course. Lead faculty for the course had the responsibility of keeping all faculty informed about course requirements and assignments. Despite these efforts, there were some missing pieces in working with faculty that continue to need monitoring by the CTW coordinator. For example, making certain that faculty, particularly part-time faculty, are reminded of required CTW data, how to perform data collection. A plan of action will be developed to address this issue.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit level? Social work students recognize that social work practice involves critical thinking. It is not only in the CTW courses when critical thinking is introduced to them, but it is given much attention across the curriculum. The Council on Social Work Education embodies the need for critical thinking in the accreditation standards. Critical thinking is an essential component of the social work curriculum. In most courses, critical thinking is part of the criteria for evaluating student performance. Thus, any improvement in critical thinking cannot be attributed to the CTW courses only, but to the effects of the entire curriculum. There may be modifications in the implementation of the assignments, but the core content of the assignments will remain. Management of CTW:

Lead faculty had the general supervision of the CTW consultants. During the spring semester, the CTW coordinator taught the CTW policy course. General meetings were instituted on a monthly basis to review course assignments, address questions on student work, share information about assignment resources. The meetings were also attended by other faculty teaching the course. The meetings were especially helpful for part-time faculty assigned to teaching the course. Lead faculty for the course had the responsibility of keeping all faculty informed about course requirements and assignments. Despite these efforts, there were some missing pieces in working with faculty that continue to need monitoring by the CTW coordinator. For example, making certain that faculty, particularly part-time faculty, are reminded of required CTW data, how to perform data collection. A plan of action will be developed to address this issue.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas? Annual Survey At the end of each semester, faculty and writing consultants are asked to complete a survey inquiring about their needs, highlighting strengths and areas for improvement in the CTW courses. Neither faculty nor CTW instructors have pointed out any problematic problems that need immediate attention. Faculty are gaining comfort with the newly designed assignments; no new iterations are expected in the next academic year. The CTW writing consultants noted the need to have more resources to help students with specific writing needs, specifically for conducting literature reviews. The SW3300 assignment’s weakest areas involved using literature to justify the selection of a theoretical framework and intervention to address the needs of the fictional client. Development of a plan of action to enhance students’ skills to identify, assess and utilize literature effectively is a priority for the next academic year. The School’s CTW team will work to consider what resources are needed to help students with this issue. There is the need to provide additional support to part-time faculty who are assigned to teach CTW courses. Establishing greater communication mechanisms to ensure part-time faculty are capturing the essence of CTW and how it should be reflected in teaching course content and assignments. A goal for the next academic year is to increase the percent of complete data from students. Although there is a lead faculty for each course who has responsibility for monitoring any part-time faculty on course content, there is the need to ensure they are adhering to the requirements for CTW data collection. Comments from writing consultants on the survey included the need for more resources on APA formatting. As a suggestion, it may be helpful to create a resource sheet on the *Top
Ten APA Errors similar to the current resource document on "Top Ten Grammar Errors". Students have difficulty knowing how to search for correct information on APA for specialized documents, such as legal documents, legislation. They often become overwhelmed with the material in the hard copy APA edition, or knowing what to search on the APA website. Instructors in SW3300 and SW3600 used the social work librarian to provide instruction and consultation on conducting literature reviews, developing a bibliography, searching public documents; the writing consultant also prepared a presentation for students on APA formatting. But in spite of these support mechanisms, there is still a recognized need to give students other resources. CTW Writing Consultant Evaluation Survey The School now has a history of offering CTW courses, and students know what it means to enroll in a CTW course. Students have definite views on CTW consultants. However, there is no formal way to capture their perspectives and use it to inform the program. Periodically, students have commented how writing consultants have helped them organize their ideas and writing style, which they found to be very helpful. Other students have commented on how some consultants have not been helpful to them, or confused them. It has been suggested that it would be helpful to have students complete a satisfaction survey at the end of each semester on the writing consultants. This information may be used as part of an evaluation component to determine topics for orientation/training, supervision, or even to determine which consultants will be retained in subsequent semesters. There is a very strong sense with school leadership that writing consultants, with proper training, are to provide quality service to students. Efforts will be made by the school to provide the support and resources to ensure the writing consultants are able to provide effective service, with the input of student views.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

The process of redesigning CTW assignments has forced faculty to reassess the intent of their assignments as they align with the goals of CTW. Much effort and collaboration occurred when faculty created the assignments for SW3300 and SW3600. The process fostered open dialogue, exchange of ideas, clarification of CTW goals and objectives, and a discussion how CTW fits with our accreditation body’s professional standards under the Council on Social Work Education (CSWE). As a result of the process, faculty have become more engaged with CTW and its intent than in previous semesters. This is partially attributed to the fact that faculty previously used standard assignments which did not align with CTW. The current assignments were specifically designed with CTW objectives in mind, fostering greater acceptance of CTW than in previous years.

Georgia State University
Assessment Data by Section
2011-2012 CTW Sociology
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The mission of our department's CTW program is to offer a changing range of courses across our three specialty areas that develop students' analytical, interpretive, and communication skills. Students will be assessed in terms of how well they are able, through their writing, to demonstrate these components of critical thinking: a written articulation of their understanding of sociological work (research reports, articles, books and theories); the ability to analyze and interpret sociological work; and the capability to use the results of their analyses to formulate new research questions and/or to extend analyses in new directions.

Goals
G 1: critical understanding
Students will be able to articulate in writing their understanding of sociological work.

G 2: critical writing
Students will be able to write critically, analytically, and interpretively about sociological work.

G 3: original critical expansion
Students will be able to formulate new research questions and/or to extend analyses of sociological work in new directions in their writing.

Student Learning Outcomes/Objectives
SLO 1: understanding (G: 1) (M: 1)
Professors of CTW courses will evaluate students' ability to demonstrate an understanding of sociological work in their writing assignments over the course of the semester. They will evaluate students using this scale: Excellent (4), Very Good (3), Good (2), and Poor (1).

SLO 2: writing (G: 2) (M: 2)
Professors of CTW courses will evaluate students' demonstration of their ability to critique, analyze, and interpret sociological work in their written assignments over the course of the semester, utilizing a four point scale: Excellent (4), Very Good (3), Good (2), and Poor.

SLO 3: expansion (G: 3) (M: 3)
Professors will assess students' demonstration of their ability to use results of analyses to formulate new research questions and/or to extend analyses in new directions in their written assignments over the course of the semester, utilizing a four-point scale: Excellent (4), Very Good (3), Good (2), and Poor (1).
Measures, Targets, and Findings

**M 1: understanding (O: 1)**

Four professors reported on students in five CTW courses taught during the spring semester: two sections of "Sociological Methods," one section of "Birth and Parenthood," and one section of "Activism, Protest, and Revolution." Data were submitted on 120 students. For examples of assignments, please see attachments. Professors assessed 24% of students as "Excellent" in terms of their demonstration of sociological understanding in their writing assignments across the semester; they assessed 36% as "Very Good"; 26% as "Good"; and 14% as "Poor."

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: understanding**

Our goal is to have a majority of students score "excellent" or "very good" (3 or 4) on this measure; 60% did. This is very similar to the results from last year. Last year's statistics showed a significant decline from the previous year -- when 78% were assessed as "excellent" or "very good" in this measure. Last year, I suggested that the decline might be attributable to the fact that fewer students were assessed and fewer professors participated in assessment than in the previous year or that our students' higher level of success in past years may have been exaggerated. It could also be that the professors who are now participating are simply judging students differently. In any case, our target for this year was to have a higher proportion of students show strength in this area. We did not meet this target.

**M 2: writing (O: 2)**

Four professors reported on students in five CTW courses taught during the spring semester: two sections of "Sociological Methods," one section of "Birth and Parenthood," and one section of "Activism, Protest and Revolution." Data were submitted on 120 students. For examples of assignments, please see attachments. Professors assessed 22% of students as "Excellent" in terms of their ability to critique, analyze, and interpret sociological material in their written work over the course of the semester; they assessed 35% as "Very Good"; 28% as "Good"; and 15% as "Poor."

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O2: writing**

Our goal is to have a majority of students score "excellent" or "very good" (3 or 4) on this measure; 57% did this year. Our target has been met, but we would like to see more students perform in these top categories in the future.

**M 3: expansion (O: 3)**

Four professors reported on students in five CTW courses taught during the spring semester: two sections of "Sociological Methods," one section of "Birth and Parenthood," and one section of "Activism, Protest and Revolution." Data were submitted on 120 students. For examples of assignments, please see attachments. Professors assessed 24% of students as "Excellent" in terms of their ability to use results of their analyses to formulate new research questions and/or to extend analyses in new directions in their written work over the course of the semester. They assessed 28% as "Very Good"; 33% as "Good"; and 15% as "Poor."

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: expansion**

Our goal is to have a majority of students score "excellent" or "very good" (3 or 4) on this measure; 52% did this year. This is similar to last year's results. Though we have met our target, we would like to see more students demonstrate positive skills in this area in the future.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

**assessment tracking**

This academic year, faculty judged that 60% of students are either excellent or very good in terms of demonstrating an understanding, in their writing, of sociological work. Faculty judged that 57% of students are either excellent or very good in terms of demonstrating, in their writing, the ability to analyze and interpret sociological work. Faculty judged that 52% of students are either excellent or very good in terms of their ability to use results of their analyses to formulate new research questions and/or extend analyses in new directions. This is similar, albeit with a slight decline, to last year's results. Since the statistics are based on evaluations of about half as many students as last year, I do not think the slight declines are part of a pattern. We are getting similar results, and are achieving or close to achieving our target goals of having a majority of students assessed as excellent or very good in our rubric's measures for critical thinking.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: expansion | Outcome/Objective: expansion
- Measure: understanding | Outcome/Objective: understanding
- Measure: writing | Outcome/Objective: writing

Implementation Description: I will communicate regularly with professors teaching CTW courses to inform them of the assessment process and to get their feedback on it.

Responsible Person/Group: CTW Ambassador

**CTW assignment development**

Faculty teaching CTW courses will have the opportunity to meet with me to discuss assignment development.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
- Measure: expansion | Outcome/Objective: expansion
- Measure: understanding | Outcome/Objective: understanding
CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?
We offered new (and more) courses and varied our selection to give our students a diverse array of choices. This has always been a goal of our Action Plan.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?
Our goal in all our courses is to help students gain critical writing skills. The data we collected show that most students make gains in critical thinking skills over the course of the semester.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?
It has been challenging to offer enough courses to satisfy our majors' needs. We have had five retirements in the past academic year, so staffing is a general issue that also affects CTW. We need to hire.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?
These courses are particular beneficial to students. Some faculty enjoy the smaller size, while others see it as too much work (because of the grading involved). We haven't changed anything in our CTW initiative since last year.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?
No changes have been made since last year. It is possible that at some point we might consider making a fixed course our second CTW course, but so far, we have been able to carry out our plan of rotating the courses that are CTW. It causes some confusion with students, because technically they can register for a CTW course when they've already had that course as a regular course earlier (or vice versa). It would be great if the registration computer system could keep them from doing this.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.
We do not intend to change our curriculum or courses because of anything in the CTW assessment findings. We are currently discussing making changes to our substantive areas in the graduate program, and this could affect the concentration areas in our UG program in future, which would have an impact on CTW courses.

ADMINISTRATIVE DEPT QUESTION 1: Explain how your department used the results from the previous cycle's (2010-2011) assessment. What actions did you take this past year based on the results from the previous cycle?
I basically did the same thing I did last year. No changes were made based on last year's data.

ADMINISTRATIVE DEPT QUESTION 2:
What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department's effectiveness?
We are pretty effective.

ADMINISTRATIVE DEPARTMENT QUESTION 3: How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?
My goal in the coming year is to achieve a smooth transition with the new CTW ambassador. The findings from this year are consistent with those of last year. We are satisfied with the findings and do not feel that our CTW program needs improvement or...
Annual Report Section Responses

Most Important Accomplishments for Year—Briefly describe the major things you accomplished over the past year. Be sure to note previous Action Plans that were executed this year, plus any accomplishments that are not otherwise mentioned in your outcomes reporting.

We held steady, achieving similar assessment results to last year. We offered several new courses under our CTW program, continuing to give our students diverse opportunities.

Challenges for Next Year—Briefly describe any special challenges (related to budget, personnel, increased standards, new projects, new expectations, etc.) that you will be facing during the next reporting cycle that might affect your department’s outcomes.

Next year, a different faculty member will take over reporting, as my time as Ug director and CTW ambassador will end. So our challenge will be to transition to new ambassadorial leadership.

Modifications in Intended Outcomes—If you modified any of your intended outcomes since the previous reporting cycle, please note those here.

N/A

Modifications in Measurement Methods—If you modified any of the measures or methods you use in the measurement process, please note those here.

N/A

University-wide Committee Participation—Use this space to document any staff participation on University-wide committees (e.g., University Senate).

N/A

Publications and Presentations—Note in this section any articles published or presentations made at professional conferences by staff.

N/A

Academic Teaching Activities—If the staff participated in teaching (or assisted in the teaching of) academic courses as part of their responsibilities to the department, please note that here.

I did not teach any CTW courses this past year, but did teach in the department.

International Activities—Note here any international activities of the department or its staff.

N/A

Contributions to Student Retention—Please discuss here any direct or indirect contributions your department has made to the retention, progression, or graduation of students.

CTW indirectly contributes to retention because it offers students a smaller, more intimate learning experience, in which they really get to know their professor. This sort of engagement is a disincentive to attrition.

Service to the External Community—Note here any initiatives or activities of your department that impact the external community (e.g., providing assistance to needy populations).

Some of our courses include a service learning component, though this is not required for CTW. Research assignments in these courses often involve examination and analysis of power arrangements, such as wealth and poverty, and various forms of oppression and discrimination. They do not typically involve hands on assistance to needy populations though. Our internship program -- and course -- which I also oversee, do provide assistance to needy populations, both directly and indirectly.

---

Georgia State University
Assessment Data by Section
2011-2012 CTW Spanish
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
Following lengthy discussions among the faculty in our section, we decided on the following definition, which allows each instructor some room for customization: The writing assignments in our CTW courses will enable students to gain a better understanding of (choose one or more from the following options: commercial, financial, economic, literary, linguistic, cultural, social, historical, etc.) trends in the Spanish-speaking world, and equip students with the tools necessary to query their intellectual and personal positions with respect to the long and complex tradition of Hispanic cultural production, which at times intersects with other traditions with which students may be familiar, and at times diverges from them. Ultimately, students in our CTW courses will be able to comprehend Hispanic ________________ (see previous blank) within their cultural, intellectual, (commercial) and historical contexts, and engage these ________________ (texts? as above) in ways that are both intellectually rigorous and personally meaningful.

Goals
G 1: CTW courses in the Spanish section will prepare students to engage fully with Hispanic societies and ideas.

a. Linguistic proficiency: students will demonstrate proficiency in written and spoken Spanish.
b. Contextual analysis: students will
demonstrate an ability to identify and analyze cultural and historical traditions related to Hispanic culture. c. Textual analysis: students will demonstrate an ability to understand Hispanic literary texts and to analyze them with respect to basic literary concepts. d. Scholarly analysis: students will demonstrate an ability to analyze scholarly arguments related to Hispanic culture and literary traditions. e. Effective written communication skills: students will demonstrate an ability to present their ideas and arguments corresponding to goals a-c in clear and persuasive prose.

### Student Learning Outcomes/Objectives

#### SLO 1: Active reading skills (G: 1) (M: 1, 2)

SPAN 3307 Introduction to the Study of Literary Texts -One possible informal CTW assignment would require students to read all but the final paragraph of a story. Students will then be asked to write down the ending of the story as they imagine it; they will be intrigued if not shocked by the actual ending; at the very least, students will need to think of the story from an unusual vantage point and will need to pay very close attention to the story’s subtleties, including the way it engages with cultural motifs.

#### SLO 2: Historical analysis (G: 1) (M: 1, 2)

SPAN 3307 Introduction to the Study of Literary Texts -In another possible informal assignment, students would be asked to imagine writing in how one of our authors (a female poet/nun from late 17th-century Mexico) would respond to a contemporary feminist treatise by a Puerto Rican writer. Doing so will require students to process and compare currents of thought expressed by authors writing in very different times and places, but who actually have much in common intellectually.

#### SLO 3: Reading Comprehension (G: 1) (M: 3)

Through the use of brief diagnostic questionnaires, instructors will assess students’ reading comprehension for both lexical and contextual precision.

### Measures, Targets, and Findings

#### M 1: Assessment Rubric (O: 1, 2)

Score of 6 – Consistently does all or almost all of the following: Accurately interprets evidence, statements, graphics, questions, etc. Identifies the salient arguments (reasons and claims) pro and con. Thoughtfully analyzes and evaluates major alternative points of view. Generates alternative explanations of phenomena or event. Justifies key results and procedures, explains assumptions and reasons. Fair-mindedly follows where evidence and reasons lead. Makes ethical judgments. Language clearly and effectively communicates ideas and is often nuanced and elegant. Errors are minimal to non-existent. Score of 5 – Does most of the following: Accurately interprets evidence, statements, graphics, questions, etc. (Thinks through issues by) Identifying relevant arguments (reasons and claims) pro and con. Offers analysis and evaluation of obvious alternative points of view. Generates alternative explanations of phenomena or event. Justifies (by using) some results or procedures, explains reasons. Fair-mindedly follows where evidence and reasons leads. Language clearly communicates ideas. Errors are minimal. Score of 4 – Does most of the following: Describes events, people, and places with some supporting details from the source. Makes connections to sources, either personal or analytic. Demonstrates a basic ability to analyze, interpret, and formulate inferences. States or briefly includes more than one perspective in discussing literature, experiences, and points of view of others. Takes some risks by occasionally questioning sources, or stating interpretations and predictions. Demonstrates little evidence of rethinking or refinement of one’s own perspective. Style is appropriate to genre of work. Score of 3 – Does most or many of the following: Responds by retelling or graphically showing events or facts. Makes personal connections or identifies connections within or between sources in a limited way. Is beginning to use appropriate evidence to back ideas. Discusses literature, experiences, and points of view of others in terms of own experience. Responds to sources at factual or literal level. Includes little or no evidence of refinement of initial response or shift in dualistic thinking. Demonstrates difficulty with organization and thinking is uneven. In general, language does not interfere with communication. Errors in grammar and syntax are not frequent; there may be some problems of style. Score of 2 – Does most or many of the following: Misinterprets evidence, statements, graphics, questions, etc. Fails to identify strong, relevant counter-arguments. Draws unwarranted or fallacious conclusions. Justifies few results or procedures, seldom explains reasons. Regardless of the evidence or reasons, maintains or defends views based on self-interest and/or preconceptions. In many places language obscures meaning. Grammar, syntax or other errors are distracting with little evidence of proofreading. Score of 1 – Consistently does all or almost all of the following: Offers biased interpretations of evidence, statements, graphics, questions, information or the points of view of others. Fails to identify or hastily dismisses strong, relevant counter-arguments. Ignores or superficially evaluates obvious alternative points of view. Argues using fallacious or irrelevant reasons, and unwarranted claims. Does not justify results or procedures, nor explains reasons. Exhibits closed-mindedness or hostility to reason. In most places language obscures meaning. Grammar, syntax or other errors are repeated with no evidence of proofreading. Goal is 4

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O1: Active reading skills**

75% of students will score at least 4/6 on this writing assignment based on the assessment rubric.

#### Findings 2011-2012 - Target: Not Met

This year the Spanish section will begin reporting separately on its two CTW courses (SPAN 3307 and SPAN 3310). Because it has been a CTW course from the inception of the program, historical records are much more thorough for 3307. Now that 3310 has formally been made the CTW capstone course, the section will start assessing this course separately from 3307. 3307: 73% of students scored at least 4/6 on this assignment: 12% scored 6/6, 29% scored 5/6, 32% scored 4/6 = 73%. 15% scored 3/6, 7% scored 2/6, 5% scored 1/6, 0% scored 0/6. 3310: No Data this cycle

**Target for O2: Historical analysis**

75% of students will score a minimum of 4/6 on this writing assignment based on the assessment rubric.

#### Findings 2011-2012 - Target: Not Met

SPAN 3307 72% of students scored a minimum of 4/6 on this writing assignment: 10% scored 6/6, 24% scored 5/6, 38% scored 4/6 = 72% attainment. 22% scored 3/6, 6% scored 2/6, 2% scored 1/6, 0% scored 0/6 = 28% no attainment. SPAN 3310 Not reported this cycle
M2: Student Survey (O: 1, 2)

At the end of the spring semester 2012, I designed and distributed -- for purposes internal to the Spanish section -- a CTW exit student survey (please see attachment "CTW End of Semester Survey"). Beginning in the fall of 2012 I intend to distribute this survey both at the start and conclusion of the semester. Although this survey constitutes an "indirect measure," I think it will prove a valuable tool in assessing student perceptions of CTW both in terms of the Spanish section and within the broader university community, and in reinforcing and furthering the general aims of the CTW mandate. I received survey results from two SPAN 3307 classes and one SPAN 3310 class. SPAN 3307 section "A" To the statement "I understand the university's CTW initiative" with #1 indicating strong agreement at one extreme and #5 indicating strong disagreement at the other extreme, 5 students replied #1, 5 students replied #2, 3 students replied #3, 4 students replied #4, and 1 student replied #5. To the statement "I understand how this particular course fits in within the university's CTW initiative", 5 students replied #1, 5 students replied #2, 3 students replied #3, 2 students replied #4, and 1 student replied #5. To the statement "I believe writing can enhance my critical thinking skills" 10 students replied #1, 1 students replied #2, 2 students replied #3, and 2 students replied #5. To the statement "This course required me to write in order to engage my critical thinking skills" 7 students replied #1, 1 students replied #2, 2 students replied #3, 4 students replied #4, and 1 student replied #5. To the statement "I am interested in improving my critical thinking skills" 12 students replied #1, 2 students replied #2, 2 students replied #3, 2 students replied #4, and 1 student replied #5. To the statement "This course improved my critical thinking skills" 12 students replied #1, 2 students replied #2, 2 students replied #3, 1 students replied #4, and 1 student replied #5. To the statement "I believe writing can enhance my critical thinking skills" 12 students replied #1, 2 students replied #2, 2 students replied #3, 1 students replied #4, and 1 student replied #5. To the statement "This course required me to write in order to engage my critical thinking skills" 10 students replied #1, 1 students replied #2, 2 students replied #3, and 2 students replied #5. To the statement "I am interested in improving my critical thinking skills" 10 students replied #1, 4 students replied #2, 3 students replied #3, 2 students replied #4, and 0 students replied #5. To the statement "I believe writing can enhance my critical thinking skills" 11 students replied #1, 5 students replied #2, 2 students replied #3, and 1 students replied #5. To the statement "This course required me to write in order to engage my critical thinking skills" 12 students replied #1, 3 students replied #2, 2 students replied #3, 1 student replied #4, and 1 students replied #5. To the statement "This course improved my critical thinking skills" 10 students replied #1, 5 students replied #2, 2 students replied #3, 1 students replied #4, and 1 student replied #5. Additional student comments: "Writing the required papers did not improve my writing or critical thinking skills, it simply made the class more stressful & did not change the way I expressed my critical thinking in class."

"*Appropriate # of assignments: CTW help [sic] students to develop [theis [sic] knowledge" *I think that the tests need to be more specific* "This course could have improved my critical thinking skills" SPAN 3307 section "B" To the statement "I understand the university's CTW initiative" with #1 indicating strong agreement at one extreme and #5 indicating strong disagreement at the other extreme, 4 students replied #1, 7 students replied #2, 3 students replied #3, 3 students replied #4, and 2 student replied #5. To the statement "I understand how this particular course fits in within the university's CTW initiative", 10 students replied #1, 5 students replied #2, 2 students replied #3, and 2 students replied #5. To the statement "I believe writing can enhance my critical thinking skills" 12 students replied #1, 3 students replied #2, 2 students replied #3, 1 students replied #4, and 1 students replied #5. To the statement "This course required me to write in order to engage my critical thinking skills" 10 students replied #1, 2 students replied #2, 2 students replied #3, and 2 students replied #5. To the statement "I am interested in improving my critical thinking skills" 10 students replied #1, 4 students replied #2, 3 students replied #3, 2 students replied #4, and 0 students replied #5. To the statement "I believe writing can enhance my critical thinking skills" 11 students replied #1, 5 students replied #2, 2 students replied #3, and 1 students replied #5. To the statement "This course required me to write in order to engage my critical thinking skills" 12 students replied #1, 3 students replied #2, 2 students replied #3, 1 student replied #4, and 1 students replied #5. To the statement "This course improved my critical thinking skills" 10 students replied #1, 5 students replied #2, 2 students replied #3, 1 students replied #4, and 1 student replied #5. Additional student comments: "A good selection of readings" *I am not clear on what exactly the university’s CTW initiative is, but I do feel that this class did improve my abilities to critically analyze poetry & literature. At first when I began the class, I was not exactly clear what was expected of me & I did not do very well on the assignments once I realized what was expected of me, improved" *I feel that this course allowed us to think outside the box and inspired innovative thoughts. My reading and writing in Spanish have improved since the first day of class" *This class was exactly what I expected & I got from it what I expected. I enjoyed the class discussion, through which we gained not only further critical thinking, reading & writing skills, but also speaking & discussion skills & which created a communal atmosphere*[1] *I enjoyed the writing assignments more than the tests in this course. It gives one the opportunity to express oneself [sic] outside of right or wrong answers" *I really enjoyed this class. My ability to interpret literature definitely improved. Also, I learned how to write more clearly in Spanish. It was a lot of fun, I will definitely attest having had a bit of a ‘reality check’ with one particular essay in this course. I knew that I grasped the story, and what point I wished to proved -- but I was pushed to observe my method of writing. Upon the revision, it was very clear to me that I had not been conveying exactly what I meant to and I explored other options of doing so. As such, I felt this course was highly beneficial, and I included enough oral communication to not leave me feeling like I was drowning" *The short answers we would have to write in response to a question presented in class was very helpful in thinking outside the box of the course. It helped me to learn to write a concise short answer and answer in the time given and at the same time it wasn’t very heavy in the sense that the questions were pertinent to us and weren’t very ‘abstract and philosophically’* "I really enjoyed this class. I’ve been exposed to hispanic literature. I really understand the richness of hispanic literature and I loved the poems!" Conclusions about the two 3307 courses: It is clear that while both courses were 3307 CTW courses and a plurality of students reported generally favorable outlooks toward the courses and CTW, there are also striking differences between sections in terms of awareness of CTW and its impact. SPAN 3310 devoted the first day of class to a discussion of the statement "I understand the university’s CTW initiative" with #1 indicating strong agreement at one extreme and #5 indicating strong disagreement at the other extreme, 8 students replied #1, 2 students replied #2, 4 students replied #3, 3 students replied #4, and 2 student replied #5. To the statement "I understand how this particular course fits in within the university’s CTW initiative", 6 students replied #1, 5 students replied #2, 4 students replied #3, and 2 students replied #5. To the statement "I knew within the first few weeks of the term that this course is a CTW course", 11 students replied #1, 1 students replied #2, 2 students replied #3, 1 students replied #4, and 2 students replied #5. To the statement "I am interested in improving my critical thinking skills" 7 students replied #1, 6 students replied #2, 2 students replied #3, 1 students replied #4, and 1 student replied #5. To the statement "This course required me to write in order to engage my critical thinking skills" 7 students replied #1, 6 students replied #2, 2 students replied #3, and 1 student replied #5. To the statement "I believe writing can enhance my critical thinking skills" 6 students replied #1, 6 students replied #2, 4 students replied #3, 2 students replied #4, and 1 student replied #5. To the statement "This course improved my critical thinking skills" 6 students replied #1, 5 students replied #2, 4 students replied #3, 2 students replied #4, and 1 student replied #5. To the statement "This course required me to write in order to engage my critical thinking skills" 11 students replied #1, 5 students replied #2, 2 students replied #3, and 2 students replied #5. To the statement "I am interested in improving my critical thinking skills" 10 students replied #1, 5 students replied #2, 2 students replied #3, and 2 students replied #5. To the statement "I believe writing can enhance my critical thinking skills" 10 students replied #1, 5 students replied #2, 2 students replied #3, and 2 students replied #5. To the statement "This course improved my critical thinking skills" 10 students replied #1, 5 students replied #2, 2 students replied #3, and 2 students replied #5. Additional student comments: "The professor has not only improved my critical thinking skills but also my writing skills and I feel that I understand the process of writing much better" "This class did a great job of presenting the facts and not using methods of persuasion. I like the essayfolios because it required us to read, but the question also required us to think critically about the material we were presented" "I think that this course was a good way to develop critical thinking skills because we were able to think for ourselves, making logical conclusions for ourselves without judgment put with positive reinforcers" "I think CTW courses are helpful to prepare for grad school & GRE exam"
**Target for O3: Reading Comprehension**

75% of students will score at least 80% on brief diagnostics given at regular intervals that determine successful reading comprehension.

**Findings 2011-2012 - Target: Not Reported This Cycle**

Data for this measure will be collected starting 2012-13.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**75% of students attain 4/6 on assessment rubric**

Based on the CTW assessment rubric, the CTW ambassador for the Spanish section (along with other participating faculty) will continue working to educate students taking Spanish CTW classes on the various elements of said rubric and its function in measuring student gains in critical thinking. Participating faculty will place greater emphasis on the attainment of a satisfactory score (4/6) based on the rubric and may implement a series of revisions to ensure attainment of minimum standards.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Assessment Rubric | Outcome/Objective: Active reading skills
- **Projected Completion Date:** 05/2011
- **Responsible Person/Group:** CTW Ambassador/Spanish section (currently Rudyard Alcocer)
- **Budget Amount Requested:** $0.00 (no request)

**75% of students reach 4/6 based on assessment rubric**

This particular assignment is more challenging to students because it calls on them to recall details of a text they read earlier in the semester. The greater difficulty is undoubtedly related to the lower percentage of students attaining a satisfactory score based on the rubric than in the other activity (“active reading skills”). Based on the CTW assessment rubric, the CTW ambassador for the Spanish section (along with other participating faculty) will continue working to educate students taking Spanish CTW classes on the various elements of said rubric and its function in measuring student gains in critical thinking. Participating faculty will place greater emphasis on the attainment of a satisfactory score (4/6) based on the rubric and may implement a series of revisions to ensure attainment of minimum standards.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):**
  - Measure: Assessment Rubric | Outcome/Objective: Historical analysis
- **Responsible Person/Group:** CTW ambassador / Spanish section (currently Rudyard Alcocer)
- **Budget Amount Requested:** $0.00 (no request)

**Continued efforts toward attainment of 75% goal**

As the Spanish section continues its implementation of the CTW initiative, it will make greater and more concerted efforts toward student achievement of the 75% (score 4/6 or higher) goal. To this end, the ambassador for the Spanish section will notify participating faculty during the semester midpoints to clarify and underscore the presence of the 75% goal so as to encourage better student performance.

- **Established in Cycle:** 2010-2011
- **Implementation Status:** In-Progress
- **Priority:** High
- **Implementation Description:** The ambassador for the Spanish section will notify participating faculty during the semester midpoints to clarify and underscore the presence of the 75% goal so as to encourage better student performance.
- **Projected Completion Date:** 04/2012
- **Responsible Person/Group:** Rudyard Alcocer
- **Additional Resources:** n/a
- **Budget Amount Requested:** $0.00 (no request)

**Increased clarity and visibility of CTW assignments**

The action plan for this particular measure is similar to the one on close reading skills (see below). The Spanish section has, I believe, sound CTW assignments, rubrics, and measures; at this point, the task becomes one of continuing our progress toward the desired 75% attainment goal. A central task for the 2011-12 academic year will be to increase the clarity and visibility of CTW assignments. While the Spanish section is making steady progress in its implementation of the CTW initiative, occasionally participating faculty and students are not constantly aware throughout the semester that they are part of the initiative until it becomes time to report on findings for the semester in question. Consequently, while we are making improvements toward the 75% attainment goal (72% this year vs. 70% last year), my task in the year ahead is to more regularly emphasize our work toward the desired goal.

- **Established in Cycle:** 2010-2011

- **Additional Resources:** n/a
- **Budget Amount Requested:** $0.00 (no request)
Increased clarity and visibility of CTW assignments

A central task for the 2011-12 academic year will be to increase the clarity and visibility of CTW assignments. While the Spanish section is making steady progress in its implementation of the CTW initiative, occasionally participating faculty and students are not constantly aware throughout the semester that they are part of the initiative until it becomes time to report on findings for the semester in question. Consequently, while we are making improvements toward the 75% attainment goal (72% this year vs. 70% last year), my task in the year ahead is to more regularly emphasize our work toward the desired goal.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Assessment Rubric | Outcome/Objective: Active reading skills

Implementation Description: The Spanish ambassador will notify participating faculty at the semester midpoint that they are to emphasize to students the existence of the 75% attainment goal.
Projected Completion Date: 04/2012
Responsible Person/Group: Rudyard Alcocer

Additional Resources: n/a
Budget Amount Requested: $0.00 (no request)

Reporting for SPAN 3310

Now that SPAN 3310 has become the CTW capstone course, the section will begin gathering data for this course.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Assessment Rubric | Outcome/Objective: Active reading skills

Implementation Description: Same procedure as SPAN 3307 data collection.
Projected Completion Date: 05/2013
Responsible Person/Group: Rudyard Alcocer and SPAN 3310 instructors.

Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

There were two major CTW accomplishments in our program this academic year: 1) The creation and implementation of a student survey for in-house purposes. This survey will help the Spanish section both to ascertain student perceptions on their progress in the CTW initiative while fostering awareness of said initiative among students. 2) The addition of SPAN 3310 as a category for targets and findings.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

With the addition of SPAN 3310 as a category for targets and findings, it should become possible to address the second half of this question. Currently, based on the rubrics in place, there has been slight statistical improvement (of about 2%); student essays in SPAN 3307, it must be said, tend to show consistent improvement during the course of evaluated semesters, a trend that suggests improvement in student critical thinking.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

The SPAN 3310 course (our capstone course) as a category for assessment requires further development.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year's CTW Assessment Report?

The major change is that both students and faculty in the Spanish section now recognize critical thinking as not just a skill, but as a skill that requires focused attention (especially through writing) for development. Because of this, faculty who teach CTW courses in the section have -- over the past several semesters -- been modifying their curricula so as to develop critical thinking skills among our students. Lastly, students are becoming increasingly aware and enthusiastic about developing their critical thinking skills.
**Goals**

**G 1: Understand Cultural Context**  
Since the cultural context of any communicative act is critical to the understanding of that act, students should be able to recognize the cultural context, construct arguments clearly, and adapt those arguments to that cultural context.

**G 2: Evaluation**  
Students should be able to evaluate supporting materials and conclusions effectively in their own analyses.

**Student Learning Outcomes/Objectives**

**SLO 3: Analytical Reaction Essays (G: 1) (M: 1)**  
Students wrote several analytical reaction essays which required them to relate a specific concept from the day’s material to materials the instructor provided (articles, handouts, or videos). Five of these papers were used in this assessment. Students were required to: clearly define the concept, clearly explain the situation, and clearly connect the concept to the situation. The assignment details (and CTW Rubric) are provided in the attached document.

**General Education/Core Curriculum Associations**

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

4.0 Students effectively analyze the meanings of texts and/or works of art or music, express ways that culture shapes values, and critically evaluate them.

7.0 Students demonstrate understanding of the United States and its related political, social, and/or institutional developments.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

4. Outcomes of research (3.3.1.4)

**Strategic Plan Associations**

3.1 Enhance a research culture.

**SLO 4: Targeted Health Message (G: 1, 2) (M: 2)**

Students studied a particular group all semester, and for this assignment, they completed a “targeted health message” for their group. This required identifying a specific health concern, explaining that concern and articulating how that concern was appropriate for their group; in addition, they were expected to identify the format of this health message (e.g., banner ad on website, print advertisement in paper, public service announcement on the radio, etc.), explain the details of the format, and articulate how this was appropriate to their selected group.

**General Education/Core Curriculum Associations**

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

4. Outcomes of research (3.3.1.4)

**Strategic Plan Associations**

3.1 Enhance a research culture.

**Measures, Targets, and Findings**

**M 1: Critical Thinking Rubric 1 Revised (O: 3)**  
This rubric focuses on defining the concept (scored 1-5), explaining the situation surrounding the concept (scored 1-5), and clearly connecting the concept to the situation (scored 1-5). Although these scores were components of the grade on each assignment, these scores did not constitute the entire grade; an additional 5 points focused on other academic issues not related to critical thinking and are thus, not reported here. See attached sheet “Assessed Analytical Essay Assignment and CTW Rubric Persuasion 2012.”

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Analytical Reaction Essays**  
scores of 4/5 by the majority of the students on each rubric item

**Findings 2011-2012** - **Target: Partially Met**
Slightly less than 1/3 of the students (7 out of 22 students) scored a 4 or higher on the first rubric item, explaining the concept. More students, though still not a majority (10 out of 22 students) scored a 4 or higher on the second rubric item, explaining the situation. Finally, a majority of the students (12 out of 22 students) did score 4 or higher on the third rubric item, connecting the concept and the situation. Interestingly, this suggests that the students did not clearly or adequately define the basics (the concept and the situation) but were more effective in explaining how the two were connected.

**M 2: Critical Thinking Rubric 2 (O: 4)**

This rubric assessed the student's ability to adapt a message to a particular audience, requiring students to understand the cultural context and to be able to evaluate supporting materials and conclusions effectively. Students studied a particular group all semester, and for this assignment, they completed a “targeted health message” for their group. This required identifying a specific health concern, explaining that concern and articulating how that concern was appropriate for their group; in addition, they were expected to identify the format of the health message (e.g., banner ad on website, print advertisement in paper, public service announcement on the radio, etc.), explain the details of the format, and articulate how this was appropriate to their selected group. The rubric assessed their ability to do this using a 5point Likert Type Scale. Please see attached sheet "Competent Adaptation to Audience Rubric."

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O4: Targeted Health Message**

The majority of students will achieve an average of 4/5, or a score of 80%, as an average across all 6 rubric items.

**Findings 2011-2012 - Target: Not Met**

Of the 19 students sampled, only 8 of these students achieved 4/5 across all 6 rubric items. Since so many students failed to meet the target achievement level, the 6 items were examined individually to provide further insight. Although most students (16/19 scored 4 or higher) identified an appropriate health topic for their groups, fewer explained their health topic well (10/19 scored 4 or higher). Most students (14/19) identified a format for their health message, but fewer students articulated how/why that format was appropriate (9/19 scored 4 or higher) and even fewer explained the format well (8/19 scored 4 or higher). Overall for this sample, the majority of students determined and explained an appropriate health topic, and although most identified a format for their message, very few students actually selected an appropriate format for their group and/or explained that format effectively.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Rubric Revision**

Written in summer 2010: The rubric may need to be expanded or tailored more directly to individual assignments. The speech faculty will review these results and the rubric in the fall to determine how the rubric should be revised. Written in 2011: Discussions in the Fall of 2010 resulted in the creation of the two rubrics used this past academic year, one for each CTW course in the speech major. These rubrics are tailored to the current assignments but need to be discussed further by the faculty to determine how validly these may measure “critical thinking” as the faculty have defined it. Written in 2012: The faculty briefly discussed the rubrics and revised the rubric for SPCH 3050 Persuasion modestly. The faculty also discussed whether or not the definition for critical thinking needed to be altered, more specifically to be less complex. Those discussions will continue this fall, and if the definition changes, then the rubrics will be changed accordingly.

**Established in Cycle:** 2009-2010
**Implementation Status:** In-Progress
**Priority:** High
**Implementation Description:** Topic to be on agenda for fall 2012 speech faculty meeting
**Responsible Person/Group:** All speech faculty

**Assignment Bank Development**

The speech faculty discussed in the Fall of 2010 the idea of creating a list of possible assignments to use in our CTW courses. In 2009-2010, two assignments were used in the SPCH 3250 Persuasion course, and in 2010-2011 a new assignment was used in this course. This was the first year we offered SPCH 4800, and the same assignment was used both semesters, though that assignment differed from those offered in the persuasion course. As new faculty move into the teaching rotation for these courses, it will become important to develop a bank of possible assignments that meet assessment requirements while still allowing instructors to have freedom in teaching the courses. Several assignments now exist, and it will be important to develop additional ones, as well as determine how effective any of these assignments have been for our students.

**Established in Cycle:** 2010-2011
**Implementation Status:** In-Progress
**Priority:** High
**Implementation Description:** This topic will be on the agenda for a fall 2012 speech faculty meeting. At that time, faculty who have taught these courses in the past year will present their assignments to colleagues, and a method for storing these options will be discussed.
**Responsible Person/Group:** Entire speech faculty

**Faculty Training**

The speech major has grown significantly over the past several years, and we will need additional sections of both CTW courses each year. This will require a more standard training procedure for the faculty.

**Established in Cycle:** 2010-2011
**Implementation Status:** In-Progress
**Priority:** High
**Implementation Description:** Topic to be on agenda for fall 2012 speech faculty meeting
**Responsible Person/Group:** Entire speech faculty
**Student Advancement**

In our Capstone course (SPCH 4800 Communication & Diversity), we require the students to "describe" a targeted health message that they would create for the group they have studied all semester long. The students have managed to describe interesting, appropriate, and research-based messages, and our past assessment indicates that these have been effective (ie, our achievement targets have been met both fall and spring semesters, 2010-2011). We thought we would advance this project, to challenge the students to "create" these messages rather than merely describe them. The description will still be required, as this description is the explanation/justification that the content and format of their targeted health message is appropriate for their particular groups. When the speech faculty first discussed this assignment, their intent was that the students would actually "create" these messages, thus fulfilling part of the major's mission (not just knowing what was involved in an effective message or analyzing effective and ineffective messages but also creating effective messages). In 2011-2012 faculty kept the assignment focused on description, and this past year, the students did not meet the target achievement levels. This could be due to the one section sample size; perhaps students in other sections did manage to complete the assignment more effectively. The detailed analysis revealed that students did select an appropriate health topic, explained that topic, and selected a format for the health message; the students did not, however, explain the format in detail or why it was appropriate for their particular target audience, their group. This "targeted health message" is the very last component of a 4-paper "capstone portfolio" assignment, and it is possible that some level of fatigue factored into their ability to complete this portion of the assignment. This is also the only piece of the portfolio that has no draft reviewed; it may be essential for student advancement to provide feedback on a draft of this particular piece of the assignment.

**Established in Cycle:** 2010-2011  
**Implementation Status:** In-Progress  
**Priority:** High

**Relationships (Measure | Outcome/Objective):**  
- **Measure:** Critical Thinking Rubric 2  
- **Outcome/Objective:** Targeted Health Message

**Implementation Description:** Instructors for SPCH 4800 will need to alter the final assignment in the course. In 2011-2012, faculty did not alter the assignment. This will be discussed at a fall speech area faculty meeting to determine two things: 1- do faculty wish to have students "create" or merely "describe" this targeted health message, and 2 - if the faculty members choose "create" then how should the rubric be revised?  

**Responsible Person/Group:** Jaye Atkinson, as CTW Ambassador, will alter the final assignment in her section of the course AND offer training and support to other faculty teaching SPCH 4800 this academic year.

**Student Articulation**

In our SPCH 3250 course, one of our achievement targets was not met (for the first writing assignment assessed, though it was met for the second writing assessment assigned). This suggests that further instruction explaining how to connect a particular course concept to a specific situation could benefit the students earlier in the course. The experience of writing these papers does seem to improve their ability to perform, but additional instruction could enhance their performance even more. As such, the speech faculty will discuss shorter writing assignments that require students to articulate the connections between course material (e.g., theory or conceptual research or research finding) and a particular situation (e.g., presidential campaign slogan, public service announcement, etc.). Brainstorming on these types of assignments will add to our "assignment bank" and will enable instructors to offer students further experience articulating the relationship between concepts and situations. Written in 2012: As indicated, the focus shifted toward making sure students could articulate a connection between a concept and the situation, and this was the only rubric item for which students met the achievement target. This may be an "overcorrection" on our part, and thus, we now need to be sure students can articulate clearly the basics (ie, the concept and the situation) before then making the connections between the two.

**Established in Cycle:** 2010-2011  
**Implementation Status:** In-Progress  
**Priority:** High

**Relationships (Measure | Outcome/Objective):**  
- **Measure:** Critical Thinking Rubric 1 Revised  
- **Outcome/Objective:** Analytical Reaction Essays

**Implementation Description:** Instructors for SPCH 3250 will need to alter the final assignment in the course. In 2011-2012, faculty did not alter the assignment. This small group meetings were impossible to schedule with the various lecturers/TT faculty assigned to the courses, and one-on-one meetings continued. This fall, training will be implemented during a speech area faculty meeting.  

**Responsible Person/Group:** Jaye Atkinson, as CTW Ambassador, will alter the final assignment in her section of the course AND offer training and support to other faculty teaching SPCH 4800 this academic year.

**Assessment Sample**

This past year is the first academic year to involve such small samples for assessment purposes (one section per course). This small sample may be partially responsible for the lack of target achievement scores being met, but more importantly, it may also limit what actions need to be implemented in the upcoming academic year. New CTW faculty simply did not respond to repeated requests for assessment data, and this lack of response will be discussed at the departmental fall faculty meeting, as well as the speech area faculty meeting.

**Established in Cycle:** 2011-2012  
**Implementation Status:** Planned  
**Priority:** High

**Relationships (Measure | Outcome/Objective):**  
- **Measure:** Critical Thinking Rubric 1 Revised  
- **Outcome/Objective:** Analytical Reaction Essays

**Implementation Description:** Of the four sections of each course offered annually, at least two sections of each course will be included in the assessment sample.  

**Responsible Person/Group:** Faculty teaching CTW courses and Jaye Atkinson as CTW Ambassador
### Mission / Purpose

Women's Studies at Georgia State University contributes to the university's broader mission of encouraging critical thinking through a focus on feminist interdisciplinary scholarship, teaching, and community participation. Women's Studies began by recognizing how sex and gender inform academic disciplines and impact the politics of knowledge production. We therefore make explicit the ways in which gender and sexuality, in connection with other categories such as race, class, ability, and age, construct our understandings of the world. Furthermore, we analyze the ways public discourse relies on gender and sexuality to conceptualize such issues as war and militarism, policy, the environment, education, healthcare, economics, the media, and popular culture. These courses will help students develop cognitive and analytical skills necessary to fulfill our learning outcomes: they will be able to identify and analyze arguments, they will be able to demonstrate knowledge of theoretical perspectives pertinent to women's studies, they will be able to demonstrate their writing skills as defined by the ability to organize material, provide sufficient evidence, and formulate new research questions.

### Goals

**G 1: Process of constructing arguments**

These courses will help students become strong writers; they will be able to think critically and organize material, understand and evaluate evidence and theorize new and interesting research questions.

**G 2: Demonstration of knowledge**

Students will be able to demonstrate both their knowledge of the field(s) and ability to use feminist/womanist perspectives in their work.

**G 3: Critical thinking through reading**

Students will demonstrate their ability to critically interpret texts, including finding main points and outlining arguments.

### Student Learning Outcomes/Objectives

**SLO 1: Identify main points and arguments (G: 3) (M: 1, 2)**

In 3010, Students will identify and analyze main points and theoretical arguments in their readings for class, as shown in their written work.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 2: Demonstrate knowledge of theoretical perspectives (G: 2) (M: 1)**

In 3010, students will demonstrate knowledge of appropriate feminist and womanist theoretical perspectives, as demonstrated by writing assignments.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 3: Writing skills (G: 1) (M: 1, 2)**

In 3010, students will demonstrate writing skills through their ability to organize material, provide sufficient evidence, and articulate a coherent thesis in their final papers.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 4: Demonstrate writing skills (G: 1) (M: 3, 4)**

For 4920/4950, students will demonstrate writing skills through their ability to formulate new research questions, organize material, provide substantial evidence, and formulate clear and concise sentences.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 5: Theoretical Perspectives (G: 2) (M: 3, 4)**

In 4920/4950, students will demonstrate their knowledge of and ability to use appropriate feminist/womanist perspectives.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**SLO 6: Apply skills (G: 1, 2) (M: 3, 4)**

In 4920/4950, students will show that they can apply interdisciplinary women's studies knowledge and skills to a particular project, such as the final paper.
Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

SLO 7: Connect to lived experiences (G: 2) (M: 3, 4)
Students will be able to demonstrate that they can connect what they have learned to lived experiences; in other words, they can demonstrate the implications of their project beyond the university, as shown by their papers and journals.

Standard Associations
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

Measures, Targets, and Findings

M 1: In 3010, Final Paper (O: 1, 2, 3)
Your final paper will be a 5-7 page paper in which you both revise and expand one of your short papers. Your final paper must demonstrate that you have re-thought the ideas presented in your short paper -- it will be both revised and developed. This paper should combine clear readings of in-class texts to provide evidence for a solid thesis which demonstrates both an innovative take on a theoretical issue and thoughtful consideration of existing work on the topic.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Identify main points and arguments
We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

Findings 2011-2012 - Target: Not Met
We found that 80% of students received at least a 3, and 40% of students received at least a 4. One interesting result we found here is that students who did well on this aspect of the measure excelled; usually, we find students barely meet our expectations -- in this instance, students either did not meet them or surpassed our expectations. This finding suggests to us that students come into the class with either excellent reading skills and those who do not have trouble developing these skills.

Target for O2: demonstrate knowledge of theoretical perspectives
We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

Findings 2011-2012 - Target: Partially Met
Here, we found that 100% of students received at least a 3, and 60% of students received at least a 4. While this result comes close to our target, it does not quite meet it. It is interesting to consider these results in light of the previous finding; it seems that students are doing somewhat better in terms of demonstrating their knowledge in general than they are in showing their ability to read well and outline main points and supporting arguments of specific texts. Since these skills seem related, it seems that the previous action plan would also be useful here.

Target for O3: writing skills
Again, on each item of the rubric associated with writing skills, our target is for 75% of students to achieve a 4 or 5, and for all students to receive a 3.

Findings 2011-2012 - Target: Not Met
This year, we assessed the papers on two separate rubrics: one focused on organization and evidence, and the second emphasized the thesis statement. In terms of organization/evidence, 80% received at least a 3, and 60% received a 4 or 5. In terms of thesis statements, only 60% received at least a 3, and 40% received a 4 or 5. The low score on thesis statements suggests that we either need to rework our instructions for the paper, or we need to cut this out of our assessment as not relevant to this particular assignment.

M 2: In 3010, Short Papers (O: 1, 3)
Students will write two 2-3 page papers that explore course readings and themes in greater detail. You might: 1) Use (at least 2) theorists from course readings to analyze some aspect of popular culture, daily life, or social interactions, politics, literature, art, etc. 2) take issue with a theory or theorist we have read. In this case, you will need to use other sources (in addition to the ones you critique, either from course readings or from outside sources), to back up your claims. 3) put two (or more) theorists from course readings in conversation with one another to expand on or develop a key debate within feminist theory. These are just suggestions -- as long as you have an original and clear thesis statement that is grounded in course readings, you may develop a paper about whatever you are interested in exploring further.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O1: Identify main points and arguments
We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

Findings 2011-2012 - Target: Not Reported This Cycle
We have no samples of these papers for this academic year as they were all returned to students; we hope to have some next year.

Target for O3: writing skills
We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.
Senior Research in Women's Studies gives students an opportunity to do advanced work on a chosen topic. Both student and instructor will decide upon a project that the student will complete during the semester. The instructor is responsible for meeting with the student at agreed-upon times during the semester, for guiding and evaluating the student’s work, and for assigning a grade. The student is responsible for completing the requirements agreed upon with the instructor. The main requirement for this course is the major paper, which should be approximately 20-25 pages long, and follow appropriate academic conventions for a research paper, including a substantial, properly cited bibliography. This paper must go through a revision process to qualify it for CTW.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O4: Demonstrate writing skills**

We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

**Findings 2011-2012 - Target: Not Met**

Here, we found that 70% received at least a 3, and only 10% received a 4. If we split them up by draft and revision, the results are not that much stronger (For the revision, we found that 80% scored at least a 3, and 20% scored at least a 4). Clearly, we need to strengthen our commitment to working on student writing.

**Target for O5: Theoretical Perspectives**

We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

**Findings 2011-2012 - Target: Partially Met**

Here, we found that 90% received at least a 3, and 70% received at least a 4, so we were close to our target, though we did not quite reach it. If we look at the revised papers, we found that 100% received at least a 3, and 80% received a 4 or 5, so we did reach our target for the revised papers.

**Target for O6: Apply skills**

We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

**Findings 2011-2012 - Target: Partially Met**

Here, we found that 90% received at least a 3, and 70% received at least a 4, so we were close to our target, though we did not quite reach it. If we look at the revised papers, we found that 100% received at least a 3, and 80% received a 4 or 5, so we did reach our target for the revised papers. Interestingly, these results were the same as for the previous, which shows that either students are performing similarly on the demonstrating knowledge and applying skills, or else we are evaluating them similarly on these particular rubrics.

**Target for O7: Connect to lived experiences**

We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

**M 4: Internship Paper (O: 4, 5, 6, 7)**

For the internship, Interns will also write a research paper (7-10 pp.) on a topic related to the organization's work. The paper should follow an acceptable academic style (APA, MLA, etc.) and should include academic references, such as books and articles in recognized journals. The paper might also include interviews with on-site personnel and/or publications by the organizations. The paper should be analytical and not merely report on the day-to-day activities of the intern. It must also go through a revision process, in which the advisor has the opportunity to read a complete draft before the student submits the final paper (50%).

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O4: Demonstrate writing skills**

We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

**Findings 2011-2012 - Target: Not Met**

On this rubric, we found that 62% scored at least a 3, and 23% scored a 4 or 5. If we focus only on the revised papers, we found that 75% scored at least a 3, and 50% scored a 4 or 5, showing that while the revised papers take us closer to reaching the target, we still have our work cut out for us in terms of improving general writing skills.

**Target for O5: Theoretical Perspectives**

We hope that 75% of students will achieve at least a good (on a 1-5 scale where 1 is poor, 2 is needs improvement, 3 is satisfactory, 4 is good, and 5 is excellent), and all students will achieve at least a 3.

**Findings 2011-2012 - Target: Partially Met**

On this rubric, we found that 86% of our students achieved at least a 3, and that 71% achieved a 4 or 5, which is close to the target. In terms of the revised papers, 100% received at least a 4, so that does meet our target, and it also indicates that requiring the revision process is particularly useful in terms of this outcome.
**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Explore ramifications and digest the information**

One thing that we noticed in assessing the results of the capstone class is that students could explore the implications of their research in more detail. In particular, we would like to help students work on how to use their research to contribute to the theoretical perspectives they are utilizing, in order to increase the integration of theory and results. Update: This year, we noticed more difficulty with these particular aspects than we previously have. We are noticing a pattern: students are (laudably!) choosing to address complex theoretical questions, but in the course of doing so, they seem to run out of time at the end in order to adequately digest the material. They get to the point where they know what they want to do with their research, but then they do not have the time/intellectual energy to actually do it. As a result, they do a good time on the literature review, etc., but they shortchange the "new contribution" they are actually working on.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - **Measure:** In 4920 Final Paper | **Outcome/Objective:** Apply skills
  - **Theoretical Perspectives**
  - **Measure:** Internship Paper | **Outcome/Objective:** Apply skills
  - **Connect to lived experiences | Theoretical Perspectives**

  **Implementation Description:** Basically, we need to continue to insist on earlier deadlines, so that we can increase the amount of early intervention.

  **Responsible Person/Group:** Julie Kubala

**Improve writing skills**

We intend to try to implement more early intervention into writing skills in order to help students improve their writing skills in these short papers. One of the major challenges here is that these are ungraded papers; as such, students are not particularly motivated to work hard in their writing here. On the other hand, ungraded writing assignments have proven quite useful in contributing to improving students' writing in general.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - **Measure:** In 3010, Short Papers | **Outcome/Objective:** writing skills

  **Responsible Person/Group:** Julie Kubala and Amira Jarmakani

**Peer Review**

While we established a revisionary process for the 3010 class this year, we realized that we could strengthen the process through providing more stringent guidelines for peer review and establishing ways to hold students accountable for their participation in the process. See the document repository for our peer review guideline sheet. In the analysis section, we have considered whether or not these increased standards are proving useful.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** In-Progress
- **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
  - **Measure:** In 3010, Final Paper | **Outcome/Objective:** writing skills

  **Responsible Person/Group:** Julie Kubala, Megan Sinnott, and Amira Jarmakani

**Increase time for revision**

While we have been doing a good job with this in terms of the Senior Research paper, what we realized this cycle is that we do not enforce enough time for revision for the final paper for the internship. We should ensure that students turn in a complete draft of their internship paper with at least 2 weeks for revision (which we do with the Senior Research paper). We hope this would increase the
Analysis Questions and Analysis Answers

CTW Reflection 1: Achievements - What were the major CTW accomplishments in your program for this academic year? How do these relate to the Action Plans that you specified last year?

For WST 3010, one improvement that we have made is that we have developed a more formal set of instructions for the peer review process, since revision is such a central component of our Critical Thinking through Writing Initiative (see the document repository). Since our evaluation of our own process is mixed, I am keeping the entire evaluation of the peer review in Question 3, overall reflection. In 3010, we also emphasized the development of critical reading skills, which show overall improvement in comparison to the past two years. Assigning short papers in which students are required to outline the main points and supporting evidence in the texts they read has proved useful in terms of students being able to articulate feminist theorists’ and writers’ points and arguments. The goal here is for students to be able to transfer these skills to their own writing; if they can evaluate the chain of reasoning in another texts, it will hopefully strengthen their ability to formulate a clear and coherent chain of reasoning in their own. In terms of the capstone courses, in this assessment process, we split up the internship and the senior research papers, which I think will be beneficial in terms of providing more specific and focused feedback on the assignments. This year, we focused intensively on exploring the ramifications of student work in terms of connecting theoretical knowledge to lived experience. Students did quite well on this aspect of their papers; they surpassed previous years in terms of connecting theoretical perspectives to experiential knowledge. Much of the strength is documented through our assessment of their thesis statements, which showed significant signs of improvement and were quite interesting. Now, we need to work on the area of thinking through and fully digesting the implications of their provocative thesis statements.

CTW Reflection 2: Assessment - What, if any, improvement in critical thinking among students have you been able to discern in a given class and/or over time from the entry level to the exit class?

Once again, as I have noted previously, our assessment of students’ knowledge of theoretical perspectives (generally speaking) suggests that students are doing reasonably well in terms of this goal. In general, by the time students are in the capstone classes, they are fairly knowledgeable of feminist perspectives, and they are able to apply these skills and connect them to their experiences fairly successfully. We continue to struggle, however, with the writing aspects of our courses. When we began CTW, we decided that we would mainly focus on the revision aspect of writing, so that we can work with students on an individual basis on their writing. While we are still committed to this process, we are realizing that we need to continue to work on refining the process and keeping student focus on the continual process of writing throughout all their classes. This year, I would have to say that we have not noticed as much significant improvement as we would like to see. Part of the reason, honestly, is that we did not have particularly
strong writers in the capstone classes this year. Also, when we have more students in the Internship class than the Senior Research, we tend to have lower scores in the writing aspects of our goals, since students who focus more intensively on writing are more likely to enroll in Senior Research. As I have stated previously, students who spend more time revising are more likely to do well, in terms of both our assessment and in terms of their grades. We therefore plan to continue working on the revision component of this class, as well as incorporating revision and/or proposals more directly into additional upper-level courses. That said, we have noticed that some students are doing extremely well in terms of their writing. It seems that there is a developing split between students who did well in 3010 and are maintaining these skills throughout their undergraduate career, and those that do not take the peer review and writing process seriously in 3010 and so continue to have some of the same writing difficulties. Again, I think this relates to the peer review process, which I address in some detail in the next question.

CTW Reflection 3: Needs - What areas of CTW in your program still need development? What aspects of the implementation of CTW have been problematic? What assistance might you need to address those areas?

In terms of the capstone classes, we still need to work on enforcing sufficient time for revision. For instance, one of the assessment committee noted that one student did not actually revise her paper at all, despite extensive comments by the instructor. At this time, we are not willing to fail students who do not revise their papers, but perhaps there can be some more stringent repercussions for students who are unwilling to do so. Perhaps incorporating the writing more heavily into the grading (although it is 50% of the grade, even for the internship) would help, or perhaps this is will remain a persistent challenge. As I have mentioned previously, we are still working on strengthening the peer review process in WSI 3010. Here are the instructor’s comments: Rationale: The reasoning for the revision assignment is to give students a chance to switch roles from student-producer to evaluator. By reading other student work they can focus on the structure and construction of the essay, and apply insights from this role to their own work. Specifically, they have an opportunity to see both models of well-crafted and successful essays and essays that are not as successful. Both types of papers are analyzed by the students giving them a chance to critically explore the techniques and strategies for writing effectively. At its best, peer review can transform the experience of writing that most students have had in which the student writes for a teacher and the teacher judges and grades the student work. Peer review allows for students to understand writing as a tool of communication rather than just a means for the student to be evaluated and graded by a teacher. However, for this dynamic to be transformed students must be willing to step outside of the role of the student as a graded and evaluated subject and see themselves as an equal participant in an exchange of ideas. Evaluation: The overall assignment had mixed results. The assignment required that students have a working draft prepared one month before the end of the semester and this required that they begin working on the paper early in the semester. This deadline helped avoid the problem of last minute paper writing in the last week of class. The students continued to revise their papers after they turned them in for peer review since they already had a working draft. However, the actual peer review process had limited success. As always, many of the drafts were not polished enough to adequately review. The students were told to make constructive comments to help improve the papers, and therefore “yes” or “no” answers to the questions on the peer review sheet were not useful. They were also instructed to write comments on the paper itself. I noticed that many of the peer review sheets had minimal comments and students did in fact respond with “yes” or “no” responses. A few of the students took the assignment seriously and gave extensive comments on the papers they had to review, but felt that their fellow students did not adequately review their papers. The students who turned in very rough and unfinished drafts usually did a poor job in reviewing other student papers. A solution may be for me to actually grade the drafts and only allow passing drafts to be submitted for peer review. There also needs to be a way to make students accountable for the effort they put into reviewing other student papers. I have given this assignment a more or less pass/fail grade in the past (either the students do it or they don’t) but I may have to institute a full grading procedure for the reviews.

CTW Reflection 4: Overall Reflection - What have been the primary changes or impact of CTW on your academic program, and on the students and faculty involved in this initiative? What changes has your department made to the CTW initiative since last year’s CTW Assessment Report?

As we have noted before, it is quite difficult to evaluate the impact of CTW on our department in particular because our field requires such a strong commitment to critical thinking and writing. Perhaps the main contribution of CTW is formalizing our discussions of the effectiveness of various pedagogical techniques in terms of increasing students ability to write clearly and correctly. We have not really made substantial changes to the CTW initiative. Rather, we are continuing to work on refining the sorts of practices that we have started, especially the revision process, in order to strengthen what we have always been our goals: getting students to read thoughtfully, write well, and think critically. We have made some minor changes, though. For instance, we have begun to separate our assessment of the two capstone classes: Senior Research and Internship. We hope that this separation allows us to see how the different areas of focus in the two classes contribute to the development of specific skills in each course. We have also added some specific action plans to more specifically target particular challenges we face in the process. For instance, in 3010, we are thinking about grading some of the low-stakes writing assignments, especially those that serve as the rough drafts for peer review. In other upper-level courses, we want to increase either the amount of full-scale revision, or at least have students submit more detailed proposals for their seminar papers. In this way, we hope to convince students to take seriously the revision process, through having it emphasized frequently and at all levels.

Georgia State University
Assessment Data by Section
2011-2012 Dual Concentration in CIS/HA MBA
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The purpose of the MBA concentration in Health Informatics is to provide students with specialized skills to improve healthcare services enabled by information technology. Such improvements focus on the information-intensive nature of healthcare institutions and processes to increase the quality and reduce the cost of healthcare services.

Student Learning Outcomes/Objectives
SLO 3: Articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources (M: 3)
Articulate and apply the theoretical basis and the practical issues in the healthcare delivery system and the resources that comprise it. This includes the overall planning, organization, management, evaluation, quality, and major healthpolicy issues.
Other Outcomes/Objectives

O/O 1: Identify security and privacy circumstances and required controls (M: 1)

Students will be able to articulate security and privacy circumstances and to propose appropriate controls.

O/O 2: Design and appropriately employ ubiquitous and pervasive information systems (M: 2)

After completing this course successfully, a student should have: · An in-depth knowledge of ubiquitous and pervasive information systems · A high-level understanding of UPIS applications and their usage scenarios · An understanding of multiple networking technologies to be used in UPIS environment · The skills to identify and design the infrastructure-support for ubiquitous and pervasive information systems · An in-depth knowledge of devices and middleware challenges in UPIS environment · A high-level knowledge of network and quality of service management · Skills to derive security and data-access requirements of different UPIS applications · An understanding of multiple factors in offering, adoption and usage of UPIS services · An awareness of emerging trends and development in UPIS

O/O 4: Identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems (M: 4)

Envision and describe considerations in the analysis, design, selection, implementation, operation, and evaluation of health information systems in a variety of settings such as health systems, hospitals, and medical practices with a focus on the critical role of e-health and information systems in the planning, operation, and management of health care organizations.

Measures, Targets, and Findings

M 1: Students will understand and analyze security and privacy circumstances and will propose appropriate control decisions. (O: 1)

Students will understand and analyze security and privacy circumstances and will propose appropriate control decisions.

Source of Evidence: Writing exam to assure certain proficiency level

Target for O1: Identify security and privacy circumstances and required controls

75% of students will be rated at or above 2.0. Measurement will be done by applying the Rubric below to the midterm or final paper in CIS 8080. Learning Objective: Identify security and privacy circumstances and required controls Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure: Accurately analyze security and privacy circumstances and propose appropriate control decisions. Students were not able to accurately articulate security and privacy circumstances and to propose appropriate control decisions. Students were able to accurately articulate security and privacy circumstances and to propose appropriate control decisions. Students were able to accurately articulate security and privacy circumstances and to propose appropriate control decisions.

Findings 2011-2012 - Target: Not Reported This Cycle

No MBA ISHA students took CIS 8080 during 2010-2011.

M 2: Design and appropriately employ ubiquitous and pervasive information systems (O: 2)

Students will design and appropriately employ ubiquitous and pervasive information systems.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O2: Design and appropriately employ ubiquitous and pervasive information systems

75% of students will be rated at or above 2.0. Measurement will be done by applying the Rubric below to the midterm or final paper in CIS 8080. Learning Objective: Design and appropriately employ ubiquitous and pervasive information systems Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure: Accurately design and appropriately employ ubiquitous and pervasive information systems Students were not able to accurately design and appropriately employ ubiquitous and pervasive information systems. Students were able to accurately design and appropriately employ ubiquitous and pervasive information systems. Students were able to accurately design and appropriately employ ubiquitous and pervasive information systems.

Findings 2011-2012 - Target: Not Reported This Cycle

There were no MBA ISHA students in CIS 8070 during 2011-2012.

M 3: Articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources (O: 3)

Students will be able to articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: Articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources

75% of students will be rated at or above 2.0. Measurement will be done by applying the Rubric below to the student work in HA 8160 Health Care System. Learning Objective: Articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources Fails to Meet Standard = 1 Meets Standard = 2 Exceeds Standard = 3 Measure 1: Accurately articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources. Students were not able to accurately articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources. Students were not able to accurately articulate and apply the theoretical basis and practical issues in the healthcare delivery system and the comprising resources.
**Findings 2011-2012 - Target: Not Reported This Cycle**

Only one student in this program took this HA 8160 during 2011-2012. This is too few to assess.

**M 4: Identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems (O: 4)**

Students will identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O4: Identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems**

75% of students will be rated at or above 2.0. Measurement will be done by applying the Rubric below to the student work in HA 8670 Health Information Systems. Learning Objective: Identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems. Students were not able to accurately identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems. Students were not able to accurately identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems. Students were not able to accurately identify considerations in the analysis, design, selection, implementation, operation, and review of health information systems.

**Findings 2011-2012 - Target: Not Reported This Cycle**

No MBA HAIS students took HA 8670 during 2011-2012.

---

**Georgia State University**

**Assessment Data by Section**

**2011-2012 Early Childhood Education MAT**

(as of 12/12/2016 04:41 PM EST)

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

**Mission / Purpose**

The mission and purpose of the Master of Arts in Teaching in Early Childhood Education program is to develop a cadre of teachers who will become change agents who will positively affect their classrooms, their schools, their communities, and their school districts as well as the national conversation about educational issues and change. Specifically, the program is designed for teachers in urban school settings who will remain in and be informed by their classrooms while assuming leadership roles in their schools, their communities, and within the larger context of the political structures that shape educative opportunities for all children. Both experience in urban schools and urban research studies suggest that urban communities face unique challenges that must be addressed by teachers in those schools. In order to accomplish this mission, the program is designed to support beginning teachers of record who have not completed a traditional teacher preparation baccalaureate but who are working in their own classrooms. Coursework has been carefully constructed in order to support them as they work in urban high needs schools in the metro Atlanta area. This will help ensure that those teachers working in high needs schools without previous coursework in education are adequately prepared to meet both the needs of their students and the challenges of teaching in urban schools.

**Goals**

**G 1: G1: Content Knowledge**

The teacher candidate will have the content knowledge necessary to understand the content in the curriculum he or she teaches.

**G 2: G2: Pedagogical Content Knowledge & Skills**

The teacher candidate will possess the pedagogical content knowledge and skills to be able to plan and teach effectively.

**G 3: G3: Student Learning**

The teacher candidate will use varied instructional strategies, assessment techniques and critical reflection to document children's development and learning.

**G 4: G4: Diversity**

The teacher candidate will work collaboratively with diverse professionals to meet the cultural, linguistic, learning, and behavioral needs of all learners.

**G 5: G5: Clinical Teaching Practice**

This key assessment evaluates candidates pedagogical and content knowledge application in the context of classroom based observations by university coaches.

**Student Learning Outcomes/Objectives**

**SLO 1: SLO1: Demonstrates Content Knowledge (G: 1) (M: 1)**

Teacher candidates understand the central concepts, tools of inquiry, and structures of the content and curricula he or she teaches. 1. Candidates are made aware that they must take and pass the GACE Early Childhood Education I and II before being recommendation for certification. 2. Candidates' content knowledge will be evaluated through their scores on the GACE Early
General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

2.0 Students understand and apply mathematical concepts and reasoning using verbal, numeric, graphical and/or symbolic forms.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

4.0 Students effectively analyze the meanings of texts and/or works of art or music, express ways that culture shapes values, and critically evaluate them.

5.0 Students demonstrate understanding of the physical universe, the nature of science, and the scientific method, and/or understand and apply mathematical concepts and reasoning using verbal, numeric, graphical or symbolic forms.

6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

7.0 Students demonstrate understanding of the United States and its related political, social, and/or institutional developments.

8.0 Students demonstrate understanding of political, social, economic, and/or institutional developments across the globe.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

Institutional Priority Associations

1 Student retention
2 Student promotion and progression
3 Timely graduation

Strategic Plan Associations

2.2 Leverage our national reputation in professional degree programs for the development of societal leaders.
3.5 Enhance Georgia State’s contributions to the sciences, and health and medical research and education.
5.4 Enhance the global competency of students, faculty and staff.

SLO 2: SLO2: Plans effectively for instruction (G: 2) (M: 2)

Teacher candidates plan instruction based upon knowledge of subject matter, students, the community, and curriculum goals.

Relevant Associations:

The Assessment- Directions for the Responsive Planning Project

This project will demonstrate increased pedagogical knowledge and skills through documenting and demonstrating the evolution of instructional planning and implementation of responsive pedagogical strategies in your classroom context. Through this project, you will provide evidence of responsive instructional planning on knowledge of subject matter, students, the community, and curriculum goals across subject areas with student’s interests, funds of knowledge, and development in mind. Specifically you will utilize planning and instructional artifacts to demonstrate your development as an increasingly responsive educator across your two years of engagement in the MAT.

Specifically, you will need to attend to the following questions:

- How has your planning and instruction changed as you have gained a more complex understanding of your students, the community, and the subject matter?
- Looking back at the first unit that you planned for your class/students, how would you characterize those plans in relation to your current understandings and practices related to curriculum design and implementation?

These questions will be the basis of your self-analysis and narration of your growth in your planning and instructional practices over your two years of teaching. Through the examination of the instructional plans you have created and the type of engagements and learning opportunities you have crafted with/for students throughout the years you will use various media to demonstrate your increasing understanding and incorporation of the following key components of responsive planning and instruction:

(a) holding high expectations for excellence;
(b) valuing and privileging the lives, histories, and inquiries of pupils through meaningful and intentional decisions about curriculum;
(c) recognizing and utilizing resources and partnerships on behalf of learners;
(d) enacting broader curriculum to develop a reciprocity between teaching and learning, learners and instructors;
(e) informing planning and instruction through knowledge of students, content, curriculum, learning environments, assessment, and self reflexive processes;
(f) facilitating productive learning tasks;
(g) engaging in self reflexive practice informing planning and pedagogy.

*Please see evaluative rubric for more information about each of these categories.

Description of how it is used in the program:

"Planning (pedagogical knowledge and skills)" will be assessed through the "RESPONSIVE PLANNING PROJECT," which will be submitted by candidates for evaluation at the Clinical Exit/Program Exit transition. This project will serve to demonstrate increased pedagogical knowledge and skills through documenting and demonstrating the evolution of instructional planning and implementation of responsive pedagogical strategies in classroom contexts. Through this project, candidates will provide evidence of responsive instructional planning on knowledge of subject matter, students, the community, and
curriculum goals across subject areas with student’s interests, funds of knowledge, and development in mind. At the Clinical Practice/Program Exit transitions, candidates will analyze and evaluate their instructional practices over the two years of teaching, examining the first unit plans they created and the type of engagements and learning opportunities crafted with/for students throughout the years. Specifically, candidates will attend to the following questions: How has your planning and instruction changed as you have gained a more complex understanding of your students, the community, and the subject matter? Looking back at the first unit that you planned for your class/students, how would you characterize those plans in relation to your current understandings and practices related to curriculum design and implementation?

**General Education/Core Curriculum Associations**

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

**Institutional Priority Associations**

2 Student promotion and progression

**Strategic Plan Associations**

2.2 Leverage our national reputation in professional degree programs for the development of societal leaders.

3.1 Enhance a research culture.

**SLO 3: SLO3: Uses assessment methods to document student learning (G: 3) (M: 3)**

Effects on P-12 Student Learning will be assessed at the Clinical Exit/Program Exit transition through the submission and evaluation of the IMPACT ON STUDENT LEARNING PROJECT. This project will be a demonstration of student learning and growth as well as teacher development and improvement through the analysis of qualitative and quantitative data based on formative and summative assessment practices. For example, candidates may provide evidence for student growth through the documentation and analysis of formal and informal, formative and summative assessments (such as the Developmental Reading Assessment-DRA- or other literacy assessment tools, math assessments based on the common core curriculum, or benchmark/anchor papers for writing assessment). Through this project, candidates will describe the gains made by their students and demonstrate such claims by including specific examples and artifacts of student learning and growth.

3 Timely graduation

**Strategic Plan Associations**

2.2 Leverage our national reputation in professional degree programs for the development of societal leaders.

3.1 Enhance a research culture.

3.4 Enhance supporting infrastructure for the conduct of research.

3.6 Other efforts in support of Goal 3 (Leading Public Research University).

4.3 Other efforts in support of Goal 4 (Complex Challenges of Cities).

5.4 Enhance the global competency of students, faculty and staff.

**SLO 4: SLO 4: Values and displays professional and ethical dispositions (G: 4) (M: 4)**

Teacher candidates are reflective practitioners who continually evaluate the effects of their choices and actions on others (students, parents, and other professionals and stakeholders in the learning community) and who actively seek out opportunities to grow professionally. They know and use ethical and professional guidelines related to educational practice. Teacher candidates foster relationships with school colleagues, parents, and agencies in the larger community to support students’ learning and well being. They are informed advocates for sound educational practices and policies.

**General Education/Core Curriculum Associations**

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

3. Timely graduation

**Strategic Plan Associations**
3.1 Enhance a research culture.
5.4 Enhance the global competency of students, faculty and staff.

**SLO 5: SLO 5: Applies content and pedagogy for successful clinical practice (G: 5) (M: 5)**

Teacher candidates use their knowledge of academic disciplines, child development, and their understanding of how children learn, develop, and differ in their approaches to learning to create, implement, and evaluate instructional opportunities that are meaningful to and supportive of all students. They use a variety of instructional strategies to encourage student development of critical thinking, problem solving, and evidence of deep understandings performed idiosyncratically and meaningfully. Teacher candidates use their understanding of individual and group motivation and behavior to create learning environments that encourage positive social interactions, active engagement in learning, and self motivation. They use knowledge of effective verbal, nonverbal, and media communication techniques to foster active inquiry, collaboration, and supportive interaction in the classroom. They are reflective practitioners who continually evaluate the effects of their choices and actions on others (students, parents, and other stakeholders and professionals in the learning community) and who actively seek out opportunities to grow professionally. Teacher candidates foster relationships with school colleagues, parents, and agencies in the larger community to support students’ learning and well-being.

**Measures, Targets, and Findings**

**M 1: M1: GACE I and II Exam scores (O: 1)**

Licensure exam scores will be analyzed for progress toward content knowledge development of MAT candidates.

Source of Evidence: Certification or licensure exam, national or state

**Target for O1: SLO1: Demonstrates Content Knowledge**

Target: 95% of our students will obtain a passing score on the GACE I and II as determined by the Georgia Professional Standards Commission. A passing score on these tests is required for teacher certification/licensure in Early Childhood Education.

**M 2: M2: Responsive Planning Project (O: 2)**

Responsive Planning Project Directions for the Responsive Planning Project This project will demonstrate increased pedagogical knowledge and skills through documenting and demonstrating the evolution of instructional planning and implementation of responsive pedagogical strategies in your classroom context. Through this project, you will provide evidence of responsive instructional planning on knowledge of subject matter, students, the community, and curriculum goals across subject areas with student’s interests, funds of knowledge, and development in mind. Specifically you will utilize planning and instructional artifacts to demonstrate your development as an increasingly responsive educator across your two years of engagement in the MAT. Specifically, you will need to attend to the following questions: How has your planning and instruction changed as you have gained a more complex understanding of your students, the community, and the subject matter? Looking back at the first unit that you planned for your class/students, how would you characterize those plans in relation to your current understandings and practices related to curriculum design and implementation? These questions will be the basis of your self-analysis and narration of your growth in your
planning and instructional practices over your two years of teaching. Through the examination of the instructional plans you have created and the type of engagements and learning opportunities you have crafted with/for students throughout the years you will use various media to demonstrate your increasing understanding and incorporation of the following key components of responsive planning and instruction: (a) holding high expectations for excellence; (b) valuing and privileging the lives, histories, and inquiries of pupils through meaningful and intentional decisions about curriculum; (c) recognizing and utilizing resources and partnerships on behalf of learners; (d) enacting broader curriculum to develop a reciprocity between teaching and learning, learners and instructors; (e) informing planning and instruction knowledge of students, content, curriculum, learning environments, assessment, and self reflective processes; (f) facilitating productive learning tasks; (g) engaging in self reflective practice informing planning and pedagogy. *Please see evaluative rubric for more information about each of these categories. Description of how it is used in the program: "Planning (pedagogical knowledge and skills)" will be assessed through the "RESPONSIVE PLANNING PROJECT," which will be submitted by candidates for evaluation at the Clinical Exit/Program Exit transition. This project will serve to demonstrate increased pedagogical knowledge and skills through documenting and demonstrating the evolution of instructional planning and implementation of responsive pedagogical strategies in classroom contexts. Through this project, candidates will provide evidence of responsive instructional planning on knowledge of subject matter, students, the community, and curriculum goals across subject areas with student's interests, funds of knowledge, and development in mind. Through this two year longitudinal self study of planning and instruction, candidates utilize planning and instruction artifacts to demonstrate development of responsive educators across the two years of engagement in the program. Due to this commitment, it is expected that most candidates, 95%, will achieve at least a rating of 3, "standard met," or 4, "standard exceeded" on the 0-4 point rubric. Candidates who do not achieve these ratings will work with faculty to create an action plan specifically designed to address areas of need with the goal of reaching a "standard met" rating. In the case that candidates do not achieve this rating, they will not be recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric by the end of the program: Level 3 or 4=95%, Levels 2, 1, and 0=5% or less.

**Target for O2: SLO2: Plans effectively for instruction**

A critical priority of the ECE MAT is to ensure that beginning teachers of record demonstrate increased pedagogical knowledge and skills through documenting and demonstrating the evolution of instructional planning and implementation of responsive pedagogical strategies in their classroom contexts. Through this project, candidates provide evidence of responsive instructional planning on knowledge of subject matter, students, the community, and curriculum goals across subject areas with student's interests, funds of knowledge, and development in mind. Throughout this two year longitudinal self study of planning and instruction, candidates utilize planning and instruction artifacts to demonstrate development of responsive educators across the two years of engagement in the program. Due to this commitment, it is expected that most candidates, 95%, will achieve at least a rating of 3, "standard met," or 4, "standard exceeded" on the 0-4 point rubric. Candidates who do not achieve these ratings will work with faculty to create an action plan specifically designed to address areas of need with the goal of reaching a "standard met" rating. In the case that candidates do not achieve this rating, they will not be recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric by the end of the program: Level 3 or 4=95%, Levels 2, 1, and 0=5% or less.

**M 3: M3: Impact on Student Learning Project (O: 3)**

**IMPACT ON STUDENT LEARNING PROJECT** Directions for the Impact on Student Learning Project This project will be a demonstration of student learning and growth as well as teacher development and improvement through the analysis of qualitative and quantitative data based on formative and summative assessment practices across two years. You will identify six focal students and describe the ways that a range of holistic data drove instruction to support the growth trajectory of each student. The six focal students, determined through pre-assessment data, should include one student from each year who began the year as a struggling learner, one student from each year who began the year as a middle level student, and one student from each year who began the year as a high achieving student. Assignment Includes: Evidence for student growth through the documentation and analysis of formal and informal, formative and summative assessments (such as the Developmental Reading Assessment-DRA- or other literacy assessment tools, math assessments based on the common core curriculum, or benchmark/anchor papers for writing assessment). A narrative description of the gains made by the students and support for these claims which includes specific examples and artifacts of student learning and growth. Reflection demonstrating the development and improvement of instructional practice through the analysis of qualitative and quantitative data based on formative and summative assessment practices. Description of how it is used in the program: Effects on P-12 Student Learning will be assessed at the Clinical Exit/Program Exit transition through the submission and evaluation of the IMPACT ON STUDENT LEARNING PROJECT. This project will be a demonstration of student learning and growth as well as teacher development and improvement through the analysis of qualitative and quantitative data based on formative and summative assessment practices. For example, candidates may provide evidence for student growth through the documentation and analysis of formative and informal, formative and summative assessments (such as the Developmental Reading Assessment-DRA- or other assessment tools, math assessments based on the common core curriculum, or benchmark/anchor papers for writing assessment). Through this project, candidates will describe the gains made by their students and demonstrate such claims by including specific examples and artifacts of student learning and growth.

Source of Evidence: Project, either individual or group

**Target for O3: SLO3: Uses assessment methods to document student learning**

As beginning teachers of record, MAT candidates are already in classrooms and responsible for student learning and development. Therefore, attention to learning of pupils is given primacy throughout the program. Effects on P-12 Student Learning will be assessed at the Clinical Exit/Program Exit transition through the submission and evaluation of the IMPACT ON STUDENT LEARNING PROJECT. This project will be a demonstration of student learning and growth as well as teacher development and improvement through the analysis of qualitative and quantitative data based on formative and summative assessment practices. For example, candidates may provide evidence for student growth through the documentation and analysis of formal and informal, formative and summative assessments. Through this project, candidates will describe the gains made by their students and demonstrate such claims by including specific examples and artifacts of student learning and growth. The rubric used to assess this project is aligned with PSC domains, the PCE rules for ECE 505-3-.16 and the Conceptual Framework Standards of the Professional Education Faculty (PEF) of Georgia State University. Since the ECE MAT leads to teacher certification/licensure at the endpoint, it is expected that most candidates, 95%, will achieve at least a rating of 3, "standard met," or 4, "standard exceeded," on the 0-4 point rubric. Candidates who do not achieve these ratings work with faculty to create an action plan specifically designed to address areas of need with the goal of reaching a score of 3 (standard met). In cases where candidates do not achieve this target, they are not recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric: Level 3 or 4=95%; Levels 2, 1, 0=5%.

**M 4: M4: Dispositions (O: 4)**

The new Dispositions Survey (implemented Fall 2010 and forward) called Five Dispositions of Effective Educational Professionals is a university supervisor rating of candidates' dispositions (values and actions) as observed in clinical practice in the following areas: Empathy, Positive View of Others, Positive View of Self, Authenticity, and Meaningful Purpose and Vision. Data presents mean scores
Target for O4: SLO 4: Values and displays professional and ethical dispositions

As beginning teachers of record in urban schools, MAT candidates must demonstrate dispositions toward diversity and professionalism that will serve students in historically underserved contexts. Since the ECE MAT leads to teacher certification/licensure at the endpoint, it is expected that most candidates, 95%, will achieve at least a rating of 3, “acceptable,” or 4, “exemplary,” on the 1-4 point Five Dispositions of Effective Educational Professionals rubric. Candidates who do not achieve these ratings work with faculty to create an action plan specifically designed to address areas of need with the goal of reaching a score of 3 (an “acceptable” rating). In cases where candidates do not achieve this target, they are not recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric: Levels 3 or 4=95%; Levels 2, 1, 0= 5%.

M 5: M 5: Clinical Teaching Practice (O: 5)

Teacher candidates in the ECE MAT program are expected to demonstrate knowledge, skills/performances and dispositions that are essential for high quality early childhood education for all student in grades prekindergarten through fifth grade. These competencies must be demonstrated in field settings with children, parents, and colleagues, as well as in university coursework. Teacher candidates in the ECE MAT have supported field based coursework throughout two academic years in the program and are full time teachers of record throughout that time. The Clinical teaching Practice Project completed at the midpoint and endpoint of the program is completed by the university coach at the end of each academic year. The evaluation is a comprehensive review of the candidate’s competencies and the rubric is aligned to the INTASC national standards for initial teacher licensure as well as the Georgia Framework for Teaching, the PSC Rules for Early Childhood Education. The rubric used to assess this project is also aligned with PSC domains, the PCE rules for ECE 505-3-.16 and the Conceptual Framework Standards of the Professional Education Faculty (PEF) of Georgia State University. The university coach (supervisor) rates the candidate based on his/her teaching performance, assignments, and projects. The rubric is aligned to the DISPOSITIONS rubric used in the Clinical teaching Practice Project Assessment. The 0-4 point rubric included: 4 (standard exceeded), 3 (standard met), 2 (approaching standard), 1 (standard minimally evidenced), and 0 (not observed). The teacher candidate is expected to receive at least ratings of 3 (standard met) on all indicators in order to complete ECE 7585 and to be recommended for certification. If a teacher candidate receives a rating lower than 3, the university supervisor works with the candidate to develop an action plan and an additional opportunity to demonstrate competency. A grade of “B” or better is required to pass all field based coursework and to continue with the program in good standing. This rubric is used at the midpoint and endpoint of the program to ensure candidate progress and success. If a candidate does not meet the minimum target for teaching performance, they are not recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric: Level 4=70%; Level 3=25%; Levels 2, 1, 0= 5%.

Source of Evidence: Field work, internship, or teaching evaluation

Target for O5: SLO 5: Applies content and pedagogy for successful clinical practice

Since the ECE MAT leads to teacher certification/licensure at the endpoint, it is expected that most candidates, 95%, will achieve at least a rating of 3, “standard met,” or 4, “standard exceeded,” on the 0-4 point rubric. Candidates who do not achieve these ratings work with faculty to create an action plan specifically designed to address areas of need with the goal of reaching a score of 3 (a rating of “standard met”). In cases where candidates do not achieve this target, they are not recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric: Levels 3 or 4=95%; Levels 2, 1, 0= 5%.

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:

What changes in the assessment process has your degree program made since last year's assessment report? (e.g., revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Since the ECE MAT program was initiated in 2011-12 along with newly crafted key assessments for beginning teachers of record, we have no complete data, however we have begun the process of conducting key assessments through the use of the LiveText management system and will be continuously assessing progress of students and monitor and maintain this data for program analysis and development.

ACADEMIC PROGRAM QUESTION 2:

What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

1. Content knowledge. Content Area courses in mathematics and literacy have been closely examined to ensure that these courses have met the needs of MAT candidates. Since the literacy coursework is based on new courses, faculty have been particularly attentive to the learning goals and understandings evidenced in these courses. Candidate participants in the design team have offered focused feedback which informs our future design of these courses in ways that are responsive to students and support their learning needs. Syllabi and course assignments, as well as key readings are being evaluated and considered in order to reflect identified areas of content expertise that could be strengthened in candidates. Data is being collected on student GPA, content area GPA (math and literacy), and the Early Childhood Education GACE Assessments as this first cohort continues with their program. Formal evaluation and assessment of Content Knowledge occurs at the endpoint of the program. This first cohort will be at program endpoint in Spring 2013 and formal consideration of content knowledge will occur at that point. 2. Professional and pedagogical knowledge, skills, and dispositions. Dispositional rubrics and Clinical Teaching Practice rubrics (collected at the midpoint and endpoint transitions), and the Responsive Planning Project (an ongoing process throughout the 5 semester MAT) will help faculty determine aspects of professional and pedagogical knowledge, skills, and dispositions that could be more significantly emphasized in programmatic engagements. Throughout this academic year, faculty have iteratively and constantly reflected upon candidate’s growing expertise in these areas, not at times of program review, but also in a constant and self-reflexive manner in order to ensure that each cohort is provided with opportunities for maximum growth and support. Additionally, we collaborate with a design team of candidates who represent their colleagues in the program in order to receive formative feedback as we consistently revisit our practices and the ways that they are aligned (and could become ever increasingly congruent and enacting) our goals. Analysis of candidate’s midpoint Clinical Practice Project rubric scores of individuals who began the MAT in Fall 2011 indicates that candidates struggle with aspects of planning and instruction, specifically (5.2, 5.3, 5.4). The course Integrative and Iterative Curriculum Design, ECE 6576, is offered to candidates after their first year of teaching (and therefore after the midpoint Clinical Practice Project Assessment). This course is designed to support beginning teachers of record as they strive to be successful and critically reflective teachers of culturally and
linguistically diverse students in urban classrooms. The focus of this course is to consider means for education for democratic purposes and engagement in meaningful and critical curriculum design and implementation. Novice teachers will explore (a) strategies to support reading comprehension and vocabulary development during the elementary years, (b) science and social studies content and methods of inquiry, (c) strategies for integrating the curriculum around science and social studies content; (d) curriculum design that incorporates student interests and queries around critical and important themes and topics, (e) personally relevant and learner centered teaching strategies, and (f) ways that teachers can build on students' culture and prior knowledge to best meet the needs of students in diverse classrooms. This is a field-based course in which beginning teachers will connect theory to practice as they develop and implement an integrative and iterative curriculum with pupils. This course specifically will support candidates with curriculum design and instruction, encouraging them and providing them with tools to: (a) implement multiple instructional strategies to guide content development, provide meaningful practice, and ensure student learning (5.2); (b) engage students in learning opportunities that promote problem solving and critical thinking using balanced lesson delivery formats (i.e., ST & SS formats including but not limited to direct instruction, lab, role play, cooperative learning) (5.3); and (c) teach using an appropriate plan and adjust strategies as needed to support student engagement and learning (5.4). Additionally this course is focused on supporting candidates as they plan and adapt instruction to be sensitive to students' diverse backgrounds, cultures, or linguistic needs (2.3); and create learning environments (3) that use effective management strategies to engage and motivate students in purposeful learning activities (3.2) and incorporate verbal, nonverbal, and media communication techniques to support learning-based interactions in the classroom or to increase student achievement (3.5) while involving learners in self-assessment and personal goal setting to increase student achievement (4.3). This course specifically attends to areas of the Clinical Practice Project rubric where candidates were less successful during the 2011-12 academic year. Through ECE 7575 and 7585, Induction Teachers as Change Agents I and II (the field based courses for the second year of the MAT), coaches will continue to support candidates in their planning and instruction, focusing specifically on these characteristics for targeted development and support. Analysis of the midpoint Dispositional Rubric scores of candidates who began the program in Fall 2011 indicates that while most candidates have positive views of themselves and others, a meaningful sense of purpose and vision, and demonstrate empathy for others and authenticity, several candidates need additional support to develop the types of dispositions needed to teach for justice in urban school contexts. While most of the candidates who scored consistently low on the dispositional rubric have been discontinued from our program or have determined that they are not interested in teaching as a vocation, those who remain will be supported by faculty throughout the second year of our program as they work to develop dispositions more attuned to the needs of their students and responsive to the communities they serve. 3. Student learning Impact on student learning is a significant and ongoing emphasis of our work. Since candidates in our program are beginning teachers of record, the ways in which they support student learning and achievement are paramount. Attention to learning trajectories of candidate’s classrooms (and of individual students in those classrooms) is a critical aspect of each of our courses. As we obtain data related to candidate impact on student learning, we continue to develop specific support structures, interventions, and teacher study groups that focus specifically on the needs of individual teachers related to P-S student learning. While official midpoint data on Effects on Student Learning is not collected, the embeddedness of this practice in courses and focused support sessions and workshops supporting candidates as they analyze their pupils’ growth and development at the midpoint of the program provide faculty with information that will inform our collaborations with individual candidates through the second year.

---

**Georgia State University**  
**Assessment Data by Section**  
**2011-2012 Early Childhood Education BSED**  
As of: 12/12/2016 04:41 PM EST  
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

### Mission / Purpose

The purpose of the Bachelor of Science in Education Program in Early Childhood Education at Georgia State University is to prepare teacher candidates who will be qualified to direct the education of young children from pre-school through elementary grades. The theme of this program is to develop teachers as facilitators of learning. Coursework, extensive field experience and collaboration among school and university faculty combine to develop a program that supports the professional growth of the novice educator.

### Goals

**G 1: Content Knowledge**  
The teacher candidate will have the content knowledge necessary to understand the curriculum he or she teaches.

**G 2: Pedagogical Content Knowledge & Skills**  
The teacher candidate will have the pedagogical content knowledge and skills to be able to plan and implement effective instruction.

**G 3: Student Learning**  
The teacher candidate will use varied assessment techniques and critical reflection to increase student achievement.

**G 4: Diversity**  
The teacher candidate will have dispositions and skills to meet the cultural, linguistic, learning and behavioral needs of all learners.

### Student Learning Outcomes/Objectives

**SLO 1: Demonstrates content knowledge (G: 1) (M: 2, 4, 5)**  
Teacher candidates understand the central concepts, tools of inquiry, and structures of the discipline he or she teaches and creates learning experiences that make these aspects of subject matter meaningful for students.

### General Education/Core Curriculum Associations

1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience,
meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

2.0 Students understand and apply mathematical concepts and reasoning using verbal, numeric, graphical and/or symbolic forms.

3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

4.0 Students effectively analyze the meanings of texts and/or works of art or music, express ways that culture shapes values, and critically evaluate them.

5.0 Students demonstrate understanding of the physical universe, the nature of science, and the scientific method, and/or understand and apply mathematical concepts and reasoning using verbal, numeric, graphical or symbolic forms.

6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

7.0 Students demonstrate understanding of the United States and its related political, social, and/or institutional developments.

8.0 Students demonstrate understanding of political, social, economic, and/or institutional developments across the globe.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

**Institutional Priority Associations**

1. Student retention
2. Student promotion and progression
3. Timely graduation

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**

1. Increase the level of scholarship support for undergraduate students.
2. Implement an Undergraduate Signature Experience.
3. Other efforts in support of Goal 1 (Undergraduate Education).
4. Enhance a research culture.
5. Enhance the global competency of students, faculty and staff.

**SLO 2: Plans effectively for instruction (G: 2) (M: 2)**

Teacher candidates plan instruction based upon knowledge of subject matter, students, the community, and curriculum goals.

**General Education/Core Curriculum Associations**

1. Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

9. Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

**Institutional Priority Associations**

1. Student retention
2. Student promotion and progression
3. Timely graduation

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**

1. Increase the level of scholarship support for undergraduate students.
2. Implement an Undergraduate Signature Experience.
3. Other efforts in support of Goal 1 (Undergraduate Education).
4. Enhance a research culture.
5. Enhance the global competency of students, faculty and staff.

**SLO 3: Applies content and pedagogy for successful clinical practice (G: 1, 2, 3, 4) (M: 2)**

Teacher candidates apply content and pedagogy for successful clinical practice. (i.e. knowledge of academic disciplines; understanding of child development and individual differences; use of differentiated instruction; use of multiple instructional strategies; development of critical thinking and problem solving; understanding of individual and group motivation and behavior; creator of positive learning environments; use of effective verbal, nonverbal, and media communication techniques; reflective practitioner; collaborative partner with students, parents and community).

**General Education/Core Curriculum Associations**

1. Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.

2. Students understand and apply mathematical concepts and reasoning using verbal, numeric, graphical and/or symbolic forms.

3. Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

4. Students effectively analyze the meanings of texts and/or works of art or music, express ways that culture shapes values, and critically evaluate them.

5. Students demonstrate understanding of the physical universe, the nature of science, and the scientific method, and/or understand and apply mathematical concepts and reasoning using verbal, numeric, graphical or symbolic forms.
6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

7.0 Students demonstrate understanding of the United States and its related political, social, and/or institutional developments.

8.0 Students demonstrate understanding of political, social, economic, and/or institutional developments across the globe.

9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

**Institutional Priority Associations**
1. Student retention
2. Student promotion and progression
3. Timely graduation

**Standard Associations**
1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**
1.1 Increase the level of scholarship support for undergraduate students.
1.3 Implement an Undergraduate Signature Experience.
1.5 Other efforts in support of Goal 1 (Undergraduate Education).
3.1 Enhance a research culture.
5.4 Enhance the global competency of students, faculty and staff.

**SLO 4: Uses assessment methods to document student learning (G: 3) (M: 1, 2)**
Teacher candidates understand and use formal and informal assessment strategies to evaluate and ensure the continuous intellectual, social, and physical development of the learner.

**General Education/Core Curriculum Associations**
1.0 Students produce well-organized communication that exhibits logical thinking, appropriate style for circumstance and audience, meets conventional standards of usage, and acknowledges the use of information sources when necessary. Students demonstrate comprehension of written material: purpose, message, and rhetorical situation.
3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.
9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

**Institutional Priority Associations**
1. Student retention
2. Student promotion and progression
3. Timely graduation

**Standard Associations**
1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**
1.1 Increase the level of scholarship support for undergraduate students.
1.3 Implement an Undergraduate Signature Experience.
1.5 Other efforts in support of Goal 1 (Undergraduate Education).
3.1 Enhance a research culture.
5.4 Enhance the global competency of students, faculty and staff.

**SLO 5: Values and displays professional and ethical dispositions (G: 4) (M: 2, 3, 5)**
Teacher candidates value and display professional and ethical dispositions to meet the needs of all learners. They are reflective practitioners who continually evaluate the effects of their choices and actions on others (students, parents, and other professionals in the learning community) and who actively seek out opportunities to grow professionally. They know and use ethical and professional guidelines related to educational practice. Teacher candidates foster relationships with school colleagues, parents, and agencies in the larger community to support students’ learning and well-being. They are informed advocates for sound educational practices and policies.

**General Education/Core Curriculum Associations**
3.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.
9.0 Students effectively analyze, evaluate, and provide convincing reasons in support of conclusions, considering opposing points of view when appropriate.

**Institutional Priority Associations**
1. Student retention
2. Student promotion and progression
3. Timely graduation

**Standard Associations**
1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**
1.1 Increase the level of scholarship support for undergraduate students.
1.3 Implement an Undergraduate Signature Experience.
1.5 Other efforts in support of Goal 1 (Undergraduate Education).
3.1 Enhance a research culture.
4.4 Enhance the global competency of students, faculty and staff.

## Measures, Targets, and Findings

### M 1: Planning, Teaching, Learning Module (PTLM) Rubric (O: 4)
Teacher candidates continuously have opportunities to impact student achievement. Through intentionally designed assignments they are required to document their use of an array of assessment tools including KWLS charts, pre and post tests, learning gains graphs, and grade books. The Planning, Teaching, Learning Module (PTLM), in the student teaching course ECE 4661, is a comprehensive, teacher work sample documenting the teacher candidate’s use of all of these assessment tools. The teacher candidate uses content knowledge to plan and implement the integrated thematic unit, motivate and manage students, and assess student learning. Throughout the project, the teacher candidate provides written reflection on student progress as well as her/his own professional development. The rubric for the PTLM highlights use to assess the candidate against the INTASC national standards for initial teacher licensure. A 100 point rubric is used to rate/score the candidate’s project on four components: planning, implementing, assessing, and reflecting. Ratings include: 5 ("proficiently met"), 4 ("adequately met"), 3 ("partially met"), 2 ("minimally met"), and 1 ("not met"). The teacher candidate is expected to receive a rating of at least 4 ("adequately met") on the assessing components in order to demonstrate competency is using assessment methods to document student learning (outcome 4). If the teacher candidate does not demonstrate that she/he has met these performance standards with ratings of at least 4 for each assessing component, an action plan is developed. The university supervisor monitors the teacher candidate’s progress in meeting goals outlined in the action plan prior to the completion of student teaching. (Note: The rubric was revised as follows: 4 ("proficiently met"), 3 ("adequately met"), 2 ("partially met"), 1 ("minimally met"), and 0 ("not met"). The teacher candidate is expected to receive a rating of at least 3 ("adequately met") on the assessing components in order to demonstrate competency is using assessment methods to document student learning (outcome 4). Teacher candidate mastery of the assessing components must be demonstrated prior to the completion of student teaching and the recommendation for certification.

Source of Evidence: Project, either individual or group

### Target for O4: Uses assessment methods to document student learning
Since the ECE BSED Program leads to teacher certification/licensure at the endpoint, it is expected that most candidates, 95%, will achieve at least a rating of 3, "adequately met," or 4, "proficient", on the revised 0-4 point rubric. Candidates who do not achieve these ratings work with faculty to create an action plan specifically designed to address areas of deficiency with the goal of reaching an adequate rating. In few cases, 5% or less, candidates who do not achieve their goals are not recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric: Level 4 = 70%; Level 3 = 25%; Levels 2, 1, 0 = 5%.

### Findings 2011-2012 - Target: Met
The review of the overall performance scores obtained from the Planning, Teaching, and Learning Module for 2011-2012 reveals the following: Aggregate scores for Traditional and Dual Program candidates show a 96% or 149/156 pass rate for having an impact on student learning on the Planning, Teaching, and Learning Module, Assessment Component (i.e., Proficiently Met-Level 4 = 72% or 113/156; Adequately Met-Level 3 = 23% or 36/156; Partially Met-Level 2 = 3% or 4/156; Minimally Met-Level 1 = 1% or 1/156, and Did Not Meet-Level 0 = 2% or 2/156). The mean scores for overall impact on student learning by program are as follows: Traditional Program – 3.57 and Dual Program – 3.82 on a (0-4) scale. Six candidates who fell below target were required to revise their narrative summary to include a more detailed explanation or were initially missing a component. One candidate who did not meet standards due to issues with performance and professionalism will repeat the Student Teaching course and the PTLM assessment prior to graduation and recommendation for certification. Additionally, 2 Traditional Program candidates (1-fall and 1-spring) and 1 Dual Program candidate withdrew from Student Teaching prior to the midpoint. The fall 2011 candidate successfully repeated and completed the experience spring 2012. The two spring candidates are required to repeat the experience fall 2012 and forward. Disaggregate scores for Traditional and Dual Program candidates indicate that the Dual Program candidates scored 6% higher on this assessment than the Traditional Program candidates. Of the Traditional Program candidates, 94% or 116/123 met the assessment target of level 3 or higher (i.e., Proficiently Met-Level 3 = 70% or 86/123; Adequately Met-Level 3 = 24% or 30/123), while 3% or 4/123 Partially Met standards- Level 2, 1% or 1/123 Minimally Met standards-Level 1 and 2% or 2/123 Did Not Meet standards- Level 0. Of the Dual Program candidates, 100% (33/33) met the assessment target of level 3 or higher (i.e., Proficiently Met- Level 4 = 82% or 27/33; Adequately Met-Level 3 = 18% or 6/33).

### M 2: Final Student Teaching Evaluation (Appendix E) (O: 1, 2, 3, 4, 5)
Teacher candidates in the ECE BSE Traditional and Dual Certification Programs are expected to demonstrate knowledge, skills/performance and dispositions that are essential for high quality early childhood education for all students in grades prekindergarten through fifth grade. These competencies must be demonstrated in field settings with children, parents, and colleagues, as well as in the university course work. Teacher candidates have three practicum field experiences prior to their clinical practice (student teaching) with up to 1300 hours of field experiences over the course of the program. The Final Student Teaching Evaluation (Appendix E) is an overall evaluation of the candidate and is completed by the university supervisor at the end of student teaching, in the course ECE 4661. The evaluation is a comprehensive review of the candidate’s competencies across all 5 learning outcomes and the rubric is aligned to the INTASC national standards for initial teacher licensure. The university supervisor rates the candidate based on her/his teaching performance, assignments and professionalism as demonstrated during student teaching, clinical practice. The 5 point rubric includes: 5 ("outstanding"), 4 ("very good"), 3 ("satisfactory"), 2 ("needs improvement") and 1 ("unsatisfactory"). The teacher candidate is expected to receive at least ratings of 3 ("satisfactory") on all indicators in order to complete student teaching, ECE 4661, and be recommended for certification. If a teacher candidate receives a rating lower than 3, the university supervisor works with the candidate to develop an action plan and an additional opportunity to demonstrate competency. A grade of "C" or better in ECE 4661 is required in order to pass student teaching. This is an end of program evaluation. Note: The rubric scale was revised as follows: 4 ("outstanding"), 3 ("very good"), 2 ("satisfactory"), 1 ("needs improvement") and 0 ("unsatisfactory"). The teacher candidate is expected to receive at least ratings of 3 ("satisfactory") on all indicators in order to complete student teaching, ECE 4661, and be recommended for certification. We have raised the target to level 3 ("very good") in evaluating the program. If a teacher candidate receives a rating lower than 2, the university supervisor works with the candidate to develop an action plan and an additional opportunity to demonstrate competency. A grade of "C" or better in ECE 4661 is required in order to pass student teaching. This is an end of program evaluation.

Source of Evidence: Field work, internship, or teaching evaluation

### Target for O1: Demonstrates content knowledge
Since the ECE BSED Program leads to teacher certification/licensure at the endpoint, it is expected that most candidates, 95%,
will achieve at least a rating of 3, "very good", or 4, "outstanding", on the revised 0-4 point rubric. Candidates who do not achieve these ratings work with faculty to create an action plan specifically designed to address areas of deficiency with the goal of reaching a "very good" rating. In few cases, 5% or less, candidates who do not achieve their goals are not recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric: Level 4 = 70%; Level 3 = 25%; Levels 2, 1, 0 = 5%.

**Findings 2011-2012 - Target: Met**

Review of the overall performance scores obtained from the Final Student Teaching Evaluation instrument for 2011-2012 reveal the following: Aggregate scores for Traditional ESOL and Dual – Special Education concentration candidates show a 95% or 145/153 pass rate on the Final Student Teaching Evaluation (i.e., 81% or 124/153 exceeded expectations with scores Outstanding- Level 4, 14% or 21/153 met expectations with scores Very Good-Level 3. Candidates scoring below target include 3% or 5/153 at the Satisfactory-Level 2, 0% at the Needs Improvement-Level 1, and 2% or 3/153 at the Unsatisfactory-Level 0. Eight candidates fell below target with five at the Satisfactory-Level 2 and three at the Unsatisfactory-Level 0. Eight candidates fell below target with five at the Satisfactory-Level 2 and three at the Unsatisfactory-Level 0. Following Action Plans for continued growth and development, five candidates (4 Traditional and 1 Dual) showed evidence of increased performance during Role Reversal of Student Teaching to meet program requirements. Two spring 2012 Traditional candidates who did not meet standards due to issues with performance and professionalism will be required to repeat ECE 4662: Student Teaching and one Traditional candidate who withdrew prior to the midpoint will also repeat the experience. The fall 2011 Traditional candidate, who withdrew prior to the midpoint, successfully repeated and completed the experience spring 2012. Finally, one Dual candidate withdrew prior to the midpoint and will be required to repeat the experience. Disaggregate scores for Traditional ESOL and Dual – Special Education concentration candidates show that the Dual candidates scored 3% higher on this assessment than the Traditional candidates. Of the Traditional candidates 94% or 114/121 met or exceeded the assessment target of level 3, while 97% or 31/32 of Dual candidates met or exceeded the assessment target. For Dual Program – Special Education concentration candidates, the score of 97% meeting or exceeding the target on this assessment is higher in comparison to their 94% score across 2007-2011. The mean scores based upon the overall Final Student Teaching Evaluation by program are as follows: Traditional ESOL concentration – 3.67 and Dual – Special Education concentration – 3.79 on a (0-4) scale. Outcome 1: Demonstrates content knowledge was indicative of high mean scores for both programs.

**Target for O2: Plans effectively for instruction**

Since the ECE BSED Program leads to teacher certification/licensure at the endpoint, it is expected that most candidates, 95%, will achieve at least a rating of 3, "very good", or 4, "outstanding", on the revised 0-4 point rubric. Candidates who do not achieve these ratings work with faculty to create an action plan specifically designed to address areas of deficiency with the goal of reaching a "very good" rating. In few cases, 5% or less, candidates who do not achieve their goals are not recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric: Level 4 = 70%; Level 3 = 25%; Levels 2, 1, 0 = 5%.

**Findings 2011-2012 - Target: Met**

Review of the overall performance scores obtained from the Final Student Teaching Evaluation instrument for 2011-2012 reveal the following: Aggregate scores for Traditional ESOL and Dual – Special Education concentration candidates show a 95% or 145/153 pass rate on the Final Student Teaching Evaluation (i.e., 81% or 124/153 exceeded expectations with scores Outstanding- Level 4, 14% or 21/153 met expectations with scores Very Good-Level 3. Candidates scoring below target include 3% or 5/153 at the Satisfactory-Level 2, 0% at the Needs Improvement-Level 1, and 2% or 3/153 at the Unsatisfactory-Level 0. Eight candidates fell below target with five at the Satisfactory-Level 2 and three at the Unsatisfactory-Level 0. Following Action Plans for continued growth and development, five candidates (4 Traditional and 1 Dual) showed evidence of increased performance during Role Reversal of Student Teaching to meet program requirements. Two spring 2012 Traditional candidates who did not meet standards due to issues with performance and professionalism will be required to repeat ECE 4662: Student Teaching and one Traditional candidate who withdrew prior to the midpoint will also repeat the experience. Two spring 2012 Traditional candidates who did not meet standards due to issues with performance and professionalism will be required to repeat ECE 4662: Student Teaching and one Traditional candidate who withdrew prior to the midpoint will also repeat the experience. Disaggregate scores for Traditional ESOL and Dual – Special Education concentration candidates indicate that the Dual candidates scored 3% higher on this assessment than the Traditional candidates. Of the Traditional candidates 94% or 114/121 met or exceeded the assessment target of level 3, while 97% or 31/32 of Dual candidates met or exceeded the assessment target. For Dual Program – Special Education concentration candidates, the score of 97% meeting or exceeding the target on this assessment is higher in comparison to their 94% score across 2007-2011. The mean scores based upon the overall Final Student Teaching Evaluation by program are as follows: Traditional ESOL concentration – 3.67 and Dual – Special Education concentration – 3.79 on a (0-4) scale. Outcome 2: Plans effectively for instruction was the lowest rated outcome at 3.62 for the Traditional candidates.

**Target for O3: Applies content and pedagogy for successful clinical practice**

Since the ECE BSED Program leads to teacher certification/licensure at the endpoint, it is expected that most candidates, 95%, will achieve at least a rating of 3, "very good", or 4, "outstanding", on the revised 0-4 point rubric. Candidates who do not achieve these ratings work with faculty to create an action plan specifically designed to address areas of deficiency with the goal of reaching a "very good" rating. In few cases, 5% or less, candidates who do not achieve their goals are not recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric: Level 4 = 70%; Level 3 = 25%; Levels 2, 1, 0 = 5%.

**Findings 2011-2012 - Target: Met**

Review of the overall performance scores obtained from the Final Student Teaching Evaluation instrument for 2011-2012 reveal the following: Aggregate scores for Traditional ESOL and Dual – Special Education concentration candidates show a 95% or 145/153 pass rate on the Final Student Teaching Evaluation (i.e., 81% or 124/153 exceeded expectations with scores Outstanding- Level 4, 14% or 21/153 met expectations with scores Very Good-Level 3. Candidates scoring below target include 3% or 5/153 at the Satisfactory-Level 2, 0% at the Needs Improvement-Level 1, and 2% or 3/153 at the Unsatisfactory-Level 0. Eight candidates fell below target with five at the Satisfactory-Level 2 and three at the Unsatisfactory-Level 0. For Dual Program – Special Education concentration candidates, the score of 97% meeting or exceeding the target on this assessment is higher in comparison to their 94% score across 2007-2011. The mean scores based on the overall Final Student Teaching Evaluation scores for both programs are as follows: Traditional ESOL concentration – 3.67 and Dual – Special Education concentration – 3.79 on a (0-4) scale. Outcome 3: Applies content & pedagogy for successful clinical practice was indicative of high mean scores for both programs.

Target for O4: Uses assessment methods to document student learning
Since the ECE BSED Program leads to teacher certification/licensure at the endpoint, it is expected that most candidates, 95%, will achieve at least a rating of 3, "very good", or 4, "outstanding", on the revised 0-4 point rubric. Candidates who do not achieve these ratings with faculty to develop an action plan specifically designed to address areas of deficiency with the goal of reaching a "very good" rating. In few cases, 5% or less, candidates who do not achieve their goals are not recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric: Level 4 = 70%; Level 3 = 25%; Levels 2, 1, 0 = 5%.

Findings 2011-2012 - Target: Met
Review of the overall performance scores obtained from the Final Student Teaching Evaluation instrument for 2011-2012 reveal the following: Aggregate scores for Traditional ESOL and Dual – Special Education concentration candidates show a 95% or 145/153 pass rate on the Final Student Teaching Evaluation (i.e., 81% or 124/153 exceeded expectations with scores Outstanding- Level 4, 14% or 21/153 met expectations with scores Very Good-Level 3. Candidates scoring below target include 3% or 5/153 at the Unsatisfactory-Level 0. Eight candidates fell below target with five at the Satisfactory-Level 2 and three at the Ununsatisfactory-Level 0 and three withdrew. Following Action Plans for continued growth and development, five candidates (4 Traditional and 1 Dual) showed evidence of increased performance during Role Reversal of Student Teaching to meet program requirements. Two spring 2012 Traditional candidates who did not meet standards due to issues with performance and professionalism will be required to repeat ECE 4662: Student Teaching and one Traditional candidate who withdrew prior to the midpoint will also repeat the experience. The fall 2011 Traditional candidate, who withdrew prior to the midpoint, successfully repeated and completed the experience spring 2012. Finally, one Dual candidate withdrew prior to the midpoint and will be required to repeat the experience. Disaggregate scores for Traditional ESOL and Dual – Special Education concentration candidates indicate that the Dual candidates scored 3% higher on this assessment than the Traditional candidates. Of the Traditional candidates 94% or 114/121 met or exceeded the assessment target of level 3, while 97% or 31/32 of Dual candidates met or exceeded the assessment target. For Dual Program – Special Education concentration candidates, the score of 97% meeting or exceeding the target on this assessment is higher in comparison to their 94% score across 2007-2011. The mean scores based on the overall Final Student Teaching Evaluation scores for both programs are as follows: Traditional ESOL concentration – 3.67 and Dual – Special Education concentration – 3.79 on a (0-4) scale. Outcome 4: Uses assessment methods to document student learning was one of the lowest outcomes rated at 3.62 for the Dual and 3.69 for the Traditional candidates.

Target for O5: Values and displays professional and ethical dispositions
Since the ECE BSED Program leads to teacher certification/licensure at the endpoint, it is expected that most candidates, 95%, will achieve at least a rating of 3, "very good", or 4, "outstanding", on the revised 0-4 point rubric. Candidates who do not achieve these ratings with faculty to develop an action plan specifically designed to address areas of deficiency with the goal of reaching a "very good" rating. In few cases, 5% or less, candidates who do not achieve their goals are not recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric: Level 4 = 70%; Level 3 = 25%; Levels 2, 1, 0 = 5%.

Findings 2011-2012 - Target: Met
Review of the overall performance scores obtained from the Final Student Teaching Evaluation instrument for 2011-2012 reveal the following: Aggregate scores for Traditional ESOL and Dual – Special Education concentration candidates show a 95% or 145/153 pass rate on the Final Student Teaching Evaluation (i.e., 81% or 124/153 exceeded expectations with scores Outstanding- Level 4, 14% or 21/153 met expectations with scores Very Good-Level 3. Candidates scoring below target include 3% or 5/153 at the Unsatisfactory-Level 0. Eight candidates fell below target with five at the Satisfactory-Level 2 and three at the Ununsatisfactory-Level 0 and three withdrew. Following Action Plans for continued growth and development, five candidates (4 Traditional and 1 Dual) showed evidence of increased performance during Role Reversal of Student Teaching to meet program requirements. Two spring 2012 Traditional candidates who did not meet standards due to issues with performance and professionalism will be required to repeat ECE 4662: Student Teaching and one Traditional candidate who withdrew prior to the midpoint will also repeat the experience. The fall 2011 Traditional candidate, who withdrew prior to the midpoint, successfully repeated and completed the experience spring 2012. Finally, one Dual candidate withdrew prior to the midpoint and will be required to repeat the experience. Disaggregate scores for Traditional ESOL and Dual – Special Education concentration candidates indicate that the Dual candidates scored 3% higher on this assessment than the Traditional candidates. Of the Traditional candidates 94% or 114/121 met or exceeded the assessment target of level 3, while 97% or 31/32 of Dual candidates met or exceeded the assessment target. For Dual Program – Special Education concentration candidates, the score of 97% meeting or exceeding the target on this assessment is higher in comparison to their 94% score across 2007-2011. The mean scores based on the overall Final Student Teaching Evaluation scores for both programs are as follows: Traditional ESOL concentration – 3.67 and Dual – Special Education concentration – 3.79 on a (0-4) scale. Outcome 5: Values and displays professional and ethical dispositions was the highest rated outcome for both programs at 3.81 Traditional and 3.89 Dual.

M 3: Five Dispositions of Effective Education Professionals Rubric (O: 5)
The new Dispositions Survey (implemented fall 2010 and forward) called Five Dispositions of Effective Education Professionals is a university supervisor rating of candidates’ dispositions (values and actions) as observed in clinical practice in the following areas: Empathy, Positive View of Others, Positive View of Self, Authenticity, and Meaningful Purpose and Vision. Data presents mean scores across these five areas. The rubric levels are as follows: Level 4 (Strength or Exceptional), Level 3 (Developing or Acceptable), Level 2 (Emerging or Marginal) and Level 1 (Unsure or Unacceptable).
Source of Evidence: Field work, internship, or teaching evaluation

Target for O5: Values and displays professional and ethical dispositions
Since the ECE BSED Program leads to teacher certification/licensure at the endpoint, it is expected that most candidates, 95%, will achieve at least a rating of 3, "acceptable", or 4, "exemplary", on the 1-4 point Five Dispositions of Effective Educational
Professionals rubric. Candidates who do not achieve these ratings work with faculty to create an action plan specifically designed to address areas of deficiency with the goal of reaching an "acceptable" rating. In few cases, 5% or less, candidates who do not achieve their goals are not recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric: Level 4 = 70%; Level 3 = 25%; Levels 2 or 1 = 5%.

Findings 2011-2012 - Target: Met
2011-2012 data indicate an overall aggregate pass rate of 97% or 150/154 total program candidates (Traditional and Dual) meeting or exceeding the target of Level 3 "acceptable" or Level 4 "exemplary" on the Five Effective Dispositions Assessment compared to 94% (136/144) of the 2010-2011 completers. Disaggregate scores from 2011-2012 data show ratings for Traditional Program teacher candidates at 97% (117/121) as compared to 100% (33/33) for Dual Program candidates meeting or exceeding the target on this assessment. Of the four Traditional ESOL candidates who received marginal ratings on this assessment, they were monitored during Student Teaching. Three students passed with a "C" in ECE 4662: Student Teaching, while one is required to repeat the course. All Newton External Delivery program candidates passed this assessment.

M 4: GACE Content Assessments in Early Childhood & Special Education (O: 1)

Passing scores on the GACE Content Assessments are required for teacher certification. The following GACE Assessments are required by program: Early Childhood Education (ECE) Traditional Program: Test 001 (Language Arts, Social Studies); Test 002 (Mathematics, Science, Health, Physical Education) Early Childhood Education and Special Education, General Curriculum (ECE SPE) Dual Certification Program: Test 001 (Language Arts, Social Studies); Test 002 (Mathematics, Science, Health, Physical Education); Test 081 and 082 (Special Education)

Source of Evidence: Certification or licensure exam, national or state

Target for O1: Demonstrates content knowledge
A passing score determined by the Georgia Professional Standards Commission on initial teacher certification is required for teacher certification/licensure in Early Childhood and Special Education.

Findings 2011-2012 - Target: Met
All program candidates recommended for teacher certification received passing scores on the GACE. Score reports are not available for the repository for the current year. Score reports for 2009 and 2010-2011 are now available and located in the repository. Scores for these two years are as follows: For 2009 - 2010 - Test 001 (Reading, English Language Arts, Social Studies): 163 candidates or 100% passed; Test 002 (Mathematics, Science, Health, Physical Education and the Arts) = 163 or 100% passed. For 2010-2011 - Test 001 (Reading, English Language Arts, Social Studies) = 157 candidates or 94% passed; Test 002 (Mathematics, Science, Health, Physical Education and the Arts) = 157 or 96% passed. Beginning fall 2010, we received approval of a program change which indicated that passing scores on the GACE Content Assessments in Early Childhood Education would no longer be a requirement for graduation but would remain a requirement for recommendation for clear renewable certification in Early Childhood Education. Teacher candidates are strongly advised to take the GACE Content Assessments in Early Childhood Education prior to graduation but not before they have completed junior level course work. GACE Content Assessments in Early Childhood Education are not used for admission to Teacher Education or to Student Teaching. In the year, 2010-2011, following the change in requirement, we observed a lower percentage of candidates who passed tests 001 and 002. This data allows us to see more clearly areas for program improvement in these content areas. Analyses of our 2010-2011 sub-indicator percentages show that our scores are equal to or above the state in all areas. There was one indicator on test 001: understand the conventions of Standard English grammar, usage, and mechanics that were the lowest for the state and for our candidates. In response to this outcome the program will implement supplemental instruction in grammar, usage, and mechanics, including structure (GUMS) beginning, fall 2012 for candidates who have been identified as needing further instruction in this area. Additionally, the program will continue to implement the Writing Mentor Program developed fall 2010 to provide one on one tutoring for candidates who need further development in writing as identified by program faculty and university supervisors. Finally, our scores on test 002 are higher than the state except for one area, again the lowest state rated outcome: understand concepts and principles of earth science. We expect to see improvement in this area due to course changes in ISCI 2001 fall 2011; such as, increased emphasis on content development in earth and life sciences and collaboration between College of Arts & Sciences and College of Education faculty who implement co-teaching models of delivery.

M 5: Observation Field Performance Assessment Rubric (O: 1, 5)
The Observation Field Performance in ECE Rubric is used to assess pre-service teachers during practicum (three field experiences prior to student teaching) and student teaching (clinical practice). The instrument is based on the Georgia Framework for Teaching. The assessor will enter observation ratings in LiveText, the electronic assessment management system, across all indicators and domains for the final teacher candidate observation in each of the field experiences; that is, Practicum I, Practicum II, Practicum III, and Student Teaching. Pre-service teachers are placed in the following grade levels for each experience: Practicum I: Pre-kindergarten (5 weeks) and Kindergarten (8 weeks) Practicum II: 1st grade (7 weeks) and 2nd/3rd grade (6 weeks) - Midpoint Evaluation Practicum III: 4th/5th grade (13 weeks) Student Teaching: 15 weeks (K-5; a selected grade level). Student Teaching observation performance ratings will be reviewed end program. Rubric levels are as follows: Level 4 (Proficient), Level 3 (Achieving), Level 2 (Developing), Level 1 (Emerging, Level 0 (Beginning). Ratings of "Developing" or higher are needed for recommendation for certification and to pass student teaching, although the program target has been identified at level 3 "Achieving" or higher across all six performance domains.

Source of Evidence: Field work, internship, or teaching evaluation

Target for O1: Demonstrates content knowledge
Since the ECE BSED Program leads to teacher certification/licensure at the endpoint, it is expected that most candidates, 95%, will achieve at least a rating of 3, "achieving", or 4, "proficient", on the 0-4 point rubric in the area of Content and Curriculum on the Observation Field Performance Rubric. Candidates who do not achieve these ratings work with faculty to create an action plan specifically designed to address the area of deficiency with the goal of reaching an "achieving" rating. In few cases, 5% or less, candidates who do not achieve their goals are not recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric: Level 4 = 70%, Level 3 = 25%, Levels 2, 1, 0 = 5%.

Findings 2011-2012 - Target: Met
Of the 2011-2012 Traditional ESOL and Dual – Special Education concentration completers 153/157 or ninety-seven percent (97%) met or exceeded the target with only three (3) completers and one (1) non-completer, or 3% falling below target on the overall domain ratings on the Observation Field Performance Assessment at the end of their program. The three completers
demonstrated competency during Student Teaching on other evaluations in order to meet program requirements. In the area of Content and Curriculum, one of the completers met Action Plan requirements to pass this assessment during Student Teaching; however, the other candidate, the non-completer, did not meet requirements and will be required to repeat the Student Teaching experience successfully prior to graduation and recommendation for certification. One hundred percent (100%) or 21/21 Traditional ESOL Newton sub-group candidates passed this assessment.

Target for O5: Values and displays professional and ethical dispositions

Since the ECE BSED Program leads to teacher certification/licensure at the endpoint, it is expected that most candidates, 95%, will achieve at least a rating of 3, "achieving", or 4, "proficient", on the 0-4 point rubric in the area of Knowledge of Students on the Observation Field Performance Rubric. Candidates who do not achieve these ratings work with faculty to create an action plan specifically designed to address the area of deficiency with the goal of reaching an "achieving" rating. In few cases, 5% or less, candidates who do not achieve their goals are not recommended for teacher certification. The following targets have been set regarding the percentage of candidates scoring at each level of the rubric: Level 4 = 70%; Level 3 = 25%; Levels 2, 1, 0 = 5%.

Findings 2011-2012 - Target: Met

Of the 2011-2012 Traditional ESOL and Dual – Special Education concentration completers 153/157 or ninety-seven percent (97%) met or exceeded the target with only three (3) completers and one (1) non-completer, or 3% falling below target on the overall domain ratings on the Observation Field Performance Assessment at the end of their program. The three completers demonstrated competency during Student Teaching on other evaluations in order to meet program requirements. In the area of O5: Values and displays professional and ethical dispositions, one of the Dual Program completers met Action Plan requirements to pass this assessment during Student Teaching; however, the Traditional Program non-completer, did not meet requirements and will be required to repeat the Student Teaching experience successfully prior to graduation and recommendation for certification. One hundred percent (100%) or 21/21 Traditional ESOL Newton sub-group candidates passed this assessment.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Dispositions Assessment Review - Dual Program

A review of programs by concentration revealed an aggregate pass rate on the Dispositions Assessment for Traditional and Dual concentration programs combined at 94%; however, the Dual concentration candidate pass rate in this area was 88% or 22/25 candidates, somewhat lower, in meeting the target on the assessment. BSE faculty will monitor closely by reviewing Disposition Assessment results 2011-2012 to see if there is any change in the Dual concentration program data. After a review of 2011-2012 data, the Dual concentration candidate pass rate in this area increased significantly from 88% (2010-2011) to 100% or 33/33 candidates meeting or exceeding the target.

ESOL Endorsement: PTLM Assessment

Although current data from the Planning, Teaching, Learning Module indicate "met" targets in using assessment for learning, it was noted that pre-service teachers experienced most difficulty with the assessment components of the project. 08-09 assessments also showed lowest ratings in using assessment for learning. In follow-up to these results, the BSE program has been revised beginning fall 2010 to require the ESOL Endorsement for all "traditional – non dual certification" program students. This decision was made in an effort to address the changing demographics and pupil needs in metro Atlanta as noted in the ECE strategic plan and to improve preparation of pre-service teachers in the areas of planning for differentiated instruction and assessment. Data indicated an increase in the aggregate pass rate from 95% to 99% from 2009-2010 to 2010-2011. Faculty will closely monitor these areas and note any differences in data in the 2011-2012 academic year, specifically outcome 4 (assessment components) as identified in the Planning, Teaching, and Learning Module. After a review of 2011-2012 data, 96% of candidates met or exceeded the target on the assessment component. While scores are close, we have noted that assessment continues to be one of the areas that pre-service teachers have difficulty. We have identified action plans that are "in progress" to address this area.

Implementation Description: ECE 3440: ESOL Curriculum & Instruction will be required for all "traditional - non dual certification" program students. ESOL/TESOL Standards addressed in ECE 3250 will be integrated into the following courses: ECE 3021 (Child Development), ECE 3600 (Language & Literacy in ECE), and ECE 3360 Assessment.

Projected Completion Date: 05/2012

Responsible Person/Group: BSE Faculty and field supervisors

Additional Resources: The proposed change requires a net gain of one load fall 2011 and each spring semester thereafter and will be covered by current ECE faculty. No additional resources will be needed as ESOL supervision will be restructured and included as part of general education supervision. This change in supervision coverage will absorb the cost of the additional load.

Planning and Assessment; ELL & Special Education Focus

2010-2011 data from the Final Student Teaching Evaluation indicate "met" targets in all areas; however, it was noted that the lowest ratings were identified in the areas of planning and assessment for the Dual concentration program with the following mean scores 3.48 for planning and 3.53 for assessment compared to Traditional concentration program mean scores of 3.74 in planning and 3.78 in assessment. Additionally, data from end program candidate surveys indicate that Traditional and Dual concentration program candidates rate themselves lower in confidence in working with students with special needs and/or linguistic needs. As a result faculty
will provide course inputs in ESOL for Dual program candidates and continued inputs in Special Education for Traditional program candidates. Also faculty will closely monitor assessments and note any differences in data, specifically outcome 2 (plans effectively for instruction) and outcome 4 (uses assessment methods to document student learning) as identified in the Final Student Teaching Evaluation. 2011-2012 data show similar results as planning and assessment are still rated the lowest areas on this assessment as follows: For planning, 3.62 Traditional Program and 3.89 Dual Program and for assessment, 3.69 Traditional Program and 3.62 Dual Program. Dual Program results for planning and assessment show a slight increase from 2010-2011 while Traditional Program results are slightly lower than the previous year’s scores. Overall scores on this evaluation for programs combined show and increase in 4% from 2010-2011 to 2011-2012. We will continue to monitor these areas and will consider the following interventions: revision of two mid-program assignments, the Guided Reading Planning Assessment and the Planning, Teaching, Learning Sample, and to see if intentional instruction mid-program increases scores by end program. Both of these assignments require our students to plan three sequential lessons and to analyze and reflect on student performance/data during and following each lesson in order to make revisions prior to teaching the next lesson. Finally, we will continue to provide ESOL and Special Education supplemental course inputs to build students’ confidence in planning and assessing students with special/linguistic needs. We will ask students to complete a survey at the end of each semester next year and note any changes in their confidence levels.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Final Student Teaching Evaluation (Appendix E) | Outcome/Objective: Plans effectively for instruction

Implementation Description: Course inputs in ESOL for Dual concentration program and continued course inputs in Special Education for Traditional ESOL concentration program. Revise mid program key assessments in planning and assessment, Guided Reading and Planning, Teaching, Learning Sample.

Projected Completion Date: 05/2013
Responsible Person/Group: BSE faculty and/or part time instructors

Budget Amount Requested: $0.00 (no request)

Technology for Student Learning
In an effort to increase pre-service teacher knowledge and skills in implementing technology for student learning, program faculty have embedded the NET Standards throughout program course work, designating specific assignments that will target this area. Additionally, a two day Digital Literacy Seminar for all candidates enrolled in ECE 3602: Reading and Language Arts II with a focus on creating digital literacies for student use in learning. It had been noted by university supervisors, that pre-service teachers have sufficient knowledge and skills in implementing lessons that require teacher use of technology; however, more instruction in student use of technology for learning would be beneficial. BSED faculty will expect to see higher ratings on the Final Student Teaching Evaluation for Outcome 3; specifically, Standard 6C: Communication Skills - Demonstrates competency in using technology to support student learning. After one year of interventions, the data reveal the following: For 2010-2011 Traditional and Dual Program candidates’ mean and modal scores for Outcome 3, Standard 6C are a 3.81 and a modal score of 4 (121/122 Traditional candidates meeting target) and 3.48 mean and a modal score of 3 (25/25 Dual candidates meeting target). For 2011-2012 Traditional and Dual Program candidates’ mean and modal scores for Outcome 3, Standard 6C are a 3.66 mean and 4 mode (123/126 Traditional candidates meeting target) and 3.76 mean and 4 mode (33/33 Dual candidates meeting target). We have also reviewed data from the Observation Field Performance Assessment, Domain 3: Learning Environments, sub-indicator 3.5 (incorporate verbal, nonverbal, and media communication techniques to support learning-based interactions in the classroom or to increase student achievement) for a second measure. The data are reported for Traditional and Dual candidates combined and show, for 2011-2012, 156/157 candidates meeting target with a mean of 3.85 and a modal score of 4 as compared to 2010-2011 with 142/145 candidates meeting target with a mean of 3.81 and a modal score of 4. We will continue with the interventions in monitoring this area.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Final Student Teaching Evaluation (Appendix E) | Outcome/Objective: Applies content and pedagogy for successful clinical practice

Implementation Description: In order to help pre-service teachers develop a student-centered approach, the BSED faculty have looked closely at the ISTE’s NETS for teachers and for students. P-12 students need to use technology in the service of high level thinking and knowledge production, including the making of digital media. The BSED faculty have created a technology project bank aligning the NETS to technology projects across course and field work. Additionally, faculty have added a two day Digital Literacy Seminar.

Projected Completion Date: 05/2013
Responsible Person/Group: BSE Faculty
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Classroom Management Strategies Focus
Data from the Final Student Teaching Evaluation sub-indicator 5A: Learning Environments and the Observations Field Performance assessment sub-indicators suggest that some of our candidates scored lower in using management strategies to engage and motivate learners. Since classroom management is an area that pre-service teachers typically need improvement in as noted in our data, we have restructured two of our classroom management courses, the first and third, for a stronger focus on “Responsive Classroom” and individual behavior management strategies. Additionally, we will begin restructuring the second management course to continue to include a study of theorists but also to increase emphasis on classroom management strategies and building community.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Final Student Teaching Evaluation (Appendix E) | Outcome/Objective: Applies content and pedagogy for successful clinical practice

Implementation Description: Course changes: Classroom Management I, II, and III for more emphasis on "Responsive Classroom" strategies

Projected Completion Date: 05/2013
Responsible Person/Group: BSED Faculty
GUMS & Writing Mentor Program & ISCI 2001 Course Changes

Analysis of our 2010-2011 GACE Content Assessment sub-indicator percentages show that our scores are equal or above the state in all areas, except the lowest area on test 001: understand the conventions of Standard English grammar, usage, and mechanics was equivalent with the state score. In response to this outcome the program will implement supplemental instruction in grammar, usage, and mechanics, including structure (GUMS) beginning, fall 2012 for candidates who have been identified as needing further instruction in this area. Additionally, the Writing Mentor BSED Program has been developed to help students improve creative and procedural writing skills. Finally, our scores on test 002 are higher than the state except for one area, again the lowest state rated outcome: understand concepts and principles of earth science. We expect to see improvement in this area due to course changes in ISCI 2001 fall 2011; such as, increased emphasis on content development in earth and life sciences and collaboration between College of Arts & Sciences and College of Education faculty who implement co-teaching models of delivery. (2011-2012 ISCI 2001 Course Changes included in report)

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High
Relationships (Measure | Outcome/Objective):

- Measure: GACE Content Assessments in Early Childhood & Special Education
- Outcome/Objective: Demonstrates content knowledge

Implementation Description: Current BSED faculty co-teaching in ISCI 2001 will monitor course changes. GACE scores will be reviewed in May 2013. One load has been assigned to BSED faculty to implement the GUMS supplemental instruction as well as the Writing Mentor BSED Program.

Projected Completion Date: 05/2013
Responsible Person/Group: BSED Faculty

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The ECE BSED Program will continue to use the LiveText course management system to document, collect, analyze, and report program data. We revised our targets and data reports this year to include disaggregated data across all levels of the key assessment rubrics. In doing so, we clearly identified the percentage of teacher candidates exceeding, meeting, and not meeting standards. As a result of obtaining this information, we identified specific areas of program focus needed (described in Academic Question 2) to improve candidate performance and program effectiveness.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

ECE BSED Program changes are based on many factors including key assessment data, university and state policy, standards from professional organizations, and research. Decisions for program changes and improvements for the Early Childhood Bachelor of Science in Education consider all of these factors. 1. Content knowledge: A review of the GACE Content Assessments in Early Childhood Education (001, 002) scores and sub scores from all program candidates indicate that our candidates continue to be qualified in content area knowledge in Reading and English Language Arts, Social Studies, Mathematics, Science, Health, Physical Education and the Arts. The data continue to indicate that the Early Childhood Program of Study, course content and instruction, assignments, and field experiences effectively prepare our candidates to perform well on the state licensing tests. The Department of Early Childhood Education will continue to monitor and revise curriculum maps and multiple curriculum assessment data sources to continue alignment with GACE Content Assessment objectives, course objectives and content standards. Beginning fall 2010, we received approval of a program change which indicated that passing scores on the GACE Content Assessments in Early Childhood Education would no longer be a graduation requirement but would remain a requirement for recommendation for clear renewable certification in Early Childhood Education. The lower percentage points in the 2010-2011 data are evident due to this program change and now reflect all students who took the test. This program change allows us to see more clearly areas for program improvement. Additionally, GACE Content Assessments in Early Childhood Education are not a requirement for admission to Teacher Education or to Student Teaching. Analysis of our 2010-2011 sub-indicator percentages show that our scores are equal or above the state in all areas, the lowest area on test 001: understand the conventions of Standard English grammar, usage, and mechanics was equivalent with the state score. In response to this outcome the program will implement supplemental instruction in grammar, usage, and mechanics, including structure (GUMS) beginning, fall 2012 for candidates who have been identified as needing further instruction in this area. Finally, our scores on test 002 are higher than the state except for one area, again the lowest state rated outcome: understand concepts and principles of earth science. We expect to see improvement in this area due to course changes in ISCI 2001 fall 2011; such as, increased emphasis on content development in earth and life sciences and collaboration between College of Arts & Sciences and College of Education faculty who implement co-teaching models of delivery. (2011-2012 ISCI 2001 Course Changes) Finally, with the inclusion of a new Unit Level assessment data source, the Observation Field Performance, we noted that ECE program faculty and supervisors rated our candidates on Domain 1: Content and Curriculum as one of the highest scored domains. This additional measure to assess content knowledge as observed in field experiences and clinical practice is a performance-based assessment and is used to evaluate teacher candidates across all PEF Conceptual Framework indicators and is aligned to the Georgia Framework for Teaching. 2. Professional and pedagogical knowledge, skills, and dispositions: In review of the following key assessments, the Final Student Teaching Evaluation - Appendix E, the Observation Field Performance, and the Five Effective Dispositions of Effective Educational Professionals assessments, the department faculty, supervisors, and mentor teachers are pleased with the growth and development of the candidates across the four semester program. These key assessments have been administered across two academic cycles (3 year years of data each cycle) and results from data on these assessments show that our candidates have the professional and pedagogical knowledge, skills, and dispositions needed in becoming teachers. With the advancement to a new electronic course management and assessment system, LiveText, we are able to more effectively use rubrics and a deeper and deeper in evaluation of each candidate’s area of strength and area of needed improvement for a more comprehensive evaluation. Data from the Observations Field Performance assessment sub-indicators suggest that some of our candidates scored lower in using management strategies to engage and motivate learners. Since classroom management is an area that pre-service teachers typically need improvement in as noted in our data, we have restructured two of our classroom management courses, the
first and third, for a stronger focus on “Responsive Classroom” and individual behavior management strategies. Additionally, we will begin restructuring the second management course to continue to include a study of theorists but also to increase emphasis on classroom management strategies and building community. In an effort to increase pre-service teacher knowledge and skills in implementing technology for student learning, program faculty have embedded the NET Standards throughout program course work, designating specific assignments that will target this area. It had been noted by university supervisors, that pre-service teachers have sufficient knowledge and skills in implementing lessons that require teacher use of technology; however, more instruction in student use of technology for learning would be beneficial. In 2010-11, faculty collected preliminary data on pre-service teachers’ attitudes toward technology use in elementary classrooms Prek – 5th and findings were presented at the International Society for Technology in Education. We learned that while pre-service teachers are avid users of technology in their personal lives, they will need scaffolding to make connections for student use of technology in their future classrooms. This study led to the renaming and design of one literacy course in the BSED Program to emphasize technology and digital literacy: that is, ECE 3602: Digital Composing as Literacy Learning. Additionally, the ECE BSED Program created two full day seminars for pre-service teachers focused on Digital Composition. The program faculty collaborated with The Alliance Theatre and Young Audiences to introduce pre-service teachers to concepts and techniques for digital storytelling and composition. This initiative included working with film and sound editing software leading to a final project where pre-service teachers created and presented original multi-media projects. ECE BSED faculty also worked with the Center for Instructional Innovation at Georgia State University to develop a hybrid course version of ECE 3602 which was implemented spring 2012. The new hybrid course immersed pre-service teachers more fully in the use of technology, combining face to face meetings with online learning environments and practices. Program faculty and supervisors have also identified a need to provide additional support for teacher candidates in the area of professional writing. A pilot program, BSE Writing Mentor Support, developed by Early Childhood Education BSE faculty was studied in the 2010-2011 academic year. The BSE Program will continue to implement the Writing Mentor Program developed fall 2010 to provide one on one tutoring for candidates who need further development in writing as identified by program faculty and university supervisors. 3. Effects on Student learning: The Planning, Teaching, Learning Module, an individual project implemented during clinical practice (i.e., Student Teaching) provided evidence that our candidates accurately included specific data that identified student learning gains (or losses) for each student in their class as a result of their teaching. Additionally, candidates provided both a narrative and a graphic summary of student learning data, an analysis of the data, an explanation of the outcomes, and an appropriate plan for additional instruction based on the analysis of their results. When candidates failed to meet some of the requirements for this assessment, they typically needed to add a more detailed narrative summary or a missing component. Candidates have an opportunity to prepare for this assessment during Practicum III, prior to clinical practice, by developing a Planning, Teaching, Learning Sample, a similar, collaborative integrated project assigned in ECE 3605: Social Studies Methods in ECE and ECE 3360: Assessment of Classroom Learning in Early Childhood Education. Course instructors will continue to provide additional scaffolding in these courses in order to address these areas for improvement. With the addition of the assessment course to the Program of Study in Area G, our candidates are no longer failing in the Needs Improvement or Unsatisfactory range of the Final Student Teaching Evaluation on INTASC 8 Assessment of Student Learning; however, results from 2011-2012 data from this assessment and the Observation Field Performance assessment reveal that it is still an area that pre-service teachers struggle with and is typically rated the lowest. The Observation Field Performance assessment shows assessment as one of the lowest scored for a few candidates, particularly in involving learners in self-assessment. Supervisors typically rate candidates as “not observed” or “does not involve learners in self-assessment”. The role of instructional assessment as it relates to teaching and learning is a major focus of this Assessment course, ECE 3360, as well as methods for documenting student learning. Candidates examine various teacher-constructed and standardized instruments used to assess student learning and learn strategies for selecting and using assessment methods. A focus on pupil self-assessment will be added to course instruction. Finally, based on feedback from this data and University Supervisors’ ratings, course instructors have become more intentional in incorporating methods of assessment across specific content area course work. In order to continue to be responsive to the climate of accountability for P-5 student learning and to improve our candidates’ competencies in assessing P-5 student learning, this is a continued focus in the content area course work. The BSE program has been revised beginning fall 2010 to require the ESOL Endorsement for all “Traditional – non Dual Certification” Program students. This decision was made in an effort to address the changing demographics and pupil needs in metro Atlanta as noted in the ECE strategic plan and to improve preparation of pre-service teachers in the areas of planning for differentiated instruction and assessment. Faculty will continue to closely monitor these areas and note any differences in data upon the implementation of this program change.

Georgia State University

Assessment Data by Section

2011-2012 Early Childhood Education BSED (B-5)

As of: 12/12/2016 04:41 PM EST

(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose

The mission of Birth Through Five (B-5) is to provide an exemplary, interdisciplinary teacher preparation program for early care and education professionals, in order to positively impact the quality of programs for very young children in the urban metropolitan Atlanta region. The program prepares new teachers, current teachers or career changers for employment in varied settings with very young children (birth through Kindergarten) both typically developing and those with special education needs. Graduates of the program are well prepared for jobs as certified teachers, administrators, or early education specialists in the Birth Through Five and Preschool Special Education fields. Our program is committed to principles and practices that are respectful of the unique characteristics of the children, families, and teacher candidates with whom we work.

The B-5 program provides a unique collaboration with the Georgia System of Technical Colleges. A system-wide articulation agreement allows a pathway to the B-5 bachelor’s degree completion for students with an Associates Degree in Early Care and Education from an accredited technical college program. As of September, 2012 sixty-six (69) students have declared the B-5 major, with 24 graduates during the 2010-2011 and 2011-2012 academic years.

Goals

G 2: Pedagogical Knowledge and Skills

The teacher candidate will possess the pedagogical content knowledge and skills to plan and teach effectively.

G 3: Student Learning

The teacher candidate will use varied instructional strategies, assessment techniques and critical reflection to document children’s development and learning.

G 4: Professional Dispositions
The teacher candidate will work collaboratively with diverse professionals and display professional and ethical behaviors.

### G 1: Content Knowledge
The teacher candidate will possess the content knowledge necessary to understand the content in the curriculum they teach.

### Measures, Targets, and Findings

| **M 1: Evaluation of Field Performance (Clinical Practice) (O: 1)** | This measure rates the candidate's overall professional performance in the early childhood classroom. The measure/rubric is based on the 15 professional standards of the early care and education profession (NAEYC and CEC). At the completion of student teaching (clinical practice), teacher candidates must receive a rating from the university supervisor of "meets" or "exceeds" on each standard/element of the rubric. If a candidate does not receive a minimum rating of "meets," s/he will be required to extend or repeat student teaching with additional coaching and action plans until mastery of standards is demonstrated. |

**Source of Evidence:** Field work, internship, or teaching evaluation

**Target for O1: Demonstrates content knowledge**

</table>
documentation of children's learning. Candidates organize the portfolio based on the standards of the National Association for the Education of Young Children (NAEYC) and the Council for Exceptional Children (Division of Early Childhood DEC/CEC). Candidates submit assigned artifacts and rationales each semester for progress monitoring. The final portfolio evaluation is completed at the end of student teaching. One key component of the portfolio is the Documentation of Learning (DOL) Project that measures the candidate's impact on student learning. This project requires the candidate to document children's learning during a 10 day thematic unit implemented during student teaching. The portfolio rubric element that rates the candidate's performance on the DOL project is titled "impact on student learning." Rubric ratings are "exceeds expectations," "satisfactory," and "unsatisfactory."

Source of Evidence: Portfolio, showing skill development or best work

**Target for O3: Uses assessment methods to document student learning**

85% of teaching candidates will obtain "satisfactory" or "exceeds expectations" on the portfolio rubric rating for "impact on student learning." This rating includes scores on the Documentation of Learning (DOL) Project from 73 - 92 (satisfactory) or 93 - 100 (exceeds).

**Findings 2011-2012 - Target: Met**

92% of candidates (11/12) received ratings of "satisfactory" or "exceeds expectations" on the Documentation of Learning Project. This project is embedded in the B-5 professional portfolio and is rated under the indicator, "Impact on Student Learning." Seven (7) candidates received ratings of "exceeds expectations" with scores between 93-100 points. Four (4) candidates received ratings of "satisfactory" with scores ranging between 73 - 92. The overall project mean score was 4.6 / 5.0 Candidate demonstrated strong scores on "Assessment rationale and tools" (4.0), which is a key skill of the project. One candidate received a rating of "unsatisfactory." (72/100) as she did not upload all DOL project components into LiveText by the end of the semester deadline. The candidate did complete the components in a paper-based format.

**M 4: Dispositions Survey (O: 4)**

The College of Education administers an online survey to assess all teacher candidate's professional dispositions. The measure is called "Five Dispositions of Effective Educational Professionals." Candidates receive a rating from program faculty mid program and end of program. Ratings are as follows: Exceptional (4 pts), Acceptable (3 pts), Marginal (2 pts), Unacceptable (1pt).

Source of Evidence: Academic indirect indicator of learning - other

**Target for O4: Values and exhibits professional and ethical dispositions**

The achievement target is a mean rating of 3.0 on a 4.0 scale. This rating would indicate that B-5 teacher candidates demonstrated professional dispositions at the "acceptable" level at the end of program.

**Findings 2011-2012 - Target: Met**

All twelve (12) candidates met the target ratings and no candidate received any ratings of "unacceptable." The mean scores on the nine (9) dimensions of professional dispositions ranged from 3.50 – 3.83/4.0 points, with an overall mean of 3.66/4.0. Eleven of the 12 candidates were rated in the exceptional or acceptable range on all dimensions. One student was rated as marginal in two dimensions ("empathy," and "authenticity.")

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Report data for "completers" only or revise schedule of assigned standards**

This is a new program with no current "completers." The data for this outcome is for 12 candidates who are "in progress," rather than "completers." These candidates were not assigned standards for demonstrating professional and ethical practices in this assessment cycle. This is an unintended design flaw in this assessment; our attempts to provide "formative" data in Weave are incomplete. In the future, the program will report measures for "completers" only. Completers will have addressed all standards by the end of student teaching. Another possible solution would be to modify the schedule of assigned standards so that all outcomes have some data from the e-portfolio in the assessment cycle.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** Medium
- **Implementation Description:** Data for the e-portfolio will be presented for program completers when all standards have been assigned to meet learning outcomes.
- **Projected Completion Date:** 06/2010
- **Responsible Person/Group:** B-5 Program Coordinator
- **Additional Resources:** None
- **Budget Amount Requested:** $0.00 (no request)

**Report data for "completers" only or revise schedule of assigned standards**

This is a new program with no current "completers." The data for this outcome is for 12 candidates who are "in progress," rather than "completers." These candidates were not assigned standards for demonstrating their competence in family and community relations this assessment cycle. This is an unintended design flaw in this assessment; our attempts to provide "formative" data in Weave are incomplete. In the future, the program will report measures for "completers" only. Completers will have addressed all standards by the end of student teaching. Another possible solution would be to modify the schedule of assigned standards so that all outcomes have some data from the e-portfolio in the assessment cycle.

Report data for "completers" only or revise schedule of assigned standards

This is a new program with no current "completers." The data for this outcome is for 12 candidates who are "in progress," rather than "completers." These candidates were not assigned standards for demonstrating their competence in assessment this reporting cycle. This is an unintended design flaw in this assessment; our attempts to provide "formative" data in Weave are incomplete. In the future, the program will report measures for "completers" only. Completers will have addressed all standards by the end of student teaching. Another possible solution would be to modify the schedule of assigned standards so that all outcomes have some data from the e-portfolio in the assessment cycle.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):

Measure: Portfolio (Documentation of Learning) | Outcome/Objective: Uses assessment methods to document student learning

Implementation Description: Data for the e-portfolio measure will be presented for program completers when all standards have been assigned to meet learning outcomes.

Projected Completion Date: 06/2011
Responsible Person/Group: B-5 Coordinator
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Course assignment will be redesigned

There are three indicators on the IEP/IFSP project rubric where more than 85% of candidates received ratings of "beginning," which is below the achievement target. These indicators are: "provides statement of environments other than natural or general education classroom," "identifies the person responsible for implementation," and "provides for transition planning." Among these three indicators, over half of the candidates (61%) scored below expectation in "provides for transition planning." An analysis of the student work and rubric ratings revealed that students did not follow the specific guidelines in the assignment or use the rubric to insure that all indicators/elements were included in the project. It was determined that the lower ratings did not result from students lack of knowledge of these indicators. The course instructor has determined that a suitable action plan will be to give students a specific template with all indicators/elements to be filled in. This template, along with the assignment instructions and rubric, should assist the candidates in providing all required project components. Additionally, the students will have two courses to work on the IEP/IFSP (EXC 4530/EXC 4520). It is expected that their scores will improve in the second course, although assessment data will only be reported from one course EXC 4530 (these courses are not required to be taken sequentially).

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Implementation Description: Redesign assignment materials and extend opportunities to work on the assessment over two courses.

Projected Completion Date: 06/2011
Responsible Person/Group: EXC 4530, EXC 4520 Course Instructor
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Revise assessment and extend assessment over two courses

There are three indicators on the IEP/IFSP project rubric where more than 85% of candidates received ratings of "beginning," which is below the achievement target. These indicators are: "provides statement of environments other than natural or general education classroom," "identifies the person responsible for implementation," and "provides for transition planning." Among these three indicators, over half of the candidates (61%) scored below expectation in "provides for transition planning." An analysis of the student work and rubric ratings revealed that students did not follow the specific guidelines in the assignment or use the rubric to insure that all indicators/elements were included in the project. It was determined that the lower ratings did not result from students lack of knowledge of these indicators. The course instructor has determined that a suitable action plan will be to give students a specific template with all indicators/elements to be filled in. This template, along with the assignment instructions and rubric, should assist the candidates in providing all required project components. Additionally, the students will have two courses to work on the IEP/IFSP (EXC 4530/EXC 4520). It is expected that their scores will improve in the second course, although assessment data will only be reported from one course EXC 4530 (these courses are not required to be taken sequentially).

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Implementation Description: The instructor will revise the assessment template and students will have the opportunity to document their performance in developing an individualized educational plan for a young child with special learning needs over two semesters, rather than just one.

Projected Completion Date: 12/2011
Responsible Person/Group: EXC 4530 instructor
Additional Resources: None
Budget Amount Requested: $0.00 (no request)

Rubric revised to clarify minimum level of performance

Going forward from fall, 2012, the IEP/IFSP rubric will be revised to reflect clearer levels of proficiency and passing scores: Mastery (29-32 points); Accomplished (25-28 points); Developing (24 points); Beginning (23 points or fewer). If a student receives 23 points or fewer, they will need to redo and resubmit the assignment until a passing score is obtained.

Established in Cycle: 2011-2012
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):

Measure: IEP/IFSP Project | Outcome/Objective: Plans effectively for development and learning

Implementation Description: EXC 4530 and EXC 4520 will revise syllabi according to the new assessment standard and scores.

Projected Completion Date: 09/2013
Responsible Person/Group: Course instructors revise syllabi; Program coordinator revises LiveText Rubric and Weave Measure

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process have your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

The student learning outcomes, assessment measures and achievement targets generally work well, however, several minor revisions to the assessments have been made as follows: Planning: IEPI/IFSP Project The assessment/measure for planning is the IEPI/IFSP project. This mid-program assessment evaluates the candidate's ability to plan for the special educational needs of the early childhood educator. Graduates of the program standards to be reached are detailed for the Preschool Curriculum Endorsement (3-5). Therefore, it is essential that our candidates have the knowledge, skills and dispositions to support special education services in the B-5 setting. Candidates have two opportunities to use the planning rubric, once for the IEP/IFSP project during fall semester (with a child below age three) and during spring semester for the IEP project (with a child age 3-5). Data is collected through LiveText for both projects. However, only the IEP Project in EXC 4530 Methods for Preschool/PreK/Exchange Children with Disabilities is used for the key assessment. Data for the 15-student cohort in EXC 4530 in the spring 2012 showed an overall mean score for the project of 3.6/4. This is a strong performance for candidates overall. The range of mean scores was 3.0 - 3.874/4 on eight dimensions of planning. The dimensions with the lowest means of 3.0 were: writing outcomes, goals and objectives; and transition planning. The dimension with the highest mean score (4.0) was: statement of student's strengths and needs, which is a core planning skill for this project. However, to reach "target" on this measure, candidates should receive ratings of "developing" or above. On five of the planning dimensions, at least one or more students received a lower rating of "beginning." The course instructor determined that these "beginning" ratings were due to incomplete/missing entries and a lack of following the assignment rubric closely, rather than skill deficiencies. This is the second year the instructor has provided more guidance in following the project rubric. Going forward from fall, 2012, the IEPI/IFSP rubric will be revised to reflect clearer levels of proficiency and passing scores: Mastery (29-32 points); Accomplished (25-28 points); Developing (24 points); Beginning (23 points or fewer). If a student receives 23 points or fewer, she/he will need to redo and resubmit the assignment until a passing score is obtained. Summary of proposed changes to improve candidate performance in LiveText: The project instructor will remind candidates that their candidate and/or program's professional dispositions was developed. The candidate did receive a positive rating at the end of student teaching in the area of "professional dispositions." The university supervisor's rating is uploaded in LiveText as the key assessment. The data for the 12 completers in 2011-2012 show five (54.1%) received an overall rating of "meets standard" (15 or more of 19 indicators rated as exceeds). Seven (7/58%) candidates received an overall rating of "meets standard" (14 or fewer of 19 indicators rated as exceeds and no ratings of not met). No candidates received a rating of "does not meet standard." Candidates who do not meet standards are provided with a professional action plan that may include additional support (e.g. extra office hours, conferences, etc.). The program coordinator will examine the individual checklists to see if there is a pattern of lower ratings on specific indicators. If no trend is noted, program faculty and university supervisors can provide additional focus on these performance indicators. Another finding is that for the three indicators that specify "working with families," the rating of "No opportunity to observe" (i.e. the student was not selected by the mentor teacher and supervisor (a rating of N/A does not affect the candidate's score). Student teaching should afford candidates many opportunities to interact with families, especially in early care and education settings (daily conversations during drop off/pick up, parent conferences, family nights, newsletters, etc.). This family and community connection is not happening in all placements. The B-5 Advisory Committee, along with the instructor for BRFV 4400, will design specific strategies/assignments for the candidate to use to support family and community connections during student teaching. Candidates will also be required to include these family-centered strategies/assignments as artifacts in their professional portfolios which is reviewed for the third and final time during clinical practice. Professional Dispositions: Survey Candidates are rated at two transition points on professional dispositions (midpoint and endpoint). The data table shows 12 candidates rated at endpoint (student teaching semester) on a 9-dimension survey of professional dispositions. All candidates met the target ratings and no candidate received any ratings of unacceptable. The mean scores on the nine professional dispositions dimensions ranged from 3.50 – 3.83/4 points. Eleven of the 12 candidates were rated in the exceptional or acceptable range on all dimensions. One student was rated as marginal in two dimensions ("empathy," and "authenticity."). These ratings were largely due to dispositions displayed in college classes with peers or instructors, and not with students, parents, or mentor teachers in field experiences or clinical practice. The candidate met with the course instructor and program coordinator for a Notification & Documentation conference. An action plan for improvement in the relevant professionalism dispositions was developed. The candidate did receive a positive rating at the end of student teaching in the area of "professionalism" on the evaluation of field performance. Summary of proposed changes to improve candidate and/or program performance: The program coordinator will continue to monitor mid-point dispositions ratings. Any candidates receiving ratings of "marginal" or "unacceptable" will be scheduled for a Notification & Documentation conference and a professional action plan. The program coordinator will review the end-point dispositions ratings for improvement or further action plans. Impact on Student Learning: DOL Project The Documentation of Learning (DOL) project was added to the Professional Portfolio as a more refined measure of candidates' efforts on student teaching. The project documents the candidate's ability to plan, teach and assess very young children's learning and development during a 10-day thematic unit during student teaching. Candidates upload artifacts in LiveText and present them during a face-to-face benchmark conference at the end of student teaching. The "evidence" of child learning is presented through developmentally appropriate formats, such as child portfolios, photo documentation boards, child interviews, and KWHL charts (captures the learning process through children's input). For the infant through Kindergarten age group, these pre-post assessment formats are more appropriate than pre-post testing. The DOL project was rated by the candidate at the 100 point grading sheet. The DOL is then rated as part of the professional portfolio in LiveText as the dimension labeled "Impact on Student Learning." Data for the 12 completers in 2011-2012 show scores ranging from 72-100/100 points with an average score of 91. The assessment target of 80/100 was met by all but one candidate. Rubric ratings show that seven candidates were rated as "meets expectations," four were rated as "satisfactory," and one student received an "unsatisfactory" rating due to incomplete or missing components in LiveText. Summary: To improve candidate and/or program performance for the DOL project is an effective measure of candidate's effects on student learning. No changes in the assessment will be made at this time. However, the program coordinator and university supervisors working with the candidates will need to insure that all candidates upload artifacts into LiveText in order to meet the target standard.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements in the assessment process will you make in the coming academic year?

The Birth Through Five program is still relatively new (2009) with only two assessment cycles completed. While the process has
identified several areas to ‘tweak’ in the assessment system, data have not revealed areas where significant revisions to curriculum, courses, or course sequence is needed. However, one observation that will be further studied concerns the lower scores on the measure, Evaluation of Field Performance (End of Program). We have noticed that student teaching interns do not consistently score as well on indices of working collaboratively with families, or incorporating family and community into the curriculum or learning process. Either student teachers are not having the opportunity to work as closely with families/community as we had hoped during student teaching or they are not able to maximize these opportunities. After discussing this issue at our B-5 Advisory Committee meetings, the course instructor for BRFV 4400 Family and Community Relations has agreed to design several assignments that could be more helpful to student teachers in building connections with families/communities.

Mission / Purpose

Normal 0 false false false The Educational Specialist major in Early Childhood Education is a degree program planned to develop classroom teachers through collaborative inquiry and action research. This applied program's primary purpose is to extend the academic and teaching skills of experienced classroom teachers to foster application of these skills in their classrooms and schools. As a cohort, participants collaborate with university faculty and each other to do work inside and outside their schools and classrooms. Successful completion of the program leads to an Ed.S. degree and a Teacher Support Specialist (T.S.S.) endorsement. Successful graduates may also apply 18 credit hours toward the Ph.D. program in Early Childhood Education after admission to the doctoral program. The Teacher Support Specialist (TSS) Endorsement program in Early Childhood Education is one of five endorsements offered through the Department of Early Childhood Education (ECE). Revised in 2007, the Ed.S.TSS program concentrates on training teachers to become teacher researchers who use data to inform their policies, procedures, and practices. The TSS program maintains the elements reported by ECE Ed.S. graduates as essential including a commitment to a cohort model, constructivist theory, and the exploration of classroom and school-based research as a way for teachers to observe and study the effects of teaching and learning changes made in their classrooms. Program assessment and evaluation components are refined and guided by the standards of the National Association for the Education of Young Children (NAEYC), National Board of Professional Teaching Standards (NBTPS) and Georgia State University (GSU) Professional Education Faculty (PEF) Conceptual Framework.

Philosophy

The educational specialist program is based on the assumption that learning is a constructive process that builds on the knowledge and experience of the learner. Through an integrated approach that provides choices and opportunities for decision making and dynamic group interactions, the program is designed around academic givens so that content areas have blurred edges, and participants partner with faculty to shape the paths by which content is learned. Certain beliefs characterize this program:

All teachers can lead and contribute to accomplishing the work of the school.

- All teachers can lead and contribute to accomplishing the work of the school.
- Constructivism is the primary basis of learning for children, adults, and organizations.
- Learning is facilitated by student choice.
- Instructors use instructional methods that are linked to and that model the way students learn.
- Instructors’ roles facilitate learning.
- Multiple continuous assessment procedures are necessary.
- The university involves faculty and students in developing the teacher education program based on the needs of the students and the professional judgment of the faculty.
- Learning and teacher education curriculum must be fundamentally connected to the community, families, school and classroom.
- Teachers/educators promote classroom/school research as a way for teachers to explore the effects of changes made in their classrooms/schools.
- Patterns of relationships form the primary bases for human growth and development.
- Schools should be organized to foster shared responsibility for school governance, for professional growth, and for achievement of agreed upon goals.
- Teachers have the potential to be change agents who challenge the systems that that limit the access, opportunities and development of young children and their families.

With these beliefs as the core, this program provides opportunities for teachers to explore classroom and school-based research as a way for teachers to observe and study the efforts of teaching and learning changes made in their classrooms. Their primary professional responsibilities are to become change agents, researchers and leaders who use data to inform their policies, practices, procedures, and epistemologies.

The vision of the ECE Ed.S program is aligned with the vision of the GSU Professional Education Faculty (PEF) to provide international leadership in educational research and to create and implement exemplary educational programs in metropolitan areas. The PEF envisions a world that embraces diversity; where social justice, democratic ideals, and equal opportunity can be increasingly enacted; and where technology is used to enhance opportunities for human development. The PEF believes that all people should be lifelong learners. Three themes permeate the ECE TSS program that meet this vision: Teacher as Researcher, Teacher as Professional Learner, and Teacher as Learner Centered Practitioner.

Mission:

The mission of the Ed.S. program is aligned with the mission of the GSU PEF, which represents a joint enterprise within an urban research university between the College of Arts and Sciences and the College of Education, working in collaboration with P-16 faculty from diverse metropolitan schools. Grounded in these collaborations, the mission of the Ed.S. program in Early Childhood Education is to prepare educators who are:

- informed by research, knowledge and reflective practice;
- empowered to serve as change agents;
• committed to and respectful of all learners; and
• engaged with learners, their families, schools, and local and global communities.

**Goals**

**G 1: Teachers as Researchers**
Normal 0 false false false MicrosoftInternetExplorer4 Successful candidates in the Ed.S. program are researchers and leaders who use data to inform their policies, practices, procedures and beliefs.

**G 2: Teachers as Learner-Centered Practitioners**
Normal 0 false false false MicrosoftInternetExplorer4 Candidates in the ECE Ed.S. program are learner-centered practitioners who build on the knowledge and experience of the learner and have the knowledge, skills and dispositions needed to serve as effective educational leaders and decision makers in their schools and communities. Thus, learning and teacher education curriculum in the Ed.S program are fundamentally connected to the school and classroom.

**G 3: Teachers as Professional Learners**
Normal 0 false false false MicrosoftInternetExplorer4 The third goal for the program is to develop the habits of maintaining learning as a lifelong process. Candidates in the Ed.S. program are able to adapt to the changing needs of the school and their own growth as quality educators. Doing so requires the development of the understandings and skills needed to discover the answers to ongoing educational issues through learning challenges and opportunities.

**Student Learning Outcomes/Objectives**

**SLO 1: Shows commitment to learning and development (M: 1, 4, 6)**
Normal 0 false false false MicrosoftInternetExplorer4 Candidates in the Ed.S. program will be able to adjust their practice according to learners’ individual differences based on their understanding of how learners develop. Candidates will be able to use this knowledge to make decisions about how to teach and treat learners equitably. An educator’s mission extends beyond developing the cognitive capacity of their learners to address the needs of the whole child and the development of a nurturing learning environment.

Relevant Associations: NAEYC; NBPTS #1; PSC Standard Domain: Effects on P-12 Learning

**SLO 2: Applies expertise for learning and development (M: 2, 4, 5, 6)**
Normal 0 false false false MicrosoftInternetExplorer4 Candidates will be able to appreciate how knowledge in their subject is created, organized and linked to other disciplines. Candidates will be able to use their specialized knowledge about how to convey content to learners and generate multiple paths to learning.

Relevant Associations: NAEYC; NBPTS #2; PSC Standard Domain: Content Knowledge

**SLO 3: Manages and monitors student learning/development (M: 1, 2, 5)**
Normal 0 false false false MicrosoftInternetExplorer4 Candidates will be able to call on multiple methods to meet clearly defined goals. Candidates will be able to orchestrate learning in different groupings and settings while placing a premium on learners’ engagement and maintaining regular assessment of their learners’ progress.

Relevant Associations: NAEYC; NBPTS #3; PSC Standard Domain: Clinical Practice

**SLO 4: Reflects on & learns from professional experience (M: 3, 4, 5)**
Normal 0 false false false MicrosoftInternetExplorer4 Educators are models for life-long learning, exemplifying the ideals they seek to inspire in others. Educators seek advice from others and draw on educational research and scholarship to improve their practice and make principled judgments.

Relevant Associations: NAEYC; NBPTS #4; PSC Standard Domain: Planning, Content Knowledge

**SLO 5: Participates in professional learning communities (M: 1, 3, 4)**
Normal 0 false false false MicrosoftInternetExplorer4 Candidates will be able to collaborate with other professionals to make schools more effective. Candidates will be able to find ways to work collaboratively with parents and caregivers engaging them in the work of the school in multiple ways and through creative avenues. Candidates will be able to take advantage of a school’s surrounding community as a resource for learning.

Relevant Associations: NAEYC; NBPTS #5; PSC Standard Domain: Planning, Clinical Practice

**Measures, Targets, and Findings**

**M 1: Disposition Survey (NBPTS) (O: 1, 3, 5)**
Normal 0 false false false MicrosoftInternetExplorer4 Prior to 2010, dispositions were measured using the NBPTS Advanced Program Survey. Each TSS participant was rated by the Ed.S. program faculty using a scoring guide from 1.0 (Not demonstrated) to 5.0 (Advanced). Six items (see list for Fall 2009) comprised the disposition questions for 2009, 12 items for 2007 and 2008. Target for disposition measure is at the Intermediate (4->) level at midpoint and Advanced (5) at the end of the program. Beginning in Summer 2010, the COE adopted a new disposition measure. The Dispositions Survey[1] is built upon National Board of Professional Teaching Standards (NBPTS) based upon the Five Core Propositions: 1: Teachers are Committed to Students and Learning 2: Teachers Know the Subjects They Teach and How to Teach Those Subjects to Students 3: Teachers are Responsible for Managing and Monitoring Student Learning 4: Teachers Think Systematically about Their Practice and Learn from Experience 5: Teachers are Members of Learning Communities Program instructors rate EdS candidates on five dispositions using formative and summative data collected throughout the program at two transition points (midyear-end of fall semester and end of program-summer 2/follow through). The Likert rating includes: 1= Unsure means that the rater (self or other) is not sure if the student holds the disposition, 2= Emerging means that the rater (self or other) has seen evidence of the disposition. 3= Developing means that the student is aware of the disposition and values it. 4= Strength means that the disposition is a pervasive trait of the student. Source of Evidence: Professional standards [1] The Dispositions Survey was adapted from Usher, L., Usher, M., & Usher, D. (2003). Five dispositions of effective teachers. Paper presented at the 2nd National Symposium on Teacher Dispositions. November 20-21, Richmond, KY.
Target for O1: Shows commitment to learning and development

Each EdS participant is rated by the Ed.S. program faculty in team discussions on elements using the following rubric at the end of the fall semester. Targets: Midyear-Intermediate (4>) End of the Program-Advanced (5>)-old measure Midyear-Acceptable (3>)
End of the Program-Exceptional (4>)-new measure We increased the achievement targets this year from 3 to 4 for the midpoint and 4 to 5 for end of the program completion.

Findings 2011-2012 - Target: Met

Findings (2011-2012) (data table attached) The majority of EDS program completers were rated at acceptable or Exceptional on all five dispositions at the midpoint assessment in Fall 2011. No unacceptable ratings were reported. At midpoint assessment, some students were rated as marginal on Positive View of Self and Meaningful Purpose and Vision. At the midpoint, candidates are often required to critically analyze their teaching methods and philosophy. Hence it is expected that they would be rated as they were. Throughout the program, candidates become increasingly confident about their teaching while developing a more meaningful purpose and vision for the work they do. All program completers met the standards set for the EDS-TSS program degree and endorsement.

Target for O2: Applies expertise for learning and development

An overall Likert score of 4.0 or better is expected for all supervisors.

Findings 2011-2012 - Target: Met

On average, student interns rated the EdS teachers who served as their supervisor on average 5 out of 5; ratings represent placements and supervision during the Fall 2011 semester. All student evaluations were used to calculate the mean. Data for the last years is provided for comparisons. Data Table ECE Preservice Teachers of ECE EDS Supervisors Summer 2010 Program Completers Supervision Fall 2009 (n=17) Summer 2011 Entries Supervision Fall 2010 (n=6) Average 4.574 4.92 Minimum 2.833 4.50 Maximum 5.0 5.0

Target for O4: Reflects on & learns from professional experience

Normal 0 false false false MicrosoftInternetExplorer4 The academic performance of all students is evaluated toward the end of the fall semester when the summative report is due.

Findings 2011-2012 - Target: Met

All TSS program completers met endorsement standards 1 through 6 as evidenced by a grade of B or better (50 out of 60 points required) on the supervision summative report. As the program has moved to the adoption of Livetext for the assessment data warehouse we have adjusted the rubric for this key assessment to be more sensitive to the recommended 4 point scale and aligned with the new COE conceptual framework. This new rubric went into effect Fall 2011 and totals 60 points across 4-point scale from proficient (4) to beginning (1) with a "not met" option.

Target for O5: Shows commitment to learning and development

Normal 0 false false false MicrosoftInternetExplorer4 The capstone experience is designed by faculty and participants to provide final reflection and documentation of an individual's work and accomplishments toward program objectives. As the culminating experience, it incorporates: self- and peer- assessment, reflection, and presentation of action research project to an outside audience.

Findings 2011-2012 - Target: Met

Of the 17 students who completed the program and the Capstone Project in Summer 2012, 100% met the target and completed their projects satisfactorily. The EDS program goal was met for the Capstone project of at least 80% of students receiving a S or better. Using a final grade of S/U, based on the rubric points, the Ed.S. faculty have determined that the measure is more descriptive and useful than the letter grades that were used previously.
The goal of action research is for teacher-researchers to solve educational problems by engaging in a systematic process of inquiry. This process enables teacher-researchers to make informed decisions at both the classroom and school level. In the Ed.S. program, each participant conducts an action research project in the classroom or school thereby bridging theory and practice. The project enables candidates to solve an educational problem as well as encourages the role of reflective practitioner. The project begins during the first semester and is carried out throughout the Ed.S. program. During spring term Ed.S. participants share the action research with an educational community. Final research reports are due in summer 2.

Source of Evidence: Project, either individual or group

**Target for O2: Applies expertise for learning and development**

Students are assessed using a rubric that details quality performance across categories required in the project. A total of 100 points are given. Target is B or better on the project (B3+). Program target is that 80% of participants will achieve this target.

**Findings 2011-2012 - Target: Met**

Target was met for this assessment. 94 percent of students received a B or higher on the final assessment rubric for the Action Research Project. Measures for assessing students’ performance on the first two parts of the action research project indicate that this is a good measure. The instructions, rubric and extensive clarification and feedback help students to achieve the targets set for them. All students met the goal for the Literature Review and one student did not meet the target for the Action Research Proposal. This student was offered additional support throughout the summer 4 semester. Of the 17 students who completed the program in Summer 2012, 94% met the target criterion and made a B or better on their Action Research Project.

**M 6: Content GPA (O: 1, 2)**

Normal 0 false false false MicrosoftInternetExplorer4 The content knowledge GPA is computed every semester with the expectation that the student maintain a 3.0 or better during the program. This assessment is directly related to the PSC/NBPTS standards. Discrete assessment data is used in the courses and designed to ensure these standards are assessed. Two GPAs are calculated. The first content GPA is for the TSS Endorsement and is calculated using final grades for the two key courses (ECE 8400, ECE 8800) and provides evidence of meeting TSS standards. This GPA is determined for the current cohort at the midpoint in the program and after completion of the two TSS specific courses each fall term. The second content GPA is calculated using the content program courses (ECE 8100, ECE 8200, ECE 8400, ECE 8410, and ECE 8920), the internship (ECE 8800), the capstone (ECE 8800), and the elective (ECE 9850) are not used in the overall content GPA as a key assessment for program completion. The overall content GPA is calculated after completion of all coursework, typically at the end of the summer 2.

Source of Evidence: Academic direct measure of learning - other

**Target for O1: Shows commitment to learning and development**

Normal 0 false false false MicrosoftInternetExplorer4 The academic performance of all students is evaluated after each semester (summer 1, fall, spring, summer 2). Criterion for program continuation includes maintaining a GPA of 3.0 or better. Students who fall below this meet with program faculty and set up an action plan for remediation.

**Findings 2011-2012 - Target: Met**

All program completers met content standards as evidenced by a GPA of 3.0 or better.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

#### Action Research Cycle

Data reported here represents program completers from summer 2008. Shift cycle to match PSC for 2009-2010 and participants who enter summer 2009 and complete coursework in summer 2009, fall 2009, and spring 2010. There will be no expected program completers for next report cycle as this group will not complete the action research project until summer 2010 and will be counted in the next round.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High

| Relationships (Measure | Outcome/Objective): |
|-----------------------|
| Measure: Action Research Project | Outcome/Objective: Applies expertise for learning and development |

- **Projected Completion Date:** 04/2010
- **Responsible Person/Group:** Program Director

#### Capstone Cycle

Data reported here represents program completers from summer 2008. Shift cycle to match PSC for 2009-2010 and participants who enter summer 2009 and complete coursework in summer 2009, fall 2009, and spring 2010. There will be no expected program completers for next report cycle as this group will not complete the capstone until summer 2010 and will be counted in the next round.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High

| Relationships (Measure | Outcome/Objective): |
|-----------------------|
| Measure: Capstone Experience | Outcome/Objective: Shows commitment to learning and development |

- **Projected Completion Date:** 04/2010
- **Responsible Person/Group:** Program Director

#### Electronic Worksamples

The program is moving to pilot a system for electronic collection of work samples and key assessments for the program for future management, analysis and reporting purposes. The program will pilot livetext with ECE 8800 in summer 2010 to meet this goal.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Supervision Summative Report | Outcome/Objective: Reflects on & learns from professional experience

Projected Completion Date: 05/2010
Responsible Person/Group: Program Director

STARS Survey
Revise use of STARS survey with new unit conceptual framework.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Disposition Survey (NBPTS) | Outcome/Objective: Shows commitment to learning and development

Projected Completion Date: 07/2009
Responsible Person/Group: Program Director

Achievement Targets
Inclusion of the preservice teachers ratings of supervisors has provided useful information on how our students perceive their supervisors and whether they are applying the skills associated with the TSS standards. However, the program faculty need to determine better achievement targets that indicate supervision quality.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Evaluation of Ed.S. Supervisor by Intern | Outcome/Objective: Applies expertise for learning and development

Projected Completion Date: 04/2011
Responsible Person/Group: EdS program Coordinator

New Disposition Measure
STARS Survey as Measure Aligned with NBPTS: We increased the achievement targets this year from 3 to 4 for the midpoint and 4 to 5 for end of the program completion. Doing so provided more variability but not enough to be able to use discrete data to make program changes (standard deviations among items ranged from 0 to 0.45 but averaged around 0.25). This is, in part, due to the fact that each item must be scored in whole units. We concluded that the STARS survey does not serve adequate assessment purposes and have decided to only use the disposition items from the previous survey for the time being as we explore additional measures (have included these in this report). Currently, the disposition survey is housed using livetext. In addition, the disposition item 2.1, program completers did not meet achievement target: Only 73% of the program completers (summer 2009) met the achievement target for item 2.1 on the disposition survey. The current group was assessed on this same item in fall 2009 and all met the target. Program faculty need to discuss and analyze this item and to other disciplines and possible explanations for the differences in the two groups in response to program and curriculum changes made.

Established in Cycle: 2009-2010
Implementation Status: Planned
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Disposition Survey (NBPTS) | Outcome/Objective: Shows commitment to learning and development

Projected Completion Date: 04/2011
Responsible Person/Group: EdS Program Coordinator

Composite Assessment Plan
Program faculty will explore how to integrate key assessments to provide better data with fewer instruments. Content GPA will be reconsidered in review of the overall assessment plan.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Low

Relationships (Measure | Outcome/Objective):
Measure: Content GPA | Outcome/Objective: Shows commitment to learning and development

Projected Completion Date: 06/2012
Responsible Person/Group: Program Coordinator - Rhina Williams

Improving Empathy Disposition
Based on the assessment data for this year, we intend to implement the following changes to improve the Ed.S. Program. The disposition survey indicated that the students had a low overall score on “Empathy” at the midpoint assessment. To rectify this, we intend to be more explicit and intentional with the students about our assessments of their dispositions. At the start of the Fall semester, 2011, each student was given a copy of the NBPTS Dispositions Survey. Each faculty member will be considering ways in which the NBPTS Dispositions can be addressed and developed throughout their courses. ECE 8100 and ECE 8200 are particularly well matched for having students explore and develop their dispositions. An additional change is that Funds of knowledge is now included as a component of ECE 8680.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Disposition Survey (NBPTS) | Outcome/Objective: Shows commitment to learning and development

Projected Completion Date: 06/2012
Use of Intern Ratings
Program faculty discussed the benefits of the intern ratings of Ed.S. supervisors. Need to explore how to use the ratings for curricular improvements.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: Medium
Relationships (Measure | Outcome/Objective):
  Measure: Evaluation of Ed.S. supervisor by Intern | Outcome/Objective: Applies expertise for learning and development

Projected Completion Date: 01/2012
Responsible Person/Group: Program Coordinator - Rhina Williams

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

Since the 2010-2011 assessment report, the following changes were made for the 2011-2012 cohort based on a survey of students as well as their general progress and performance throughout the program: 1. At the start of the Fall semester, 2011, each student was given a copy of the NBPTS Dispositions Survey. Each Ed.S. faculty member considering ways in which the NBPTS Dispositions could be addressed and developed throughout the courses. The instructor for ECE 8100 and ECE 8200 had students explore and develop their dispositions as needed during the courses. 2. The due date for the literature review was changed to a later date early in the spring instead of the Fall (semester 2) which was not conducive to giving them options about the topics in which they were interested. 3. ECE 8920 was moved to the fall semester and ECE 8410, was moved to the summer 1 semester to allow students to explore areas of interest and existing research prior to choosing a topic on which to focus as their area of study. 4. All Ed.S. candidates were paired with a Block 1 BSE student intern to streamline the process as all interns in Block 1 had similar assignments and schedules which were then easier for Ed.S. candidates to understand and follow. 5. Continue to use Funds of Knowledge in ECE 8400 so that the Ed.S. supervisor could learn more about the BSE student intern from a cultural perspective.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

**The Ed.S. program was put on hold for the academic year 2012-2013 and students were admitted separately for a TSS Endorsement only. The findings from the assessments indicate that all targets for the Ed.S. program were met. Should the program continue, the following changes, based on student surveys, will be implemented to improve the program: 1. 1. An additional whole group meeting will be added at the end of the ECE 8800 Capstone course in which students would share their completed projects and reflections with each other to create opportunities for sharing ideas and resources. 2. Although all targets were met on the Dispositions Survey, the program faculty determined that Ed.S. candidates needed to take ownership of the development of these dispositions. In the future, this work could be approached more intentionally through the Book Groups in ECE 8410 as well as in ECE 8200. 3. Continue to align supervisor expectations with BSE student interns and build more support for Ed.S. candidates by offering them more time with veteran supervisors.

Georgia State University
Assessment Data by Section
2011-2012 Early Childhood Education MEd
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
The Collaborative Master’s Program (CMP) provides a unique approach to educational graduate studies, unparalleled in the nation. Educational equity and student-focused teaching are guiding tenets of the program. We believe students from all backgrounds should have equal access to quality instruction, resources, and other educational opportunities. Each year we invite teachers from the metropolitan Atlanta area to explore the practices, ideas, and beliefs which guide and direct their teaching. In line with our focus on educational equity, teachers consider questions such as, How do my lived experiences impact how I view my students, how my students learn, and their families? What does teaching for educational equity look like? Why is there an achievement gap? Are the interests of my students reflected in my instruction? Our focus on student-centered teaching asks teachers to consider questions such as, Why do I teach the way that I do? When are my students engaged in learning? Does my instruction meet the needs of all of my students? During the year-long program, teachers engage in rigorous study, debate, and research focused on improving their teaching and their students’ learning. The teachers’ classrooms are the contexts for their work. Their classrooms are their laboratories. The teachers are guided by faculty who are educators and researchers.

Goals
G 1: Students will become empowered
Students will become empowered as instructional decision makers.

G 2: Students will advocate for their classroom students’ instructional needs
Students will advocate for instruction that addresses the needs of their classroom students.
G 3: Students will advocate for educational justice
Students will advocate for educational justice for all students.

**Student Learning Outcomes/Objectives**

**SLO 1: Educators manage and monitor student learning. (M: 3)**
The Teacher Development Rubric assesses the students content knowledge, pedagogical knowledge, planning, and effects on student learning through their performance on two program activities that focus directly on the teacher's in-classroom practice: faculty classroom visits and teacher video clubs.
Relevant Associations: This objective is from National Board Performance Teaching Standard

**SLO 2: Educators demonstrate subject matter knowledge. (M: 2, 3)**
Educators have mastery over the subject(s) they teach and the skill and experience in teaching the subject(s).
Relevant Associations: This outcome is from National Board Teaching Performance Standards

**Other Outcomes/Objectives**

**O/O 3: Educators reflect on their practice. (M: 1, 2)**
Educators critically examine their practice on a regular basis to deepen knowledge, expand their repertoire of skills, and incorporate new findings into their practice.
Relevant Associations: This objective is from NBPTS

**O/O 4: Educator will collaborate with peers and others. (M: 2)**
Educators collaborate with others to improve student learning and they know how to work collaboratively with parents.
Relevant Associations: This objective is from NBPTS

**O/O 5: Educator will show commitment to student learning. (M: 2)**
Educators are dedicated to making knowledge accessible to all students. They believe all students can learn and they understand how students develop and learn. They respect the cultural and family differences students bring to their classroom.
Relevant Associations: This objective is from NBPTS

**Measures, Targets, and Findings**

**M 1: Benchmark (O: 3)**
The "Impact of Program Rubric" assesses the candidate's perception of how the CMP program impacted his/her views of teaching and learning. Assessment of candidate's occurs twice during the program—end of Spring semester, via Benchmark assignment, and then at the end of the second summer semester, via a Capstone assignment. The rubric is aligned with the PEF Conceptual Framework and the NBPTS graduate teaching standards. Specifically, the rubric assesses the candidate's: (a) knowledge of child-centered pedagogy (Conceptual Framework standard: 1.1, 1.2 and NBPTS Standard: 1, 2, 3) (b) knowledge of the content (Conceptual Framework standard: CF.1.1, 1.2 and NBPTS Standard: 2, 4) (c) ability to monitor and manage student learning; (Conceptual Framework standard: 1.3, 2.2, 3.1, 3.2; NBPTS Standard: 3) (d) to think systematically about their practice and learn from performance (Conceptual Framework standard: 1.2, 1.3, 2.3 and NBPTS Standard: 4) (e) participation in a learning community (Conceptual Framework standard: 2.2, 2.3, 3.1, 3.2, 3.3, and NBPTS Standard: 5).
Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Educators reflect on their practice.**
Benchmark The Benchmark is a mid-program personal written reflection that: (1) identifies three ways the program has altered personal conceptions of teaching and learning (2) provides specific examples which demonstrate the change, and (3) reflects on how these changes have impacted personal conceptions of teaching and learning. The rubric has the following four proficiency categories: Not Demonstrated, Novice/Independent; Intermediate, and Advanced. Scores were assigned on a 1-4, with 4 representing the Advanced category. Educators who have a total score between 2.0 – 4.0 are considered to have met the target performance. Mid-program Target: 2 (1-4 scale)

**Findings 2011-2012 - Target: Met**
Impact of Program Rubric I Benchmark Mid-program The candidates were assessed twice: mid-program with the Impact of Program Rubric I Benchmark and end-of-program with the Impact of Program Rubric II Capstone. The Benchmark is a mid-program personal written reflection that: (1) identifies three ways the program has altered personal conceptions of teaching and learning (2) provides specific examples which demonstrate the change, and (3) reflects on how these changes have impacted personal conceptions of teaching and learning. The rubric has the following four proficiency categories: Not Demonstrated, Novice/Independent; Intermediate, and Advanced. Scores were assigned on a 1-4, with 4 representing the Advanced category. Educators who have a total score between 2.0 – 4.0 are considered to have met the target performance. Mid-program Target: 2 (1-4 scale) Mid-program Analysis: Fourteen candidates were assessed with the Mid-program Impact of Program Rubric I Benchmark. For the six dimensions evaluated, the 14 candidates scored in either the Novice/Independent, Intermediate, Advanced. As such, all candidates met target. For items 1 (critically analyzes program
The “Impact of Program Rubric II Capstone” assesses the candidate’s perception of how the CMP program impacted his/her views of teaching and learning. Assessment of candidate's occurs twice during the program—end of Spring semester, via Benchmark assignment, and then at the end of the second summer semester, via a Capstone assignment. The rubric is aligned with the PEF Conceptual Framework and the NBPTS graduate teaching standards. Specifically, the rubric assesses the candidate’s: (a) knowledge of child-centered pedagogy (Conceptual Framework standard: 1.1, 1.2 and NBPTS Standard: 1, 2, 3) (b) knowledge of the content (Conceptual Framework standard: CF.1.1, 1.2 and NBPTS Standard: 2, 4) (c) ability to monitor and manage student learning; (Conceptual Framework standard: 1.3, 2.2, 3.1, 3.2; NBPTS Standard: 3) (d) to think systematically about their practice and learn from performance (Conceptual Framework standard: 1.2, 1.3, 2.3 and NBPTS Standard: 4) (e) participation in a learning community (Conceptual Framework standard: 2.2, 2.3, 3.1, 3.2, 3.3, and NBPTS Standard: 5).

**Target for O2: Educators demonstrate subject matter knowledge.**

The Capstone is similar to a Showcase Portfolio in that it includes written reflections, samples of educator's work while in the program as well as sample of their students’ work. All are included to demonstrate the educator's growth while in the CMP program. The rubric has the following four proficiency categories: Not Demonstrated, Novice/Independent; Intermediate, and Advanced. Scores were assigned on a 1-4, with 4 representing the Advanced category. Educators who have a total score 3.0 – 4.0 are considered to have met the target performance. Findings will be completed at the end of Summer Semester 2012 once the candidates turn in their Capstones. Target: 3 (1-4 scale)

**Findings 2011-2012 - Target: Met**

Fourteen candidates were assessed with the End-program Impact of Program Rubric II Capstone. For the six dimensions evaluated, the 14 candidates scored in either the Intermediate or Advanced categories. As such, all candidates met target. For items 1 (critically analyzes program experiences), 2 (reflects critically), and 4 (uses knowledge students' cultures) candidates scored in either Intermediate or Advanced Categories. For items 3 (professional literature) and 6 (uses technology), all candidates scored in the Intermediate category. For item 5 (includes required components) all students scored in the Advanced category. (See attached Item Analysis table.) Based on these results all of the candidates demonstrated in the areas assessed that they were impacted by the experiences in the program. Specifically, they met target as a consequence of their participation in a variety of program activities that promote reflection, in-class discussions about democratic practice, and in designing learner-centered experiences.

**Target for O3: Educators reflect on their practice.**

The Capstone is similar to a Showcase Portfolio in that it includes written reflections, samples of educator's work while in the program as well as sample of their students’ work. All are included to demonstrate the educator's growth while in the CMP program. The rubric has the following four proficiency categories: Not Demonstrated, Novice/Independent; Intermediate, and Advanced. Scores were assigned on a 1-4, with 4 representing the Advanced category. Educators who have a total score 3.0 – 4.0 are considered to have met the target performance. Findings will be completed at the end of Summer Semester 2012 once the candidates turn in their Capstones. Target: 3 (1-4 scale)

**Findings 2011-2012 - Target: Met**

The Impact of Program Rubric II Capstone assesses the candidate's perception of how the CMP program impacted his/her views of teaching and learning. Assessment for the end of program occurs at the end of the second summer semester, via a Capstone assignment. The rubric is aligned with the PEF Conceptual Framework and the NBPTS graduate teaching standards. Specifically, the rubric assesses the candidate’s: (a) knowledge of child-centered pedagogy (Conceptual Framework standard: 1.1, 1.2 and NBPTS Standard: 1, 2, 3) (b) knowledge of the content (Conceptual Framework standard: CF.1.1, 1.2 and NBPTS Standard: 2, 4) (c) ability to monitor and manage student learning; (Conceptual Framework standard: 1.3, 2.2, 3.1, 3.2; NBPTS Standard: 3) (d) to think systematically about their practice and learn from performance (Conceptual Framework standard: 1.2, 1.3, 2.3 and NBPTS Standard: 4) (e) participation in a learning community (Conceptual Framework standard: 2.2, 2.3, 3.1, 3.2, 3.3, and NBPTS Standard: 5). The rubric has the following four proficiency categories: Not Demonstrated, Novice/Independent; Intermediate, and Advanced. Scores were assigned on a 1-4, with 4 representing the Advanced category. Educators who have a total score 3.0 – 4.0 are considered to have met the target performance. Based on these results all of the candidates demonstrated in the areas assessed that they were impacted by the experiences in the program. Specifically, they met target as a consequence of their participation in a variety of program activities that promote reflection, in-class discussions about democratic practice, and in designing learner-centered experiences.

**Target for O4: Educator will collaborate with peers and others.**

The Capstone is similar to a Showcase Portfolio in that it includes written reflections, samples of educator's work while in the program as well as sample of their students’ work. All are included to demonstrate the educator's growth while in the CMP program. The rubric has the following four proficiency categories: Not Demonstrated, Novice/Independent; Intermediate, and Advanced. Scores were assigned on a 1-4, with 4 representing the Advanced category. Educators who have a total score 3.0 – 4.0 are considered to have met the target performance. Target: 3 (1-4 scale)

**Findings 2011-2012 - Target: Not Reported This Cycle**

The Impact of Program Rubric II Capstone assesses the candidate's perception of how the CMP program impacted his/her views of teaching and learning. Assessment for the end of program occurs at the end of the second summer semester, via a Capstone assignment. The rubric is aligned with the PEF Conceptual Framework and the NBPTS graduate teaching standards. Specifically, the rubric assesses the candidate’s: (a) knowledge of child-centered pedagogy (Conceptual Framework standard: 1.1, 1.2 and NBPTS Standard: 1, 2, 3) (b) knowledge of the content (Conceptual Framework standard: CF.1.1, 1.2 and NBPTS Standard: 2, 4) (c) ability to monitor and manage student learning; (Conceptual Framework standard: 1.3, 2.2, 3.1, 3.2; NBPTS Standard: 3) (d) to think systematically about their practice and learn from performance (Conceptual Framework standard: 1.2, 1.3, 2.3 and NBPTS Standard: 4) (e) participation in a learning community (Conceptual Framework standard: 2.2, 2.3, 3.1, 3.2, 3.3, and NBPTS Standard: 5). The rubric has the following four proficiency categories: Not Demonstrated, Novice/Independent; Intermediate, and Advanced. Scores were assigned on a 1-4, with 4 representing the Advanced category. Educators who have a total score 3.0 – 4.0 are considered to have met the target performance. Based on these results all of the candidates demonstrated in the areas assessed that they were impacted by the experiences in the program. Specifically, they met target as a consequence of their participation in a variety of program activities that promote reflection, in-class discussions about democratic practice, and in designing learner-centered experiences.
The rubric has the following four proficiency categories: Not Demonstrated, Novice/Independent, Intermediate, and Advanced. Scores were assigned on a 1-4, with 4 representing the Advanced category. Educators who have a total score 3.0 – 4.0 are considered to have met the target performance. Target: 3 (1-4 scale) Findings will be completed at end of Summer Semester 2012 when the candidates turn in their Capstones.

Target for O5: Educator will show commitment to student learning.

The Capstone is similar to a Showcase Portfolio in that it includes written reflections, samples of educator's work while in the program as well as sample of their students’ work. All are included to demonstrate the educator's growth while in the CMP program. The rubric has the following four proficiency categories: Not Demonstrated, Novice/Independent; Intermediate, and Advanced. Scores were assigned on a 1-4, with 4 representing the Advanced category. Educators who have a total score 3.0 – 4.0 are considered to have met the target performance. Target: 3 (1-4 scale)

Findings 2011-2012 - Target: Not Reported This Cycle

The Impact of Program Rubric II Capstone assesses the candidate’s perception of how the CMP program impacted his/her views of teaching and learning. Assessment for the end of program occurs at the end of the second summer semester, via a Capstone assignment. The rubric is aligned with the PEF Conceptual Framework and the NBPTS graduate teaching standards. Specifically, the rubric assesses the candidate's: (a) knowledge of child-centered pedagogy (Conceptual Framework standard: 1.1, 1.2 and NBPTS Standard: 1, 2, 3) (b) knowledge of the content (Conceptual Framework standard: CF.1.1, 1.2 and NBPTS Standard: 2, 4) (c) ability to monitor and manage student learning; (Conceptual Framework standard: 1.3, 2.2, 3.1, 3.2; NBPTS Standard: 3) (d) to think systematically about their practice and learn from performance (Conceptual Framework standard: 1.2, 1.3, 2.3 and NBPTS Standard: 4) (e) participation in a learning community (Conceptual Framework standard: 2.2, 2.3, 3.1, 3.2, 3.3, and NBPTS Standard: 5). The rubric has the following four proficiency categories: Not Demonstrated, Novice/Independent; Intermediate, and Advanced. Scores were assigned on a 1-4, with 4 representing the Advanced category. Educators who have a total score 3.0 – 4.0 are considered to have met the target performance. Target: 3 (1-4 scale)

M 3: Teacher Development (O: 1, 2)

This project enables teacher candidates to improve their classroom practice. Two program activities focus directly on the teacher's in-classroom practice: faculty classroom visits and teacher video clubs. Faculty Classroom Visits: Program faculty visit each teacher two times during the Fall semester and two times during Spring semester. The visits include an observation of the educator and a follow up after the visit, the educator submits a written reflection. After what was learned and how future work will be influenced by this new information. Teacher Video Clubs: Teachers meet in small groups three times Fall semester and three times Spring semester. At each meeting, one to three teachers share a 5 to 10 minute video clip of a lesson. Teachers prepare to share their clips by completing the protocol.

Source of Evidence: Performance (recital, exhibit, science project)

Target for O1: Educators manage and monitor student learning.

The rubric has the following four proficiency categories: Not Demonstrated, Novice/Independent; Intermediate, and Advanced. Scores were assigned on a 1-4, with 4 representing the Advanced category. For the mid-program assessment cycle, educators who have a total score between 2.0 – 4.0 are considered to have met the target performance. Mid-program Target: 2 (1-4 scale)

End of Program Target: 3 (1-4 scale)

Findings 2011-2012 - Target: Met

Candiates were assessed twice using the Teacher Development Rubric: Mid-program and end of program. The group of candidates was divided into two groups. The analysis combines the data from both tables. The rubric has the following four proficiency categories: Not Demonstrated, Novice/Independent; Intermediate, and Advanced. Scores were assigned on a 1-4, with 4 representing the Advanced category. For the mid-program assessment cycle, educators who have a total score between 2.0 – 4.0 are considered to have met the target performance. Mid-program Target: 2 (1-4 scale)

End of Program Target: 3 (1-4 scale)

Target for O2: Educators demonstrate subject matter knowledge.

The rubric has the following four proficiency categories: Not Demonstrated, Novice/Independent; Intermediate, and Advanced. Scores were assigned on a 1-4, with 4 representing the Advanced category. For the mid-program assessment cycle, educators who have a total score between 2.0 – 4.0 are considered to have met the target performance. Mid Program Target: 2 (1-4 scale)

End of Program Target: 3 (1-4 scale)

Findings 2011-2012 - Target: Met

Candiates were assessed twice using the Teacher Development Rubric: Mid-program and end of program. The group of candidates was divided into two groups. The analysis combines the data from both tables. The rubric has the following four proficiency categories: Not Demonstrated, Novice/Independent; Intermediate, and Advanced. Scores were assigned on a 1-4,
with 4 representing the Advanced category. For the mid-program assessment cycle, educators who have a total score between 2.0 – 4.0 are considered to have met the target performance. Mid-program Target: 2 (1-4 scale) Mid-program analysis: Fourteen candidates were assessed. Fourteen out of 14 candidates scored between 2.0 -4.0 for every item on the ten item survey. Therefore 100% of the candidates met target. The attached table shows the scores for each item. The scores fell in two categories Novice or Intermediate. Seven items: (1.1, 1.2, 1.3, 2.2, 3.1, 3.2, 3.3) the scores fell into Novice or Intermediate. For six items more candidates scored in the Intermediate category than the Novice; the seventh item, (3.2) was split equally between Novice and Intermediate. For the remaining three items (1.4, 2.1, 2.3) all candidates scored in the Intermediate category. Based on these data the candidates are performing on target and are poised to continue their improvement as they participate in the variety of teacher development activities. End of Program Target: 3 (1-4 scale) End of Program Analysis Fourteen candidates were assessed. Fourteen out of 14 candidates scored between 2.0 -4.0 for every item on the ten item survey. Therefore 100% of the candidates met target. The attached table shows the scores for each item. The scores fell in three categories Novice, Intermediate, and Advanced. The scores for one item (1.3) ranged across the three categories. For eight items: (1.1, 1.2, 2.1, 2.2, 2.3, 3.1, 3.2, 3.3) the scores fell into Intermediate or Advanced. For one item (1.4) the scores fell into two categories Novice and Intermediate. Based on these data the candidates are performing on target. As demonstrated by the attached table, scores moved into higher categories suggesting the candidates advanced in each of the areas assessed.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Examine literature on achievement gap between majority and minority students.
During the Glue classes attention will be directed toward examining reasons behind the achievement gap between majority and minority students. Students will read a variety of texts and hold classroom discussions.

<table>

<td>07/2009</td>
</tr>
<tr>
<td>Responsible Person/Group:</td>
<td>The two program directors will be responsible for selecting readings and for leading the discussions.</td>
</tr>
</tbody>
</table>

Incorporate monthly video clubs
Teachers will meet 1 Wednesday of each month with their video club groups. The focus of the clubs is on the student – teacher language interactions. Each teacher will seek feedback on her language interactions during either a math, literacy, or community lesson.

Action Plans
Although target was met as a group, the following action plans have been identified to ensure that more students score at least at the 80% mark. An analysis of the Capstones identified two areas that need to be addressed. These are: writing using the professional literature and writing to illustrate reflective thinking. To address these areas of need, the program will intensify its focus on writing.

Specifically, 1. The literacy course will include a more intensive focus on writing. A literature review will be assigned during the summer. To help with organization, the students will be provided a template for organizing a literature review. Also a Writing Workshop structure will be used in class to included mini lessons and in-class revision sessions. 2. The Benchmark assignment will be used to focus on reflective writing. Again a Writing Workshop structure will be used in class to included mini lessons and in-class revision sessions.

**Projected Completion Date:** 12/2013  
**Responsible Person/Group:** Program Directors

**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1:**

What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

More in-depth rubrics were created for the students to use to guide the development of their Capstones. The rubric addressed areas identified as needing improvement. An analysis of the 2010-2011 Benchmarks revealed two areas that needed improvement. These were: writing using the professional literature and writing to illustrate reflective thinking. To address these areas of need, we intensified the program's focus on writing. Specifically, the literacy course included a more intensive focus on writing. A literature review was assigned during the summer. To help with organization, the students were provided a template for organizing a literature review. Also a Writing Workshop structure was used in class to included mini lessons and in-class revision sessions. The Benchmark assignment will be made during the 2012-2013 year to increase the students' self-assessment. Students will be asked to turn in mid-course grade justifications. Now they only create grade justifications at the end of each course.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

After the Program Directors reflected on the Video Clubs, they decided to make changes to ensure the students maximized the reflective potential of the Video Clubs. The two changes implemented during the 2011-2012 year will be expanded on this year to enhance the students' ability to reflect on their practice. One, the students and the Program Directors reviewed the protocol and then used it to evaluate a teaching clip. Two, the Program Directors increased the number of video clubs they attended from one to two. This way only one meeting during each semester was without the presence of one of the Program Directors. The 2012-2013 year we will continue the changes made to the video clubs but add more in-class reviews of clips of the students' teaching. We also plan to use eluminate to bring small groups of students together to discuss their uploaded clips of their teaching. A review of the Capstones and the assessment data reveal more emphasis is needed on how to use knowledge of children's culture as the candidates plan their classroom instruction. The literacy and mathematics and critical issues courses will add additional readings related to cultural influences on children's learning. Also because technology is a tool useful in differentiating instruction and meeting the diverse needs of students, the literacy course will increase the use of technology to augment the presentation of course content.
### Student Learning Outcomes/Objectives

<table>
<thead>
<tr>
<th>SLO 1: Thoughtful writers and speakers (M: 1, 3)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Candidates write and speak clearly. They provide demonstrate appropriate genre and audience awareness in their scholarly work. They are able to write and speak about research-related topics in ways that are accessible yet demonstrate deep knowledge about the field of early childhood and elementary education.</td>
</tr>
<tr>
<td>Relevant Associations: NAEYC graduate standards</td>
</tr>
</tbody>

100% (2 of 2) successfully defended their dissertation.
## Comprehensive exams revised

While we met our goal, we have revised our comprehensive exams (based on feedback from earlier years). The first students electing to use the revised comps format will do so summer 2009. It will be required of those entering fall 09. We plan to monitor the process and products associated with the revised comprehensive exams.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):** Comprehensive examination | Thoughtful writers and speakers
- **Implementation Description:** Beginning summer 2009, continuing...
- **Responsible Person/Group:** PHD Advisory Committee

## Quality of dissertations

While we want to ensure our students are graduating in a timely manner, we also want to ensure quality in their dissertations. This year we plan to develop an instrument to document levels of quality for students' presentation of their dissertation.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):** Dissertation presentation | Thoughtful writers and speakers
- **Responsible Person/Group:** PHD Advisory Committee

## Summary of Professional Growth

Develop a checklist for mentors to assess students during teaching apprenticeship.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** Medium
- **Relationships (Measure | Outcome/Objective):** Teaching apprenticeship | Knowledgeable teachers
- **Projected Completion Date:** 04/2010
- **Responsible Person/Group:** Program advisory committee

## Summary of research skills form

Continue to research and develop a checklist of communication and research skills to use in evaluating the presentation of the dissertation.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Planned
- **Priority:** High
- **Relationships (Measure | Outcome/Objective):** Dissertation presentation | Ethical researcher
- **Projected Completion Date:** 12/2009
- **Responsible Person/Group:** PHD Advisory Committee

## Monitoring of comp exam process

We will continue to monitor "process" for comp. exams. The timeframe could be problematic for students who also work full-time.

- **Established in Cycle:** 2009-2010
- **Implementation Status:** Planned
- **Priority:** Medium
- **Relationships (Measure | Outcome/Objective):**
**Goals**

**G 1: Knowledge of Content and Curriculum**

Knowledge of Elementary Mathematics Content and Curriculum: Candidates will understand and use the major concepts of mathematics appropriate for grades K-5.
G 2: Knowledge of Learners, Learning, and Teaching
Knowledge of Learners, Learning, and Teaching: Candidates will understand and use research-based knowledge of how children learn mathematics with understanding and effective strategies for teaching for understanding.

G 3: Assessment of Student Learning
Assessment of Student Learning: Candidates will understand and use multiple, appropriate assessment methods to assess student learning and improve program effectiveness.

G 4: Knowledge of Diversity
Knowledge of Diversity: Candidates will understand and use knowledge of student diversity to affirm and support full participation and continued study of mathematics by all students.

Student Learning Outcomes/Objectives

SLO 1: Demonstrates Knowledge of Content and Curriculum (G: 1) (M: 1, 3, 5)
Learning Objectives: The following objectives summarize the requirements of the Georgia Professional Standards Commission for the K-5 Mathematics Endorsement (see PSC 505-3-6). These objectives are consistent with the GSU-PED Conceptual Framework. Demonstrates knowledge of elementary mathematics content and curriculum (G1): Candidates appropriately use knowledge of mathematical content and curriculum emphasized in national, state, and local standards for grades K-5 in preparing learning experiences for children.

SLO 2: Demonstrates Pedagogical Content Knowledge (G: 2) (M: 4, 5)
Demonstrates research-based pedagogical content knowledge (G2): Candidates use instructional strategies based on current research and applicable standards and use appropriate technology and a variety of physical and visual materials for exploration of mathematical concepts and procedures and development of children's thinking, understanding, and problem solving across the strands of the elementary mathematics curriculum.

SLO 3: Assesses Student Learning and Program Effectiveness (G: 3) (M: 2)
Assesses student learning and program effectiveness (G3): Candidates understand and use multiple, appropriate assessment methods to assess student learning and improve program effectiveness.

SLO 4: Demonstrates Knowledge of Student Diversity (G: 4) (M: 2)
Demonstrates knowledge of student diversity (G4): Candidates demonstrate knowledge of student diversity (e.g., gender, ethnicity, socioeconomic background, language, special needs, etc.) and use this knowledge to affirm and support the learning of mathematics by all students.

Measures, Targets, and Findings

M 1: Worthwhile Mathematical Tasks Collection (Q: 1)
The Worthwhile Mathematical Tasks Collection Assessment is graded at the end of each of the four mathematics content/pedagogy courses in the program (ECE 7393, ECE 7394, ECE 7395, and ECE 7396). Instructed candidates for this assessment are as follows: Collection of Worthwhile Mathematical Tasks and Rationales The NCTM Professional Standards for Teaching Mathematics (1991) emphasizes the posing of learning activities it calls worthwhile mathematical tasks. These tasks are to be based on—Sound and significant mathematics; Knowledge of students' understandings, interests, and experiences; Knowledge of the range of ways that diverse students learn mathematics; And these tasks are intended to—Engage students' intellect Develop students' mathematical understandings and skills; stimulate students to make connections and develop a coherent framework for mathematical ideas; Call for problem formulation, problem solving, and mathematical reasoning; Promote communication about mathematics; Represent mathematics as an ongoing human activity; Display sensitivity to, and draw on, students' diverse background experiences and dispositions; Promote the development of all students' dispositions to do mathematics. (p. 25) "In selecting, adapting, or generating mathematical tasks, teachers must base their decisions on three areas of concern: the mathematical content, the students, and the ways in which students learn mathematics." (pp. 25-26) Stein, Smith, Henningsen, and Silver (2000) encourage the analysis of mathematics instructional tasks for "the kind and level of thinking required of students in order to successfully engage with and solve the task." (p. 11). Their analysis of cognitive demands divides mathematics tasks into two general categories, each of which are divided further into two subcategories: Lower-Level Demands (including Memorization Tasks and Procedures Without Connections Tasks) and Higher-Level Demands (including Procedures With Connections Tasks and Doing Mathematics Tasks). "Since the tasks with which students become engaged in the classroom form the basis of their opportunities for learning mathematics, it is important to be clear about one’s goals for student learning. Once learning goals for students have been clearly articulated, tasks can be selected or created to match these goals. Being aware of the cognitive demands of tasks is a central consideration in this matching." (p. 11). The NCTM Principles and Standards for School Mathematics (2000) elaborates on the role of problem solving in learning mathematics by specifying that—Instructional programs from prekindergarten through grade 12 should enable all students to—build new mathematical knowledge through problem solving; solve problems that arise in mathematics and in other contexts; apply and adapt a variety of appropriate strategies to solve problems; monitor and reflect on the process of mathematical problem solving. (p. 51) "Problem solving means engaging in a task for which the solution method is not known in advance. [The 1989 NCTM Curriculum and Evaluation Standards called this nonroutine problem solving.] In order to find a solution, students must draw on their knowledge, and through this process, they will often develop new mathematical understandings. Solving problems is not only a goal of learning mathematics but also a major means of doing so. Students should have frequent opportunities to formulate, grapple with, and solve complex problems that require a significant amount of effort and should then be encouraged to reflect on their thinking." (NCTM, 2000, p. 51) Tasks and Rationales: Select, adapt, or generate (and organize) ten (10) worthwhile mathematical tasks across grades P-5 focusing on developing understanding of the major concepts of elementary mathematics emphasized in this course. For each task collected, provide a rationale/cover page that identifies the following (refer to Stein, Smith, Henningsen, & Silver, 2000, pp. 16, 21): Anticipated students (age, grade level, and prior knowledge/experience); Goals for student learning (from GPS or NCTM Standards); Mathematical features of the task, including what students are asked to do, in what context, with what tools (including the impact of the use of calculators or other technology); etc.; Level of cognitive demands (kinds of thinking required by the task); Rationale for the categorization of cognitive demands. Your Solutions to the Tasks: For each of the tasks in your collection, provide a complete solution of your own work. Following your solution, explain in writing your thinking used to
M 2: Student Interview Assessments (O: 3, 4)

The Student Interview Assessments are graded during three of the four mathematics content courses in the program (ECE 7393, ECE 7394, and ECE 7395). These assignments provide a model for student-centered teaching. Instructions to candidates for these assessments are as follows: Student Interview Assessments The Teaching Principle from the NCTM Principles and Standards for School Mathematics indicates teachers’ must understand children's thinking to make effective curricular and instructional decisions. Specifically—Effective teaching requires knowing and understanding mathematics, students as learners, and pedagogical strategies. Teachers need different kinds of knowledge about the mathematical knowledge, content, process, and products of instruction; deep, flexible knowledge about curriculum goals and about the important ideas that are central to their grade level; knowledge about the challenges students are likely to encounter in learning these ideas; knowledge about how the ideas can be represented to teach them effectively; and knowledge about how students’ understanding can be assessed. This knowledge helps teachers make curricular judgments, respond to students’ questions, and look ahead to where concepts are leading and plan accordingly. (NCTM, 2000, p. 16). Interviewing individual students provides an opportunity to apply research on children's thinking and to develop a deep understanding of how children construct conceptual understanding in the context of solving nonroutine problems. Interactions with individual children provide the foundation for developing student-centered instruction attending to each child’s needs. For this assignment during the Number and Operations Course (3 Interviews): Interview #1: Addition and Subtraction (First Grade) a. Prepare a script of 10 potential addition and subtraction word problems to pose to a child in First Grade. Include one of each type of problem identified in the CGI framework of addition and subtraction problem types. Vary the names of participants, objects, and numbers used in the collection of problems. Provide for your selection of alternative number sizes during the interview, depending on the as yet unknown needs of the child. The problems must make sense with all of the alternate number sizes. Use realistic contexts for all problems, but make the problems as simple in context and syntax as possible. The goal is for the problems to be engaging yet easily understandable. b. Interview one child with the purpose of coming to know what that child understands about solving addition and subtraction word problems. Provide a collection of appropriate physical materials as well as paper and pencil for the child to use in solving the problems. Begin by asking one of the easier problems from your script and record in as much detail as possible what the child does and says in trying to solve the problem. On the basis of the child’s strategy and success in solving the first problem, sequence additional problems that will explore the extent of the child’s strategies and understanding while continuing to encourage and support the child’s success in solving the problems you pose. c. Write a report that lists the problem you posed, identifies the problem type from the CGI framework (e.g., JRU for Join Result Unknown), describes the child’s response as completely as possible, and analyzes the child’s response on the basis of the CGI framework for solution strategies. Repeat this process (problem as posed, CGI problem type, child’s response, and CGI analysis) for each of the problems that you posed. At the end of this report, write one paragraph that summarizes what you learned about the child’s understanding of addition and subtraction, the types of problems the child successfully solved and struggled with, the range of numbers with which the child was familiar, and the types of strategies the child demonstrated. Conclude the report with an Instructional Decision as follows: Write one word problem that is an appropriate next problem to ask this student to solve to continue developing the student’s understanding of addition and subtraction. Identify the CGI problem type and justify your choice of next problem based on the CGI research. Interview #2: Multiplication and Division (Second Grade) a. Prepare a script of 10-12 potential multiplication and division word problems to pose to a child in Second Grade. Most of the problems for this interview should be Grouping and Partitioning problems (multiplication, measurement division, and partitive division) as identified in the CGI framework. Include only one multiplication problem from each of the Rate, Price, and Multiplicative Comparison types at the end of your script. Include at least one partitioning problems with a remainder, considering the four different types: Partitive division, Measurement Division, Rate, and Price. Use realistic contexts for all problems, but make the problems as simple in context and syntax as possible. The goal is for the problems to be engaging yet easily understandable. b. Interview one child with the purpose of coming to know what that child understands about solving grouping and partitioning word problems. Provide a collection of appropriate physical materials as well as paper and pencil for the child to use in solving the problems. Begin by asking one of the easier problems from your script and record in as much detail as possible what the child does and says in trying to solve the problem. On the basis of the child’s strategy and success in solving the first problem, sequence additional problems that will explore the extent of the child’s strategies and understanding while continuing to encourage and support the child’s success in solving the problems you pose. c. Write a report that lists the problem you posed, identifies the problem type from the CGI framework (e.g., G/P-PD for Grouping/Partitioning-Partitive Division), describes the child’s response as completely as possible, and analyzes the child’s response on the basis of the CGI framework for solution strategies. Repeat this process (problem as posed, CGI problem type, child’s response, and CGI analysis) for each of the problems that you posed. At the end of this report, write one paragraph that summarizes what you learned about the child’s understanding of grouping and partitioning, the types of problems the child successfully solved and struggled with, and the types of strategies they demonstrated. Conclude the report with an Instructional Decision as follows: Write one word problem that is an appropriate next problem to ask this student to solve to continue developing the student’s understanding of base ten concepts. The types of problems the child successfully solved and struggled with, and the range of numbers with which the child was familiar. Conclude the report with an Instructional Decision as follows: Write one word problem that is an appropriate next problem to ask this student to solve to continue developing the student’s understanding of base ten concepts. The types of problems the child successfully solved and struggled with, and the range of numbers with which the child was familiar.
ten. Identify the CGI problem type and justify your choice of next problem based on the CGI research. For this assignment during the Algebra Course (2 Interviews): Interview #4: Children's Understanding of Equality a. Design an adaptive performance assessment of understanding of equality. Target the assessment to a specific (P-5) grade level of your interest. Prepare a script of 6-10 problems, including open number sentences (e.g., 8 + 4 = 5 + 1) and True-False number sentences (e.g., 8 + 3 = 7 + 4 True or False?). See Thinking Mathematically, pp. 9-24 for examples. Carefully and deliberately choose numbers and your problem sequence to elicit children's understanding of equality and the symbolic representation of addition and subtraction. Justify your choice of next problem based on the research on children's understanding of equality. b. Form a worthwhile, interesting, researchable problem that involves a familiar context, involves numerical data that can be consistently interpreted, anticipates the range of possible responses, compares data from at least two groups, and is likely to get the information required to accomplish the purpose of the study. c. Create and interpret data displays that support the purpose of the study and communicate a useful picture of the range and distribution of the data to the intended audience. Appropriately treat values of zero and zero frequencies in these data displays. Use available technology (e.g., Excel) in preparing these data displays. d. Analyze, summarize, and interpret the data, recognizing emergent features of the aggregated data (such as center, spread, and shape) that are not visible within the variability of the individual cases; provide a summary of appropriate averages and consider the various ways in which typically is communicated by means of a major mode, median, and mean; and interpret the data by comparing and contrasting the data by comparing and contrasting the data. e. Relate the interpretations of the data back to the real-world situation by making statements and claims about the real-world situation rather than just the representations of the data. f. Prepare and present (a) a poster presentation to convey your question, methods, and findings to your peers. This assessment is graded using the Data Project and Presentation Grading Rubric.

Source of Evidence: Written assignment(s), usually scored by a rubric

Target for O3: Assesses Student Learning and Program Effectiveness
Rubric average score of Meets Expectations / High Quality (80%).

Findings 2011-2012 - Target: Met
Across six uses of this measure during 2011-2012, 100% of candidates scored Meets Expectations / High Quality or better, with a mean rating of 4.92 out of 5 or 98.4% compared to the target of 80%.

Target for O4: Demonstrates Knowledge of Student Learning
Rubric average score of Meets Expectations / High Quality (80%).

M 3: Data Project and Presentation Assessment (Q: 1)
The Data Project and Presentation Assessment is graded during the data analysis and probability content/pedagogy course in the program (ECCE 7396). Instructions to candidates for this assessment are as follows: Data Project and Presentation This assignment is adapted from: Russell, S. J., Schifter, D., & Bastable, V. (2002). Working with data: Facilitator's guide. Parsippany, NJ: Dale Seymour (Pearson Learning Group). People collect data in order to answer a question or to illuminate some aspect of their lives. For this reason, every aspect of data collection and analysis must be evaluated in light of the purpose of the investigation. For example, was the investigation designed in such a way that it produced the needed data? Did respondents interpret the survey question in the way it was designed? Were the measurements accurate enough to be reliable? Does the way the data are represented in a graph or table give a view of the data that helps answer the original question? (Russell, Schifter, & Bastable, 2002, p. 122) Assignment Instructions: a. Prepare a written Data Project Report that documents the following activities: a. Form a worthwhile, interesting, researchable question that involves a familiar context, involves numerical data that can be consistently interpreted, anticipates the range of possible responses, compares data from at least two groups, and is likely to get the information required to accomplish the purpose of the study. b. Gather applicable data, differentiating between the real-world event and the abstracted data documenting some aspect of that event. c. Create and interpret data displays that support the purpose of the study and communicate a useful picture of the range and distribution of the data to the intended audience. Appropriately treat values of zero and zero frequencies in these displays. Use available technology (e.g., Excel) in preparing these data displays. d. Analyze, summarize, and interpret the data, recognizing emergent features of the aggregated data (such as center, spread, and shape) that are not visible within the variability of the individual cases; provide a summary of appropriate averages and consider the various ways in which typically is communicated by means of a major mode, median, and mean; and interpret the data by comparing and contrasting the data by comparing and contrasting the data. e. Relate the interpretations of the data back to the real-world situation by making statements and claims about the real-world situation rather than just the representations of the data. f. Prepare and present (a) a poster presentation to convey your question, methods, and findings to your peers. This assessment is graded using the Data Project and Presentation Grading Rubric.

Source of Evidence: Project, either individual or group
**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Increase Pedagogical Emphasis and Tools**

The qualitative data from program key assessments has indicated a need for greater emphasis and support for implementing standards-based pedagogy. We have introduced a standards-based lesson plan format for use in each of the math

### Source of Evidence:

- **Portfolio, showing skill development or best work**

### Findings

#### M 4: Professional Portfolio Project (O: 2)

The Professional Portfolio Project is graded at the end of the clinical practice course in the program (ECE 7740). Instructions to candidates for this assessment are as follows: Professional Portfolio Project This assignment is adapted from the PSC K-5 Mathematics Endorsement Program Portfolio Guidelines. The portfolio is organized into three sections and must include a minimum of ten lesson plans plus other artifacts that illustrate your effective implementation of mathematics content lessons that positively impact mathematics student achievement. The portfolio will be evaluated as Satisfactory (S) or Unsatisfactory (U) based on completeness and the quality of included artifacts. Section 1. Content Implementation This section of the portfolio includes artifacts generated from demonstrating implementation of content knowledge in teaching. A minimum of four lesson plans demonstrating implementation of instructional strategies, one from each of the four mathematics content areas in ECE 7393, 7394, 7395, and 7396. These lesson plans must have been taught by you and must include your written lesson reflection and analysis. Observer notes and comments regarding a minimum of two taught mathematics lessons based on a pre-established observation rubric. Section 2. Student Learning The portfolio must include a minimum of two different types of artifacts illustrating evidence of impact on student mathematics learning. A minimum of four lesson plans (which you have taught and include your written reflection and analysis) with collected student work or other assessment evidence demonstrating the impact of the lesson on student learning. At least one of these lesson plans must demonstrate the following: - A lesson developed in response to formative student assessment data. May include recommendations for enrichment or remediation. - A differentiated lesson based on specific student needs or interests. A written response to a lesson-observation rubric completed by an observer, specifying lesson modifications intended to improve the impact of the lesson on student mathematics learning. Section 3. Technology Integration The portfolio must include a minimum of two artifacts demonstrating the integration of available technology into mathematics instruction. A minimum of two lesson plans (which you have taught and include your written reflection and analysis) incorporating available technology into mathematics instruction. A personal statement that could be shared with parents on the effective use of technology in mathematics instruction to support learning mathematics with understanding. Notes: All lesson plans, teaching, and reflections included in the portfolio must originate while enrolled in K-5 Mathematics Endorsement Program courses (ECE 7393, 7394, 7395, 7396, and/or 7740). A minimum of 2 of the 10 lesson plans included in the portfolio must provide evidence of working with diverse students as demonstrated by submitting demographics of the classes taught with the lesson plans. The use of electronic-recording media for the purpose of lesson analysis is not considered technology incorporation into mathematics instruction. This portfolio is graded using the Professional Portfolio Project Rubric.

Source of Evidence: Portfolio, showing skill development or best work

#### Target for O2: Demonstrates Pedagogical Content Knowledge

Rubric average score of Meets Expectations / Satisfactory (80%).

Findings 2011-2012 - Target: Met

Nine out of 10 Advanced Program students (90%) enrolled in ECE 7740 during 2011-2012 completed the course with a portfolio rating of Satisfactory / Meets Expectations. One candidate has not yet completed the course pending satisfactory completion of the portfolio. One of two candidates (50%) receiving an incomplete during a previous period (Spring 2011) satisfactorily completed the portfolio; the other candidate did not satisfactorily complete the portfolio, but completed the Advanced Program by satisfying the total hours requirement using an alternate course.

#### M 5: Selected Course Grades (O: 1, 2)

Course grades from the four courses in the program integrating content and pedagogy in elementary mathematics classrooms reflect candidate knowledge of major concepts of mathematics content appropriate for grades K-5. These courses are as follows: ECE 7393: Number and Operation in the Elementary Classroom ECE 7394: Geometry and Measurement in the Elementary Classroom ECE 7395: Algebra in the Elementary Classroom ECE 7396: Data Analysis and Probability in the Elementary Classroom.

Source of Evidence: Academic direct measure of learning - other

Target for O1: Demonstrates Knowledge of Content and Curriculum

GPA of 3.00 or better for all candidates in the specified courses.

Findings 2011-2012 - Target: Met

The aggregate GPA for the four elementary mathematics content courses during 2011-2012 was 3.90 (A). All candidates achieved a GPA for those courses of 3.00 or better.

Target for O2: Demonstrates Pedagogical Content Knowledge

GPA of 3.00 or better for all candidates in the specified courses.

Findings 2011-2012 - Target: Met

The aggregate GPA for the four elementary mathematics content courses during 2011-2012 was 3.90 (A). All candidates achieved a GPA for those courses of 3.00 or better.
content/pedagogy courses that supports teachers' attention to important elements of standards-based pedagogy. This increased emphasis will be continued through the current cycle of four math content/pedagogy courses that concludes in May 2012. Results from key assessments for 2011-2012 will be analyzed for improvement in attention to these pedagogical details.

**Established in Cycle:** 2010-2011  
**Implementation Status:** Finished  
**Priority:** High  
**Projected Completion Date:** 05/2012  
**Responsible Person/Group:** Program Co-Coordinators (Dr. Smith and Dr. Swars)  
**Additional Resources:** None  
**Budget Amount Requested:** $0.00 (no request)

---

**Analysis Questions and Analysis Answers**

**ACADEMIC PROGRAM QUESTION 1:** What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We have not made any changes in the assessment process for the degree program since last year's assessment report. The current assessment process is working very well and continues to provide the data needed for ongoing program improvement.

**ACADEMIC PROGRAM QUESTION 2:** What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Use of Assessment Results to Improve Performance 1. Content knowledge Evidence of content knowledge from the findings of multiple key assessments indicate that candidates are developing the content knowledge intended by the PSC standards through participation in the program. No changes are suggested by this evidence. 2. Professional and pedagogical knowledge, skills, and dispositions Evidence of pedagogical knowledge, skills, and dispositions, primarily from the findings of the Professional Portfolio Project indicates that student-centered pedagogy needs somewhat greater emphasis during the Number and Operations content/pedagogy course (ECE 7393). This will be an ongoing effort to provide sufficient emphasis on student-centered pedagogy in this course. 3. Student learning Evidence of student learning from the findings of multiple key assessments indicate that all candidates satisfactorily completing ECE 7740: Internship are able to achieve the K-5 student learning intended by the PSC standards. The findings from the Professional Portfolio Project have been particularly helpful in making this determination.

**Georgia State University**  
**Assessment Data by Section**  
**2011-2012 Economics Assessment of Core**

(As of: 12/12/2016 04:41 PM EST)  
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

**Mission / Purpose**
The mission of the Department of Economics’s undergraduate program and its central role in the University core curriculum is to increase substantive knowledge, analytical skills and communication skills by educating students about economic principles and by imparting an appreciation of economic issues from a global perspective.

**Goals**

G 1: social science (area E) goal  
Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

G 2: BOR II: global perspectives goal  
Students demonstrate understanding of political, social, economic, and/or institutional developments across the globe.

**Student Learning Outcomes/Objectives**

SLO 1: social science (area E) goal - econ (G: 1) (M: 1)  
Students will demonstrate knowledge about how economists think about human behavior and the interactions between humans as they make choices.

**General Education/Core Curriculum Associations**

6.0 Students effectively analyze the complexity of human behavior, and how historical, economic, political, social, and/or spatial relationships develop, persist, and/or change.

**Institutional Priority Associations**

1 Student retention  
2 Student promotion and progression  
3 Timely graduation

**Standard Associations**
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**
1.5 Other efforts in support of Goal 1 (Undergraduate Education).

**SLO 2: BOR II: global perspectives goal - econ (G: 2) (M: 2)**
Students demonstrate understanding of global and cultural differences across the globe and how they apply to the field of economics.

**General Education/Core Curriculum Associations**
8.0 Students demonstrate understanding of political, social, economic, and/or institutional developments across the globe.

**Institutional Priority Associations**
1 Student retention
2 Student promotion and progression
3 Timely graduation

**Standard Associations**
1 Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**
1.5 Other efforts in support of Goal 1 (Undergraduate Education).
5.4 Enhance the global competency of students, faculty and staff.
5.5 Other efforts in support of Goal 5 (Globalizing the University).

---

**Measures, Targets, and Findings**

**M 1: Multiple Choice Questions on Exams (O: 1)**
Five multiple choice questions which can be used to assess the new social science learning outcome were embedded on the final exams of selected sections of economics courses in the core (ECON 2100 – The Global Economy; ECON 2105 – Principles of Macroeconomics; ECON 2106 – Principles of Microeconomics). In past assessment cycles, different questions were used in different classes, but all questions were selected from an approved list that can be used to measure the learning outcomes. In this cycle, we attempted for the first time to have the same set of questions in each section of the 3 different courses (different questions were used for each course, but the same questions were used across all sections of the same course). One question for the micro (ECON 2106) course was changed from fall 2011 to spring 2012. See the attached file for the actual questions used.

Source of Evidence: Standardized test of subject matter knowledge

**Target for O1: social science (area E) goal - econ**
We are reporting the data this year in the new way we started last year. Like last year, we include a table with the exact questions used and the number of students (as well as the percentage of students) that answered each question correctly. We then report the average of the percentage of correct answers across all questions for each of the three separate courses (2100, 2105, and 2106) assessed. (See the attached document in the measures and findings sections for the actual questions used.) We would like to see the average of the percentage of correct answers across all questions for each course to be at least 75%.

**Findings 2011-2012 - Target: Partially Met**
This year, we tried to use the same questions for all sections of the same course. Like last year, we include a table with the exact questions used and the % of students who answered each question correctly. We also report the average of those percentages for each course. See the attached document for the results.

---

**M 2: Multiple Choice questions embedded on unit exams (O: 2)**
Five multiple choice questions which can be used to assess the new global perspectives learning outcome were embedded on the exams of selected sections of ECON 2100: The Global Economy. See the attached file to see the actual questions used.

Source of Evidence: Standardized test of subject matter knowledge

**Target for O2: BOR II: global perspectives goal - econ**
We would like to see the weighted average of the percentage of correct answers across all sets of questions for each course to be at least 75%.

**Findings 2011-2012 - Target: Not Met**
This year, we tried to use the same questions for all sections of the same course. Like last year, we include a table with the exact questions used and the % of students who answered each question correctly. We also report the average of those percentages for each course. See the attached document for the results.

---

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**increase number of students assessed**
Each year, the Department of Economics asks instructors of the economics courses in the core curriculum to volunteer to participate in assessment of the contemporary issues general education learning outcomes. In the future, we hope to get more instructors involved in the assessment, and therefore, increase the number of students assessed. Starting in Fall 2012, all instructors of ECON 2100, 2105, and 2106 will be required to participate in assessment efforts.

- **Established in Cycle:** 2007-2008
- **Implementation Status:** Planned
- **Priority:** Medium
- **Projected Completion Date:** 12/2012
update core assessment questions and reporting method
When we sent the email to the faculty teaching ECON 2100, 2105, and 2106 the list of questions we wanted them to include on their exams, many instructors responded by saying that they did not like some of our questions. As a result, we did not get many instructors to include all the questions on their exams. Some did not participate at all in the assessment data collection; some only used a subset of the questions. However, we are not too frustrated by this outcome, because we took that as an opportunity to get more faculty involved in crafting the instruments we use for assessment of the core courses. Our plan is to use a subset of the questions we use on our tracking exam (a measure we use for assessment of our BA, BBA, BS program in our ECON 4999 capstone course) for the set of questions we use for ECON 2105 and ECON 2106. As a result of this first attempt to get the same questions used in all sections of each course, we are revising the entire list of tracking exam questions, including the ones used for core assessment. We also developed a new method for gathering the data from instructors, which will be much more efficient. Effective Fall 2012, all instructors of ECON 2100, 2105, and 2106 will be required to include the selected questions on their exams, so getting buy-in from those instructors is very important.

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We have met to discuss the questions we are using for our measures. We have already revised the questions once and we are working on revising it again. We decided to do this based on the discussions the ECON Undergraduate Program Committee had about the reliability and validity of the questions we had been using. We have a larger number of faculty involved in the assessment process now, and we consider that a good thing. We have developed a new way to gather the assessment data from the instructors of the core courses - using an online form - which we think will greatly increase the efficiency of the process and will lead to more instructors participating in the process.

ACADEMIC PROGRAM QUESTION 2:
What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g. revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

We have not made major changes to our program based on assessment data. Most of our changes have been to the assessment process itself. We are reviewing and revising the questions we use and expect to have more meaningful results in the future - which may prompt us to make changes to the courses or program, depending on what we find out from the assessment data in the future.

Georgia State University
Assessment Data by Section
2011-2012 Economics BA,BBA,BS
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
Economics is the study of how best to allocate scarce resources. Economics is an academic discipline that is central to the offerings of all major universities. As at most universities, economics plays an essential role in the general education required of all undergraduates, extending well beyond our undergraduate majors to essential courses in the core curriculum required of all GSU students, especially those majoring in business. At the Andrew Young School of Policy Studies at Georgia State University, it is the fundamental mission of the Department of Economics to contribute to the advancement of knowledge in our discipline, to share that knowledge with our students, and to disseminate that knowledge with policymakers and leaders in the public, nonprofit, and business communities, here and abroad. The Department of Economics is committed to the broad goals of Georgia State University and the Andrew Young School of Policy Studies. The University Strategic Plan 2000 states the “[t]he overarching goal of the Georgia State University is to become one of the nation’s premiere research universities located in an urban setting”. As stated in the Andrew Young School of Policy Studies Strategic Plan 2002-2007, the School “intends to be the highest rated policy school in the South and one of the highest ranked in the nation by 2007”. The Department of Economics shares both of these goals. We intend to contribute to these goals by continuing our efforts to better serve the needs of our undergraduate majors, our graduate students, and GSU students more broadly, by engaging in such activities as improving our curricula, introducing innovative course features, and creating new degree programs. Finally, we will continue to expand our service and outreach activities, to the profession, to the local business, nonprofit, and public sectors, to the State of Georgia, and to foreign countries and international agencies.

Goals
G 1: goals
The goals of the Department of Economics's undergraduate program include teaching students the "economic way of thinking", and helping them appreciate and understand the global economy in which we live today. We wish to send out students that are prepared for the competitive job market with skills that are valued by employers.

**Student Learning Outcomes/Objectives**

**SLO 1: Economics Basic Theories (G: 1) (M: 1, 3)**

To demonstrate knowledge of basic theories, concepts, and analytical methods of microeconomics and macroeconomics.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**

1.5 Other efforts in support of Goal 1 (Undergraduate Education).

**SLO 2: Apply to specific fields (G: 1) (M: 1)**

To be able to apply theories, concepts, and analytical methods of microeconomics and macroeconomics to specific fields of economics.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**

1.5 Other efforts in support of Goal 1 (Undergraduate Education).

**SLO 3: Benefits and costs (G: 1)**

To be able to identify the relevant benefits and costs to consider when comparing policy choices.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**

1.5 Other efforts in support of Goal 1 (Undergraduate Education).

**SLO 4: Communication (G: 1) (M: 2)**

To be able to communicate, using appropriate writing and oral conventions, basic economic theories, concepts, analytical methods, and policy choices.

**Standard Associations**

1. Outcomes of educational programs, including student learning outcomes (3.3.1.1)

**Strategic Plan Associations**

1.5 Other efforts in support of Goal 1 (Undergraduate Education).

**Measures, Targets, and Findings**

**M 1: Tracking Examination (O: 1, 2)**

To measure the success of Economics majors in the undergraduate program in learning core economic concepts, the Department of Economics developed two Tracking Exams (TEs), one for Principles of Microeconomics (MicroTE) and one for Principles of Macroeconomics (MacroTE). Each exam is comprised of 50 multiple choice questions that cover the core concepts taught in the two principles courses. The TEs were previously administered each fall and spring semester in a selection of 3000/4000 level courses. At the end of the 50 questions, the student is asked whether or not they are majoring in Economics, and the student is presented with a list of all undergraduate economics courses and is asked to indicate which courses they have taken. Students are not allowed to take a copy of the exam with them, and are not given the answers to the exam at any point. The two TEs were developed and first administered in Fall 2004. Starting in Fall 2006, the TEs were administered in the newly developed ECON 4999: Senior Capstone Course in Economic Policy. The TEs count for 5% of the final course grade in ECON 4999 (addressing a concern a couple of years ago about students taking the TEs seriously). ECON 4999 is required for all new undergraduate economics majors, effective Fall 2009 (effective Fall 2006, it was required for all undergraduate economics majors except the BA in International Economics and Modern Languages; effective Fall 2009, it is required for all BA IEML majors too). The exam is administered twice - once during the first week of classes and again at the end of the semester - and the higher of the two scores is the one that counts toward the course grade. Several questions were selected this fall and spring to measure learning outcomes 1 and 2. See the attached document in the findings section for the questions that were used for each learning outcome.

**Source of Evidence:** Capstone course assignments measuring mastery

**Target for O1: Economics Basic Theories**

We would like to see the average on the questions selected to assess each of the learning outcomes be at least 65%. While this may seem like a low target to an outsider, we believe it is appropriate because these questions are not necessarily emphasized in the ECON 4999 course. These are really questions that assess skills learned in the introductory (ECON 2105 and 2106) courses, and it may be quite some time since the students took those courses by the time they take the ECON 4999 course. We hesitate to ask questions beyond the introductory level because of the way our program is set up - students have a good bit of flexibility in selecting their upper level economics courses, and therefore, students in the ECON 4999 course will likely have taken different 4000 level courses. The only courses we can be sure they've all had are the introductory and intermediate courses.
**Findings 2011-2012 - Target: Met**

Note to review committee: See the table in the link provided (called econ tracking exam results 2012 report). While the percentage correct of a few questions is below the target, the average across all questions is above the target. Last year, we directly compared the results to the previous year, but that is not possible this year because we changed some of the questions since last year (that was part of our action plan). Our target was met.

**Target for O2: Apply to specific fields**

We would like to see the average on the questions selected to assess each of the learning outcomes be at least 65%. While this may seem like a low target to an outsider, we believe it is appropriate because these questions are not necessarily emphasized in the ECON 4999 course. These are really questions that assess skills learned in the introductory (ECON 2105 and 2106) courses, and it may be quite some time since the students took those courses by the time they take the ECON 4999 course. We hesitate to ask questions beyond the introductory level because of the way our program is set up - students have a good bit of flexibility in selecting their upper level economics courses, and therefore, students in the ECON 4999 course will likely have taken different 4000 level courses. The only courses we can be sure they've all had are the introductory and intermediate courses.

**Findings 2011-2012 - Target: Partially Met**

Note to review committee: See the table in the link provided (called econ tracking exam results 2012 report). While the percentage correct of many questions is above the target, the average across all questions is just below the target. Last year, we directly compared the results to the previous year, but that is not possible this year because we changed some of the questions since last year (that was part of our action plan). Our target was partially met.

**M 2: Group Project in ECON 4999 (O: 4)**

The group project will allow students to work together to analyze how the benefits and costs of a particular public policy are to be evaluated. The topic will be chosen by the group and should not be one covered in class. Groups consisting of no more than five students (and no fewer than two) will be assigned during the second week of the semester. Group presentations will take place during the last two weeks of classes, and should last about 15 minutes each. Groups must use PowerPoint for their presentations, which they will hand in at the time of the presentation. (A paper is not required for the group project.) Library research is required for the group project, and sources should be carefully noted within the presentation. The presentation should be about ten minutes long. The group can choose who speaks during the presentation. The group may have more than one of the group members speak during the presentation if the group feels it would enhance the presentation. Each individual must also hand in the evaluation sheet provided on the last page of the syllabus. The group project will count for 20% of the course grade. During this assessment cycle, the project was broken down by different skills and groups were assessed individually on these different skills. See the attached file for the rubric on the group presentation.

Source of Evidence: Capstone course assignments measuring mastery

**Target for O4: Communication**

We would like to see groups earn an average score of 7 or more out of 10 on the communication measure of the group project.

**Findings 2011-2012 - Target: Met**

Note to review committee: See the table in the link provided (called econ 4999 group project results 2012 report). The average score in the communication category, as well as the overall average score are both above our target of 7 (the average score for communication was 8.25 and the average overall score was 8.6). We are pleased to see that our target is met.

**M 3: Individual Book Review in ECON 4999 (O: 1)**

The individual book review will require the student to explore topics in economics that he or she is interested in and choose a book to read and thoroughly review. The review should be done in 5-6 pages (using one-inch margins, Times New Roman 12 font). The instructor will approve of the book before the first test is scheduled. In addition, an outline for the book review will be due one week before the first test. The individual book review will count for 15% of the course grade. See the attached rubric for the book review.

Source of Evidence: Capstone course assignments measuring mastery

**Target for O1: Economics Basic Theories**

The book review was broken down into different skills and students were assessed separately on each one. See the attached rubric (in the measures section) for more details. We hope to see the majority of students earn a rating of 2 or more, and many of them should earn an even higher rating on the “economics concepts” measure.

**Findings 2011-2012 - Target: Met**

Note to review committee: See the table in the link provided (called econ 4999 book review results 2012 report). The book report is also a CTW assignment (in the ECON4999 CTW course), so the table includes results from both a first and second draft as well as the final paper. A majority of students earned a rating of 2 or higher on the first draft, and a score of 3 or higher on the second draft and final paper. In fact, 98% earned a rating of 3 or higher on the final paper. We are pleased to see that our target is met.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**determine best way to assess learning outcome #3**

We have made adjustments to our assessment of learning outcomes based on feedback from the review committee of our previous assessment reports. Instead of reporting the average score for the micro and macro tracking exams as in the past, this cycle, we selected particular questions to assess the first 2 learning outcomes in 2009-2010 and 2010-2011. We are planning to change the tracking exam questions for the first 2 learning outcomes. We did not select questions from the tracking exams to assess learning outcome #3 in either cycle. We are still thinking about the best way to assess that learning outcome. We also did not use the tracking exam to assess learning outcome #4; we used the group project in ECON4999 for that instead.

**Established in Cycle:** 2009-2010

**Implementation Status:** In-Progress
change questions for the tracking exam

Upon inspection of the findings from last year, the Department of Economics’ Undergraduate Program Committee decided to change the tracking exam questions to better reflect the learning outcomes we are seeking to measure.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Tracking Examination | Outcome/Objective: Apply to specific fields | Economics Basic Theories

Implementation Description: We made changes to the questions since last year, but we are still re-visiting them and considering more changes.
Projected Completion Date: 05/2013
Responsible Person/Group: economics undergraduate programs committee in consultation with ECON 4999 instructors

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We have met to discuss the questions on our tracking exam, which is one of our measures. We have already revised the exam once and we are working on revising it again. We decided to do this based on the discussions the ECON Undergraduate Program Committee had about the reliability and validity of the questions we had been using. We have a larger number of faculty involved in the assessment process now, and we consider that a good thing.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

We have not made changes to our program or curriculum based on the assessment data. We are generally meeting our targets, so we don't feel the need to change our program or curriculum. We do add courses from time to time - largely because of the increased demand for our upper level courses, and we want to offer our majors more courses to take. We have added an internship course, and a career planning course - both on an experimental basis last year - and are in the process of adding them permanently to our list of offerings; we hope these courses will help our students be better equipped on the job market. We also added a course cross-listed with the Philosophy department, and we are working on developing a concentration in Philosophy for ECON majors (PHIL will offer a concentration in ECON for PHIL majors). This was a joint effort between the PHIL and ECON departments because we believe this is a great interdisciplinary collaboration between our departments.

Georgia State University
Assessment Data by Section
2011-2012 Economics MA
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose

The Master of Arts in Economics program is designed to train students for careers in local, state, and federal government and in the private sector. The program emphasizes basic analytical skills, micro- and macro-economic theory, and mathematical statistics, at a level necessary for contributing to and assessing policy research. Microeconomic skills are taught in Economics 8100. Macroeconomic skills are taught in Economics 8110. Statistical skills are taught in Economics 8740 and 8840. Students’ mastery of these skills is assessed with midterm and final examinations in the respective courses. The program also emphasizes advanced understanding of selected topics. Students must take seven additional economics courses, chosen in consultation with their advisors. They must demonstrate mastery of this course material through midterm exams, final exams, and research papers. A final high-quality research paper chosen by the student must demonstrate that the student has the ability to examine an economic problem at a level consistent with advanced graduate course work.

Goals

G 1: Theoretical and applied background.
To equip the MA program graduates with wide-ranging and in-depth knowledge of theoretical and applied economics. Graduates should be able to perform applied economic analysis based on sound theory and data analysis.

G 2: Professional success and continued education.
To facilitate the continued academic and professional development of the MA program graduates. Graduates should possess the necessary theoretical and analytic background to perform successfully in the job market and to be able to pursue further graduate level education.
Student Learning Outcomes/Objectives

SLO 3: Analytical Skills. (G: 1, 2) (M: 1, 2)
To learn and grasp basic analytical skills of microeconomics, macroeconomics, and econometrics.

Other Outcomes/Objectives

O/O 1: Applying Economic Models. (G: 1, 2) (M: 2, 3)
To be able to use and develop economic models to analyze various economic issues and to make policy recommendations.

O/O 2: Economic Disciplines. (G: 1, 2) (M: 1, 2)
To learn to identify various disciplines of economics and their ways of thinking economic issues.

O/O 4: Economic Data. (G: 1, 2) (M: 2)
To be able to understand, use and analyze economic data.

Measures, Targets, and Findings

M 1: Core exams. (O: 2, 3)
All graduating Master of Arts in Economics students will be assessed on their basic learning of microeconomics, macroeconomics, and econometrics (e.g., Master of Arts in Economics, Learning Outcome 1). The assessment will be based on the performances of their final examinations in microeconomics, macroeconomics and econometrics, the three required courses in their programs. Each exam will be graded on a discrete scale (e.g., A, A-, B+, B, B-, C+, C, C-, D, and F). Questions on the examinations will be classified by type (e.g., definitional, mathematical, policy-relevant, and so on), so that graders of the examination will be able to report more exactly the quality of each examination and the performance in specific areas.
Source of Evidence: Writing exam to assure certain proficiency level

Target for O2: Economic Disciplines.
Target not set in this cycle.

Findings 2011-2012 - Target: Met
There was a substantial increase on the number of students compared to last year because of an increase in enrollment due to a special program that brought 15 Indonesian students to our MA program. In the 2011-2012 cycle, 36 students took the microeconomics exam. There were improvements in almost all the categories with respect to the previous year. For example in Math and Analytics the scores were 4.0 and 4.30 compared to 3.92 and 4.30 in 2010-2011. We had already noted improvement in these two categories last year and are pleased the improvement has continued. In econometrics, 41 students took the exam. There were declines in some of the categories like Analytics (from 4.26 to 4.10), and Applications (from 4.38 to 4.15). These declines may perhaps be attributed to the large group of students from the Indonesian program in this cohort. The econometrics background they had received in their country was perhaps not as strong as the average of our usual cohorts.

Target for O3: Analytical Skills.
Target not set in this cycle.

Findings 2011-2012 - Target: Met
There was a substantial increase on the number of students compared to last year because of an increase in enrollment due to a special program that brought 15 Indonesian students to our MA program. In the 2011-2012 cycle, 36 students took the microeconomics exam. There were improvements in almost all the categories with respect to the previous year. For example in Math and Analytics the scores were 4.0 and 4.30 compared to 3.92 and 4.30 in 2010-2011. These declines may perhaps be attributed to the large group of students from the Indonesian program in this cohort. The econometrics background they had received in their country was perhaps not as strong as the average of our usual cohorts.

M 2: Essay. (O: 1, 2, 3, 4)
All students will submit a research paper to demonstrate their learning in a chosen subject of their own and to show their understanding, usage, and analysis of economic data. The Essay will typically be a product of the interaction with at least one faculty member in the Department of Economics, and will be assessed by the faculty member(s) involved. The Essay will be evaluated on several criteria (e.g., overall contribution to the literature, understanding of the literature, writing, technical proficiency, and so on).
Source of Evidence: Senior thesis or culminating major project

Target for O1: Applying Economic Models.
Target not set in this cycle.

Findings 2011-2012 - Target: Met
Eight essays were submitted in this cycle. Applying economic models were judged by the following two categories: Ability to Covey the Research Question and by Economic Analysis. The average for both of these categories was 3.8, while somewhat below last year's average, it is still under the criteria of meeting expectations. Nevertheless, more attention will be devoted to improving the essays in this and other categories.
**Target for O2: Economic Disciplines.**

Target not set in this cycle.

**Findings 2011-2012 - Target: Met**

This category was measured by Comprehension of the Literature. The average grade was 4.17 which meets our target in this category.

**Target for O3: Analytical Skills.**

Target not set in this cycle.

**Findings 2011-2012 - Target: Met**

This category was measured by the Theoretical Skills and Overall Contribution rankings. The average score in Overall Contribution was 3.58 which meets targets, but we would like to raise. The average score in Theoretical Skills was 3.89 which improved on last year’s score of 3.5.

**Target for O4: Economic Data.**

Target not set in this cycle.

**Findings 2011-2012 - Target: Met**

This category was evaluated by Data Collection, Measurement and Computation. The average score was 4.25, which is higher than last year’s and indicates good, solid performance.

**M 3: Alumni survey. (O: 1)**

All graduates of this program will be asked to complete a questionnaire that assesses how what was learned in the program contributes to their performance in their current job. This survey will be given at one year and three years after graduation.

Source of Evidence: Alumni survey or tracking of alumni achievements

**Target for O1: Applying Economic Models.**

Target not set in this cycle.

**Findings 2011-2012 - Target: Met**

This year we also received 5 responses to the alumni survey. The responses were generally favorable. In response to, “The program improved my ability to carry out research projects,” the average response by the alumni was a perfect 5.0. For two years running now graduates have felt that the program adequately improved their research skills. In addition, when asked if alumni would recommend our program to their peers, the average score was 4.6 which is higher than last year at 4.0. This is an indicator of an overall positive experience in the program. On the other hand, alumni felt that we could improve in two particular areas. First, offer them more background training in math to help them with the courses. Second, for the program administrators to have ongoing communication with them about program developments, etc.

**Details of Action Plans for This Cycle (by Established cycle, then alpha)**

**Alumni**

Compile a database of alumni and reinvigorate the contact with them to track job performance over time and satisfaction with the MA program.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** In-Progress
- **Priority:** High
- **Responsible Person/Group:** Bess Blyler

**Collect timely information**

Execute the newly developed surveys of current and graduating students to track experiences in a timely manner.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High

**Exchange programs**

Increase the number of students who participate in international exchange programs by providing comprehensive information.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High
- **Implementation Description:** The AYSPS has centralized information on study abroad programs. Information sessions are now provided by the college.

**High standards in core classes**

Work with the instructors of the core classes to maintain high standards across all measured outcomes, with particular emphasis on providing theoretical content with applied relevance and analytical skills.

- **Established in Cycle:** 2008-2009
- **Implementation Status:** Finished
- **Priority:** High
- **Projected Completion Date:** 11/2011
Improve research essays
The MA program advisor has received several inquiries from both faculty and students about the essay requirements. We expect an immediate improvement in the quality of research papers from clarifying these guidelines and requiring higher standards for passing.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 11/2011

New website
Build a comprehensive website for the MA program to use in the advising process, program administration, and promotion.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Projected Completion Date: 11/2011

Professional experience
Increase the number of internships and fellowships available to students to enrich their professional background and preparedness for employment. Also, provide more information about career events and opportunities.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High
Implementation Description: An internship course has been created, ECON 8941. It will run parallel to the PMAP course. This should encourage our students to obtain more internships.

Recruitment
Compile a large dataset of contacts where we can advertise the program.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High
Implementation Description: An initial dataset has been built. Information about the program has started to be sent in the Fall of 2012

Recruitment
Increase recruitment efforts in the U.S. and internationally. The new website will be essential in this effort.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High

Start a Seminar Series for our MA students
A special seminar series that met a couple of times a semester will be developed. The purpose is to integrate MA students specifically into our departmental activities. There are many other seminars offered throughout the semester, but are only typically attended by doctoral students and faculty. This new MA seminar series would be on topics specifically of interest to them such as: talks by alumni of the program on their job experiences and advise; talks by faculty about topical issues at a level accessible to MA students, etc.

Established in Cycle: 2010-2011
Implementation Status: Finished
Priority: High
Relationships (Measure | Outcome/Objective):
  Measure: Alumni survey.
  | Outcome/Objective: Applying Economic Models.
Implementation Description: The MA Symposium was established in Fall 2011 and has been meeting every semester since.
Responsible Person/Group: MA Director

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year's assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

There have been no changes in assessment process since last year.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year's assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

We will discuss adding a new math course requirement to the core which should improve performance in courses. We have continued to better integrate the MA students into the department with regular symposiums. Also, our Career Services office has become increasingly active in providing guidance with workshops and bring employers to meet students. We have introduced a new internship course which should also help students to gain experience while in the program.

ADMINISTRATIVE DEPT QUESTION 1: Explain how your department used the results from the previous cycle’s (2010-2011) assessment. What actions did you take this past year based on the results from the previous cycle? What changes did you make as a result?

see response to Academic Program Question 1
ADMINISTRATIVE DEPT QUESTION 2:
What have you learned from your assessment findings this year (2011-2012)? What do they reveal about your department's effectiveness?

see response to Academic Program Question 2

ADMINISTRATIVE DEPT QUESTION 3:
How will you use your findings from this year? What strategies for improvement will you use over the coming year? What degree of improvement do you anticipate?

We will publicize the program more widely to increase enrollments. We will make the curriculum changes proposed by the program to improve our student's skills. We will continue to work with our Career Services Office to facilitate and improve the placement of our graduates.

Georgia State University
Assessment Data by Section
2011-2012 Economics PhD
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request.)

Mission / Purpose
The Ph.D. in Economics program seeks to develop a high level of competence in conducting basic and applied policy research. The doctoral program requires that students master microeconomics, macroeconomics, and econometrics at a level required for independent professional research. Necessary skills for microeconomics are taught in Economics 9010, 9030 and 8500. Necessary skills for macroeconomics are taught in Economics 9020, 9040, and also 8500. Necessary skills for econometrics are taught in Economics 8030, 9710, 9720 and 9730. Students' mastery of these skills is assessed in midterm and final exams in these courses. Skills for microeconomics and macroeconomics are also assessed in comprehensive exams, normally taken after the first year. Additional concentration is required in one field of the student's choosing (Environmental and Urban Economics, Experimental Economics, Labor Economics, or Public Economics). Three courses are taken from the chosen field. Skills are assessed using midterm exams, final exams, and research papers in these courses. Field comprehensive exams (covering all three courses in one field) are required and usually are taken in the third year. A secondary field is optional; the requirement includes taking at least two courses from the chosen secondary field. The doctoral program also requires that students demonstrate proficiency in the techniques of teaching and research. This is demonstrated through collaboration with faculty members in research, presentation of papers and reports, and the writing of a dissertation. Students learn these skills in Economics 9510, 9515 and 9940. In these courses, they work individually with professors on research projects and gain expertise in presenting and conducting new research. Satisfactory progress is indicated by a passing grade in these courses. Finally proficiency in these skills is determined by the successful completion of an oral examination on the subject of the student's dissertation.

Goals
G 1: Knowledge
To equip the Ph.D. students with wide-ranging and in-depth knowledge of theoretical and applied economics and to achieve a high level of mastery of the issues, theories, and latest advances in at least one of the fields of economics.

G 2: Research
To develop a high level of competence in conducting independent and original basic and applied research.

Student Learning Outcomes/Objectives
SLO 1: Analytical Skills (G: 1)
To achieve a high level of competence understanding and using analytical skills of microeconomics, macroeconomics, and econometrics.

SLO 2: Theoretical and Quantitative Methods (G: 1) (M: 3)
To achieve a high level of competence in understanding the most recent theoretical and quantitative methods in economics.

SLO 3: Field Specialization (G: 1) (M: 2, 3)
To demonstrate mastery of the issues, theories, and latest advances in at least one of the fields in economics offered by the program.

SLO 4: Conducting Independent Research (G: 2) (M: 3, 4, 5)
To demonstrate ability to conduct independent and original basic and applied research in economics.

Measures, Targets, and Findings
M 2: Field Examination (O: 3)
All Ph.D. students take at least one Comprehensive Field Examination at the end of the second-year after taking the required courses for the field. This examination tests the knowledge of the field. The examination is graded, on a discrete scale (e.g., High Pass, Pass, Low Pass, High Fail, Fail), and students are given feedback. Questions on the examinations are categorized by type
(e.g., definitional, mathematical, policy-relevant, and so on). This provides opportunities for the graders to evaluate the quality of each examination and the performance in specific areas along several dimensions.

**Source of Evidence:** Comprehensive/end-of-program subject matter exam

### Target for O3: Field Specialization

<table>
<thead>
<tr>
<th>Findings 2011-2012 - Target: Met</th>
</tr>
</thead>
<tbody>
<tr>
<td>Examinations were given in four different fields. The number of students who took field examinations and the distribution of average grades in the field exams are comparable across 2010 and 2011. The Public Finance field exam was given to three students in Summer 2011 and Spring 2012; all three students passed the exam. The Labor Economics field exam was given to one student in Summer 2011 who passed the exam. The Urban/Environmental field exam was given to one student in Spring 2012 who passed with a high grade. Finally, the Experimental Economics field exam was given to four students in Summer 2011 and Spring 2012. Three of the four students passed the exam on the first attempt; one student passed it on the second attempt.</td>
</tr>
</tbody>
</table>

### M 3: Dissertation (O: 2, 3, 4)

After completion of the program’s coursework, students are required to write a Dissertation. The dissertation is written with close supervision of a faculty dissertation chair and a dissertation committee. The Dissertation is evaluated on several criteria (e.g., overall contribution to the literature, knowledge of the literature, writing expertise, technical proficiency, and so on).

**Source of Evidence:** Senior thesis or culminating major project

</thead>
<tbody>
<tr>
<td>Five alumni responded to the survey this year. Overall the alumni gave high scores to the program: on a scale of 5, the average scores varied from 4.3 (improved ability to teach) to 4.8 (improved job opportunities, analytical skills and ability to carry out research projects). These five alumni value highly the training they received in conducting research and data-analyzing techniques as well as the guidance and research assistance from the faculty and staff. They suggest that the program might benefit from: (i) introducing applied econometrics courses earlier in the program; (ii) continuing on expanding opportunities for teaching; (iii) more collaboration and joint research projects between faculty and graduate students; (iv) offering a grant writing workshop; and (v) further advancing research and policy focus training. The program should also consider establishing a network of the alumni. All five alumni would highly recommend the program to their peers (4.6 out of 5). These alumni are performing quite successfully; they have published a total number of 22 papers and book chapters.</td>

### M 5: Senior Ph.D. Student Survey (O: 4)

Ph.D. students in their 4th and 5th year are asked to complete a questionnaire that evaluates the program. The survey includes questions about the students’ current research output, including published and submitted research papers and presentations at
Findings 2011-2012 - Target: Met

Fourteen PhD students responded to the 2011 survey. Overall, the students valued the program highly. They would recommend the program to their peers: average scores are 4.2 and 4.3 (out of 5) for 4th and 5th year students. The program is valued highly with respect to improved analytical skills (4.5) and ability to carry out research projects (4.3). Improved writing skills and collaboration with other professionals in their fields both earned a score of 4.23. The lowest score was observed on perception of "improved teaching skills should I choose an academic career" (3.0). The total number of papers, book chapters and policy reports published is 23; the figure for working papers and work in progress is 53. Furthermore, there were 35 presentations (13 of them during 2011-2012) at conferences and professional meetings. Five students have teaching experience but only one of them taught at Georgia State University. Overall, from the students' point of view the program seems to be on track; they appreciate the core courses, strong analytical skills, econometric techniques and experimental methods. They suggest the program: (i) explore opportunities for collaboration with other departments such as mathematics and statistics, and computer science department; (ii) emphasize and better assist students with respect to opportunities to teach while in the program; (iii) consider merging labor, health and education in one field; (iv) consider developing additional courses, similar to Causal Inferences course, that aim at bridging the gap between the theory and applied cutting edge research; (v) expand on training in macroeconomics and labor; and (vi) offer assistance and guidance on preparing grant applications, writing reports and policy briefs.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

CV writing course
We organized a CV writing course for Ph.D. students.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High

High standards in core classes
Work with the instructors of the core classes to maintain high standards across all measured outcomes, with particular emphasis on providing theoretical content with applied relevance and analytical skills.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High

Job market preparation
Organize the consulting sessions during which faculty will give advice to students on how to prepare their job market applications. This activity is organized by the GSA.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High

Job market presentation
We continue to require that all graduating students present job market papers in the brown bag during the Fall semester. As reported in findings this change has been shown to improve job market outcomes.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High

Micro sequence
The microeconomics sequence was reorganized from three semesters to two semesters. This change eliminated the overlap in material from previous courses. It also allows students to have their first summer course free; students can focus solely on preparing for their comprehensive exams. We also eliminated summer courses in the first year; we no longer count the summer as one of the two semesters for students to get off of academic warning for low GPA. This allows students to focus exclusively on preparing for their comprehensive exams, as opposed to the previous practice in which students would try to take additional courses in the summer to raise their GPA, only to fail their comprehensive exams. As we had expected, students' performance on those exams improved significantly. All first year students passed the Macroeconomics comprehensive exam. In comparison with the previous year, the percentage of students who passed the Macroeconomics comprehensive exam on the first attempt increased from 81% to 100%; with respect to the Microeconomics comprehensive exam, the percentage of students who passed the exam on the first attempt went up from 53% to 67%.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High

Re-organization of the summer semester I
We moved ECON 8500 “History of Economic Thought” from the summer of the second year to the spring of the first year. This change eliminated mandatory courses in the summer of the second year. This allows students to do internships in their second year and have more time to study for field comprehensive exams in the second year. This also helps with GPA requirements, since students tend to do well in this particular course.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High
Re-organization of the summer semester II
We also eliminated summer courses in the first year; we no longer count the summer as one of the two semesters for students to get off of academic warning for low GPA. This allows students to focus exclusively on preparing for their comprehensive exams, as opposed to the previous practice in which students would try to take additional courses in the summer to raise their GPA, only to fail their comprehensive exams.

Established in Cycle: 2008-2009
Implementation Status: Finished
Priority: High

Additional dissertation workshop
Students will be required to take an additional dissertation workshop (ECON 9515) in which they will present research and give peer feedback. Particular attention will be paid to presentation skills and the substance of the research; students will be videotaped while presenting.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High

Econometrics sequence
To help differentiate the Ph.D. level courses from the MA level courses, we have proposed renumbering the courses in the econometrics curriculum. These proposed changes are in line with the policy of using course numbers starting with 9 for PhD level courses. ECON 8730 was re-numbered to Econ 9710. ECON 8750 was re-numbered to Econ 9720. The prerequisites reflect the proposed course renumbering in the econometrics curriculum. ECON 8760 was re-numbered to Econ 9730. The prerequisites reflect the proposed course renumbering in the econometrics curriculum. ECON 8790 was re-numbered to Econ 9740. The prerequisites reflect the proposed course renumbering in the econometrics curriculum. ECON 8770 was re-numbered to Econ 9750. The prerequisites reflect the proposed course renumbering in the econometrics curriculum.

Established in Cycle: 2009-2010
Implementation Status: Finished
Priority: High

Students' characteristics and success in the program.
We are working on creating a database with students' individual characteristics, their academic performance during the years in the program, placements in the job market and their subsequent research activities. The purpose is to identify determinants of what students' characteristics are correlated with success in the program and out of the program. This will help in developing a data-driven strategy in assessment of the program which will complement the information we get from the self-reporting surveys.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High

Summer support
Development of an administrative procedure that enforces professional performance responsibilities on graduate students who receive summer support.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High

Tutoring Experience
We continue to rotate all 3rd year students through the tutoring lab. Last year this helped with staffing the tutoring lab and provided graduates with valuable teaching experience, which we expect to increase their value on the job market.

Established in Cycle: 2009-2010
Implementation Status: In-Progress
Priority: High

Coordination of tutoring assignments with research schedules
Coordinate rotation of tutoring lab assignments with research schedules. All 3rd year students will continue to be rotated through the tutoring lab. This will continue to help with staffing the tutoring lab and provide graduates with valuable teaching experience which will increase their value on the job market. Coordination of the tutoring lab assignments with sponsored research grant support from faculty and students' own research grants will minimize conflicts between program objectives.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Further Development of procedures for summer support
Further development of the administrative procedure that enforces professional performance responsibilities on graduate students who receive summer support. Develop specific procedures for inclusion of research and educational activities carried out at non-university sites with approval by faculty advisers.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

New Course on Casual Inference
We added a new course: ECON8899/PMAP8899: Causal Inference and Evidence-based Policy. This course on causal inference is intended for graduate students in social and behavioral sciences broadly and is appropriate for students with advanced empirical training as well as students with only the pre-requisites (graduate-level statistics course covering probability theory and multivariate regression). The course emphasizes a deeper understanding of causality and the designs and methods used to draw causal
Use information from the database to inform admission decisions for applicants to the graduate program

Begin the process of using the graduate student database to inform the admissions decision. We have been developing a database with students’ individual characteristics, their academic performance during the years in the program, placements in the job market and their subsequent research activities. The purpose is to identify determinants of what students’ characteristics are correlated with success in the program and out of the program. A next step is to use information from the database to inform admission decisions for applicants to the graduate program.

Established in Cycle: 2010-2011
Implementation Status: Planned
Priority: High

Georgia State University
Assessment Data by Section
2011-2012 Education of Students with Exceptionalities PhD
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
Description: The mission of the Ph.D. program in Exceptional Students, Department of Educational Psychology and Special Education at Georgia State University, is to prepare graduates who are capable of performing the roles expected of faculty members in special education at institutions of higher education. Students enrolled in this program will demonstrate the ability to (a) design, implement, evaluate, and interpret data-based research, (b) prepare and teach courses at a university level which have a theoretical foundation and convey research-based information, (c) write proposals for funded projects, (d) collaborate with colleagues at the university and K-12 levels, and with members of community organizations; and (e) are dedicated to performing service for the public schools. In 2011-12, there were a total of 31 doctoral students, including 6 who had graduated, 3 who withdrew, and 1 who was dropped from the program. All 31 students demonstrated expertise with major concepts, theoretical perspectives, and empirical findings in special education. Twenty of the students received funding support.

Goals
G 1: Develop expertise in research skills
Students of the Education of Students with Exceptionalities PhD program will have the knowledge and skills to design, implement, evaluate and interpret their own research. In addition, students will be able to write data-based research articles for peer review journals, write grants, and critically read and analyze data-based research.

G 2: Develop expertise in teaching higher education
Students of the Education of Students with Exceptionalities PhD program will have the knowledge and skills to teach at the university level, including university courses, course lectures, and/or practicum supervision.

G 3: Engage in professional development
Students of the Education of Students with Exceptionalities PhD program will engage in professional development experiences, including collaborating with colleagues at the university and K-12 levels, and with community organizations.

G 4: Develop content expertise
Students of the Education of Students with Exceptionalities PhD program will develop content expertise in special education.

Student Learning Outcomes/Objectives
SLO 1: Students will design and conduct investigations (G: 1) (M: 1)
Students will develop expertise in research skills, specifically the ability to design, implement and evaluate their own research studies. They will also prepare their results for publication and submit their finding to refereed journals. Students will also develop skills in grant writing.
Relevant Associations: Related Measure: Doctoral Indicator Survey-Research section

SLO 2: Students will teach at the university level (G: 2) (M: 2)
Students will develop expertise in teaching at the university level through teaching (or assisting in teaching) university courses, course lectures, and/or practicum supervision.
Relevant Associations: Related Measure: Doctoral Indicator Survey-Teaching Section

SLO 3: Students will participate in presentations (G: 3) (M: 3)
Students will participate in professional development activities, including presentations and participation in professional organizations.
Relevant Associations: Related Measure: Doctoral Indicator Survey-Professional Development
## SLO 4: The student will meet course/program requirements (G: 4) (M: 4)

The student will demonstrate content expertise by earning satisfactory course grades, participating in class, passing the comprehensive exam, and successful defense of the prospectus (as appropriate).

### Measures, Targets, and Findings

#### M 1: Doctoral Indicator Survey - Research section (O: 1)

Evidence of submitted database articles, number of published articles, number of book chapters, and participation in grant development as compiled from the research activities section of the Ph.D. doctoral programs indicator survey.

**Source of Evidence:** Performance (recital, exhibit, science project)

**Target for O1: Students will design and conduct investigations**

- **By candidacy:** 100% of students will have submitted a manuscript in which they are senior author to a refereed journal.

**Findings 2011-2012 - Target: Met**

In 2011-2012 we had a total of 31 doctoral students and all students who reached candidacy submitted a manuscript as a senior author to a refereed journal. Additionally, 41 manuscripts were submitted by 18 students (with students being the senior author on 14 of these); 21 articles were published by 12 students (with students being the senior author on 8 articles); 4 book chapters were authored or co-authored by 4 students, and 8 grants were prepared with the assistance of 6 students.

#### M 2: Evidence of teaching college courses (O: 2)

Evidence of teaching college courses as teaching assistant and/or instructor, number of guest lecturers, number of students who supervised practica, as compiled from the teaching activities section of the Ph.D. doctoral programs indicator survey.

**Source of Evidence:** Performance (recital, exhibit, science project)

**Target for O2: Students will teach at the university level**

- **By candidacy:** 100% of the students will have completed their requirement of assisting or teaching a university course.

**Findings 2011-2012 - Target: Met**

In 2011-2012, all students who had reached candidacy had assisted or taught at least one university course. For the 2011-2012 year, 11 students assisted in teaching 29 courses; 12 students taught 25 courses as GTAs; 9 students gave guest lecturers; and 9 students supervised 60 practicum students.

#### M 3: Evidence of professional development (O: 3)

Evidence or professional development including presentations and participation in professional organizations as compiled from the professional development section of the Ph.D. doctoral programs indicator survey.

**Source of Evidence:** Performance (recital, exhibit, science project)

**Target for O3: Students will participate in presentations**

- **100% of the students will have made at least one conference workshop presentation by candidacy.**

**Findings 2011-2012 - Target: Met**

In 2011-2012, all students who had reached candidacy had made at least one conference or workshop presentation, 12 students made 28 national conference presentations; 12 students made 18 state conference presentations; 10 students made 15 workshop presentations; and 3 students held office in professional organizations.

#### M 4: Successful rating on annual evaluation (O: 4)

The student will demonstrate content expertise through successful rating on annual evaluation consisting of a review of course grades and participation, comprehensive exam scores, and prospectus (as appropriate).

**Source of Evidence:** Performance (recital, exhibit, science project)

**Target for O4: The student will meet course/program requirements**

- **Students will rate a satisfactory or higher on annual evaluations which include a review of course grades and participation, comprehensive exams, and prospectus (as appropriate) and is determined by PMA faculty.**

**Findings 2011-2012 - Target: Met**

In 2011-2012, there were a total of 31 doctoral students, including 6 who had graduated, and 3 who withdrew from the program. All 31 students demonstrated expertise with major concepts, theoretical perspectives, and empirical finding in special education. Twenty for the students received funding support. Outcomes were very positive this year as evidenced by the annual evaluation results.

### Details of Action Plans for This Cycle (by Established cycle, then alpha)

**Goal/objective has been met this year**

- **Goal/objective has been met this year and no further action is needed.**

  **Established in Cycle:** 2008-2009
  **Implementation Status:** Finished
  **Priority:** High

  **Relationships (Measure | Outcome/Objective):**
New PhD program creation and Course changes
In 2011, a restructuring of the EXC doctoral program is anticipated to occur to align with proposed changes being made by the College of Education. The EXC PhD program will be reexamined to determine appropriate changes, taking into consideration assessment data.

Established in Cycle: 2010-2011
Implementation Status: In-Progress
Priority: High

Relationships (Measure | Outcome/Objective):
Measure: Successful rating on annual evaluation
Outcome/Objective: The student will meet course/program requirements

Implementation Description: A new PhD program in currently in place, starting Fall 2012. Several courses were changed with new courses being created and content added. Course content may be further adjusted based upon faculty and student feedback.
Projected Completion Date: 05/2014
Responsible Person/Group: PMA committee/ department

Examine PhD Data
In addition to faculty continuously evaluating their students and monitoring their process, the PhD data base is updated each spring and results are discussed along with each EXC PhD student’s annual evaluation. Faculty to continue this evaluation process for 2012 – 2013 academic year and continue their discussions of student data and process in PMA meetings.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: Medium

Relationships (Measure | Outcome/Objective):
Measure: Successful rating on annual evaluation
Outcome/Objective: The student will meet course/program requirements

Projected Completion Date: 09/2013
Responsible Person/Group: Kathy Heller for maintaining data base with support. PMA committee to evaluate PhD student progress and evaluate their data.

Monitor new PhD Program
Starting in Fall 2012, the department had approved a new PhD program. The program as a whole needs to be closely monitored to determine if there are any further course changes or general changes that need to be made to the program, or to the requirements of the program.

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High
Projected Completion Date: 05/2014
Responsible Person/Group: PMA committee

Georgia State University
Assessment Data by Section
2011-2012 Educational Leadership EdD
As of 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
MISSION STATEMENT and PROGRAM DESCRIPTION Mission: The mission of the Professional Doctorate in Education (Ed. D.) with a major in Educational Leadership is to advance the development and practice of effective educational leadership. Purpose: The Professional Doctorate in Education (Ed. D.) with a major in Educational Leadership provides senior-level administrators with the following: the knowledge and skills necessary to deal effectively with the complex issues facing education today the methods of inquiry necessary to analyze current educational problems the leadership skills necessary to direct the development and implementation of programs to address those problems and to disseminate the results in various professional and public forums the knowledge and applied skills rarely provided in traditional advanced degree programs in educational leadership in an alternative format that meets the needs of senior-level administrators

Goals
G 1: Goal 1: Vision, Mission, and Goals
Goal 1: Vision, Mission, and Goals: Graduates will possess the skills to ensure the achievement of all students by guiding the development and implementation of a shared vision of learning, strong organizational mission and high expectations for every student, staff member, and stakeholder.

G 2: Goal 2: Teaching and Learning
Goal 2: Teaching and Learning: Graduates will possess the skills to ensure achievement and success of all students by monitoring and continuously improving teaching, learning, and leadership.

G 3: Goal 3: Managing Organizational Systems and Safety
Goal 3: Managing Organizational Systems and Safety: Graduates will possess the skills to ensure the success of all students by creating and managing organizational systems and resources for a safe, high-performing learning environment.

G 4: Goal 4: Collaborating with Families and Stakeholders
Goal 4: Collaborating with Families and Stakeholders
Graduates will possess the skills to ensure the success of all students by collaborating with families and stakeholders who represent diverse community interests and needs and mobilizing community resources that improve teaching, learning, and leadership.

Goal 5: Ethics and Integrity
Graduates will possess the skills to ensure the success of all students by being ethical and acting with integrity.

Goal 6: The Education System
Graduates will possess the skills to ensure the success of all students by influencing interrelated systems of political, social, economic, legal, and cultural contexts affecting education to advocate for their teachers’ and students’ needs.

Student Learning Outcomes/Objectives

SLO 1: Objective 1.1: High Expectations for All (G: 2) (M: 2, 3, 4, 5)
Objective 1.1: High Expectations for all: Graduates will demonstrate the ability to lead stakeholders in ensuring that the vision and goals establish high, measurable expectations for all students and educators.

SLO 3: Objective 1.3: Continuous Improvement Toward the Vision, Mission, and Goals (G: 1, 6) (M: 2, 3, 4, 5)
Objective 1.3: Continuous Improvement toward the Vision, Mission, and Goals: Graduates will demonstrate the ability to ensure the achievement of all students by guiding the development and implementation of a shared vision of learning, strong organizational mission, and high expectations for every student, staff member, and stakeholder.

SLO 4: Objective 2.1: Strong Professional Culture (G: 1, 2, 4, 6) (M: 1, 4, 5)
Objective 2.1: Strong Professional Culture: Graduates will demonstrate the skills to ensure a strong professional culture that supports teacher learning and shared commitments to the vision and goals.

SLO 5: Objective 2.2: Rigorous Curriculum and Instruction (G: 2, 5, 6) (M: 3, 4, 5)
Objective 2.2: Rigorous Curriculum and Instruction: Graduates will demonstrate the skills to improve achievement of all students by requiring all educators to know and use rigorous curriculum and effective instructional practices, individualized for success of every student.

SLO 6: Objective 2.3: Assessment and Accountability (G: 1, 2, 3, 5, 6) (M: 4, 5)
Objective 2.3: Assessment and Accountability: Graduates will demonstrate the skills to improve achievement and close achievement gaps requiring that leaders make appropriate, sound use of assessments, performance management, and accountability strategies to achieve vision, mission, and goals.

SLO 7: Objective 3.1: Effective Operational Systems (G: 2, 3, 4, 5, 6) (M: 4, 5)
Objective 3.1: Effective Operational Systems: Graduates will demonstrate the skills to distribute leadership responsibilities and supervise daily, ongoing management structures and practices to enhance teaching, learning, and leadership.

SLO 8: Objective 3.2: Aligned Fiscal and Human Resources (G: 2, 3, 5, 6) (M: 4, 5)
Objective 3.2: Aligned Fiscal and Human Resources: Graduates will demonstrate the skills to establish an infrastructure for finance and personnel that operates in support of teaching, learning, and leadership.

SLO 9: Objective 3.3: Protecting the Welfare and Safety of Students and Staff (G: 3, 4, 5, 6) (M: 1, 4, 5)
Objective 3.3: Protecting the Welfare and Safety of Students and Staff: Graduates will demonstrate the skills to ensure a safe environment by addressing real and potential challenges to the physical and emotional safety and security of students and staff that interfere with teaching, learning, and leadership.

Other Outcomes/Objectives

O/O 2: Objective 1.2: Shared Commitments to Implement the Vision, Mission, and Goals (G: 1) (M: 3, 4, 5)
Objective 1.2: Shared Commitments to Implement the Vision, Mission, and Goals: Graduates will demonstrate the ability to ensure that the process of creating and sustaining the vision, mission, and goals is inclusive, building common understandings and genuine commitment among all stakeholders.

Measures, Targets, and Findings

M 1: Dispositions Assessment (O: 4, 9)
1. Dispositions Assessment 2. This assessment is used to gain an initial understanding of candidate dispositions. It is administered during the first semester in the program. 3. This assessment is the College of Education Disposition Assessment. 4. Because this program is currently in its first year of existence, there are not data to report. Data will be uploaded as they become available.
Source of Evidence: Academic indirect indicator of learning - other

M 2: The Problem Identification Project (O: 1, 3)
EPEL 9000 Final Project Rubric: The Problem Identification Project *This assignment is given in the first semester in the program as a
The dissertation requires the field of study, the nature of the student's methodology, or the nature of the results of the investigations. Each student will develop a final written paper as well as a presentation to the class on the research questions and the literature reviewed. Submitted papers will be evaluated based on a rubric. Student presentations will be evaluated using an acceptable/unacceptable scale. Additional feedback will be given through peer feedback regarding the topic selection, literature review and the research questions developed.

Source of Evidence: Written assignment(s), usually scored by a rubric

The Literature Review Project requires the field of study, the nature of the student's methodology, or the nature of the results of the investigations. Each student will develop a final written paper as well as a presentation to the class on the research questions and the literature reviewed. Submitted papers will be evaluated based on a rubric. Student presentations will be evaluated using an acceptable/unacceptable scale. Additional feedback will be given through peer feedback regarding the topic selection, literature review and the research questions developed.

Source of Evidence: Written assignment(s), usually scored by a rubric

The Literature Review Project is an integral part of the dissertation project. In it, the student identifies an unmet need, describes the problem to be investigated, and outlines the methods to be used in the investigations. This section functions in the same way as the first chapter of a dissertation.

Source of Evidence: Written assignment(s), usually scored by a rubric

The comprehensive examination consists of a written portion and an oral portion. The students have two opportunities to pass the comprehensive examination. Students who do not pass the examination on the second attempt are not permitted to continue in the doctoral program. To be eligible to take the comprehensive examination, the students' cumulative grade point average in the doctoral program of study must be no less than 3.25. Each student's Doctoral Advisory Committee determines what coursework must be completed before he or she may take the comprehensive examination. A student's committee members will determine the content of the examination items and the scoring of the responses. It will be the decision of the committee whether to discuss and to distribute examination questions in advance. Students may pass or fail any session (A, B or C) of the exam. All sessions must be passed in order to pass the examination. Each examiner for sessions A, B or C will grade the examination on a pass/fail basis. Consensus of the student's committee is required to pass all sessions. A student who fails a session may sit for that session a second time. The committee will determine the time of the retest. After two failures on any session, the student is not eligible to retake that session, has failed the comprehensive examination, and is not eligible to continue doctoral studies.

Examinations may be written with a word processor approved by the department. A student may initially elect to write the examination by hand and to transcribe or to have the examination transcribed within 48 hours of completion of the examination. The handwritten examination shall be copied before leaving the department for transcription. Both the handwritten and transcribed copy must be turned in. Notice of the examination results will be forwarded to the Office of Academic Assistance by the end of the semester. Sample examination questions for each session are available to assist students in preparing for the examination. Sample examinations are not intended as practice exams, as study guides, nor as an indication of content of a session. Rather, sample examinations are to provide an indication of the types of questions that might be asked on the examination. Types of questions on an actual examination may differ from those on the sample examination. The department provides a sample examination for all sessions. The exams will be graded based on a rubric. Because the program is in its first semester of existence, there are not data to report at this time.

Source of Evidence: Comprehensive/End-of-program subject matter exam

The comprehensive examination consists of a written portion and an oral portion. The students have two opportunities to pass the comprehensive examination. Students who do not pass the examination on the second attempt are not permitted to continue in the doctoral program. To be eligible to take the comprehensive examination, the students' cumulative grade point average in the doctoral program of study must be no less than 3.25. Each student's Doctoral Advisory Committee determines what coursework must be completed before he or she may take the comprehensive examination. A student's committee members will determine the content of the examination items and the scoring of the responses. It will be the decision of the committee whether to discuss and to distribute examination questions in advance. Students may pass or fail any session (A, B or C) of the exam. All sessions must be passed in order to pass the examination. Each examiner for sessions A, B or C will grade the examination on a pass/fail basis. Consensus of the student's committee is required to pass all sessions. A student who fails a session may sit for that session a second time. The committee will determine the time of the retest. After two failures on any session, the student is not eligible to retake that session, has failed the comprehensive examination, and is not eligible to continue doctoral studies.

Examinations may be written with a word processor approved by the department. A student may initially elect to write the examination by hand and to transcribe or to have the examination transcribed within 48 hours of completion of the examination. The handwritten examination shall be copied before leaving the department for transcription. Both the handwritten and transcribed copy must be turned in. Notice of the examination results will be forwarded to the Office of Academic Assistance by the end of the semester. Sample examination questions for each session are available to assist students in preparing for the examination. Sample examinations are not intended as practice exams, as study guides, nor as an indication of content of a session. Rather, sample examinations are to provide an indication of the types of questions that might be asked on the examination. Types of questions on an actual examination may differ from those on the sample examination. The department provides a sample examination for all sessions. The exams will be graded based on a rubric. Because the program is in its first semester of existence, there are not data to report at this time.

Source of Evidence: Comprehensive/End-of-program subject matter exam

The dissertation is an original contribution to knowledge in the field of study. It is a focused research project that advances knowledge in the area of inquiry. It is recommended (although not required) that a scholarly journal to which the manuscript could be submitted be identified prior to completion of the dissertation. Because the research manuscript may be limited by the number of manuscript pages that a journal typically accepts, additional material related to the conducting the research may be included in appendices (e.g., additional tables, information regarding computer programs, details on coding, information about primary sources) so that the research document will be fully documented. The organization of the research manuscript will follow the expected format of the research field as represented in scholarly journals. At the discretion of the student's committee, an introductory section or chapter may be included in the review and research format dissertation. This section functions in the same way as the first chapter of a traditional format dissertation. In it, the student identifies an unmet need, describes the problem to be investigated, and indicates the method of inquiry. This chapter links the review manuscript to the research manuscript. The student's committee may establish additional requirements. These requirements may change depending on the nature of the questions being investigated or the field of study, the nature of the student's methodology, or the nature of the results of the investigations. In summary, this format requires: 1) a comprehensive literature review manuscript that addresses a current issue, in this case in educational leadership
policy and/or practice, prepared according to the style requirements of a scholarly journal so that the manuscript is suitable for publication. The literature review manuscript should avoid extreme brevity and be understandable to the members of the candidate's Doctoral Advisory Committee even if this necessitates some elaboration of the standard article format, and 2) a research manuscript that describes the results of an original, applied research project informed by the comprehensive literature review, described above. The two manuscripts will be integrated into the dissertation format. Oral Defense: The purpose of the oral defense of the dissertation is to enable the Doctoral Advisory Committee to judge the quality of the investigation and the students' ability to defend their work. The student, in consultation with committee members, is responsible for setting the date and time of the oral defense. Once the Doctoral Advisory Committee agrees upon the date and time, the student should notify Jeff Stockwell at jstockwe@gsu.edu and request the date, time, room, and equipment needs. When the dissertation is completed, a public announcement of the oral defense of the dissertation is disseminated via the Office of Academic Assistance and Graduate Admissions to the College of Education faculty. The announcement must be submitted to the Office of Academic Assistance and Graduate Admissions at least ten business days prior to the scheduled defense. Additionally, the dissertation must be defended between the first day of classes and the last day of final examinations; it cannot be defended between academic terms. Students should consult the current deadlines for doctoral candidates to plan the timely announcement of the dissertation defense. At the same time the announcement of the oral defense is submitted, two typed copies of the completed dissertation are made available for faculty review in the Office of Academic Assistance and Graduate Admissions. The announcement of the oral defense includes the date and location of the defense and an abstract of the dissertation of no more than 350 words. The oral defense is scheduled during regular dates of operation (i.e., between the first day of classes and the last day of final examinations each term, excluding official holidays). The oral defense must be attended by no fewer than three (3) members of the Doctoral Advisory Committee and is open to all College of Education faculty and invited guests. The committee will invite other faculty and guests present to question the candidate and to communicate to the committee their professional reactions. Approval and acceptance of the doctoral dissertation requires a favorable vote of a majority of the Doctoral Advisory Committee. The presentation of the dissertation study shall include an overview of the study, including its rationale, design, data analysis, and results. The presentation should be approximately twenty minutes in length. The presentation will be followed by questions from the committee members. Following the period of questioning the Chairperson of the defense will invite the candidate and all visitors to leave the room while the committee deliberates. Upon returning, he/she learns of the committee's decision. The committee shall decide if the candidate passed or failed and in either case, what revisions, if any, are required. After the candidate has been asked to return to the room, it is the responsibility of the major advisor to inform the candidate of the expected revisions and determine if committee members are to be involved in reviewing the revisions. Revisions must be completed and approved 2 to 4 weeks after the defense. It is the responsibility of the committee as a whole to judge the quality of the candidate's work and recommend approval of the dissertation. All differences of opinion shall be handled by the committee as a whole with the major advisor guiding the candidate through agreed upon required changes. In cases where consensus is not possible, dissenting members have an option of not signing the dissertation approval form. This option shall be exercised very rarely; it is anticipated that differences will be resolved within the committee. In special cases, the Coordinator of the Ed.D. program may be consulted for assistance in resolving committee conflicts. The dissertation will be evaluated using a rubric Because the program is in its first year of existence, there are no data to report at this time.

Source of Evidence: Senior thesis or culminating major project

---

**Georgia State University**

**Assessment Data by Section**

**2011-2012 Educational Leadership EdS**

*As of: 12/12/2016 04:41 PM EST*  
*(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)*

### Mission / Purpose

The mission of the Specialist in Educational Leadership at Georgia State University is to prepare candidates to be effective instructional leaders who positively impact student achievement. The Ed.S. major in Educational Leadership is designed to build the capacity of practicing administrators to lead their schools effectively. Applicants for the major must be full time, practicing educators and be employed in a partnering school system. L-5 or NL-5 Educational Leadership certification is a prerequisite for entry into the program. The program may be designed to fulfill the requirements of PL-6 Educational Leadership certification by the State of Georgia.

### Goals

#### G 1: Goal 1: Vision, Mission, and Goals

Goal 1: Vision, Mission, and Goals: Candidates will possess the skills to ensure the achievement of all students by guiding the development and implementation of a shared vision of learning, strong organizational mission and high expectations for every student.

#### G 2: Goal 2: Teaching and Learning

Goal 2: Teaching and Learning: Candidates will possess the skills to ensure achievement and success of all students by monitoring and continuously improving teaching and learning.

#### G 3: Goal 3: Managing Organizational Systems and Safety

Goal 3: Managing Organizational Systems and Safety: Candidates will possess the skills to ensure the success of all students by managing organizational systems and resources for a safe, high-performing learning environment.

#### G 4: Goal 4: Collaborating with Families and Stakeholders

Goal 4: Collaborating with Families and Stakeholders: The candidate will possess the skills to ensure the success of all students by collaborating with families and stakeholders who represent diverse community interests and needs and mobilizing community resources that improve teaching and learning.

#### G 5: Goal 5: Ethics and Integrity

Goal 5: Ethics and Integrity: The candidate will possess the skills to ensure the success of all students by being ethical and acting with integrity.
**Goal 6: The Education System**

The candidate will possess the skills to ensure the success of all students by influencing interrelated systems of political, social, economic, legal, and cultural contexts affecting education to advocate for their teachers’ and students’ needs.

### Student Learning Outcomes/Objectives

**SLO 1: Objective 1.1: High Expectations for All (G: 1, 2) (M: 1, 2, 6)**

Objective 1.1: High Expectations for all: The candidate will demonstrate the ability to lead stakeholders in ensuring that the vision and goals establish high, measurable expectations for all students and educators.

**SLO 2: Objective 1.2: Shared Commitments to Implement the Vision, Mission, and Goals (G: 1, 4, 6) (M: 2, 6)**

Objective 1.2: Shared Commitments to Implement the Vision, Mission, and Goals: The Candidate will demonstrate the ability to ensure that the process of creating and sustaining the vision, mission, and goals is inclusive, building common understandings and genuine commitment among all stakeholders.

**SLO 3: Objective 1.3: Continuous Improvement toward the Vision, Mission, and Goals (G: 1, 2, 6) (M: 2, 3, 6)**

Objective 1.3: Continuous Improvement toward the Vision, Mission, and Goals: The Candidate will demonstrate the ability to ensure the achievement of all students by guiding the development and implementation of a shared vision of learning, strong organizational mission, and high expectations for every student.

**SLO 4: Objective 2.1: Strong Professional Culture (G: 1, 2, 4, 5, 6) (M: 2, 4, 6)**

Objective 2.1: Strong Professional Culture: The candidate will demonstrate the skills to ensure a strong professional culture that supports teacher learning and shared commitments to the vision and goals.

**SLO 5: Objective 2.2: Rigorous Curriculum and Instruction (G: 2, 3, 5, 6) (M: 2, 5, 6)**

Objective 2.2: Rigorous Curriculum and Instruction: The candidates will demonstrate the skills to improve achievement of all students by requiring all educators to know and use rigorous curriculum and effective instructional practices, individualized for success of every student.

**SLO 6: Objective 2.3: Assessment and Accountability (G: 1, 2, 3, 5, 6) (M: 2)**

Objective 2.3: Assessment and Accountability: The candidates will demonstrate the skills to improve achievement and close achievement gaps requiring that leaders make appropriate, sound use of assessments, performance management, and accountability strategies to achieve vision, mission, and goals.

**SLO 7: Objective 3.1: Effective Operational Systems (G: 2, 3, 6) (M: 2)**

Objective 3.1: Effective Operational Systems: The candidate will demonstrate the skills to distribute leadership responsibilities and supervise daily, ongoing management structures and practices to enhance teaching and learning.

**SLO 8: Objective 3.2: Aligned Fiscal and Human Resources (G: 3, 5, 6) (M: 2)**

Objective 3.2: Aligned Fiscal and Human Resources: The candidate will demonstrate the skills to establish an infrastructure for finance and personnel that operates in support of teaching and learning.

**SLO 9: Objective 3.3: Protecting the Welfare and Safety of Students and Staff (G: 2, 3, 5, 6) (M: 2, 6)**

Objective 3.3: Protecting the Welfare and Safety of Students and Staff: The candidate will demonstrate the skills to ensure a safe environment by addressing real and potential challenges to the physical and emotional safety and security of students and staff that interfere with teaching and learning.

**SLO 14: Objective 5.2: Examining Personal Values and Beliefs (G: 1, 2, 5) (M: 2, 6)**

Objective 5.2: Examining Personal Values and Beliefs: The candidate will demonstrate the skills prove their commitment to examine personal assumptions, values, beliefs, and practices in service of a shared vision and goals for student learning.

### Other Outcomes/Objectives

**O/O 10: Objective 4.1 Collaboration with Families and Community Members (G: 4, 6) (M: 2, 6)**

Objective 4.1 Collaboration with Families and Community Members: The candidate will demonstrate the skills to extend educational relationships to families and community members to add programs, services, and staff outreach and provide what every student needs to succeed in school and life.

**O/O 11: Objective 4.2: Community Interests and Needs (G: 4, 5, 6) (M: 2, 6)**

Objective 4.2: Community Interests and Needs: The candidate will demonstrate the skills to respond and contribute to community interests and needs in providing the best possible education for their children.

**O/O 12: Objective 4.3 Building on Community Resources (G: 4, 5, 6) (M: 2)**

Objective 4.3 Building on Community Resources: The candidate demonstrates the skills to maximize shared resources among schools, districts, and communities that provide key social structures and gathering places, in conjunction with other organizations and agencies that provide critical resources for children and families.
Measures, Targets, and Findings

**M 1: Policy Manual Review (O: 1)**
Policy Manual Review: 1) The assessment is a paper written by the candidate that reviews the school system's policy manual current status in relation to local, state, and national laws and First Amendment Rights. The following is the instructions provided to the candidate to complete the assignment: 2) Students will present a final paper based upon their review of the local school system's policy manual. This paper is to ascertain the manual's current status in relation to Georgia laws, national laws, and First Amendment Rights of students and teachers. 3) There are four indicators within the Policy Manual Review Rubric that address the ELCC Standard 6. 4) To be successful, students must achieve a score of 3 of 4 points for the average of the overall total score of all four indicators. Here is the link for the EPS Policy Review Rubric: EPEL_EDS_KeyAssessment_RUBRIC FOR POLICY/REGULATION REVIEW 4) The Educational Leadership program was reviewed under new standards in the Fall of 2010. Therefore, based on the review, the program has collected data from the year 2010-2011 and forward. There are 2 data reports attached below that indicate all of the students successfully completed the Policy Manual Review.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O1: Objective 1.1: High Expectations for All**
90 percent of students receiving Exceeds Expectations and/or Meets Expectations on the policy manual review.

**Findings 2011-2012 - Target: Met**
1) Students will present a final paper based upon their review of the local school system's policy manual. This paper is to ascertain the manual's current status in relation to First Amendment Rights of students and teachers. 2) This assignment is aligned to Goal (ELCC Standard) 6: Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by understanding, responding to, and influencing the larger political, social, economic, legal, and cultural context. In analyzing the policy manual for elements related to Constitutional law, students demonstrate an understanding of the contexts outlined in Goal 6. 3) A brief analysis of the data findings is as follows: The starting point for any legal analysis is the claimed violation of law. State what law is claimed to be violated. 12 students or 100% exceeded expectations for this measure State the names of the witnesses and to what facts (in summary fashion) they testified. 12 students or 100% exceeded expectations for this measure Describe the documents, which helped prove the case and the important parts of each document. 8 students or 66% exceeded expectations for this measure 4 students or 33% met expectations for this measure

**M 2: GACE (O: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18)**
GACE - Educational Leadership Content Test 1) The content assessment was a required test for all candidates aspiring to admission into the Specialist (Ed.S.) in Educational Leadership program for the 2009-2010 year as it was a required for the NL-5 leadership certificate. 2) All candidates (100%) admitted to the Specialist (Ed.S.) in Educational Leadership program had a passing score on the two-part GACE exam. Further analysis reveals that Candidates scored above the state average average on most subareas. Scaled scores are also noteworthy. Scaled scores run from 100 to 300 with 220 being the passing mark. GSU candidates ranged from 246 to 268, significantly higher that the cut-off score.

Source of Evidence: Portfolio, showing skill development or best work

**M 3: School Improvement Plan Analysis (O: 3)**
1) Purposes of this assignment: (1) To understand and analyze a school's SIP in order to understand the process of effective school improvement planning and (2) to determine/analyze the ways in which the SIP is used and is useful and implemented in a school, and (3) to determine if the plan IS or IS NOT being effectively used or implemented in the school. 2)This assessment aligns with ELCC Standard 2.0: Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by understanding, responding to, and influencing the larger political, social, economic, legal, and cultural context. In analyzing the policy manual for elements related to Constitutional law, students demonstrate an understanding of the contexts outlined in Goal 6. 3) A brief analysis of the data findings is as follows: The starting point for any legal analysis is the claimed violation of law. State what law is claimed to be violated. 12 students or 100% exceeded expectations for this measure State the names of the witnesses and to what facts (in summary fashion) they testified. 12 students or 100% exceeded expectations for this measure Describe the documents, which helped prove the case and the important parts of each document. 8 students or 66% exceeded expectations for this measure 4 students or 33% met expectations for this measure

Based on the analysis, Candidates scored above the state average average on most subareas on the GACE exam. Scaled scores are also noteworthy. Scaled scores run from 100 to 300 with 220 being the passing mark. GSU candidates ranged from 246 to 268, significantly higher that the cut-off score. This assignment provides evidence for meeting the standard because candidates are required to identify, analyze, and discuss elements related to policy (Constitutional law) and practice (how that law plays out in a school setting).
provide an effective instructional program within the school. 2.3 Students will determine how SIP procedures encourage the application of "Best Practice" to student learning. In analyzing the SIP, candidates demonstrate understanding of how this document can provide the framework for an effective instructional program and for student learning.

Source of Evidence: Written assignment(s), usually scored by a rubric

**Target for O3: Objective 1.3: Continuous Improvement toward the Vision, Mission, and Goals**

The majority of students will meet or exceed for this measure.

**Findings 2011-2012 - Target: Met**

3) Twenty-five students were in the class for the initial administration in which 19 students were rated "Exceed", 4 students were rated "Meets", and 1 student was rated "Developing". Exceeds Expectations(A) 19 76% Meets Expectations (B) 4 16% Developing (C) 1 4% Exceeds Expectations(D or F) A majority (94%) of candidates in the program met or exceeded expectations on this assignment. This success rate would indicate that the majority of students have a clear understanding of the key to the audit committee to understand the complex issues concerning a multicultural organization. Meets Expectations: Student submits an acceptable report of multiple diversity issues related to his/her school or district based on an equity audit involving the audit committee to understand the complex issues concerning a multicultural organization. Does Not Meet Expectations: Student submits a report that omits significant diversity issues related to his/her school or district based on an equity audit involving the audit committee to understand the complex issues concerning a multicultural organization. Does Not Meet Expectations: Student submits a report that omits significant diversity issues related to his/her school or district based on an equity audit involving the audit committee to understand the complex issues concerning a multicultural organization. Does Not Meet Expectations: Student submits a report that omits significant diversity issues related to his/her school or district based on an equity audit involving the audit committee to understand the complex issues concerning a multicultural organization.

**M 4: Equity audit (O: 4)**

Students will initiate and facilitate an equity audit using key stakeholders with their school or districts in order to determine the school's or district's status regarding diversity (i.e. whether the school or district is a monolithic, diverse, or multicultural organization). Students will help school and/or district stakeholders identify diversity issues related to school policies, curriculum, instruction, culture, management, and operations, personnel, and parent involvement and then apply those issues toward the audit.(EPEL 8020).

**EQUITY AUDIT RUBRIC:**

1) The Portfolio Assessment examines student work and assignments collected in Live Text over the course of the Educational Leadership Program. There is a formative assessment at the midpoint of the program and a summative assessment at the conclusion of the program. 2) The candidate will collect work samples, papers, observations, and reviews during the program in Live Text that can provide the framework for an effective instructional program and for student learning. 3) The Portfolio Assessment examines student work and assignments collected in Live Text over the course of the Educational Leadership Program. There is a formative assessment at the midpoint of the program and a summative assessment at the conclusion of the program. 4) The evidence for meeting the stated standard because candidates must be able to both identify specific elements within the plan and analyze how those elements are evidenced in the school's organizational structure.

Source of Evidence: Portfolio, showing skill development or best work

**Target for O4: Objective 2.1: Strong Professional Culture**

90 percent of students receiving Exceeds Expectations and/or Meets Expectations on the equity rubric (EPEL 8020).

**Findings 2011-2012 - Target: Met**

1) The purpose of this assignment is to determine whether the candidate's particular school has in place policies, ideas, staff, missions, and goals to be considered a multicultural organization. 2) The Equity Audit Assessment is linked to Goals (ELCC Standards) 1, 3, 4, and 5. 3) A total of 12 students participated in the first administration of the assessment. The results of the assessment are as follows: Project Element Exceeds Expectations Met Expectations Does not Meet Expectations Introduction 12 100% Identification/Statement of Problem 12 100% Literature Review 6 50% 5 42% 1 8% Proposed Methodology 8 75% 4 25% Conclusion 12 100% Presentation Summary 10 83% 2 17% Total for Each Level Of the 12 students who completed the first administration of the assessment, all met or exceeded expectations for the overall assignment with 8% not meeting expectations for the literature review portion. This information demonstrates that the majority of candidates have a solid grasp on the elements assessed. This information also suggests that further attention should be paid to ensuring that students write the literature review portion of their assessments. A total of 22 students were in the course for the second administration of the assessment. The results of the assessment are as follows: Project Element Exceeds Expectations Met Expectations Does not Meet Expectations Introduction 12 100% Identification/Statement of Problem 15 68% 5 23% 2 9% Literature Review 10 45% 10 45% 2 9% Proposed Methodology 15 68% 5 23% 2 9% Conclusion 15 68% 5 23% 2 9% Presentation Summary 20 91% 2 9% Total for Each Level Of the 22 students who completed the second administration of the assessment, the numbers mirrored those from the first assessment with the single difference being that 2 students or 9% failed the assessment altogether. While this could be indicative of a larger issue related to the difficulty of the assignment, it is believed that the two students are outliers as they did not submit the assignment for evaluation.

4) The evidence for meeting Goals 1, 3, 4, and 5 are as follows: Read and review current literature to identify and understand issues related to diversity and multiculturalism (informed by research, knowledge and reflective practice) ELCC Standard 1 Understand and be able to explain the social contexts within which ideas related to diversity and multiculturalism are developed, changed, and analyzed (informed by research, knowledge and reflective practice) engaged with learners, their families, schools, and local and global communities) ELCC Standard 4 Recognize/understand, and be able to explain historical, philosophical, social, and cultural influences on diversity theories and respond to those influences (informed by research, knowledge and reflective practice) ELCC Standards 4, 5 Understand and help others identify and understand the relationships among diversity and the setting of schools and school systems (informed by research, knowledge and reflective practice) empowered to serve as change agents) ELCC standards 1, 3 Understand how diversity and multiculturalism has an impact on the complexity of schooling (informed by research, knowledge and reflective practice; committed to and respectful of all learners) ELCC Standards 3, 4, 5 Distinguish between the experiences of different stakeholders in the educational setting and identify steps to increase the equity of those experiences (empowered to serve as change agents; committed to and respectful of all learners) Investigate and analyze the processes of the educational setting and determine how to positively impact those in areas related to the topics explored in class ELCC Standards 1, 4, 5

**M 5: Portfolio Assessment (O: 5)**

1) The Portfolio Assessment examines student work and assignments collected in Live Text over the course of the Educational Leadership Program. There is a formative assessment at the midpoint of the program and a summative assessment at the conclusion of the program. 2) The candidate will collect work samples, papers, observations, and reviews during the program in Live Text that address all six Goals of the Ed.S Educational Leadership Program. 3) Data reported for 2012 indicate all students meet or exceed expectations on the Portfolio Assessment (see attachment).

Source of Evidence: Presentation, either individual or group

**Target for O5: Objective 2.2: Rigorous Curriculum and Instruction**

The majority of students will meet or exceed expectations for this measure.
Findings 2011-2012 - Target: Met

1) The Portfolio Assessment examines student work and assignments collected in Live Text over the course of the Educational Leadership Program. There is a formative assessment at the midpoint of the program and a summative assessment at the conclusion of the program. 2) The candidate will collect work samples, papers, observations, and reviews during the program in Live Text that address all six Goals of the Ed.S Educational Leadership Program. 3) Data reported for 2012 indicate all students meet or exceed expectations on the Portfolio Assessment. M 6: Dispositions Assessment (O: 1, 2, 3, 4, 5, 9, 10, 11, 13, 14, 15, 16)

1) The dispositions assessment is a required element of all programs in the College of Education. 2) The dispositions assessment is linked to Goal (ELCC Standard) 5: Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by acting with integrity, fairly, and in an ethical manner.

Source of Evidence: Academic direct measure of learning - other

Target for O1: Objective 1.1: High Expectations for All

Students will meet or exceed expectations for this measure.

Details of Action Plans for This Cycle (by Established cycle, then alpha)

Extending program by one semester

Since this is the first year with the new program, we have talked with the students about the things they thought were very good about the new program and things they would recommend that we change. Based on their feedback related to the intensity of the program, we are planning to extend the program by one semester.

Established in Cycle: 2008-2009
Implementation Status: Planned
Priority: High
Implementation Description: This change was put into place in 2010. The program is now delivered over four semesters instead of three and is much more workable for candidates holding leadership positions.
Projected Completion Date: 07/2010
Responsible Person/Group: Educational Leadership Unit
Additional Resources: None

Revision of coaching model

Since this is the first year with the new program, we have talked with the students about the things they thought were very good about the new program and things they would recommend that we change. Based on their feedback we are also in the process of revising our coaching process and our portfolio format. Coaching and the portfolio are components that are required by the state.

Established in Cycle: 2008-2009
Implementation Status: In-Progress
Priority: High
Implementation Description: The coaching model was revised and implemented this year. The new model includes monthly learning sessions as well as an updated coaching handbook and required activities that span across the standards.
Projected Completion Date: 12/2009
Responsible Person/Group: Educational Leadership Unit
Additional Resources: None
Course Restructuring
Because the program has been in existence for five years, because there seemed to be some repetition in the coursework, and because the new ELCC Standards (2011) were publicized, the unit decided to begin the process of aligning every course and major assessment to the standards and elements in an effort to make sure that our program was adequately meeting the articulated needs of our students and consumers (schools and systems).

Established in Cycle: 2011-2012
Implementation Status: Planned
Priority: High
Implementation Description: We are currently working to align the current assignments to the standards. Next steps will be to look at all of the assignments to determine overlap and modify accordingly.
Projected Completion Date: 04/2013
Responsible Person/Group: Educational Leadership Unit
Additional Resources: None

Analysis Questions and Analysis Answers

ACADEMIC PROGRAM QUESTION 1:
What changes in the assessment process has your degree program made since last year’s assessment report? (e.g. revised learning outcomes, measures, targets, etc.) Why were these changes made? What changes and improvements in the assessment process will you make in the coming academic year?

We have made several changes to the assessments we use as major assessments in an effort to better conceptualize all aspects of our program through the major assessments. We added the dispositions assessment as it is a fundamental assessment for the College of Education, and we deleted several assessments that were repetitive of skills measured in the current list. In the coming academic year, we will continue the work of aligning all assessments and assignments to the new ELCC Standards.

ACADEMIC PROGRAM QUESTION 2: What is the impact of the data obtained from assessment findings on your educational degree program? What changes and improvements to your educational program will be made based on this year’s assessment data? (e.g., revised curriculum, courses, sequence, etc.) If changes to curriculum or courses are made for other reasons, please explain.

Because students continue to meet or exceed the measures almost universally, we are currently looking at whether or not to modify the assessments in order to better measure both mastery and degree of mastery. Additionally, we are reviewing the content of each course to determine whether or not it is feasible to restructure the program sequence and delivery in order to better integrate the coaching and performance requirements within both the residency and the courses.

Georgia State University
Assessment Data by Section
2011-2012 Educational Leadership MEd
As of: 12/12/2016 04:41 PM EST
(Includes those Action Plans with Budget Amounts marked One-Time, Recurring, No Request)

Mission / Purpose
MISSION STATEMENT and PROGRAM DESCRIPTION The mission of the Masters in Educational Leadership at Georgia State University is to prepare graduates to be effective instructional leaders who positively impact student achievement.

Goals
G 1: Goal 1
1. Candidates will be leaders in applying leadership theory in practice

G 2: Goal 2
Candidates will be leaders in designing and implementing action research

G 3: Goal 3
Candidates will be change agents in schools

G 4: Goal 4
Candidates will be leaders in urban education settings

Student Learning Outcomes/Objectives
SLO 2: Outcome/Objective 2
2: Can design and implement action research (Final) Student can apply the tools of action research to improve school performance

Student Learning Outcome: Yes Established in Cycle: 2005-2006 Active Through: 2008-2009 Entry Status: Final Last Updated By: Jami Berry on 09/29/2009 Established By: Migration Tool on 10/13/2008 Relevant Associations: Georgia PSC Standards-(ELCC - Educational Leadership Constituent Council, 2001) 1. Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by utilizing the development, articulation, implementation, and stewardship of a school vision of learning supported by the school community. 2. Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by promoting a positive school culture, providing an effective instructional program, applying best practice to student learning, and designing comprehensive
Students are able to apply general theories of leadership to practice. Student Learning Outcome: Yes Established in Cycle: 2005-2006 Active Through: 2007-2008 Entry Status: Final Last Updated By: Jami Berry on 09/29/2008 Established By: Migration Tool on 10/13/2008 Relevant Associations: Georgia PSC Standards-(ELCC - Educational Leadership Constituent Council, 2001) 1. Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by collaborating with families and other community members, responding to diverse community interests and needs, and mobilizing community resources. 2. Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by acting with integrity, fairly, and in an ethical manner. 6. Candidates who complete the program are educational leaders who have the knowledge and ability to promote the success of all students by understanding, responding to, and influencing the larger political, social, economic, legal, and cultural context. 7. Internship: The internship provides significant opportunities for candidates to synthesize and apply the knowledge and practice and develop the skills identified in standards 1-6 through substantial, sustained, standards-based work in real settings, planned and guided cooperatively by the institution and school district personnel for graduate credit. Strategic Plans President, Georgia State University 3.1 New Academic Programs (Modes of Delivery) Institutional Priorities 1.11 Targeted programs of distinctiveness that are nationally and internationally recognized 2.23 Educational support systems that foster student access and success 3.31 Use of our unique location and environment to offer a distinctive education to our students 3.32 Participation in partnerships that have a positive impact on the community, state, and nation 4.45 Compliance with federal, state, and BoR regulations and accrediting and professional standards
